Why did Fairless do this? His friends recall that steel was the model industry in cooperating with wartime price controls. His friends say, however, that many industrialists felt that prices and wages had been held down artificially and, with the war over, should be gradually raised. Fairless himself was afraid that the economy would not expand; that steel's most profitable policy was to operate with rising prices and reduced production. This same thinking is believed to dominate the industry's mind today.

Critics of Fairless say he acted as he did to break price and wage controls. In this, he had much support. For only 9 months later, in November 1946, controls were virtually wiped out. The voters had had enough, too. So they elected a Republican Congress.

NO BARS THIS TIME

Ten years later, in the summer of 1956, the steel bargaining was again the central economic drama. The decade had been dizzingly prosperous for some. Income and output records had been broken annually—except in slump years. Cold war and Korean war had left the economy with a structure not completely unlike that of World War II.

But there were no controls. Prices went up. Wages went up. The stock market went up.

Workers in the big unionized industries got real gains in income. Shareholders in the basic industries did even better and their profits were taxed at no more than 25 percent.

Others—farmers, white collar workers, civil servants, old-age pensioners—didn't fare as well.

The chief actors in the steel play had changed, however, by 1956. Murray had died. McDonald, his former secretary, was president of the union. Blough, the suave, glib lawyer, had replaced Fairless.

The plot of the story hadn't changed, however. Again the strike ran 4 weeks. It was followed by wage and price increases.

Then as now, the word had gone out early that a month-long strike was in the cards. So the customers had hurried to stock up on steel ahead of the deadline.

Friends of Labor Secretary James P. Mitchell and Treasury Secretary George M. Humphrey let it be known that these two had settled the strike in secret. However, many skeptics figured that this was a face-saving device to get the union and the corporation off the hook. The skeptics figured that the prestrike scare talk had built up inventories to a point where a strike was necessary to bring them down.

TWO ALTERNATIVES

A way of reducing inventories without a strike would have been to cut prices, but that is something that steel just doesn't try. Still another alternative to a strike would have been to cut back production and lay off men.

But the arrangement which was devised left the industry and the union satisfied. From 1947 through 1958, the wholesale price of finished steel went up 101 percent; all industrial prices, 32 percent, and all wholesale commodity prices, 24 percent. In the same period, steelworkers' wages went up 100 percent and all manufacturing wages, 72 percent.

Since more steel was being produced by fewer workers, the companies were making fine profits. These don't show up too clearly in the annual reports because fast tax writeoffs obscure true profits. The Senate Antitrust Subcommittee has shown, however, that profits per ton went up from $7.47 in early 1953 to $19.31 in late 1958, a jump of more than 250 percent.

FROM $12 TO $100

All this has been fine for the stockholders, too. A man who bought United States Steel at its average price of $12 a share in 1957 could have turned an $88 per share profit when it hit $100 recently. Since then, with the heat being turned on against any price increase, it has slipped a shade under $90. But from $12 to $90 is a nice gain, especially since the top tax rate on this is 25 percent.

And, for Blough and fellow executives, this is an especially rewarding picture, because from time to time they issue themselves options enabling them to buy thousands of steel shares later at fixed prices. As of January 1, Blough and 257 other big steel executives had claims on stock which would yield them an $18 million profit.

All this, however, is against the current background of high unemployment. Jobs are short in steel, too. Also in the picture is the late and curious recession with its rising prices. These factors are fueling the heat from Capitol Hill, the Federal Reserve Board, and the White House.

Senator ESTES KEFAUVER, Democrat, of Tennessee, has invited Blough and McDonald, along with General Motors Chairman Frederic Donner and United Auto Workers President Walter Reuther, to testify on a price notification bill before the steel negotiations begin. Both steel men are expected to oppose vigorously any effort to make them tell the Government in advance why they raise their prices and wages.

Public relations advisers for both union and the industry (and they share some) are telling their clients that another wage-price boost in steel, or an inventory-clearing strike, will build up even more support for the disliked bill.

However, United States Steel is understandably reluctant to forgo a walkout. As things now stand, the corporation can blame the union for price increases. And it saves money by taking a strike.

If steel were now producing for real demand instead of for strike-scared customers, it would have to lay off men. This would increase its unemployment compensation taxes and force it to pay out supplemental unemployment benefits.

Nevertheless, by last weekend the heat was so strong that there were rumors of a new face-saving device with political overtones. A suggestion has been sent aloft that Vice President NIXON's Cabinet Commitee on Inflation hear McDonald and Blough before KEFAUVER gets to them.

If this script goes according to one plan, there will be a wage increase but little or no price increase. And the Vice President will emerge as the hero who stopped inflation.

Predictions are worthless here. With such brilliant actors and such high drama, only the men who write the scripts can foretell how the third act will come out. And these script writers are busy repolishing even that.

MUTUAL SECURITY PROGRAM UNDER FIRE

Mr. WILEY. Mr. President, the mutual security program, now being considered by the House Committee on Foreign Affairs, will again be under heavy fire in Congress this year.

We recall that President Eisenhower recently has restressed the need for a strong mutual security program as essential to our national, as well as free world defense. Constructively, leaders of the Democratic Party, including former President Truman, have also urged the approval by Congress of ample funds to carry on an effective mutual security program. In addition, we recall that the President's Committee To Study the United States Military Assistance Program, headed by William H. Draper, Jr., not only urged approval of the President's recommendations but stressed the need for additional funds to gird up the free west alliance in its efforts to obstruct Communist expansion. Prior to this report, specially appointed groups containing representatives of business, labor, the military, and other cross sections of American life, have reviewed this program in detail and almost unanimously have agreed that it is an essential part of our defense program.

We recognize, of course, that it is difficult to gain popular support for the idea that American taxpayers' dollars are being spent abroad if the impression is given widely that these funds are either being misspent or that the program, itself, is an impractical, if not useless, way to spend American dollars, thus creating a hardship on the taxpayers.

As a taxpayer, myself, I am, like every other American, concerned with assuring that the expenditures for this, or any other program, are handled wisely, efficiently, and in the best interests of the country.

Unfortunately, in almost all programs—whether in private enterprise or under federally administered projects—there develop, from time to time, unfortunate examples of poor judgment, miscalculations, or plain mistakes. We recognize, of course, that "to err is human." Where errors have been made, we cannot, of course, "sweep them under the rug." Rather, we must strive to correct the situation and to set up as efficient an operational system as possible to administer this, as well as other, programs which are felt to be needed for national security and progress.

We realize that, historically speaking, the mutual security program is a pioneer in its field. Never before in history has any nation embarked on such a broad scope program for mutual development and security among friendly nations.

However, in view of the criticisms—some perhaps justified and some unjustified—it is important to get before the American people the proper perspective of how the mutual security program is being handled and how it is contributing to our defense. Particularly, it is important to refute allegations which may be untrue. In addition, it is necessary to attempt to assure that unfortunate instances in which there may have been specific cases of misjudgment in administration do not give the impression of reflecting the character of the whole program.

Today I received from Mr. Guilford S. Jameson, Deputy Director for Congressional Relations of the International Cooperation Administration, a statement prepared by ICA which that Agency feels refutes recent allegations made against the mutual security program.

I ask unanimous consent to have the statement printed at this point in the RECORD.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

COMMENTS OF THE INTERNATIONAL COOPERATION ADMINISTRATION ON EDITORIAL WHICH APPEARED IN THE INDIANAPOLIS STAR ON DECEMBER 23, 1958, ENTITLED "FOREIGN AID FOR COMMUNISTS

The editorial states:

"The State Department will not make an item-by-item report" (on how foreign-aid funds are spent).

"We (the Indianapolis Star) are no more able than Congress to get the facts and details of foreign spending."

The facts: Information concerning the program financed with mutual security funds or under title II (emergency relief) and title III (American nonprofit welfare agencies) programs of Public Law 480 is available in the "International Cooperation Administration Operations Report," which is sent each quarter by mail to anyone who requests it (including many newspapers). Information concerning programs administered by other agencies, such as the Department of Agriculture, the Export-Import Bank, and the United Nations Relief and Rehabilitation Agency (now defunct) is, or has been, available in the various reports of those agencies.

In addition to this detailed coverage which each agency involved has given to its own activities, the whole field has been covered by various one-time and periodic publications of the Department of Commerce, which approaches the subject as a part of its work in calculating the balance of international payments of the United States. These publications include "Foreign Aid by the U.S. Government," 1940–51, available at $1 per copy from the Government Printing Office; the annual "Statistical Abstract of the United States" (which includes several tables on foreign grants and credits) for sale at GPO, and various documents of the House of Representatives (H. Doc. 404, 85th Cong.; H. Doc. 82, 86th Cong., now in press, at 25 cents each). On a current basis, the Office of Business Economics, Department of Commerce, issues a comprehensive quarterly report entitled "Foreign Grants and Credits by the U.S. Government." This is prepared for the use of the Congress and Government agencies, and is available on request. It also is sent to many Government depository libraries, including the Indiana State Library, in Indianapolis. It was the source of information on grants and credits used by the Library of Congress.

In addition, the executive branch presents to the Foreign Affairs Committee of the House and the Foreign Relations Committee of the Senate, and the Appropriations Committees of both Houses, detailed documentation, by country, about every dollar expended under the mutual security program. This information includes both military-aid figures (which are classified) and non-military-aid figures which are not classified. Every Congressman and every Senator has access to and is invited to inspect these documents which are available in the committee rooms. The only restriction is that he or she respect the security classification.

The Indianapolis Star says: "We will bet that not 1 man in 10 in Congress knows how U.S. foreign-aid funds are spent, who gets the money, or why. How can they?"

They can do it quite easily as pointed out in the foregoing paragraph.

The editorial gives a distorted picture of grants and credits made available by the U.S. Government during the 12½-year period—July 1, 1945 through December 31, 1957.

1. The editorial does not identify any time period, nor purpose for which aid was made available to the Eastern European nations. For example, it classifies these countries as Communist countries and states or implies that aid was given to the Communist governments of these nations. The editorial ignores the fact that substantial portions of that aid was actually provided before the Communists took over the countries.

2. Most of the aid to these countries was granted for humanitarian relief programs during the immediate postwar period; most of it was distributed for relief purposes by the United Nations Relief and Rehabilitation Agency; some of it was supplied by the American Red Cross, or in cooperation with private voluntary agencies such as CARE, Church World Service, National Catholic Welfare Conference, and Lutheran World Relief.

3. The editorial fails to distinguish between aid given directly to governments and aid given directly to people, sometimes, especially in the case of Hungarian refugees, the victims of those governments. The editorial ignores the fact that the Congress enacted Public Law 480 which authorizes the U.S. Government to give such humanitarian assistance "to friendly but needy populations without regard to the friendliness of their government." It was under this provision that aid to the people in Hungary, Czechoslovakia, and East Germany was pro-

vided following the disastrous floods of the Danube and other rivers in 1954.

"Communist Albania got $20,444,000 between 1946 and 1957."

The facts: There has been no aid of any kind to Albania during the past 12 years—not since 1947. The only aid to Albania was extended during the fiscal years 1946 and 1947. This was extended through the United Nations Relief and Rehabilitation Agency. It is a matter of record that Albania was one of the U.S. allies in the struggle against nazism. Relief was supplied to the people of Albania following the end of the war. To say that "Communist Albania" got aid "between 1946 and 1957" may be correct from a bookkeeping point of view (inasmuch as the records for all countries cover the entire postwar period) but it is misleading, since there has been no aid to Albania since fiscal year 1947 and no aid of any kind at any time under the mutual security program.

"Communist Czechoslovakia got $185,827,000 plus $29,583,000 credits."

The facts: The overwhelming portion (98 percent of the grant aid to Czechoslovakia was supplied before the Communist coup d'etat in 1948. It was supplied to a U.S. World War II ally and most of it was supplied through the United Nations Relief and Rehabilitation Agency during the two fiscal years of 1946 and 1947. The grant aid distributed by UNRRA amounted to $183,374,000 in 1946 and 1947. In addition, there was $75,000 made available to Czechoslovakia through the American Red Cross in 1946 and a $2,000 phaseout of lend-lease also in 1946.

This leaves a balance of $2,376,000 in grants. None of this was given to the Czechoslovakian Government. All of it was distributed directly to the Czechoslovakian people through the League of the Red Cross Societies. The grant was made not in money but in U.S. surplus agricultural commodities which were sent for distribution in Czechoslovakia to relieve the victims of the Danube River flood which occurred in 1954.

In respect to credits—not a single credit to Czechoslovakia was extended through the mutual security program. Of the $29,583,000 worth of credits utilized by Czechoslovakia, the overwhelming majority were used before the Communist coup; $29,400,000 was utilized during the two fiscal years 1946 and 1947. Only $182,000 was used in 1948 and only $1,000 in 1949. Since then nothing. Therefore, although the figures in the editorials are correct, since there are no explanations as to timing or purpose, the implications are wrong.

"Communist Germany (yes, that's what we said) got $17,339,000."

The facts: The Government of Communist Germany has never received one penny under the mutual security program. Therefore, the statement is wrong.

It is true that in 1954 and 1955 at the request of Chancellor Adenauer of the Federal Republic of Germany (West Germany), President Eisenhower made food supplies available directly to the people of East Germany who were suffering from starvation. Far from aiding and abetting Communism, this program was regarded by the East German Communists as a scheme on the part of Western "imperialists" to recruit saboteurs and agents for criminal activities in Germany.

The food was made available in West Berlin to East Germans who were willing to cross the border and pick it up at various food distribution centers. Some people traveled as far as 100 miles to get from East Germany to West Berlin to pick up the food packages. On the seventh day of the distribution, the Communists in East Germany prohibited the sale of railway tickets to Berlin.

Despite the Communist harassments, including widespread confiscation of parcels, in a little over 2 months more than 5½ million parcels containing nearly 18,000 tons of food had been distributed, and it was estimated that nearly one-sixth of all Germans under Soviet domination had directly benefited from this food program.

This program was announced publicly when it was begun in an official U.S. Government press release dated August 7, 1953, and later written up in an official ICA pamphlet. The facts are on record. The results of this food program for the people of East Germany were adverse to Communist control; the U.S.-financed program refuted Communist claims and propaganda in East Germany; the food program was of enormous benefit to the Western World, including the United States.

"Communist Hungary got $17,723,000 plus $15,917,000 credits."

The facts: All of the credits and $2.4 million of the grants were extended to the Government of Hungary before the Communist takeover in 1947 and the adoption of the Communist-type of constitution in 1949. All of the credits were established under the overseas surplus property sales program directed by the Office of Foreign Liquidation Commissioner in the fiscal years 1946 and 1947. Two and four-tenths million dollars of the grant aid was made available through the United Nations Relief & Rehabilitation Agency in the fiscal years 1946 and 1947.

On July 29, 1954, President Eisenhower offered U.S. assistance to relieve the victims of the floods in the Danube River basin. His offer was not limited to the Danube River valley but included East Germany and the valleys of the rivers that flow into the Baltic and North Seas. Two and seventh-tenths million dollars worth of U.S. surplus agricultural products were distributed in Hungary directly to the farmers and other victims of the flood through the offices of the League of Red Cross Societies. All the food and feedstuffs were bagged and market "Gifts of the American People."

(Later on in the editorial the following statement appears:)

"Then after the Hungarians revolted and were smashed by the Reds we sent the Red Hungarian Government $11,867,000. Apparently it pays in American foreign aid to smash a revolt against communism with Soviet troops."

The facts: The statement is in error, and so is the conclusion. No aid was given to the Red Hungarian Government after the revolt of November 1956. Aid was supplied to Hungarian refugees, victims of the Red suppression, but not one single penny of the U.S. taxpayers' money has gone to the Red Hungarian Government.

"Communist Poland got $365,017,000 plus $88 million credits."

The facts: Of the $365,017,000 grants the sum of $365,008,000 (99.9 percent) was made available to Poland—a World War II ally—before it was taken over by the Communists. Most of this sum—$364,031,000 was made available through the United Nations Relief and Rehabilitation Agency during 1946 and 1947. An additional $885,000 was made available through the American Red Cross and another $92,000 represented the windup of the World War II lend-lease program. A few additional thousand dollars have been entered in the bookkeeping column marked Poland. This does not mean that the Polish Government was the recipient—only that Poland was the country of destination. The money was used to pay the costs of ocean freight for transportation of U.S. surplus agricultural commodities sent to relieve the Polish people by U.S. voluntary agencies (especially CARE and Catholic Relief Services) and distributed in Poland directly to those people by representatives of the U.S. agencies.

Therefore, it is a misstatement of fact to say that Communist Poland got $365,017,000 worth of grants because none of this aid went to the Communist Government of Poland.

Credits to Poland:

Of the $88 million listed as credits to Communist Poland, about 86 percent of it was authorized and negotiated before Poland was taken over by the Communists: $37.7 million listed as a credit represented sales of U.S. surplus property immediately after the end of World War II, and $40 million was an Export-Import Bank loan authorized in 1946.

During fiscal years 1957 and 1958, additional credits were extended by the U.S. Government to the Government of Communist Poland, not because it was Communist and not to aid the cause of international communism, but to make it possible for Poland to become more independent of Soviet domination and control. It is believed that any weakening in the Sino-Soviet bloc cannot fail to be in the interests of the United States.

"Communist Yugoslavia got $789,732,000 plus $55,900,000 credits."

The facts: Of the $789,732,000 grants, almost $300 million were for humanitarian relief aid extended to the people of Yugoslavia in the immediate postwar period. Of this sum $298,054,000 was extended through the United Nations Relief and Rehabilitation Agency, $719,000 was extended through the American Red Cross and $76,000 was represented by the windup of the lend-lease program. There were no other grants to Yugoslavia until fiscal year 1951, after Yugoslavia asserted its independence from Moscow.

Between July 1, 1950 (the beginning of fiscal year 1951) and December 31, 1957, grant assistance to Yugoslavia amounted to $490,884,000 divided as follows:

	Thousands of dollars
Mutual security program economic aid funds beginning with fiscal year 1951, including costs of ocean freight on emergency relief shipments	347,873
Emergency food relief shipments under the famine relief and other assistance (title II, Public Law 480) program, including the Danube flood of 1955	47,750
Special Yugoslav program, under the Yugoslav Emergency Relief Assistance Act of 1950 (Public Law 897, 31st Cong., Dec. 29, 1950), an emergency drought relief measure	37,560
Value of donations by the U.S. Government of surplus agricultural commodities and relief supplies shipped by American private welfare organizations, such as CARE, Lutheran World Relief, and Church World Service	57,700

The credits made available for Yugoslavia represent $55 million in loans extended through the Export-Import Bank during fiscal years 1957 and 1958, and $900,000 previously listed as a grant which was by agreement converted into a credit.

As in the case of Poland, the purpose of U.S. aid to Yugoslavia is not to foster or promote international communism but, on the contrary, to enable that nation to maintain its independence of Russian domination and control. The Sino-Soviet bloc regards an independent Yugoslavia—even though it has a Communist government—as an enemy of international communism. The Soviet Union has tried in many ways, including the cutting off of credits, to coerce Yugoslavia into the status of a Soviet satellite.

Assisting Yugoslavia to maintain its independence in the face of Soviet pressures is an effective demonstration to the world that any nation which cherishes its independence and is not subservient to the Soviet Union, can enjoy advantageous relations with the United States and other Western countries.

REMOVAL OF JURISDICTION OF FEDERAL COURTS OVER THE ADMINISTRATION OF PUBLIC SCHOOLS

Mr. TALMADGE. Mr. President, responsible criticism of the usurpations of the Supreme Court of the United States is being heard with increasing frequency.

Throughout the Nation there is a swelling public outcry for Congress to act to restore the Court to its appointed constitutional role as the interpreter rather than the giver of the Nation's laws.

The Court's arrogations of legislative power and encroachments upon the rights of States and individual citizens have become so flagrant as to draw the stinging rebuke of the Conference of State Chief Justices.

The High Tribunal, according to the judges of the highest courts of the individual States, has adopted the role of policymaker without proper judicial restraint; has assumed primarily legislative powers; and has allowed the individual views of its members to override a dispassionate consideration of what is or is not constitutionally warranted.

The State chief justices declared that the Supreme Court's recent decisions "raise at least considerable doubt as to the validity of that American boast that we have a government of laws and not of men."

The concern of the country about this situation prompted the significant debates which took place during the second session of the 85th Congress on the question of the so-called Jenner-Butler and Smith Bills.

I supported both measures wholeheartedly and expect to give my support to the same or similar bills during the 86th Congress.

However, it was my conviction then—and it is my conviction now—that as worthy as those or similar pieces of legislation may be, they do not go far enough to correct for all time the judicial trends which are so alarming to those of us who believe the Constitution of the United States means word for word what it says.

That is true because they do not seek to correct the decision which set the pattern for the current wave of judicial usurpation—the Supreme Court's ruling of May 17, 1954, in the case of *Brown, et al.* v. *Board of Education of Topeka* (347 U.S. 483, 98 L. ed. 873, 74 S. Ct. 686, 38 A.L.R. 2d 1180) which held that State and local governments could not operate public schools for different races on a separate, but equal, basis.

Undoubtedly the reason that decision has not heretofore been included in any of the proposed corrective measures lies in the false emotional factors which have been injected into the school question by those who are more interested in pandering to the prejudices of minority groups for political gain than they are in preserving constitutional government or assuring the best possible public education for all the young people of America regardless of their color or place of residence.

But, Mr. President, I wish to point out and to emphasize as vigorously as I know how that so long as that decision is allowed to stand this Nation will never be free from the threat of judicial dictatorship and the Constitution and the rights of the American people will forever be subject to the whims of the men who transiently occupy the Supreme Court bench.

The Brown decision represents a complete departure from judicial decisions based on the Constitution, the law, and established legal precedents. It substitutes in their stead bald court edicts based upon so-called modern authority and the personal opinions of the Justices.

The Brown decision raises grave constitutional questions, the disturbing and far-reaching ramifications of which cannot be obscured by a racial smokescreen.

It is to those constitutional questions that the bill I today shall introduce and that my present remarks are addressed.

I shall say for the benefit of the professional race baiters and the chronic bleeding hearts, Mr. President, that the races are living together in harmony and mutual respect in my State of Georgia. They are solving whatever racial problems Georgia may have on the local level in accordance with local wishes. I am confident those good relations will continue, regardless of what the future may bring.

I say that, Mr. President, because Georgia citizens of all races recognize that the question involved is one far more fundamental than the issue of who goes to which school. They are aware that it goes to the very heart of constitutional government—the balance between a Federal Government of limited powers and State and local governments exercising all other powers.

In writing the Brown decision the Supreme Court ignored 105 years of judicial precedent, the clear meaning of the 10th amendment, and the obvious intent of the 14th amendment.

It overruled at least 5 of its own decisions, at least 18 Federal district and circuit court decisions, and at least 59 State and Territorial court decisions.

It cited as its only authority books and treatises on sociology and psychology written by men of questionable background and doubtful loyalty.

It was unable to point to a single law or legal precedent to support its decision. It could not, because there were none; they were all on the other side.

It substituted modern authority for the Constitution, intangible considerations for legal precedent, and we-cannot-turn-the-clock-back doctrine for the intent of the framers of the Constitution and its amendments.

The Court found it necessary to jump a number of high hurdles in order to reach its desired conclusion.

Its first hurdle was the 14th amendment itself.

Briefs submitted at the request of the Court showed that the same 39th Congress which promulgated the 14th amendment established separate schools for the races in the District of Columbia. They further pointed out that of the 37 States in existence at that time, only 5 abolished separate schools contemporaneously with the ratification of the 14th amendment, and 3 of those later did so.

Even in the face of such preponderance of evidence that the 14th amendment was not intended to abolish separate schools, the Court pleaded ignorance. It said the record was "inconclusive," and maintained that it could "not turn the clock back to 1868."

The Court then went on to ignore the language of the 5th section of the 14th amendment, which provides that Congress is to enforce it with "appropriate legislation." The fact that Congress had never seen fit to do so with respect to public schools was lost upon the Court in writing its decision in the Brown case.

The second hurdle which the Court had to clear was the 10th amendment.

The 10th amendment reserves to the individual States all powers not specifically granted to the Federal Government; and education is one of the many functions left—by virtue of constitutional silence—to the States. Nowhere in the Constitution can there be found any wording which, either by direction or innuendo, deprives the States of the right to administer their school systems in accordance with local wishes.

The Court did not regard that fact even worthy of consideration. It brushed the 10th amendment aside as if it did not exist, and did not even mention it in its ruling.

The Court's third hurdle was that of its own decisions upholding the "separate, but equal" doctrine laid down in *Plessy* v. *Ferguson* (163 U.S. 537) in 1896, and upheld by that tribunal as late as 1950.

It was at that point in its deliberations that the Court came up with its new theory that separate schools are "inherently unequal," and held that Plessy against Ferguson was bad sociology not supported by modern authority.

It was at that point that the Court introduced, via footnote 11 of the Brown decision, the nine so-called modern authorities on sociology and psychology on which it relied for its finding that separate schools are unconstitutional.

The Harvard Law Review, in commenting on the ruling, stated:

> In dealing with prior cases, especially *Plessy* v. *Ferguson*, the Chief Justice did not seek to demonstrate that the Court had once blundered. His point, rather, was that these prior decisions were simply outmoded in present-day society (68 Harv. L. Rev. 96).

Thus was introduced a new rule for testing constitutionality—the rule of whether a law or practice is, in the opinion of the judges, outmoded.

In the Brown case, the Court did not hold that the facts disclosed by the briefs and arguments presented before it justified a departure from the separate, but equal, doctrine. It held, rather, that psychological knowledge was of greater validity than the facts and the law.

The Court conceded that the cases before it demonstrated equality of school facilities in respect to all tangible factors. But it maintained that its decision could not turn on such tangible factors, but, rather, must have its basis in intangible considerations.

On that premise it declared:

Whatever may have been the psychological knowledge at the time of *Plessy* v. *Ferguson*, this finding is amply supported by modern authority. Any language in *Plessy* v. *Ferguson* contrary to this finding is rejected.

It is an elemental rule of law that a court may not consider treatises in a field other than law unless the treatises themselves are the very subject of inquiry. The Supreme Court itself has so held in a number of cases.

In *Pinkus* v. *Reilly* (338 U.S. 269) the Court held that the use of nonlegal materials in a case was illegal, illogical, and unfair.

In *National Council of American-Soviet Friendship, Inc.* v. *McGrath* (341 U.S. 292) the Court said the use of such material constituted a denial of "the rudiments of fair play" and amounted to "condemnation without trial."

In *U.S.* v. *Abilene & Southern Railway Company* (265 U.S. 347) Justice Brandeis wrote:

Nothing can be treated as evidence which was not introduced as such.

That rule was universal until the Supreme Court found it standing in the way of the decision it was determined to render in the Brown case.

And what of the modern authority upon which the Court based its decision?

Two of the six principal authorities listed by the Court—Theodore Brameld and E. Franklin Frazier—have between them been members of, or identified with, 28 organizations declared by the Attorney General of the United States or the Committee on Un-American Activities of the U.S. House of Representatives to be Communist, Communist fronts, or Communist-dominated. A third of the six—K. B. Clark—was, at the time of the arguments before the Court, on the payroll of the National Association for the Advancement of Colored People as a so-called social-science expert—a highly irregular procedure in view of the fact that the NAACP was the principal plaintiff in those cases.

The book, "An American Dilemma," written by Dr. Karl Gunnar Myrdal, a Swedish Socialist, on grant from the Carnegie Foundation, was cited in its entirety by the Supreme Court as an authority for its ruling. Sixteen of the contributors to that book have lengthy records of pro-Communist activity, in the files of the Un-American Activities Committee. One of them, Negro educator W. E. B. DuBois, who contributed to 82 portions of the book, has been cited no less than 72 times by the committee. He filed briefs on behalf of executed atom spies Julius and Ethel Rosenberg and sent a message of condolence upon the death of Joseph Stalin.

It was in that book that Myrdal declared, on page 13, that the U.S. Constitution is impractical and ill suited for modern conditions and characterized its adoption as nearly a plot against the common people. Furthermore, he openly avowed that liberty must be forsaken for what he called social equality.

By declaration of the Supreme Court, Dr. Myrdal and his book have now become modern authority, and what was aptly termed by one of the Nation's foremost authorities on constitutional law, Hon. R. Carter Pittman, of Dalton, Ga., as "corpus juris tertius in American pseudo-socio-law."

The dangers inherent in substituting sociological and psychological theories for law are obvious.

U.S. Circuit Judge Jerome Frank recognized that, when he wrote that such generalizations and the "inferences derived therefrom are almost certain to be importantly false. For the consequences of the operation of certain customs or group attitudes are often canceled out by the consequences of other conflicting customs and attitudes."

Even the latest book cited in footnote 11, "Personality in the Making," by Witmer and Kotinsky, states:

Unfortunately for scientific accuracy and adequacy, thoroughly satisfactory methods of determining the effects of prejudice and discrimination on health or personality have not yet been devised, nor has a sufficient number of studies dealing with the various minority groups been made.

Writer Edmond Cohn, who agrees with the result of the Brown case, nevertheless criticized the use of sociological authority and stated the danger therein in these words:

The word "danger" is used advisedly, because I would not have the constitutional rights of * * * Americans rest on such flimsy foundations as some of the scientific demonstrations in these records.

Since the behavioral sciences are very young, imprecise, and changeable, their findings have an uncertain life expectancy, and today's observations very likely will be canceled by tomorrow's new theories.

I ask, therefore, Mr. President, is it right that our fundamental constitutional rights should be conditioned upon the latest psychological literature or scientific theory?

As surely as day follows night, if the Supreme Court is permitted to use psychology and sociology books instead of law books as the basis for its decisions, there is no area of American life which it cannot touch and attempt to revolutionize whenever it may take the notion.

Those who feel it is proper for Myrdal to be the authority for the school decision had best reflect, Mr. President, on how they would like for Freud or Kinsey to be the authority for rulings on their States' laws governing public conduct.

In basing the Brown decision on so-called "modern authority," the Supreme Court was guilty of what it itself has frequently condemned.

For example, as late as 1952, Justice Frankfurter wrote in his decision in the case of *Beauharnais* v. *People of Illinois* (343 U.S. 250):

Only those lacking responsible humility will have a confident solution for problems as intractable as the frictions attributable to differences of race, color or religion. * * * Certainly the due process clause does not require the legislature to be in the vanguard of science—especially sciences as young as human ecology and cultural anthropology. * * * It is not within our competence to confirm or deny claims of social scientists as to the dependence of the individual on the position of his racial or religious group in the community.

Commenting on that obvious inconsistency on the part of the Court, Mr. Pittman, to whom I earlier have referred, stated:

The Court admitted it didn't know enough about sociology, human ecology, and cultural anthropology to decide racial issues in 1952. But by 1954 the justices had become so expert in pseudo-socio-science a la Myrdal that they abandoned the Constitution, the law, reason, and common sense to embrace a doctrine unknown to God and unknown to any other government of law in the history of civilization.

When the Justices found the 14th amendment did not mention schools and decided its legislative history was "inconclusive," the Court should have declared, as it did in the case of *Ullman* v. *U.S.* (360 U.S. 427) in March 1956, that "nothing new can be put into the Constitution except through the amendatory process."

The Court has ruled time and again that it has no authority to amend the Constitution; yet the evidence that it sought to do so in the Brown case is irrefutable.

It is plain even to the layman that the Supreme Court's decision had the effect of amending the Constitution.

Article V clearly sets forth the fixed methods of amending the Constitution, and amendment by judicial decree is not one of them.

Everyone will agree, I believe, with the statement of Chief Justice Marshall in the famed *Marbury* v. *Madison* decision (1 Cranch 137, 174–175, 2 L. ed. 60, 72) of 1803:

The Constitution is either a superior paramount law, unchangeable by ordinary means, or it is on a level with ordinary legislative acts, and, like other acts, is alterable when the legislature shall please to alter it.

The implications of that ruling were forcefully analyzed by the Honorable James F. Byrnes of South Carolina—a former member of the Supreme Court—in an address before the Illinois State Bar Association. He declared:

If the latter be true, a written Constitution is an absurdity. It is equally clear that if the Constitution is the superior paramount law, it cannot be altered whenever the Supreme Court wishes to alter it. That would be an absurdity.

If the Supreme Court can alter the Constitution by its decisions, then five men—a majority of the Court—can make the Court a constitution maker instead of a constitution defender.

Or, as aptly expressed last year by the erudite and distinguished senior Senator from North Carolina [Mr. ERVIN]:

If court decisions are laws, when a court makes a decision, it makes a law; when it reverses a decision, it repeals a law; when it modifies a decision, it modifies a law.

To accept a contrary view, Mr. President, would be to nullify the constitutional concept of Congress as the Nation's only lawmaking body.

The legislative powers granted by the Constitution are vested exclusively in Congress. The first line of the Constitution says that, and, as I have pointed out, the framers of the 14th amendment sought to make certain that only Congress should implement the new and

dangerous powers which it embraced by specifying that only Congress should have the power to enforce it.

Article VI of the Constitution defines the "law of the land" as the Constitution of the United States and the laws and treaties made under its provisions. The Founding Fathers were careful to exclude executive orders and judicial decrees from that definition.

The framers of the Constitution knew the importance of a free, courageous, virtuous judiciary. But they also knew that a pliant, servile and time-serving judiciary would be a deadly enemy of free society and a republican form of government. Consequently, they were careful to set the judicial branch up as a coordinate and independent department of government but also were careful to put a check on it by vesting in Congress the authority to fix its jurisdiction.

The Supreme Court's Brown decision has done great harm to this Nation because through it the Court has shown its willingness to disregard our written Constitution and its own decisions, to invalidate the laws of the individual States and substitute for them a policy of its own, supported not by legal precedents but by the writings of social scientists.

Every thinking American knows that surrender to the Supreme Court of the power to amend the Constitution at will, will vest in that tribunal power to make changes inimical to the public welfare and eventually will lead to a complete loss of control of the Government by the people.

That is why, Mr. President, I am today introducing for appropriate reference a bill to add a new section to chapter 21 of title 28 of the United States Code which would read as follows:

> No justice, judge, or court of the United States shall have jurisdiction to hear, determine, or review, or to issue any writ, process, order, rule, decree, or command with respect to, any case, controversy, or matter relating to the administration, by any State or any political or other subdivision of any State, or any public school, public educational institution, or public educational system operated by such State or subdivision.

However much some citizens may applaud the Brown decision, Mr. President, they will accept the manner in which it was handed down only at the peril of exposing themselves to some future application of the same theory of legislation by judicial decree.

Unless the application of that concept of judicial lawmaking is stopped now by the enactment of legislation such as I am today proposing, the inevitable result will be to substitute for constitutional government a judicial oligarchy under which the executive and legislative branches and the State and local governments will exercise only such powers as the Supreme Court deems fit to grant them.

Constitutional government as we heretofore have known it and the philosophy upon which the Brown decision was based are incompatible. So long as it is allowed to stand, the liberties and heritage of freedom which Americans in all regions so zealously cherish are in great jeopardy.

If the Brown decision is allowed to stand, Mr. President, then we have no Constitution and no laws—only what the Supreme Court on any given occasion may say the Constitution and the laws are.

Mr. President, I herewith introduce my bill and ask that it be appropriately referred.

The PRESIDING OFFICER. The bill will be received and appropriately referred.

The bill (S. 1593) to amend chapter 21 of title 28 of the United States Code with respect to the jurisdiction of the justices, judges, and courts of the United States, introduced by Mr. TALMADGE, was received, read twice by its title, and referred to the Committee on the Judiciary.

PROPOSED BUREAU OF SUBMARINES

Mr. DODD. Mr. President, I introduce, for appropriate reference, a bill to establish a Bureau of Submarines within the Department of the Navy.

The PRESIDING OFFICER. The bill will be received and appropriately referred.

The bill (S. 1597) to establish in the Department of the Navy a Bureau of Submarines, introduced by Mr. DODD, was received, read twice by its title and referred to the Committee on Armed Services.

Mr. DODD. Mr. President, during the first half of this decade a small group of dedicated men wrought a series of scientific miracles which have already revolutionized naval warfare.

These dedicated men, housed in unpretentious, temporary buildings, working 80 hours a week, denying themselves most of the comforts of life, through an unsurpassed effort extending over many years, purchased with their sacrifice an advantage for our country which, if properly exploited, will redress the balance of military power; a balance which is shifting steadily against us as the Soviet Union forges ahead in intercontinental ballistic missiles.

I refer to the group of men led by Vice Adm. Hyman G. Rickover, who achieved a remarkable scientific breakthrough years ahead of our Communist opponents. I speak of the men who gave us the atomic submarine, and who thereby gave us two priceless elements in our struggle for survival—time and opportunity.

They gave us time to construct, before our manned bombers and exposed stationary bases become vulnerable, a vast fleet of nuclear powered submarines capable of delivering nuclear payloads to any part of the Communist homeland; and to develop a whole new concept of naval warfare indispensable to our island continent in a period when our Communist opponents will have superiority on land and in the air.

They gave us opportunity to pioneer in the peaceful conquest of the new frontier under the seas, through the development of undersea commerce, through scientific explorations that may yield incalculable benefits in mineral resources, in agricultural potentials and in paths of peaceful progress.

The peaceful uses of discoveries originally destined for warfare have proved a source of countless blessings for mankind. Development in military aircraft paved the way for great advances in commercial aircraft.

Our progress in the conquest of outer space has been a byproduct of the military ballistic missiles program.

The development of undersea technology will yield a rich harvest of peaceful uses for coming generations.

We have the basic scientific know-how essential to the building of an armada of nuclear-powered submarines, equipped with thermonuclear missiles, each of which could loose fearful devastation upon any aggressor.

But we have not achieved the degree of coordination and organization necessary to exploit this scientific knowledge to the full.

Today, in what I believe is a step toward better coordination and organization, I am introducing a bill which provides for the establishment of a separate Bureau of Submarines within the Department of the Navy. This afternoon I would like to discuss briefly the history of submarine warfare, the revolutionary implications of the submarine, and the need for creation of a separate Bureau for developing this top priority underwater program.

The first operational submersible, the U.S.S. *Holland,* made its appearance in 1897. Its successors in World War I were formidable tactical weapons, but their limitations and the failure of the German high command to grasp the full implications of their U-boat fleet, prevented the new weapon from being decisive in naval warfare.

Submarines of World War I were only surface ships in reality, capable of only brief interludes of submergence, interludes needed to protect themselves from detection and bombardment. Because of limited endurance and speed, they had to operate largely on the surface. These submarines could be found and destroyed. They lacked an engine which could operate beneath the sea without oxygen, and they had to rely on storage batteries. Their surface engines needed diesel oil and they had to be refueled frequently.

Yet, despite these disadvantages, Germany had in its submarine fleet a weapon so deadly and novel that, in my judgment, it could have been decisive had it been vigorously exploited.

If the Germans had instituted unlimited submarine warfare against Allied shipping in 1915, instead of 1917, there is little doubt but that Birtain and France, dependent as they were on open sealanes for their survival, would have been brought to their knees before the United States could have made a real contribution.

But the German high command of World War I, fortunately, failed to recognize and to act upon the great advantage which its U-boat fleet provided.

Once again, in World War II, the Allied Powers narrowly escaped defeat by German U-boats. At one period of World War II, German submarines were sinking Allied shipping faster than we

were building new ships. We were faced with imminent disaster.

Only Hitler's refusal to delay his aggression until his submarine fleet was ready, only our supreme effort in shipbuilding and in antisubmarine warfare, only the defects inherent in submarines of that vintage, made it possible for us to overcome this threat.

In 1949 Admiral Rickover and his group embarked upon their revolutionary journey in the area of undersea warfare. At that time the atomic submarine was little more than a conception. Yet by 1953 a complete prototype of its atomic powerplant was operational and the *Nautilus* itself went to sea in 1955.

The *Nautilus* was the first true submarine. Such a submarine can fight years of warfare without refueling. It can stay submerged running at full power for weeks on end. Atomic powerplants give these submarines the speed, performance and endurance characteristics comparable to the best surface vessels. Thus, for the first time concealment is coupled with performance in the submarine.

The voyage of the *Nautilus* under the North Pole, and the submergence of the *Sea Wolf* for over 60 days, have demonstrated the full meaning of these vessels, and have foreshadowed the shape of things to come.

But developments in the field of ordnance, in the weapons which can give one nuclear submarine enough destructive power to devastate a nation, have not kept pace.

Although the *Nautilus* was sailing under the oceans in 1955, she carried World War II torpedoes; and even today the operational date for the Polaris and other submarine missiles seems obscured.

A handful of these ships, properly armed, could control the ocean. Whole task forces would be relatively defenseless against them. The nuclear submarine, armed with missiles and atomic warheads, is a capital ship with a gross firepower more powerful than a fleet, greater than the firepower of all the manned bombers and all the fleets of World War II. Thus, the great implication of nuclear submarines is strategic, not tactical.

The advent of nuclear powered engines has eliminated the defects in the submarine itself. The advent of a thermonuclear missile capable of being fired from a submarine from the depths of the sea will open limitless strategic possibilities.

It remains for us to eliminate our deficiencies in organization, in money, in planning, and in vision, which today stand in the way of full development of this ultimate weapon.

For several years the Soviet Union has had the capacity to launch a devastating nuclear attack upon the United States. For a longer period of time we have possessed an even greater capacity for destruction.

The moral and ideological traditions of this country have made an unprovoked, surprise attack by the United States out of the question. But the hand of the Soviets is not stayed by any ideals. The Communists, who did not blanch at the murder of millions of their own countrymen, certainly would not hesitate to inflict mass destruction on their enemies, if they could do so without fear of retaliation.

Mao Tse-tung, the Red dictator of China, has publicly declared that Red China was prepared to endure the loss of hundreds of millions of its people, but that Western nations could not stand up under such a loss.

Therefore we must assume that if the Communists ever arrive at the point where they could deliver a paralyzing attack upon the Western World without fear of reprisal in full measure, they would not hesitate to do so. We must always plan for the worst.

As we enter the era in which the Soviets will possess a wide advantage in intercontinental ballistic missiles, it is theoretically possible for them to destroy, by sudden attack, most of our retaliatory capacity.

It is possible to conceive of the perfection of a defense against our manned bombers, a defense that could reduce our retaliatory capacity to limits that the Communist world was willing to absorb. It is possible to conceive of an attack which could destroy our exposed missile launching bases all over the world.

But the advent of the atomic submarine, armed with deadly nuclear missiles, offers us a retaliatory capacity so invulnerable that we cannot conceive of its sudden destruction.

Imagine a force of a hundred atomic submarines, hidden in the depths of the sea, many of them lying under the Arctic ice caps; each of them within range of the Communist heartland; each of them armed with destructive power greater than all the explosive power set off during World War II.

Here is a capacity for massive retaliation which, under foreseeable circumstances, cannot be destroyed by a sudden onslaught.

The Arctic coastline of the Soviet Union, which extends half way around the world, furnishes a limitless expanse from which our submarines can deal destruction. To the Kremlin, this presents a problem of the greatest magnitude. It is one they might not solve in this century.

The simultaneous destruction of a whole fleet of nuclear submarines will be close to impossible for decades to come. The only way to get at a nuclear submarine is with other naval units, probably with other submarines. Our submarines will have to be found and fought one at a time.

To accomplish this would require many ships and endless tracking and combat. Any aggressor would be forced to disclose his intentions of making war long before he could destroy even a fraction of these units.

The net effect of having such a fleet could be the equivalent, in today's terms, of having all of the Strategic Air Command airborne at all times.

Thus atomic submarines armed with nuclear warheads are a true and ultimate deterrent to war. They are, therefore, our greatest guarantee of peace.

So long as this force exists we shall be safe from nuclear attack. And this assurance will give us political and psychological strength in the capitals of the world, strength which we shall need very badly during the coming period of clear Soviet ICBM superiority.

But we are a long way from having such a deterrent force. Even the most ambitious program now being considered calls for only 30 of these ships. More than a year ago the distinguished junior Senator from Washington [Mr. JACKSON] called for a fleet of 100, missile-firing nuclear submarines. I join him today in urging that number as a minimum goal.

Right now we have only a handful of atomic submarines. A submarine designed specifically for firing nuclear missiles has yet to be launched. The missiles themselves, upon which all depends, are as yet unavailable.

The great scientific breakthroughs of the early 1950's have not been followed with necessary breakthroughs in missile development, or with the necessary program for a huge fleet of atomic submarines, or with the necessary organization that would make such a fleet a reality in the shortest possible time.

I think the present organizational setup in the Navy for developing this submarine fleet leaves much to be desired.

The building of the nuclear components is under Admiral Rickover.

The submarine building program itself comes under the Bureau of Ships, which must also worry about aircraft carriers, destroyers, tankers, and everything else afloat.

Weapons systems in submarines come under the jurisdiction of the Bureau of Ordnance.

Submarine personnel are under the Bureau of Personnel.

Within the submarine program itself there are further delineations of authority.

The attack submarine, designed for combating other enemy ships, is under the technical direction of Admiral Rickover.

The polaris-firing submarine, the capital and strategic ship of the future, is under Rear Adm. William F. Raborn, with Admiral Rickover responsible for providing the nuclear powerplant.

In addition, many other bureaus and divisions of the Navy are working on undersea warfare.

The great advances that have been made thus far are in some ways a triumph over the present system of organization, which is characterized by overlapping functions, by divided responsibilities, by confused lines of authority, and by lack of unified direction. The result has been a delay in technical advance, insufficient priority for the needs of undersea warfare, drift and drag.

I believe the atomic submarine is so obvious a departure from previous naval weapons, so vast in its strategic implications, so urgent in its priority as to justify a significant change in naval organization.

How have we handled revolutionary strategic developments in the past?

In 1921, when naval air power was relatively untested and unproved, Congress established a Bureau of Aeronautics within the Navy Department.

I might add here that all of us remember the gallant efforts by naval aviators to convert the then dominant "battleship school" of naval thought to the critical importance of air power. It was quite a struggle.

The "battleship school" resisted the claims of air power for long years and we are fortunate that the naval air power advocates won their case before the outbreak of World War II.

The last American battleship was laid to rest in 1957. The aircraft carrier is now the dominant naval vessel. But the nuclear submarine is clearly the principal vessel of the future.

We are fortunate that the present Chief of Naval Operations, Adm. Arleigh Burke, well understands the significance of submarine warfare. But history indicates that we may anticipate opposition to submarine supremacy by the champions of, let us say, the aircraft carrier.

We are in a race in which every day counts. There is no time for prideful stubbornness or for the intraservice rivalry that held back the growth of air power, on occasions, in both the Army and the Navy.

One of the reasons why a separate Bureau of Submarines is necessary is so that the advocates of submarine supremacy may be organized in a manner which will allow them to present their case forcefully and effectively.

After World War II when aircraft, carrying atomic weapons, became our chief deterrent force, an entirely new branch of the service, the Air Force, was established to achieve the maximum development of air power.

As ballistic missiles and space satellites came to the fore and as we recognized defects in organization, duplication, divided responsibility, and lack of unified direction, new organizations were established in the executive branch of Government and in the Congress. In the executive branch, the National Aeronautics Space Administration was created, charged with unifying and coordinating our space and missile programs. Congress has recognized this field as a unique area worthy of separate attention and has created aeronautical and space sciences committees in the Senate and House. One subcommittee of the Senate is devoted almost exclusively to the problem of studying reorganization of our space programs.

The area of undersea warfare is as vital as any of these. The need for rapid progress is as urgent. The delays due to poor organization are as apparent.

We must make an approach toward unified direction for our nuclear submarine program.

If the Soviet sputnik taught us any one lesson, it is that we cannot allow these problems of technical management and direction to just drift and drag along. We can lose our lead if we follow the same path as in the missiles program, the path of having everyone and no one in charge.

That is why I propose the creation of a Bureau of Submarines in the United States Navy, and have introduced today proposed legislation providing for the creation of such a Bureau.

Under my proposal the Bureau of Submarines would have a status similar to that of the Bureau of Aeronautics or the Bureau of Ordnance. The Bureau of Ships would retain jurisdiction over all ships other than those capable of submergence. The Secretary of the Navy would have the power to set the Bureau's duties in detail, but I would hope he would envision submarines as weapons systems and give the Bureau responsibility for all aspects of the system including its missiles.

The new dimensions under the seas are as challenging as the skies above, and are as deadly.

The Kremlin recognizes this. The Russians are devoting their principal naval effort to undersea warfare. They already have a fleet, we are told, of more than 600 submarines, many of them equipped to fire ballistic missiles with a range of at least 200 miles.

While their present fleet dwarfs ours in size, the technical superiority gained for us by the Rickover group gives us a vast but temporary advantage over the Soviet.

When the Russians have unlocked the secret of nuclear submarines, if indeed they have not done so already, we may be sure they will allow no organizational problems, no budgetary limitations, no lack of priority to prevent them from developing this new strategic weapon with maximum speed.

Yesterday's press and today's carried reports that the Russians were distributing conventional submarines among their satellites. This is interpreted as an indication that Russia is starting construction of an atomic submarine fleet for her own use.

In recently released testimony before the House Defense Appropriations Subcommittee, leading naval authorities testified that deficiencies in our antisubmarine forces posed a grave threat to our security; that our antisubmarine vessels are obsolete and undermanned; and that additional spending of $1.2 billions next year was needed to meet the Red sub menace.

Our technical advantage may last for a few years at the most.

Shall we fritter away this advantage? Shall we adopt only minimum goals that miss the significance of undersea warfare supremacy?

I pray that we do not, and I urge my colleagues to take a forward step by supporting the establishment of a Bureau of Submarines that will give leadership, unity, and vision to the development of the true deterrent to war.

FIFTIETH ANNIVERSARY OF THE DISCOVERY OF THE NORTH POLE BY ADM. ROBERT E. PEARY

Mr. MUSKIE. Mr. President, 50 years ago yesterday, a courageous pioneer fulfilled the dream of a lifetime, as he stood in the midst of the arctic waste and announced: "89°57'; the pole at last."

We in Maine are proud to claim Rear Adm. Robert E. Peary as our own. Although Admiral Peary was born in Pennsylvania in 1856, his family moved to Maine when he was but 3 years of age. Robert E. Peary was educated in the public schools of Portland and was graduated from Bowdoin College in Brunswick, Maine, in 1877. In 1904, he and his wife built a cottage on Eagle Island, off the Maine coast in Casco Bay which is still used by members of his family.

Admiral Peary's daughter, Mrs. Marie Peary Stafford, who has earned her own reputation as an arctic explorer, now lives in Brunswick, Maine. Mrs. Stafford was born only 13° from the North Pole. Before she was 10, she had made four trips into the arctic region. In 1932, she headed the Peary memorial expedition to Greenland. Her brother, Robert E. Peary, Jr., a brilliant engineer, has worked on construction projects in the north. Admiral Peary's grandson, Comdr. Edward Peary Stafford, currently assigned to congressional liaison work with the U.S. Navy, is following the Peary family tradition of service to the Nation.

Incidentally, Comdr. Edward Peary Stafford 2 or 3 years ago won the $64,000 question prize.

Admiral Peary worked and planned for more than 20 years before he reached the North Pole. He once said, "I will find the way to the pole or make one," and at the age of 53, he walked 500 miles over ice and frozen arctic waste to make the way. He covered the last 133 miles to the pole in a daring dash alone. I doubt if there has ever been in our history a more shining example of individual enterprise, initiative and single-minded devotion to a great purpose.

It is my privilege, therefore, to ask unanimous consent that there be printed in the RECORD the remarks of Mr. Robert E. Peary, Jr., at National Cemetery on April 6, 1959, on the occasion of the 50th anniversary of the discovery of the North Pole.

There being no objection, the remarks were ordered to be printed in the RECORD, as follows:

REMARKS OF ROBERT E. PEARY, JR., AT ARLINGTON NATIONAL CEMETERY, APRIL 6, 1959, ON THE OCCASION OF THE 50TH ANNIVERSARY OF THE DISCOVERY OF THE NORTH POLE

For many years, circumstances have prevented me from attending the exercises which the Civil Engineer Corps of the U.S. Navy hold annually on the 6th of April.

To the best of my knowledge, the Civil Engineer Corps is the only organization with which my father was associated that has faithfully assembled here every year since his death in 1920 to honor him and my mother.

As representative of the descendants of that valiant couple, I wish to express our sincere appreciation and thanks.

For the past 6 years, I have been engaged in engineering work on defense projects in the far north, and people frequently say to me, "So you are following in your father's footsteps." If a person traveling from New York to San Francisco by pullman car could be considered as following in the footsteps of his ancestor who made the trek by covered wagon, then I am following in my father's footsteps.

Actually he was one—and if you will pardon a possibly prejudiced comment—the best one of a handful of pioneers who discovered new lands and broke new trails through what had heretofore been considered impenetrable regions. I am one of thousands who have come after to build on the foundation which he laid.

While his work in the Arctic was not, strictly speaking, engineering work, it seems to me that only an engineering mind could conceive, plan, and execute the work which he did.

He received his engineering education at Bowdoin College, in Brunswick, Maine, graduating in 1877, and a few years after entered the Civil Engineer Corps as a lieutenant by competitive examination.

One of his first assignments was to investigate the collapse of a Navy pier at Key West, Fla. This pier had been overloaded with, among other things, coils of wire rope, and when the pier collapsed the wire rope created a formidable tangle. The private contractor who had the contract from the Government to salvage and rebuild the pier reported that it was impossible, and young Peary was sent to investigate. His report stated that it was not impossible, and offered a few suggestions as to how it could be accomplished, whereupon he was told to go ahead and do it. This he did, not only proving that the impossible can be done, but also saving the Government thousands of dollars.

Later he, with other Navy engineers, made the preliminary survey for the Nicaragua Canal.

Then his attentions were directed to the Arctic, and for over 20 years most of his energies were directed northward. During this time he attained many firsts. He discovered new land, mapped new regions, determined the insularity of Greenland, and, to climax his work in the north, 50 years ago today he reached the North Pole, being the first man to set foot on either pole of the earth.

Mr. MUSKIE. Mr. President, I also ask unanimous consent to have printed in the RECORD at this point two newspaper articles regarding the achievement of Admiral Peary.

There being no objection, the articles were ordered to be printed in the RECORD, as follows:

[From the Portland (Maine) Telegram, Apr. 5, 1959]

VALUE OF PEARY'S ARCTIC TRIP SEEMS MORE SIGNIFICANT NOW

(By Daniel Rapoport)

"I have won out at last."

Six words scrawled in a post card. They were written on April 6, 1909, by Comdr. Robert E. Peary to his wife. The place: the North Pole. Peary had just become the first man to reach it.

For Peary, a native of Maine, it was the culmination of 20 years of almost fanatical determination. He had set his sights on the pole nearly a quarter century earlier.

He had made his first probe north in 1888, when he was only a few years out of Bowdoin College. In between he had served a short time as a civil engineer in the U.S. Geodetic Survey from which he transferred into similar work in the Navy.

His first trip was undertaken on his own during a 3-month leave of absence, but he had greater support, official and unofficial, for the series of trips that took him ever farther northward until his successful venture in 1909.

Peary reached the pole accompanied by his Negro aid, Matt Henson and four Eskimos. They were helped by support parties during most of the 37-day journey over the vast ice reaches, but went the final 133 miles alone in a daring dash.

His goal finally reached, Peary called it "the prize of three centuries," but in Washington when the news of the discovery arrived several months later, President William Howard Taft is reported to have laughingly observed: "Now that you've found it, what are you going to do with it?"

For many years nothing was "done with it." The world seemed to share the opinion expressed in Taft's jest.

As late as 1958, this country was warned of the dangers involved in neglecting the polar region. Dr. Ernest Patty, president of the University of Alaska, flatly stated the United States was "losing the battle of the North Pole."

He chided Americans for centering most of their attention on the South Pole region. "We're concentrating on the wrong end of the earth," he said, and added that Russian scientists were becoming increasingly superior in the field.

Patty's remarks on the subject were supported by the U.S.-Canadian Joint Research Committee, which in the same year issued a grim report predicting that the lack of scientific information on the polar basin "will invite a scientific Pearl Harbor."

Then, suddenly, less than 6 months after the report, the pole was again the object of an historic feat. The U.S. atomic submarine *Nautilus* crossed under the pole. Eight days later it was followed by another nuclear-powered submarine, the U.S.S. *Skate*, which managed to surface 40 miles from the pole.

Whether or not the submarine crossings mark a turning point in our study of the pole remains to be seen. In any event, public attention is certainly more aware of it than at any time since Peary's day.

A handbook of the North Pole might list these significant facts:

It offers the shortest distance between North America and Eurasia.

The pole is actually situated on the Arctic Ocean, although it is generally frozen over at the actual axis.

The ice mass covering the pole is slowly melting. The Arctic ice pack is 40 percent thinner and 12 percent smaller than it was at the beginning of the century. Experts predict that in not too many decades the region will melt altogether in the summer months.

Under the sea at the polar region are two mountain ranges, one of which divides the ocean into two great rotating systems. It was through the Barrow Valley in these mountains that the *Nautilus* and *Skate* threaded their way under the pole.

Time and direction have little meaning at the pole. Everywhere you look is south. And from March 21 to September 21, the sun circles the pole in never-ending daylight.

These days the polar region claims three major industries.

Air traffic is probably its biggest, what with planes from six airlines and the U.S. Strategic Air Command flying over it. One noted veteran of Arctic flights says the time will come soon when the region will need an air traffic control center.

Weather flights, especially by the U.S. Air Force, are made daily over the pole. Weathermen consider developments there extremely pertinent to the weather picture in the populated portions of the earth.

Scientific exploration of the polar regions has come into its own with the recently concluded International Geophysical Year. Fletcher Island, 40 square miles of ice 100 feet thick, has served as an operating base for several expeditions as it slowly circles around the pole.

To consider the future of the polar region is an exciting adventure in itself.

Military men are already quite certain of how they would like to utilize the features of the pole.

It is a perfect bomber route between the United States and Russia. Naval tacticians see great possibilities in hiding nuclear-powered missile-launching submarines below the great ice cap firing through gaps in the ice. Adm. Hyman Rickover thinks the threat of these undetected nuclear weapon carriers could also act as a deterrent to war.

Looking toward a world at peace, the trade and travel opportunities of the polar region appear to be vast. The melting of the ice cap could signal the start of extensive surface shipping during certain months of the year. And giant nuclear-powered cargo submarines would even be less limited. Air travel is certain to increase.

The two worlds divided by the Arctic Circle are destined to meet. But when they do, it is difficult to imagine anyone matching the feat of Commander Peary. His record of walking to and from the pole has never been duplicated.

[From the Portland (Maine) Telegram, Apr. 5, 1959]

(By Steve Riley)

South Portland can rightfully claim the late Adm. Robert E. Peary, discoverer of the North Pole, as a local boy who made good. But Portland, Bowdoin College, and Fryeburg can all share in that claim, too.

Although Peary was born in 1856 in a small Pennsylvania town, his parents had moved there from Maine. And, after his father died, Mrs. Peary and son moved back to the State in 1859. They settled in the Scammon Hill section of South Portland, which was then part of Cape Elizabeth.

The section contained woods and streams and it was there that young Peary's avid interest in the outdoors first became apparent to his friends.

One of these friends was the late Edward C. Reynolds, who eventually became a prominent local attorney. Back in the days when Peary's fame was at its height, Reynolds told reporters many tales of his boyhood experiences with the explorer.

"He liked boating, skating, and sliding," Reynolds said. "He had strength and agility and if football and baseball had been played much in those days he would have excelled." He wasn't big, but he was wiry and could move quickly.

Mrs. Peary and Bert, as Robert was known to his friends, lived with a cousin in that section of town a short time, then mother and son moved to an apartment in the Freeman Evans house at the corner of Evans and Summer (now Broadway) Streets in the Pleasantdale section.

The Reynolds family moved to the same area shortly afterward so the two boys remained chums and went to school together in a little building known as Schoolhouse No. 3.

"It has been said by some that Peary had to earn every cent of his education," Reynolds said, "but that is simply not true. His father died young but he left Mrs. Peary a competence. With her plain, inexpensive habits, she always managed to supply sufficient funds for her son's education."

That must have been true, for Peary soon left the little South Portland school and entered a private school in Portland and later another private school in Farmington.

He returned to Portland, however, for high school, and he and his mother moved to 119 Oxford Street, where they lived until he graduated in 1873.

Reynolds was an invited guest at Peary's high school graduation and here's how he pictured it:

"I went to the old city hall at Bert's invitation to see him graduate. He had a part, but he was neither valedictorian nor salutatorian of his class. I think his essay was on 'Mysteries of Nature.'"

Bert Peary went on to Bowdoin College as an engineering student, but his close relationship with his mother continued. She

followed him there and kept house for him all the time he was going to school.

Peary's interest in sports continued and his work in engineering and science subjects was outstanding. But he was no grind, as this entry in his diary shows:

"Tuesday we are examined in mathematics and after that—hurrah for a long vacation and no studying."

The diary is full of talk about sports and contains many entries which indicate that Peary liked working in the field as an engineer.

It reveals that in a ball-throwing contest he threw one 316 feet, 10 feet ahead of his nearest competitor.

"There were a good many surprised looks and I overheard one fellow telling another that he didn't see where I kept all that amount of throw, for I didn't look as if I could do it," he wrote in the diary.

He could call upon similar ability in his studies. Talking about a problem in graphical statics, he wrote:

"The professor and I worked on it all day with no results. The next day we worked until noon * * * the next day we went at it again and worked all day. At night I got it, obtaining an almost perfect result. I then showed it to him and * * * the next morning he brought it back saying it was the best piece of work that had been done in the department since it was founded. I tell you I was as happy a boy as you often see, I was so completely rewarded for all my labor."

But despite this display of scholastic skill, Peary was not the top student in his class. His old friend, Reynolds, attended his graduation as a civil engineer.

"Again at Peary's personal invitation, did I attend his graduation. I was a guest of his family during commencement exercises. Once more, Bert had a part but again he was neither valedictorian nor salutatorian. I think he was a fair scholar and had very little trouble passing his mathematics. It was only in mathematics, though, that he was brilliant. He excelled at that branch of studies."

After graduation in 1877, Peary took a job in Fryeburg, his mother's home town. He had always enjoyed wandering through the White Mountains during his summer vacations and that may have been the reason for his choice, but whatever the reason, Reynolds was disappointed.

"I had a feeling that he had taken a step backward," Reynolds said, "that somehow, the brilliant career we had all come to believe must be his seemed to be eluding him. When he remained 2 years, I felt this even more keenly."

Despite his friends' reservations, there are indications that he spent a happy 2 years in Fryeburg. His mother moved back and established her home there.

He spent a great deal of time surveying and made a topographical map of the town. For recreation, he enjoyed horseback riding. But it soon became obvious that there was not sufficient challenge. Two years later in 1879, Peary left home, and his mother, to take a job with U.S. Coast and Geodetic Survey group in Washington.

That was the move that was to lead him in a few short years from obscurity to nationwide fame as an explorer and discoverer.

THE LATER YEARS

Admiral Peary was married in 1888 to the former Josephine Diebitsch, of Washington and it soon became clear that he would be as close to her as he had been to his mother.

She accompanied him on several trips north and their daughter, Marie, was born far above the Arctic Circle. This won her nationwide fame as the "Snow Baby."

Although his trips north kept him away much of the time. Peary never really deserted Maine. After his mother's death, he and his wife built a cottage at Eagle Island, off Harpswell, in 1904. The cottage was enlarged in 1910.

Mrs. Peary and her children, Marie and Robert E. Peary, Jr., spent many summers there and the explorer dropped by whenever he could, until his death in 1920.

Mrs. Peary continued to come to this area in the early 1930's. She lived in a Baxter Boulevard apartment winters and spent her summers at Eagle Island until her death, at 92, in 1955.

ADDRESS BY SENATOR TALMADGE

Mr. RUSSELL. Mr. President, on Monday, March 30, of this year, my distinguished colleague [Mr. TALMADGE] delivered the principal address at the annual banquet of the Atlanta Public School Teachers' Association in Atlanta. I regard this as a particularly noteworthy speech. It deals with the personalities of some of those who have been prominent in education in Georgia for many years.

My distinguished colleague served for 6 years as Governor of the State of Georgia and is throughly familiar with every aspect of the educational system of that State. He has a number of ideas on present day education which have attracted a great deal of attention.

Mr. President, I ask unanimous consent that the address be printed in the RECORD.

The PRESIDING OFFICER (Mr. MUSKIE in the chair). Is there objection to the request of the Senator from Georgia?

There being no objection, the address was ordered to be printed in the RECORD, as follows:

President Derthick, Miss Jarrell, distinguished guests, and members of the Atlanta Public School Teachers' Association, thank you for according me the honor of sharing this delightful occasion with you.

It is a particular pleasure for me to have the opportunity to meet with the teachers of Atlanta because as a parent whose children have attended the public schools of Atlanta I have a deep and abiding interest in Atlanta's public educational system and its welfare.

The sustained progress which the city of Atlanta has made over the years in developing one of our Nation's foremost programs of public education is a record in which you, and all Atlantans and Georgians, can take justifiable pride.

I share that pride and I salute you—the public school teachers of Atlanta—upon your achievements of the past and your plans for an even greater future.

The city of Atlanta is fortunate indeed to have the services of capable and loyal teachers like you and of able and dedicated school officials like your superintendent, Miss Ira Jarrell.

I know of no one in Georgia who has made a greater contribution to the cause of public education or who has served the public interest more tirelessly and unselfishly than has Miss Ira. The Atlanta public school system stands as the embodiment of her consummate skill as an administrator and her proven devotion as a teacher.

During my tenure as Governor, I had the privilege of working with Miss Ira on a number of occasions and I gained therefrom a tremendous respect for and admiration of her not only as a great educator but also as a great lady.

Miss Ira, I am pleased that I have been afforded this opportunity to pay my respects to you and the outstanding job you are doing for the city of Atlanta and the State of Georgia.

It is a sad commentary upon contemporary society that, of all our public servants, none are given less recognition, are taken more for granted or are more criticized than are our teachers.

While it is granted that we have grave problems in the field of education—problems which we must resolve soon and realistically if our Nation is to survive—I have no patience with those whose only solution is to blame our difficulties on the teaching profession.

If Johnny can't read, spell or write a simple essay and if Susie is mathematically and scientifically illiterate—and I am afraid we will have to admit that all too many Johnnys and Susies fall into these categories—the fault is not the teacher's, but society's.

The situation in which we find ourselves today is the product of a quarter century of soft living in which security, conformity and comfort have become more important than love of adventure, thirst for knowledge and the challenge of the future.

When fathers consider football more important than physics and when mothers attach more significance to passing than learning, it is hardly likely that teachers who are dependent upon the public treasury for their livelihood can successfully resist the trend.

It would be a wonderful thing if education could be served to all with the ease of a quick-frozen dinner or could be swallowed like a concentrated vitamin capsule. But the most intriguing anomaly of our time is that the further we advance toward the ultimate in technology and creature comfort, the greater is the demand for better-trained technicians to maintain and sustain them.

Therefore, we arrive at the paradox that the first requirement of an easy life is a hard education.

Unless society faces up to the fact that there is no short cut to education and puts an end to schooling in the philosophy of getting by, the United States soon is going to find itself in the position of the foolish fellow who failed to measure the width of his doors before undertaking to build a yacht in his basement.

Teachers know Johnny will never master quantum theory physics by taking courses in handicraft.

Teachers know Susie will never learn how to put two ideas together for a college thesis by studying folk dancing.

Teachers know it is impossible to instill culture with comic books or to produce scientists with social adjustment tests.

Teachers know that when Johnny is insulated against competition and Susie is sheltered from the facts of life, both are coddled into mental paralysis and intellectual stagnation and another step is taken toward a perpetual cycle of educational and intellectual mediocrity.

The pressing question is not when are the teachers going to do something about education but rather when are the parents going to let the teachers do something about education.

The mothers and fathers of this country need to ask themselves in all honesty these questions:

How much longer is society going to try to make everybody happy by giving them the trappings of an education and by handing out high school diplomas as attendance prizes instead of earned badges of applied scholarship?

How much longer is society going to be lured by the siren song that public education must be diluted to the lowest common denominator in order to avoid frustrating the child of average or below-average intelligence?

How much longer is society going to kid itself into believing that it is possible to educate youth on a basis other than the highest standards of quality and performance without turning the cherished American dream of universal education into a nightmare?

How much longer is society going to insist upon substituting the right to march in a commencement procession for the right to an education?

If ours were the only Nation on earth and we were not engaged in a life-or-death technological and ideological struggle with an enemy sworn to our destruction, there conceivably might be some justification for what former U.S. Senator Ralph Flanders, of Vermont, aptly called a happy ant school system.

However, the realities of life and the lessons of history being what they are, there is—to use the words of one of our country's greatest scientists and scholars, Vice Adm. Hyman G. Rickover—"little comfort for the survival of a society composed of happy, cooperative ants."

Admiral Rickover, the father of the atomic submarine, correctly observed in a recent speech that "nothing we bestow upon our children in the way of material advantages can compare with the gift of a good education."

How true.

And how sad it is to reflect upon the large numbers of our countrymen who have come to consider administering to the wants of the physical body more important than developing the mind.

Admiral Rickover's further words on this subject are so profound and so true that I would like to quote further from them. He declared:

"We often speak of democratic freedom, and of course we treasure it. But basic to political freedom is personal independence; and this can exist only where the mind has been unshackled from ignorance, from dependence on the opinions of others, and from fear of disagreeable facts.

"Bombarded as all of us are, all day long, by subtle sloganeers seeking to convert us to their views, we sorely need minds that have been sharpened by hard intellectual work. We must know how to dig up our own facts—how to discover truth for ourselves.

"The person who has learned to trust only proven facts, who knows how to find and recognize truth, and who has been trained to decide all issues on the basis of truth and reason—he and he alone is a free man."

The goals of education have never been defined more eloquently.

Education on any other basis will not equip our young people for competition in a world in scientific revolution.

Education on any other basis will not produce well-rounded scholars who can match and surpass the genius of any mind produced by the schools of our enemies.

Education on any other basis will not kindle in the breasts of future generations the same flame of individual initiative and desire for self-betterment which motivated our Founding Fathers to build and preserve the greatest and freest nation the world has ever known.

The first step toward putting American education on that basis is for society to admit to itself the awful truth of the observation of historian H. G. Wells that "human history becomes more and more a race between education and catastrophe" and then to take its stand on the side of education.

Once we Americans recognize our problem the solution to it is simple.

All we have to do is to throw the schemes of the theorists into the discard and put the dedicated teachers back to teaching.

There is nothing wrong with the American educational system which cannot be cured by stiff doses of discipline, rigorous training in the three R's, a shift in major emphasis from more classrooms to more classwork and a return to the fundamentals of integrity, intellect, wisdom, and will.

While I would not minimize the importance of having the best possible buildings, facilities, and equipment for our schools, the point I want to make is that the quality of education is dependent not upon the physical materials used in teaching but rather upon the ability and dedication of the teachers.

President James A. Garfield forcefully emphasized that truth when he said of the president of Williams College:

"I am not willing that this discussion should close without mention of the value of a true teacher. Give me a log hut, with only a simple bench, Mark Hopkins on one end and I on the other, and you may have all the buildings, apparatus, and libraries without him."

I have never known a successful man who said that the inspiration of his life was a school building but I have heard many who attributed their success to the inspiration of teachers who aroused within them a sense of purpose and who channeled their latent talents into capacities for accomplishment.

Speaking for myself, I know that whatever success I may have achieved, or may in the future achieve, I owe in a large measure to the teacher who awakened in me an interest in history and public affairs and who taught me to love the give-and-take of debate and to appreciate the satisfactions of public speaking.

She is Mrs. Jerry Duggan, of Dublin, whom I know affectionately as "Miss Enda." To me she is the personification of all a teacher should be and I still seek and treasure her sound advice and wise counsel just as I did when I was one of her students in McRae more years ago than I care to remember.

I venture to say that each of you here tonight has had a counterpart of "Miss Enda" in your life and that, in a large measure, you can attribute your accomplishments to her instruction and encouragement. I also am sure that many of you teachers are "Miss Enda's" to your pupils and that under your influence and guidance many of the leaders of the world of tomorrow are being inspired and prepared.

It was to the "Miss Enda's" of the teaching profession that Johann Von Goethe referred when he wrote:

"A teacher who can arouse a feeling for one single good action, for one single good poem, accomplishes more than he who fills our memory with rows on rows of natural objects, classified with name and form."

It was of the "Miss Enda's" of the teaching profession that Anatole France was thinking when he penned these words:

"The whole art of teaching is only the art of awakening the natural curiosity of young minds for the purpose of satisfying it afterwards."

It was of the true worth of the "Miss Enda's" of the teaching profession that Henry Brooks Adams said: "A teacher affects eternity; he can never tell where his influence stops." And Sir William Osler stated: "No bubble is so iridescent or floats longer than that blown by the successful teacher."

It was the "Miss Enda's" of the teaching profession who built and maintained here in America an educational system which, until only recently, had no challenger anywhere in the world.

And it is to the "Miss Enda's" of the teaching profession that we must turn to save our schools from degenerating into intellectually barren and culturally sterile baby-sitter clubs.

The "Miss Enda's" of the teaching profession know there is no easy way to get an education and they recognize the fallacies and dangers inherent in the utopian and unrealistic theories of the so-called progressive educators.

The "Miss Enda's" of the teaching profession know that there is only one way through which knowledge can be acquired and youth equipped mentally to cope with the problems of adulthood—and that way lies in diligent study, intensive application and hard work.

The future of America demands that the dedicated teachers—the "Miss Enda's," if you please—be restored to positions from which they can make absolutely certain that our children are educated to realize their highest capabilities for the benefit of themselves and our country.

I feel confident that you who count yourselves in the ranks of the dedicated teachers agree with me in that conclusion.

A second facet of the progressive philosophy that equality is more important than quality in education has even more ominous and immediate implications for the South.

I refer to the application of that false philosophy by the Supreme Court of the United States in its present effort to force a new social order upon our region by judicial constitutional amendment.

It is not necessary for me to tell you that, carried to its ultimate conclusion, the enforcement of that philosophy will have the disastrous result of destroying public education in many areas of the South.

Such an eventuality would be an unparalleled catastrophe which no one would deplore more vigorously than I.

It would be a terrible tragedy from which no one would benefit and in which the children of the South would be the principal losers.

My position in support of public education is well known.

My record on that point as Governor of Georgia speaks for itself.

And I wish to declare to you and all Georgians that, in every way open to me as one Member of the U.S. Senate, I shall continue to work and fight for the preservation of our public school system so long as it can be preserved on the basis of our constitutional heritage of government by the consent of the governed.

However, let me also make it equally plain that I shall never so stultify my conscience or so compromise my convictions as to advocate the preservation of public schools at the price of the surrender of the constitutional right of the people of Georgia to administer them as they see fit.

The basic question involved is far more fundamental than the mere matter of who attends what school. It goes to the very heart of our concept of constitutional, republican government; that is, the right of local people to run their local affairs in accordance with local wishes, conditions, and prevailing attitudes.

And whenever we in this country get away from that fundamental cornerstone of our freedom, as of that moment we will have ceased to be a nation in which the people govern themselves and will have become instead a judicial dictatorship.

Now I recognize that on the issue of separation of the races in the schools of the Nation there is a wide divergence of opinion and individual feelings are strong and inflamed on both sides. The best minds of the country are divided on the constitutional and sociological ramifications of the Supreme Court's desegregation decision.

Therefore, an essential prerequisite to resolving the issue without destroying the public schools of the South is a recognition on the part of all the people of this Nation—East and West as well as North and South—of the two incontrovertible facts of the situation:

First, whether one accepts it or not, the Supreme Court's school decision is an accomplished fact which will remain so until

it either is reversed by the Court itself or is nullified or modified by Congress or the people.

And, second, whether one likes it or not, the overwhelming majority of the people of the South will neither accept nor submit to the forced implementation of that decision and there is no prospect of any change in that position within the foreseeable future.

There is only one realistic, constitutional way by which the public schools of the South can be spared the fate of being crushed between those two millstones.

That way lies in affirmatively amending the Constitution of the United States along the lines I have proposed to vest exclusive and concurrent jurisdiction over the administration of public schools in the various State governments and their political subdivisions.

Such a solution would be compatible with our American constitutional concepts and would provide firm common ground upon which those who disagree on the legal and social questions involved could meet to serve the best interests of the present and future generations of American youth.

It would settle the question for all time to come and would permanently end the threat of Federal control of education from any quarter.

It would assure the uninterrupted instruction of all the children of the Nation regardless of their color or place of residence.

It would assure that whatever change might take place would be with the consent of the governed and by the constructive process of evolution rather than the destructive process of revolution.

It would preserve the constitutional right of the States and their citizens to run their own affairs.

It would create a basis for unity throughout the Nation at a time when it is vitally important that we of the United State present a united front before our enemies.

The principle of State and local control of public education is well established by both law and precedent.

Our Founding Fathers recognized that education is a local responsibility by leaving it as one of the areas retained for exclusive State and local control under the terms of the 9th and 10th amendments to the Constitution.

It is a principle which is supported both by the local nature of school financing and by the findings of responsible Federal study groups.

According to the Library of Congress, 93.4 percent of all public school revenue and 96.4 percent of all capital outlay funds for public school facilities are raised on the State and local levels. And, in a report issued June 28, 1955, President Eisenhower's Commission on Intergovernmental Relations declared that the national interest in education, like many other national objectives, is best served by State and local administration and control.

Since 1889 Congress itself has, in 12 instances bestowed exclusive control over public schools to newly admitted States—the latest being the Hawaiian Statehood Act which provides that the schools of the Hawaiian Islands shall forever remain under the exclusive control of said State.

I find myself unable to comprehend how any thinking person could possibly disagree with the premise that public schools which were established and are financed on the local level should be administered in accordance with the desires of the parents of the children attending them.

Neither can I understand how any Member of Congress who sincerely desires to see this disruptive issue peacefully and permanently resolved and who genuinely is concerned about the welfare of all the children of the United States could oppose the submission of an amendment along the lines I have proposed for ratification or rejection by the elected representatives of the people on the State level.

The very basis of our form of government is, in the words of the Declaration of Independence, that it derives its "just powers from the consent of the governed."

That is the crux of the present effort to force a new social order upon the South by judicial dicta—it is being done without the consent of the people directly affected.

The sum total of the experience of mankind is that attempts to force all humanity into the same mold are foredoomed to failure because the inherent individuality of the human soul inevitably will assert itself—shackles and jails to the contrary notwithstanding.

Until the day when we have a situation like that envisioned by Aldous Huxley in his controversial book, "Brave New World," in which babies are grown in bottles to predetermined mental and physical specifications—and God forbid that civilization ever shall descend to such depths of depravity—there will never be a dictator, a court, an oligarchy or a philosophy which can make all men think, act or react alike in any given situation at any given time.

The same Supreme Court which now is trying to force all schools into the same mold is the same Supreme Court which, in its initial decision, acknowledged the variety of local problems presented by its ruling and instructed the district courts to take local conditions into account in formulating their decrees under it. However, when the Little Rock District Court sought to do just that last year, the High Court reversed itself and held that integration would have to proceed despite local conditions and the public interest.

The Supreme Court thus has sought to establish itself—without benefit of constitutional or legislative authorization—as a super board of education superior to the Constitution, to Congress, and to the consent of the people. In the course of less than 5 years it has so disrupted laws governing education that every school in the Nation now is subject to the whims of whatever five men happen to constitute a majority of the Court.

I, for one, do not believe that it is the wish of the rank-and-file of the citizenry of the United States that local schools which were paid for and are operated on the local level should be put at the mercy of a Federal court which has no knowledge of educational needs or the public interest in fulfilling them.

Of all our public institutions, none are more needful or deserving of stability and continuity than are our schools. It is inconceivable that the younger generation can be educated for responsible citizenship in the future under continually changing rules of instruction.

However, national power politics being what they are—with organized minority pressure groups exercising powers denied to the unorganized majorities—it would be totally unrealistic for anyone to hope that Congress would act on its own under present circumstances to approve an amendment along the lines I have proposed.

Consequently, our one hope for getting a hearing for our viewpoint in Congress lies in eliciting a sympathetic response from the constituents of Members of Congress—particularly those who represent States and districts outside the South.

We in the South can best work toward that end by acquainting our friends and relatives who live in other regions with the facts of our desperate plight and by asking them to urge their Senators and Congressmen to support the Talmadge school amendment.

It has been most gratifying to learn that a number of Georgia newspapers have organized letterwriting campaigns in this regard. And if we could get every Georgian and every southerner to write to just one person living outside the South, I believe there would be a good chance of generating an expression of public sentiment which would bear fruit in the Halls of Congress.

It is my thinking that those of us who believe in local self-government and local self-determination have been too long in a defensive posture. We have failed to realize that our struggle is for the minds of people outside the South and to take steps to win the sympathy of those people.

The mail which I have received since proposing my amendment leads me to believe that the overwhelming majority of the American people feel that schools which are erected and financed by local people should likewise be controlled and administered by local people.

If we can get around the lockout of information imposed by the various news media outside the South and reach people in other areas of the country with our message I believe we can get them thinking in the proper perspective and win their support for a reaffirmation of the time-honored right of all Americans to run their local affairs as they see fit.

I have unlimited faith in the desire and willingness of the American people, once they are acquainted with the facts, to demand that our national house be set in order.

In a constitutional Republic such as ours, the masses may not be immediately articulate, but once given leaders and leadership they are swift in making their wishes felt and known.

The outcome of our struggle for our rights will depend largely upon how strongly we feel about it and how hard we are willing to work to promote our viewpoint.

This is not something which can be left for the other fellow to do if we seriously expect to get it done.

If all of us will but put our efforts where our beliefs are, I am convinced that a public expression can be obtained and that expression will be to give Congress a mandate to afford the people of America an opportunity to amend the Constitution to assure for all time to come that our schools shall continue to be public and that the control of those schools shall continue to remain in the hands of local people.

Our heritage as free Americans is that our Government's foundations rest upon the will of the people.

It is a heritage of which we are proud and which the entire world respects.

It is a heritage to which this Nation must adhere if it is to be passed uncompromised to our children and their children after them.

It is a heritage which is to be put to an acid test in the issues which will determine the future course of education in the United States.

We of the South—you and I—have our work cut out for us if we are to preserve that heritage.

With our faith in Almighty God and our feet firmly planted on the rock of the Constitution, I am supremely confident that we shall not fail.

TV BOOSTER STATIONS

Mr. MOSS. Mr. President, thousands of people in my State of Utah, and in other parts of the country, are awaiting anxiously the action of the Federal Communications Commission on proposals for modifying its rules concerning VHF–TV booster stations.

I ask unanimous consent to have printed in the RECORD a letter I addressed today to Chairman Doerfer, of the Federal Communications Commission.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

U.S. SENATE,
COMMITTEE ON INTERIOR AND INSULAR AFFAIRS,
April 7, 1959.

Hon. JOHN C. DOERFER,
Chairman, Federal Communications Commission, Washington, D.C.

DEAR CHAIRMAN DOERFER: Almost 2 months have passed since the staff of the Federal Communications Commission was directed to make a study of VHF–TV booster rulemaking. Since I believe this problem has been in actual study status since some time in January, I cannot understand why final action has not been taken.

I am reliably informed that over the past month, booster equipment which could be put on the market for under $500 has been undergoing tests in FCC laboratories, and that this equipment can meet the basic requirements of the FCC. Surely this is the last and most important step of this study.

I know that T. A. M. Craven, the only FCC Commissioner-engineer who conducted, on behalf of the FCC, an on-the-spot inquiry, said in November 1957, that the Commission can and should establish reasonable rules providing for the authorization of VHF boosters on a practicable basis.

I am sure you are familiar with the letter written by former Senator Dill, of Washington, to Senator FULBRIGHT, of Arkansas, in answer to the appeal of the distinguished Senator from Arkansas that the FCC be allowed to administer the Communications Act as it relates to boosters without undue interference. Senator Dill, who wrote the radio law in 1927, and revised it into the Communications Act of 1934, and whose long years of service on the Senate Interstate and Foreign Commerce Committee made him one of our foremost communications experts in the country, summarizes the situation very well when he writes:

"It should be remembered that the dominant purpose of Congress when it passed the radio law was to provide free radio service to all of the people. These little boosters come as near to doing the job as is possible in lonely parts of the country where direct reception is impossible."

Mr. Chairman, I hope the FCC action will be forthcoming shortly. You can appreciate the fact that the people throughout the country, and particularly in my State of Utah, who need VHF–TV booster service, are anxious to ascertain the kind of ground rules under which they may operate. The people in remote areas of the country should certainly not be denied the entertainment and educational benefits of TV at a price comparable to that paid by the public in larger communities.

With kindest regards.

Sincerely,

FRANK E. MOSS,
U.S. Senator.

PROPOSED GREAT BASIN NATIONAL PARK, NEV.—MULTIPLE-USE MANAGEMENT OF AMERICAN FORESTS

Mr. MOSS. Mr. President, there is considerable discussion in western Utah and eastern Nevada about a proposal to create a Great Basin National Park in the Wheeler Peak-Lehman Caves area of the Snake Range in Nevada.

It is my understanding that the Department of the Interior has recently completed a comprehensive study of the area to determine whether it possesses the intrinsic significance to warrant its designation as a national park or monument, and that these findings will be considered at the meeting to be held this month of the Advisory Board on National Parks, Historic Sites, Buildings, and Monuments. I hope that the report this group makes to the Department will also discuss fully the advisability of authorizing livestock grazing, mining, hunting, and fishing within the area should it be recommended for a national park or monument.

Wheeler Peak and its associated mountain areas are in the Snake division of the Humboldt National Forest which has been administered as part of the national forest system since 1909. This national forest area contains many resources subject to management and utilization under the multiple-use policies of national forest management, including forage, water, timber, game—especially deer—and recreation. There are a number of mining claims in the region.

Mr. C. J. Olsen, presently director of the State park and recreation commission, and formerly the regional forester at Ogden, Utah, has written a challenging article on multiple-use management in the February issue of American Forests, entitled "The Proposed Invasion of Mt. Wheeler." In asking unanimous consent that this article be printed in the RECORD, I am not taking any stand for or against the proposed Great Basin National Park. I am only making Mr. Olsen's experienced thinking on multiple-use management available for study and discussion.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

THE PROPOSED INVASION AT MOUNT WHEELER

(By C. J. Olsen)

The opinions expressed in this article are concerned with a fundamental issue in land management policy, and are addressed therefore to all readers. However, they are addressed even more pointedly to Nevada residents—so many of whom I know, and so many of whom I claim as warm friends—because it is they who will be most directly, and most seriously, affected if a bill scheduled for presentation in the forthcoming session of Congress is enacted into law.

The bill I refer to is designed to create a national park out of the Mount Wheeler area in the Snake Division of the Humboldt National Forest in Nevada.

The proposed park area was described in Nevada Highways and Parks (Nov. 1, 1958) by Weldon F. Heald. Mr. Heald wrote that the area contains "* * * a characteristic kind of western scenery now lacking in the Park Service that should be added while there is still time."

All readers in any degree interested in the proposal itself are urged to reread these words, because they represent a widespread attitude affecting land management that seriously needs refutation. My efforts to refute it are directed against the attitude itself, not against Mr. Heald, nor against others who I am sure sincerely believe it would be wise to create a national park of the area named.

The implication in any such words as those quoted—however well meant—is that unless this area is added to the national park system "* * * while there is still time," it will be despoiled of its scenic and recreational beauties, and its most essential values will be lost to the people. Of necessity, too, the implication is that the interests of John and Jane Citizen, whether of Nevada, Michigan, or elsewhere, are to be properly served only if such areas are given national park status and subjected to the limited-use practices in national park lands.

I am fully aware that existing national parks—especially the more spectacular and inviting ones—are heavily used, and are becoming more and more heavily used each season, and that new park areas are needed. I should like to make it emphatically clear, too, that I am in no way opposed to the existence of national parks; neither am I necessarily opposed to the policies under which areas that should be national parks are administered. What I am opposed to is the easy assumption that the Wheeler Peak region in Nevada, or any similar region elsewhere, can serve public interests best if given the "national park" label and withdrawn from all but scenic and recreational use.

To preserve is often necessary, but to conserve is often far better. To maroon certain highly valuable and critically needed resources in any State by circumscribing them with national park boundaries may be equivalent, not merely to locking up such resources, but to throwing away the key.

Let us examine the facts as thoroughly as possible.

The proposed national park boundaries would include Mount Wheeler and adjacent lands totaling about 75,000 acres. Adjoining this area is a tract about 1 mile square, already set aside and operating as the Lehman Caves National Monument.

The proposal has recently been expanded to include 220,000 acres of the Snake Range, leaving only 20,000 acres in the southwest corner of the Snake unit in the national forest. An additional 63,000 acres of public domain along the east side have been added to the proposal.

Sixty percent of the new proposal inside the national forest area is within an established mining district. The area is generally highly mineralized, and contains several patented mining claims and an unknown number of unpatented ones. Several hundred acres of private ranch lands are included in the area outside the national forest. Either proposal, if made into a national park or a national monument, would create an impossible management problem. According to the Nevada Fish and Game Department, 800 sportsmen have been permitted, in past years, to harvest the annual deer crop. This essential management process would be eliminated. The National Park Service would have a "bear by the tail."

Both proposals would seriously affect the operations of ranchers and livestock men in this area. The latter proposal, number 2, would, of course, most seriously affect them, I am not advocating overuse of forage by livestock, but conservative use—use which will perpetuate the forage supply and protect the soil and watershed. The impact of either proposal would be serious for the colorful and profitable ranching operations in eastern Nevada and western Utah, as well as for the whole economy of Nevada, present and future, although proponents may say that the ranch economy will be replaced by a single recreation economy.

Under multiple use management, with the application of research methods and through the cooperative efforts of the land managing agencies, the Nevada Fish and Game Department, the sportsmen, those interested in recreation development, the water users, the stockmen, and other interested groups, we can have a permanent, productive and thriving economy, without the restrictions necessarily imposed by a national park or national monument status.

Topographically the area is high and mountainous, culminating in Wheeler Peak, rugged and spectacular, rising to 13,063 feet. On the north face of Wheeler Peak is a deep cirque holding a permanent snow field or névé, highly valuable as a water resource, but technically a névé, rather than a glacier as some enthusiasts have advertised it and supposed it to be.

The resources generally are typical for such a region, and are especially to be prized in a State where high and verdant terrain is extremely limited in proportion to total State area.

Twelve streams have their source in this area, with a peak flow sufficient to irrigate about 10,000 acres of farm and ranch lands. In addition, these streams supply domestic water for four local communities as well as for the private ranch establishments scattered along stream courses.

Recreational facilities, concentrated largely in the Lower Lehman Creek area, include 45 picnic sites and camping units and 14 trailer-house units. A system of well-kept trails is being projected into outlying wilderness spots, and about 45,000 people are already coming to the area annually and making use of existing facilities.

Wildlife is considered plentiful. A deer herd estimated to be 3,000 strong, ranges the area for an 8-month period each year. Fishing is kept good by seasonal plantings from the Snake Creek Fish Hatchery, a State-maintained agency. Beaver (restricted to trapping, of course) abound in upper reaches of the streams.

There is an estimated 3 million feet of merchantable timber in the area, about one-half of it being ponderosa pine. In addition, about 1,500 piñon pine Christmas trees are harvested each year on a thinning basis.

The Wheeler Peak areas provide annual grazing for more than 400 cattle and about 4,000 sheep.

The mining resources of the area stand high among the region's assets. More than 260 acres are covered by patented claims, and nearly 1,200 acres more by valid unpatented claims. The western slopes generally are mineralized and mining potential is considered to be good.

Would it be wise for Congress to pass a bill this year—or ever—withdrawing this area from multiple-use privileges? It is my firm belief that it would not.

This belief, if justified, must be supported, of course, by strict reference to the facts. I should like to return therefore to the article by Mr. Heald, already referred to. He says, "* * * it is one of the fundamental policies of the Park Service that each unit within the system should exemplify a definite type of scenery which is a supreme example of America's originally rich and diversified wilderness." This statement of course is in keeping with national park policy "to protect and preserve areas of remarkable scenic and scientific values." A bit later in the Heald article, however, the author contradicts the idea that the Wheeler Peak area is unique (and therefore that it needs special safeguarding) by pointing out that it is "* * * typical of the vast desert region between the Rockies and the California Sierra Nevada * * *."

In this last statement, Mr. Heald and those who are thinking with him in terms of national park areas are entirely correct. The Wheeler Peak area is typical, and typical not merely for its locale, but typical of a great many high mountain areas in the Great Basin region. Such areas are spectacular, but scarcely unique; and any justification for withdrawing the Wheeler Peak area from multiple use by making a national park of it would be justification for doing the same thing with any of a score of similar areas.

The name "national park" may sound inviting to many people. It may tend to flatter the people of any State by suggesting that they possess an area unusual enough to deserve setting aside exclusively to provide recreational and scenic values. There is the special danger, too, that people in communities adjacent to the park, or en route to it, may be caught up by unwarranted enthusiasm and proclaim the merits of park status too soon and too loudly, without enough thought.

Let us take the resources offered by the Mt. Wheeler Peak area and consider precisely what would happen to each if the bill in question became law.

I have already made the point that the area, though rather spectacular, is no more unique than many other areas in the Great Basin region. But before leaving this point, I want to add that the preservation of the scenic values of this area (one of the main reasons for proposing to turn it into a national park) has not suffered under Forest Service administration, and is in no danger of suffering. They are there, rugged and grand, and protected in a degree quite as rigid as they would be under park status.

I should add also that the proposed national park boundaries would leave a narrow marginal area of forest and rangelands in the Snake Range still under Forest Service management, but awkward and expensive to administer effectively.

I should like to reemphasize the point that the particular spot in the Mount Wheeler area that should be devoted to special use, namely, the Lehman Caves, has already been set aside and is operating as a national monument.

The facts already stated give evidence that the scenic and recreational resources of the region are already being well developed and properly utilized. The facts correctly suggest, too, that the services necessary to a fuller utilization of these resources will be expanded as needed, in keeping with long-established Forest Service policy. The facts should imply also that the scenic and recreational resources of this area, such as they are, can in no way be enhanced nor extended by mere application of a national park label.

My whole argument up to this point amounts to this: The special resources which the national park system is designed most expressly to protect, make available, and preserve, are already being made available, protected, and conserved.

On the one hand, therefore, little if anything that the public needs and wants from the Mount Wheeler area would be gained by making it into a national park; on the other hand, much, very much, would be lost. Let us see why.

Timber harvesting is an entirely legitimate use, and a critically needed one, in this area. A timber harvest can be perpetuated endlessly under conservative forestry practice without in any way diminishing the scenic and recreational values of the area. Under National Park Service policy, timber usage for merchantable purposes, regardless of potential, is of necessity ruled out.

Grazing is a legitimate resource of this area—a badly needed resource. Grazing is being judiciously regulated under the present multiple-use plan, and with the application of sound range management principles, a cattle and sheep harvest—like a timber harvest—can be continued. Under national park management, grazing of livestock is prohibited.

Big game constitutes another legitimate resource of the area—a valuable and much-prized resource. Under Forest Service management an appreciable annual deer crop can be had indefinitely. Big game has, of course, a proper esthetic value; but essentially, big game needs to be harvested annually and in proper degree as a legitimate crop. This is necessary to keep herd numbers in proper balance with forage supply. Big game harvesting is desirable also because the public is allowed to participate in and to share in the harvest.

One of the major objectives of multiple-use management of the renewable resources mentioned up to this point is to perpetuate them and, through applied research methods, make them even more permanent and more productive. Under the national park system a game harvest is of necessity precluded.

Mining constitutes another legitimate resource of the area. And the proper promotion of mining, with its attendant income and jobs, in a region of known potential is an interest that an informed public will not readily forego. Mining interests, properly regulated by law as they are now, need not conflict with other resource uses in the area. Moreover, it may add appreciably to the mineral resources of a Nation which must look ahead with increasing care to a swiftly mounting population and to the diminution of known sources of supply. Of necessity, mining, regardless of potential, cannot be promoted under the national park system.

These are the main reasons why it would be disadvantageous to the public generally to withdraw the Mount Wheeler area from multiple use under the Forest Service, and subject it to highly restricted use under the national park system. Moreover, such an action should be objectionable to the Park Service itself, because it would introduce into a system of highly select lands a region without enough qualifications to recommend it adequately as a national park.

I should not conclude an article in which I have set forth my strongest convictions without some accounting for the vital interest I have in the Wheeler Peak issue.

I am vitally interested, first of all, because I have spent a very large part of my life studying and administering public lands. Out of this experience has come a great faith in the wisdom of multiple-purpose usage of all public lands, except for areas so highly specialized and unique in nature that there can be no reasonable doubt that it would be wise to put them under the restricted usage the national park system is designed to serve.

Secondly, I have a vital interest in this issue because of a longstanding, intimate, and fond acquaintance with the area itself. I was supervisor of the Nevada National Forest during 1932, 1933, and 1934, and even before the Civilian Conservation Corps program began, I encouraged the purchase of the 40-acre tract marking the opening to the now famous Lehman Caves.

I recall with fond appreciation such names as Chris Roan, Andy Barr, George Doyle, Vail Pittman, Charles Russell, and many others—all public-spirited men, and all key figures in those first early efforts needed to forestall private exploitation of the Lehman Caves and to assure their preservation as a national monument.

It is to all men such as these that I again most hopefully address my words. For half a century, the multiple-use doctrine has been tested in all of its aspects, and has proved itself good. In consequence, I have no reluctance in saying that multiple use, except in extraordinary situations, is the only policy that can serve well enough the important purpose for which it was intended: "Maximum good * * * to the greatest number of people * * * for the longest possible period of time." The Mount Wheeler area does not constitute such an extraordinary situation.

Even so, I am aware that national park status for the Mount Wheeler area will capture much public fancy. Over the most impressionable and the least informed it will cast something of a spell. To all such as these it will loom as a bona fide case of love at first sight, and hence a love quickly to be espoused. To still others, though it looms as a flattering proposal, it will be something to be thoughtfully weighed. And finally, to the judicious and the well-informed, it will loom as an illicit affair, easy to get into, but burdensome to endure, and once espoused, impossible to shake.

REHABILITATION SERVICES RENDERED BY DISABLED AMERICAN VETERANS

Mr. MOSS. Mr. President, an exceptional record of vital rehabilitation services freely extended to thousands of Utah citizens has recently come to my attention. These splendid humanitarian services are not sufficiently appreciated by those who have benefited thereby, directly and indirectly.

Among the several congressionally chartered veterans' organizations, which have State departments and local chapters in Utah, is the Disabled American Veterans. The DAV is the only such organization composed exclusively of Americans who have been either wounded, gassed, injured, or disabled by reason of active service in the Armed Forces of the United States, or of some country allied with it, during time of war. Formed in 1920, under the leadership of Judge Robert S. Marx, DAV legislative activities have benefited every compensated disabled veteran very substantially. Its present national commander is another judge, David B. Williams, of Concord, Mass. Its national adjutant is John E. Feighner, of Cincinnati, Ohio. Its national legislative director is Elmer M. Freudenberger; its national director of claims, Cicero F. Hogan, and its national director of employment relations, John W. Burris—all located at its National Service Headquarters at 1701 18th Street NW., Washington, D.C.

Inasmuch as less than 10 percent of our country's war veterans, or some 2 million, are receiving monthly disability compensation payments for service-connected disabilities the DAV can never aspire to become the largest of the several veterans' organizations. Nevertheless, since shortly after its formation in 1920, the DAV national headquarters, located in Cincinnati, Ohio, has maintained the largest staff of full-time trained national service officers of any veterans' organization. Some 138 DAV officers are located in the 63 regional and 3 district offices of the U.S. Veterans' Administration, and its central office in Washington, D.C. There they have ready access to the official claim records of those claimants who have given them their powers of attorney. All of them being war-handicapped veterans themselves, these service officers are sympathetic and alert to the problems of other less well-informed claimants.

The DAV national service officer in Utah is Mr. George L. Carey located at the VA regional office, 1750 South Redwood Road, Salt Lake City. The national first junior vice commander this year is Mr. James Brusatto, 2879 South 8560 West, Magna, Utah. The department commander is Mr. William L. Carr, 1072 South Fourth East, Salt Lake City, and the department adjutant is Mr. Woolas A. Macey, 1453 Sherman Avenue, Salt Lake City.

The VA hospitals in Utah are a 194-bed GM hospital and a 546-bed NP hospital, both located at Salt Lake City.

The DAV Department of Utah has nationally appointed representatives to the Veterans' Administration Voluntary Services Advisory Committees at each of the Veterans' Administration hospitals servicing Utah veterans. These DAV representatives and the hospitals are as follows: Fort Douglas VA Hospital, Salt Lake City, Utah, Mrs. Bonnie Anderson, representative, care of department adjutant, DAV, Salt Lake City, Utah; and Salt Lake City VA Hospital, Salt Lake City, Mr. Orlando Barber, representative, 8769 West 3030 South, Magna, Utah.

During the last fiscal year, the VA paid out $27,512,000 for its veterans program in Utah, including $6,738,120 disability compensation to its 8,833 service disabled veterans. These Federal expenditures in Utah furnish substantial purchasing power in all communities. Only about 20 percent—1,717—are members of the 16 DAV Chapters in Utah.

This 20 percent record is much above average, but not enough in view of the very outstanding record of personalized service activities and accomplishments of the DAV national service officer in behalf of Utah veterans and dependents during the last 10 fiscal years, as revealed by the following statistics:

Claimants contacted (estimate): 39,224.
Claim folders reviewed: 32,687.
Appearances before rating boards: 23,045.
Compensation increases obtained: 2,549.
Service connections obtained: 1,157.
Nonservice pensions: 342.
Death benefits obtained: 52.
Total monetary benefits obtained: $1,214,950.43.

The above figures do not include the accomplishments of other national service officers on duty in the central office of the Veterans' Administration, handling appeals and reviews, or in its three district offices, handling death and insurance cases. During the last 10 years, they reported 83,611 claims handled in such district offices, resulting in monetary benefits of $20,850,335.32, and in the central office, they handled 58,282 reviews and appeals, resulting in monetary benefits of $5,337,389.05. Proportionate additional benefits were thereby obtained for Utah veterans, their dependents and their survivors.

Because of an unfortunate chain of circumstances, Utah had no DAV national service officer during the period from November 19, 1956, to August 14, 1957. According to all our statistics, the disabled veterans, whose claims would normally have been handled by the service officer, lost, because no one represented them, an average of $562.04 a month in increases and $2,683.42 a month in retroactive benefits. So the events which led Utah to be without a DAV national service officer for 8 long months in effect resulted in a loss of $25,963.68 to veterans of Utah. Mr. President, no other single event has offered me such conclusive proof of the value of the DAV service program. Not only the disabled veterans, but the whole economy of my State is irrevocably welded to the service of the Disabled American Veterans.

These figures fail properly to paint the picture of the extent and value of the individualized advice, counsel, and assistance extended to all of the claimants who have contacted DAV national service officers in person, by telephone, and by letter.

Pertinent advice is furnished to all disabled veterans—only about 10 percent of whom are DAV members—their dependents, and others, in response to their varied claims for service connection, disability compensation, medical treatment, hospitalization, prosthetic appliances, vocational training, insurance, death compensation or pension, VA guarantee loans for homes, farms and businesses, and so forth. Helpful advice was also given as to counseling and placement into suitable useful employment—to utilize their remaining abilities—civil-service examinations, appointments, retentions, retirement benefits, and multifarious other problems.

Every claim presents different problems. Too few Americans fully realize that governmental benefits are not automatically awarded to disabled veterans; they are no given on a silver platter. Frequently, because of lack of official records, death or disappearance of former buddies and associates, lapse of memory with the passage of time. lack of information and experience, proof of the legal service-connection of a disability becomes extremely difficult, and too many times impossible. A Claims and Rating Board can obviously not grant favorable action merely based on the opinions, impressions or conclusions of persons who submit notarized affidavits. Specific, detailed, pertinent facts are essential.

The VA, which acts as judge and jury, cannot properly prosecute claims against itself. As the defendant, in effect, the U.S. Veterans' Administration must award the benefits provided under the laws administered by it, only under certain conditions.

A DAV national service officer can and does advise a claimant precisely why his claim may previously have been denied and then specifies what additional evidence is essential. The claimant must necessarily bear the burden of obtaining such fact-giving affidavit evidence. The experienced national service officer will, of course, advise him as to its possible improvement, before presenting such evidence to the adjudication agency, in the light of all of the circumstances and facts, and of the pertinent laws, precedents, regulations and schedule of disability ratings. No DAV national service officer, I feel certain, ever uses his skill, except in behalf of worthy claimants, with justifiable claims.

The VA has denied more claims than it has allowed, because most claims are not properly prepared. It is very significant, as pointed out by the DAV acting national director of claims, Chester A. Cash, that a much higher percentage of the claims, which have been prepared and presented with the aid of a DAV national service officer, are eventually favorably acted upon, than is the case as to those claimants who have not given their powers of attorney to any such special advocate.

Another fact not generally known is that, under the overall review of claims inaugurated by the VA some 4 years ago, the disability compensation payments of about 37,200 veterans have been discontinued, and reduced as to about 27,300

others at an aggregate loss to them of more than $28,000,000 a year. About four-tenths percent of such discontinuances and reductions have probably occurred as to disabled veterans in Utah, with a consequent loss of about $112,000 a year.

Most of these unfortunate claimants were not represented by the DAV or by any other veteran organization. Judging by the past, such unfavorable adjudications will occur in the case of an additional equal number or more during the next 3 years, before such review is completed. I urge every disabled veteran in Utah to give his power of attorney to the national service officer of the DAV, or of some other veteran organization, or of the American Red Cross, just as a protective measure.

The average claimant who receives helpful advice probably does not realize the background of training and experience of a competent expert national service officer.

Measured by the DAV's overall costs of about $12,197,600 during a 10-year period, it will be found that it has expended about $3.50 for each claim folder reviewed, or about $8.80 for each rating board appearance, or, again, about $22.70 for each favorable award obtained, or about $123 for each service connection obtained, or about $54 for each compensation increase obtained; and has obtained about $14.10 of direct monetary benefits for clamaints for each dollar expended by the DAV for its national service officer setup. Moreover, such benefits will generally continue for many years.

Evidently, most claimants are not aware of the fact that the DAV receives no Government subsidy whatsoever. The DAV is enabled to maintain its nationwide staff of expert national service officers primarily because of income from membership dues collected by its local chapters and from the net income on its Idento-Tag—miniature automobile license tags—project, owned by the DAV and operated by its employees, most of whom are disabled veterans, their wives, or their widows, or other handicapped Americans—a rehabilitation project in thus furnishing them with useful employment. Incidentally, without checking as to whether they had previously sent in a donation, more than 1,400,000 owners of sets of lost keys have received them back from the DAV's Idento-Tag department, 2,139 of whom, during the past 8 years, were Utah residents.

Every eligible veteran, by becoming a DAV member, and by explaining these factors to fellow citizens, can help the DAV to procure much-needed public support which will enable it to maintain its invaluable nationwide service setup on a more adequate basis. So much more could be accomplished for distressed disabled veterans if the DAV had the funds with which to maintain an expert service officer in every one of the 173 VA hospitals.

During the past 10 years, the DAV has also relied on appropriations from its separately incorporated trustee, the DAV Service Foundation, aggregating $3,300,000, exclusively for salaries to its national service officers. Its reserves having been thus nearly exhausted, the DAV Service Foundation is therefore very much in need of the generous support of all serviced claimants, DAV members and other social-minded Americans—by direct donations, by designations in insurance policies, by bequests in wills, by assignments of stocks and bonds and by establishing special types of trust funds.

A special type of memorial trust fund originated about 3 years ago with concerned disabled veteran members of the DAV chapter in Butte, Mont., which established the first perpetual rehabilitation fund of $1,000 with the DAV Service Foundation. Recently it added another $100 thereto. Since then, every DAV unit in that State has established such a special memorial trust fund, ranging from $100 to $1,100, equivalent to about $4 per DAV member.

As a DAV life member, I am pleased to enroll as one of the benefactors on the memorial honor roll of the DAV Service Foundation, with the realization that only the interest earnings therefrom will be available for appropriation to the DAV for its use in continuing to maintain its national service officer setup in my State of Utah.

Each claimant who has received any such rehabilitation service can help to make it possible for the DAV to continue such excellent rehabilitation service in Utah by sending in donations to the DAV Service Foundation, 631 Pennsylvania Avenue NW., Washington 4, D.C. Every such serviced claimant who is eligible can and should also become a DAV member, preferably a life member, for which the total fee is $100—$50 to those born before January 1, 1902 or World War I veterans—payable in installments within two full fiscal year periods.

Every American can help to make our Government more representative by being a supporting member of at least one organization which reflects his interests and viewpoints—labor unions, trade associations and various religious, fraternal and civic associations. All of America's veterans ought to be members of one or more of the patriotic, service-giving veteran organizations. All of America's disabled defenders, who are receiving disability compensation, have greatly benefited by their own official voice—the DAV.

LEVYING AND COLLECTING OF TAXES AND ASSESSMENTS

The PRESIDING OFFICER (Mr. MUSKIE in the chair). The hour of 2 o'clock has arrived; and the Chair lays before the Senate the unfinished business, which the clerk will state by title.

The LEGISLATIVE CLERK. A bill (S. 643) to amend the act entitled "An act relating to the levying and collecting of taxes and assessments, and for other purposes," approved June 25, 1938.

AMENDMENT OF REORGANIZATION PLAN NO. 2 OF 1953

Mr. JOHNSON of Texas. Mr. President, I ask unanimous consent that the unfinished business be temporarily laid aside, and that the Senate resume the consideration of Calendar No. 131, Senate bill 144, to amend Reorganization Plan No. 2 of 1953.

There being no objection, the Senate resumed the consideration of the bill (S. 144) to amend Reorganization Plan No. 2 of 1953.

DISTRICT OF COLUMBIA TRAFFIC SAFETY AND EDUCATION PROGRAM

Mr. LANGER. Mr. President, the problem of traffic safety and education in the United States is of great concern to all of us. The District of Columbia, the Nation's Capital, is moving forward—as it should—with an energetic traffic safety and education program. I ask unanimous consent that two articles from the Traffic Safety Reporter of the District of Columbia be inserted at this point in the RECORD.

There being no objection, the articles were ordered to be printed in the RECORD, as follows:

THE COLD FACTS ABOUT DRINKING AND DRIVING

A drinking driver was involved in at least 30 percent of all fatal U.S. traffic accidents last year.

Twenty-three percent of the adult pedestrians killed had been drinking.

Special holiday studies by the National Safety Council showed that 55 percent of the Christmas season fatal traffic accidents involved a drinking driver.

Forty-eight percent of the Labor Day fatal traffic accidents involved a drinking driver.

In many accident cases the fact that a driver has been drinking is not recorded and is never entered in the driver's official record.

In spite of past and present efforts to increase safety education and traffic enforcement, too many drinking drivers are still operating on our streets and highways.

The social drinkers are a greater menace than commonly believed, as their critical judgment is impaired with a fairly low alcohol concentration and they outnumber the obviously intoxicated drivers.

Drinking to any extent reduces the ability of any driver.

Small amounts of alcohol reduce judgment, self-control, and driving ability.

Alcohol is not a stimulant and is classified medically as a depressant.

Loss of judgment and the capacity for self-criticism occurs before obvious symptoms of intoxication.

It takes at least 3 hours to oxidize (eliminate) 1 ounce of pure alcohol (about two cocktails).

Two cocktails (about 0.04 percent of alcohol in the blood) may reduce visual acuity as much as wearing dark glasses at night.

"Under the influence" means that due to drinking alcohol a person has lost (to any degree) some of the clearness of mind and self-control that he would otherwise possess.

You do not have to be obviously intoxicated to be "under the influence" and an unsafe driver.

Pure alcohol leaves no odor on the breath; it is the flavors in the beverage that cause the odor.

Coffee or other stimulants will not offset the effects of alcohol. Only time can eliminate alcohol from the bloodstream.

Chemical tests provide the police with a scientific means to determine whether or not alcohol has reduced a driver's ability.

TRAFFIC COORDINATING COMMITTEE REPORTS PROGRESS

At a recent meeting of the official Traffic Coordinating Committee, Lt. Col. Jess P.

Unger, Assistant Engineer Commissioner and chairman of the committee, reported that in the 6 months since its formation, on August 1, 1958, the departments represented on the committee had accomplished the following:

1. Published an official traffic safety program.
2. Provided for a monthly publication, the Traffic Safety Reporter, which will keep the public informed about the official traffic safety program.
3. Broadened dissemination of accident summaries prepared by the police department.
4. Arranged for advance designation of judges assigned to traffic court.
5. Arranged for attendance at traffic conference for judges prior to assignment to traffic court.
6. Acquired the Keystone telebinocular device for testing drivers' eyesight.
7. Reduced the timelag between driver violations and action under the point system. One day is now normal time for this.
8. Installed neon "no left turn" signs at 20 intersections.
9. Tested flashing school signs.
10. In coordination with the Commissioners' Traffic Advisory Board, conducted a special holiday safety campaign. December 1958 traffic deaths were eight less than the total for December 1957.

GENERAL WELLING APPEALS TO CLERGY

The engineer Commissioner, Brig. Gen. A. C. Welling, has called on the clergy to help convert every resident of the District of Columbia to the idea that obeying the rules of the road is a manner of exemplifying a basic religious tenet, namely, "I am my brother's keeper."

In a letter addressed to Protestant, Greek Orthodox, Catholic, and Jewish leaders of the National Capital community, General Welling stated that more and more officials are coming to believe that the job of making our streets safer is perhaps one for an evangelist rather than for an expert or a technician.

The engineer Commissioner specifically called for church help in educating elderly persons who constitute a very large proportion of pedestrians killed each year in Washington traffic. He asked for clergymen to emphasize such subjects as:

Speed and stopping distances; maneuvering limitations of automobiles; necessity for wearing something light in color at night; need for compensations for less acute sight and hearing; need for breaking outdated, firmly fixed walking habits; and other specific safety needs of elderly pedestrians.

General Welling reported that the proclamation of a Traffic Safety Sabbath was being considered for some time this year. The Traffic Safety Sabbath envisions, on a single weekend, clergymen of all faiths offering prayers together with their congregations for deliverance from recklessness, carelessness, and disregard of precious human life on our highways.

RECORD OF LEWIS STRAUSS

Mr. LANGER. Mr. President, I ask unanimous consent to have printed in the body of the RECORD an editorial entitled "Commerce Secretary Strauss Follows a Familiar Pattern," from the Louisville Courier-Journal of March 16, 1959.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

COMMERCE SECRETARY STRAUSS FOLLOWS A FAMILIAR PATTERN

Former Atomic Energy Commissioner Lewis Strauss made a record of sorts while he occupied that post. He left it as probably the most spectacularly unpopular public figure ever to tangle with the Congress.

Mr. Strauss retired gracefully from the AEC when matters had reached such a pass that almost any proposal made by him raised the hackles of powerful Senators. He handpicked his successor, but this was deemed a small price to pay for getting him out of the congressional hair.

But the energetic Strauss had no intention of remaining idle for long. Commerce Secretary Weeks, last but one of the original eight-millionaires-and-a-plumber cabinet, departed, and the President promptly nominated Mr. Strauss to succeed him.

All this was last year, but Mr. Strauss' appointment has not yet been confirmed in the Senate. Each time the subject is mentioned, deep-throated growls come from Senators who can hardly wait to vote against him, and his confirmation is one of the certainties least likely to encourage bets around Washington.

AN EARLY STAR IN DISCORD

Under these circumstances the normal man would be inclined to speak softly, walk on tiptoe and engage in no controversy more unsettling than the possibility of rain or shine. Not so Mr. Strauss. He had scarcely taken his unconfirmed seat before announcing that he planned to review a departmental decision which permitted slight relaxations in East-West trade. He promptly rejected an application for the export of some 12,000-odd tons of 28 and 30-inch pipe to the Soviet Union.

He has this right under the Export Control Act, but it is one that former Secretaries have exercised subject to the advice of other departments, principally the State Department. He has now rejected the application for the third time, and this time the State Department took the unusual step of making public the fact that it had advised him not to. The Department, furthermore, questioned his account of the proceedings, an even more unusual performance.

Mr. Strauss explained his action in these words: "The turndown, announced, following an intensive review by an interdepartmental committee which recommended rejection, was made on the grounds that approval of the application would not be in the national interest as defined in the Export Control Act."

State Department spokesmen said that the committee did not "recommend rejection." According to them the application was discussed, with some agencies counseling rejection and others approval. At the conclusion of the meeting its chairman, a Commerce Department underling of Mr. Strauss agreed with him that rejection was in order. He is, State's spokesmen delicately pointed out, under no obligation to consider the views of other departments. In committee discussions the State Department representative questioned the effectiveness of forbidding export of only 30 to 40 miles of what will be thousands of miles of oil pipeline. There is, said an official, "no useful purpose in controls unless they register an impact on the Soviet bloc," and to apply them where they have no impact on military potential gives the Soviet Union a propaganda opportunity.

Thus, the furor which accompanied Mr. Strauss's administration of atomic energy is apparently transferred to the Commerce Department. He is following his familiar practice of making decisions which should be guided by the overall interests of foreign policy entirely on his own—this is the first time he has consulted the interdepartmental committee although this was his third rejection of the same application—and then by implication seeking to involve other departments in his decisions.

It is fatiguing to think that this contentious man is already stirring up his own brand of interdepartmental mischief, before he is even officially installed as Commerce Secretary, and that, if confirmation is given his appointment, he can do so for almost 2 years longer. But it is worse than merely tiresome, it is dangerous. Our relations with the rest of the world are now so delicately balanced, so difficult for so many reasons that, although Mr. Strauss seems to be only on the periphery of foreign relations, it is appalling to think of the number of ways in which, by meddling, he can worsen them. It is too much to hope that the President will withdraw his name, but one can think wistfully how pleasant it would be if the Senate could, and would, retire him permanently from this administration.

THE CANCER OF INFLATION IS EATING AWAY THE PEOPLE'S SUBSTANCE

Mr. LANGER. Mr. President, it has been very disheartening to note releases from the White House calling for economy in the Federal agencies and in the Congress, while apparently fruitless efforts are being made for economy in the executive offices themselves. For some years we have been witnessing the spectacle of labor's demanding and getting wage increases, and the spectacle of various industries using these wage increases to raise the price of the goods they sell to the people. All this has become a vicious, endless circle. One year ago the President called upon both labor and industry to stop this; and he stated that the deadliest inflation would result if the cycle continued. He renewed that request the past week.

Mr. President, as everyone knows, the people closely watch every move the President of the United States makes. Whether they are on the farms or in the factories, or in the hills or in the dales, whether they are in the North or the South, the East or the West, the people observe the attitude that the President takes on various issues, and guide themselves accordingly.

It seems to me that it comes with ill grace for the President of the United States to call upon others not to seek wage boosts and higher prices, while he, himself, sets the mad pace which results in inflation and more inflation. Let us look at the record. In the last year when Mr. Truman was President, $8,335,043 was appropriated to run the Executive Office. This year Mr. Eisenhower has asked for $11,739,870.

I suggest that Congress give Mr. Eisenhower no more money to run the executive offices than Mr. Truman had. If Mr. Eisenhower cannot get along with that amount, then the President should have his assistants ride up to Capitol Hill, in some of the eight limousines that the White House now has, to convince us that he must have more money.

The Office of the Vice President in 1959 received $101,925, with an estimate of $112,140 for 1960. However, the 1953 appropriation for the Vice President's office was $55,410, or less than one-half of the current appropriation. And so as not to appear to be singling out the President and Vice President, let us examine the appropriations to run the offices of the Senators: Appropriations for 1959, $9,664,000; estimate for 1960,

$10,834,650. On the other hand, the appropriations for 1953 were $5,552,785.

Mr. President, there are now before Congress bills to increase the pay of workers, particularly those under the Federal hour-wage law. The stock market prices are shooting up and up and up, reflecting the inflationary period we are in and the high profits that certain large concerns are getting from Government contracts.

It seems to me that the person to start a wave of economy and to stop this inflation is the President himself. He, himself, must set the example in his own department; and the Members of Congress should follow his example, and should reduce their salaries in the same proportion that the President reduces his; and the Members of Congress should reduce their office expenses in the same proportion the President reduces his office expenses. Even a reduction of 5 percent would be welcomed by the taxpayers, who are aghast at the terrific spending, and who are looking vainly for someone to call a halt to it.

Back in 1932–33, when we were in the midst of one of the worst financial depressions, with its accompaning tragic unemployment, the Congress of the United States set the example for the entire Nation to follow.

First, Congress passed Public Law 212—72d Congress, 47th Statutes at Large 401, section 105A—which provided for a 15-percent salary reduction for the Vice President and for the Speaker of the House, whose salaries were $15,000 a year, and a 10-percent salary reduction for U.S. Senators and Representatives, whose salaries were $10,000. The next year Congress passed the so-called Economy Act—Public Law 273, 48th Statute at Large 14—which provided for a 15-percent salary reduction for the Vice President, the Speaker of the House, and U.S. Senators and Representatives.

Back in 1932 and 1933, the salary reduction for the Members of Congress was proposed in order to lead the Nation to economy by the enactment of the Economy Act. Today it is just as important to stop the danger of inflation, as it is for Congress to enact another Economy Act asking for reduction of the salaries of the President, the Vice President, the Speaker, and the other Members of Congress, and also proposing cuts in the budget for expenses to run the offices of the President, the Vice President, the Speaker of the House, Senators, Representatives, and Federal agencies.

Mr. President, I was particularly impressed with an article that appeared in the New York Times of March 15, 1959, which reads in part as follows:

PENTAGON'S "LOSS" $7½ BILLION IN 1958

WASHINGTON, March 14.—The Department of Defense, which spends a huge share of the Nation's budget, wrote the equivalent of at least $7,500 million off its books last year.

A billion of that was spent for goods the military did not need and could not use. And, though brandnew, the stuff was ultimately sold for about 8 cents on the dollar.

Most of the $7,500 million loss was spent on weapons and equipment that the services considered as either obsolete or worn out and therefore useless.

For example, a technical change prompted the Air Force to dispose of 1,500 flight helmets for which it paid $550 apiece. Private dealers in war surplus sold them for $75 each.

About $1,500 million represented aircraft and missile programs that the military, principally the Air Force and Navy, officially abandoned as miscalculations.

Further, if past experience is a reliable guide, the Pentagon will write off $6 billion worth of goods this year as surplus.

The buying and selling of surplus military goods, incidentally, has become a $750-million-a-year enterprise for private industry.

Such sums are not piddling, even against the background of the administration's proposed $41 billion defense budget, now before Congress.

The question is not about whether the $41 billion is too much, but whether it's too little.

Representative GEORGE MAHON, Democrat, of Texas, and chairman of the House Subcommittee on Defense Appropriations, believes it is too little. "We cannot afford to be caught short," he said.

At the same time, he noted that the military "make a lot of mistakes, tremendous mistakes, but they are largely mistakes in judgment."

Congress has been struggling for years with the question of whether the taxpayer is getting his money's worth out of the Defense Department. The lawmakers also have been trying to persuade the military to use more businesslike procedures. It has been like pouring water on a duck's back.

The Mahon subcommittee reports that none of the services has an adequate inventory system and thus has no precise idea of what it owns. Some instances were found where inventory information was 12 months out of date.

One result is that nobody knows whether the property held by the services is worth $50 billion or $60 billion.

The cost ascertainment method of the services on negotiated contracts leave something to be desired.

Last year the military spent $23 billion on procurement and 34 percent went into negotiated contracts made without competitive bidding.

Negotiated contracts usually are on a cost-plus-fixed-fee basis and, supposedly, the manufacturer has to explain and justify his costs.

As for the abandoned programs:

Over the last 12 months the Air Force decided that the future belonged to ballistic missiles and abandoned the Navaho program, into which it has pumped $750 million. The Navaho was a jet missile.

The Air Force also abandoned its air-to-air missile program known as the Rascal, which cost $374 million. It dropped the diversionary missile program called the Goose project after spending $70 million.

The Navy gave up on the jet-type anti-aircraft missile, the Regulus, after spending $78 million. The Navy also abandoned its seaplane experiment, into which it had poured close to $200 million .

The $7,250 million written off by the department does not include the money spent by the various services duplicating each other's work.

One illustration of this: The Army spent $700 million developing the 1,500-mile-range missile, the Jupiter, before turning it over to the Air Force, which in turn has spent as much or more developing a similar missile, the Thor.

Mr. President, what must the average taxpayer think of a Congress which permits a continuation of this sort of nonbusiness practice. A billion dollars is a thousand million dollars. Yet according to the report, the Defense Department does not know whether we have 50 billion dollars (which would be 50 thousand million dollars) or 60 billion dollars. It is certainly a sad reflection on the ingenuity of the American public-office holders.

Mr. President, we have boys in our armed services in practically all parts of the world. They are ready to give up their lives, if necessary for the defense and security of our Nation. But, Mr. President, consider what the pay of an Army private is. It is $78 a month, for each private who is single. I wonder what he must think of Congress and of the executive branch of the Government, which permit a continuation of the nonbusiness practices mentioned in the article in the New York Times. And what must the people who are living on old-age pensions or retired benefits, which sums have dwindled because of this terrific inflationary period, think about the spiral of rising prices and rising costs, and the nonbusiness practices heretofore mentioned.

And what about the farmer who is caught in a pincer movement of lower prices for his farm products and higher costs for the operation of his farm? What about all of the average people who must live on fixed salaries, but are confronted with higher prices and living costs due to the inflationary spiral?

Mr. President, frankly the whole situation is appalling; and perhaps the best thing to do is to bring it to the realization of the executive department by having Congress pass an "Economy Act," and thereby reduce the costs of operating the executive, legislative, and judicial branches of our Government.

Mr. President, to paraphrase a famous saying, I say that Congress should authorize billions for defense, but not 1 cent for waste.

All this running hog-wild with the taxpayers money simply has to be stopped. It is just a question of whether we, the officials duly elected by the people, have the stamina, the strength, and the nerve to cut our own operating expenses and lead the country to a sensible state of economizing, without adversely affecting the economy and the security of our Nation.

On behalf of the taxpayers, I call upon the appropriate Senate committee to bring to the Senate as soon as possible a measure to halt this increasing inflation and I call upon the President, the chosen leader of 180 million people, to head a real drive for economy.

A LONG, HARD LOOK AT THE CIVIL DEFENSE PROGRAM IS NEEDED

Mr. YOUNG of Ohio. Mr. President, in this space age of challenge, with jet planes exceeding the speed of sound, and with Soviet intercontinental ballistic missiles capable of spanning continents in less than 20 minutes, I reiterate my insistence that we take a long, hard look at our civil defense program.

It is well known that Soviet submarines off our East and West coasts could send rockets with nuclear warheads 1,500 miles or more inland, and that these devastating missiles can be fired with great accuracy.

It has been reliably estimated that Civil Defense officials would probably have 5 minutes' warning of a Soviet attack. That is all. Hydrogen warheads could lay waste to vast areas with a single blow, destroying entire cities, killing hundreds of thousands immediately, and additional thousands later, due to radiation and fallout.

It does not take much imagination to realize the ineffectiveness of civil defense under such circumstances. Air raid shelters or evacuation highways would be of little use to anybody.

The Federal Government is now paying $5,100 an hour, around the clock, for civil defense. State and local tax funds are being spent at about the same rate. The Civil Defense Agency, in the budget now being considered in the Congress, seeks to hike outlays of Federal taxpayers' money to $240,000 for each 24-hour period.

The present Civil Defense program has become as outmoded and as obsolete as Civil War cannonballs. It would be a shameful waste of public money to continue in the same pattern; yet Civil Defense officials—now crowded on the public payroll to the extent of more than 1,700 salaried officials and employees, plus thousands of others on State and municipal payrolls—are grinding out their propaganda booklets and are coming up with various and divers plans, including building shelters in backyards and basements, and, at the same time, are promulgating evacuation plans on a large scale. In one section of the country, Civil Defense officials are urging mass evacuation, and are publishing elaborate details on how it is to be accomplished, as if in the event of a devastating enemy attack with nuclear weapons, people would pay attention to traffic lights and Civil Defense highway markings. These officials are even indulging in planning mock mass evacuations which, when held, cost the taxpayers much money, but serve no useful purpose.

The Civil Defense in Ohio had in storage $73,000 worth of penicillin with oil base. This should not have been purchased in the first instance. It has doubtless deteriorated during the past several years. At present, penicillin has a water base, instead of an oil base. This Civil Defense stored penicillin is of questionable quality, and should really be written off as worthless. In addition, firehose furnished by Civil Defense authorities in Columbus, on loan to fire departments of cities in Ohio, was neglected. Water was left in the hose, and froze; and the fire hose not thus broken and ruined was permitted to mildew. This loss by rot and destruction approximates $20,000. This seems unbelievable. The U.S. Government, in connection with Civil Defense, contributed $266,000 of matching funds, and the city of Columbus, Ohio, spent $400,000 in addition. This huge sum, approximating two-thirds of a quarter million dollars was spent to synchronize traffic signals on the streets of Columbus, Ohio, to flash a warning signal in case of enemy attack threatening to devastate the Columbus area. Mr. President, does any intelligent person think fleeing civilians in a massive effort to escape atomic bombing and the resulting fallout would watch traffic signals?

Also, one may wonder why Civil Defense officials in the Columbus, Ohio, area could have any reason to believe that the capital city of the State I am proud to represent in part would be a target for atomic attack from the Soviet Union.

Mr. JAVITS. Will the Senator from Ohio yield for a question?

Mr. YOUNG of Ohio. I yield briefly for a question.

Mr. JAVITS. I have just entered the Chamber; and I understand that the Senator from Ohio is again addressing himself to the matter of the Civil Defense.

Mr. YOUNG of Ohio. Yes. I am making particular reference to some wasteful practices in my State of Ohio; and I shall continue with my remarks as soon as the Senator from New York permits me to proceed.

Mr. JAVITS. Mr. President, if the Senator from Ohio will yield further to me, let me say that, being a lawyer, I shall have to wait until I hear the Senator from Ohio present the facts he has in mind, and also his observations on them, before I, myself, comment.

However, in view of what I have already heard the Senator from Ohio say, I wish to ask a question at this time. I heard what he said about spending money for traffic signals and the likelihood or possibility of attack upon Ohio, and so forth. I wonder whether the Senator from Ohio has asked these questions of the Federal Civil Defense officials, before making his speech.

Mr. YOUNG of Ohio. First, let me say that I hold the distinguished senior Senator from New York [Mr. JAVITS] in the highest admiration. He and I, in years past, served together in the House of Representatives. I may say to the Senator it is a fact that I have discussed this matter with Civil Defense officials and also with the Adjutant General of my State of Ohio. If the Senator from New York will permit me, I shall now proceed to advert to some facts pertaining to my State of Ohio. I say further to the distinguished Senator from New York that, while my information may not be accurate, it is my understanding that in recent weeks in Canada and in some European countries that are our allies serious consideration has been given to the thought of merging civil defense with the military establishments and giving the military establishments control over civil defense. Perhaps that is a matter to which thought should be given in our own country.

Mr. JAVITS. I reciprocate the Senator's expression about me, which I deeply appreciate. I have known the Senator from Ohio a long time. I myself have a very deep affection for the Senator.

I should like to point out I am not given here, nor, I hope, will I ever be given, to caviling about a particular incident and trying to make it appear odd or embarrassing to the speaking Member of Congress. I do not think such conduct advances our cause. Let us for the moment consider foreign aid, and not civil defense, for the purpose of this illustration. Often when a great national effort is referred to an insignificant, peripheral development, such, for instance, as the use of tuxedos for attendance at funeral parlors in Greece, is pointed out, with the effect of discrediting a whole program of enormous and vital national interest.

When I replied, on a previous occasion, to the Senator from Ohio—and I may feel impelled to reply again—I did it only in the spirit to which I have referred. I think it is important that we keep this issue in proper proportion and perspective. We understand that there may be waste or acts of stupidity—who is immune from them?—but we should not allow waste or stupidity attaching to certain details to prejudice a program of fundamental and very deep and important concern to the national interest.

No matter what may be said about civil defense, I deeply believe, even if only because of the effect on the morale of the American people, it is vital that they have less dread of H-bombs and A-bombs falling on this country, which, God willing, we hope will not happen. Yet we may have to face up to such a situation if we are determined to stand by the cause of freedom.

I am interested in what the Senator from Ohio has said about putting civil defense in military hands. Such a proposal would not disturb me. But that question involves a far more definite and fundamental discussion, in terms of keeping our eye on the target, than do the pinpoint details in which there may have been stupidity or waste involved.

I compliment the Senator from Ohio. If he finds there has been waste, he should bring the matter into the open; but always it should be emphasized that it is a minor consideration. The major question is, What are we to do with regard to a great national program which is essential to national survival?

Mr. YOUNG of Ohio. I thank the distinguished Senator from New York very much for his comments. It appears to be that he and I are not at complete variance on this subject. In view of the fact that in this session of Congress an effort will be made to eliminate unnecessary expenditures from the budget, probably we both agree, that consideration should be given to the fact that the civil defense agency has asked for an 85-percent increase in its appropriation this year. At a time when the budget is being so seriously considered by Congress, at a time when we are trying to hold the line against greater expenditures, it seems to me we should all try to get together and scrutinize the civil defense program very carefully.

I am pleased to have been interrupted by the distinguished Senator from New York.

Now regarding the capital city of my tate, Columbus, Ohio, and the expenditure of this money, does anyone claim that there are intercontinental ballistic missile bases in Columbus? Is it claimed that Columbus is a great industrial city such as Detroit, Cleveland, or Pittsburgh? Or is there a fear that the

dictators of the Kremlin believe our Nation would be stricken with a well nigh fatal blow were some of our State legislators to be war casualties? Surely, if there are those who believe that Columbus, Ohio, would be a prime traget for enemy attack during the few months the General Assembly of Ohio is in session, let me comfort them with the assertion that in the event of such a catastrophe, they should have faith and a feeling of security and confidence that a divine providence would come to the rescue of our beloved State of Ohio and fill the vacant chairs. What have Ohio civil defense officials to say regarding these examples of squandering taxpayers' money?

My view is that were we to curtail or eliminate civil defense expenditures and do away with unnecessary or unproductive high-salaried civil defense officials, taxpayers would be saved millions of dollars, and our Nation would not be placed in jeopardy as a result.

Civil defense has a big name now, "Office of Civil and Defense Mobilization. Its national Administrator seeks to build up a civil defense stockpile of supplies worth $2,500 million. It has on hand a quarter of a billion dollars in supplies. That amount is the cost. Much of the supplies on hand are worth but a small fraction of the cost. Taxpayers everywhere are sufferers, as States and local communities have provided money to qualify for Federal funds. Nearly two-thirds of a stupendous sum of money is now going for communications equipment. The crazy idea was conceived to synchronize traffic lights in time of emergency. It was stated these lights would then be turned green for fleeing civilians to be guided away from the municipality. As if, at a time of attack by nuclear bombs, fleeing civilians would accept the guidance of traffic signals.

During the Civil War, President Abraham Lincoln declared martial law and suspended the writ of habeas corpus. Were the Soviet Union to attack us, the military would immediately take over; and, just as was done by our Armed Forces in Europe, every effort would be made to keep civilians off public roads needed for movement of our Armed Forces.

Civil defense has degenerated into a haven for defeated politicians. Political workers from the local level to the national level almost completely staff its offices, taking practically all the salaried jobs. That is true in my State of Ohio. It is true in the Nation.

We Senators consider that our offices are adequate for the important duties with which we are entrusted, but they are shabby offices, indeed, compared to the private offices of the Federal Civil Defense Administrator and of numerous district and State administrators.

Leo A. Hoegh, defeated for Governor of Iowa and later appointed by President Eisenhower as Administrator of Civil Defense at $22,500 a year, is directing the energies of his agency, which is staffed with high-salaried political hacks to investigate—one would never guess what, Mr. President—the extent to which Japanese manufactured gloves are hurting U.S. knitting industries.

He made the silly comment, "If American business firms should be forced out of producing gloves, our Armed Forces, in event of war, might be shy of gloves to wear."

It seems anything may be done in an effort to justify the huge expenditure involved in civil defense.

Ex-Governor Hoegh envisions 2,000 officials and employees instead of the approximately 1,750 now employed.

He proposes that plans be made for building shelters in backyards and basements, despite the well recognized fact that fallout following nuclear explosions would render such shelters valueless, unless they were of great depth and were stored with provisions to enable occupants to remain perhaps a year underground, and unless they were equipped with air filtering devices to save lives.

This is a fantastic recommendation by ex-Governor Hoegh, that homeowners build basement shelters and that each householder have a 2-weeks supply of food and water.

Grocers and building contractors would then have plenty of extra money to put into circulation. Except for that, such expenditure would be foolish and unproductive.

If every citizen were to call at the Civil Defense offices and secure one copy of each of the booklets issued, he would be immediately disgusted with the waste.

In this jet and atomic age, with nuclear shelling and bombing certain in the event of an all-out war with the Soviet Union, present civil defense expenditures are an utter waste; and civil defense, as now conducted, is as outmoded as are World War I weapons.

Radioactive fallout, following a nuclear attack upon any missile base, industrial center, or other portion of the United States, is a frightening threat against which there seems to be no defense other than instant retaliation.

Any air raid shelters, such as we knew in World War II, would be utterly useless against radioactive strontium 90, unless such shelters were of great depth, were so constructed that persons could hide away from the outside world, were stocked with sufficient foodstuffs to sustain life for a year or longer, and were equipped to filter the atmosphere so that impurities would be screened off.

Incidentally, many of our citizens have been persuaded to construct air raid shelters in their backyards or basements, and, unfortunately, such shelters belong to the era of World War II.

In fact, much of the equipment purchased at great expense to taxpayers by Civil Defense, is obsolete; and although it is not so ancient as the bow and arrow and cannon balls, it is equally worthless. Such civil defense equipment might as well include the tallow dips and mustache-cups of our great grandfathers.

Mr. President, before I close I pay tribute to the hundreds of thousands of volunteer civil defense workers who have made great sacrifices. They seek to render our Nation needful public service.

Thousands have wasted many hours as skywatchers, notwithstanding we live in a jet age.

Thousands have rendered valuable service as auxiliary policemen and auxiliary county sheriffs in times of floods, fires, and windstorms.

In fact, many volunteer workers have been injured and a few have lost their lives in rescue attempts.

Mr. President, no salaried civil defense official or employee—not one—has made any such sacrifice. They are "riding the gravy train."

American taxpayers are sweating; and it is all quite unnecessary and useless.

U.S. ARTS FOUNDATION

Mr. JAVITS. Mr. President, I take the floor today, when we do not have a great deal of active business in the Senate, to develop a subject which is very important to the enjoyment of life in our country and in a sense very important even to the conduct of the effort which represents our defense of freedom and our defense against communism in terms of American morale. I refer to cultural activities in the United States, and what we as a government are doing to give to our people support for unity of purpose which comes from enoblement of the spirit and recognition on the national level of our cultural heritage as a nation. Toward that end I am today introducing, for myself and for my distinguished colleague from Pennsylvania [Mr. CLARK], a bill to establish a U.S. Arts Foundation, which I now send to the desk for appropriate reference.

The PRESIDING OFFICER. The bill will be received and appropriately referred.

The bill (S. 1598) to establish the U.S. Arts Foundation, introduced by Mr. JAVITS (for himself and Mr. CLARK), was received, read twice by its title, and referred to the Committee on Labor and Public Welfare.

Mr. JAVITS. Mr. President, the bill is intended to stimulate throughout the United States the study and advancement of the performing arts in the following ways: The Foundation would assist and encourage productions of plays, concerts, ballet, and other performances by marshaling professional advice, compiling registers of theaters and personnel, and providing subventions to help with the difference between box office receipts and costs, both from its own appropriations and from contributions made by private sources.

Mr. President, the concept of the operation would be somewhat like that of the Smithsonian Institution, which in turn operates the National Gallery of Art. Indeed, I have in mind very much the same kind of nonpolitical approach and very much the same kind of directing personnel. It is estimated that a foundation of this kind would cost, in appropriations, not more than $5 million a year, and that it would stimulate as much as $50 million a year in privately financed activity.

Our generation has seen the United States emerge as the leading economic, scientific and military force in the world.

Our political institutions, our individual freedoms and our way of life serve as examples, even as an inspiration, to the peoples of the world. We have expended untold toil and countless billions to give our Nation this stature and to preserve it. Yet, in this tremendous progress, one vital element of our national character has been left to struggle with little public effort and assistance to aid it. The cultural heritage of America—one of the great binding forces holding together and enhancing our varied national life—has been relegated to a lesser role in the pageant of America.

It is not a lack of desire by our people which has caused this neglect, but rather a lack of commercial opportunity and support. The 2,000 community theaters, the more than 400 colleges and universities offering degrees in drama, and the great centers of the performing arts located in New York, Virginia, Texas, California and other States all bespeak the desire of the people to see and to participate in performances of music, opera, ballet and drama. Although we now have only 10 professional repertory companies in the United States, there were at one time as many as 400, playing throughout the Nation in the opera houses—with which we were all familiar in our hometowns when we were small boys—and the river showboats, bringing the cultural interest of the theater and live music to our people.

Nor is the desire to advance the arts through governmental participation new. In 1891 Congress established the National Conservatory of Music, which brought Anton Dvorak to this country; it was this American experience which inspired him to compose the "New World Symphony."

In 1935—which brings us up to recent times—the American National Theater and Academy—ANTA—was chartered by Congress. Although its growth was seriously hampered by the coming of the war and by lack of funds, it is now directing with great success our international efforts in the field of music and the theater under the auspices of the State Department. In recent years, Congress established the permanent program of cultural exchange with other nations, granted a Federal charter to the National Music Council, and took the initial steps to establish a National Cultural Center in Washington, D.C., for which the President has recently appointed a most distinguished group of men to serve as its trustees.

Recognition of America's need for frequent performances of theatrical and other works in all parts of our Nation and of the people's unabated desire for such performances prompted me in 1949 to introduce, while a member of the House of Representatives, a resolution looking toward the establishment of an American National Theater and an American National Opera and Ballet. On the same basis, some 8 years later, in 1957, in this body, I introduced a bill for a United States Foundation with Senator Clark. That proposal, like the present one, is closly analogous to the British and Canadian Arts Councils, which have done so much in their countries to stimulate the performing arts.

I emphasize that here are two of the outstanding democracies of the whole world. No one has ever claimed that they are one whit less active in their democratic processes than are we. They are the countries which, in a sense, form the models for my particular bill.

I point out that in addition to stimulating and encouraging both study and performance, the emphasis of the Arts Foundation is upon people and places, rather than upon bricks and mortar. I think this is very important, because there are other efforts to accomplish this general objective, but many of them are very heavily based upon the idea of some memorial, some theater, some structure within which these activities may be housed.

I point out that my concept is that of spreading the performing arts throughout the country, reaching places which are not now reached. That is the great emphasis. This effort is not especially needed—although it could do a great deal of good—in New York City, Chicago, San Francisco, Los Angeles, and perhaps other cities. But it is certainly vitally needed in many other areas of the country which are now barren of this kind of cultural interest and activity for the people.

The money which would be provided under the terms of the bill would cover the marginal difference between success and failure and make feasible a particular activity in the performing arts, in terms of financing, when otherwise it might not be feasible by virtue of what is called the "death of the road" in terms of the theater and music in the United States.

Furthermore, I believe that the proposed program has great attractiveness in terms of utilizing the musical talent of the country, which is very seriously suffering, as anyone knows who is aware of the problems of the musicians' union, by reason of underemployment.

No one wishes to diminish the attractiveness of the impact of motion pictures, television, radio, and all the other mechanical aids to broadening and fulfilling life; but there is no reason why we—almost uniquely among the great civilized nations on earth—should neglect the national responsibiilty for keeping alive the sources of all these artistic endeavors, which are, in the final analysis, the performers, the directors, the writers, the technicians, the scene designers, and all the other manifold artists who make artistic creation possible. However, many of them fall by the wayside today because there is such a narrow area in which they can operate. Only the very best, the topflight, the most highly paid performers, can get any real opportunity.

I emphasize also that the whole purport of the bill is to apply to nonprofit activities. There is no need for giving a subvention to the commercial theater or to the commercial end of music, the dance, or any of the other performing arts.

In the wide area of the college theater many of our State universities have magnificent theatrical organizations, which, with a little help could spread their culture, their interest, and their excitement throughout whole States and groups of States; but they cannot do it today because of the absence of a very modest amount of needed help.

I do not recommend a national theater in the old European sense. I do recommend a national appreciation of the arts in the truly American sense.

I point out also that, in contrast with the experience of the British and Canadian arts organizations, I have omitted from the bill the graphic and mural arts. My reason for doing so is that I believe that we would be more likely to obtain action at this time on a bill such as mine dealing with the performing arts, rather than a bill dealing with various aspects of museums, and artists who are concerned with painting, sculpture, drawing and other manifold arts. That may come. Indeed, I do not believe that the entire structure would be complete without it. But I feel that, considering the tentative way in which we have always approached the subject, and the number of fears which have been expressed with respect to the proposal, it would be better to go a little slower rather than to try to go too rapidly.

Finally, one of the great objections voiced to this entire proposal has been that the program would fall into political hands. I think that is rather an expression of a lack of self confidence. I point out that there are a great number of voluntary activities, from the Metropolitan Opera to many less glamorous activities, which are being very well carried on, and which have not fallen into political hands. In a city which is so politically conscious as is New York City, there exists the City Center. In essence, it is a municipal activity, dealing with the finest kind of performances in the theater, in music, and in art of all kinds. It is entirely free from politics. Indeed, it is one of the ornaments of New York City. If such a program can be carried on in New York City, it certainly can be carried on in other parts of the Nation. It is my earnest hope that the present Congress will take cognizance of America's need for an active and expanded cultural life—a need which this bill attempts to meet.

I close upon the following note.

The principal purposes of the Foundation would be to, first, stimulate study and advancement of the performing arts and public interest therein; second, encourage presentation in the United States and, in cooperation with the Department of State, in other countries of the performing arts; third, encourage professional and amateur groups in the performing arts; fourth, maintain registers of personnel and theaters; fifth, make surveys of the performing arts; and sixth, provide financial assistance out of appropriations and other income to nonprofit groups engaged in or concerned with the performing arts, especially insofar as this will enable such groups to go to parts of our country which ordinarily would not have the opportunity to see their performances.

It is authorized to accept donations, collect admissions charges and utilize

the services of volunteers, so that a minimum of appropriated funds would be required. The Foundation would have an appropriate number of committees composed of professional people and the general public covering the various aspects of the performing arts to remove any danger of uniformity due to governmental assistance. The panels would judge the artistic worth and cultural significance of works to be presented to determine if they are worthy of support by the Foundation.

An organization functioning in this manner makes baseless the fear of governmental control of the arts and its relatively small cost should cause little anxiety about the level of governmental expenditures. This is indeed one case where a drop in the bucket can quench the thirst of 175 million people.

I believe the U.S. Arts Foundation can enable us to look forward to the day when our Nation will be served—as it was in the past—by theater, opera, ballet, and music available in all sections of our land, and the world will honor us for it. The soul of America will in this way be enabled to grow in keeping with the growth of our productive capabilities.

We shall soon be seeing in New York City the Bolshoi Ballet from Moscow. I have no doubt that it will receive very favorable public notice. Yet how many will consider the fact that it represents a governmental effort far greater than I have envisioned in my bill, namely, a modest subvention to help to stimulate interest in the performing arts? The Bolshoi Ballet represents the full effort of government itself. While the people will enjoy it and praise it, I do not think they will stop to reflect that we could be doing very much the same thing if we gave a little help where help is desired and is so necessary.

I make the same observation with respect to Sadler's Wells Opera, which the British Arts Council supports; as well as the Old Vic Theater, which is keeping alive in the finest tradition all the great plays of Shakespeare. Old Vic also is helped by the British Art Council.

I believe we are trying too hard to contend in the whole world on many issues without recognizing that there are other weapons in our armory—weapons of a happy kind—which we can utilize not only for ourselves but for the whole world very significantly and effectively. One of the most significant is the one to which I am referring today.

Our problem, in a deep psychological sense, is how we shall keep our country great, in keeping with our growth and productive capability. I have tried to put before Congress one way, in terms of world experience for centuries past, going back to the days of the Greeks, whom we still honor and who have remained world famous because of the drama and philosophy which they authored.

I hope very much, therefore, that my colleagues, even my serious colleagues, among whom I include myself, who feel that we are in the grimmest kind of struggle for survival, will agree with me that my proposal is a part of the armament which we need in that struggle, and that a plan such as the one I propose is well worthy of our consideration.

I ask unanimous consent to have printed in the RECORD at this point as a part of my remarks an article published in the New York Times Sunday magazine of yesterday, written by me, entitled "Plan To Aid Our Lagging Culture," in which I outline the plan for the bill I am introducing and my arguments in its support.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

PLAN TO AID OUR LAGGING CULTURE

(A Senator proposes a Federal foundation to stimulate artistic achievement, both for the sake of communities now neglected and for the good of our world position)

(By JACOB K. JAVITS)

WASHINGTON.—Culture only too often has been a suspect word in the American language. At the very beginning of the Nation, we acquired a reputation—now undeserved—for being crude and "rock-ribbed." As far back as 1842, when the New Orleans musical prodigy, Louis Moreau Gottschalk, applied for permission to study piano at the Paris Conservatoire, he was laughed down. He had come from America, and that was enough. "America is a country of steam engines," snorted the famous Prof. Pierre Zimmerman, who refused to take Gottschalk as a pupil.

The old traditions linger. We as a nation are still, sometimes, looking for a practical return on a cultural investment. Unless something will "pay off" concretely, we often will have none of it. This attitude has long tended to persist in the thinking of our Government on cultural matters, and since the notes of a Beethoven symphony cannot be weighed and assessed, since the tread of an actor's foot on a stage does not rock the earth, our cultural institutions have been left by our Government largely to shift for themselves. Whatever men and women have done in the arts, they have done largely on their own.

Except for some tentative help during the WPA days, our Government has never given official recognition to the arts. Where most other civilized nations in the world have lent a helping hand to their artists, we have stood aloof. That our culture is in as healthy a state as it is remains a miracle. For, with practically no Government help, we have created symphony orchestras, dance groups and a theater that the world regards with respect. Certainly it is a tribute to our people, and a testament of their aspirations toward the better things in life, that they have accomplished so much on their own.

But, in a country of our size, the sum total of artistic accomplishment is not nearly what it should be. A few great orchestras in a few great cities, with large sections of the country foreclosed to serious performances of music, dance and theater—this does not make for cultural adequacy. Our culture needs help and needs it badly. The time has come when the Federal Government must lend a hand, in accordance with the widely accepted Lincolnian philosophy that the Federal Government has the responsibility to help people do those things that they cannot do for themselves.

I believe that we can best accomplish this objective of strengthening American culture through the establishment of a U.S. Arts Foundation that would bring the prestige of the Federal Government to bear to develop more fully and to disseminate more widely our cultural heritage. To that end, I will shortly introduce in Congress a bill calling for the establishment of such a foundation.

Never has the time demanded such a project more urgently. In self-defense, if for no less selfish reason, we must be prepared to meet the cultural challenge of our competitors. Private enterprise has done a noble job up to now, but we found private funds could not do the job in the international arena. And private funds cannot take care of nurturing all the talent we now have, nor assure the next generation of every possible chance to develop itself to its full potentiality. If we are to measure up to the stature of leader of the free world, we must act as such and a nation's civilization is equated in many places with its degree of culture.

Our performing arts need support in virtually every area. Our major opera, symphony and ballet groups struggle from year to year with deficits that become increasingly hard to meet only with private funds. Our young artists and creators must fight all kinds of obstacles to make careers; and many give up the fight. A helping hand must be extended to talent. A correspondent to the New York Times, writing about the woeful lack of string players in this country, points out that the American Federation of Musicians will hold a string congress in Oklahoma this summer. We have almost 180 million people in the United States, and 50—yes, 50—children will have scholarships to the congress. It should be 5,000.

The American Federation of Musicians is doing all it can, and so are other worthy groups devoted to helping the musician, actor and dancer. But ars longa, vita brevis—and their efforts are a pail of water in the ocean. The cultural surge in America is too big and private funds alone cannot keep up with all the needs of the national interest. For every city that has a theater movement, there are 20 that need one. Opera, even on a semipermanent basis, is missing from all but six or seven cities in America (even the proud Metropolitan, our leading opera house, operates only about 6 months of the year, whereas most opera houses in Europe have much longer sessions, often 11 months).

The ballet renaissance in America has seen the emergence of lively groups in representative sections of the country, but all of them, even our three big touring companies, work gallantly on a shoestring and would go out of existence if private funds were not wearily dredged up, funds that are not nearly sufficient to give the companies a sense of security or scope.

It should not be left to private enterprise alone to integrate the arts on a full-time communal basis, no more than it should be the job of private enterprise alone to support all the museums and libraries. It is true that, in a relatively few metropolitan centers, we have developed a rich and flourishing cultural activity. But the majority of Americans around the country face a meager cultural fare and, indeed, are blacked out of professional cultural activities for a good part of the year.

We are probably the only large Nation in the world that does not have a government-sponsored opera, theater or symphony. England and Canada have their Arts Councils. Russia supports well over 30 full-time opera houses, not to mention orchestras, theaters, and dance groups. Nearly every country in Latin America pitches in to help its cultural organizations, often with results that achieve worldwide fame. Because Mexico, for example, engaged in a large-scale program of commissioning murals for its public buildings, the Mexican school of mural painting was stimulated to a point where it developed into one of the most significant contemporary artistic manifestations.

In Italy, one cannot go far without encountering a subsidized opera house. Vir-

tually every city in Germany has its state opera, theater and orchestra, financed by grants from the Federal, State, and local Governments. In France, the Opera and Opéra-Comique enjoy grants the size of which would make the director of our major opera house turn cartwheels of glee down Broadway.

Last year Austria spent $5,800,000 on its four state theaters in Vienna and plans a slight increase for 1959. This was larger than the sum Austria paid to its entire foreign service. Imagine. $5,800,000 out of a total national budget of $1,500 million.

Thus, while the proposed bill for an arts foundation might be considered precedent-shattering in the United States, it would be taken for granted nearly anywhere else in the world. An arts foundation in this country can be instrumental in helping to create a truly national establishment of theater, music, opera, and dance. It would give assistance to both professional and amateur segments of the performing arts. It would encourage performances of the best we have in great areas of the country where little is now available. And it would encourage widespread training and teaching of the arts so that more young people may receive encouragement and direction in realizing to the full their artistic potential.

The bill would provide for Federal assistance to private, nonprofit theater, opera, symphony, dance, and other arts groups; to accredited nonprofit colleges and universities, and municipally sponsored arts councils and commissions for the presentation of and instruction in the living arts.

After the program is underway, it is estimated that expenditures under the bill would not exceed $5 million annually. (There is every indication that this amount would stimulate as much as $50 million in private activity in the performing arts over and above what is now being spent.)

Responsibility for making the necessary artistic judgments and for channeling the funds would be in the hands of panels of specialists in the various arts, functioning under a 12-member board of trustees composed of distinguished private citizens appointed by the President. Those trustees would select the chief officer of the foundation. Naturally, the foundation would be expected to function with complete freedom. Politics can and must be kept out of its operations, as politics has been kept out of the international exchange program of the American National Theater and Academy under the aegis of the State Department.

Such a program would, of course, be only a modest start. I do not envisage a series of Government-sponsored theaters and musical organizations. Nor would the arts foundation compete with existent organizations. It would instead complement them in the nonprofit field. College theaters would be given small supplementary grants for tours to localities seldom visited by the large organizations. Small cities would be encouraged to set up cultural projects along the lines established by the New York City Center of Music and Drama. Perhaps a grant to some of our important musical organizations would enable them to extend their tours of the Nation. If the box office receipts did not cover the costs, the Government would help to meet a loss.

Professional help could be supplied to some of the more than 2,000 community theaters in the country. Eventually, some of those theaters might become the nucleus of professional companies able to support a full season of theater. Traveling repertory companies would be established. Scholarships could be provided to some of the talented students of the more than 400 colleges and universities that offer degrees in the drama. Young musicians could also be helped by scholarships. Above all, so many neglected audiences of America could have the chance to breathe some of the cultural air they now lack. Who knows but that such exposure to the arts might stimulate the emergence of an American Mozart or Corneille?

The initial sum of $2,500,000 is, as noted, small—about one three-hundredth of 1 percent of the proposed Federal budget for 1959–60. But, small as it is, it would be a tremendous stimulus to the arts in America, if only by assuring the artist—and the whole world—that the American Government has taken, for the first time, an affirmative position toward our cultural heritage.

Perhaps the events of the last few years may have prepared our legislators for the creation of an Arts Foundation. For, within the last decade, our Government has lent a helping hand to art and artists through the international exchange program, supplying financial assistance to get them overseas. We were, indeed, almost forced to do so. For it is a moot question whether the Government would have been able to get the money, even at this late date, to show the world some of our cultural resources had not our great rival, Russia, started sending battalions—no, divisions—of its cultural armies all over the world.

It is not the specific purpose of the proposed Arts Foundation to send American artists abroad. But the Arts Foundation could certainly help to create such a renaissance of cultural activity in the United States as to increase materially our cultural stature in the international arena. The Russian artists, of course, do a tremendous propaganda job. Everywhere they go—and they go everywhere—they instill in the minds of their hosts, by word or deed, the argument that Russia, far from being a warlike nation, is interested primarily in peace and culture; that the great Russian bear would spend all his time and energies sniffing flowers if given the chance.

Repeated often enough, any message begins to be believed. The fact remains that the cultural message is international, and Russia spends enormously more on its culture than we do on ours, to the applause of people throughout the world, and to our detriment. Of course, the cry will go up in certain quarters that the Federal Government has no business engaging in an arts program, just as similar objections were raised against all of the new programs that the Government entered into to keep pace with the times and with the development of America.

Critics blasted the social security program as Government encroachment upon free enterprise and the private lives of our citizens. Critics blasted the establishment of Federal minimum wage laws as a violation of industry's prerogatives. Critics blasted the advent of unemployment compensation, of Federal aid to hospital construction, of the Rural Electrification Administration and of the Federal Reclamation Service as unwarranted interference by the Federal establishment with the national economy or the rights of the individual. Yet today all those programs are accepted and regarded as integral parts of our society.

There are peripheral arguments against an arts foundation, some of them well-meaning but certainly refutable. Federal participation in the arts, some lament, means the suffocation of the creative genius of the artist. As if Beethoven or Van Gogh or any creative artist who ever lived was in the habit of turning down commissions.

An artist will create best when given the most opportunities, and happily, as long as he has entire freedom to create what he wants. He is his own master, not the servant of the state. In Rusia, where the creative artist is the servant of the state, the esthetic worth of much of that country's serious art has been highly dubious during the last generation. As long as America remains America, that cannot happen here.

And what about Federal competition with private industry? The musicians in America will respond to this with hollow laughter. "What private industry?" they will ask. Virtually all serious, large-scale musical organizations in America today are nonprofit and are run at a loss. As for so-called competition with the private theater, the proposed Arts Foundation will not be interested in the big cities, where the commercial theater operates, but in the smaller communities, where it does not. The aim is to build up an audience away from New York—and a body of performers and creators—that will in the long run help the commercial theater.

In short, the Arts Foundation, which will not be controlled by a Federal bureaucracy but by distinguished private citizens active in the arts, will operate within the framework of private enterprise and voluntary association, strengthening and supplementing their efforts. It is our duty to help the living arts flourish at home so that they may flourish abroad, demonstrating to ourselves and the world the enlightenment and maturity we have and should enjoy.

We have already begun to recognize the fact that the world judges us as much by our culture as by our machinery, perhaps more so. The times are ripe for such an undertaking. Some Congressmen say that only 4 years ago they could not have supported an arts program without being laughed at back home. Practically nobody is laughing any more.

TENTH ANNIVERSARY OF THE SIGNING OF THE NATO PACT

Mr. JAVITS. Mr. President, I should like to add my voice to the voices of others during the past week, while Congress was in recess, in commemoration of the 10th anniversary of the signing of the NATO Pact.

It will be recalled that the exact anniversary is April 4.

Ten years ago, on April 4, 1949, at the State Department auditorium in Washington, the North Atlantic Pact was signed by the foreign ministers of Belgium, Canada, Denmark, France, Great Britain, Iceland, Italy, Luxembourg, the Netherlands, Norway, Portugal, and the United States. To these original 12 apostles of peace were added Greece and Turkey in 1952 and the German Federal Republic in 1955.

In joining NATO its members reaffirmed their faith in the United Nations, to which all belong, and declared that an armed attack against any one of them would be considered an attack against them all. Moreover, and more important, though this is not sufficiently emphasized, they provided for cultural and economic cooperation among the members of the alliance. It is most significant that the final communique of the NATO Ministerial Council in Washington has just emphasized this point.

In 1951, in order to give added strength to the common defense, NATO's planning body, the Council of Ministers, established a military arm, the Supreme Headquarters Allied Powers Europe, popularly known as SHAPE. Gen. Dwight D. Eisenhower, whom Europe knew, respected, and loved as its World War II liberator, was installed as commander. It was his leadership that knit together the threads of the alliance into the strong protective fabric it is today.

During the past decade NATO has withstood many crises, both internal and external. Such internal dissensions as the fishing rights dispute between Great Britain and Iceland and the controversy over Cyprus between Greece and Turkey have neither given cause for the participants to sever their ties with NATO or have permanently impaired its effectiveness. Repeated threats and incidents by the Soviet on many fronts, war in Korea and war in Suez, and now a major crisis over Berlin—all have failed to shake the alliance. In desperation, the Soviet Union has formalized into one single agreement its many treaties of alliance with its satellites by creating the Warsaw Pact in 1955. This has only served to fortify the determination of the NATO participants.

We now mark the 10th anniversary of NATO. The foreign ministers of the 15 member nations have met in Washington, the birthplace of the North Atlantic Treaty, to develop policy to preserve the peace. This June nongovernmental citizen delegates will join together in London for a North Atlantic Congress to rally the peoples of the member nations to the objectives for which the free world stands and to suggest the course of NATO for the next 10 years.

NATO is collective diplomacy for peace. Its military arm, SHAPE, is the big stick that is carried with the softspoken word.

But if we do no more on this 10th anniversary of the signing of the North Atlantic Pact than to sing its praises, we fail ourselves and those in the free world, or those who wish to be free, who look to us for leadership and inspiration. President Eisenhower has urged that we wage the peace. This we must do.

It will be recalled that in both World War I and World War II declarations of high moral principle, the 14 points of Woodrow Wilson and the Atlantic Charter of Roosevelt and Churchill, were proclaimed to rally the world in the battle for liberty and survival.

Therefore, I urge that, between now and the conclusion of the North Atlantic Congress, by the cooperation of the heads of government, there be issued a similar declaration of high moral principles, making clear our goals and the tenets of our secular faith. For this purpose a convocation of the heads of the NATO governments should be held prior to the summit meeting later in the summer.

It is time that we remind the world, as well as ourselves, that we are not interested only in combating communism, but that we are also affirmatively interested in our principles, objectives, goals, and ideals. Our task is to see not only that freedom survives and grows more pervasive and beneficent all the time but that for those now enslaved hope shall not perish from the earth.

I now turn to another subject.

The PRESIDING OFFICER. The Senator from New York has the floor.

U.S. POLICY TOWARD DICTATORIAL REGIMES IN LATIN AMERICA

Mr. JAVITS. Mr. President, I ask unanimous consent to have printed in the RECORD as a part of my remarks a very interesting letter which I received from the Department of State. It delineates American policy with respect to dictatorial regimes in the Americas.

The PRESIDING OFFICER. Without objection, it is so ordered.

(See exhibit 1.)

Mr. JAVITS. Mr. President, very shortly our position in this matter will be subjected to the tests of international opinion, since there is some indication that the Cuban Government will not choose to participate in the Organization of the American States because dictatorial governments are also members of that Organization.

I have made available to all our colleagues, with the permission of the Department of State, its letter to me on this subject. I should like to read the concluding paragraph, because it deals with a policy of which all of us should be cognizant, especially because few people in our country know better than those of us here, the practical problems which we face in respect to dictatorial regimes. I quote the paragraph as follows:

> U.S. support of representative democracy must, of course, be within the principle of nonintervention. There are, however, ways in which the United States can and does support and promote democracy without violating the principle of nonintervention: for example, by aiding in the maintenance of peace and security, by helping create the economic and social conditions under which democratic processes can be strengthened, as well as by continuing ourselves to follow democratic traditions.

Mr. President, I add to that the assertion that, although we extend recognition to dictatorial regimes, and the exigencies of life make us do business with them, the great moral strength and the great moral voice of the United States must constantly and always be raised for free institutions and the processes of self-government, in which we believe.

It is not enough simply to be for the principles of free institutions or the maintenance of peace and security or the creation of economic conditions in which freedom can flourish; but inherent and implied in the letter of the State Department, as I read it, are moral declarations which should be made as often as possible, fortifying and reaffirming our decisions to give comfort to those, wherever they may be, who believe with us.

EXHIBIT 1

MARCH 17, 1959.

The Honorable JACOB K. JAVITS,
U.S. Senate.

DEAR SENATOR JAVITS: The Department welcomes the opportunity, in response to your letter of March 5, 1959, to comment on the course of our foreign policy as it concerns dictatorial regimes in the Western Hemisphere

There are two important principles in the sphere of inter-American relations which are intimately related to the matter of dictatorial regimes in the Western Hemisphere and which have influenced U.S. policy with regard to the question. The first of these is that continuity of diplomatic relations among the American States is desirable, and that establishment or maintenance of diplomatic relations with a government does not imply any judgment upon the domestic policy of that government. This principle was enunciated in Resolution 35 of the Bogotá Conference of 1948. The second is the principle of nonintervention. The charter of the Organization of American States provides that no state or group of states has the right to intervene, directly or indirectly, for any reason whatever, in the internal or external affairs of any other state.

Both of these principles have the support of the American republics including the United States. The other American republics have long cherished the principle of nonintervention and they attach particular importance to it as it relates to actions of the United States. While adhering to these principles, we have witnessed with satisfaction a growth of representative democracy in the hemisphere in recent years. It is the intention of the Department to continue to be guided by these principles.

As indicated in your letter, the question of dictatorial governments may be raised in the Organization of American States. It may well be that the issue will be debated at the 11th Inter-American Conference scheduled to be held early next year in Quito, Ecuador.

The OAS Charter also states that inter-American solidarity calls for the effective exercise of the representative democracy. This is specifically included among the principles reaffirmed by the American States in article 5 of the charter.

The devotion of the United States to democratic principles was clearly expressed by President Eisenhower last August in these words: "The United States believes firmly in the democratic elective process and the choice by the people, through free and fair elections, of democratic governments responsive to them. Authoritarianism and autocracy, of whatever form, are incompatible with the ideals of our great leaders of the past. Free institutions, respect for individual rights, and the inherent dignity of man are the heritage of our western civilization."

U.S. support of representative democracy must, of course, be within the principle of nonintervention. There are, however, ways in which the United States can and does support and promote democracy without violating the principle of nonintervention: For example, by aiding in the maintenance of peace and security, by helping create the economic and social conditions under which democratic processes can be strengthened, as well as by continuing ourselves to follow democratic traditions.

Sincerely yours,

WILLIAM B. MACOMBER, Jr.,
Assistant Secretary
(For the Acting Secretary of State).

DISCLOSURE OF INCOME BY MEMBERS OF CONGRESS

Mr. MORSE. Mr. President, every Member of Congress is very much aware these days of the publicity which has come our way in the press recently on two matters: One, the employment of relatives of Members to serve on their staffs; the other, the disclosure of the sources of income on the part of Members.

I have long advocated legislative reform in both these fields, and I shall reintroduce two measures to deal with them.

The first requires every Member of Congress and everyone else employed by the U.S. Government at a salary of $10,000 a year or more, and the national chairmen of the Democratic and Republican Parties, to file a report with the Comptroller General each year showing the sources and amounts of income received. The language of my bill makes clear that this report must include income and gifts received by someone else on behalf of the Government official. It also includes any asset held by or entrusted to him and any other person jointly.

It was in 1946 that I first introduced a resolution of this nature. At that time it applied only to Members of the Senate. In subsequent Congresses, I enlarged its application, as indicated in the listing I have had prepared of all my bills on this subject.

I ask unanimous consent to have the list printed in the RECORD at this point in my remarks.

There being no objection, the list was ordered to be printed in the RECORD, as follows:

INCOME DISCLOSURE BILLS SPONSORED BY SENATOR WAYNE MORSE

Seventy-ninth Congress, second session (1946), Senate Resolution 306: Requiring Senators to file annual statements of income and financial transactions. Referred to Committee on Banking and Currency.

Eightieth Congress, first session (1947), Senate Resolution 31: Amending rules so as to require Senators to file annual statements of income and dealings in securities. Referred to Rules Committee.

Eightieth Congress, first session (1947), Senate Resolution 33: Requiring Senators to file annual statements of income and dealings in securities. Referred to Rules Committee.

Eightieth Congress, second session (1948), S. 2086: To require certain members of legislative, judicial, and executive branches of Government to file statements relating to amount and sources of income and dealings in securities and commodities. Referred to Rules Committee.

Eighty-first Congress, first session (1949), S. 109: To require certain members of legislative, judicial and executive branches of the Government to file statements relating to amount and sources of income and dealings in securities and commodities. Referred to Rules Committee.

Eighty-second Congress, first session (1951), S. 561: To require certain members of the legislative, judicial, and executive branches of the Government to file statements relating to amount and sources of income and dealings in securities and commodities. Referred to Rules Committee.

Eighty-second Congress, second session (1952), Senate Resolution 334: Requiring annual reports showing names of persons employed by each Senator with their compensation. Referred to Rules Committee.

Eighty-third Congress, first session (1953), S. 334: To require Members of Congress, certain other officers and employees of the United States, and certain officials of political parties to file statements disclosing the amount and sources of their incomes, the value of their assets and their dealings in securities and commodities. Referred to Rules Committee.

Eighty-fourth Congress, first session (1955), S 2747: To require Members of Congress, certain other officers and employees of the United States and certain officials of political parties to file statements disclosing the amount and sources of their incomes, the value of their assets and their dealings in securities and commodities. Referred to Rules Committee.

Eighty-fifth Congress, second session (1958), S. 3346: To require members of Congress, certain other officers and employees of the United States, and certain officials of political parties to file statements disclosing the amount and sources of their incomes, the value of their assets, and their dealings in securities and commodities.

SENATE SALARIES SHOULD ALSO BE PUBLISHED

Mr. MORSE. Mr. President, it will be noted than in 1952 I submitted a resolution to restore the practice of disclosing the salaries of Senate employees. The names of all persons employed by the Senate and by individual Senators on their staffs are already available in the annual report of the Secretary of the Senate.

The Senate does not follow the very sound procedure of the House, namely, of listing in the thick volume to which I have referred, the salaries of the members of our staffs; we simply list the total amounts of money which our offices spend. Why should this veil of secrecy be maintained in the Senate, while a different procedure is followed in the House? I am asking that the same procedure be followed in both branches of Congress. The Senate should return to the practice we followed before 1948 of publishing them.

I see no reason in the world why the salaries paid to the members of our staffs should not be published. As a matter of fact, I believe all expenditures by Congress, by or for its committees and its Members, should be public information. The burden of proof for keeping secret any expenditure of public money is upon those who want to keep it secret.

Many of us have been very critical—and rightly so—of the executive branch for dropping a veil of secrecy over much of the business of the American people. Most of that is done in the name of national security, although the term has been stretched over much business which does not affect national security.

But nothing for which the Congress spends money in the operation of the Congress itself has any relationship to national security. Why has not the public the right to know how we spend its money in running the Congress?

I believe information about all such expenditures should be available for public inspection. My 1952 resolution will be reintroduced just as soon as I have been able to ascertain whether or not it should be expanded to cover publication of additional types of disbursements which may not now be available to the public.

TIME TO RESTUDY CONGRESSIONAL REFORM

As a matter of fact, the Congress would do well to restudy its entire organization. There have been many criticisms of congressional practices and procedures, largely directed against those practices which have developed over the years as a matter of tradition rather than by design.

It is time that both branches of Congress clean their parliamentary house and put it in order. We should bring an end to congressional rules that permit the Congress to be controlled by minority groups. We should reexamine and reform our systems of party leadership.

When an individual Member of Congress rises to criticize these practices, which are in fact the object of much disgust and ridicule among the American people, such Member is likely to be subjected to severe criticism himself.

WE NEED A NEW LA FOLLETTE-MONRONEY COMMITTEE

Congress made such a self-analysis in the mid-forties when it set up the La Follette-Monroney committee. Through such a committee, we can institutionalize the entire discussion, and get away from personalities in evaluating our congressional procedures.

I suggest that such a committee today would find many areas in need of study and improvement. For example, it should look into the issue of how party leadership is and should be organized in both Houses, and among both the minority and majority parties. Personally, I favor a system of periodic party conferences, without binding any member; it is also a longstanding conviction of mine that the members of our policy committees should be selected by party members by secret ballot. At present, the Democratic policy committee is not representative of a cross section of Democratic points of view in the Senate or across the country.

Another area that cries out for reform is the selection of committee chairmen. The La Follette-Monroney committee gave some attention to the seniority system, but did not recommend any changes because it was felt that to go into that subject might jeopardize the entire legislative reorganization bill it was proposing. But that does not mean we cannot ever do anything about it. There are many alternatives to seniority in choosing committee chairmen, and I believe a more democratic method could be agreed on.

A third area this committee should look into is that of conflict of interest among Members of Congress. I would hope that it would recommend the kind of measure I am introducing today, requiring disclosure of all income and financial transactions, so that our constituents may judge whether we are unduly influenced by income sources.

A fourth area we should try to deal with is the whole subject of patronage, both within the Congress and within the executive branch of the Government, including lameduck patronage.

I do not think the American people are fully aware, for example, of the incompetency which is being perpetrated by this administration in some of its inexcusable lameduck patronage appointments since the defeat of the present administration in the elections of 1954, 1956, and 1958. Yet lameduck patronage seems to be a sort of sacred cow in American politics which must not be touched. It is assumed to be a part of the nature of the political system.

What I am interested in is: What is the effect of putting into a position of great responsibility a lameduck, displacing a career person who really could serve the Government with competency on the specialized subject matter of the

particular agency which he has been serving, but from which he has been displaced by this administration? I intend to give some attention to that in the proposals I shall make in the near future. When all is said and done, the people of the Nation are entitled to protection from political practices both by Congress and the executive branch which at the present time are not working in the interest of good government in the United States.

A little self-appraisal on the part of Congress from time to time is the least the American people should expect from us. It has been 14 years since Congress undertook such a self-appraisal. I hope others will share my view that it is time for another one.

Undoubtedly there are other areas of congressional practice which should be included in a restudy of legislative organization. The important thing is that Congress remember that it, too, is a human institution and subject to the same frailties we criticize and investigate not only in the executive branch, but in nongovernmental institutions in America, too.

INCOME DISCLOSURE GAINING SUPPORT

I am pleased that although I have introduced the same type of bill on this subject since 1946, some of my colleagues in the Senate have come to think well enough of it that they have been offering bills of their own which deal with the same basic principles of my proposal.

Whether they are parties to my bill or introduce bills of their own, I welcome that kind of endorsement of the principle of good government for which I am fighting.

What is that principle? It is that in a democracy there is no substitute for public disclosure of the public's business. That is what my bill pertains to.

Mr. HUMPHREY. Mr. President, will the Senator yield?

Mr. MORSE. I yield.

Mr. HUMPHREY. As I recall, it was once my privilege to be associated with the senior Senator from Oregon in the introduction of a bill or a resolution which related to income disclosure and income listing, so as to avoid or prevent any conflict of interest on the part of Members of Congress. I fully subscribe to the proposal which the senior Senator from Oregon has outlined. I believe it would do much to alleviate the doubts many persons have expressed about congressional procedures. I should very much like to associate myself with the Senator's bill, if he will permit me to join with him as one of its cosponsors.

Mr. MORSE. I should be highly honored to have the senior Senator from Minnesota cosponsor my bill. No Senator was invited to cosponsor it because I am very careful not to make suggestions to Senators at any time which might possibly embarrass them. I always welcome, however, the kind of support which the senior Senator from Minnesota is offering me again, and has offered for many years. He has stood shoulder to shoulder with me in support of the principle of full disclosure. I am delighted to ask unanimous consent that his name be added as a cosponsor of the bill.

Mr. President, I ask unanimous consent that the bill be printed at this point in the RECORD, and that the name of the senior Senator from Minnesota be shown as a cosponsor.

The PRESIDING OFFICER. The bill will be received and appropriately referred; and, without objection, the bill will be printed in the RECORD, and the name of the Senator from Minnesota will be added as a cosponsor.

The bill (S. 1603) to require Members of Congress, certain other officers and employees of the United States, and certain officials of political parties to file statements disclosing the amount and sources of their incomes, the value of their assets, and their dealings in securities and commodities, introduced by Mr. MORSE (for himself and Mr. HUMPHREY), was received, read twice by its title, referred to the Committee on Rules and Administration, and ordered to be printed in the RECORD, as follows:

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That each Member of the Senate and House of Representatives (including each Delegate and Resident Commissioner); each officer and employee of the United States who (1) receives a salary at a rate of $10,000 or more per annum or (2) holds a position of grade GS–15 or above, and each officer in the Armed Forces of the rank of colonel, or its equivalent, and above; and each member, chairman, or other officer of the national committee of a political party shall file annually with the Comptroller General a report containing a full and complete statement of—

(1) the amount and resources of all income and gifts (of $100 or more in money or value, or in the case of multiple gifts from one person, aggregating $100 or more in money or value) received by him or any person on his behalf during the preceding calendar year;

(2) the value of each asset held by or entrusted to him or by or to him and any other person and the amount of each liability owed by him, or by him together with any other person as of the close of the preceding year; and

(3) the amount and source of all contributions during the preceding calendar year to any person who received anything of value on his behalf or subject to his direction or control or who, with his acquiescence, makes payments for any liability or expense incurred by him.

SEC. 2. Each person required by the first section to file reports shall, in addition, file semiannually with the Comptroller General a report containing a full and complete statement of all dealings in securities or commodities by him, or by any person acting on his behalf or pursuant to his direction, during the preceding six-month period.

SEC. 3. (a) Except as provided in subsection (b), the reports required by the first section of this Act shall be filed not later than March 31 of each year; and the reports required by section 2 shall be filed not later than July 31 of each year for the six-month period ending June 30 of such year, and not later than January 31 of each year for the six-month period ending December 31 of the preceding year.

(b) In the case of any person required to file reports under this Act whose service terminates prior to the date prescribed by subsection (a) as the date for filing any report, such report shall be filed on the last day of such person's service, or on such later date, not more than three months after the termination of such service, as the Comptroller General may prescribe.

SEC. 4. The reports required by this Act shall be in such form and detail as the Comptroller General may prescribe. The Comptroller General may provide for the grouping of items of income, sources of income, assets, liabilities, and dealings in securities or commodities, when separate itemization is not feasible or not necessary for an accurate disclosure of a person's income, net worth, or dealings in securities, and commodities.

SEC. 5. Any person who willfully fails to file a report required by this Act or who willfully and knowingly files a false report shall be fined $2,000 or imprisoned for not more than five years, or both.

SEC. 6. (a) As used in this Act—

(1) The term "income" means gross income as defined in section 22(a) of the Internal Revenue Code.

(2) The term "security" means security as defined in section 2 of the Securities Act of 1933, as amended (U.S.C., title 15, sec. 77b).

(3) The term "commodity" means commodity as defined in section 2 of the Commodity Exchange Act, as amended (U.S.C., title 7, sec. 2).

(4) The term "dealings in securities or commodities" means any acquisition, holding, withholding, use, transfer, disposition, or other transaction involving any security or commodity.

(5) The term "person" includes an individual, partnership, trust, estate, association, corporation, or society.

(b) For the purposes of any report required by this Act, a person shall be considered to be a Member of the Senate or House of Representatives, an officer or employee of the United States and of the armed services as described in the first section of this Act, or a member, chairman, or other officer of the national committee of a political party, if he served (with or without compensation) in any such position during the period to be covered by such report, notwithstanding that his service may have terminated prior to December 31 of such calendar year.

SEC. 7. The Comptroller General shall have authority to issue, reissue, and amend rules and regulations governing the publication of reports, or any part of them. He shall prescribe fees to cover the cost of reproduction. In formulating such rules and regulations, he shall seek to maximize the availability of reports for purposes of informing the public and agencies and officials of the Federal and local governments, and to minimize use of such records for private purposes.

FIFTIETH ANNIVERSARY OF DISCOVERY OF THE NORTH POLE BY REAR ADM. ROBERT E. PEARY

Mrs. SMITH of Maine. Mr. President, yesterday, April 6, was the 50th anniversary of the discovery of the North Pole by a U.S. naval officer, Rear Adm. Robert E. Peary.

Although his accomplishment and his fame are deservedly international, the State of Maine is, needless to say, proud of Peary.

He was born in Cresson, Pa., in May of 1856, of Maine parents, and was brought up in Portland, Maine. Bowdoin College, in Brunswick, graduated him as a trained civil engineer in 1877. As a young man, he lived and worked as a surveyor and taxidermist in Fryeburg, Maine. With the first money he earned after college, he bought Eagle Island, in Casco Bay, Maine, and later established there the most nearly permanent, and certainly the best loved, home of his life.

In 1881, he was commissioned a lieutenant in the Civil Engineer Corps of the

Navy, as a result of competitive examinations, and was assigned two projects, which he completed, in the tropics: the salvage and reconstruction of a collapsed pier at Key West, Fla.; and the preliminary survey for a sea level, interoceanic canal through Nicaragua.

After his Nicaraguan duty, and while he was back on duty in Washington, he became interested in the Arctic. In 1886, 2 years before his marriage to Josephine Diebitsch, he began a series of expeditions to Greenland, which ended 23 years later with the discovery of the pole. The first two, in 1886 and 1892, were reconnaissance and experience trips. In 1892, and again in 1894, he crossed the great Greenland icecap from west to east.

In 1898, he was granted 4 years' leave, to pursue his Arctic work; and he spent from 1898 to 1902 in the Far North. That was his first expedition with the North Pole as its goal; and in the course of those 4 years he learned a valuable lesson. The ships of the time were unable, even in the summer months, to get him far enough north against the sea and the ice. By the time his men and dogs had trekked to the shores of the Arctic Ocean they were no longer fresh and strong enough to attain the Pole.

Back in Maine, he had the *Roosevelt*—named for his friend and supporter Theodore Roosevelt—specially designed and built. She was designed by a Maine man, incorporating special features of Peary's own, and was built in Bucksport, Maine, by Maine craftsmen especially for navigation in the ice. With the *Roosevelt* as a base, in 1906 he attained the farthest north yet reached by man, 87°06'' N. latitude.

Finally, again using the *Roosevelt*, and on feet from which the toes had been amputated, after they were frozen years before, Peary walked the thousand miles to the pole and back in 1909. No other party has ever walked to the North Pole. Admiral Peary was the first man at either pole of the earth. After his last polar expedition, he devoted himself to the advocacy of aviation for defense and exploration.

Peary died in 1920. He left a son, Robert E. Peary, Jr., who is also a civil engineer, and who has spent years in the Arctic on military construction projects. He also left a daughter, Marie Peary Stafford, who has made a distinguished career of writing and lecturing and exploring on her own. Both hold degrees from Bowdoin College, Maine, although, by the nature of Bowdoin, Mrs. Stafford's degree must be honorary.

Three grandsons have followed the tradition of the naval service, all in naval aviation. One, Peary D. Stafford, after a distinguished combat record as a career pilot, was killed in a tragic mid-air collision in 1946; another is presently flying out of Guam as an electronics technician; the third, Comdr. Edward Peary Stafford, after a recent tour as operations officer of an airborne early warning squadron in the North Atlantic, is stationed in Washington as one of the two naval liaison officers to the Senate. In what spare time this assignment permits, he also writes and lectures.

Yesterday, Commander Stafford was present and spoke at the ceremony commemorating this 50th anniversary, at his grandfather's grave in Arlington National Cemetery. I think his remarks were especially timely and well justified. I ask unanimous consent that they be printed at this point in the RECORD, in connection with my own remarks.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

STATEMENT BY COMDR. EDWARD PEARY STAFFORD

In these days when our country finds itself challenged and threatened around the world, it is good for those of us in the armed services to examine our strength and our weakness.

I think we know our strength well enough.

Our weakness lies at least partially in a tendency toward softness, in an overemphasis on the easy, pleasant life available to us at home with our families. We tend to gripe when we are ordered to sea and we do not always feel that we are paid quite enough.

The distinguished naval officer whom we honor here today set us an example which is worth considering. For 25 years, he made repeated expeditions into the far north which at that time was months away and completely out of contact with the rest of the world. Year after year he spent away from his family, which he loved, doing the hardest kind of physical labor. Finally, when he was 53 years old, he walked the 500 miles over the broken ice and pressure ridges of the Polar Sea from Cape Columbia to the Pole and the 500 miles back. It took him 53 days. He did it for two reasons: First, because it had not been done before and was said to be impossible to do, and second, because he wanted the United States and the U.S. Navy to be first at the pole.

For 25 years of hard work, away from home, it paid very poorly, but he was well content.

This, I am proud to say, is the tradition of our Navy and it is good to remember.

AMENDMENT OF REORGANIZATION PLAN NO. 2 OF 1953

Mr. MANSFIELD. Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER (Mr. JAVITS in the chair). The clerk will call the roll.

The legislative clerk proceeded to call the roll.

Mr. HUMPHREY. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER (Mr. HART in the chair). Without objection, it is so ordered.

Mr. HUMPHREY. Mr. President, the pending business, as I understand, is Calendar No. 131, Senate bill 144, to amend Reorganization Plan No. 2 of 1953.

The PRESIDING OFFICER. The Senator is correct.

The Senate resumed the consideration of the bill (S. 144) to amend Reorganization Plan No. 2 of 1953.

Mr. HUMPHREY. Mr. President, this bill was introduced on January 9, by me and some 20 cosponsors, and it is a bill which has received the approval of the Committee on Government Operations. Its purpose is to restore to the administrator of the Rural Electrification Administration the statutory authority for the granting of rural electrification loans vested in him by the Rural Electrification Act of 1936—Public Law 605, 74th Congress.

This authority, which the administrator exercised for so many years in the administration of what we all know has been a highly successful program, was assumed by the Secretary of Agriculture about a year and a half ago. The action to curb the administrator was taken, according to statements made by the Secretary and his general counsel, pursuant to the Reorganization Plan No. II of 1939 and Reorganization Plan No. 2 of 1953.

As a consequence of the Secretary's action, the REA Administrator today must have prior approval from an Assistant to the Secretary before he can make certain loans. These loans include all the major loans in both the electric and telephone programs.

The bill before the Senate for action and approval, S. 144, seeks to correct this situation before serious harm can be done to the REA program. The bill will put back in the Administrator's hands the loan-making authority originally vested in him by the Congress—an authority exercised by each Administrator through the years until the present period.

As Senators know, I introduced a bill for this purpose in the last Congress, that is, the 85th Congress. The session adjourned before the committee took action. In January of this year I introduced S. 144, and I am proud that the following distinguished Senators joined me in sponsorship of the bill: Senators MANSFIELD, HENNINGS, MAGNUSON, YARBOROUGH, JOHNSTON of South Carolina, HILL, LANGER, MURRAY, HARTKE, JACKSON, KERR, PROXMIRE, MORSE, KEFAUVER, THURMOND, JORDAN, KENNEDY, FULBRIGHT, YOUNG of North Dakota, SPARKMAN, CARROLL, O'MAHONEY, DOUGLAS, MONRONEY, and MCCARTHY.

At this point, Mr. President, I should like to present the findings of the Committee on Government Operations, which deal with this highly important issue, as follows:

The Committee on Government Operations recommends the enactment of S. 144, after extensive examination of the operations of the Rural Electrification Administration since its establishment in 1936. In taking this action the committee bases its recommendation on the following factors:

1. It was clearly the intent of the Congress when it established the Rural Electrification Administration that all of its powers should be exercised by the REA Administrator. Section 1 of Public Law 605, 74th Congress, as originally enacted, reads:

"Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That there is hereby created and established an agency of the United States to be known as the 'Rural Electrification Administration', all of the powers of which shall be exercised by an Administrator."

2. It is also clear it was the intent of the Congress that the authority to grant rural electrification loans should be lodged directly in the REA Administrator, subject to the terms of the Rural Electrification Act. Section 2 of Public Law 605, 74th Congress, specifically authorized the REA Administrator to make loans, as follows:

"The Administrator is authorized and empowered to make loans in the several States

and Territories of the United States for rural electrifiaction and the furnishing of electric energy to persons in rural areas who are not receiving central station service, as hereinafter provided * * *"

3. It is also clear that it was the intent of the Congress that the Rural Electrification Administration should be administered on a nonpolitical or nonpartisan basis. Section 9 of Public Law 605, 74th Congress, reads:

"This act shall be administered entirely on a nonpartisan basis, and in the appointment of officials, the selection of employees, and in the promotion of any such officials or employees, no political test or qualification shall be permitted or given consideration, but all such appointments and promotions shall be given and made on the basis of merit and efficiency."

4. As noted above, Reorganization Plan No. 2 of 1953 transferred all functions of the Rural Electrification Administration, including the REA Administrator's authority to grant loans, to the Secretary of Agriculture.

Although the present Secretary of Agriculture has delegated the performance of these functions to the present REA Administrator, it is the committee's finding that the vesting of the Rural Electrification Administrator's powers in the Secretary of Agriculture conflicts directly with long standing congression intent expressed in the basic Rural Electrification Act.

It is, therefore, the committee's conclusion that, in the best interests of the rural electrification program, the powers specifically granted the REA Administrator by Public Law 605 of the 74th Congress relating to the granting of rural electrification loans should be restored.

These are the findings the Committee on Government Operations arrived at after long and careful consideration of the whole question of whether the loan-making power of the REA Administrator should be curtailed as it has been.

The bill before the Senate today is designed to accomplish two purposes: To keep REA intact as an agency, and to put loan-making back into the hands of the Administrator.

First. The bill, first of all, will prevent the Secretary of Agriculture from transferring the functions and activities of REA to other agencies, bureaus, or offices of the Department of Agriculture. It requires that the Rural Electrification Administration be kept intact within the Department of Agriculture as an integral unit, with all of the functions and duties pertaining to the administration of the Rural Electrification Act being performed by that unit. In this respect, no change has been made from the manner in which the Rural Electrification Administration actually has operated since it was first transferred to the Department of Agriculture back in 1939. It has always operated as an integral unit within the Department, and I am sure it is the intention of Congress that it shall continue to be so operated. This bill will insure that it will continue to be so operated.

Reorganization Plan No. II of 1939 provided for the operation of Rural Electrification Administration as a unit within the Department of Agriculture. Reorganization Plan No. 2 of 1953 gave the Secretary of Agriculture the authority to transfer records, property, personnel, appropriations, allocations, and other funds as he deems necessary to carry out the plan. Thus, under Reorganization Plan No. 2 of 1953, the Secretary has the right to break up the integral unit that we know as REA and have its functions exercised by other agencies, bureaus, or offices of the Department of Agriculture.

When Reorganization Plan No. 2 of 1953 was being considered by the Congress, fears were expressed that the Secretary might transfer functions of REA to other parts of the Department.

Mr. MANSFIELD. Mr. President, will the Senator yield?

Mr. HUMPHREY. I yield.

Mr. MANSFIELD. Is it true that within the Department of Agriculture, the Department in which the Rural Electrification Administration is now located, the powers of the Administrator of the REA have been diluted to an extent, in that he can approve loans up to a certain amount but with regard to loans above that certain amount someone else must step in to approve or disapprove?

Mr. HUMPHREY. The Senator is correct. For loans up to $500,000 the REA Administrator has final approval, but for loans over $500,000 the final approval rests with the Secretary of Agriculture or his assistant. I refer to an assistant to the Secretary of Agriculture, whose appointment is not confirmed by the Senate, who is only a departmental employee. It is a process, therefore, which vests final approval of REA loans of any significant amount in the hands of a person whose appointment is not confirmed by the Senate and who is not a Presidential appointee, yet who can supersede the authority of the REA Administrator, who is appointed by the President and whose appointment must be confirmed by the Senate.

Mr. MANSFIELD. Mr. President, will the Senator yield further?

Mr. HUMPHREY. I yield.

Mr. MANSFIELD. Is it not true that the Administrator of the REA at the present time is supposedly acting under the direction of the Secretary of Agriculture?

Mr. HUMPHREY. The Senator is correct.

Mr. MANSFIELD. Why is it necessary to have another person to pass upon loans above $500,000, when the Administrator's appointment is confirmed by the Senate and the Administrator himself is a Presidential appointee? The Administrator can pass upon loans only up to $500,000. Why is there such a discrepancy? Why is there a diminution of power on the part of the Administrator of REA, who is supposed to be in control of this particular segment of the Department of Agriculture?

Mr. HUMPHREY. It is to that very obvious weakness in the present situation that the bill, S. 144, is directed. S. 144 would remove the middleman and the authority of the middleman, who is the assistant to the Secretary and who presently exercises the authority.

Senate bill 144 would also make it mandatory that the REA be preserved as an integral unit in the Department of Agriculture, with the loan-making authority of the Administrator exclusive and not subject to the whim or control of anyone, including the Secretary.

Mr. MANSFIELD. I thank the Senator. If he will yield further, I believe I am correct in stating this is not the first time the distinguished senior Senator from Minnesota has introduced such a bill.

Mr. HUMPHREY. It is not. In fact, I introduced a similar bill in the 85th Congress.

Mr. MANSFIELD. This is the first time, however, the measure has come to the floor of the Senate for consideration and, I hope, for approval.

Mr. HUMPHREY. The Senator is correct. It is our hope that we shall be able to expedite action on this measure. I believe the bill represents a reform which is long overdue and a reform which the evidence indicates is vitally needed.

Mr. MANSFIELD. Mr. President, will the Senator yield further?

Mr. HUMPHREY. I yield.

Mr. MANSFIELD. I am happy to be a cosponsor of the bill along with some 20 other Senators, under the leadership of the senior Senator from Minnesota.

Is there anything in the measure which would tend to keep the interest rates of the REA's at 2 percent, rather than to raise them to a contemplated 4-percent figure about which I have heard rumors from time to time as being in accord with the policy of the administration?

Mr. HUMPHREY. The bill is not directed toward the question of interest rates. It would, however, maintain intact the present 2 percent interest rate, because the bill does not in any way seek to amend that portion of the law. The bill does not propose to raise the interest rate, but would preserve the status quo in terms of the interest rate.

This is essentially an organization bill, and it relates to the organizational structure of the Rural Electrification Administration.

Mr. MANSFIELD. Mr. President, will the Senator yield further?

Mr. HUMPHREY. I yield.

Mr. MANSFIELD. Can the Senator tell us what is the record of repayment, generally speaking, on the part of the REA's? I raise that question because in my opinion there has never been a finer piece of legislation passed than the Rural Electrification Administration Act. It has been a great boon and has brought much benefit to our farmers.

I raise the question also because, as I have stated many times, in my own State—and I think the Senator from Minnesota is the source of my information—the REA program has been one of the greatest assets for private industry, as represented by General Electric, Westinghouse, and other corporations. That is because when the REA's electrify the farms the farmers buy their freezers, radios, TV sets, refrigerators and other items from the large appliance manufacturers. Is that a correct statement?

Mr. HUMPHREY. The Senator is correct. I believe the figure was once given that for every dollar of investment in the rural electrification program——

Mr. MANSFIELD. An investment in America.

Mr. HUMPHREY. The Senator is correct. For every dollar of investment in the rural electrification program, an investment in America, such as the REA distribution lines and the REA generation plants, approximately $6 or $7 of additional sales are generated for the large producers of electrical appliances.

In other words, every $1 investment in the REA's produces $6 or $7 worth of business in the channels of commerce on the part of the private merchants—the wholesalers, manufacturers, and distributors.

Mr. MANSFIELD. It is a dollar invested by the Government, fully repayable, with interest.

Mr. HUMPHREY. With interest.

Mr. MANSFIELD. And that dollar investment brings about $6 or $7 worth of business for the private industries of the country.

Mr. HUMPHREY. That is correct.

I should like to make one other point. Approximately $3 billion has been made available for the REA program in the period since 1935, which is approximately 23 years. Approximately $3 billion has been made available for loans to rural electric cooperatives, and of that $3 billion more than $1 billion has already been repaid, with interest. Payments have been made, in most instances, ahead of schedule. There has been a record of repayment to the Government on the part of the REA's which is second to none in any area of American private enterprise. For example, I know of no industry which has a better record of repayment. I know of no great construction area, such as housing or commercial plants, with a better record of repayment. This has been good business all the way down the line.

Mr. MANSFIELD. Mr. President, will the Senator yield further?

Mr. HUMPHREY. I yield.

Mr. MANSFIELD. In my opinion the farmer-owned, farmer-managed cooperatives have been one of the greatest assets ever made available to the American farmers.

I am very happy and proud to join, under the leadership of the distinguished senior Senator from Minnesota, in sponsoring the proposal. I hope when the time comes for a vote we shall be able to pass the measure overwhelmingly, because it is long overdue.

I thank the Senator.

Mr. HUMPHREY. I am deeply grateful to the Senator from Montana not only for his remarks and his contribution to this discussion but also for his cosponsorship of the measure which is before the Senate and for his long dedication to the rural electrification program.

Mr. CURTIS. Mr. President, will the distinguished Senator from Minnesota yield?

Mr. HUMPHREY. I am happy to yield.

Mr. CURTIS. The REA was originally conceived and set up as an independent agency, was it not?

Mr. HUMPHREY. The Senator is correct.

Mr. CURTIS. The Senator has agreed that the REA was originally conceived as an independent agency. The two Reorganization Acts, the one of 1939 and the one of 1953, placed the REA in the Department of Agriculture and gave the Secretary of Agriculture general authority, along with the Administrator. Is not that correct?

Mr. HUMPHREY. Yes. They gave the Secretary of Agriculture what is called general supervision, but maintained the integrity of the loan-making authority of the Administrator.

Mr. CURTIS. The Senator's bill, as reported from the committee, on page 2, lines 15 and 16, contains the following language: "under the general direction and supervision of the Secretary of Agriculture"——

Mr. HUMPHREY. Yes.

Mr. CURTIS. "Except—" What is it that is excepted under the terms of the Senator's bill that would not be excepted under the general supervision of the Secretary of Agriculture?

Mr. HUMPHREY. The main function of the Administrator of the Rural Electrification Administration is to grant loans, or to make decisions as to whether or not loans should be granted. The purpose of the REA was to provide long-term loans at low rates of interest for the development of rural electric facilities—and, in this instance, rural electric cooperative facilities.

The exception provided for in Senate bill 144, in lines 16 through 22, is as follows: "except that insofar as such functions relate to the approval or disapproval of loans authorized to be made under the Rural Electrification Act of 1936, as amended, their exercise by the Administrator shall not be subject to the supervision or direction of, or to any other control by, the Secretary of Agriculture."

Mr. CURTIS. In other words, if Senate bill 144, as amended by the committee, becomes law, the Secretary of Agriculture will continue to have general direction and supervision of the REA program, except as to the granting of loans.

Mr. HUMPHREY. The Senator is correct. He will have the bookkeeping functions. He will have what may be called the housekeeping functions. He will present the Rural Electrification budget to the committees of the Congress. When I say "he" I mean the Secretary of Agriculture, obviously with the Administrator of the Rural Electrification Administration alongside him for whatever expert technical information may be required.

What Senate bill 144 seeks to accomplish is to restore unmistakably and unqualifiedly the situation which prevailed from 1939 to 1953, the situation which prevailed before Reorganization Plan No. 2 of 1953. However, inasmuch as there was some doubt as to whether the Secretary still maintained a residual power over loanmaking, Senate bill 144 would make it absolutely clear, beyond a shadow of a doubt, that the Secretary has no control whatsoever, in any form, shape, or manner, over the granting or disapproval of loans by the REA Administrator.

Mr. CURTIS. I thank the Senator.

Mr. HUMPHREY. Mr. President, at this point I believe it would be well to have the language of Senate bill 144, as proposed to be amended by the committee by an amendment in the nature of a substitute, printed in the RECORD. I ask unanimous consent that that be done.

There being no objection, the committee amendment was ordered to be printed in the RECORD, as follows:

That the functions and activities of the Rural Electrification Administration and the Administrator of the Rural Electrification Administration which were transferred to the Department of Agriculture and to the Secretary of Agriculture by Reorganization Plan No. II of 1939 and Reorganization Plan No. 2 of 1953 are hereby transferred to the Administrator of the Rural Electrification Administration, and shall be exercised and administered within the Department of Agriculture by such Administrator under the general direction and supervision of the Secretary of Agriculture; except that insofar as such functions relate to the approval or disapproval of loans authorized to be made under the Rural Electrification Act of 1936, as amended, their exercise by the Administrator shall not be subject to the supervision or direction of, or to any other control by, the Secretary of Agriculture.

Mr. HUMPHREY. The Secretary, however, assured us that he would not take any steps to change the operations of REA without first consulting the Congress. It was only on the basis of this assurance that many of us approve this reorganization plan.

I should add at this point that there had been no complaints about REA and its administration prior to this reorganization plan. The reorganization plan was a product of the Hoover Commisson reports on the Department of Agriculture.

The Secretary testified at length about this plan. I was a member of the subcommittee which heard that testimony, and a member of the full committee which finally passed upon the reorganization plan. As I recall—and I believe the record will bear me out—there were no complaints about the manner in which REA was being administered. The whole purpose of the reorganization plan was to give the Secretary more general authority and supervision over the REA than had been possible under the reorganization plan of 1939. In other words, the reorganization plan of 1953 was to consolidate further the Secretary's general authority and supervision over all aspects of Rural Electrification Administration activities.

What the proposal now before the Senate, Senate bill 144, seeks to do is to restore the situation as it was prior to 1953, and to make it even more clear and precise that the REA Administrator is to have complete independence over the granting or disapproval of loans; and that the banking functions, the loaning functions, the financial functions, are not to be subject to partisan or political domination on the part of a Cabinet officer. Rather, those functions are to be undertaken and fulfilled by an officer who has been appointed on a nonpartisan basis, whose nomination has been confirmed by the Senate, and whose term of office is 10 years, extending beyond the first 4-year term of a President, and even beyond the 8 years represented by two terms.

The purpose of the bill is to make as clear as possible the independence—and I underscore that word—of the REA Administrator in the essential function he is to perform, namely, the loan-making function, the financial function.

So far as concerns the question whether or not the REA Administrator is to have enough paper clips or enough stationery, and so far as concerns the REA administration in terms of its overall housekeeping budget for custodial services, telephone service, personnel, and so forth, such items are to be included as agency items in the budget of the Department of Agriculture, just as many other aspects of the Department of Agriculture are presented in the budget.

We are not attempting to interfere with what is considered to be sound administrative practice in terms of housekeeping and budget functions. We are attempting to carry out the intent of Congress in 1935, and again in 1939. We intend to make absolutely clear and unmistakably certain the intent of Congress, namely, that the REA Administrator shall be independent in his financial and loan-making responsibilities. That was the purpose of the act.

However, events have taken a different course from that which was outlined before our committees in 1953. The Secretary made what many of us consider to be an important change in the functions of the Administrator without consulting the Congress. In fact, the change was made so secretly that it was not until weeks after the change had been made that any of us even knew about it. That change was to require that the Administrator could make no loan over $500,000, and no loan to a new borrower, without the prior review of the loan application by a man on the Secretary's staff who carries the title of Director of the Agriculture Credit Service. More recently, the approval figure was changed to $1 million. This action took place just as our committees began consideration of the bill last month.

Experience has shown that REA has functioned extremely well as an integral unit within the Department of Agriculture, but experience has also demonstrated that we can have no assurance that it will continue to be operated as an integral unit unless we so provide by law.

In fact, Reorganization Plan No. 2 of 1953 gives the Secretary of Agriculture the authority literally to dissect REA, He could, under his powers in that reorganization plan distribute the functions which are currently being performed by the Rural Electrification Administration among other agencies and bureaus of the Department of Agriculture.

The bill before the Senate, S. 144, would require that the REA be maintained as an integral unit, as a unified unit, as an autonomous unit within the Department of Agriculture. It would make it absolutely mandatory that the Rural Electrification Administrator have complete power over all loanmaking and financial functions relating to the granting or disapproval of loans to rural cooperatives.

Second. Let me turn now to the second important part of S. 144. As I have already pointed out, the bill provides that the functions of the Administrator in connection with the approval and disapproval of loan applications will be completely free of the supervision, direction, and control of the Secretary.

Senators will recall that the REA Administrator is appointed by the President with the consent of the Senate. He has an efficient staff to assist and advise him in connection with loan applications. There is no need for, and nothing useful can be accomplished by, a review of loan applications after the Administrator has made his final review. If the Administrator and his staff cannot be trusted to make the correct decisions, then efficient operation calls for a strengthening of the staff or a change in Administrators, not the superimposing of an additional authority over the Administrator. Since there has been no accusation of inefficiency or impropriety on the part of the REA staff or the Administrator, there is only one explanation for this erosion of his authority, and that is that a political test has been added to the requirements of the Rural Electrification Act. The Rural Electrification Act calls for nonpolitical administration, and it has been so administered—at least until this new procedure was imposed. Senate bill 144 will place the final authority for the making or disapproval of loans where Congress intended that it should be placed, namely, solely—I repeat, solely—in the Administrator.

The bill is based on sound management principles. It establishes specific responsibilities in the hands of the Administrator and provides him with the necessary authority to carry out those responsibilities. This is not a singular practice; indeed, it is the kind of good administration that has been followed in many other cases.

I should like to call attention to other instances in which Federal agencies which are parts of Federal departments are given functions not subject to the supervision, direction, or control of the Secretary of that department.

Take the case of the Federal Maritime Board. Here we have an agency within the Department of Commerce. However, it is independent of the Secretary of Commerce with respect to certain of its functions, even though it is to be guided by his policies with respect to all other functions.

Take the case of the Bureau of Mines. This Bureau is an agency of the Department of the Interior. Yet certain of its decisions are subject, not to the control of the Secretary, but to that of the Federal Coal Mines Safety Board of Review, which is an independent agency outside the Interior Department.

Another analogous situation concerns the General Counsel of the National Labor Relations Board, who was made independent of the Board in many respects. In fact, his entire office is independent of the Board in many respects.

On the basis of this, we can see that we are following well-tried practice. It is perfectly consistent with sound governmental organization and functioning to commit finally to the head of an agency certain functions of such agency, even though in other respects the agency head is subject to the general supervision and control of the head of the Department in which the agency is located.

Some have expressed concern that the bill would give the Administrator the functions and activities of the program but would leave him without the property, records, personnel, and funds for exercising and administering these functions and activities.

This argument has no validity. Senate bill 144 does not purport to make REA an independent agency. We want REA to continue to be an agency in the Department of Agriculture, but we also want it to be continued as a unit within the Department of Agriculture. It is because REA has been an effective unit that it has been so successful in accomplishing a job which, a quarter of a century ago, all the experts said could not be done.

Until the Secretary took over the review of major loans, the REA Administrator was exercising his duties and functions under a delegation of authority from the Secretary. He operated REA as a unit. It was not split up and dispersed among other bureaus in the Department as could have been done by the Secretary if he had so wished it.

Senate bill 144, in addition to restoring the loan-making authority to the Administrator, merely makes sure that REA will continue in that manner. The bill makes sure there will be no change in any way in REA until Congress decides a change is called for. In other words, the Secretary cannot distribute the functions of REA, but is required to maintain REA as an autonomous unit, an integrated unit, a unified unit within the Department of Agriculture. The loan-making and fiscal responsibilities of the agency would be exclusively the prerogative of the Administrator.

I should like to call attention to the fact that Congress now appropriates the money for the administration of the Rural Electrification Act, designating separate amounts within the total appropriation for the Department of Agriculture for this purpose. This will not be changed in any way.

Senate bill 144 makes no change whatsoever in the status of REA's career employees. This staff will continue to operate as an integral and dynamic unit in the Department of Agriculture. The Secretary of Agriculture and the Bureau of the Budget will have no more power than they now have to withhold any money appropriated by the Congress for the employment of these staff members in the administration of REA.

Because the Secretary will no longer have authority to make drastic changes in REA administration without taking such measures through congressional legislative channels, S. 144 will offer assurance and peace of mind to REA employees. Even more to the point, it will give assurance to millions of rural people who are dependent for electricity upon rural electric systems that their REA program will go forward on the road to continued success as long as Congress deems that the present structure is justified.

It is not true, as has been suggested, that under S. 144 "the Administrator has the horse but no feed, the Secretary has the feed but no horse." The Administrator is assured, under this bill, of all the "feed" which Congress gives for the maintenance of his "horse." The personnel and administrative funds to operate REA will be available to him exactly as they are now.

Thus, S. 144 does exactly what we want it to do—and it does it in a simple and efficient manner. It makes the Administrator the sole and final authority in connection with the making of loans, and it insures the continued operation of the Rural Electrification Administration as an integral unit within the Department of Agriculture.

It has been suggested by some that S. 144 does not go far enough, and that REA should be completely removed from the domination of the Secretary of Agriculture.

My own opinion is that this is too radical a step to take in solving the problem we have before us. The creation of another independent agency to handle the REA program is, in my opinion, undesirable for several reasons:

First. It goes beyond the immediate problem we are trying to solve, and that is the question of who should have the final authority to make REA loans.

Second. The creation of another independent agency flies in the face of all we have learned about good Government administration. We would simply be piling up new problems of government by increasing the number of separate and independent agencies.

I might add that the two Hoover Commission reports have had as their central purpose the grouping together and the consolidation of agencies, rather than their proliferation. An attempt has been made to simplify and coordinate administration, rather than to disperse it. Therefore, S. 144 meets the basic requirements of the Hoover Commission recommendations, namely, the grouping within the jurisdiction and scope of the Department of all related activities. At the same time, because it is a unique function of REA, the granting of loans would be removed completely from any kind of political pressure or potential political pressure. The granting of loans is the sole prerogative of a nonpartisan, presidentially-appointed, Senate-confirmed Administrator of the Rural Electrification Administration. It seems to me that these principles are valid now, as they have been in the past.

Third. We know that REA can work successfully as a part of the Department. The record from 1939 until the time the Secretary transferred the Administrator's loan-making authority demonstrates the success that can be achieved by REA in the Department of Agriculture.

Fourth. It has been said that if it is desirable to separate REA's loan-making function from the Secretary, it should be just as desirable to separate REA's budget procedure as well. I contend that this does not necessarily follow. Congress cannot study individual loans, but it always has the opportunity to study the budget before final action is taken. Our only aim is to curb the Secretary's domination in the area of loans because it is in that area, where any type of political pressure would be highly significant.

Fifth. Many of us feel—and I believe the record bears this out—that rural electrification and the Department of Agriculture belong together. REA has been benefited, in my opinion, by its association with the Department of Agriculture, and with the Agriculture Committees both of the Senate and House. This is not to say that other committees and other procedures might not work. However, I believe that it is wise not to tamper with what has proved to be a useful and fruitful relationship.

The legislation embodied in S. 144 has the widespread support of those interested in rural electrification throughout the country. Time and again in the past 2 years they have expressed deep concern about the new and unprecedented restriction of the REA Administrator's loan-making authority.

For 2 years now the rural electric cooperatives in their regional meetings have passed resolutions in support of legislation of the kind embodied in S. 144.

They have adopted resolutions which on the one hand would maintain REA within the confines of the Department of Agriculture, but at the same time would maintain the loan-making power of the Administrator separate and independent from the jurisdiction of the Secretary of Agriculture.

Many of the State associations have passed similar resolutions. As a matter of fact, many witnesses who are members of State associations have testified before committees of Congress in support of the objectives outlined in S. 144. A year ago at Dallas, and this winter at the National Guard Armory in Washington, D.C., the National Rural Electric Cooperative Association, at its annual meetings, approved such resolutions.

They affirmed the principles and the language of S. 144 seeking to restore the REA to the status it enjoyed from 1939 to 1953; and to restore the loan-making authority of the Administrator of REA as being independent of any control or domination by the Secretary of Agriculture or any of his appointees.

What the co-op people are saying is that they do not believe a captive Administrator is good for them or for the program.

The bill (S. 144) will insure that any decision the Administrator makes on loans will be his own decision. It will insure that policy considerations relating to rural electrification shall be given Cabinet status; in other words, that REA shall be represented through the Secretary of Agriculture in the President's official family, the Cabinet of the President of the United States, an independent agency loses that distinction, that fine qualification.

REA by being maintained within the household of the Department of Agriculture, but at the same time with its function of loanmaking being independent of and without control from any other source than the Administrator of REA, would enjoy the prestige that comes from being a part of Cabinet-Government policy.

Furthermore, I am of the opinion that an independent REA would soon lend itself to the policies which are being relentlessly pursued in some quarters, namely, policies to increase interest rates and policies to restrict the financing powers of the REA. When REA is at least brought within the confines of the overall policy considerations of the executive branch of the Government, particularly the Department of Agriculture, Congress will have an opportunity to review such policies within the broad confines of national policy, and to protect the REA interests as being important to the formation of a sound and progressive agriculture.

I am concerned that if changes of a more radical nature are made—namely, changes which will take REA completely out of the confines of the Department of Agriculture—REA soon will be looked upon as a bank, or an institution having banking characteristics, requiring higher interest rates and more stringent loan terms. That will in many ways reduce the effectiveness of this splendid agency. It will in many ways cripple or limit a sound and humanitarian agricultural program.

Mr. President, I ask unanimous consent to have printed in the RECORD at this point the statement or newsletter issued by the National Rural Electric Cooperative Association for April 1959, entitled "The Humphrey-Price REA Bill." It is a question-and-answer newsletter. The first question is:

What is the Humphrey-Price REA bill?

Then the following questions are listed:

What is the purpose of this bill?

Why is the bill necessary?

Don't present laws accomplish this?

Have any loans been affected?

Has the Secretary explained why he put a curb on the Administrator?

If the Secretary's domination over REA is undesirable, why not take REA out of the Department of Agriculture altogether?

Can an agency be partly subject to the Secretary's general supervision and direction and partly not?

How does the bill affect REA employees?

Can S. 144 and H.R. 1321 operate as a "ripper" bill, by transferring duties and functions to the Administrator without also transferring to him personnel, records, etc.?

Why should the Administrator have full authority over loans?

How do the rural electric people feel about this bill?

In the main, those are the questions which are asked in this National Rural Electric Cooperative Association bulletin for April 1959. The questions have been asked, and the answers have been stated. I have found this particular bulletin to be a concise and succinct analysis of the proposed legislation that is before us. I have also found that it answers unmistakably and very directly the counter-proposals or substitute proposals which have been offered from time to time and which may be offered in the future. I ask unanimous consent that the text of the bulletin to which I have referred be printed at this point in the RECORD.

There being no objection, the bulletin was ordered to be printed in the RECORD, as follows:

THE HUMPHREY-PRICE REA BILL

Question. What is the Humphrey-Price REA bill?

Answer. S. 144 in the Senate and H.R. 1321 in the House read as follows:

S. 144

"Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That the functions and activities of the Rural Electrification Administration and the Administrator of the Rural Electrification Administration which were transferred to the Department of Agriculture and to the Secretary of Agriculture by Reorganization Plan No. II of 1939 and Reorganization Plan No. 2 of 1953 are hereby transferred to the Administrator of the Rural Electrification Administration, and shall be exercised and administered within the Department of Agriculture by such Administrator under the general direction and superivsion of the Secretary of Agriculture; except that insofar as such functions relate to the approval or disapproval of loans authorized to be made under the Rural Electrification Act of 1936, as amended, their exercise by the Administrator shall not be subject to the supervision or direction of, or to any other control by, the Secretary of Agriculture."

H.R. 1321

"Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That the functions and activities of the Rural * * *." exactly the same as S. 144.

Question. What is the purpose of this bill?

Answer. It has two purposes:

First, it will restore to the REA Administrator the authority to approve or disapprove loans without supervision or direction of, or any other control by, the Secretary of Agriculture.

Second, it will keep REA intact as an effective operating unit within the Department of Agriculture.

Question. Why is the bill necessary?

Answer. Legislation is required to reaffirm the nonpolitical independence with which Congress intended the Administrator to act and to reinstate the powers which Congress intended the Administrator to exercise.

Question. Don't present laws accomplish this?

Answer. Apparently not. In May 1957 the Secretary under his reorganization powers took over the Administrator's loan-making authority. Neither the public nor committees of Congress have been able to discover any standards or criteria—political, personal or idealogical—which have been established for the loan review he set up.

Question. Have any loans been affected?

Answer. Yes. At least one has been sidetracked. Others have been delayed but fortunately without serious harm to anyone. The Secretary took over the Administrator's loan-making authority in May 1957 at a time when REA was processing a large application from a group of Indiana co-ops. This loan was not made then. It still has not been made.

What concerns the rural electric co-ops however, is not what has happened up to now but what they expect will happen if this bill isn't approved and when public attention turns to something else.

Question. Has the Secretary explained why he put a curb on the Administrator?

Answer. No, not publicly. Instead he has maintained that in practice the Administrator's authority has not been lessened. Yet he objects to legislation which merely confirms the practices which he alleges are being followed.

Question. If the Secretary's domination over REA is undesirable, why not take REA out of the Department of Agriculture altogether?

Answer. Such a radical step would perhaps solve one problem but it would create many others. REA has benefited from its association over the years with USDA and the Agriculture Committees in Congress. The record prior to 1957 demonstrates that an aggressive and successful program is possible with REA in the Department. The bill consequently deals only with the problem at issue and seeks to restore REA to the status that proved to be so effective in the past.

Question. Can an agency be partly subject to the Secretary's general supervision and direction and partly not?

Answer. Yes. REA functioned that way successfully from 1939 to 1957. REA was under the general supervision and direction of the Secretary but the Administrator had final authority on loans. Other agencies in the Government similarly have specific functions that are independent of departmental control. Examples include the Federal Maritime Board, an agency of the Department of Commerce; the General Counsel of the National Labor Relations Board; and Bureau of Mines of the Department of Interior.

Question. How does the bill affect REA employees?

Answer. First of all, the bill makes no changes at all in their status. The Secretary has no more power under the bill than he now has to withhold REA appropriations.

Second, the bill does assure them of the continuation of the REA program as a unit because the Secretary's power to redistribute its functions among other agencies of the department will be eliminated.

Question. Can S. 144 and H.R. 1321 operate as a "ripper" bill, by transferring duties and functions to the Administrator without also transferring to him personnel, records, etc.?

Answer. Absolutely not. This bill does not change the status of personnel, etc., except that it insures continued operation of REA as an integral and dynamic unit within the Department of Agriculture. Appropriated administrative funds and the personnel needed to administer the program will still be made available, exactly as they are now.

Question. Why should the Administrator have full authority over loans?

Answer. First, the Administrator is selected exclusively for the REA job and his qualifications can therefore be considered purely from that standpoint.

Second, Congress indicated that the office should have substantial stature when the original REA Act specified that the Administrator should be appointed by the President for a 10-year term and confirmed by the Senate.

All this serves to provide for good, efficient administration because it tends to keep political considerations out of decisions that should be made on the basis of legal, economic and technical standards.

Question. How do the rural electric people feel about this bill?

Answer. The Humphrey-Price bill has the full support of the rural electric systems. They feel that at present they are being denied access to the real REA Administrator—that is, to the man who makes the decision on their loans.

At State, regional and national meetings for the last 2 years, the rural electric officials have passed resolutions calling for congressional action on this problem. Last summer when hearings were held on similar bills, rural electric representatives came in from all over the country. Twenty-five of them testified and nearly 100 other officials felt strongly enough to come to Washington and express their support.

The REA program has had phenomenal success. Farm electrification has gone from 10 percent to more than 95 percent. Three billion dollars in sound loans have been made and already $1 billion have been paid back to Uncle Sam. What this bill will do is restore REA to the kind of organization it had during the 23 years this record was achieved.

Mr. HUMPHREY. Mr. President, I also ask unanimous consent to have printed in the RECORD the resolutions of the cooperatives which have been adopted in the past year or so. The resolutions relate to proposed legislation which is now before us, to the Humphrey-Price bill of 1958, and to the present Humphrey-Price bill, Senate 144, which is before the Senate this year.

There being no objection, the resolutions were ordered to be printed in the RECORD, as follows:

RURAL ELECTRIC SYSTEMS IN REGION I

The following resolution was adopted at the regional meeting held in Philadelphia, Pa., September 30–October 1, 1957, by rural electric systems operating in the States of Delaware, Maine, Maryland, New Hampshire, New Jersey, New York, Pennsylvania, North Carolina, Vermont and Virginia:

"REORGANIZATION OF REA

"Whereas the original REA Act of 1936 provided for strictly nonpartisan administration of REA and provided for the appointment of an administrator by the President, with confirmation by the Senate for a 10-year term to insure nonpartisan, nonpolitical administration; and

"Whereas Secretary of Agriculture Ezra Taft Benson pledged himself to a congressional committee to make no changes in REA without first consulting the proper congressional committees and other interested groups; and

"Whereas in June 1957, the Secretary did reorganize REA by requiring that all loans of $500,000 or more be reviewed by persons outside REA: Now, therefore, be it

Resolved, That we are vigorously opposed to any reorganization of REA which will allow partisan control; we are absolutely opposed to this recent action by Secretary Benson which threatens to make REA a partisan political agency; and be it further

Resolved, That as soon as the Congress reconvenes in January that a bill be introduced and passed exempting REA from the Reorganization Act of 1953 and that this same bill stipulate that REA is to be reestablished on a nonpartisan basis as it was prior to the passage of the Reorganization Act."

RURAL ELECTRIC SYSTEMS IN REGION II

The following resolution was adopted at the regional meeting held in Atlanta, Ga., October 17–18, 1957, by rural electric systems operating in the States of Georgia, Florida and South Carolina:

"REORGANIZATION OF REA

"Whereas the original REA Act of 1936 provided for strictly nonpartisan administration of REA and provided for the appointment of an administrator to the President, with confirmation by the Senate for a 10-year term to insure nonpartisan, nonpolitical administration; and

"Whereas the Secretary of Agriculture Ezra Taft Benson pledged himself to a congressional committee to make no changes in REA without first consulting the proper congressional committees and other interested groups; and

"Whereas in his letter to Senator HUMPHREY dated August 30, 1957 Secretary Benson asserts that he has the authority to 'review, reverse, amend, annul, or affirm' all proceedings in REA or other agencies: Now, therefore, be it

"*Resolved,* That we are vigorously opposed to this recent action by Secretary Benson which threatens to make REA a partisan political agency; and be it further

"*Resolved,* That as soon as the Congress reconvenes in January, a bill be introduced and passed exempting REA from the Reorganization Act of 1953 and that this same bill stipulate that REA is to be reestablished as it was prior to the passage of the Reorganization Act."

RURAL ELECTRIC SYSTEMS IN REGION III

The following resolution was adopted at the regional meeting held in Mobile, Ala., October 14–15, 1957, by rural electric systems operating in the States of Alabama, Mississippi, Kentucky, and Tennessee:

"REORGANIZATION OF REA

"Whereas the original REA Act of 1936 provided for strictly nonpartisan administration of REA and provided for the appointment of an administrator by the President, with confirmation by the Senate for a 10-year term to insure nonpartisan, nonpolitical administration; and

"Whereas Secretary of Agriculture Ezra Taft Benson pledged himself to a congressional committee to make no changes in REA without first consulting the proper congressional committees and other interested groups; and

"Whereas in June, 1957, the Secretary did reorganize REA by requiring that all loans of $500,000 or more be reviewed by persons outside REA; now, therefore, be it

"*Resolved,* That we are vigorously opposed to any reorganization of REA which will allow partisan control; we are absolutely opposed to this recent action by Secretary Benson which threatens to make REA a partisan political agency; and be it further

"*Resolved,* That as soon as the Congress reconvenes in January, a bill be introduced and passed exempting REA from the Reorganization Act of 1953 and that this same bill stipulate that REA is to be reestablished on a nonpartisan basis as it was prior to the passage of the Reorganization Act."

RURAL ELECTRIC SYSTEMS IN REGION IV

The following resolution was adopted at the regional meeting held in Toledo, Ohio, September 16–17, 1957, by rural electric systems operating in the States of Ohio, Indiana, Michigan, and West Virginia:

"REORGANIZATION OF REA

"Whereas the original REA Act of 1936 provided for strictly nonpartisan administration of REA and provided for the appointment of an Administrator by the President, with confirmation by the Senate for a 10-year term to insure nonpartisan, nonpolitical administration; and

"Whereas Secretary of Agriculture Ezra Taft Benson pledged himself to a congressional committee to make no changes in REA without first consulting the proper congressional committees and other interested groups; and

"Whereas in June, 1957, the Secretary did reorganize REA by requiring that all loans of $500,000 or more be reviewed by persons outside REA; now, therefore, be it

"*Resolved,* That we are vigorously opposed to any reorganization of REA; we are absolutely opposed to this recent action by Secretary Benson which threatens to make REA a partisan political agency; and be it further

"*Resolved* That as soon as the Congress reconvenes in January that a bill be introduced and passed eexmpting REA from the Reorganization Act of 1953 and that this same bill stipulate that REA is to be reestablished as it was prior to the passage of the Reorganization Act."

RURAL ELECTRIC SYSTEMS IN REGION V

The following resolution was adopted at the regional meeting held in Springfield, Ill., October 10–11, 1957, by rural electric systems operating in the States of Illinois, Iowa, and Wisconsin:

"REORGANIZATION OF REA

"Whereas the original REA Act of 1936 provided for strictly nonpartisan administration of REA and provided for the appointment of an Administrator by the President with confirmation by the Senate for a 10-year term to insure nonpartisan, nonpolitical administration; and

"Whereas Secretary of Agriculture Ezra Taft Benson pledged himself to a congressional committee to make no changes in REA without first consulting the proper congressional committees and other interested groups; and

"Whereas in June 1957, the Secretary did reorganize REA by requiring that all loans of $500,000 or more be reviewed by persons outside REA: Now, therefore, be it

"*Resolved,* That we are vigorously opposed to any reorganization of REA which will allow partisan control; we are absolutely opposed to this recent action by Secretary Benson which threatens to make REA a partisan political agency; and be it further

"*Resolved,* That as soon as Congress reconvenes in January a bill be introduced and passed exempting REA from the Reorganization Act of 1953 and that this same bill stipulate that REA is to be reestablished on a nonpartisan basis as it was prior to the passage of the Reorganization Act."

RURAL ELECTRIC SYSTEMS IN REGION VI

The following resolution was adopted at the regional meeting held in Minneapolis, Minn., October 31–November 1, 1957, by rural electric systems operating in the States of Minnesota, North Dakota, and South Dakota:

"REORGANIZATION OF REA

"Whereas the original REA Act of 1936 provided for strictly nonpartisan administration of REA and provided for the appointment of an Administrator by the President, with confirmation by the Senate for a 10-year term to insure nonpartisan, nonpolitical administration; and

"Whereas Secretary of Agriculture Ezra Taft Benson pledged himself to a congressional committee to make no changes in REA without first consulting the proper congressional committees and other interested groups; and

"Whereas in June 1957, the Secretary did reorganize REA by requiring that all loans of $500,000 or more be reviewed by persons outside REA: Now, therefore, be it

"*Resolved,* That we are vigorously opposed to any reorganization of REA; we are absolutely opposed to this recent action by Secretary Benson which threatens to make REA a partisan, political agency; and be it further

"*Resolved,* That we urge that as soon as the Congress reconvenes in January that a bill be introduced and passed exempting REA from the Reorganization Act of 1953 and that this same bill stipulate that REA is to be reestablished as it was prior to the passage of the Reorganization Act."

RURAL ELECTRIC SYSTEMS IN REGION VII

The following resolution was adopted at the regional meeting held in Cheyenne, Wyo., September 23–24, 1957, by rural electric systems operating in the States of Colorado, Kansas, Nebraska, and Wyoming:

"REORGANIZATION OF REA

"Whereas the original REA Act of 1936 provided for strictly nonpartisan administration of REA and provided for the appointment of an Administrator by the President with confirmation by the Senate for a 10-year term to insure nonpartisan, nonpolitical administration; and

"Whereas Secretary of Agriculture Ezra Taft Benson pledged himself to a congressional committee to make no changes in REA without first consulting the proper congressional committees and other interested groups; and

"Whereas in June 1957 the Secretary did reorganize REA by requiring that all loans of $500,000 or more be reviewed by persons outside REA: Now, therefore, be it

"*Resolved,* That we are vigorously opposed to any reorganization of REA; we are absolutely opposed to this recent action by Secretary Benson which threatens to make REA a partisan political agency; and be it further

"*Resolved,* That as soon as the Congress reconvenes in January that a bill be introduced and passed exempting REA from the Reorganization Act of 1953 and that this same bill stipulate that REA is to be reestablished as it was prior to the passage of the Reorganization Act."

RURAL ELECTRIC SYSTEMS IN REGION VIII

The following resolution was adopted at the regional meeting held in New Orleans, La., September 19–20, 1957, by rural electric systems operating in the States of Oklahoma, Arkansas, Louisiana, and Missouri:

"REORGANIZATION OF REA

"Whereas the original REA Act of 1936 provided for strictly nonpartisan administration of REA and provided for the appointment of an administrator by the President, with confirmation by the Senate for a 10-year term to insure nonpartisan, nonpolitical administration; and

"Whereas Secretary of Agriculture Ezra Taft Benson pledged himself to a congressional committee to make no changes in REA without first consulting the proper congressional committees and other interested groups; and

"Whereas in June 1957 the Secretary did reorganize REA by requiring that all loans of $500,000 or more be reviewed by persons outside REA; and

"Whereas in his letter to Senator HUMPHREY dated August 30, 1957, Secretary Benson asserts that he has the authority to 'review, reverse, amend, annul, or affirm' all proceedings in REA or other agencies: Now, therefore, be it

"*Resolved,* That we are vigorously opposed to this recent action by Secretary Benson which threatens to make REA a partisan political agency; and be it further

"*Resolved,* That as soon as the Congress reconvenes in January that a bill be introduced and passed exempting REA from the Reorganization Act of 1953 and that this same bill stipulate that REA is to be reestablished as it was prior to passage of the Reorganization Act."

RURAL ELECTRIC SYSTEMS IN REGION IX

The following resolution was adopted at the regional meeting held in Portland, Oreg., November 4–5, 1957, by rural electric systems operating in the States of Washington, California, Idaho, Montana, Oregon, Utah, and Alaska:

"REORGANIZATION OF REA

"Whereas the original REA Act of 1936 provided for strictly nonpartisan administration of REA and provided for the appointment of an Administrator by the President, with confirmation by the Senate for a 10-year term to insure nonpartisan, nonpolitical administration; and

"Whereas Secretary of Agriculture Ezra Taft Benson pledged himself to a congressional committee to make no changes in REA without first consulting the proper congressional committees and other interested groups; and

"Whereas in June 1957, the Secretary did reorganize REA by requiring that all loans of $500,000 or more be reviewed by persons outside REA: Now, therefore, be it

"Resolved, That we are vigorously opposed to any reorganization of REA which will allow partisan control; we are absolutely opposed to this recent action by Secretary Benson which threatens to make REA a partisan political agency; and be it further

"Resolved, That as soon as the Congress reconvenes in January a bill be introduced and passed exempting REA from the Reorganization Act of 1953, and that this same bill stipulate that REA is to be operated on a nonpartisan basis as it was prior to the passage of the Reorganization Act."

RURAL ELECTRIC SYSTEMS IN REGION X

The following resolution was adopted at the regional meeting held in Dallas, Tex., November 9–10, 1957, by rural electric systems operating in the States of Texas, Arizona, and New Mexico:

"REORGANIZATION OF REA

"Whereas the original REA Act of 1936 provided for strictly nonpartisan administration of REA and provided for the appointment of an Administrator by the President, with confirmation by the Senate for a 10-year term to insure nonpartisan, nonpolitical administration; and

"Whereas Secretary of Agriculture Ezra Taft Benson pledged himself to a congressional committee to make no changes in REA without first consulting the proper congressional committees and other interested groups; and

"Whereas in June 1957, the Secretary failed to consult Congress or other interested groups before requiring that all loans of $500,000 or more be reviewed by persons outside REA: Now, therefore, be it

"Resolved, That we are vigorously opposed to any reorganization of REA which will allow partisan control; we are absolutely opposed to this recent action by Secretary Benson which threatens to make REA a partisan political agency; and be it further

"Resolved, That as soon as the Congress reconvenes in January a bill be introduced and passed exempting REA from the Reorganization Act of 1953, and that this same bill stipulate that REA is to be on a nonpartisan basis as it was prior to the passage of the Reorganization Act."

RESOLUTION ADOPTED AT THE 16TH ANNUAL MEETING OF THE NATIONAL RURAL ELECTRIC CO-OP. ASSOCIATION, DALLAS, TEX., FEBRUARY 3-6, 1958—REORGANIZATION PLAN NO. 2, U.S. DEPARTMENT OF AGRICULTURE

Whereas the current Secretary of Agriculture has violated the trust of the Congress in regard to the changes he has made in the structure and functioning of REA; and

Whereas REA can no longer function efficiently and effectively as a result of this action by the Secretary of Agriculture; and

Whereas this situation has been brought about by passage of the Reorganization Plan No. 2 of 1953; and

Whereas Senator HUMPHREY has introduced a bill, S. 2990, providing "That section 1 of Reorganization Plan No. 2 of 1953 shall not hereafter apply to the Rural Electrification Administration, and there are hereby transferred to the Administrator of the Rural Electrification Administration all functions which were transferred from the Administrator to the Secretary of Agriculture by such Reorganization Plan": Now, therefore, be it

Resolved, That we support S. 2990 which would rectify the situation.

RURAL ELECTRIC SYSTEMS IN REGION I

The following resolution was adopted at the regional meeting held in Burlington, Vt., September 25–26, 1958, by rural electric systems operating in the States of Delaware, Maine, Maryland, New Hampshire, New Jersey, New York, Pennsylvania, North Carolina, Vermont and Virginia:

"REA REORGANIZATION

"Whereas the original REA Act of 1936 provided for strictly nonpartisan administration of REA and provided for the appointment of an Administrator by the President, with confirmation by the Senate for a 10-year term to insure nonpartisan, nonpolitical administration; and

"Whereas Secretary of Agriculture Ezra Taft Benson pledged himself to a congressional committee to make no changes in REA without first consulting the proper congressional committees and other interested groups; and

"Whereas in June 1957, the Secretary did reorganize REA by requiring that all loans of $500,000 or more, and that all loans of whatever amount, to new borrowers, be reviewed by the Secretary's office; and

"Whereas Secretary Benson has supported a bill in Congress which would drastically increase interest rates and drive electric and telephone cooperatives to Wall Street for their financing: Now, therefore, be it

"Resolved, That we are vigorously opposed to any reorganization of REA; and be it further.

"Resolved, That as soon as the new Congress convenes in 1959 a bill identical or similar to the Humphrey-Price bill of 1958, which would restore to the REA Administrator all of the functions and authority vested in him by the original act of 1936, be introduced and passed."

RURAL ELECTRIC SYSTEMS IN REGION II

The following resolution was adopted at the regional meeting held in St. Petersburg, Fla., November 3–4, 1958, by the rural electric systems operating in the States of Georgia, Florida, and South Carolina:

"REORGANIZATION OF REA

"Whereas the original REA Act of 1936 provided for strictly nonpartisan administration of REA and provided for the appointment of an Administrator by the President, with confirmation by the Senate for a 10-year term to insure nonpartisan, nonpolitical administration; and

"Whereas Secretary of Agriculture Ezra Taft Benson pledged himself to a congressional committee to make no changes in REA without first consulting the proper congressional committees and other interested groups; and

"Whereas in June 1957, the Secretary did reorganize REA by requiring that all loans of $500,000 or more, and that all loans of whatever amount, to new borrowers, be reviewed by the Secretary's office; and

"Whereas Secretary Benson has supported a bill in Congress which would drastically increase interest rates and drive electric and telephone cooperatives to Wall Street for their financing: Now, therefore, be it

"Resolved, That we are vigorously opposed to any reorganization of REA; and be it further

"Resolved, That as soon as the new Congress convenes in 1959 a bill identical or similar to the Humphrey-Price bill of 1958, as amended by the House subcommittee, which would restore to the REA Administrator all of the functions and authority vested in him by the original act of 1936, be introduced and passed."

RURAL ELECTRIC SYSTEMS IN REGION III

The following resolution was adopted at the regional meeting held in Gatlinburg, Tenn., September 15–16, 1958, by rural electric systems operating in the States of Alabama, Mississippi, Kentucky, and Tennessee:

"REA REORGANIZATION

"Whereas Secretary of Agriculture Ezra Taft Benson pledged himself to a congressional committee to make no changes in REA without first consulting the proper congressional committees and other interested groups; and

"Whereas in June 1957, the Secretary did reorganize REA by requiring that all loans of $500,000 or more, and all loans of whatever amount to new borrowers, be reviewed by the Secretary's office: Now, therefore, be it

"Resolved, That we are vigorously opposed to any reorganization of REA; and be it further

"Resolved, That the new Congress convening in 1959 be urged to introduce and pass a bill identical or similar to the Humphrey-Price bill of 1958, which would restore to the REA Administrator all of the functions and authority vested in him by the original REA Act of 1936, be introduced and pass."

RURAL ELECTRIC SYSTEMS IN REGION IV

The following resolution was adopted at the regional meeting held in French Lick, Ind., September 4–5, 1958, by rural electric systems operating in the States of Ohio, Indiana, Michigan and West Virginia:

"REA REORGANIZATION

"Whereas the original REA Act of 1936 provided for strictly nonpartisan administration of REA and provided for the appointment of an Administrator by the President, with confirmation by the Senate for a 10-year term to insure nonpartisan, nonpolitical administration; and

"Whereas Secretary of Agriculture Ezra Taft Benson pledged himself to a congressional committee to make no changes in REA without first consulting the proper congressional committee and other interested groups; and

"Whereas in June 1957 the Secretary did reorganize REA by requiring that all loans of $500,000 or more and all loans of whatever amount to new borrowers, be reviewed by the Secretary's office; and

"Whereas Secretary Benson has proposed a bill to the Congress which would drastically increase interest rates and drive electric and telephone cooperatives to Wall Street for their financing: Now, therefore, be it

"Resolved, That we are vigorously opposed to any reorganization of REA; and be it further

"Resolved, That as soon as the new Congress convenes in 1959 a bill identical or similar to the Humphrey-Price bill of 1958, which would restore to the REA Administrator all of the functions and authority vested in him by the original act of 1936, be introduced and passed."

RURAL ELECTRIC SYSTEMS IN REGION V

The following resolution was adopted at the regional meeting held in Madison, Wis., September 29–30, 1958, by rural electric systems operating in the States of Illinois, Iowa, and Wisconsin:

"REA REORGANIZATION

"Whereas the original REA Act of 1936 provided for strictly nonpartisan administration of REA and provided for the appointment of an Administrator by the President, with confirmation by the Senate for a 10-year term to insure nonpartisan, nonpolitical administration; and

"Whereas Secretary of Agriculture Ezra Taft Benson pledged himself to a congressional committee to make no changes in REA without first consulting the proper congressional committee and other interested groups; and

"Whereas in June 1957, the Secretary did reorganize REA by requiring that all loans of $500,000 or more, and that all loans of whatever amount, to new borrowers, be reviewed by the Secretary's office; and

"Whereas Secretary Benson has supported a bill in Congress which would drastically increase interest rates and drive electric and telephone cooperatives to Wall Street for their financing: Now, therefore, be it

Resolved, That we are vigorously opposed to any reorganization of REA; and be it further

"*Resolved,* That as soon as the new Congress convenes in 1959 a bill identical or similar to the Humphrey-Price bill of 1958, which would restore to the REA Administrator all of the functions and authority vested in him by the original act of 1936, be introduced and passed."

RURAL ELECTRIC SYSTEMS IN REGION VI

The following resolution was adopted at the regional meeting held in Bismarck, N. Dak., October 27–28, 1958, by rural electric systems operating in the States of Minnesota, North Dakota, and South Dakota:

"REA REORGANIZATION

"Whereas the original REA Act of 1936 provided for strictly nonpartisan administration of REA and provided for the appointment of an Administrator by the President, with confirmation by the Senate for a 10-year term to insure nonpartisan, nonpolitical administration; and

"Whereas Secretary of Agriculture, Ezra Taft Benson, pledged himself to a congressional committee to make no changes in REA without first consulting the proper congressional committees and other interested groups; and

"Whereas in June 1957, the Secretary did reorganize REA by requiring that all loans of $500,000 or more, and that all loans of whatever amount, to new borrowers, be reviewed by the Secretary's office; and

"Whereas Secretary Benson has supported a bill in Congress which would drastically increase interest rates and drive electric and telephone cooperatives to Wall Street for their financing: Now, therefore, be it

"*Resolved,* That we are vigorously opposed to any reorganization of REA; and be it further

"*Resolved,* That as soon as the new Congress convenes in 1959 a bill identical or similar to the Humphrey-Price bill of 1953, which would restore to the REA Administrator all of the functions and authority vested in him by the original act of 1936, be introduced and passed."

RURAL ELECTRIC SYSTEMS IN REGION VII

The following resolution was adopted at the regional meeting held in Denver, Colo., November 10–11, 1958, by rural electric systems operating in the States of Colorado, Kansas, Nebraska, and Wyoming:

"REA REORGANIZATION

"Whereas the original REA Act of 1936 provided for strictly nonpartisan administration of REA and provided for the appointment of an Administrator by the President, with confirmation by the Senate for a 10-year term to insure nonpartisan, nonpolitical administration; and

"Whereas Secretary of Agriculture, Ezra Taft Benson, pledged himself to a congressional committee to make no changes in REA without first consulting the proper congressional committees and other interested groups; and

"Whereas in June 1957, the Secretary did reorganize REA by requiring that all loans of $500,000 or more, and that all loans of whatever amount, to new borrowers, be reviewed by the Secretary's office; and

"Whereas Secretary Benson has supported a bill in Congress which would drastically increase interest rates and drive electric and telephone cooperatives to Wall Street for their financing: Now, therefore, be it

"*Resolved,* That as soon as the new Congress convenes in 1959 a bill identical or similar to the Humphrey-Price bill of 1958, as amended by the House subcommittee which would restore to the REA Administrator all of the functions and authority vested in him by the original act of 1936, be introduced and passed."

RURAL ELECTRIC SYSTEMS IN REGION VIII

The following resolution was adopted at the regional meeting held in Oklahoma City, Okla., October 30–31, 1958, by rural electric systems operating in the States of Arkansas, Louisiana, Missouri, and Oklahoma:

"REA REORGANIZATION

"Whereas the original REA Act of 1936 provided for strictly nonpartisan administration of REA and provided for the appointment of an Administrator by the President, with confirmation by the Senate for a 10-year term to insure nonpartisan, nonpolitical administration; and

"Whereas Secretary of Agriculture Ezra Taft Benson pledged himself to a congressional committee to make no changes in REA without first consulting the proper congressional committees and other interested groups; and

"Whereas in June 1957, the Secretary did reorganize REA by requiring that all loans of $500,000 or more, and that all loans of whatever amount, to new borrowers, be reviewed by the Secretary's office; and

"Whereas Secretary Benson has supported a bill in Congress which would drastically increase interest rates and drive electric and telephone cooperatives to Wall Street for their financing: Now, therefore, be it

"*Resolved,* That as soon as the new Congress convenes in 1959 a bill identical or similar to the Humphrey-Price of 1958, as amended by the House subcommittee, which would restore to the REA Administrator all of the functions and authority vested in him by the original act of 1936, be introduced and passed."

RURAL ELECTRIC SYSTEMS IN REGION IX

The following resolution was adopted at the regional meeting held in Missoula, Mont., November 13–14, 1958, by the rural electric systems operating in the States of Alaska, California, Idaho, Montana, Nevada, Oregon, Utah, and Washington:

"In order to further the national objectives of the Rural Electrification Act and the laws relating to the comprehensive development of the Nation's energy resources, and in order to assure an adequate supply of low cost power for maximum development of rural America, we adopt the following legislative policies, and we urge our leaders and public officials to take prompt and continuing steps to bring these about:

"* * * * * *

"3. We urge Congress to reestablish the full authority of the REA Administrator to make loans."

RURAL ELECTRIC SYSTEMS IN REGION X

The following resolution was adopted at the regional meeting held in Brownsville, Tex., November 17–18, 1958, by rural electric systems operating in the States of Texas, Arizona, and New Mexico:

"REA REORGANIZATION

"*Be it resolved,* That as soon as the Congress convenes in 1959 a bill identical or similar to the Humphrey-Price bill of 1958, as amended by the House subcommittee, which would restore to the REA Administrator all of the functions and authority vested in him by the original act of 1936, be introduced and its passage pressed."

RESOLUTION ADOPTED AT THE 17TH ANNUAL MEETING OF THE NATIONAL RURAL ELECTRIC CO-OP. ASSOCIATION, WASHINGTON, D.C., FEBRUARY 9–12, 1959

REORGANIZATION OF REA

Whereas the original Rural Electrification Act of 1936 provided for strictly nonpartisan administration of REA and provided for the appointment of an Administrator by the President, with confirmation by the Senate for a 10-year term to insure nonpartisan, nonpolitical administration; and

Whereas Secretary of Agriculture Ezra Taft Benson pledged himself to a congressional committee to make no changes in REA without first consulting the proper congressional committees and other interested groups; and

Whereas in June 1957 the Secretary did reorganize REA by requiring that all loans of $500,000 or more, and all loans of whatever amount to new borrowers, be reviewed by the Secretary's office; and

Whereas the Humphrey-Price bill would restore to the REA Administrator all of the functions and authority vested in him by the original act of 1936, without divorcing REA from the Department of Agriculture: Now, therefore, be it

"*Resolved,* That we urge the Congress to pass the Humphrey-Price bill as early as possible in the 86th Congress.

ADDRESS BY SENATOR HUMPHREY BEFORE THE 16TH ANNUAL BANQUET OF THE FARMERS UNION GRAIN TERMINAL ASSOCIATION

Mr. HUMPHREY. Mr. President, I ask unanimous consent to have printed in the body of the RECORD a speech which I delivered in December of 1953 at the 16th annual banquet of the Farmers Union Grain Terminal Association, in St. Paul.

Recently I had occasion to refer to this speech, and was interested to find that the truths stated at that time about American agriculture have even stronger impact today. The needs of the farm segment of our economy, as enunciated then, have increased in intensity today. The rights of American farmers in 1953 are the same rights in 1959. For these reasons, I find the remarks timely; so I ask to bring them to the attention of my colleagues.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

THE FARMER'S BILL OF RIGHTS

It is an honor to address this 16th annual banquet of the Farmers Union Grain Terminal Association—a great enterprise symbolic of the growth and progress of agriculture in the Midwest, and symbolic of what farm people can do working together.

It's a thrilling sight to look out over this vast gathering of farmers from throughout the great breadbasket of the Midwest.

This is America—the solid, determined, dependable America—the deep roots of democracy, embedded firmly in the soil.

America owes a tremendous debt of gratitude to its farmers of the past and of the present.

FOOD OUR BASIC QUEST

Every farmer in the Nation can be justly proud of the great contribution American agriculture has made, and is still making, to our country's growth and progress.

Agriculture is basic to life itself. It is the lifeline of food and fiber, without which we cannot survive.

Farmers were among our Nation's founders. They paved the way for creation of our great Nation of today, by producing in ever-increasing abundance the essentials of our survival—the food and fiber we needed for a growing and struggling Nation of free people.

The struggle for food comes before all else. By the ever-increasing efficiency of America's farmers, in providing food not only for themselves but for others about them as well, they have made possible the release of manpower to create a mighty industrial as well

as a rich agricultural empire in our new world.

THERE'S STRENGTH IN THE LAND

But agriculture has contributed more than food and fiber to our Nation. It has contributed much to our basic strength of moral character, our hardiness, our respect for family ties. It has contributed our American pattern of family farming, with its broad base of independent landholders as a firm foundation upon which democracy could survive and grow.

Is it any wonder, then, that I say America owes a great debt of gratitude to its farm people?

Farmers today, however, are seriously concerned about the future. They see strangely familiar symptoms of economic trouble. Farm prices have been falling too far and too fast. The parity ratio—the relation of what a farmer receives to what he must pay—has gone steadily downward. It has slumped to a national average of 90 percent, the lowest since 1941. It's even lower in many States, and for many important commodities.

FARMER IS THE KEYSTONE

Farmers aren't the only ones concerned about these danger signs. The President and Congress are concerned. The business community is growing increasingly concerned. Why? Because we have learned that agricultural income and national prosperity go hand in hand. We have learned that depressions start on the farm. We have learned that the economic problems of agriculture are not just farm problems, but everybody's problems.

Agriculture is still basic to America's economy. Without a sound, efficient, abundant, prosperous agriculture, America's dynamic economy cannot long maintain its expanding pace of higher living standards and greater comforts of life for all.

We have learned that lesson in the past—the hard way. We must never forget it.

There is a public interest responsibility toward agriculture that cannot be ignored.

Our Government early recognized the public's interest in the Nation's welfare in a strong agriculture, in a family-farm type of agriculture, by opening up vast public lands to homesteading in order to encourage agricultural expansion and farm ownership.

By making such opportunities available, the Nation was repaid many times the value of its investment in agriculture's future.

And, if you'll pardon an aside, I very much doubt if the moral fiber of our pioneering fathers was corrupted by accepting that homestead subsidy of free land.

HOW SKIDS WERE GREASED

As our Nation embarked upon its industrial development, it was business and industry—not agriculture—that first shunned the risks of the free market, and asked for aid and protection by law—the tariffs, the grants, and subsidies, the power of regulating production and competition to assure reasonable profits.

As a new aristocracy of industrial barons developed in our country, their influence upon government resulted in public policy being designed more and more to serve their own ends—at the expense of American agriculture, and the American workingman.

Our economy grew out of balance, and weaker became the foundation upon which it all was based.

The rich grew richer, and the poor grew poorer, until the bubble had to be burst.

I need not, I am sure, remind you at length of the great depression. Most of us remember all too well that tragic period in our economic and political history.

Agriculture, as usual, felt its impact first, longest, and hardest.

Agriculture was and is today the bellwether of our economy. It is where the symptoms first strike, then spread to the main streets, the factories, and the homes of all America, rural and city alike.

PARITY FORGED IN 1920'S

Out of that depression of the 1920's and 1930's, we learned that the cost of depression is far greater, in money and human misery, than any cost of maintaining a sound and prosperous nation.

From the despair of the great depression, agriculture united in a historic fight for rightful recognition of the importance of its role in American life. It brought forth a great concept so in keeping with the principles of American democracy that it has earned a permanent place in America's economic life—the parity concept, of equality for agriculture.

All of the efforts down through the years by our great organizations of farmers became solidly pinpointed toward one major purpose:

The clear declaration of public policy that prices and income of farmers should be maintained on a basis of parity with industrial wages and industrial prices.

None of us should ever forget the fight it took to establish the parity concept of equality for agriculture as the law of our land.

A FEW LEAD THE WAY

The great voices of that earlier historic battle for farm parity—the voices of the agricultural statesmen of that day, Ed O'Neal, of the American Farm Bureau Federation, Louis Taber, of the Grange, and yes, the great voice of your own hard-hitting Bill Thatcher—these voices refused to be silenced. They knew they were right. They knew they were not only fighting for farmers. They knew they were fighting for the sound economic welfare of America, for the country they loved.

It wasn't an easy fight. Powerful forces were arrayed against them. A strange coalition of the uninformed, the ill advised, the men of little faith and little vision, looking backward instead of ahead, was molded together and manipulated as a front against agriculture.

Let me make myself clear: Fairminded Americans—and I think most Americans are fairminded—have never been against decent prices and fair and equal treatment for agriculture, or for anyone else. But always in any society, there are a few who refuse to look beyond their own money counting tables, regardless of the public interest that may be involved.

It is always these vocal few who raise the entirely false cry of government interference with "free enterprise," when their own toes are stepped upon in order to assure the benefits and blessings of free enterprise to all the rest of us.

But all the misleading attempts to distort agriculture's just plea for equality failed.

THE LEGISLATED ECONOMY

We became realists about our economy, and the world we live in.

We recognized that there no longer exists a complete free exchange of goods and services, a complete free market. Instead, we faced up to the fact that we work and live in the midst of protective regulations by government, firm prices administered by business, fixed costs established by accepted standards of fair wages and reasonable profits in other segments of our economy. Federal Reserve regulations, utility and transportation rate fixing, tariffs to protect industry, minimum wage laws, the fair trade practices act to eliminate unfair price cutting, and subsidies to shipping firms, airlines, and newspapers are but a few of many examples.

The farmer has never lost his spirit of independence, his willingness to work, and work hard.

FAIRPLAY NEEDED

But the world about him has changed. The ways of farming have changed. The world in which he must compete for survival has changed. Manmade changes have hemmed him in on all sides by a complex, legislated economy, in which he has too often become the forgotten man.

None of us can thwart the tide of change. Our task is to keep abreast of change, to keep pace with the progress and the problems it creates, and to look to the future.

If the farmer must compete in a legislated economy, to ask him alone to exist by the simple standards of a bygone generation is like asking our superhighways of today to be governed by traffic rules of the horse-and-buggy days. Only confusion and tragedy can result.

In a democracy dedicated to serving all the people, what is wrong with farmers asking the Government—their government—to remember that they, too, must be able to keep pace with the times, and must have traffic rules that do not leave them by the wayside as everyone else zooms past on the highway of modern life and modern living?

Government—your government—has the obligation, under our Constitution, to promote the general welfare—not the welfare of the few at the expense of the many.

Congress recognized that obligation in declaring it to be the policy of our country that prices and income of farmers should be maintained on a basis of parity with other segments of our economy. With full parity as its goal, our government launched a courageous and historic series of national farm programs aimed at achieving that objective.

MEN OF GRIT COMBINE

From time to time those programs have been changed, improved, and adapted to agriculture's changing needs—but always the same objective has been spelled out—the objective of parity prices and parity income.

Let me say right now, that it has taken nonpartisan support from the great farm States of our Nation to maintain our strides toward the objective, and to withstand the powerful pressure that would divert us. It has taken the wholehearted support of men who know and understand agriculture, and men with plenty of gumption to stand up and be counted—sometimes against their own colleagues—like my good friend, the distinguished Republican Senator MILT YOUNG of North Dakota. I was proud to fight shoulder to shoulder with him in the great battle of 1949 for the Russell-Young amendment, to keep our farm program from being diverted away from its historic objective.

We have made progress, tremendous progress, under the stabilizing influence of our national farm programs.

STILL FAR FROM GOAL

Hand in hand with the concept of fair returns for agriculture came other great strides forward in American farm life—reasonable credit, sound conservation, rural electrification. We've tossed out the kerosene lanterns, and brightened the rural countryside with electricity. We've eased the drudgery of farm life by bringing the blessings of modern conveniences and modern power to the farm. We've checked the depletion and waste of America's potential productivity, by lifting the face of the rural countryside through sound conservation farming. We've strengthened the opportunities for farm ownership, by a credit structure geared to agriculture's needs. We breathed new life, new hope, new opportunity into a prostrate rural America—and with it, we breathed new strength and new stability into the entire American economy.

From such gains we can never turn back. Yet the real job has just begun. We are still far from our goal, far from the original

objective of equality which agriculture started out to achieve. And there are still forces at work to divert us from that objective, both through misguided differences of opinion over methods of achieving it, and deliberate intent to keep us from achieving it. Together, they make a formidable foe.

LABOR RECALLS PAST

By devious means, they seek to divide and divert the farm unity of this country. They try to turn consumers against farmers, to turn farmers against labor, and labor against farmers, and to even turn farmers against farmers—to split your own household against you.

They are failing on one front. American labor is still the farmer's best friend. They are your customers, yet they know you are their customers, too. They, too, haven't forgotten grim lessons of the past; and they are worried about dangerous symptoms of the present. They want farmers to have decent prices and decent incomes, just as they want such goals for themselves. They know that only in a well-balanced, expanding economy can higher living standards be maintained for all. Farmers need more of such understanding among consumers.

FARM RANKS BREACHED

But the forces historically alined against you have gained on another front. They have split the ranks of agriculture itself.

At a time when unity of purpose is needed in agriculture as never before since the great crusade of 1933, new leadership of some major farm groups has wavered from the very objectives upon which their own organizations grew great and powerful. In the heat of controversy over how such objectives can best be achieved, willingly or unwillingly, they have allowed themselves to be diverted from the objectives themselves.

Where now are the voices of Ed O'Neil and Louis Taber, forceful voices crying out for full parity, for full equality of economic opportunity for agriculture?

Thank God the great voice of Bill Thatcher has never been stilled, has never wavered, has never been sidetracked from the main line of agriculture's fight for full economic equality.

You can be thankful, too, for the vigorous leadership of Jim Patton as president of the National Farmers Union.

GTA PACED THE FIGHT

Every farmer-stockholder of GTA can be proud of the great record of achievement and service of this cooperative grain marketing organization. It has done more than serve you well. It has fought for you. Along with the Farmers Union, with which it is affiliated, it has always been in the forefront of the struggle for a square deal for all farmers.

Agriculture needs such vigorous champions today.

Agriculture would do well, today, to harken back to the wise words of Ed O'Neil in 1941, when he prophetically said:

"This issue raised is very clear * * * that issue is whether the parity objective is to be a reality for American farmers, or whether it is to be merely an illusive mirage, constantly dangled before the eyes of farmers, but which they are never permitted to attain."

Now, as then, that is the issue.

The issue is joined; the battle lines are being drawn.

SOME WANT JUNGLE LAW

On the one hand, we have those lacking faith in democracy, men of little vision and less confidence in America's ability to maintain a dynamic, expanding economy. They are the flexers, holding to a philosophy of scarcity, an outmoded philosophy of survival by jungle laws alone.

On the other hand, we have those holding firm to the conviction that government in a democracy must promote the general welfare, with equality of economic growth and progress.

Between these groups is a large segment of the American population which, unfortunately, fails to fully realize how much everyone is involved. They have taken our abundance for granted. America has never suffered scarcity. As a result, many haven't stopped to realize perhaps, how our abundance has kept prices to consumers reasonable. A smaller percentage of our income is required to purchase food and clothes in America than anywhere else on earth, freeing more money for purchase of homes, automobiles, television sets, and other products keeping the wheels of industry and commerce spinning. All of us should be concerned about what makes that abundance of food possible. We should be looking ahead, too, at our population growth of 2,700,000 a year—new people who have to be fed and clothed and provided with jobs. They, too, have a stake in this struggle.

The issue is not whether the present farm programs are perfect.

It is whether we hold firm to the basic objective of those farm programs—the right of farmers to equal economic opportunity—while seeking to improve our means of achieving it.

The challenge is to go ahead, rather than turn backward.

With our eyes firmly fixed on the same historic goal, there is much more that we can and must do—and do now.

A TIME FOR COURAGE

We must point closer to the income objectives set forth time after time in our farm legislation, the take-home pay the farmer receives. We must raise our sights, rather than lower them, toward effective devices to achieve full parity.

We need to extend price protection to the major income-producing perishable commodities, as well as the storable products. To achieve such price protection, we must use the methods or combination of methods most effective for each commodity. A diversified agriculture may call for a diversified approach. On those commodities where the price support system has worked well, both to the benefit of the producer and the consumer, let there be no tinkering or tampering. For those commodities, particularly in the perishable field, where experience may reveal the need for improved methods of price protection, let us have the courage and the imagination to try new methods. This is within the American spirit. We are not hidebound by doctrine or theory. We are a practical people. As such, all of us want to see food used, not wasted.

LONG PLAN REQUIRED

We need longer range assurance of stability for agriculture. The American farmer justly deserves a long-range policy he can depend upon. Temporary extension of legislation, year by year, does not represent a policy; it represents only expediency. Constant uncertainty as to the long-range agricultural policy is within itself a source of instability within the market place. Farmers must not be left to the discretionary whims of any Secretary of Agriculture. Discretionary authority will always mean indecision and uncertainty; mandatory protection under the law means certainty and stability. The time is at hand to quit treating agricultural policy as if it were a biennial political football, to be kicked around every election year.

Effective price protection, of course, is just a foundation.

IMPORT CURBS VITAL

We need to develop new outlets and uses for our food and fiber. We need to learn to live with abundance, and use it wisely for the greatest good of humanity. To protect and expand areas of freedom in this world, we must think of full stomachs as well as full cartridge belts.

We need expanded international trade, but we need at the same time, common sense protection against certain groups of farmers having to suffer economic losses amounting to more than their fair share of the burden of maintaining our foreign trade policies. I refer specifically to the increasingly serious problem of competing barley, rye, and oat imports from Canada. I want to commend both Senators BILL LANGER and MILT YOUNG for their leadership in seeking the proper use of the protective administrative devices Congress has had the wisdom to provide for such a situation, a fight in which I have given my wholehearted support.

We need assurances that production restrictions shall not be placed upon any important food commodity at any point below the total of domestic consumer need, plus normal exports and an adequate safety reserve including a special reserve for use in strengthening our foreign policy. In acreage restrictions on wheat, we need recognition of the differentials in types and qualities, some of which are in short supply while others are in surplus. Wheat is not just wheat; it has many varieties, used for different purposes. Durum is an example of a variety of which we need more, rather than less.

CONSERVATION

We need adequate incentive premiums to convert diverted acres under production restrictions to soil building conservation practices, rather than to other competing and soil-depleting crops.

We must make greater progress in conservation. We must harness the destructive force of excess water, and convert it to constructive use. We must extend rural telephone service to farm homes of America, just as we have extended electric light and power. We must continue our progress in research and marketing efficiency.

Obviously, there is much that can be done to improve our farm legislation—without taking away any of the advantages it now offers. It is in that spirit Congress must approach its task of writing firm, constructive, long-range farm legislation at its forthcoming session. And, it is in that spirit, I am sure, that my Senate colleagues of the great agricultural Midwest and South will stand firmly together, regardless of party.

American agriculture, at long last, has come of age.

It accepts responsibility to be concerned about the well-being of all the American people.

DON'T WANT FAVORITISM

Farmers asked only what is rightfully theirs, by their heritage as American citizens: The right of equal treatment and equal respect, under the law of our land.

I know that is your conviction. I know it has long been mine. But it is time that all the American people recognized and accepted that right of equality for agriculture. It's time they accepted it as in the best interest of the entire Nation—not just for the benefit of farmers alone.

Tonight marks the 162d anniversary of our Nation's Bill of Rights. As a nation, we are dedicated to preservation of these rights of all the people, rights we hold to be inalienable. We guard and protect these rights zealously. They are the very cornerstone of our democracy.

But, perhaps it is time that we, as a nation, also dedicate ourselves to preservation of certain rights for the American farmer, as the custodian of the very basis of our national life.

FARM BILL OF RIGHTS

I propose as a standard from which agriculture should never again retreat this farmer's bill of rights:

1. The right to full equality of economic opportunity.

2. The right for improved standards of rural living.

3. The right of reasonable protection against natural hazards.

4. The right to extend agricultural free enterprise through cooperative action.

5. The right to public cooperation and assistance in saving the soil.

6. The right to preserve the social and human values of family farming.

7. The right to decent land tenure which would encourage the desirable goal of farm ownership.

8. The right to a democratic voice in his own farm program.

9. The right to benefits of an expanding world trade.

10. The right to a long-term program of food storage to encourage abundance.

Much could be said about each of these fundamental rights for agriculture. They involve the right to a fair share of the national income for agriculture through more reasonable assurance of fair rewards and adequate incentives for those who efficiently and abundantly provide for the food and fiber needs of the Nation. They mean modern schools, roads, housing, and health facilities and services in rural areas equal to those afforded city folks. They mean protection against forces beyond agriculture's own control, through adequate farm credit facilities geared to agriculture's needs; through crop insurance, within the farmer's ability to participate, through disaster aid when needed to protect both the public and the individual interest; and through price-support programs designed to contribute stability to our entire economy, and to protect the farmer from being left at the mercy of speculators.

CO-OPS NEED FREEDOM

The bill of rights for agriculture means the right of farmers to self-help through farming cooperatives for marketing farm products, purchasing farm supplies, and providing essential services, such as extending the benefits of electricity and telephones in rural areas, with legal protection against efforts to curtail the effective functioning of such farm cooperatives. They mean the right of aid in conserving the Nation's agricultural resources—our productive lands, water supplies, and forests—so that these resources will be permanently useful for the benefit of generations to come.

They mean adequate landlord-tenant arrangements for sharing the income that the soil produces, with adequate opportunity for tenants to advance up the ladder toward farm ownership. They mean an effective voice for the farmer in his own destiny such as farmer participation in both administration and development of farm programs through democratically elected farmer committeemen, and self-determination of the needs of adjusting production to a reasonable balance with demand through voluntary farmer referendums. They mean facilitating the flow of farm exports to broaden the base of our farm economy.

A RIGHTFUL HERITAGE

The farmer's bill of rights means greater public recognition of the wisdom and necessity for maintaining at adequate levels our storage food banks of feed and food reserves safeguarding the Nation from any eventuality. They mean public policies making more effective use of the abundance farmers are capable of producing, policies enabling the farmer to see his food used wisely, rather than be wasted; to see the output of his land and his toil make its utmost contribution toward stamping out hunger and deprivation at home and abroad, and serving as the humanitarian arm of the Nation's foreign policy, in our efforts to create a better and more peaceful world.

These, I believe, are basic rights of American agriculture.

They are not new rights. They are not rights of special privilege, gained through misuse or abuse of tremendous power over the lifelines of the Nation's food supply.

WE'VE EARNED THE RIGHT

Rather, they are rights of historic precedent, earned by the great and continuing contribution of agriculture to American life—the fulfillment of the Nation's needs in peace or war, in good times or bad, at personal profit or personal loss.

They are rights set forth as public policy, time after time, in the objectives of legislation enacted by the Congress of the United States.

They need reiterating now only as a guiding beacon of light, cast upon the darkness of confusion surrounding current controversy over America's farm policy.

They must be just as zealously guarded, against forces which seek to destroy them, as we guard other historic rights, privileges, and responsibilities of freedom in our democracy.

That, I believe, should be American agriculture's rallying point for unity today—and the Nation's challenge to fully exemplify the meaning of democracy as equal opportunity for all.

AMENDMENT OF REORGANIZATION PLAN NO. 2 OF 1953

The Senate resumed the consideration of the bill (S. 144) to amend Reorganization Plan No. 2 of 1953.

Mr. CURTIS. Mr. President, the Rural Electrification Administration was originally conceived to be operated as an independent agency. The original intent of the law was that the REA program should be operated by an independent agency of the Government. That law was changed somewhat by the Reorganization Act of 1939, and was again changed by the Reorganization Act of 1953.

Senate bill 144 is not a satisfactory solution to the problem now before us. The bill has been changed materially in the past few weeks.

Senate bill 144 provides that the program "shall be exercised and administered within the Department of Agriculture by such Administrator under the general direction and supervision of the Secretary of Agriculture."

The bill makes an exception to that; and the exception is confined to the approval or disapproval of loans. The exception does not even include the general fiscal policy of the REA.

An amendment, offered by me and the distinguished senior Senator from Georgia [Mr. RUSSELL], would establish the REA as a completely independent agency, as it was originally conceived. That amendment to Senate bill 144 is being printed. It is now the pending question.

Mr. President, I could spend a great deal of time appraising the rural electrification program. It has been one of the finest programs ever developed for American farmers. It is something the American farmers are paying for. The REA cooperatives have had an excellent record of repayment. The program has brought a new day to the farms of America not only by the use of electric lights, but also by the use of electric-powered equipment of all kinds. The program is successful. The repayment record is good. The present Administrator, Mr. David Hamil, is the finest REA Administrator the Government has ever had. He is doing an outstanding job. He has the confidence of the farmers of the Nation.

But notwithstanding the splendid record of Mr. Hamil, certain fears and apprehensions have arisen throughout the country because reorganization acts have vested in the Secretary of Agriculture all the power the Administrator of the REA had. The Committee on Government Operations held hearings on this matter. Representatives of local REA's and individual farmers appeared before the committee. I attended the hearings. As I recall, I took occasion to ask every witness who appeared whether the service he had been receiving from the REA was satisfactory. Every witness replied in the affirmative. I asked each witness whether his REA had made application for a loan which had been denied. Each of the witnesses replied that that was not the case.

Nevertheless, one could sense a fear of the power of the Secretary of Agriculture over the REA program. They did not like that power. They held to the opinion that there was a possibility that the program would take a turn other than to their liking.

I do not regard that as a condemnation of the present Secretary of Agriculture. Every Secretary of Agriculture encounters a certain amount of controversy. We have controversy and we have politics concerning an agricultural price-support program. We have controversy and we have politics concerning proposed legislation with reference to any crop, whether it be sugar, cotton, wheat, corn, or whatnot. If Senate bill 144 is passed and is enacted into law, the Secretary of Agriculture will still have the general direction and supervision of the REA program.

After the hearings were held last year, I went home and discussed this matter with a number of REA leaders. The opinion was unanimous that what ought to be done is to have the REA set up as an independent agency.

The proposal in which the distinguished Senator from Georgia [Mr. RUSSELL] has joined me, as an amendment of S. 144, does that very thing. The proposal is not a new departure. The REA Administrator would lend money to local REA's so that they could carry out their programs.

The Curtis-Russell amendment proposes to do in this case what was done in the case of the Farm Credit Administration. Public Law 202, 83d Congress, 1st session, created the Farm Credit Administration as an independent agency. The law took the agency out of the Department of Agriculture and established it on its own. It removed the Farm Credit Administration from all the controversy and politics that go with something that is as difficult to legislate for as is the entire field of agriculture. The Curtis-Russell amendment follows the same pattern. I am referring to Public Law 202 of the 83d Congress, 1st session, relating to the Farm Credit Administration. The first sentence of section 3 reads:

The Farm Credit Administration shall be an independent agency in the executive branch of the Government.

I ask unanimous consent to have printed in the RECORD as a part of my remarks at this point subparagraphs (b), (c), (d), and (e) of section 7 of that act.

There being no objection, the extracts were ordered to be printed in the RECORD, as follows:

(b) Employees in the Department of Agriculture who are being utilized on the effective date of this Act primarily for the performance of functions, powers, and duties heretofore or by this Act vested in the Farm Credit Administration, shall be transferred to the jurisdiction and control of the Farm Credit Administration in those instances in which the Governor determines that they are qualified and necessary to carry out the functions, powers, and duties of the Farm Credit Administration.

(c) All assets, funds, contracts, property, and records used and employed in the execution of the functions, powers, and duties heretofore or by this Act vested in the Farm Credit Administration are hereby transferred to the jurisdiction and control of the Farm Credit Administration.

(d) So much of the unexpended balances of appropriations, allocations, and other funds available or to be made available for salaries, expenses, and all other administrative expenditures as the Director of the Bureau of the Budget shall determine for use in the execution of the functions heretofore or by this Act vested in the Farm Credit Administration, shall be transferred to and vested in the Farm Credit Administration.

(e) All unexpended balances of appropriations, allocations, or other funds, other than those mentioned in subsection (d) of this section, available (including those available for the fiscal year ending June 30, 1953) for the Farm Credit Administration and/or for the Secretary of Agriculture on account of the functions and activities of Farm Credit Administration, shall be transferred to the Farm Credit Administration and shall remain available for the exercise of the functions and activities of the Farm Credit Administration.

Mr. CURTIS. Mr. President, if the Senate should pass S. 144 as reported by the Committee on Government Operations, it would certainly be legislating confusion, because the Senate would say, on the one hand, the Secretary of Agriculture shall have general supervision and direction of the program, and, on the other hand, the Senate would say, "except he shall not have any supervision or control of the approval or disapproval of loans."

If the Senate is to give any attention to the problems raised as set forth in the hearings, it should go all the way and vest authority in one place. If S. 144 as reported should pass, there would result a situation wherein the determination of general policy for REA would vest in the Secretary of Agriculture. Such authority would be broad in its scope. Legal policy, legal requirements, legal procedures, and like matters, would be subject to the authority of the Secretary of Agriculture.

If S. 114 as reported by the committee should pass, there would be vested in the Secretary of Agriculture the determination of policies to be adopted in reference to interest and recommendations for raising or lowering interest rates.

If the Curtis-Russell amendment or substitute shall be adopted, that authority will be vested in the REA Administrator. If the Curtis-Russell amendment shall be enacted, the authority over his own legal department will be in the hands of the Administrator. Whoever controls the legal department of an agency can determine the actions of the agency.

If S. 144 as reported by the committee shall be passed, all policies of the agency will be subject to the general supervision and control of the Secretary. Likewise, the Administrator's assistants, his help, all of his personnel, his budget, and everything that determines the program he will be able to carry on, will be subject to the general supervision and control of the Secretary of Agriculture.

It seems to me we are faced with a problem. We had a fine independent agency. Under the reorganization acts the agency was placed in the Department of Agriculture. If it is to be left in the Department, that is a decision the Congress should make. But certainly Congress should not leave the agency in the Department and have the authority so divided that the farmers of the country and the local REA's will find nothing but confusion in the fixing of responsibility for the conduct of the REA program.

If S. 144 as reported by the committee shall be passed, the borrowers will have to look to the Secretary of Agriculture for the ultimate determination of every decision and every policy relating to REA except as to the mere approval or disapproval of a loan. While the making of the loan is a very important act, the power of the agency would be narrowed to a single function.

I am thoroughly convinced that if the National REA Association were to carry back to its members and to the farmers of the country a request for a decision as to whether, if there is to be legislation, the REA should be constituted an independent agency or whether Congress should legislate confusion, as is proposed by S. 144 as reported by the committee, the farmers would be in favor of the establishment of an independent agency.

Mr. President, the Curtis-Russell amendment, as I have stated, follows the pattern of the Farm Credit Administration. It begins by stating that there shall be created and established in the executive branch of the Government an independent agency to be known as the Rural Electrification Administration.

It provides that Administrator Hamil shall continue as Administrator.

It calls for the appointment, at the end of Mr. Hamil's term, of an Administrator for a period of 10 years, at a salary of $20,000 a year.

Its purpose is to give the REA the status it ought to have; namely that of an agency in its own right. Its purpose is to remove from confusion, from controversy, and from agricultural legislation politics, the fine program of the REA.

The amendment sponsored by me and by the distinguished Senator from Georgia [Mr. RUSSELL] provides for a transfer of the employees now working in the REA to the new agency, and for a transfer of the assets, appropriations and powers. It follows very closely the pattern established by Congress in Public Law 202 of the 83d Congress relating to the Farm Credit Administration, parts of which I have already had printed in the RECORD.

Some question has been raised as to whether, if the Curtis-Russell amendment should prevail, the same committees which now handle authorizations and appropriations for REA would continue to do so. We have added section 4 to make that matter abundantly clear.

Mr. President, I ask unanimous consent to have printed in the RECORD at this point a copy of the Curtis-Russell amendment.

There being no objection, the amendment in the nature of a substitute offered by Mr. CURTIS for himself and Mr. RUSSELL was ordered to be printed in the RECORD, as follows:

Strike out all after the enacting clause and insert in lieu thereof the following:

"That there is hereby created and established in the executive branch of the Government an independent agency to be known as the 'Rural Electrification Administration' all of the powers of which shall be exercised by an Administrator who shall be appointed by the President by and with the advice and consent of the Senate for a term of ten years and who shall receive a salary of $20,000 per annum. The Administrator shall have direction, supervision, and control of the Rural Electrification Administration and all of its operations and functions as authorized in the Rural Electrification Act of 1936, as amended.

"SEC. 2. The incumbent of the Office of Administrator of the Rural Electrification Administration appointed before the effective date of this Act shall serve the remainder of the term for which he was appointed. At the expiration of such term, or if the office shall become vacant at any time for any reason, the President shall designate an Acting Administrator to exercise and perform all functions, powers, and duties vested in the Rural Electrification Administration until the appointment and qualification of an Administrator, as provided in the first section of this Act.

"SEC. 3. (a) Employees in the Department of Agriculture who are being utilized on the effective date of this Act primarily for the performance of functions, powers, and duties provided for in the Rural Electrification Act of 1936, as amended, shall be transferred to the jurisdiction and control of the Rural Electrification Administration in those instances in which the Administrator determines that they are qualified and necessary to carry out the functions, powers, and duties of the Rural Electrification Administration.

"(b) All assets, funds, contracts, property, and records used and employed in the execution of the functions, powers, and duties authorized by the Rural Electrification Act of 1936, as amended, are hereby transferred to the jurisdiction and control of the Rural Electrification Administration.

"(c) All unexpended balances of appropriations, allocations, or other funds available (including those available for the fiscal year ending June 30, 1959) for the Rural Electrification Administration and for the Secretary of Agriculture on account of the functions and activities of the Rural Electrification Administration shall be transferred to the Rural Electrification Administration and shall remain available for the exercise of the functions and activities of the Rural Electrification Administration.

"SEC. 4. (a) Notwithstanding any other provision of this Act, or of any rule of the Senate or of any committee of the Senate, any proposed legislation or other matter (including appropriations), relating to the administration of the Rural Electrification Act of 1936, as amended, shall, after the date of

enactment of this Act, be referred to the same committees and subcommittees of the Senate to which such proposed legislation or other matter would have been referred had this Act not been enacted.

"(b) This section is enacted—

"(1) as an exercise of the rulemaking power of the Senate and as such it shall be considered as part of the rules of the Senate, and shall supersede other rules of the Senate only to the extent that they are inconsistent therewith; and

"(2) with full recognition of the constitutional right of the Senate to change such rule at any time, in the same manner and to the same extent as in the case of any other rule of the Senate."

Amend the title so as to read: "A bill to establish the Rural Electrification Administration as an independent agency, and for other purposes."

Mr. CURTIS. Mr. President, a reading of the Curtis-Russell amendment will not leave confusion in the mind of anyone. Anyone who reads the amendment will know who is to have the authority in REA matters. He will know who will have authority to go before the Bureau of the Budget and to outline the program. He will know who is to have the authority to recommend to the Congress the interest policy—namely, the REA Administrator, David Hamil. He will know who is to have the authority to run the legal department of the REA—namely, the REA Administrator, David Hamil. He will know who is to have the authority to establish any policy with reference to the REA.

Mr. President, who knows where authority will rest under S. 144? The whole theory of the reorganization plans was to establish a chain of command and to give to the Secretary—in this case the Secretary of Agriculture—all the power the administrator of an agency may have.

The bill S. 144 is what we have to consider. In the bill it is stated that the activities of the agency shall be administered by the Administrator of the REA under the general direction and supervision of the Secretary of Agriculture, except that the mere approval or disapproval of loans is not to be subject to his control.

One can raise any question about the REA policy he desires to suggest, but there are still two officials having initial authority, with ultimate authority vested in the Secretary of Agriculture.

Again I say if the National Association of REA Cooperatives, now that this matter has been fully developed in the hearings of the Committee on Agriculture and Forestry and the Committee on Government Operations, will resubmit this issue to the American farmers and to the local REA's, there is no question in my mind that they will say, "Give this fine REA program the recognition it should have. Give the program a status of its own. Make this an independent agency. Do not legislate confusion, with the dual responsibility and the serious questions that are left unanswered by S. 144."

Mr. President, the purpose of these remarks is to outline for those who read the CONGRESSIONAL RECORD the provisions of the amendment we expect to offer tomorrow. I do not know what version will prevail. I do not know whether there will be sufficient votes to adopt the amendment. I hope the amendment will be agreed to, and I am inclined to think it may be.

I am thoroughly satisfied that if any Senator takes the issue back home and submits the decision to the farm leaders in the various localities who run the REA's, those farm leaders will say, "Give us an independent agency with clear-cut authority under one Administrator, and grant recognition not only to a splendid program, the REA program, but grant recognition also to the most outstanding REA Administrator we have ever had, Mr. David Hamil."

I am likewise convinced that should S. 144 become law, as written, it will be most unsatisfactory to all these people.

Mr. President, I yield the floor.

Mr. LANGER. Mr. President, one of the most important issues of interest to the people of North Dakota, as well as other parts of the country, is the question of the REA interest rate. I have spoken on this subject many times, but today I should like to have printed in the RECORD a speech I made on the floor of the Senate on January 23, 1958. I ask unanimous consent that it be printed in the body of the RECORD.

There being no objection, the speech was ordered to be printed in the RECORD, as follows:

Mr. LANGER. Mr. President, this morning I introduced two bills dealing with REA. I ask unanimous consent that a statement prepared in connection with the bills may be printed in the body of the RECORD following the introduction of the bills.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

"I have asked for the floor because I want to speak up against the robbery of the American people. It is a robbery that has been going on for years, but I don't think we should let another day pass without doing something to stop it. I am referring to the practice of electric power companies in spending countless millions in propaganda advertising and political activities and then adding the costs of this propaganda to their cost of operation and making the consumer pay for it in his electric bill.

"ELECTRIC POWER A MONOPOLY INDUSTRY

"As everyone knows, the electric power industry is a monopoly industry. The man that wants electricity must buy it from the company that services his community and he must pay the rates which they charge. The consumer has absolutely no choice in the matter. Because of this monopoly position enjoyed by the electric power companies the law provides that they are allowed to charge only such rates that will enable them to cover their costs of operation and their costs of obtaining the money that they need for that operation. Obviously, money spent to attack some public development or to propagandize the consumer along certain political and economic lines, is not a cost of the operation of an electric power company.

"The electric consumer wants, and is entitled to receive, the best possible electric service at the lowest possible cost. The electric consumer should not have to pay the cost of expensive advertisements, in slick national magazines, attacking TVA, or a Federal Hells Canyon project, or the rural electric cooperatives of the country. Expenditures of that kind do not contribute to any better or cheaper service for the consumer—on the contrary, all that they do is to increase his electric bill.

"Can you imagine what the electric consumer would say if his electric-light bill showed that 5 or 10 percent of it—or any amount of it, no matter what the percentage—was being charged him because his electric-power company wanted to feed him propaganda against rural electric cooperatives? Or because they wanted to lobby against Hells Canyon? Can you imagine what would happen if your electric bill read: "$10 for electricity, $1 to finance propaganda by the company to make you think TVA is socialistic." I don't have to tell you that overnight there would be such a howl of protest that either the electric-power companies would stop that practice immediately or something would be done to make them stop it. The only reason that the electric consumers all over the country are not raising their voices in protest—the only reason they are not knocking at our doors and filling our offices—is that they don't know what is going on. They are being taken and taken badly, but they don't know it.

"But you and I know it, and the public utility commissions of the country know it. What possible excuse do we have for allowing this robbery to continue? I tell you that I am going to speak up against it at every possible opportunity and I am not going to let up in this fight until this outrageous practice is stopped.

"MISLEADING ADVERTISING

"Now, back in the 1920's the National Electric Light Association tried to control public opinion through its propaganda advertising and political activities. And of course, at the same time they were charging the costs of this public opinion control to the electric consumer himself in his electric bill. These practices became so outrageous that they were investigated and exposed by the Federal Trade Commission, and for a while conditions improved. Some of the more naive thought perhaps the practice had been licked and that the electric power companies would not again try to brainwash their customers at their customers' expense, but apparently it takes a lot more than that to keep the electric power companies in line. Actually, for the last 15 years these old practices and abuses have been renewed and once again the electric consumer has had to foot the bill for his misinformation. The electric power companies of the country have spent and are spending millions of dollars of their customers' money in this attempt to mislead and control the thinking of their customers. They have tried and are trying to brainwash them at their own expense.

"There are four major organizations through which the electric power companies are carrying on this brainwashing campaign. There is the Edison Electric Institute, which prepares the statistical ammunition and cooperates with educational institutions in the preparation of literature. Then there is the electric companies' advertising program, which hands out advertising to magazines and newspapers, sponsors weekly radio and television programs, and provides its member companies with the material for them to use locally. Then there is the electric companies' public information program, which provides material for use in speeches, and by the local press and employee publications. Finally, there is the National Association of Electric Companies, which carries on the lobbying activities in Washington.

"Between the years 1941 and 1952, the electric companies' advertising program alone spent more than $5 million for mass circulation news ads and almost $7½ million for national radio and television hookups. Their advertisements appeared regularly in the Saturday Evening Post, Life, Farm Journal, Country Gentleman, and the Progressive

Farmer. They have sponsored such national programs as Nelson Eddy, the Hour of Charm, Helen Hayes, and Meet Corliss Archer.

"This is just a small sample of what the electric power companies spend for propaganda purposes. I can go on and on listing their expenditures, but you know them as well as I do. You know that the amount is huge, the purpose improper and the practice inexcusable.

"WHAT IS THIS PROPAGANDA?

"And what is this propaganda that the electric consumer is being compelled to finance without his consent? There is the propaganda that tries to convince the American people that any activity of cooperatives or any Government agency in the electric power field is socialism. I have here a copy of an advertisement which has on it a map of the United States covered by dots, supposedly representing existing and proposed Federal power and cooperative installations—and in bold print under the map is the question, 'A Socialistic United States of America?'

"This is the most outrageous type of misrepresentation imaginable. The cooperatives are the finest example of private enterprise that we have. They are not Government owned. They are owned by the same farmers that they serve. Coupling the cooperatives with Government installations is completely dishonest—and the power companies know it. Yet they tax their customers in order to feed back to them this lying hogwash. The good farmers who own and operate these rural electric cooperatives bitterly resent this shameful, lying attack on their patriotism. And I for one intend to do something about it.

"This whole advertisement is, of course, hogwash. There is no element of socialism even in the Government's power program. The Government is not in the retail electric business and the electric power companies are not in a free-enterprise business. Socialism to me and to the American people means interference by the Government in the free-enterprise system. It does not mean the activities of the Government in the electric power field, any more than it is socialism for a local government to supply its citizens with sewage facilities or with water. The electric power companies know this just the same as you and I, but they don't care what they say if they can turn the public against Government and cooperative power activities—especially when they can make their customers pay for it.

" 'TAXPAYING ELECTRIC INDUSTRY'?

"And look at all the ads by the electric power companies trying to establish themselves as the 'taxpaying electric industry.' They don't pay the taxes and they know it. The taxes are included in their operating expenses and all they do is collect it from their customers and turn it over to the Government. They don't pay the taxes—their customers pay them.

"And look at all the other misleading propaganda they publish about the rural electric cooperatives. They talk about the profits that the cooperatives are making. What profits? How can a cooperative make profits? How can anyone make profits out of dealing with himself? The cooperatives were organized by their members in order to serve themselves. They serve themselves at cost. Anything that is left over at the end of the year belongs to the same farmers who furnished the money. The power companies know this. They know that cooperatives do not make profits. They know that coperatives are nonprofit organizations. And yet they keep repeating this same lie over and over again.

"Now what possible sense does it make—what possible right do the electric power companies have to spend millions in this type of propaganda advertising and then turn around and charge the electric consumer the cost for having his brain washed? There is no right—neither legal nor moral—and yet this has been going on for years. I ask you—what are we going to do about it?

"SALUTE TO PUBLIC SERVICE COMMISSION

"Fortunately, some of the State public service commissions are beginning to wake up to their responsibilities and are refusing to permit the power companies to include these propaganda expenditures as part of their operating expenses. I salute the public service commission of Wisconsin for recently ruling that electric power companies cannot charge their customers for the cost of political advertising attacking rural electric cooperatives. But there is not enough of this type of ruling. We need more vigilance and concerted action by all of the State regulatory bodies to make sure that not 1 cent of this brainwashing fund is charged to the electric consumer. And we in the Congress can do something about it also. We can pass laws to make sure that the Federal Power Commission does not allow these propaganda expenses to be charged as operating expense in any case before the Federal Power Commission. And we can also pass laws to make sure that these expenditures cannot be relied upon by the power companies to reduce their income taxes.

"USEFUL ADVERTISING

"There are, of course, types of advertising which are definitely part of the operations of an electric power company. Advertisements which help increase the use of electricity, or which tell the consumers of new electric appliances, or which help educate the consumers on the proper use of electricity—all these are legitimate purposes. And the costs of advertisements relating to these purposes are a legitimate expense of operation. Advertising going beyond this, however, is not an expense of operation and must not be charged to the consumer.

"Now, I want to make it perfectly clear that I don't care how much these electric power companies spend on their propaganda and I don't care what they say in their propaganda. Of course, like every American, I would like to see the day come when they told the truth for a change. But even if they want to keep on telling their lies, let them do it. Let them say whatever they want to about BILL LANGER, and TVA, and Bonneville, and Hells Canyon, and the rural electric cooperatives, provided they pay for it out of their stockholders' money and not charge it to the electric consumer in his electric bill. That is my point. Let them talk, let them advertise, let them do anything they want to do, but let them pay for it out of their own money.

"I tell you it is a disgrace and crying shame that this has been allowed to go on as long as it has. Those of us in every branch of every government that have allowed this to go on should hang our heads in shame. We have stood by and watched the eletcric consumer get robbed of millions of dollars and we have not done anything to stop it. I say that the time has come when we must do something to stop it and I hope that in this session of Congress we can get through some bills which will stop it at least insofar as the Federal Government can stop it. And by the illustration we give by our action, I hope that the State legislatures and the State commissions will stop this robbery at the State level.

"TWO PERCENT INTEREST RATE HIGH ENOUGH

"Now, there is another thing I want to talk about and that is the current drive that is on to double or possibly triple the REA interest rates. The Director of the Bureau of the Budget sent a proposed bill up to the Congress last June which would raise the REA interest rate from its present level of 2 percent to at least 4½ percent and it might possibly go higher than that. Now, the Government entered into an agreement with the rural electric systems that the interest rate would be 2 percent provided the systems extended service on an areawide basis to all of the people in rural areas who wanted and needed electric service.

"The REA cooperatives have carried out their part of the agreement as is evidenced by the fact that more than 95 percent of the farmers have electric service today.

"At the very same time that the administration sent this bill to the Congress it was negotiating a loan to the British Government for $3,750 million at 2 percent, with permission for the British to waive up to 7 annual payments of interest and principal if payment threatened to work a hardship on them, and they have exercised their right to waive payment. It is all right to lend the British money at 2 percent and waive annual interest and principal payments, but when it comes to our own rural electric systems, which are serving thinly populated rural areas, then this is all wrong.

"I am bitterly opposed to any change in the REA interest rate and will fight it as long as I am in the Senate.

"I want to give you three or four reasons why the REA interest rate should not be increased:

"1. The rural electric cooperatives have a most enviable repayment record. No other agency of the Federal Government in the lending business can claim as good a repayment record. As of June 30, 1957, the rural electric borrowers had paid back $425.8 million in principal and $281.5 million in interest. Furthermore, as of that date, only $200,602 in principal and interest was overdue more than 30 days.

"2. Throughout the life of the rural electrification program the Federal Government has made—not lost—money. This fact comes straight from the Comptroller General of the United States who reports in the REA audit for fiscal year 1956 that the REA has a net margin of interest income over interest expense of $54,177,262.

"3. As long as the Government continues to subsidize the private power companies under sections 167 and 168 of the income-tax laws there can be no justification for an increase in the REA interest rate except for purpose of destroying the program.

"I mentioned earlier the British loan and I will not repeat here anything further on it.

"This attempt to raise REA interest rates is nothing more nor less than an attempt by the commercial power companies to destroy the REA systems; and if we are not on our guard here in the Congress, it will be done."

REVITALIZATION AND STABILIZATION OF THE NATION'S COAL INDUSTRY

Mr. BYRD of West Virginia. Mr. President, it is evident that the ultimate hope for the revitalization and stabilization of our Nation's coal industry must lie in the direction of securing new and varied markets for coal. And the only possible way to discover and utilize these new uses for coal is through coal research.

To illustrate the enormous potential for coal which might be developed through research, I ask unanimous consent to have printed in the CONGRESSIONAL RECORD an editorial which was published last month in the Williamson (W. Va.) Daily News. This editorial points out that coal has the potential for the production of literally thousands of various

products—from phonograph records to aspirin, to explosives, to perfume, to medicine, to cosmetics, and one could continue ad infinitum—if the methods for making these products are but developed.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

COAL OFFERS GREAT POTENTIAL

The prosaic lump of coal is a veritable treasure chest yielding a seemingly endless variety of products.

The Germans even made ersatz butter from coal during World War II, and a scientist predicted recently that synthetic food will become a major byproduct of coal.

Other products now derived in whole or part from coal include aspirin, phonograph records, laughing gas, the flavoring in most vanilla ice cream, perfume, embalming fluid, laxatives, synthetic vitamins, dyes, TNT, moth balls, indelible pencils, clay pigeons, paint, synthetic rubber, saccharin, and fingernail polish.

This is just a sampling. There are believed to be more than 200,000 chemical byproducts of bituminous coal, the National Geographic Society says. Relatively few, however, are marketed commercially.

The multitude of substances are part of the rich yield from coking ovens, which release the "buried sunshine" in coal. When coal is heated to high temperatures in the absence of air, the solid residue is carbon-rich coke, essential in producing steel.

The gases produced in the coking process are equally important. In recent years special plants have been built to distill and process chemicals from the gases. Coke is simply the byproduct.

One of the most versatile of the some 350 compounds derived from the coking process is coal tar. A young English chemist, W. H. Perkin, made a synthetic mauve dye from coal tar in 1856, giving England its "mauve decade" and opening the way for a vast synthetic chemical industry.

Coal tar, a sticky, foul-smelling substance, can be treated to produce many products, including the delicate perfume scents of new-mown hay and orange blossoms. Almost 25 tons of violets once were required to make a single ounce of natural oil—a process now duplicated easily in the laboratory.

Coal tar also is used to make DDT, sulfa drugs, photographic developers, weed killers, refrigerants, road paving, detergents, carbon electrodes and antiseptics.

Other gases drawn off and treated after coking produce an array of substances, including plastics like nylon and the flexible resin polyethylene. When drained of much of their chemical wealth, the gases can be burned as fuel.

Although chemicals are important, coal is mainly used for fuel in the United States. Slightly more than half of all electric power in the United States is generated from that source. The steel industry is the next largest consumer.

It is the decline in the demand of coal as a fuel which is bringing about the current depressed conditions in the coal mining industry. Railroads and steamships, which once were big consumers of coal in the field of transportation, now use very little.

It is the present imbalance which makes it imperative that Congress give favorable consideration to pending legislation which would place greater emphasis on establishing a coal research commission. Perhaps the future of the coal industry, and particularly our own area in the coal-laden region of southern West Virginia, rests in the greater development of byproducts.

Mr. BYRD of West Virginia. Mr. President, coal is the most abundant fuel in our country's rich storehouse of natural resources. While other types of fuel appear to be slowly nearing exhaustion, the reserve supplies of coal are so vast that they stagger the imagination. They are fully ample to sustain our Nation until it has finally utilized the ultimate source of fuel—the atom. While coal production today is measured only in millions of tons, the total known reserve of American coal nears the staggering, imagination-defying figure of a trillion tons. And these bountiful reserves are spread throughout considerably more than half the States of the Union. North Dakota, for instance, has coal reserves estimated at 175 billion tons. Montana has reserves of 110 billion tons. Illinois has 68 billion tons. Wyoming has 60 billion tons. Kentucky has 59 billion tons. My own State of West Virginia has 52 billion tons. Altogether, a total of 27 States have substantial coal reserves, and 22 States have reserves of more than a billion tons.

Clearly, Mr. President, this is a gift from God which is too valuable to be allowed to lapse into misuse. The almost unlimited potential of our coal reserves should be utilized to the greater prosperity and well-being of our Nation, instead of being permitted to sink slowly into an ignominious abandoned condition.

The path to a greater utilization of coal—and to improved living conditions for all Americans—lies in the direction of coal research.

It is true that the coal companies themselves have been making an effort to undertake coal research programs. But these companies, for the most part, are barely able to survive under current operating conditions, and have been able to spend only meager amounts for research. For instance, the 1957 report of the House Subcommittee on Coal Research pointed out that, in 1955, the coal industry spent only $17,382,400 on research, while the petroleum industry spent $145,900,000, and the chemical industry spent $361,100,000. Thus it can readily be seen that the coal industry of today is unable to "go it alone" adequately in the mushrooming field of research.

Two years ago, the House Subcommittee on Coal Research issued a report which stated:

From 1925 to 1953, inclusive, the bituminous coal-mining industry experienced a net loss in 13 of the 27 years for which data are available, and in only 2 of the 27 years were fairly good profits obtained. * * * Viewing industry's earnings from another angle, it is found that the value, f.o.b. mines, of the total production of bituminous coal in 1953 was on the order of $2,247 million, from which the incorporated producers * * * realized a profit after Federal taxes of less than $13 million—or a calculated net profit of less than three-quarters of 1 percent of the gross value of the coal produced. It is doubtful that any other major industry vital to the economy of the Nation has experienced anything approaching the depressed financial condition of the coal-mining industry over the past 20 years.

This is a rather hopeless picture for the men who invest their money in America's coal industry. And to illustrate the fact that coal mining is still unprofitable today, Mr. President, I ask unanimous consent to insert in the RECORD an article from the March 1 edition of the Wheeling, W. Va., News Register. I feel that the headline of this article tells the story. It states: "Investors Get Less Return on Coal Than U.S. Bonds."

There being no objection, the article was ordered to be printed in the RECORD, as follows:

INVESTORS GET LESS RETURN ON COAL THAN U.S. BONDS

(By Monroe Worthington)

What does it cost to mine coal? What does the miner get? What do the owners of a business get?

Partial answers to these questions became available last week from study of the annual report of the North American Coal Corp., operators of the Powhatan Mining Co., down river from Wheeling, and of numerous other mines in various States.

The company is among the 10 largest coal producers in the Nation.

The company's net profits seem large, indeed, until this figure, $1,087,240 is divided by the number of tons of coal sold, which was 6,970,323 during the year 1958. Then it turns out that the men who supplied the $38,227,637 invested in the business got a rent of 15 cents per ton for the use of their money. On a percentage basis, this was 2.8—far less than they would have received had their money been invested in Government bonds. But in that case the thousands of people who depend on the company for jobs would have been on the breadlines.

The company does not say these things in its annual report. A company must be brave and dignified. The figures tell the story.

In contrast, 30 cents out of each ton went to the welfare fund of the coal miners. Actually, the miners received 40 cents per ton, but the company produced some Canadian coal and sold it. The company is planning on selling its Canadian operations, and all coal will pay the welfare fund from now on. This goes for hospitalization and pensions for old miners.

Other expenses, each in terms of the nearest cent per ton, were:

Production costs, including labor, repairs, payments to owners, electric power, etc., $4.49.

Sales expense, 31 cents.

Depreciation, the wearing out of machinery, 28 cents.

Interest on money borrowed from banks, etc., 7 cents.

Deferred payment fund, 1 cent.

Miscellaneous costs, 1 cent.

Total costs before taxes, $5.49.

Taxes, 7 cents.

Net to stockholders, 15 cents.

Total costs $5.68 per ton.

The report was signed by H. G. Schmidt, president. This company has a large, creative research department. They are the company which will soon be putting in a pilot plant to turn coal mine wastes into alumina, for ultimate sale to aluminum producers. Other companies have not done as well.

Mr. BYRD of West Virginia. The answer then, must be found in a Government program to bolster coal research, in order that this industry may fully come into its own, and bring its potential myriad of benefits to our Nation. It is my belief, Mr. President, that S. 49, the Coal Research and Development Act introduced by Senator DIRKSEN and cosponsored by Senator RANDOLPH and I and others contains that answer.

The Dirksen bill would create an agency to be called the Coal Research and Development Commission. The

Commission would be charged with the fourfold purpose of, first, developing new and more effective uses of coal; second, improving and expanding existing uses of coal; third, reducing the cost of coal production and distribution; and fourth, emphasizing those developments in uses for coal of particular value to small coal producers.

Mr. JOHNSON of Texas. Mr. President, will the Senator yield?

Mr. BYRD of West Virginia. I am happy to yield to the distinguished majority leader.

Mr. JOHNSON of Texas. I have had numerous conferences with the distinguished Senator from West Virginia on this subject, and I commend him for his tireless efforts and his devotion to this great industry.

I assure the Senator that I believe the statement he has made is very helpful. I should like to see legislation of the type to which he has directed our attention considered by the Senate. I believe that if we could establish such a Commission as he envisions, we might relieve the misery now being suffered by hundreds of thousands of our best citizens.

I visited the Senator's State last fall, and saw with my own eyes conditions which do not exist in very many sections of the country. I saw many fathers who were willing, able, and eager to work, but for whom no work was to be found. That was due to a series of circumstances.

I believe that the proposed commission could very well make a thorough study of the problem, and make constructive suggestions which would alleviate the situation to which reference has been made.

Some persons seem delighted that the unemployment figure has dropped by a few thousand. But so long as there is one man in the country who is able, willing, and eager to work, and who cannot find a job, that is one too many.

I hope other Members of the Senate will join the distinguished Senators from West Virginia [Mr. RANDOLPH and Mr. BYRD] in their efforts to spotlight the need which exists in a great many sections of the country, and that we can have some action on this subject at this session.

Mr. BYRD of West Virginia. I thank the majority leader for his words concerning the need for such a program as I have discussed today. I know that he has been very sympathetic toward West Virginia. He has expressed himself on many occasions. I am confident that he has a very real understanding of the problems which confront us in our State.

I am very grateful for the interest which the distinguished majority leader has shown in our problem. I appreciate very much his comments today in regard to the need for a coal research program.

In carrying out its duties, the Commission would, first, conduct research projects, second, work for the coordination of research operations of industries, universities, and other groups, and third, serve as a great intelligence center for research information and technical papers concerning coal research. The Commission would conduct research efforts on its own only when it is impractical for them to be carried out by other groups.

The benefits of this massive research undertaking would not redound to the financial benefit of only one company, or to only a handful of private interests. The Dirksen bill specifies that no research shall be agreed to by the Commission unless all discoveries and benefits of the work shall "be available to the public generally."

Furthermore, the cost of this program would be small, compared to the expenses of most Government undertakings today. Only $2 million is called for to put the program into operation in this fiscal year, and the allocations for future years is left to the discretion of future sessions of Congress. It is possible that the entire cost of this program might, within a few years, be fully returned to the Government through the increase of tax revenues from the coal industry and coal employees, and through decreased costs of unemployment compensation and welfare programs in coal-producing areas.

To me, Mr. President, S. 49 embodies the progressive, ingenious, forward-looking spirit of the mid-20th century. It contains the promise of a slight governmental boost to put an ailing industry on its feet and start it on the road to the realization of its full potential in our Nation's economy—a boost that would be returned to the people of America manyfold through new prosperity, new products, new employment, and new hope for the men and women of our country's leading fuel industry. With each new coal use discovered through this program, with each new job brought to the suffering coalfields, with each new improvement in America's standard of living, the citizens of the United States would be repaid for the small expense of putting S. 49 into operation.

Therefore, Mr. President, I urge that S. 49 be brought quickly to the floors of both bodies of Congress, and be promptly enacted into law.

Mr. President, I yield the floor.

ADJOURNMENT

Mr. JOHNSON of Texas. Mr. President, I move that the Senate stand in adjournment until 12 o'clock noon tomorrow.

The motion was agreed to; and (at 4 o'clock and 37 minutes p.m.) the Senate adjourned until tomorrow, Wednesday, April 8, 1959, at 12 o'clock meridian.

NOMINATIONS

Executive nominations received by the Senate April 7, 1959:

ASSISTANT SECRETARY OF STATE

J. Graham Parsons, of New York, a Foreign Service officer of the class of career minister, to be an Assistant Secretary of State.

DEPARTMENT OF AGRICULTURE

Frank A. Barrett, of Wyoming, to be General Counsel of the Department of Agriculture, vice Robert L. Farrington, resigning.

COMPTROLLER OF CUSTOMS

Mr. Stanley Ormsbee Styles, of Saugerties, N.Y., to be Comptroller of Customs with headquarters at New York.

COMMISSIONER, DISTRICT OF COLUMBIA

David Brewer Karrick, of the District of Columbia, to be a Commissioner of the District of Columbia for a term of 3 years and until his successor is appointed and qualified—reappointment.

U.S. ATTORNEY

Francisco A. Gil, Jr., of Puerto Rico, to be U.S. attorney for the district of Puerto Rico for the term of 4 years, vice Harley A. Miller, resigned.

IN THE ARMY

Maj. Gen. Leonard Dudley Heaton, O16960, Medical Corps, U.S. Army, for appointment as the Surgeon General, U.S. Army, under the provisions of title 10, United States Code, section 3036.

Maj. Gen. Ralph Thomas Nelson, O17308, Army of the United States (brigadier general, U.S. Army), for appointment as Chief Signal Officer, U.S. Army and as major general in the Regular Army of the United States, under the provisions of title 10, United States Code, section 3036.

IN THE AIR FORCE

Maj. Gen. Bernard A. Schriever, 1519A, Regular Air Force, to be assigned to positions of importance and responsibility designated by the President in the rank of lieutenant general, under the provisions of section 8066, title 10 of the United States Code.

IN THE NAVY

Vice Adm. John M. Will, U.S. Navy, to be placed on the retired list in the grade of vice admiral under the provisions of title 10, United States Code, section 5233.

Having designated, under the provisions of title 10, United States Code, section 5231, Rear Adm. Roy A. Gano, U.S. Navy, for commands and other duties determined by the President to be within the contemplation of said section, I nominate him for appointment to the grade of vice admiral while so serving.

Having designated under the provisions of title 10, United States Code, section 5231, the following-named officer for commands and other duties determined by the President to be within the contemplation of said section, I nominate him for appointment to the grade of vice admiral while so serving:

Rear Adm. John T. Hayward, U.S. Navy.

IN THE COAST GUARD

The following-named person to be lieutenant in the U.S. Coast Guard:

David C. Klingensmith

The following-named persons to be lieutenants (junior grade) in the U.S. Coast Guard:

Robert A. Biller
Robert R. Tutt
Robert J. Ketchel
Thomas W. Kirkpatrick
Walter W. White
Wesley Goodwin
William M. Devlin
Michael Abarbanell
William F. Roland
Donald L. Prince
Donald L. Frantz
Ronald C. Kollmeyer
Basil D. Harrington
Donald T. Campbell
Floyd D. Hunter
Richard E. Sardeson
George F. Viveiros, Jr.
Kennard M. Palfrey, Jr.
William G. Hicks
John N. MacDonald
Clifton R. Smith
Norman B. Lynch
Norman E. Cutts
Barry C. Roberts
Robert G. McMahan
Bruce L. Solomon
William F. Merlin
Thomas P. Schaefer
Robert Gillespie
James Weiskittel
Donald M. Taub
Richard D. Olsen
Bruce J. Kichline
Don S. Bellis
Charles W. Faircloth
Lynn N. Hein
Arthur K. Hounslea
Neal H. B. Benjamin
Raymond E. Womack
Arthur H. Wagner
James E. Rivard, Jr.
LeRoy C. Melberg, Jr.
William M. Flanders
John G. Stanley
William B. Mohin
Lawrence F. Bond
James A. Granger
Earl L. Sullivan, Jr.
Kirk R. Kellogg
George L. Rettie
Richard I. Rybacki
Laurence C. Kindbom
Joseph H. Wubbold III

William J. Brogdon, Jr.	Joseph F. Smith
David A. Sumi	Vernon C. Jones
Charles E. Moorhead, Jr.	Alan C. Dempsey
	John E. DeCarteret
Arnold Swagerty	Gilbert E. Brown, Jr.
Richard J. Kyte	Parker D. Morris
James I. McLeaish	John L. Callahan
Bruce S. Gathy	Gilbert L. Aumon
John D. Basque	Ernest C. Allen
Paul T. Thevenin	Robert E. McKew
Robert L. Bristol	Richard A. Blackford
Lawrence J. O'Pezio	Robert I. Plattus
James J. Rooney III	Edward J. Quinn
Brinton R. Shannon	Paul D. Henneberry
Roger P. Hartgen	John R. Ehrmann
Ernest G. Marsh	Benjamin K. Schaeffer
George R. Oberholtzer	

The following-named persons to be ensigns in the U.S. Coast Guard:

Albert Jeremiah Allison III
Roger Allen Andersen
Richard Lee Andrews
Clarence Clyde Atkins, Jr.
Ronald Glenn Barnes
Anthony Christopher Beardsley
Richard Harry Beiter
Stanley Edward Bielski
Jason Michael Bowen
Robert David Brown
Peter Arnold Bunch
Garret Thayer Bush III
John Dominic Campbell
Edmond Gaines Case
James Alexander Chappell
James William Coste, Jr.
John Ernst Cummings
Thomas Joseph Cunningham
John Deck III
William Michael Devereaux
John Richard Edwards
James Edward Foels
Richard Willis Folker
Gerald Ray Foster
Dean Allen Frankenhauser
David Robert Garner
John William Gerometta
Jack Carroll Goldthorpe
William Bayard Hewitt
James Gerald Heydenreich
Donald Leo Hoffer
John Terrence Howell
William Burgess Howland
Frank James Iarossi
Robert Joe Imbrie
John Edward Irwin
John William Klotz
Otto Robert Kossmann
George Eric Krietemeyer
Edouard Wilfred LaCroix, Jr.
Peter Christian Fabricius Lauridsen, Jr.
William Philip Leahy, Jr.
Charles Stanley Loosmore
Thomas Frank Marucci
Stephen Jay Thomas Masse
James Lane McDonald
Garald Henry McManus
Robert Fritz Melsheimer
Lawrence Eric Meyer
James Wesley Miller II
Donald Leslie Millroy
Charles Stanley Mincks
Ronald Francis Miscavich
James Terrence Montonye
Thomas Norman Morrow, Jr.
Harold Frederick Norton, Jr.
Frank Walfir Olson
Paul Edward Pakos
Bruce Albert Patterson
David Lemar Pepple
Ronald Marion Polant
Geoffrey Thomas Potter
Bryson Smith Randolph
Robert Reynard
Walter Scott Rich
Frank John Ropiak, Jr.
Ralph Daniel Sanford
William Nolden Schobert
Gerald William Seelman
Robert Edward Shenkle
Andrew Harley Sims, Jr.
Joel Douglas Sipes
Bruce Clayton Skinner
Robert Howard Thornton
Joseph Edward Vorbach
William George Walker
Paul Andrew Welling
Robert Russell Wells
Floyd William White, Jr.
Robert Bruce Workman, Jr.

The following-named persons to be chief warrant officers, W-3, in the U.S. Coast Guard:

Joseph R. Rowland, Jr.
Richard F. Goward
Kenneth M. Lumsden

The following-named persons to be chief warrant officers, W-2, in the U.S. Coast Guard:

Robert E. Gardner	John F. Curry
Clayton W. Collins, Jr.	Peter D. Corson
Ralph G. Isacson	William R. Lipham
Joseph J. Bookout	Axel J. Hagstrom
Maynard J. Fontaine	David L. Abbott
Richard D. Mellette	John H. Hancock, Jr.
Eugene L. Davis	Francis M. Coonrod, Jr.
Dewey F. Barfield	
Frank J. Diersen	Donald L. Alsup
Kenneth L. Heinzen	Cyril D. Maxwell
Howard Janke	Julian W. Howell
Fleming C. Walker	Charles T. Silk
Harry W. Perdue	John F. Sutton

HOUSE OF REPRESENTATIVES

TUESDAY, APRIL 7, 1959

The House met at 12 o'clock noon.

Rev. Charles W. Holland, Jr., pastor, Fountain Memorial Baptist Church, Washington, D.C., offered the following prayer:

Solomon prayed, I Kings 3: 9: *Give therefore, Thy servant an understanding heart * * * that I may discern between good and bad.*

Eternal God, Holy Father, as this stately body convenes in a time when arduous decisions must be made, in an age when it is so important to make right decisions, give these servants wisdom.

We thank Thee, that as Solomon was privileged to pray for wisdom so every servant of Thine has the prerogative to ask for the same.

Humble our Christian laymen, and may energy spent in destructive criticism of this group be diverted into channels of prayer and constructive criticism.

God direct our Speaker and give him strength and wisdom as he leads us. We know that this can only come from Thee.

Bless us as we walk together in the name of Jesus Christ our Saviour, we pray. Amen.

The Journal of the proceedings of Thursday, March 26, 1959, was read and approved.

SENATE ENROLLED JOINT RESOLUTIONS SIGNED

The SPEAKER. The Chair desires to announce that, pursuant to the authority granted him on Wednesday, March 25, 1959, he did on March 26, 1959, sign the following enrolled joint resolutions of the Senate:

S.J. Res. 47. Joint resolution providing that certain communication activities at the IX Plenary Assembly of the International Radio Consultative Committee to be held in the United States in 1959 shall not be construed to be prohibited by the Communications Act of 1934 or any other law; and

S.J. Res. 73. Joint resolution extending an invitation to the International Olympic Committee to hold the 1964 Olympic games in the United States.

THE FARM PROGRAM

Mr. MARSHALL. Mr. Speaker, I ask unanimous consent to address the House for 1 minute and to revise and extend my remarks and include a table.

The SPEAKER. Is there objection to the request of the gentleman from Minnesota?

There was no objection.

Mr. MARSHALL. Mr. Speaker, many statements are being made about the cost of the farm program. Ever since the budget was published I have been getting inquiries about why the farm program costs are so high.

One reason for this is that when the budget was published it set out approximately $5.4 billion for the stabilization of farm prices and income. Another reason is that the agricultural budget has reached a point where there is legitimate concern about its size.

In order to understand the farm budget better, we have made a breakdown of 1959 fiscal year expenditures. One shows expenditures which benefit the general public or someone else more than the farmer. The other shows expenditures which benefit the farmer more than anyone else.

Our intent is to present in an unbiased way a picture of how the items in the agricultural budget should be charged. Officials of the Department of Agriculture have done this in a general way in a table issued January 27 of this year.

At the close of these remarks we are placing a table in the RECORD to show the breakdown as we have made it from the budget and from Department figures for the 1959 fiscal year. USDA officials have cooperated with us in developing this table, and it has been checked by them.

The business of providing food and fiber for our country is one of the most basic industries we have. For this reason, the agricultural budget goes way beyond the farmer himself. Let me illustrate:

For a number of years we have had the school lunch program. This is not intended to be a program for farmers. It is a program for the schoolchildren of the country. Certain funds, and in some cases certain foods, are made available to schools meeting the necessary standards for the serving of school lunches.

In the present fiscal year the budget provides $144 million for this purpose. More than 2 billion meals are being served to 11 million schoolchildren in some 56,000 schools throughout the country. State and local groups are matching the Federal contribution by nearly 3 to 1.

The wool price support program is just the opposite. The $21 million in payments on wool this year go directly to wool growers. In fact, it is intended as an incentive. The $713 million included in this year's budget to finance the soil bank acreage reserve is another direct outlay to farmers.

The current fiscal year's budget has an item of $150 million for food distribution to the aged and the needy. This is properly considered as a program benefiting the general public rather than the farmer specifically. There is another item of $240 million for the agricultural conservation program. This might be called a borderline case. For every dollar of Federal funds spent on this program the farmer on the average spends another dollar. The effect is to give double benefits to conservation industries and to the general public in national conservation gains. However, we are counting this program as one primarily benefiting the farmer. Conservation payments are made directly to the farmer, and are used as an incentive to make it possible for farmers to contribute as much to conservation as they receive.

There is a clear distinction between the $21 million carried in the current budget to finance meat inspection, and the $68 million to finance the sugar program. Meat inspection is clearly a service provided for the general public. The sugar program is one of direct benefit to the sugar producer and to the domestic sugar industry.

When you hear that the current budget has $5.4 billion charged up for stabilization of farm prices and incomes, remember that more than $1 billion of this is represented by the value of commodities sent to other countries under the program known as Public Law 480, and for which we receive foreign currencies. This is strictly a foreign relations and defense program. It involves the use of surpluses after they have been produced. In my opinion it is an excellent program which is serving the country well and could perhaps serve it even better. But this money is not properly chargeable to farmers. The Department recognizes this in its January 27 compilation.

Also charged to the farmer in the current budget are $129 million worth of materials for which farm products have been bartered under the Public Law 480 program and are being transferred to the supplemental defense stockpile. This also is recognized by the Department as not appropriately chargeable directly to the farmer. The international wheat agreement involving $65 million in the fiscal year 1959 budget also is a program bearing more directly on foreign relations than upon agriculture itself.

Included in the total for stabilizing farm prices and incomes is one item involving $38 million for the financing of military housing in Europe. If this sounds farfetched, it is because the use of some surplus farm products was involved in this financing.

What about the cost of farm price support itself?

The budget for this fiscal year shows $3,118 million for price support, supply and purchase programs. Our table allocates $989 million as appropriately chargeable to farmers directly out of this amount.

Most of the $3 billion charged to price support is backed up by crops turned over to Commodity Credit Corporation by farmers as collateral for the loans they have received. The $989 million which I consider to be appropriately chargeable to farmers out of the total represents an estimate of a little more than 1 year's loss on such commodities.

The farmer is not given a handout. In exchange for a loan, he turns over to the Government commodities meeting certain grade and quality requirements. It is appropriate to charge the farmer with the loss on these commodities for 1 year, and possibly a little longer. It is not appropriate to charge the farmer for everything.

One reason is that the farmer has no control over what happens to the value of his collateral after it gets into the hands of Commodity Credit Corporation. On the other hand, the policies of the Department of Agriculture have much to do with what happens to the value of the farmer's collateral.

Another reason is that more than one-third of total expenditures for price support involve spending of primary benefit to business. These represent a proper charge against price support programs, but it does not seem fair to charge such expenditures to farmers.

The largest of these business items is one of $683,173,000 representing storage, handling and transportation charges for a year. In other words, a little more than one-fifth—22 percent—of all the price support expenditures, went to the people who store, handle, and ship our grains, cotton, tobacco, and other commodities.

The second largest business expense is $203,215,000 for the cost of exporting crops. This is an appropriate charge in terms of the disposal of a commodity, but hardly proper as a charge against the farmer. There may be some that are surprised to know that our merchant marine obtains so large a subsidy from the farm program. In addition, the shipping interests of this country have a subsidy program all their own. It has averaged $175 million a year for each of the last 20 years. You may remember in our hearings last year the report on nonfarm subsidies which showed that ship subsidies had totaled $3.5 billion in a 20-year period.

The third largest of the business expense items for price support in the current fiscal year is $102,368,000 as net interest cost. Needless to say, this does not go to farmers. The other business items include nearly $42 million for the purchase of strategic materials; about $37 million for acquisition of additional storage facilities. Administrative expenses, including Federal Reserve bank charges, totaled $48,802,000. The figures are all given in some detail in the table that follows.

When the charges are more appropriately assigned to their proper place, Mr. Speaker, the farmer is allocated $1,831 million out of the $5,386 million charged to him in the budget for stabilization of farm prices and income. This represents 34 percent of the total now so charged.

If to this are added the cost of the agricultural conservation program and the conservation reserve—and there are those who would argue with force that conservation is not properly chargeable to agriculture alone—the total expense assigned directly to farmers out of the entire 1959 agricultural budget comes to $2,212 million. This represents 30 percent of the total budget of $7,341 million.

Estimated Department of Agriculture 1959 fiscal year budget expenditures

	Amount	Of the items listed at left these are appropriately chargeable to farmers
	Millions	*Millions*
Charged to farm program for stabilization of farm prices and incomes:		
Price support, supply and purchase programs: This includes expenditures primarily to business totaling $1,116 million, but these funds do not go to farmers [1]	$3,118	$989
Public Law 480, title I—exchange of farm commodities for foreign currencies	[2] 1,049	
Public Law 480—transfer of bartered materials to supplemental stockpile	[2] 129	
Soil bank—acreage reserve	713	713
International Wheat Agreement	[2] 65	
Wool program	21	21
Food distribution	[2] 150	
Sugar program	68	68
Marketing quotas and allotments	40	40
Other (military housing $38,300,000, waterfowl feed $35,000, and sale of stockpile cotton less $5,100,000 net income from crop insurance program)	[2] 33	
Charged to farm prices and incomes	5,386	
Properly chargeable		1,831

See footnotes at end of table.

Estimated Department of Agriculture 1959 fiscal year budget expenditures—Continued

	Amount	Of the items listed at left these are appropriately chargeable to farmers
	Millions	*Millions*
Programs mainly for benefit of the farmer:		
Agricultural conservation program (for every dollar of Federal funds spent on this program the farmer on the average spends another dollar, providing double benefits to conservation industries and to national conservation gains)	240	240
Conservation reserve program—payments made in exchange for removal of a specified number of acres from production for a stated number of years, and for carrying out conservation practices on the land while idled	141	141
Other programs, all with multiple benefits and not directly chargeable to farmers: [2]		
Disaster relief, title II, Public Law 480 program	[2] 106	
School lunch program (over 2,000,000,000 meals to 11,000,000 children in 56,000 schools during fiscal 1959; Federal contribution matched nearly 3 to 1 by State and local groups)	[2] 144	
School milk program	[2] 73	
Investment in REA and FHA loans subject to repayment	[2] 590	
Long range programs for the improvement of agricultural resources, including research, meat inspection, disease and pest control, education, market development and services, protection of soil and water resources, and forest and public land management	[2] 651	
Total agricultural budget	7,341	
Properly chargeable to farmers		2,212

[1] The business expense items include $41,810,000 for purchase of strategic materials; $203,215,000 export cost; $36,841,000 purchase of storage facilities; $102,368,000 net interest expense; $48,802,000 administrative expenses, county office expense, Federal Reserve bank charges, etc.; $683,173,000 storage, handling, and transportation charges for a year.

[2] Funds are considered by the Department of Agriculture to have multiple benefits and should not be directly chargeable to farmers. These are shown in a USDA tabulation dated Jan. 27, 1959.

CATAWBA INDIAN NATION

Mr. HEMPHILL. Mr. Speaker, I ask unanimous consent to address the House for 1 minute and to revise and extend my remarks.

The SPEAKER. Is there objection to the request of the gentleman from South Carolina?

There was no objection.

Mr. HEMPHILL. Mr. Speaker, I have introduced today legislation intended to clear up a situation with regard to the Catawba Indian Nation, which exists in South Carolina. These proud people who have always exhibited the best citizenship, have depreciated numerically from 6,000 people who owned 144,000 acres of land to 614, at the latest count, who own 4,000 acres of land. Unfortunately, the land is tied up today so that these people cannot borrow for their homes nor do they have the other privileges and responsibilities to which their citizenship entitles them. It is my purpose to put these people and their land on an even keel, an even station, with other citizens of the United States.

For many years these people have been excluded from the privileges of development as they hold no title, except mutual title, which the banks and other lending institutions cannot accept as collateral.

Chief Blue, who led his people for many years, told me the first time I asked him about this problem, that the people should be allowed to own the land, and borrow on it. He told me again the last time, when I went by to see him during the Easter recess. Chief Blue is retired now, but he can reflect on many years of honorable leadership. He wants his people to have the same privileges as other citizens.

The Catawbas have voted for this legislation. They just voted a resolution to have me introduce a bill. After the bill was prepared, I went to the district, met with those who showed enough interest to come, and they voted more than 2 to 1 for the bill introduced today.

Finally, Mr. Speaker, I want to thank and commend the Bureau of Indian Affairs for its help and cooperation. We have all worked hard on the problems presented and I hope and believe this legislation will be fruitful.

CRUDE OIL IMPORTS

Mr. VANIK. Mr. Speaker, I ask unanimous consent to address the House for 1 minute.

The SPEAKER. Is there objection to the request of the gentleman from Ohio?

There was no objection.

Mr. VANIK. Mr. Speaker, on March 10 President Eisenhower ordered mandatory controls on imports of crude oil and petroleum products. He said mandatory controls were necessary because voluntary controls did not work. The record shows that at the very time the President made his price-fixing order voluntary controls were working. February imports were almost 60,000 barrels a day below the established voluntary quota levels.

There are many ridiculous results of the President's decree ordering mandatory oil import quotas. It has recently been disclosed that oil import quotas have been assigned to certain refiners who were not previously engaged in oil import. They promptly sold or transferred their import quotas to companies engaged in the import business at fabulous profits created by the Eisenhower decree at the expense of the ultimate consumers.

Free enterprise is indeed a wonderful thing for these refiners when the President creates an asset they can sell at a handsome profit with no risks involved.

SUBCOMMITTEE NO. 2, COMMITTEE ON BANKING AND CURRENCY

Mr. McCORMACK. Mr. Speaker, I ask unanimous consent that Subcommittee No. 2 of the Committee on Banking and Currency may sit during general debate.

The SPEAKER. Is there objection?

There was no objection.

FOOD FOR PEACE

Mr. McCORMACK. Mr. Speaker, I ask unanimous consent that the gentleman from California [Mr. ROOSEVELT] may extend his remarks at this point in the RECORD.

The SPEAKER. Is there objection to the request of the gentleman from Massachusetts?

There was no objection.

Mr. ROOSEVELT. Mr. Speaker, I wish to associate myself with the very fine remarks made on Thursday, March 26, by my colleague, Mr. WOLF, when he addressed this body with cogency and fluency about "food for peace through the United Nations."

I indeed join with him in his concern not only in using our surplus foods to aid millions of starving peoples in other areas of the world, but also in helping our fellow citizens here at home who lack the means to purchase basic food commodities.

The idea of using our surplus foods, for which the taxpayer has already invested, instead of further investing in silos and storage facilities, makes good dollar sense. But even more significant, our surplus foods can and should become a major ingredient in the world struggle with which we are faced.

We would be touching base with lesser developed but awakened regions of the world, and for once language would be no barrier.

The objectives behind the remarks of the gentleman from Iowa are in line with the "food for peace resolution" introduced earlier in this session. I and other Members of this body joined with Mr. McGOVERN in introducing a House concurrent resolution expressing "that it is the sense of the Congress that an agricultural abundance is one of America's greatest assets for raising living standards and promoting peace and stability in the free world; and that Congress favors action to resolve the paradox of American agricultural surpluses and world food needs by more fully utilizing the resources of the American farmer as an integral part of the U.S. farm assistance program."

It is my sincere hope that Congress will act affirmatively to achieve the objectives discussed by the gentleman from Iowa and those set forth in the pending resolution.

A QUICK TOUR OF EUROPE: THE AIR FORCE LEADER EXCHANGE PROGRAM AND NATO'S STRENGTH

The SPEAKER. Under previous order of the House, the gentleman from Oregon [Mr. PORTER] is recognized for 15 minutes.

Mr. PORTER. Mr. Speaker, should the Air Force attempt to establish a leader exchange program with NATO reserve officers?

How strong are we in Europe?

What policies should we press for in negotiations as to the status of Berlin?

I took these three questions to Europe with me when I left Washington March 14, 1959. An answer to the first question was the purpose of the 12,500 mile, 2-week trip which was under the sponsorship of the Air Force and the Reserve Officers Association.

The other two questions arose naturally. Later this week, along with colleagues here, Members of Parliament in the United Kingdom and possibly French Deputies, I expect to make public our conclusions with respect to Berlin. Today I shall deal with the first two questions.

PROMOTING BETTER UNDERSTANDING

Many leader exchange programs exist, but none has been established with respect to Reserve officers. In 1948, as part of the Smith-Mundt Act, Congress authorized the leader exchange program "to promote a better understanding of the United States in other countries and to increase mutual understanding by the people of the United States and the people of other countries."

This also has been called the people-to-people program and has the strong support of the President.

In the words of able Maj. Gen. R. A. Grussendorf, Assistant Chief of Staff for Reserve Forces, Headquarters, USAF, our 2-week trip to seven NATO nations was a feasibility test. We met with reserve officers throughout Europe and we concluded, emphatically and unanimously, that the program should be launched as soon as possible.

In Brussels, for example, we found out that reserve officer exchange among European countries has been done successfully for years.

Plans are now being made to invite about 20 NATO reserve officers, not all of them in the air arm, to visit selected Air Reserve training locations in the United States, including unit and individual training, Headquarters Continental Air Command, a numbered air force, the Air Force Academy, Strategic Air Command Headquarters, and perhaps other such installations during a 2-week visit.

VERY LOW COSTS

The costs will be minimal and will require no appropriations. Transportation from Europe will be on a space-available basis. Transportation here will be by Air Reserve units carrying out regular training. Quarters will be paid for the individuals and will be in bachelor officer facilities. The Reserve Officers Association, as an organization and through various members, will take care of most of the social affairs.

My distinguished colleague from Louisiana, Mr. T. ASHTON THOMPSON, and I were the only Members of Congress on the trip. Both of us are Air Force Reserve officers.

The other members, in addition to General Grussendorf, were an outstanding group of officers, mostly but not all in the Reserve. They were as follows:

Brig. Gen. Daniel DeBrier, USAFR, lawyer.

Col. John W. Richardson, USAFR, vice president, Reserve Officers Association.

Col. Don C. Ross, USAFR, industrialist.

Col. Eugene E. Myers, Office of Legislative Liaison, Headquarters, USAF.

Col. Norman B. Beasley, USAFR, executive director, for air, Reserve Officers Association.

Lt. Col. Arthur W. Herron, USAFR, industrialist.

Lt. Col. Paul J. Scally, USAFR, Radio Corp. of America.

Maj. M. P. Parsons, Office of the Vice Chief of Staff, USAF.

Maj. J. J. Leonard, Assistant Executive to the Assistant Chief of Staff for Reserve Forces, Headquarters, USAF.

Our trip took us to the Azores, Paris, Wiesbaden, Brussels, Copenhagen, Amsterdam, London, Rome, Naples, Gibraltar, Azores, and Newfoundland. We traveled in the air for more than two and a half days—63 hours and 30 minutes—in all. We never missed an engagement on our schedule and our air travel was without a hitch, something not too common, especially in Europe at this time of the year.

I want to take this opportunity to pay tribute to our crew's highly professional performance, especially to the pilot, Capt. Wilfred Barrett, but also to the team he so ably led. The others included Lt. Col. Arthur W. Herron, USAFR, industrialist from Los Angeles, also a member of our delegation, and himself a competent and experienced pilot; Maj. Noble D. Wright, pilot; Capt. E. R. Savage, navigator; T. Sgt. H. M. Edlund, crew chief; T. Sgt. G. E. Pendaris, crew chief; T. Sgt. H. A. Zambryski, radio operator; A1c. R. J. Mullikin, flight steward; A2c. D. F. Dahlund, flight steward.

EXTEND THE PROGRAM

There are many weapons, Mr. Speaker, in the cold war. Leader exchange programs are an essential part of our cold war arsenal. Of course allies, whether in NATO or elsewhere in the world, need to know us personally. If, however, the proposed visit from NATO reserve officers is as successful as I believe it will be, then I suggest that the Defense Department enlarge this program to include the Army and the Navy.

I have another suggestion. We have traded students, farmers, journalists and others with nations who are not allies. Subject to the usual security precautions of course, let us exchange Reserve officers, the very people who must fight world war III if and when it erupts, with all nations, even our potential enemies.

Who wants war? Not our citizens and leaders, not the rank and file of any country. How can we prevent war? By gaining trust and understanding among nations, that is, among their leaders and their peoples. The exchange program is small and its effects slow, but it is a soundly conceived method of fighting the cold war by demonstrating the good faith and peaceful purposes of the United States and its citizens.

And now I turn to the other question, the answer to which I sought on this journey.

How strong are we in Europe?

Stronger than I believed before I made this trip. I saw with my own eyes how well dug in we are in Europe; how so many aspects of our affairs in Europe are standard operating procedures; how familiar our personnel are with the geography, the economics, the politics and all sides of what used to be an unknown continent to almost all Americans.

PLENTY OF WILL TO RESIST

In our NATO briefing just outside Paris the deterrent to war was divided on a placard into three parts: Retaliatory forces (also called the sword) that is, SAC and our missiles; the shield forces, our troops arrayed along the borders of free Europe; and, finally, will. The briefing officer discussed at length the sword and the shield, but did no more than mention the last factor.

He was right. There is a strong will to resist Soviet aggression in all parts of NATO. It needs no protesting or embroidery when you are on the spot.

Of course we shall continue to have problems in Europe and with NATO in particular. Of course we have no reason to be reckless in our dealings with the Soviet Union. But I returned from Europe much encouraged as to our unity of purpose with all allies and our capacity to deter the Soviet Union from overt aggressive action in Europe.

We were privileged to be briefed on the military situation on four different occasions: At NATO headquarters in France, at U.S. Air Force headquarters in Europe at Wiesbaden, by the Danish Government in Copenhagen—this included more than just military matters—and by the NATO headquarters in southern Europe at Naples.

I wish, Mr. Speaker, that my colleagues and constituents could see what the United States and its allies in NATO have built as an organization to preserve freedom in Europe. It is more than a network of airfields, supply lines, communications, training centers, naval bases, and missile launching sites.

It is a family of nations working together through its dedicated sons and daughters for mutual survival and progress. I shudder to think what attrition and tragedy the last 10 years would have brought to the free world if NATO had not been established and painstakingly built to its present high degree of excellence.

Yes, Mr. Speaker, we are strong in Europe. We are not strangers there now. We prayerfully hope, however, that we will never have to use this incredible strength in battle but that through negotiations and measures like the leader exchange program we can amicably coexist in a divided world until that happy, but remote, day when world peace under world law can be attained.

LEAVE OF ABSENCE

By unanimous consent, leave of absence was granted to:

Mr. MULTER (at the request of Mr. DOYLE), for an indefinite period, on account of illness.

Mr. MOORE (at the request of Mr. ARENDS), for April 7 to 16, on account of

official business, attending Inter-Governmental Committee on European Migration meeting in Geneva.

Mrs. ST. GEORGE (at the request of Mr. ARENDS), for period of April 7 through 17, 1959, on account of official business.

Mr. WALTER (at the request of Mr. DOYLE), for April 7 to 16, on account of official business, attending Inter-Governmental Committee on European Migration meeting in Geneva.

Mr. FLOOD (at the request of Mr. QUIGLEY), indefinitely, on account of official business.

SPECIAL ORDERS GRANTED

By unanimous consent, permission to address the House, following the legislative program and any special orders heretofore entered, was granted to:

Mr. PORTER, for 15 minutes, today, and to revise and extend his remarks and include extraneous matter.

Mr. GEORGE P. MILLER (at the request of Mr. MCCORMACK), for 30 minutes, on Thursday, April 9.

Mr. MADDEN, for 30 minutes, on Monday next.

Mr. SCHENCK, for 30 minutes, tomorrow.

EXTENSION OF REMARKS

By unanimous consent, permission to extend remarks in the CONGRESSIONAL RECORD, or to revise and extend remarks, was granted to:

Mr. ASPINALL and to include extraneous matter.

Mr. ALGER.

Mr. THOMAS and to include a list of names.

Mr. PORTER in two instances and to include extraneous matter.

Mr. MASON on the subject of foreign aid and to include a bulletin on the same subject.

Mr. BALDWIN and to include extraneous matter.

Mr. O'KONSKI in two instances.

Mr. O'HARA of Illinois (at the request of Mr. YATES) and to include extraneous matter.

Mr. ANFUSO (at the request of Mr. MCCORMACK) and include extraneous matter.

Mr. CRAMER and include extraneous matter.

Mr. BERRY.

ADJOURNMENT

Mr. MCCORMACK. Mr. Speaker, I move that the House do now adjourn.

The motion was agreed to; accordingly (at 12 o'clock and 12 minutes p.m.) the House adjourned until tomorrow, Wednesday, April 8, 1959, at 12 o'clock noon.

EXECUTIVE COMMUNICATIONS, ETC.

Under clause 2 of rule XXIV, executive communications were taken from the Speaker's table and referred as follows:

771. A letter from the national executive director, Girl Scouts of the United States of America, transmitting the Ninth Annual Report of the Girl Scouts of the United States of America, pursuant to Public Law 272, 83d Congress (H. Doc. No. 105); to the Committee on the District of Columbia and ordered to be printed with illustrations.

772. A letter from the Chairman, U.S. Advisory Commission on Information, transmitting the 14th Report of the U.S. Advisory Commission on Information, dated March 1959, pursuant to Public Law 402, 80th Congress (H. Doc. No. 106); to the Committee on Foreign Affairs and ordered to be printed.

773. A letter from the Comptroller General of the United States, transmitting the report on audit of the Federal National Mortgage Association, Housing and Home Finance Agency, for the fiscal year ended June 30, 1958 (H. Doc. No. 107); to the Committee on Government Operations and ordered to be printed.

774. A letter from the Comptroller General of the United States transmitting a report on the audit of the Office of Defense Lending, Treasury Department, for the fiscal year ended June 30, 1958 (H. Doc. No. 108); to the Committee on Government Operations and ordered to be printed.

775. A letter from the Secretary of the Army, transmitting a letter from the Chief of Engineers, Department of the Army, dated February 18, 1959, submitting a report, together with accompanying papers and an illustration, on a review of reports on Kahului Harbor, Island of Maui, T.H., requested by a resolution of the Committee on Public Works, House of Representatives, adopted April 21, 1953 (H. Doc. No. 109); to the Committee on Public Works, and ordered to be printed with one illustration.

776. A letter from the Secretary of the Army, transmitting a letter from the Chief of Engineers, Department of the Army, dated February 5, 1959, submitting a report, together with accompanying papers and illustrations, on a review of reports on Connoquenessing Creek at Butler, Pa., requested by a resolution of the Committee on Public Works, House of Representatives, adopted April 12, 1956 (H. Doc. No. 110); to the Committee on Public Works, and ordered to be printed with three illustrations.

777. A letter from the Director, Bureau of the Budget, Executive Office of the President, transmitting correspondence justifying estimated increased appropriations to the Veterans' Administration for "Inpatient care," pursuant to previous reports required by section 3679 of the Revised Statutes, as amended (31 U.S.C. 665); to the Committee on Appropriations.

778. A letter from the Secretary of the Army, transmitting semiannual report of Department of the Army contracts for military construction awarded without formal advertisement for the period July 1 through December 31, 1958, pursuant to section 506, Public Law 85–685, 85th Congress, 2d session; to the Committee on Armed Services.

779. A letter from the Director of Research and Development, Department of the Army, transmitting listing of research and development contracts July 1, 1958, through December 31, 1958, pursuant to Public Law 557, 82d Congress; to the Committee on Armed Services.

780. A letter from the Assistant Secretary of Defense, transmitting a request from the Department of the Army for approval for the construction of a one-unit-plus National Guard armory with motor vehicle storage building at Ishpeming, Mich., and a one-unit National Guard armory at Mobridge, S. Dak., to replace two existing armories which recently were destroyed by fire, pursuant to the authority contained in section 2233a(b) of title 10, United States Code, as amended; to the Committee on Armed Services.

781. A letter from the Deputy Secretary of Defense, transmitting a draft of proposed legislation entitled "A bill to amend title 10, United States Code, to provide for the readiness of industrial capacity for defense production or mobilization reserve purposes"; to the Committee on Armed Services.

782. A letter from the Acting Secretary of Defense, transmitting a draft of proposed legislation entitled "A bill to amend title 10, United States Code, to provide that the Secretary of the Navy shall prescribe the compensation of the academic dean of the Naval Postgraduate School"; to the Committee on Armed Services.

783. A letter from the Acting Secretary of Defense, transmitting a draft of proposed legislation entitled "A bill to amend section 265 of the Armed Forces Reserve Act of 1952 to define the term 'a member of a Reserve component' so as to include a member of the Army or Air Force without specification of component;" to the Committee on Armed Services.

784. A letter from the Secretary of Defense, transmitting the 11th Annual Report on the National Industrial Reserve, pursuant to section 12 of the National Industrial Reserve Act of 1948, Public Law 883, 80th Congress; to the Committee on Armed Services.

785. A letter from the Deputy Director, Office of Civil and Defense Mobilization, Executive Office of the President, transmitting the "Report on Borrowing Authority" for the quarter ending December 31, 1958, pursuant to section 304(b) of the Defense Production Act as amended; to the Committee on Banking and Currency.

786. A letter from the President, Export-Import Bank of Washington, transmitting the report of the Export-Import Bank of Washington, covering the period July to December 1958, pursuant to section 9 of the Export-Import Act of 1945, as amended; to the Committee on Banking and Currency.

787. A letter from the President, Board of Commissioners of the District of Columbia, transmitting a draft of proposed legislation entitled, "A bill to provide for examination, licensing, registration, and for regulation of professional and practical nurses, and for nursing education in the District of Columbia, and for other purposes"; to the Committee on the District of Columbia.

788. A letter from the President, Board of Commissioners of the District of Columbia, transmitting a draft of proposed legislation entitled, "A bill to amend the District of Columbia Teachers' Salary Act of 1955, as amended"; to the Committee on the District of Columbia.

789. A letter from the president, D.C. Transit System, Inc., transmitting a revised set of financial statements covering operations as of December 31, 1958; to the Committee on the District of Columbia.

790. A letter from the president, the Foundation of the Federal Bar Association, Washington, D.C., transmitting the report of audit for the fiscal year ending September 30, 1958, pursuant to Public Law 662, 83d Congress; to the Committee on the District of Columbia.

791. A letter from the Acting Secretary of State, transmitting a draft of proposed legislation entitled "A bill to amend the Mutual Defense Assistance Control Act of 1951"; to the Committee on Foreign Affairs.

792. A letter from the Director, U.S. Information Agency, transmitting the 11th semiannual report for the period from July 1 to December 31, 1958, pursuant to section 1008, Public Law 402, 80th Congress; to the Committee on Foreign Affairs.

793. A letter from the Acting Secretary of Commerce, transmitting a report of foreign excess property disposed of during calendar year 1958 by the U.S. Department of Commerce, pursuant to section 404(d), Public Law 152, 81st Congress; to the Committee on Government Operations.

794. A letter from the Comptroller General of the United States, transmitting a report on audits of Government Services, Inc., and of Government Services, Inc.'s employee retirement and benefit trust fund and supplemental pension plan for the year ended

December 31, 1958; to the Committee on Government Operations.

795. A letter from the Comptroller General of the United States, transmitting a report of the examination of prices negotiated under certain Department of the Air Force contracts with Friden, Inc., San Leandro, Calif.; to the Committee on Government Operations.

796. A letter from the Comptroller General of the United States, transmitting a report on examination of economic and technical assistance program for Pakistan international cooperation, Department of State, for the fiscal years 1955–57; to the Committte on Government Operations.

797. A letter from the Director, Office of Civil Defense Mobilization, Executive Office of the President, transmitting a copy of the report of the Special Advisory Committee on Telecommunication, December 29, 1958; to the Committee on Interstate and Foreign Commerce.

798. A letter from the Administrator, Federal Aviation Agency, transmitting a copy of the 1959 revision of the "National Airport Plan"; to the Committee on Interstate and Foreign Commerce.

799. A letter from the Secretary of the Interior, transmitting a copy of an application for a loan to the Santa Ynez River Water Conservation District of California, pursuant to the provisions of the Small Reclamation Projects Act of 1956 (Public Law 984, 84th Cong., as amended by Public Law 85–47) in accordance with section 4(c) of Public Law 85–47; to the Committee on Interior and Insular Affairs.

800. A letter from the Secretary of the Interior, transmitting a copy of an application for a loan for Centerville-Deuel Creek Irrigation Co., near Centerville, Utah, pursuant to provisions of the Small Reclamation Projects Act of 1956 (Public Law 984, 84th Cong., as amended by Public Law 85–47, sec. 4(c)); to the Committee on Interior and Insular Affairs.

801. A letter from the Under Secretary of the Interior, transmitting one copy of various laws enacted by the Legislature of the Virgin Islands in its 1957 regular and special sessions, pursuant to section 9(g) of the Revised Organic Act of the Virgin Islands of the United States approved July 22, 1954; to the Committee on Interior and Insular Affairs.

802. A letter from the Assistant Secretary of the Interior, transmitting a draft of proposed legislation entitled, "A bill to consolidate, revise, and reenact the public land townsite laws"; to the Committee on Interior and Insular Affairs.

803. A letter from the Assistant Secretary of the Interior, transmitting an application for a loan to the Weber-Box Elder Conservation District of Ogden, Utah, pursuant to section 10 of the Small Reclamation Projects Act of 1956, section 4(c); to the Committee on Interior and Insular Affairs.

804. A letter from the Secretary of the Army, transmitting a draft of proposed legislation entitled "A bill for the relief of Vincente Solvia Empleo"; to the Committee on the Judiciary.

805. A letter from the Secretary of the Army, transmitting a draft of proposed legislation entitled "A bill for the relief of Josef Jan Loukotka"; to the Committee on the Judiciary.

806. A letter from the Director, Administrative Office U.S. Courts, transmitting a draft of proposed legislation entitled "A bill to amend subdivision d of section 60 of the Bankruptcy Act (11 U.S.C. 96d) so as to give the court authority on its own motion to reexamine attorney fees paid or to be paid in a bankruptcy proceeding"; to the Committee on the Judiciary.

807. A letter from the Director, Administrative Office, U.S. Courts, transmitting the Annual Report of the Director of the Administrative Office of the U.S. Courts for the fiscal year 1958, and annual and special meetings of the Judicial Conference of the United States held in 1958, pursuant to section 604 (a) (4) of title 28 of the United States Code; to the Committee on the Judiciary.

808. A letter from the Acting Secretary of the Treasury, transmitting a draft of proposed legislation entitled "A bill to provide for payment by the Federal Reserve banks of the cost of constructing a depository for the storage of Federal Reserve notes"; to the Committee on Public Works.

809. A letter from the Chairman of the Board, Tennessee Valley Authority, transmitting additional comments by the Bureau of the Budget and another Federal agency to accompany executive communication No. 714, dated March 13, 1959; to the Committee on Public Works.

810. A letter from the Administrator, Veterans' Administration, transmitting a draft of proposed legislation entitled "A bill to extend the existing authority to provide hospital and medical care for veterans who are U.S. citizens temporarily residing abroad to include those with peacetime service-incurred disabilities"; to the Committee on Veterans' Affairs.

811. A letter from the Acting Secretary of the Treasury, transmitting a draft of proposed legislation entitled "A bill to amend the Internal Revenue Code by increasing the taxes on motor and aviation fuel, and for other purposes"; to the Committee on Ways and Means.

812. A letter from the Acting Secretary of Defense, transmitting a draft of proposed legislation entitled, "A bill to extend the Renegotiation Act of 1951 until September 30, 1961, and for other purposes"; to the Committee on Ways and Means.

813. A letter from the Deputy Secretary of Defense, transmitting a draft of proposed legislation entitled "A bill to extend for a period of 2 years the privilege of free importation of gifts from members of the Armed Forces of the United States on duty abroad"; to the Committee on Ways and Means.

814. A letter from the Secretary of Labor, transmitting two drafts of proposed legislation entitled "A bill to extend the Federal-State unemployment compensation program to Puerto Rico, and for other purposes"; and "A bill to establish a new account in the unemployment trust fund to which an amount equal to all Federal unemployment taxes collected shall be appropriated, and out of which all employment security administrative expenses shall be paid, to increase the amount of the reserve in the Federal unemployment account for advances to the States, to increase the amount of wages subject to taxation under the Federal Unemployment Tax Act, and for other purposes"; to the Committee on Ways and Means.

815. A letter from the Secretary of Labor, transmitting a draft of proposed legislation entitled "A bill to extend the unemployment compensation program"; to the Committee on Ways and Means.

816. A letter from the Acting Secretary of the Treasury, transmitting a draft of a proposed bill entitled "A bill to exempt the U.S. Coast Guard from the tax imposed upon the sale or transfer of firearms and ammunition"; to the Committee on Ways and Means.

817. A letter from the Commissioner, Immigration and Naturalization Service, U.S. Department of Justice, transmitting copies of orders entered under the authority contained in section 13(b) of the act as well as a list of the persons involved, pursuant to the act of September 11, 1957; to the Committee on the Judiciary.

818. A letter from the Commissioner, Immigration and Naturalization Service, U.S. Department of Justice, transmitting copies of orders entered in cases of certain aliens who have been found admissible into the United States, pursuant to the Immigration and Nationality Act; to the Committee on the Judiciary.

819. A letter from the Commissioner, Immigration and Naturalization Service, U.S. Department of Justice, transmitting a copy of the order suspending deportation for the case of Samuel Hochstaedt and his wife Amalie Hochstaedt, pursuant to Public Law 863, 80th Congress; to the Committee on the Judiciary.

820. A letter from the Commissioner, Immigration and Naturalization Service, U.S. Department of Justice, relative to the case of Yee Yong Sang, A–11078987, and requesting that it be withdrawn from those now before Congress and returned to the jurisdiction of this Service, pursuant to the Immigration and Nationality Act of 1952; to the Committee on the Judiciary.

821. A letter from the Commissioner, Immigration and Naturalization Service, U.S. Department of Justice, transmitting a copy of an order suspending deportation for the case of Gee Yem, also known as Ly Man, A–8944580, pursuant to section 244(a) (1) of the Immigration and Nationality Act of 1952 (8 U.S.C. 1254(a)(1)); to the Committee on the Judiciary.

822. A letter from the Commissioner, Immigration and Naturalization Service, U.S. Department of Justice, transmitting copies of orders granting the applications for permanent residence filed by the subjects, pursuant to section 6 of the Refugee Relief Act of 1953; to the Committee on the Judiciary.

823. A letter from the Commissioner, Immigration and Naturalization Service, U.S. Department of Justice, transmitting copies of orders suspending deportation as well as a list of the persons involved, pursuant to section 244(a)(5) of the Immigration and Nationality Act of 1952 (8 U.S.C. 1254(a) (5)); to the Committee on the Judiciary.

824. A letter from the Commissioner, Immigration and Naturalization Service, U.S. Department of Justice, transmitting a copy of an order suspending deportation for the case of Arthur Tuggi Brunner, A–7297541, pursuant to section 244(a)(2) of the Immigration and Nationality Act of 1952 (8 U.S.C. 1254(a)(2)); to the Committee on the Judiciary.

825. A letter from the Commissioner, Immigration and Naturalization Service, U.S. Department of Justice, transmitting 344 reports concerning individuals admitted to the United States notwithstanding affliction with tuberculosis, pursuant to section 6 of the act of September 11, 1957; to the Committee on the Judiciary.

826. A letter from the Administrator, General Services Administration, transmitting notice of a proposed disposition of quinine now held in the national stockpile, pursuant to the provisions of section 3(e) of the Strategic and Critical Materials Stock Piling Act (53 Stat. 811, as amended, 50 U.S.C. 98b(e)); to the Committee on Armed Services.

827. A letter from the Assistant Secretary of Defense (Supply and Logistics), transmitting reports on Army, Navy, and Air Force prime contract awards to small and other business firms showing military procurement actions completed during the month of January 1959, and in fiscal year 1959 through January, pursuant to section 10(d) of the Small Business Act as amended by Public Law 85–536; to the Committee on Banking and Currency.

REPORTS OF COMMITTEES ON PUBLIC BILLS AND RESOLUTIONS

Under clause 2 of rule XIII, pursuant to the order of the House of March 26,

1959, the following bill was reported on April 3, 1959:

Mr. WALTER: Committee on Un-American Activities. Report on the Southern California District of the Communist Party (Rept. No. 259). Referred to the Committee of the Whole House on the State of the Union.

PUBLIC BILLS AND RESOLUTIONS

Under clause 4 of rule XXII, public bills and resolutions were introduced and severally referred as follows:

By Mr. BURDICK:

H.R. 6122. A bill to amend the Federal Credit Union Act; to the Committee on Banking and Currency.

By Mr. DOWDY:

H.R. 6123. A bill to amend the law relating to indecent publications and gambling in the District of Columbia; to the Committee on the District of Columbia.

By Mr. FOGARTY:

H.R. 6124. A bill to amend the Fair Labor Standards Act of 1938 so as to increase the minimum hourly wage from $1 to $1.25; to the Committee on Education and Labor.

H.R. 6125. A bill to amend the Civil Service Retirement Act to increase to 2½ percent the multiplication factor for determining annuities for certain Federal employees engaged in hazardous duties; to the Committee on Post Office and Civil Service.

By Mr. FOLEY:

H.R. 6126. A bill to amend the National Cultural Center Act to provide that the building to be constructed for the performance of symphonies and operas shall be named the Woodrow Wilson Memorial Hall, to provide for a library of the performing arts, and for other purposes; to the Committee on Public Works.

By Mr. HARRIS:

H.R. 6127. A bill to amend the Communications Act of 1934, as amended, by eliminating the requirement of an oath or affirmation on certain documents filed with the Federal Communications Commission; to the Committee on Interstate and Foreign Commerce.

By Mr. HEMPHILL:

H.R. 6128. A bill to provide for the division of the tribal assets of the Catawba Indian Tribe of South Carolina among the members of the tribe, and for other purposes; to the Committee on Interior and Insular Affairs.

By Mr. HOSMER:

H.R. 6129. A bill to prohibit unjust discrimination in employment because of age; to the Committee on Education and Labor.

By Mr. METCALF:

H.R. 6130. A bill to stabilize the domestic market prices of lead and zinc; to the Committee on Ways and Means.

By Mr. MOORE:

H.R. 6131. A bill to amend the Internal Revenue Code of 1954 to provide a deduction from gross income for amounts paid by a taxpayer for the special maintenance and schooling of exceptional children, and to allow the taxpayer an additional personal exemption for each such child; to the Committee on Ways and Means.

By Mr. MILLS:

H.R. 6132. A bill relating to the rate of tax on the issuance of shares or certificates of stock by regulated investment companies; to the Committee on Ways and Means.

By Mr. SIMPSON of Pennsylvania:

H.R. 6133. A bill relating to the rate of tax on the issuance of shares or certificates of stock by regulated investment companies; to the Committee on Ways and Means.

By Mr. MURRAY:

H.R. 6134. A bill to amend the Federal Employees Pay Act of 1945 to eliminate the authority to charge to certain current appropriations or allotments the gross amount of the salary earnings of Federal employees for certain pay periods occurring in part in previous fiscal years; to the Committee on Post Office and Civil Service.

H.R. 6135. A bill to provide for uniformity of application of certain postal requirements with respect to disclosure of the average numbers of copies of publications sold or distributed to paid subscribers, and for other purposes; to the Committee on Post Office and Civil Service.

By Mr. O'KONSKI:

H.R. 6136. A bill to authorize the sale of certain tribal land of the Lac du Flambeau Band of Lake Superior Chippewa Indians, Wisconsin; to the Committee on Interior and Insular Affairs.

H.R. 6137. A bill to amend the Internal Revenue Code of 1954 to withhold the tax credit provided under section 3302 from maritime employers in States that do not meet the conditions required by section 3305(f); to the Committee on Ways and Means.

By Mr. PORTER:

H.R. 6138. A bill to amend section 1(15) of the Interstate Commerce Act so as to aid in alleviating shortages of railroad freight cars during periods of emergency or threatened emergency, and for other purposes; to the Committee on Interstate and Foreign Commerce.

By Mr. TEAGUE of Texas (by request):

H.R. 6139. A bill to amend section 11 of Public Law 85–857 to provide for the payment of emergency officers' retirement pay to certain persons who did not qualify therefor because their applications were not submitted before May 25, 1929; to the Committee on Veterans' Affairs.

By Mr. UDALL:

H.R. 6140. A bill to provide that withdrawals or reservations of public lands shall not affect certain water rights; to the Committee on Interior and Insular Affairs.

By Mr. GIAIMO:

H.J.Res. 330. Joint resolution proposing an amendment to the Constitution of the United States relative to equal rights for men and women; to the Committee on the Judiciary.

By Mr. HARRIS:

H.J.Res. 331. Joint resolution to establish a commission to study and report on the U.S. telecommunication resource with special attention to the radio spectrum; to the Committee on Interstate and Foreign Commerce.

By Mr. TEAGUE of Texas:

H.J. Res. 332. Joint resolution proposing an amendment to the Constitution of the United States with respect to the appointment of postmasters; to the Committee on the Judiciary.

By Mr. BALDWIN:

H. Res. 229. Resolution requiring each Member of the House to disclose certain information with respect to his employees and rental of office space, and regulating the place of performance of duties by certain House committee employees; to the Committee on House Administration.

By Mr. MINSHALL:

H. Res. 230. Resolution requiring each Member of the House to disclose certain information with respect to his employees; to the Committee on House Administration.

MEMORIALS

Under clause 3 of rule XXII, memorials were presented and referred as follows:

By the SPEAKER: Memorial of the Legislature of the State of Alaska, memorializing the President and the Congress of the United States to support legislation striking a certain restrictive phrase from the first sentence of section 6(h) of Public Law 85–508, as set forth in Senate Joint Memorial No. 8; to the Committee on Interior and Insular Affairs.

Also, memorial of the Legislature of the State of Arizona, memorializing the President and the Congress of the United States to prevent enactment of a proposed bill establishing a national wilderness preservation system and designating certain areas to be maintained as a wilderness, passed by the 24th Arizona State Legislature; to the Committee on Interior and Insular Affairs.

Also, memorial of the Legislature of the State of Arizona, memorializing the President and the Congress of the United States with reference to requesting the establishment of a national cemetery in Arizona; to the Committee on Interior and Insular Affairs.

Also, memorial of the Legislature of the State of California, memorializing the President and the Congress of the United States relative to enactment of a national food allotment stamp plan; to the Committee on Agriculture.

Also, memorial of the Legislature of the State of California, memorializing the President and the Congress of the United States relative to the conversion of sea water; to the Committee on Interior and Insular Affairs.

Also, memorial of the Legislature of the State of Kansas, memorializing the President and the Congress of the United States to safeguard and preserve established State and individual rights to the use of water within the separate States; to the Committee on Interior and Insular Affairs.

Also, memorial of the Legislature of the State of Massachusetts, memorializing the President and the Congress of the United States to enact legislation for the benefit of distressed areas; to the Committee on Banking and Currency.

Also, memorial of the Legislature of the State of Massachusetts, memorializing the President and the Congress of the United States to enact legislation for the benefit of the textile and fishing industries; to the Committeee on Ways and Means.

Also, memorial of the Legislature of the State of Minnesota, memorializing the President and the Congress of the United States to consider two resolutions, viz: (1) to oppose measures altering the tax status of cooperatives, and (2) to adopt the Blatnik amendment to the Federal Water Pollution Control Act; to the Committee on Ways and Means.

Also, memorial of the Legislature of the State of Nebraska, memorializing the President and the Congress of the United States to oppose Federal decisions and trends toward Federal supremacy and usurpation over water which tend to destroy individual and States rights; to the Committee on Interior and Insular Affairs.

Also, memorial of the Legislature of the State of New York, memorializing the President and the Congress of the United States relative to providing for the utilization of Camp Drum in Jefferson County on a year-round basis; to the Committee on Armed Services.

Also, memorial of the Legislature of the State of Oregon, memorializing the President and the Congress of the United States relative to "Operations Outdoors," the 5-year plan announced by the U.S. Department of Agriculture for modernizing and expanding recreational facilities; to the Committee on Appropriations.

Also, memorial of the Legislature of the State of Oregon, memorializing the President and the Congress of the United States to provide Federal aid to education; to the Committee on Education and Labor.

Also, memorial of the Legislature of the State of Oregon, memorializing the President and the Congress of the United States to provide Federal aid to education; to the Committee on Education and Labor.

Also, memorial of the Legislature of the State of Oregon, memorializing the President

and the Congress of the United States to take such steps as may be necessary to permit the Portland-Vancouver Bridge to be operated as a toll-free bridge, and that the cost of improving navigation on the Columbia River and improving the existing highway be paid for by Congress from gas taxes and other revenues for the Interstate Highway System; to the Committee on Public Works.

Also, memorial of the Legislature of the State of Washington, memorializing the President and the Congress of the United States relative to the disposal of Federal surplus property under the provisions of House bills 707, 986, 2442, and 2186; to the Committee on Government Operations.

Also, memorial of the Legislature of the State of Washington, memorializing the President and the Congress of the United States relative to the Wahluke Slope area of the State of Washington; to the Joint Committee on Atomic Energy.

Also, memorial of the Legislature of the Territory of Hawaii, memorializing the President and the Congress of the United States to support the aspirations of the citizens of the District of Columbia for a measure of self-government; to the Committee on the District of Columbia.

PRIVATE BILLS AND RESOLUTIONS

Under clause 1 of rule XXII, private bills and resolutions were introduced and severally referred as follows:

By Mr. BALDWIN:

H.R. 6141. A bill for the relief of Aloysius van de Velde; to the Committee on the Judiciary.

H.R. 6142. A bill for the relief of Feleciana and Carmen M. Lafrades; to the Committee on the Judiciary.

By Mr. HOLIFIELD:

H.R. 6143. A bill for the relief of Mrs. Shigeko Suzuki Mitchell and her minor daughter, Yumiko Mitchell; to the Committee on the Judiciary.

By Mr. HUDDLESTON:

H.R. 6144. A bill for the relief of Dr. Giuliano Quintarelli; to the Committee on the Judiciary.

By Mr. KASEM:

H.R. 6145. A bill for the relief of Chieko Yabe; to the Committee on the Judiciary.

By Mr. MONTOYA:

H.R. 6146. A bill for the relief of Mary John Karavas; to the Committee on the Judiciary.

By Mr. MURRAY:

H.R. 6147. A bill to authorize the Secretary of Agriculture to convey certain lands to the Bethel Baptist Church of Henderson, Tenn.; to the Committee on Agriculture.

By Mr. SISK:

H.R. 6148. A bill for the relief of Gilberto Azevedo; to the Committee on the Judiciary.

By Mr. SMITH of Iowa:

H.R. 6149. A bill for the relief of Wesley C. Newcomb; to the Committee on the Judiciary.

PETITIONS, ETC.

Under clause 1 of rule XXII, petitions and papers were laid on the Clerk's desk and referred as follows:

140. By Mr. BUSH: Petition of citizens of Berwick, Pa., urging the repeal of the Federal excise tax on telephone service; to the Committee on Ways and Means.

141. By Mr. HORAN: Petitions of 256 taxpayers in Coulee Dam, Wash., and 36 taxpayers in Reardan, Wash., urging the Congress to confine their expenditures to existing sources and limits of revenue and not to increase taxes; to the Committee on Ways and Means.

142. By the SPEAKER: Petition of the chairman, Steering Committee, Washington Metropolitan Regional Conference, Washington, D.C., petitioning consideration of their resolution with reference to urging the amendment of and prompt and favorable action on Senate bill 910; to the Committee on Interior and Insular Affairs.

143. Also, petition of Francis Jean Reuter, Charlottesville, Va., relative to a redress of grievance relating to treatment received by him and Mrs. Reuter by agencies of the Government; to the Committee on the Judiciary.

144. Also, petition of Milo C. Caughrean, San Francisco, Calif., relative to a redress of grievance relating to a 10-ton sled designed and built by him; to the Committee on the Judiciary.

EXTENSIONS OF REMARKS

The Townsend Plan

EXTENSION OF REMARKS
OF
HON. ALVIN E. O'KONSKI
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 7, 1959

Mr. O'KONSKI. Mr. Speaker, when Congress passed the Social Security Act in 1935, it was widely predicted and almost universally believed that title I (the title concerned with old age assistance) would prove to be little more than a temporary stopgap. The theory was that as social security matured and more and more people qualified for old age insurance, the need for assistance would disappear. It has not, of course, worked out that way at all. Today nearly 2,500,000 elderly persons still are recipients of old age assistance. Close to 500,000 persons draw both old age insurance and assistance. The assistance program, which was supposed to have outlived its usefulness after a few years, has become a permanent fixture.

This is most surely to be deplored, not because we are helping people who need help, but because of the stigma that attaches to charity of whatever nature. Our States subject recipients to half a dozen humiliations. The means test, required in all States, is simply a modern version of the Elizabethan pauper's oath. Many States require applicants to sign documents giving the authorities a lien on their homes. Others badger responsible relatives, under threat of legal prosecution, to contribute to the support of welfare clients. In more than half the States the names and addresses of recipients are made a matter of public record.

I know of cases in which elderly women are actually ashamed to cash their welfare checks at the grocery store because they feel they will be looked down upon. I know of other cases in which welfare clients have been reduced to tears by the constant and impersonal probing of case workers. The assistance program strips recipients of their dignity and self-respect. What is even worse, it perpetuates poverty by limiting clients to subsistence levels and penalizing them by reducing their grants whenever they show initiative by earning and working.

There is, to the best of my knowledge, no way of eliminating this disgraceful and un-American system as long as we continue to cling to the present social security system. Yet I think my colleagues will agree that it is desirable to eliminate any program which humiliates and stigmatizes free Americans.

There is a practical way of accomplishing this goal, and it lies in the enactment of a bill, known as the Townsend plan bill, which has been introduced in this session of Congress by Mr. BLATNIK and Mr. GUBSER.

This proposed legislation would solve the problem simply by paying retirement benefits as a matter of right. This cannot be done under present social security because benefits are related to earnings; and people who can show no earnings are disqualified, and therefore must rely on charity. H.R. 4001, by contrast, would impose a universal gross income tax; the rate would be moderate; citizens would automatically be eligible, just as children automatically are entitled to a public education as a matter of right.

Surely there is no excuse in this land of ours for the crushing burden of poverty and the twin evil of grudging charity. These blights can be removed, and there is no reason in this world for further delay.

H.R. 4000 and H.R. 4001 supply the solution. I heartily commend them to the attention of my colleagues. Here is a magnificent opportunity for the Congress to restore dignity and decency to millions of American senior citizens. It is difficult to imagine a goal more noble.

Carlton Cadettes Visit Washington

EXTENSION OF REMARKS
OF
HON. ALBERT THOMAS
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 7, 1959

Mr. THOMAS. Mr. Speaker, recently I had the distinct honor and pleasure of welcoming to Washington a group of young ladies from the Jefferson Davis Senior High School in Houston. The 36 young ladies are senior members of the Carlton Cadettes, one of the finest high-school drill corps in the country.

For the past several years the senior members of this group have visited Washington on a tour of the eastern part of the Nation. The visit these young ladies pay to my office and to the Capitol is always one of the highlights of the congressional year to me.

On the trip this year, the cadettes visited Williamsburg and Philadelphia before coming on to Washington. While in

the Nation's Capital, they toured the Capitol and other historic buildings. The young ladies also were able to visit the U.S. Naval Academy at Annapolis.

I am glad that the practice of high school students visiting the Nation's Capital seems to be increasing. These young people, the leaders of tomorrow, have a much better appreciation of our great country and our system of government after visiting the White House, the Capitol, and other points of interest. Certainly, it is refreshing for Washington to play host to thousands of these young visitors each year.

The Carlton Cadettes were accompanied by Miss Frances Newton and Mrs. Lorraine Nix, faculty sponsors for this outstanding group. Others who made the trip to Washington are Lorrie Blackburn, Margaret Boney, Charlotte Cernuch, Deette Dupree, Rosemary Evans, Judy Frederick, Gloria Garcia, Pat Genaro, Susan Gray, Sandra Hauck, Lucretia Hoke, Linda Holder, Betty Howard, Judy Jennings, Mary Krause, Annette Leu, Frances Mendoza, Jean Mitchell, Joyce Muery, Jane Noble, Diana Overstreet, Deanna Partain, Patsy Payne, Terry Perrigin, Linda Plemons, Sue Pool, Karen Sanford, Julia Santos, Estella Schott, Judy Spencer, Betty Thagard, Sally Thompson, Esther Williams, Jennie Wilson, Diane Wolf, Nita Yokem.

A Republican Challenge: Keeping Ours the Party of Freedom

EXTENSION OF REMARKS
OF
HON. THOMAS H. KUCHEL
OF CALIFORNIA
IN THE SENATE OF THE UNITED STATES
Tuesday, April 7, 1959

Mr. KUCHEL. Mr. President, I ask unanimous consent to have printed in the CONGRESSIONAL RECORD an address delivered by me last week before the Wayne County Republican Central Committee, at Detroit, Mich.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

A REPUBLICAN CHALLENGE: KEEPING OURS THE PARTY OF FREEDOM

(By THOMAS H. KUCHEL, U.S. Senator from California, before Wayne County Republican Central Committee dinner, Detroit, Mich., April 2, 1959)

I am honored by your invitation to speak to my fellow Republicans in this great city of Detroit. Your magnificent State of Michigan and her people, over a century ago, helped to create the forward-looking Republican Party as a political instrument devoted to the liberty of man. Today, Republicans in this modern era face an equal challenge to keep our party the forward-looking advocate of human freedom at a time when that noble concept all too often is destroyed by slavery as in Tibet and East Berlin.

A few weeks ago I told my fellow Republicans in California that the strength of the traditionally American two-party system is pretty much of a question of what we Republicans, in and out of Government, now do and now say. Nobody in his right mind wants innumerable splinter parties with their invariably weak coalition governments. God forbid that we shall ever have in this country the one-party system of Communist Russia. Yet, the sad fact is that we were hurt in the last election. I can speak with some knowledge of Republican damage in 1958. We suffered a political holocaust in California. I am glad to say we are taking forward steps to rebuild our party. To begin with, I think there is a little less cannibalism among our members now. Republicans of varying shades of political ideologies saw first-hand how disagreement over a few columns of the Republican temple gave the Democrats sufficient enthusiasm to succeed in demolishing the whole thing.

The Republican Party is big enough and it ought to be strong enough to have some divergence of views among its membership. Indeed, from such divergence should come the stimulus to produce more constructive public policy. I suggest to my fellow partisans in Michigan that the less fighting you do among yourselves the better. It will give us that much more time to devote to the development of constructive policies for our States, and for the Nation, to which the wise and honest may repair.

One enterprising and provocative bit of political philosophy in the economic field came the other day from a Democratic Member of the House of Representatives who frankly alleged that he could balance the whole Federal budget, if people would only listen to him.

"What we ought to do," he said, "is get all this money that's in savings accounts all over the country out into circulation. I believe the answer to all our financial troubles is in getting that money into circulation. It doesn't do anybody but the bankers any good where it is now. I say let's spend it, live the golden life. What's the sense of just piling it up?"

"Does it bother you," he asked rhetorically, a few weeks earlier, "that our Nation now has a debt of $280 billion? It doesn't bother me. What I want to know is, who does the Government owe this money to? That's a question I've never been able to get anybody to answer."

Well, let me answer. Our $280 billion debt bothers any American who thinks about our Nation's future. Our Federal Government borrowed another $12 billion last year. That's not merely bothersome, it's worrisome. It's deadly serious. And I assume that it is bothersome and worrisome and serious to the people of Michigan to reflect upon the evil fiscal situation which has befallen your State government.

By the way, I understand your Governor is available for his party's presidential nomination next year. I am told that he points with pride to the good things which may have come to the people of Michigan this last decade but, with equal vigor, directs an accusing finger at Republicans in your State legislature and elsewhere and charges them with every single bad thing which in that period may have affronted your Commmonwealth. I am not here to pass judgment on your State's political gains or losses. That is not my business as a Californian. But I can say that during the long years of Republican success in California our party gave the people of my State constructive forward-looking government. It tried, if you let me say so, to determine what course was best for all the people along the lines of the old textbook maxim: "The greatest good for the greatest number." That is the approach which has been vindicated at the ballot box. The Republican Party has been successful in the past. It will be successful in the future, in California, across the Nation, and—I hope—in your own great State in next week's elections.

Republicans, we have an excellent record of accomplishment on the homefront. We abandoned wartime wage controls and price controls when some of our Democratic colleagues were demanding that they be continued in peacetime. We scrapped the unfair excess profits tax on business over partisan opposition. We reduced individual income taxes by 10 percent and we cut most excise taxes in half. We adopted a $33-billion interstate highway construction program. We overcame bitter opposition to enact the first civil rights legislation since Lincoln's time. We fulfilled our national platform pledges for Alaskan statehood and Hawaiian statehood on the basis of bipartisan support. White House foreign policy, these last 6 years, has been approved by a bipartisan majority on every rollcall in the Senate. The farm problem is still a mess because a few Republicans and a lot of Democrats love high rigid price supports. As a symbol of progress by free men, the President's atomic peace ship was authorized. And the courageous leadership of our President, in the Middle East, in Asia, in Africa, in Europe, and in the Americas, unquestionably has contributed greatly to deterring aggression and to preventing war.

The tragically difficult recommendations which the President has been required to make to the Congress find their origins in the events which marked the close of World War II. At that time, the United States, in accordance with our traditional practice, began to demobilize our Armed Forces and to turn again to peacetime pursuits. We devotedly believed that with the creation of the United Nations we could look hopefully forward to an era of peace with justice in our conflict-weary world. We undertook through the Marshall plan generously to assist in rebuilding war-ravaged nations, whether they were allies of ours or not, in what will stand as one of the great unselfish acts of any government, anywhere, and at any time.

How soon the disillusionment came. Historic, freedom-loving European nations began to disappear, as, one by one, they went down the Communist drain. We began in chagrin to realize that the Soviet Union never had any intention of honoring its treaty obligations, but to the contrary, it was bent on pursuing the program laid down by Marx and Lenin with the single objective of communizing the world.

As these foreboding breaches of faith were occurring, the American State Department said:

"The instability of peace the world over is due, in large measure, to deliberate Soviet policy and actions, and to wholesale Soviet violations of basic agreements. Because of the U.S.S.R.'s record in ignoring its international pledges, the faith of the world in Soviet signatures has been badly shattered. Whether it be the Yalta Agreement, or a treaty of friendship, the U.S.S.R. has chosen to ignore its sworn commitments whenever it found such actions advantageous for its own purposes."

And, Mr. Dulles thereafter said: "It is now the policy of the United States not to exchange U.S. performance for Communist promises."

It is significant to recall that while America was rushing to return to a peacetime economy, the Soviet Union never did demobilize its own vast military forces but, to the contrary, maintained approximately 175 Russian divisions which was the Red army strength at the end of World War II. And, during the intervening years, these military resources have been greatly increased in their effectiveness through modern weapons, modern training, and improved leadership. Similarly, the Soviet has added to the strength of its air force. It has amassed a fleet of over 400 submarines, far in excess of Hitler's undersea fleet in the beginning of World War II. At the same time, the Kremlin strengthened its hold on the Soviet industrial machine, it sequestered the scientific brains available to it for the

single purpose of producing a nuclear arsenal of ballistic missiles, international in scope, bringing the American continents within their range.

Your great Senator Arthur Vandenberg led this Nation into a clearer recognition of its modern responsibilities when, a little over a decade ago, he introduced the justly famed Vandenberg resolution which successfully led our Nation to a new landmark of American diplomacy. The U.S. Senate adopted your great Senator's proposal which "advised the President to seek security for the free world through U.S. support of mutual defense arrangements, to operate within the United Nations Charter, but outside the Security Council veto. It also advised the President to attempt to strengthen the charter through curbs on the veto, itself, and by providing a United Nations police force together with the regulation and reduction of armaments under dependable guarantee against violation." (Vandenberg papers.)

Those continue to be sound and solid policies for the United States to follow. The Senate, on June 11, 1948, overwhelmingly adopted the Vandenberg resolution, and on that splendid foundation, the American doctrine of collective security formally replaced the outworn policy of pre-World War II isolation.

It is particularly appropriate to recall that resolution tonight as our President and our country join in celebrating a monumentally successful decade of the North Atlantic Treaty Organization, an outstanding example of our country's membership in effective security pacts under the Vandenberg resolution. Prior to NATO, 17 sovereign nations were engulfed by the Soviet, as I say, one by one. Since NATO, no nation in the Atlantic community has either lost her independence nor has been attacked. There is the strong proof of its effectiveness. NATO is a modern adaptation of the old American colonial cry: "In union there is strength." The member states of NATO standing together, solemnly agreeing that an attack on one will be deemed an attack on all, brought Soviet destruction of free states in Europe to a close.

When Red aggression against Korea came, America once again was required to mobilize its military strength to combat Communist imperialism which broke out within our defense perimeter, this time in Asia. The actions of the Soviets from and after Korea have imposed new requirements on the people of our country and our Government, as the acknowledged leader of the free world. It is now unhappily necessary, for the first time in our history, to maintain a large military establishment in time of peace. There appears to be little, if any, possibility of relief from this costly necessity so long as the Kremlin maintains its present course toward world domination.

The American people are dedicated to peace. The American Government has most earnestly striven to attain peace with justice in the world. The President's proposal at Geneva in 1955 for a nuclear disarmament on the basis of an adequate mutual inspection gave hope to every peace-loving human being as a real possibility of the beginning of a new era. The President's open sky aerial inspection was almost summarily rejected by the Soviet. Since that time, at London, at Geneva, and elsewhere, American representatives together with those of our NATO allies have tried, and tried, and tried to find a mutually acceptable formula by which disarmament could be honorably agreed upon and, thereafter, effectively assured. Our Government continues, most earnestly, to find an honorable prescription which the Soviets might accept.

Meanwhile, the difficulty over Berlin continues. Our position, and that of our allies, the British and French, has been made clear to Mr. Khrushchev, both in the public utterances by our heads of state, and in the private statements made to him by Prime Minister Macmillan and others. God knows what the true feelings of the Soviet leader are, but we do know that it is Mr. Khrushchev, and he alone, who lays down the Soviet line, aided and abetted, it is unquestionably true, by thoroughly competent staff personnel and by the most skilled propagandists. The President once again has indicated his own availability for a summit conference, contingent upon the effectively logical proviso of a prior meeting of foreign ministers, which would clear the chaff from the wheat, and would specify in clear language the decisions necessary to be rendered by the heads of state.

And the Soviets continue to zig and zag. After belligerently indicating that world war III was inexorably on its way over Berlin, Mr. Khrushchev now tells a press conference that the "notion" that he had given the West an ultimatum to get out of Berlin by May 27 was "an unscrupulous interpretation of our position."

Our Government is faced with the problem of determining how best to design and build a military defense establishment capable of responding to the hazards of conflict whatever the size of the conflicts may be. The solution is found in the doctrine of deterrence and in the continuing application of the principle of collective security. An unerring adherence to this doctrine and to this principle is the indispensable partner of our peace-inspired diplomacy, most particularly if that diplomacy is to receive deserved consideration by Moscow, where there is a wholesale respect for military strength.

The people of our country, regardless of party, are prepared to underwrite whatever the cost of an adequate defense may be, and the cost of its concomitant, our mutual security program. In the field of defense, professional military skills must be the basis on which initial estimates for each branch of the services are made. And then, the professional military members of the Joint Chiefs of Staff give their collective estimate. From there, civilian heads of the Pentagon pass their judgment, and, finally, the President makes his recommendations to the Congress.

As a lay U.S. Senator, and neither as a partisan nor as a self-styled global strategist, I am glad to tell you that I shall support the President in his military recommendations which he has made to the Congress for the sole and single reason of deterring or, if necessary, of combating any aggression against us, and of preserving the freedoms which we know.

I do not quarrel for a moment with the right of a Member of Congress, or, for that matter, of any citizen, to disagree with the President in matters of defense or anything else. But I trust they will not quarrel with me when I discard their opinions in this field as inaccurate and when I determine, once again, on the basis of the record, to vote for the Eisenhower proposals for America's defense.

And now, some who earlier were using rather inflammatory language in speaking of our Defense Department have conceded, however belatedly and reluctantly, that our strength and our planning are adequate for our country's safety. Indeed, there have just been made public some excerpts from the testimony of our military Chiefs of Staff two of whom say that we have too many nuclear weapons rather than too few.

May we not recall that, in World War II, President Roosevelt made Dwight Eisenhower supreme commander over all military personnel in the European theater. After World War II, he took over the military responsibilities of the North Atlantic Treaty Organization. As President, he'll be guiding us down the road for another 2 years. We can gratefully salute his almost entire lifetime of dedictated devotion to the people of the United States.

Republicans, be proud of the accomplishments under the Republican label that have taken place in our Nation's Capital. We came into being in the 1850's as the American party of freedom. We intend to keep it the party of freedom in its second century of existence.

Problems of Civil Defense in Event of a Nuclear War

EXTENSION OF REMARKS
OF
HON. JACOB K. JAVITS
OF NEW YORK
IN THE SENATE OF THE UNITED STATES
Tuesday, April 7, 1959

Mr. JAVITS. Mr. President, there has been much public concern with problems of civil defense in case of a nuclear war. Present-day nuclear bombs have more than a million times the explosive power of the blockbuster, the largest bomb used during World War II, in addition to dangers of fallout. In the light of this public concern I believe that my recent exchange of correspondence with the Office of Civil and Defense Mobilization on the question of our civil defense program would make for greater understanding of how civil defense affects our security.

I ask unanimous consent that the correspondence be printed in the RECORD.

There being no objection, the correspondence was ordered to be printed in the RECORD, as follows:

MARCH 6, 1959.

OFFICE OF CIVIL AND DEFENSE MOBILIZATION,
17th and Pennsylvania Avenue NW.,
Washington, D.C.

GENTLEMEN: Section IX of the Rockefeller Report on the Problems of U.S. Defense dealt with civil defense problems. Among the observations and recommendations made by the report were the following:

"In the age of the ballistic missile the known capability of a society to withstand attack will become an increasingly important deterrent.

"Difficulty does not mean impotence, however, while it may be impossible to protect the population against the blast and heat of an atomic explosion, protection against radioactive fallout and other contamination appears to be much more feasible. Equally important is increased understanding on the part of our people about the effects of modern weapons. This will enable us to respond with discipline and effectiveness to a surprise attack and it will discourage such a move because an aggressor would no longer be able to gamble that a sudden attack might disorganize our society.

"It is impossible to state certain general principles in relation to the development of any civil defense program:

"'1. Civil defense must be considered as part of the overall U.S. strategic posture. It must be faced forthrightly. It should be part of our defense planning and included in our overall strategic plans. Cadres charged with supervising civil defense activitives, both in possible preattack and the postattack phase, must be developed and trained immediately. The expense involved should be in addition to existing military outlays.

"'2. The American people need to be told more clearly the dimensions of the damage that would be inflicted on us by a sudden attack and about the measures to reduce its

effects. Any civil defense program must have as a prerequisite a program of public information supported by the Federal Government and carried through at all levels.

" '3. A civil defense program should be integrated with the construction program needed for the normal development of our expanding population and economy.'

"It would be too costly to disperse existing industrial installations but tax incentives could be provided for the location of new facilities away from main concentrations.

"The main feature to note with respect to civil defense is that it is overdue. It does not make sense for the free world to engage in a major military effort without at the same time protecting its most important resources: its civilian population."

I would very much appreciate the comments of your office regarding these obvervations and your plans and proposals to effectuate the several recommendations cited.

While the Gaither report in 1957 has not yet been released publicly, nevertheless certain of its recommendations have been reliably reported in the press, among them the following:

A civil defense shelter program at a cost of around $5 billion annually for 4 to 5 years. These shelters would be designed to save lives against the perils of radioactive fallout and only incidentally to help the Nation's industry recuperate after an enemy attack.

As you will recall the Gaither report was the result of recommendations for a shelter program presented by the Federal Civil Defense Administration to the President in the Spring of 1957.

I would very much appreciate your comments regarding the aforementioned recommendation.

Sincerely,

JACOB K. JAVITS.

EXECUTIVE OFFICE
OF THE PRESIDENT,
Washington, D.C., March 13, 1959.

Hon. JACOB K. JAVITS,
U.S. Senate,
Washington, D.C.

DEAR SENATOR JAVITS: Thank you for your inquiry of March 6, 1959, in which you asked for comments on certain recommendations of the Rockefeller report on the problems of U.S. defense.

In general, I may say that this report represents a thoughtful analysis of an extremely important problem. I find myself in substantial agreement with its conclusions. As you will note from the enclosed statement of the national policy on shelters, issued on May 7, 1958, our own staff studies and analyses have led us to substantially the same conclusions.

With respect to the specific principles which you quote in your letter of March 6, please note that—in somewhat different words—the President in his promulgation of the national plan for civil defense and defense mobilization supported the concept of civil defense as part of the overall U.S. strategic posture when he said: "Civil defense and defense mobilization are vital parts of the Nation's total defense."

The responsibility for supervising civil defense activities, under the national plan, is clearly assigned to (and in fact inherent in the responsibilities of) the chief executives of all levels of government, assisted by their civil defense staffs. An important implementing measure to strengthen these State and local staffs will, I hope, be provided in the appropriation for fiscal year 1960 to permit carrying out the administrative support provisions of Public Law 85–606.

This fact, of course, underscores the importance of assuring continuity of Government at all levels in order to provide leadership, direction, and service in the event of attack. We have been working in close cooperation with the Council of State Governments, the American Municipal Association, the U.S. Conference of Mayors, and the National Association of County Officials and have received gratifying support of our recommended program for continuity of Government.

The second principle referred to in the Rockefeller report is concerned with the important requirement of a public information program. The importance of public information in a civil defense program can hardly be exaggerated. As you will note, the first element of the action program in the enclosure on shelter policy concerns itself with this important area of activity.

In 1956, the Federal Civil Defense Administration had the benefit of the advice of a panel composed largely—but not entirely—of social scientists, who had the following comment:

"We share a firm conviction that the American people do not have nearly enough knowledge of the consequences of a successful nuclear attack. We recognize that there have been widely held and voiced opinions that necessary information has been withheld from them on grounds of security. We have satisfied ourselves that sufficient information has been made available to them—but it has not been successfully conveyed to them and incorporated in their feelings and actions. Thus the information has not become knowledge, and this, in our opinion, is the crux of the problem.

* * * * *

"In our opinion, the keystone of the program is knowledge, not merely information made available, but information—both frightening and hopeful—so successfully conveyed as to become useful knowledge, translated into plans, procedures, and the capability for constructive action. It has been wisely said, we think, that courage is based on knowledge of the grounds of fear and hope."

In my view, the undertaking is as difficult as it is vital. It will require a many-pronged attack. We are currently devoting a substantial share of our resources to reaching a growing segment of the American people. In addition to the usual mass-media efforts (radio, TV, magazines, newspapers, etc.), we have recently distributed approximately 36 million wallet cards, which contain simple instructions for preparedness and for proper reaction to warning signals, and over 3 million pamphlets entitled "What You Should Know About the National Plan for Civil and Defense Mobilization." A few months ago the Boy Scouts of America distributed to virtually each household in America (a total of 42 million copies) our "Handbook for Emergencies."

We have also distributed over 6,000 radiological defense training kits to high schools throughout the country and plan an additional distribution of 9,000 kits by the end of the present fiscal year. These will serve the double purpose of familiarizing high school students with the radiation phenomenon and placing, on a fairly well distributed basis throughout the country, instruments that could be used in the event of emergency by science teachers who are familiar with them.

As a part of its emergency assignment, the U.S. Office of Education is initiating a nationwide adult education program on the hazards of nuclear attack and on effective defensive measures and preparations. This will be a substantial undertaking and will require increased financial support over the next 2 years.

As you will note in the enclosed "National Policy on Shelters," the third principle cited in the Rockefeller report—that the program should be integrated with normal construction development—is included in our program. The Federal Government will itself set the example in its new construction by incorporating fallout shelters in appropriate civilian Federal buildings.

With respect to the cited recommendation from the Gaither report, as reported in the press, the enclosed policy statement makes it clear that we do not contemplate a massive federally financed shelter construction program. There is so much fallout protection in the United States to be had for only minor modification cost in private homes, apartments, commercial and industrial buildings, and in other places that I believe is not unreasonable to call upon our citizens to undertake these modest expenditures.

I appreciate very much this evidence of your interest in our program and stand ready at any time to furnish additional information should you require it.

Sincerely,

LEO A. HOEGH.

World Law Resolution

EXTENSION OF REMARKS
OF

HON. CHARLES O. PORTER

OF OREGON

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 7, 1959

Mr. PORTER. Mr. Speaker, world peace can only be accomplished through world law. How do we attain world law? We strengthen the United Nations. This means revising the charter in accordance with studies which can start later this year.

It means enacting the resolution set out below.

The Committee on Arrangements for a United Nations Charter Review Conference meets this June. The United States should at that time urge the Committee to recommend to the United Nations General Assembly that governments establish national commissions, or instruct appropriate national bodies, to undertake studies to determine their position on charter review.

Here are some facts about United Nations Charter revision:

In order to provide for revision and amendment, the United Nations Charter provides two mechanisms. Article 108 provides for the General Assembly to recommend amendments. Article 109 specifies procedures for calling a Charter Review Conference to draft revisions.

In either case, amendments are then to be referred to member states for ratification. They become effective on approval by two-thirds of the member states, including all five permanent members of the Security Council.

Pursuant to article 109, charter review was placed on the agenda of the General Assembly in 1955, which then decided—43 in favor, 6 opposed, 9 abstentions, and approved by the Security Council, 9 in favor, 1 against, 1 abstention—that a Charter Review Conference shall be held at an appropriate time and expressed the belief that review of the charter should be conducted under auspicious international circumstances. At a meeting in June 1957 the Committee established by the General Assembly to consider the time and place for a Review Conference concluded that the appropriate time and auspicious inter-

national circumstances referred to in the 12th General Assembly, the Committee recommended that it be continued in being to report again with recommendations not later than the 14th General Assembly—1959. This recommendation was adopted by the General Assembly with no negative votes—54 in favor, 9 abstentions.

Factors which seem to have led to postponement of a Charter Review Conference, as indicated by Committee debate, are not only political tensions and Soviet opposition, but fears that irresponsible and divisive charter amendments would be proposed. This fear is no doubt enhanced by the fact that no formal or official proposals for significant amendments have been made by our own or other governments.

As regards Soviet opposition, the following facts are significant:

First. No further Security Council action is required with respect to a Review Conference, or proposals adopted by it.

Second. The Soviet Union cannot veto the holding of a Review Conference.

Third. The U.S.S.R. cannot veto proposals made at that Conference, or prevent the Conference from officially approving and submitting for ratification amendments endorsed by a two-thirds majority.

Fourth. Of course, the Soviet Union, under the charter's present provisions, must ratify amendments before they can go into effect.

Fifth. Failure to ratify, unlike a veto, is not a final act and leaves open possible future consent to the amendments.

Sixth. The U.N. Charter does not put a time limit on the ratification period for charter amendments, so Soviet approval can be sought as long as may be required.

Should careful United States study of charter amendment lead to conclusions that important changes should be proposed and would have widespread international support, then approval for these amendments could be sought through a two-thirds vote in the General Assembly rather than by a Charter Review Conference. Here, also, there would not be veto on procedure, but the same considerations on ratification as outlined above would hold.

The text of the resolution which will be introduced within the next 10 days is as follows:

Whereas the basic purpose of the foreign policy of the United States of America is to protect the freedom of its citizens; and

Whereas the United States seeks freedom, peace, and prosperity for the peoples of all nations; and

Whereas the United States has joined with other nations to pursue these goals through the United Nations; and

Whereas enforceable law has proven to be indispensable to the attainment of these goals and to the peaceful and just settlement of disputes within all civilized communities: Now, therefore, be it

Resolved by the House of Representatives (the Senate concurring), That it is the sense of the Congress that it should be U.S. policy to seek, through the United Nations, the development of world law to protect the freedom, peace, and just aspirations of all peoples, to provide for the peaceful settlement of international disputes and to permit the elimination of national armaments; and be it further

Resolved, That a copy of this resolution will be sent to the President of the United States, who is hereby requested to initiate studies of the changes which should be made in the Charter of the United Nations or in the charters of other international organizations to further the development of world law for the purposes enumerated in this resolution; and, pursuant to this goal; be it further

Resolved, That the U.S. Government should urge the United Nations Committee on Arrangements for a United Nations Charter Review Conference, when it meets in June 1959, to recommend to the United Nations General Assembly that governments establish national commissions, or instruct appropriate national bodies, to undertake studies to determine their positions on charter review or revision in order to facilitate fruitful consideration of suitable measures to strengthen the United Nations Charter as an effective legislative, executive, and judicial instrument of world law when a Charter Review Conference is held.

Fair Treatment for Great Lakes Maritime Workers

EXTENSION OF REMARKS
OF
HON. ALVIN E. O'KONSKI
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 7, 1959

Mr. O'KONSKI. Mr. Speaker, today I introduced a bill which, if passed, would eliminate a terrible and inequitable situation which has repeatedly been called to the attention of the Governor and the State Legislature of the State of Ohio. This bill will provide the necessary remedy by amending section 3305(f) of the Internal Revenue Code of 1954 to withhold tax credits under section 3302 from a maritime employer who maintains the office from which the operations of a vessel are regularly supervised, managed, directed and controlled in a State that does not, on and after July 1, 1961, treat maritime service the same as other service for the same employer.

My bill, Mr. Speaker, if enacted, is adequate to achieve the results desired; namely, elimination of stipulations in State unemployment compensation laws which discriminate against maritime employees by affording them protection against unemployment on terms less favorable than those extended to workers in other covered industries. Illustrative of the form of discrimination which my bill is designed to terminate is that authorized by the Ohio unemployment compensation law, whereunder maritime employment is treated as seasonal and the workers engaged therein are eligible to receive unemployment benefits only during the 9 months of the year in which the Great Lakes shipping industry is in operation—Revised Code Annotated, page 1954, section 4141.33(B).

Under such a provision, a maritime worker who consistently is rehired during each annual 9-month shipping season would never be able to qualify for benefits during the 3-month layoff period.

In addition to singling out maritime workers for this special treatment, even to the extent of distinguishing them from other workers engaged in seasonal employment, Ohio also appears to protect entrepreneurs in the maritime industry from the exaction, in conformity with a merit-rating plan, of a substantially severer unemployment compensation tax than is imposed on employers in more stable trades. Indeed, under the Ohio law, a maritime employer who regularly rehired all of his workers at the end of each annual 3-month layoff period conceivably would be entitled to the highest rating accorded employers with stable employment records, and, correspondingly, to the lowest rate at which Ohio unemployment taxes are levied; to wit, 0.1 percent. By way of contrast, Wisconsin, which subjects employers engaged in seasonal industries to the same conditions as are applied to all other employers, conceivably might impose on maritime employers a merit-rating exacting as high as 4 percent—Ohio Revised Code Annotated, page 1954, section 4141.25; Wisconsin Statutes Annotated—West, 1957, section 108.18 (4); Ohio Board of Review, Decision 655–BR–51, June 18, 1951; Commerce Clearing House, Inc. Unemployment Insurance Reporter; Ohio, paragraph 2000.08; Wisconsin, paragraph 2000.

What is sought to be achieved by the passage of my bill is the enlargement of the power of the Secretary of Labor to the end that he may withhold approval not only of entire State unemployment compensation laws—United States Code, section 26:3304(c)—but also of discriminatory provisions of otherwise certified State laws which affect maritime workers adversely. Upon withdrawal of Federal approval of such provisions, an employer of maritime workers covered thereunder would cease to be eligible for the 90-percent credit allowed as an offset against the Federal 3-percent unemployment tax—United States Code, section 26: 3301, 3302(a)(3)—and would be exposed to the burden of paying in their entirety both the Federal as well as the State unemployment compensation tax.

Our Senior Citizens Deserve Better Treatment

EXTENSION OF REMARKS
OF
HON. WAYNE N. ASPINALL
OF COLORADO
IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 7, 1959

Mr. ASPINALL. Mr. Speaker, as I am sure most of my colleagues know, I have been a strong advocate of the Townsend plan for national insurance throughout my career as a Member of the Congress. It is a matter of pride to me that the Colorado delegation, to which I have the honor of belonging, has invariably cooperated 100 percent on

those occasions when a discharge petition was employed in an effort to bring this legislation to the floor.

I consider it a privilege to speak in this Congress in behalf of H.R. 4000, the current Townsend bill, which now resides within the jurisdiction of the Committee on Ways and Means.

I sincerely hope that this committee will see fit to issue a favorable report on H.R. 4000 when this Congress is called upon to consider revision of our social security program. The amendments it proposes are, in my mind, long overdue.

Many of my constituents were rather badly disappointed with the social security amendments of 1958, and I must say that I can hardly blame them. The 7 percent increase we voted for beneficiaries of old age, survivors, and disability insurance, and the few additional dollars we appropriated for recipients of old-age assistance constituted a pitifully inadequate solution to the problems which our senior citizens must face every day of their lives.

It is a sad but true fact that these problems too often tend to be ignored or overlooked, not only by the whole of society, but here in Congress. And yet it is Congress, and Congress alone, to which these people must look for a solution.

I suggest that our basic approach has been erroneous. Last year, for example, we satisfied ourselves with a so-called cost-of-living formula. We were told that since the last social security benefit increase, the cost of living index had jumped by eight points, and so, as a curious compromise, we settled on a 7 percent increase in benefits. On the surface, this seemed to be a not unreasonable solution. But the real crux of the matter lay beneath the surface. The truth was that the original benefit level was so absurdly low that the tiny increase we authorized served only to perpetuate an existing evil. What I am saying is that a small percentage increase at the poverty level does little more than bring poverty up to date, and the amelioration is so insignificant as to be virtually nonexistent. Our social security fabric needs a complete overhaul. Repairs on a tiny percentage scale are like patches on a worn garment.

As we all know, the Department of Health, Education, and Welfare has exhibited no fondness for a realistic benefit level; indeed, at hearings during the previous Congress, Department spokesmen made it abundantly clear they favored only minimal improvements. The Department has time and again reiterated its contention that the system must be kept solvent, and that any benefit increases must be related to the program's financial capabilities. It is impossible to quarrel with this logic. But it is equally impossible to accept as final the notion that our vastly wealthy Nation has strained its resources to the point where no further improvements can be made in our social security structure.

I suggest we have been the victim of partial truths. There is, to be sure, some evidence that the present social security system has matured to the extent that little further growth seems feasible—at least within the cost range that people will tolerate. But this does not mean there is no better system. The fact is, a better system does exist.

The better plan is H.R. 4000. It is better because it can do the things the social security program cannot do, that is, pay higher benefits to more people without the risk of insolvency, and at the same time assure that retirement benefits will at all times bear a realistic relationship to living costs.

It is quite natural that as benefits under the present program grow more and more expensive, the Congress will grow increasingly reluctant to increase them. I believe we have just about reached that point. It is time now to take a long, hard look at the system itself. If we can find a more economical way to pay the higher benefits our senior citizens deserve and need, then certainly we are morally obligated to give it close and careful scrutiny.

For this reason I urge the Committee on Ways and Means to consider H.R. 4000 as the next logical step in the development of our country's social security pattern.

Foreign Aid Facts and You

EXTENSION OF REMARKS
OF

HON. NOAH M. MASON

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 7, 1959

Mr. MASON. Mr. Speaker, my regular weekly letter to the people of my district treats of our foreign aid program and our present national fiscal situation. The discussion of these subjects is pertinent today in the face of the proposed foreign aid appropriation for the next fiscal year.

Mr. Paul Peters has prepared a bulletin on the same subject that gives added information. I include my letter and Mr. Paul Peters' bulletin as a part of my remarks for the enlightenment of my colleagues who will vote soon on the appropriation for foreign aid for the coming fiscal year:

FOREIGN AID FACTS AND YOU

1. In 1948, 450 people were employed to hand out foreign economic aid. Ten years and $41 billion later the foreign aid staff had grown to 12,000 employees directing 2,000 projects. Besides that, 9,000 persons are engaged in the military aid program that has given out $22 billion.

2. A total of $3 billion foreign aid funds has been given to foreign governments to help reduce their national debts and balance their budgets. In order to do this we had to borrow the money and increase our national debt.

3. Two billion dollars in foreign aid has been given to governments that are hostile to the United States—Poland, Yugoslavia, and the Soviet Union.

4. An official report on foreign aid given to oil-rich Iran states: "U.S. aid in Iran, between 1951 and 1956, totaled a quarter billion dollars. This was administered in a loose, slipshod, and unbusinesslike manner, so that it is impossible to tell what became of the money."

5. The much-touted Development Loan Fund is a foreign aid device to loan money on what amounts to second mortgage securities and accept soft local currencies in repayment. The Development Loan Fund also lends money to American businessmen to build oversea factories to produce goods in competition with American-produced goods. Seven hundred million dollars has already been appropriated, but so far only $400 million has been obligated.

6. India—a country that has received hundreds of millions of dollars in aid from us—increased her Communist vote from 4 million to 12 million between 1952 and 1957. Today the Communist Party is the second largest party in the Indian Parliament.

7. Our foreign aid program results in confusion, misunderstanding, and often chaos. After 15 years of giving out $63 billion in foreign aid we are probably the most disliked and envied Nation in the world.

8. More than one-fourth of our national debt of $285 billion has resulted from our foreign aid programs. The annual interest on the foreign aid portion of our debt is $2 billion. Our past and present foreign aid programs amount to 20 percent of all tax money collected from American individuals. So, 20 percent of your Federal tax money goes for foreign aid. Figure out how many of your dollars go for foreign aid.

TODAY'S FINANCIAL PICTURE

Recently Secretary of the Treasury Anderson personally briefed the members of the Ways and Means Committee on the Nation's financial picture and the national debt. In a nutshell the following is the picture:

(a) Our total debt amounts to $867 billion, distributed as follows:

	Billion
Federal debt	$285.0
State and local debt	60.0
Corporate debt	284.0
Individual debt	238.0
Total debt	867.0

This year's budget receipts will be	68.0
This year's budget expenditures will be	80.9
This year's deficit will be	12.9

Our Federal Government is having difficulty today in refinancing Government bonds when they become due. There are two reasons for this situation: First, our Government credit standing is not so good as it was 20 years ago; and, second, the demand for money for industrial expansion is much greater today than ever. Therefore, competition for money is keen.

Other countries are cutting down their national debts while we are increasing ours. Why?

SPENDING FOR FOREIGN ECONOMIC AND MILITARY AID IN 13 POSTWAR YEARS GREATER THAN GRANTS-IN-AID AND CHECKS TO INDIVIDUALS BY BILLIONS

In the 13 postwar fiscal years, 1946 through 1958, inclusive, the U.S. Treasury has disbursed more of the taxpayers' dollars for foreign economic and military aid than was disbursed as grants-in-aid to State and local governments plus checks direct to individuals for subsidies, relief, and all other purposes, including veterans' benefits.

As a matter of fact, the obvious preference of foreign governments and people over the hard-pressed American taxpayers, probably will be one of the hottest issues in the campaigns of 1960. The issue is already getting so hot that efforts of the Eisenhower administration to dress up foreign aid as a military necessity in support of our national defense efforts or as a method to "contain" communism are not receiving the reception expected. In fact, the record shows that

foreign aid has not contained communism, nor has it in any way lessened our own expenditure for national defense.

The table following shows in separate columns by fiscal years, the reported expenditures for foreign aid (grants and credits) and the amounts disbursed here at home as grant-in-aid and checks direct to individuals other than loans for the 13 postwar years:

Fiscal year	Reported gross foreign aid	Grants-in-aid and checks to individuals
1946	[1] $6, 904, 122, 806	$1, 209, 107, 183
1947	[2] 8, 523, 477, 612	1, 694, 070, 076
1948	7, 087, 000, 000	5, 551, 054, 046
1949	7, 602, 029, 206	5, 493, 710, 763
1950	6, 338, 536, 000	5, 518, 879, 345
1951	6, 624, 286, 000	4, 850, 097, 620
1952	5, 098, 000, 000	4, 241, 158, 202
1953	7, 030, 000, 000	4, 053, 941, 794
1954	5, 155, 410, 175	4, 284, 380, 522
1955	4, 380, 920, 377	4, 594, 669, 209
1956	4, 473, 177, 000	5, 152, 135, 647
1957	4, 625, 000, 000	6, 468, 449, 760
1958	4, 661, 000, 000	7, 420, 769, 899
Total	78, 351, 136, 176	60, 615, 424, 066

[1] Excludes loans to several American Republics.
[2] Includes British loan for $3,750,000,000 of which $2,050,000,000 had been disbursed. Excludes subscriptions to International Bank and International Monetary Fund.

Results of Questionnaire Mailed by Hon. John F. Baldwin, of California, to Residents of the California Sixth District

EXTENSION OF REMARKS
OF
HON. JOHN F. BALDWIN, JR.
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 7, 1959

Mr. BALDWIN. Mr. Speaker, 2 months ago I mailed a questionnaire to every family of registered voters in the California Sixth Congressional District. The response to this questionnaire was, by far, the largest that I have ever received. Many constituents not only answered the questionnaire, but attached supplementary letters or wrote detailed comments on the back of the questionnaire. I have spent many hours personally reading all of these comments, and they have been most helpful. I am firmly convinced that a Congressman can better represent his constituents if he knows the views of all of those constituents, than if he has only heard from pressure groups.

The tabulation of the questionnaire is summarized below:

1. It has been proposed that Congress pass legislation to insure to union members the right to elect their union officials by secret ballot. Do you favor or oppose such legislation? Favor 87 percent, oppose 5 percent, undecided 8 percent.

Answers from union members: Favor 83 percent, oppose 4 percent, undecided 13 percent.

Answers from nonunion members: Favor 91 percent, oppose 5 percent, undecided 4 percent.

2. Should we stand firm in the protection of West Berlin against Communist threats, or should we pull out of West Berlin? Stand firm 88 percent, pull out 4 percent, undecided 8 percent.

3. Do you favor, or oppose, the admission of Communist China into the United Nations? Favor 19 percent, oppose 65 percent, undecided 16 percent.

4. Do you feel that President Eisenhower and Allied leaders should, or should not, have a summit conference with Khrushchev of Russia? Yes 57 percent, no 24 percent, undecided 19 percent.

5. Do you favor, or oppose, statehood for Hawaii? Favor 85 percent, oppose 8 percent, undecided 7 percent.

6. A bill pending before Congress would provide that any Federal civilian employee who is a security risk may be discharged. Do you favor or oppose such legislation? Favor 76 percent, oppose 11 percent, undecided 13 percent.

Answers from Federal civilian employees: Favor 72 percent, oppose 7 percent, undecided 21 percent.

Answers from non-Federal civilian employees: Favor 80 percent, oppose 11 percent, undecided 9 percent.

7. It has been proposed that the social security program be expanded to provide for the payment of surgical and hospital bills for those who are retired and receiving social security pensions. The increased cost would be covered by increasing the social security withholding tax by an additional one-fourth of 1 percent or one-half of 1 percent on both employers and employees. Do you favor or oppose such legislation. Favor 63 percent, oppose 27 percent, undecided 10 percent.

8. Would you be in favor of, or opposed to, an increase of 1½ cents per gallon in the Federal gasoline tax for the purpose of keeping the Federal interstate highway construction program moving forward on schedule? Favor 39 percent, oppose 51 percent, undecided 10 percent.

9. The present income tax laws provide that oil and gas depletion allowances of 27½ percent may be deducted from profits before the income tax is computed. A bill has been introduced to reduce these depletion allowances to 15 percent. Would you be in favor of this reduction? Yes 41 percent, no 30 percent, undecided 29 percent.

10. Would you be in favor of legislation to make bombings of schools, churches, and other buildings a Federal offense? Yes 85 percent, no 10 percent, undecided 5 percent.

11. The Post Office Department estimates its deficit for the coming fiscal year will be $522 million. In view of this fact, would you favor an increase in the first-class letter mail rate from 4 cents to 5 cents? Yes 50 percent, no 43 percent, undecided 7 percent.

12. The present selective service or draft law will expire this year unless extended. In view of world conditions, would you be in favor of its extension? Yes 83 percent, no 10 percent, undecided 7 percent.

The Plight of the Cities

EXTENSION OF REMARKS
OF
HON. JOHN F. KENNEDY
OF MASSACHUSETTS
IN THE SENATE OF THE UNITED STATES
Tuesday, April 7, 1959

Mr. KENNEDY. Mr. President, the distinguished senior Senator from Pennsylvania [Mr. CLARK] once again has called attention to the plight of America's urban communities. In an excellent article entitled "A Voice for the Cities," which was published in the March 7, 1959, issue of The Nation, he points to the need for a greater recognition in the councils of government, of urban problems. I ask unanimous consent that the article be printed in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

A VOICE FOR THE CITIES
(By Senator JOSEPH S. CLARK)

This is a land of milk and honey and money.

We have become accustomed to a gross national product and a rate of private expenditures which are, in the old Hollywood phrase, "merely colossal." But our schools are deteriorating, traffic is strangling our cities, slums are spreading quicker than we can eradicate them, and in the midst of affluence there is poverty. Seven million American families are existing on incomes of $2,000 a year or less.

Our failure to face and deal realistically with these problems amounts to a kind of paralysis in our public life. The scope of our action is determined not by a forthright analysis of the facts which all admit, but by preconceived limitations growing out of inertia and outmoded thinking.

Last November's election was, I am convinced, an indication of profound public discontent with the way things are going. Americans voted for candidates of both parties who appear to look to the future and not to the past. If we interpret the voter's mood accurately, complacency with present-day America cannot be the mark of the current Congress.

My own discontent, when I look at our public scene, rises for many reasons, but the one about which I perhaps feel most keenly is our failure to recognize and deal with the change which has transformed us from a rural to an urban nation.

Simply because of the economics of housing, the continuance of our present cities is assured for the immediate future. For some time the rate of new housing construction has been insufficient even to take care of our expanding population and to replace dwellings which burn or are demolished. The prospect for the future shows little chance of improvement. People will continue to live in cities for the simple reason that there is nowhere else for them to go. There is grave question, of course, as to what kind of cities they will be, but in any case they will continue to house at least as many people as they now do.

Even with the most optimistic assumptions as to urban renewal, we can expect to house in our central cities only 17 million of the estimated total population increase of 55 million in the next 20 years. Thus, at least two-thirds of our population growth must be housed outside the core cities of our metropolitan areas. In other words, the metropolitan explosion cannot be stopped.

So we are going to have central cities and rapidly growing fringe areas which surround and swallow many smaller cities. Within another generation, the remaining gaps will be filled in the continuous urban and suburban belt reaching from Portland, Me., to Alexandria, Va. The problem is to make these urban concentrations as civilized an environment as possible.

What is wrong now is familiar to all of us: The decay of the older areas of central cities; blight and slums; the flight of the middle class to the suburbs; the vicious circle created as talented people desert the central city, leaving a leadership vacuum filled by those less skilled culturally, economically, and politically. And, on the other hand, the often barren life in the suburbs—inadequate community organization, the haphazard provision of services through inadequate special districts, and the oppressive problems of transportation and communication (traffic bottlenecks, lack of downtown

parking) resulting in strangulation of the commercial areas of the central cities.

Yet a visitor from outer space, looking at the structure of our Federal Government, would conclude that America is still a rural Nation, with rural problems its dominant concern. We have a Department of Agriculture, which devotes itself to the problems of the farm; we have a Department of the Interior, which reflects the interests and needs of the more sparsely settled States; but there is no department with responsibility for the problems of the tens of millions of people living in forced congestion in metropolitan areas.

City people, too, need an advocate in Washington. To illustrate; The Senate became disturbed last year about the plight of the Nation's railroads. The Department of Commerce was concerned; so was the Interstate Commerce Commission. The Commerce Committee of the Senate has a standing subcommittee with jurisdiction over railroads. So it organized a study. Those of us who have been worried about a related problem—namely, the plight of the commuter and the deterioration of mass transit in the cities—tried to make sure that urban mass-transit problems would be covered in this study. The answer was no. States rights intervened.

No department of the Federal Government has any interest in what should be done about commuter-transportation services. No committee or subcommittee of the Congress has any jurisdiction. Yet mass transit is not merely a State and local problem. Much of the traffic crosses State lines. Some of the railroads involved serve many States. Let's face it—State and local governments are incapable of dealing successfully with this problem in most localities—just as urban renewal was generally beyond their competence until the Federal Government stepped in.

Maybe the ultimate answer is that mass transit should not be a Federal problem, even in part. Maybe the same applies to air and stream pollution, and water supply. But what concerns me most is that, at the present time, we don't even have the mechanism for examining such problems, comprehensively and making intelligent national decisions.

I believe the first step should be the creation of a Department of Urban Affairs at Cabinet level with the responsibility of keeping abreast of urban and metropolitan problems and developing recommendations for Federal, State, and local action. The department would represent the urban viewpoint in the administration of nationwide programs which particularly affect cities and their suburbs—notably, highways and water conservation. It would be assigned—initially, at least—only those operating programs which are peculiarly urban, and these are already clustered in the Housing and Home Finance Agency. But the department, to my mind, would be something far beyond the present HHFA. The additional element would be a "hunting license" to study, research, and recommend, and a responsibility to listen to representatives of groups like the HHFA, understand their problems, and reflect that understanding in the policy-forming processes within the executive branch.

I have seen the criticism that a new department should not be formed until a philosophy of Federal-State-local relations is agreed upon. I think the logic points in just the opposite direction. Governmental philosophies do not spring full-blown into being; they evolve. But they cannot evolve unless someone in government has responsibility for thinking creatively about them. We will get the philosophy far more quickly if we establish the mechanism first.

In 1957, speaking at a convention of the American Institute of Architects, I responded to the question, "How can the city be restored?" by suggesting that three things are needed: more money, changes in political structure, and elimination of political lag.

First, money. Our central cities are in mortal danger not only through strangulation from traffic congestion but through financial starvation and attrition. The city, still the hub and nerve center of its area, must provide more and more services at increasing costs not only for the people who live in it, but also for those who work in it, use its facilities, but no longer vote, live, and pay taxes there. Moreover, the people who can best afford to sustain the increasing costs of maintaining and improving the city's facilities are the very ones who have moved to the suburbs.

Some recently published figures on the Washington area illustrate this point. They reveal that the average family income for families living within the District of Columbia in 1956 was $4,900; but in the immediate surrounding area it was $6,773, more than one-third higher. In nearby Montgomery County, Md., it ranged up to $7,735. I suspect the same relative income levels hold true for similar areas.

As the city's costs go up, its tax resources go down. Those who move in are poorer than those who move out. Moreover, in the competition with State and Federal Governments for tax revenues, local government comes off a poor third. Business, looking for lower tax rates, is following the flight to the suburbs. The city is left with the problems of providing the needs and services required for civilized living without the money to cope with them.

I don't believe the way out of this financial dilemma will come through local taxing systems—even as they may be revised. Wealth is too unequally distributed; its location bears too little relation to the need for services. Hence the property tax is unfair and relatively unproductive as well as relatively inflexible. And there is hardly any other kind of tax available which can be administered well on a local basis. Local sales taxes drive business outside the taxing jurisdiction. Graduated income taxes have been largely preempted by State and Federal Governments.

There are only two alternatives. One is to establish a new level of government, a fourth layer, that will correspond geographically to the new community, the metropolitan area. The other is to use the larger judisdictions that already exist: the State and Federal Governments, which in practical fact means the latter, since States are as limited in their financial resources as the cities.

All the evidence I have seen indicates that, despite the current outcry, the Federal budget is less of a strain on the national tax base than local budgets are on local tax resources. Since 1946, State and local taxes per capita have risen three times as fast as Federal taxes; State and local debts (a rough measure of the excess of need over resources) have also risen much faster than the Federal debt. This is why it seems to me that the economy campaign now being waged by some powerful organizations is totally misguided when directed against those parts of the Federal budget which would relieve the burden on local taxpayers—for example, Federal aid to education. Equally misguided have been the administration's cuts in urban renewal, which is a splendid example of something that could not be done at all if the communities had to rely on their own tax resources.

The second obstacle to restoration of the city is obsolete governmental structure. The legal and political framework in which we struggle to provide for the city of the future is sometimes our own worst enemy, when it should be our greatest ally.

What would we do if we were the Founding Fathers, and were creating a national political structure in this year 1959 instead of 1787? Of course, we would still create a Federal system, but would we have 49 States—plus Hawaii—with the present boundaries? Of course not. We would pay attention to the natural boundaries of social, economic and political communities and regions—we might even try to make boundary adjustments from time to time as conditions change.

But we are the captives of the mistakes, as well as the beneficiaries of the wisdom, of the Founding Fathers and their successors. We can't do much about illogical State boundaries in our lifetime. We can only try to moderate their effects.

In the meantime, there is a great opportunity for political invention at the local level. Instead of the unimaginative labyrinth of special and ad hoc bodies created in our metropolitan areas, let's continue to search for new approaches to metropolitan government. The need is great. I favor such developments as those being worked out in Toronto and Atlanta, in Dade County, Fla., and Allegheny County in Pennsylvania. And, in seeking larger jurisdictions, let's use intelligently the larger jurisdictions that already exist—the county, for instance; or for problems which cross county lines, the State; or for metropolitan problems that are characteristically interstate, the Federal Government.

If this last month sounds like a dangerous invasion of our honored tradition of local home rule, consider what's happened in highways. Very few of our communities had made any real start in building the metropolitan highway system of the future until the new Federal highway program was enacted. Now superhighways within metropolitan areas are an accepted part of the interstate system. Communities have the wherewithal to get these highways built, yet local control over the location of the highways is not truly lessened. City authorities participate to the full in these decisions. Under Federal leadership we have improvised a de facto metropolitan structure for highway-building which is working.

The same evolution is evident in regard to metropolitan water supplies. Municipal water supply has already become an important factor in Federal river-development projects; eventually, it may be the major factor. And because of the multipurpose use of water today, it may require a river-basin governmental agency to coordinate various consumer uses.

But to use our higher levels of government as we should in the solution of urban problems, two other political reforms are required:

1. We must bring the State legislature up to date, so that the tail of the rural counties stops wagging the dog of our huge urban populations.

2. We must reorient a Federal Government superbly equipped to deal with the nineteenth-century problems of agriculture and natural resources, and hardly equipped at all to deal with the urban society which today it largely represents.

A Federal Government which does not pay as much attention to urbiculture as to agriculture, to the conservation of cities as to soil, to the movement of people and goods within as well as between cities, is not adapted to today's America.

The third obstacle to restoring the city I have called a political lag. Thomas Jefferson warned that "the laws and institutions must go hand in hand with the progress of the human mind:" We must overcome the lag that separates the politician from the planner. The successful politician leads the people as well as reflects their views. Overcoming political lag means educating not just the politicians, but the public as well.

I don't suggest that creation of a Federal Department of Urban Affairs will determine whether the good society will survive. But

I think it can be the focus for efforts to restore our cities—perhaps our greatest challenge in the age-old battle of man to control and shape the environment in which he lives. The struggle between man and his surroundings—both those he found and those he made himself—is the stuff of which history is made. Along the path of this struggle, civilizations have come and gone.

And in many ways, the city is civilization. It is more than form; it is substance, life, spirit. Streets, buildings, and facilities exist for a purpose; they came into being because people need them to lead the type of existence which they preferred to any other.

And the desire to live in cities, the desire for urban culture—these will continue as long as civilization lasts.

Poll of the People of the Second Congressional District of South Dakota

EXTENSION OF REMARKS
OF
HON. E. Y. BERRY
OF SOUTH DAKOTA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 7, 1959

Mr. BERRY. Mr. Speaker, under leave to extend my remarks in the CONGRESSIONAL RECORD, I would like to include the results of a questionnaire I recently sent out to the people of the Second Congressional District of South Dakota.

Since this district is about equally divided between agricultural and nonagricultural interests, I made a special effort to obtain the benefit of the views of those in the agricultural area.

The questionnaire was sent to boxholders outside of first-class post offices and addressed to residents in first-class post office areas. Approximately 38,000 questionnaires were sent out in this manner, and approximately 7 percent have thus far returned their questionnaires.

In tabulating the results, I have divided the returns into four groups: the nonagricultural cities in the Black Hills area, agricultural cities and towns, farmer, and farmer-rancher categories.

Aside from the general questions on agriculture, labor, defense, and aid to education, probably the most interesting are the answers to questions 6 and 7 wherein 81 percent of the people of my district told me to vote against those grant-in-aid bills which violate the budget, unless tax increases are provided to cover additional costs. This, Mr. Speaker, does in my opinion give the Congress a good idea of the way the people of America feel with regard to grant-in-aid programs and reckless spending in general.

Let me say, Mr. Speaker, that this questionnaire has been most valuable to me, not only because of the vote itself but because more than 8 out of 10 returning the questionnaire gave me the additional benefit of their thinking in footnotes at the bottom of the questionnaire itself. Many also enclosed an additional letter covering their views.

In presenting the tabulation, the percentages are listed simply as "Yes" and "No." The remainder have no opinion on the various questions.

QUESTIONNAIRE RETURNS

1. The defense of the United States—in the face of the Soviet Union's constant aim for world domination and the challenge of their outer space satellites—is a grave national problem. Do you favor expansion and an acceleration of our defense effort, particularly in such fields as long-range ballistic missiles, nuclear weapons, earth satellites, and basic scientific research, even though this may require additional taxes to meet these added expenditures:

Total: Yes, 64 percent; no, 18 percent. City: Yes, 77 percent; no, 13 percent. Town: Yes, 66 percent; no, 12 percent. Farmer-rancher: Yes, 59 percent; no, 26 percent. Farmer: Yes, 52 percent; no, 21 percent.

2. In the President's budget, he suggested appropriating $3.9 billion for our mutual security (foreign aid) program, on the basis that this program helps the free nations promote collective defense and economic growth and, as such, is essential to our security. Do you favor continuation of our mutual security-foreign aid program?

Total: Yes, 45 percent; no, 40 percent. City: Yes, 50 percent; no, 34 percent. Town: Yes, 47 percent; no, 46 percent. Farmer-rancher: Yes, 47 percent; no, 45 percent. Farmer: Yes, 37 percent; no, 35 percent.

If your answer is "yes," check one of the following:

Total: At present cost, 52 percent; at reduced cost, 41 percent; at increased cost, 7 percent.

3. In an effort to keep a check on domestic spending at a time when our defense program must have absolute top priority, the President has asked that Congress curtail certain civil programs and turn back the responsibility for various Federal grants-in-aid programs to the State and local governments. Do you agree with such a domestic belt-tightening program at this time?

Total: Yes, 72 percent; no, 16 percent. City: Yes, 76 percent; no, 16 percent. Town: Yes, 76 percent; no, 11 percent. Farmer-rancher: Yes, 75 percent; no, 14 percent. Farmer: Yes, 60 percent; no, 25 percent.

The President also suggests that new starts on construction of irrigation and flood-control projects be delayed until defense pressures on our economy have eased. Do you agree with this policy?

Total: Yes, 72 percent; no, 21 percent. City: Yes, 73 percent; no, 20 percent. Town: Yes, 69 percent; no, 24 percent. Farmer-rancher: Yes, 80 percent; no, 18 percent. Farmer: Yes, 70 percent; no, 24 percent.

5. School districts depend generally upon the real and personal tax base within their districts for the operation of the schools. Increased demands are being made upon districts by a higher pupil load, more classroom facilities, and increased salaries for teachers. Increased revenue can be obtained in four ways: (1) Increasing the real and personal property tax levy; (2) by the State adding 1 cent sales tax earmarked for education; (3) the Federal Government adding 1 cent on the net income tax, diverting it directly to the treasury of the State earmarked for education; (4) an expensive overall Federal aid-to-education program (Murray-Metcalf bill costing from $3 billion to $5 billion annually) with the necessary Federal regulations and controls. Which system do you prefer?

Total: (1) 14 percent; (2) 64 percent, (3) 19 percent, (4) 3 percent. City: (1) 9 percent, (2) 72 percent, (3) 15 percent, (4) 4 percent. Town: (1) 14 percent, (2) 63 percent, (3) 18 percent, (4) 5 percent. Farmer-rancher: (1) 15 percent, (2) 67 percent, (3) 17 percent, (4) 1 percent. Farmer: (1) 17 percent, (2) 55 percent, (3) 24 percent, (4) 4 percent.

6. In order to keep the budget in balance, would you favor requiring the Congress to levy additional taxes for all spending programs enacted which would be in excess of the anticipated national income?

Total: Yes, 52 percent; no, 32 percent. City: Yes, 54 percent; no, 33 percent. Town: Yes, 51 percent; no, 33 percent. Farmer-rancher: Yes, 55 percent; no, 28 percent. Farmer: Yes, 48 percent; no, 35 percent.

7. Do you want me to vote against those grant-in-aid bills which violate the budget unless tax increases are provided to cover the additional costs?

Totals: Yes, 81 percent; no, 8 percent. City: Yes, 81 percent; no, 6 percent. Town: Yes, 81 percent; no, 8 percent. Farmer-rancher: Yes, 88 percent; no, 7 percent. Farmer: Yes, 76 percent; no, 10 percent.

8. There is wide recognition of the need to more fully utilize the potential of our young people in professional fields, particularly science and engineering. Do you favor the granting of Federal tax deduction credit to parents for college tuition costs as one means of encouraging greater college enrollment of qualified young people?

Total: Yes, 55 percent; no, 35 percent. City: Yes, 57 percent; No, 34 percent. Town: Yes, 59 percent; no, 32 percent. Farmer-rancher: Yes, 56 percent; no, 35 percent. Farmer: Yes, 48 percent; no, 39 percent.

9. Following the findings of the McClellan Labor Rackets Committee hearings, the President recommended labor legislation which would do four things: (1) Safeguard workers' funds in union treasuries against misuse of any kind whatsoever; (2) protect the rights and freedoms of individual union members, including the basic right to free and secret election of officers; (3) advance true and responsible collective bargaining; (4) protect the public and innocent third parties from unfair and coercive practices such as boycotting and blackmail picketing. Do you want me to oppose legislation which falls short of these four goals?

Total: Yes, 74 percent; no, 14 percent. City: Yes, 75 percent; no, 13 percent. Town: Yes, 77 percent; no, 14 percent. Farmer-rancher: Yes, 78 percent; no, 13 percent. Farmer: Yes, 65 percent; no, 18 percent.

10. In his agricultural message, the President emphasized the food-for-peace program of expanding the use of our agricultural surpluses for food abroad. Although expansion involves increased expenditure, would you favor such a program rather than curtailment of farm production?

Total: Yes, 66 percent; no, 19 percent. City: Yes, 60 percent; no, 23 percent. Town: Yes, 65 percent; no, 19 percent. Farmer-rancher: Yes, 68 percent; no, 18 percent. Farmer: Yes, 69 percent; no, 17 percent.

11. Would you favor limiting our economic foreign aid program entirely to providing food supplies abroad?

Total: Yes, 49 percent; no, 36 percent. City: Yes, 40 percent; no, 43 percent. Town: Yes, 50 percent; no, 37 percent. Farmer-rancher: Yes, 48 percent; no, 38 percent. Farmer: Yes, 56 percent; no, 28 percent.

12. A crash program on missiles has produced amazing results. Would you favor a crash program in research for the development of industrial uses for farm commodities?

Total: Yes, 59 percent; no, 24 percent. City: Yes, 42 percent; no, 35 percent. Town: Yes, 58 percent; no, 24 percent. Farmer-rancher: Yes, 61 percent; no, 24 percent. Farmer: Yes, 75 percent; no, 14 percent.

13. Wheat is the principal farm commodity on which a legislative program may be expected out of this Congress. Would you prefer the domestic parity or two-price system for wheat, with bushel rather than acreage quotas, to the present support program?

Total: Yes, 49 percent; no, 13 percent. City: Yes, 30 percent; no, 9 percent. Town: Yes, 47 percent; no, 12 percent. Farmer-rancher: Yes, 55 percent; no, 13 percent. Farmer: Yes, 62 percent; No, 21 percent.

14. Would you favor high Government supports on all farm products with absolute rigid production controls covering all farm commodities?

Total: Yes, 14 percent; no, 72 percent. City: Yes, 5 percent; no, 73 percent. Town: Yes, 10 percent; no, 72 percent. Farmer-rancher: Yes, 16 percent; no, 77 percent. Farmer: Yes, 26 percent; no, 65 percent.

15. The President has proposed an increase of Federal gasoline tax from the present 3 to 4½ cents per gallon to accelerate construction of the Interstate Highway System. Do you favor such an increase?

Total: Yes, 41 percent; no, 52 percent. City: Yes, 48 percent; no, 42 percent. Town: Yes, 43 percent; no, 50 percent. Farmer-rancher: Yes, 37 percent; no, 56 percent. Farmer: Yes, 37 percent; no, 59 percent.

Washington Report

EXTENSION OF REMARKS
OF
HON. BRUCE ALGER
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Monday, March 16, 1959

Mr. ALGER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following newsletter of March 28, 1959:

WASHINGTON REPORT BY CONGRESSMAN BRUCE ALGER, FIFTH DISTRICT, TEXAS

MARCH 28, 1959.

The second supplemental appropriation bill, 1959, totaled approximately $2,480 million and involved mainly Government salary increases voted in the last Congress. The big debate was over the $100 million increase to the Development Loan Fund, under foreign aid. The clash occurred over the Comptroller's figures of $678 million in the Fund still unexpended versus the argument that obligations or signed loan agreements totaled $685 million, leaving only a $15 million balance. Admittedly, the report accompanying the bill described the latter figures as "guess figures." To this uncertainty is added the disapproval some of us have over the loss of congressional control of this revolving fund, best example of which is our voting to spend more on the strength of "guess figures." Secondly, I find it hard to approve further spending, even meritorious (if it is), when we are spending beyond the already-too-high budget. The amendment approving this $100 million amendment additional spending passed by a vote of 183 to 59. I opposed it.

The Bretton Woods Agreement Act amendment in two parts deals with world loans (68 individual member nations):

1. International Monetary Fund: Its purpose, to stabilize member nations' currencies, endeavoring to keep currencies convertible by extending short term loans. The end sought being increased trade and monetary exchange between nations. Of a total of $9 billion, the United States has subscribed 26 percent, and this bill would provide another $1,375 million, 25 percent of which is payable in gold, as is 25 percent of the earlier subscription.

2. International Bank for Reconstruction and Redevelopment: Its purpose, to aid economic assistance of member nations through loans for projects such as electrical power development, port and transportation facilities, land reclamation and others. Of the $10 billion, the United States has bought stock totaling 28 percent. This bill would double the stock purchase of each nation (total becoming $21 billion). Of each nation's total, 2 percent is in gold or dollars, 18 percent in a nation's currency, and 80 percent callable as reserve. The nations of the world helping each other through joint participation is a neighborly, challenging, and commendable goal, as I see it. The results are satisfying in that no loans are in default, and banking policies—that is, businesslike procedures—are being followed. But dangers, that in starry-eyed idealism we must not overlook, include; (1) loans to stabilize foreign currency, the whole structure resting on U.S. credit and financial strength—the whole program is weakened to the degree that U.S. currency is unstabilized by our own deficit financing and debt through trying to help others. And we are operating at a deficit, (2) our gold reserve is steadily being depleted, and our currency value rests on this gold. Foreigners can convert dollars into gold, but Americans cannot. Of our $20 billion gold reserve, some estimate that $11 billion is callable now by foreign nations, (3) we add money to funds which must have large liquid assets when the United States because of continued expanding Federal spending is not liquid itself, with its own bonds becoming less attractive to investors, (4) how much of this loan structure is actually repayable through U.S. gifts of foreign aid in one form or another? It seems to me that no one can know until the study is made. Basically, if the U.S. economic systems on which world loans depend collapses, it would be the death of the free world and personal freedom which we all treasure. I feel our action of expanding spending programs is too hasty when we have a $13 billion deficit this year and another deficit in prospect. Can anyone seriously contend we can help strengthen others if we weaken or collapse our own economy? I cannot.

The fair trade bill, H.R. 1253, is before the Interstate and Foreign Commerce Committee for hearings. Last year as a member of the subcommittee, I sat through weeks of hearings. This week I testified against this bill and presented 22 digested studies of the bill for the CONGRESSIONAL RECORD and colleagues who might be interested. The fair trade bill would permit manufacturers to set retail prices through Congress setting aside antitrust law which makes price maintenance conspiracies illegal.

For the layman, it may be difficult to take the matter seriously, it is so apparently antithetical to all our beliefs, but I'm convinced the proponents are serious. What's wrong with the bill? Well, it's unconstitutional, incompatible with free enterprise, and violates States rights and individual prerogatives. These charges can be spelled out with documentation. Information will be sent to anyone so requesting it. Retailers, particularly smaller independents, should study fair trade to learn how it will ruin, not help, them.

(EDITORIAL NOTE.—No kinfolk are on the payroll and no office rental payments are received for Texas' Fifth Congressional District.)

Twelve-Point Plan To Improve Social Security System

EXTENSION OF REMARKS
OF
HON. VICTOR L. ANFUSO
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 7, 1959

Mr. ANFUSO. Mr. Speaker, it is by now generally agreed that help and care of our aged population constitutes today a major national problem which requires a serious approach on a national scale. We have today over 12 million elderly and retired citizens who are dependent on their monthly social security payments for their subsistence, and before very long their number will reach 15 million people. There are others in this age group who would prefer to retire, but they cannot afford to do so because the benefits they would derive would be insufficient to cover their needs in these days of high cost of living.

Our social security system was initiated in 1935. We shall soon be approaching the quarter-century mark. It was originally established as one of the major steps in combating the greatest economic depression in our history, and it really proved to be an important factor in helping to pull the Nation out the economic mire of the 1930's. What is achieved then it can do now, too, in view of the 5 million unemployed in the country now and the very slow recovery that our economy is making from last's year's recession.

Over the past few years we have made some amendments to the Social Security Act, particularly in extending coverage to more people and increasing benefits to some extent. Last year I supported the 7-percent increase, though I tried to obtain a higher increase. However, these improvements have been relatively small compared to the needs of the average retired person. Many of them have no savings to supplement their social security income. They have been victimized by the sharp rise in the cost of living since the end of the war. Many of them find themselves in dire straits and are actually undergoing physical and mental anguish in an effort to keep their heads above the water at a period in life when their health is deteriorating.

Our Nation cannot afford to let those who are forced to retire because of advanced age to pay a heavy toll by being relegated to a lower standard of living in their declining years. The higher costs of food, medical care and other essentials of life have shrunk the value of their meager dollars which they receive each month. In the past, some of our elderly citizens were able to supplement their limited income with outside earnings, but these opportunities have greatly diminished in recent years with the increase in unemployment.

I have become firmly convinced in the last few years that we have reached a point where an overhaul of the social security system is badly needed. We must bring it into step with the times and the needs of the people. We must make urgent improvements and introduce long-needed changes which will enable our elderly people to enjoy the fruits of their life's labor in their declining years, without undue worries and the feeling of being "the forgotten people."

Consequently, I have given considerable thought to this whole problem of our senior citizens, with the result that I am now renewing my efforts to obtain larger benefits. During the past few months I have been working on an omnibus social security measure and I am now introducing this bill. It contains 12

major changes which, if adopted, would be a great step forward in overhauling and improving the whole social security system.

The following are the 12 major provisions advocated in my omnibus social security bill:

Section 1 increases all social security benefits by 30 percent. Minimum monthly payments are to be increased to $50, instead of $33 at present. Maximum payments are to be established at $200 in the case of primary beneficiaries.

Section 2 reduces the retirement age to 62 for both men and women, and eliminates the present actuarial reduction in benefit amounts for women.

Section 3 increases from $4,800 to $6,000 the amount of annual wages which may be taken into account in computing benefits and taxes, thus increasing the earnings base.

Section 4 does the same thing for those in the self-employment category by increasing from $4,800 to $6,000 the amount of their income from self-employment which is to be taken into account in computing their benefits and taxes.

Section 5 extends from 18 to 21 the maximum age for eligibility of children to receive benefits, which would enable such children to continue their education and finish college or other schooling.

Section 6 increases the amount of a widow's social security benefit from the present level of 75 percent of her husband's allowance to 85 percent of that amount.

Section 7 increases from $1,200 to $1,500 a year the amount of outside earnings which a social-security pensioner may receive without suffering deductions from his benefits under the work clause.

Section 8 permits a blind person to receive disability insurance benefits with only four quarters of coverage, and to continue to receive such benefits after attaining retirement age.

Section 9 establishes a new program of hospitalization and surgical insurance for individuals entitled to old-age and survivors insurance benefits. It would cover the costs of up to 60 days of hospitalization in each 12-month period; the cost of up to 120 days of nursing home services in each 12-month period, also payments covering reasonable costs of surgical services, as well as out-patient care and emergency surgery.

Section 10 provides that an individual's first $50 a month of earned income shall be disregarded in determining his eligibility, on the basis of need, for old-age assistance. In other words, recipients of such assistance would be permitted to earn up to $50 a month without having that amount deducted from their subsistence grants.

Section 11 seeks to aid dependent children over the age of 18, if they are regularly attending school. The purpose here is to encourage the care of dependent children and to enable such needy children to acquire an education.

Section 12 increases the rates of social security taxes for employees, employers, and the self-employed in order to obtain the necessary funds required to cover the additional costs of these increased benefits and to keep the social security fund solvent.

This is my 12-point program for overhauling the social security system. Each of these points fills a need. All of them together would bring the entire system up to date and make it one of the best in the whole world—a model for many other nations to seek to emulate.

It is my view that the increased benefits advocated in my bill will repay the extra cost in a number of ways:

First. It would provide greater purchasing power to our retired citizens and enable them to maintain an adequate standard of living in their retirement.

Second. It would encourage many of our older workers to retire and make available more jobs for younger people, thus decreasing the unemployment rolls and unemployment insurance payments.

Third. It would provide a much-needed health program of hospital and surgical services and nursing-home care for the elderly, thus helping them to save on their costly medical care needed in old age and to utilize their meager income for other essentials.

Fourth. It would assist and encourage many youngsters to stay in school and continue their education up to the age of 21, from which both they and the Nation would gain, thus keeping them out of the labor force or preventing them from becoming public charges.

Fifth. It would provide a considerable boon to the economy of the country because of the increased purchasing power on the part of the retired, the reduction in unemployment, the medical care for the old, the education to the young, and the other phases of this program.

Just as the launching of social security in the 1930's helped to overcome the effects of the depression of that era, so an overhaul along the lines as suggested in my bill could prove to be of more lasting value to the economy of the Nation and the continued economic growth of the country.

I recall that when social security was first introduced nearly a quarter of a century ago, it was considered by many people as a drastic step because of the payments involved. There were even some pessimists who foresaw economic ruin for the country. As we look back over the perspective of time, what do we find? Today a grateful Nation realizes the tremendous significance of the social security system and would not hear of discarding it or even reducing it. A political officeholder or a political party advocating such a step would be thrown out of office at the very next election.

The American people have long ago ceased to regard social security in the nature of a dole. Rather, they prefer to regard it as a democratic system established by a free people to provide economic security to its older citizens after they have completed a lifetime of useful service. It is our way of saying to these people: Now that you are retired from your life's labors, a grateful Nation will maintain you in dignity and security, free from want or worries. But are we really maintaining them in dignity and security? Unfortunately, our elderly citizens are not enjoying the measure of economic independence originally foreseen for them under the social security system.

The time has, therefore, come when we must take full cognizance of the problems of our aging population, not merely for their own benefit but for the Nation as a whole. We cannot ignore these problems any longer or they will get out of hand. We must approach them from a practical, yet humane, point of view.

I believe that the approach advocated in my bill is reasonable and realistic. It will help eliminate major deficiencies in our social security system, and at the same time provide our older citizens with greater economic security. It will make possible for them to live in dignity and to walk with their heads high—proud that an appreciative Nation has not forgotten them in their old age.

Chicago Pays Tribute of Appreciation and Affection to Hon. Thomas J. O'Brien

EXTENSION OF REMARKS
OF

HON. BARRATT O'HARA

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 7, 1959

Mr. O'HARA of Illinois. Mr. Speaker, my colleagues on both sides of the aisle will be pleased to learn of the tribute of appreciation and affection given the Honorable THOMAS J. O'BRIEN, beloved dean of the Illinois delegation at a notable luncheon in his honor at the Palmer House in Chicago on Friday last. The luncheon, sponsored by the president and the board of trustees of the Metropolitan Sanitary District for his leadership in lake diversion legislation, was attended by the leaders in the public and civic activities of the city of Chicago. It was an outstanding event, marking the great esteem in which the dean of our delegation is held in the city of his birth and of his life-long devotion.

Following is the resolution passed by the Metropolitan Sanitary District, an engrossed copy of which was presented to Congressman O'BRIEN in a speech by Trustee Casimir Griglik:

Whereas the Honorable THOMAS J. O'BRIEN, Congressman from the Sixth Illinois District, dean of the Illinois House congressional delegation, has consistently and with persistence and outstanding ability in the 83d, 84th, and 85th sessions of Congress led the fight for the vitally needed diversion of water from Lake Michigan at Chicago to improve the polluted conditions in the Illinois Waterway; and

Whereas the diversion bills in the 83d and 84th Congresses, having both been approved by the House and Senate, were vetoed by the President, and Congressman O'BRIEN's bill in the 85th Congress (H.R. 2) was approved by the House in the first session but failed of passage in the Senate in the closing hours of the second session; and

Whereas despite these discouraging actions, Congressman O'BRIEN, on January 7, 1959, at the opening of the 1st session of the 86th Congress, on behalf of the Illinois House delegation, again introduced the diversion bill patterned to meet the objections

heretofore raised to the preceding bills by the various opponents, which bill was given the significant designation of H.R. 1 in respect to its sponsor, Congressman THOMAS J. O'BRIEN; and

Whereas at Congressman O'BRIEN's urging, the House Public Works Committee conducted open hearings on said H.R. 1 on February 17 and 18, 1959, and March 3, 1959, to enable all proponents and opponents ample time to present their respective views, and thereafter said House Committee on Public Works favorably recommended the adoption by the House of H.R. 1 by a vote of 19 to 11; and

Whereas the House of Representatives on March 13, 1959, after due debate on the merits of said legislation, concurred in the recommendations of the House Public Works Committee and adopted H.R. 1 by a vote of 238 to 142: Now, therefore, be it

Resolved by the board of trustees of the Metropolitan Sanitary District of Greater Chicago, in regular meeting assembled this 19th day of March 1959, That we do hereby formally express our sincere personal and official appreciation to Congressman THOMAS J. O'BRIEN for his outstanding labors in Congress on behalf, not only of all of the people of the city of Chicago and of the Metropolitan Sanitary District of Greater Chicago, but the people of the entire State of Illinois; and be it further

Resolved, That, in recognition of Congressman O'BRIEN's outstanding services, particularly on behalf of this vitally needed additional diversion legislation in view of the impressive opposition, these resolutions be spread upon the official records of the permanent proceedings of the Metropolitan Sanitary District of Greater Chicago, and a copy hereof suitably engrossed be presented to the Honorable Congressman THOMAS J. O'BRIEN.

Board of Trustees: Walter S. Baltis, John A. Cullerton, Vincent D. Garrity, Casimir Griglik, John G. Henneberger, Wm. S. Nordburg, William F. Patterson, Christopher C. Wimbish, Frank W. Chesrow, President.

I am further extending my remarks to include TOM O'BRIEN's heart-to-heart, straight from the shoulder talk to his fellow Chicagoans who had met in this imposing gathering to pay him honor. I am sure that every Member of this body in which TOM O'BRIEN has served so long and with such distinction, and in which he is beloved and respected by all, will wish to read his remarks on this memorable occasion. Here is the full text:

Mr. Chairman and friends, I want to thank all of you for the many nice things you have said about me and for this testimonial.

I am particularly proud of the many gracious things said to me by Dick Daley. I have lived in the city of Chicago all my life, and it has been a long life. I have been in politics a long time—as a matter of fact, I was elected to the Illinois Legislature over 50 years ago. I have known all the mayors of Chicago during my political life and I want to say here and now that the city of Chicago never had a better mayor than Dick Daley. I mean it. Those of you who know me know that I speak directly and to the point. I say without a doubt that Dick Daley has been the best mayor the city has ever had.

I am being honored today, and yet a goodly portion of the honor which you bestow upon me today is attributable to the mayor. He has worked unceasingly for the lake diversion bill and it is because of his wish that I filed it. He has cooperated and worked with me and with the other members of the Illinois delegation like no other mayor ever did. As a matter of fact, until Dick Daley came into office, the Illinois congressional delegation never knew officially that a mayor of Chicago existed. They never asked us to help them with any legislation; they never communicated with us as Dick Daley has done, on the housing bill, on the airport construction bill, on the lake diversion bill, on the National Medical Library bill, on public housing, on appropriations for urban renewal and development—Dick Daley has been in the center of the fight of all of these bills, and has been working with us. That is why I say I am particularly honored that the mayor should say the nice things he did about me.

I really didn't want this ceremony—but that doesn't mean that I am not grateful for it. I must say in all honesty, right at the start, that although it is I who am being honored, the testimonial should go to all members of the Illinois congressional delegation—Republicans and Democrats alike. Mrs. CHURCH and HAROLD COLLIER fought just as hard for this bill as any of us did, and deserve as much credit for its passage by the House on March 13 as any of the Democrats. This is a nonpartisan bill. I once heard President Truman say that the Illinois delegation in Congress is the best congressional delegation in the country. That is still true today.

Yes, we have the bill passed by the House. And before we came home for the Easter recess, Sid Yates and I went over to the Senate and asked Senator KERR to set the bill down for hearing before his committee. He promised us that he would do it as soon as the Congress reconvened. I know we will get a fair hearing from Senator KERR.

But I would not be fair with you if I did not tell you that I believe the bill is in trouble—in much more trouble than it was in the last session of Congress, because at that time the Government of Canada had declared that it had no objection to the bill. The entire executive branch was with us then—the State Department, the Bureau of the Budget, the Army Engineers—as a matter of fact, it was at the suggestion of one of the representatives of the executive branch that the 3-year period of diversion was cut down to 1 year. It was represented to us that if this was done we could obtain the approval of the State Department and the President would not veto the bill.

And we did it—we changed the bill in accordance with that suggestion. Nothing has changed since that time. The conditions are exactly the same. The present bill provides for 1-year diversion and yet, for some unknown and mysterious reason, the Government of Canada is against it, the State Department is against it, the Bureau of the Budget is against it, and the Corps of Army Engineers is against it. What has happened to make all these people change their minds? I don't know, but I shall certainly ask Senator KERR to try to find out the reasons for this reversal.

I cannot understand the attitude of the Government of Canada to this bill. Canada is a great country. Its people are among the finest in the world. We have enjoyed the friendliest relations with our great neighbor to the north in every respect. I read in the paper on Wednesday night that the Canadian Consul General had declared that "Chicago is more closely tied to Canada than any other part of the United States." He said that "Chicago has become the very hub of this great American-Canadian trade and industrial relationship. * * * There is more trade flowing back and forth between the Chicago Midwest and Canada than any other area in the United States." That is what the Canadian Consul said the other night and I agree with him. There is no reason for any difference between Canada and Chicago on any matter—and that includes the lake diversion matter as well.

The experiment which we are proposing in the lake diversion bill will harm no one and can only bring beneficial results, because the problem of sanitation and water pollution is of tremendous importance to every metropolitan area in the country. This experiment may very well furnish the basis for new methods of disposing of wastes.

I cannot believe that Canada is serious in contending that this study will be harmful to navigation and will injure its shipping and power interests. We do not propose a permanent diversion in this bill. We seek only to divert an additional 1,000 cubic feet per second for a period of 1 year to permit the study to be made. The Corps of Engineers—certainly, a most reputable agency—has declared that the experiment would have no significant effect upon navigation and the lowering of lake levels. The most that any lake level will fall as a result of the additional diversion of water contemplated in my bill is a quarter of an inch or less. How can it possibly be said that this will be hurtful to navigation or shipping.

There is an additional point which must be made and which demonstrates conclusively that navigation and shipping need not be affected. The report of the Corps of Army Engineers printed in the Senate as Document No. 23 of the 85th Congress, 1st session, declares, in paragraph 197, that "lowering of lake levels resulting from an increase in diversion considered herein could be compensated for on Lakes Michigan, Huron and Erie. Such compensating works for Lakes Michigan and Huron could be built in the St. Clair River at an estimated cost of $1,530,000. The gated control dam above the cascades in the Niagara River now under construction under the supervision of the International Joint Commission could be operated to compensate for the reduction in the Lake Erie level. The levels of Lake Ontario will be regulated in connection with the St. Lawrence Seaway and power project. The plan of regulation can be modified as required to accommodate the reductions in outflows within the range of stage established for Lake Ontario levels under regulation."

The Engineers' report says, further: "Coordination and agreement with Canada would be required to accomplish either of the above."

So, you see, Canada has it within its own power by agreement with the United States to regulate the levels of the lake and to prevent any damage to navigation and shipping. Even if the sill in the St. Clair River, to which the Army Engineers refer, is not constructed, the damage to Canada's navigation and shipping interests can be eliminated almost entirely during the period of diversion proposed in my bill. Therefore, there is no basis for protest on this score.

The other objection raised by Canada, namely, the loss in power revenues, is similarly subject to adjustment. The report of the Corps of Engineers indicated that over the 15-year period during which time the proposed diversion is supposed to have an effect, the loss in revenues to both Canadian and American interests would average $36,000 per year. I ask you—how badly would Canadian and American power interests who are protesting this bill—how badly would they be hurt when their projected loss of $36,000 per year compared with total power revenues accruing to them of $100 million per year? One hundred million dollars is the anticipated annual earnings of the Canadian and American powerplants.

When one compares this small most uncertain injury with the tremendous earnings of the huge power operations, how pertinent becomes the statement made by the House Committee on Public Works in its report on my bill, when it said: "The value of helping to solve one of the most pressing problems of a great metropolitan area far outweighs whatever slight temporary loss, if any, might be sustained by adjacent areas."

But the possibility of minimizing this loss even further exists for the power interests

by adjustments in the rate of flow over the Niagara Falls. Amounts of water are apportioned at certain times of the day in greater quantities because of tourists. Why could not the possible damage be compensated for by adjusting the flow to permit slightly longer diversion of the water for power purposes? The amount of loss to the tourists would be infinitesimal in terms of their enjoyment of the grand spectacle.

Thus, there are a number of ways in which parties willing to work together can find a solution to this problem. We want to work together with Canada. I agree with Counsel General Newman that "Chicago is more closely tied to Canada than any part of the United States"—and we want to keep it that way. That is why we ask Canada to keep an open mind on this matter which is of such vital importance to the people of Chicago and Illinois, rather than permitting the historical antagonisms of the past to shut out any possibility of coming to an agreement.

I hope we can persuade the Government of Canada to withdraw its protest. Chicago is destined to become the No. 1 city of the world, and its growth must not be impeded by what must be described as an illogical and unwarranted protest by the Government of Canada. If Canada holds dear Chicago's friendship—as Chicago does Canada's—it will not arbitrarily throttle the natural expansion of a thriving metropolis by filing a stony and final protest, rather than seeking a meeting place where the minds of friends may agree upon a reasonable solution of a pressing problem.

Chicago will never stop growing. It will never stop because its people are so vital and dynamic—because its people have pride and confidence in themselves and in their community—and because we have leaders like Mayor Daley.

I want you to know that I will continue to fight for the people of Chicago and for the passage of the lake diversion bill. I am sure that all of my colleagues in the Illinois congressional delegation join me in that pledge.

To all of you, to Mayor Daley, to President Chesrow, to all the members of the Metropolitan Sanitary District of Greater Chicago, I say in the words of Speaker RAYBURN: "Thank you from the bottom of a grateful heart for your graciousness and generosity in bestowing this great honor upon me today."

Status of the Democratic Program

EXTENSION OF REMARKS
OF
HON. CHARLES O. PORTER
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 7, 1959

Mr. PORTER. Mr. Speaker, the majority leader of the other body is certainly correct when he states that the 86th Congress has a man-sized job cut out for it.

In his speech at Big Spring, Tex., of November 7, 1958, Senator JOHNSON listed 12 objectives.

How are we doing with respect to these objectives? Where do we stand as of April 10, 1959? At my request the Legislative Reference Service prepared for me a brief summary and status of the Democratic legislative program as set forth in the 12 items which Senator JOHNSON listed in his address, plus a 13th having to do with education, which I have taken the liberty of adding to the list.

It is plain from looking at these data, which are set out below, that leadership will have to select particular bills in some instances and in other instances will have to see that further legislation is filed.

The following program as outlined is taken primarily from legislation which has been introduced in the Senate. Certain companion bills introduced in both Houses have been noted. In most cases similar legislation has been introduced in the House and referred to the appropriate committee.

Committee action, not indicated, has already been initiated by most of the committees responsible for such legislation. The enactment of the outlined Democratic program appears to be well ahead of schedule.

Here is the information:

First. We need to breathe life into the newly created space agency and launch a program to explore outer space:

S. 586, Mr. KEFAUVER, January 20, 1959 (Aeronautical and Space Sciences): Department of Science Act of 1959 establishes a Department of Science to carry out programs for developing missiles, rockets, etc., and other programs of research with respect to outer space. Transfers to such agency the National Science Foundation, the Atomic Energy Commission, and similar functions of the Defense Department.

S. 676, Mr. HUMPHREY and others; January 23, 1959 (Government Operations): Department of Science and Technology Act of 1959 establishes a Department of Science and Technology and transfers to such department (1) the National Science Foundation; (2) the Atomic Energy Commission; (3) the National Aeronautics and Space Administration; (4) the National Bureau of Standards; and (5) certain functions now being administered by the Smithsonian Institute.

S. 1096, Mr. JOHNSON of Texas and Mr. BRIDGES; February 17, 1959 (Aeronautical and Space Sciences): Authorizes an additional $48,354,000 for fiscal 1959 for the National Aeronautics and Space Administration as follows: (1) salaries and expenses, $3,354,000; (2) research and development, $20,750,000; (3) construction and equipment, $24,250,000. Passed Senate March 10, 1959; reported in House March 18, 1959.

H.R. 2971, Mr. BROOKS of Louisiana; January 21, 1959 (Science and Astronautics): Authorizes $82,050,000 for the acquisition of property; plant construction, etc.; for the National Aeronautics and Space Administration.

Second. We need a program to develop the peaceful uses of the atom—with emphasis on an atomic merchant marine.

S. 683, Mr. GORE; January 27, 1959 (Atomic Energy): Atomic energy amendments of 1959 authorizes $1 billion for the Atomic Energy Commission (1) to construct a large-scale prototype power reactor; (2) to construct power reactor facilities at major production facilities of the Commission to supply the electrical energy needed by such facilities; (3) to develop reactor designs, etc., capable of a maximum production of not more than 50,000 kilowatts of electricity; and (4) to initiate a program for the development of civilian power reactors of from 10,000 to 50,000 kilowatt capacity.

Directs the Commission to conduct a vigorous program of international cooperation and assistance in the development of power reactors, and to accelerate existing programs for the development of nuclear rocket propulsion and to proceed with the development of a manned vehicle powered by nuclear propulsion.

H.R. 4822, Mr. TOLLEFSON; February 19, 1959 (Merchant Marine and Fisheries): Authorizes the construction of a nuclear-powered tanker for operation by the Maritime Administration.

Third. We need a program to step up the supply and conservation of water for the West.

S. 13. Messrs. ENGLE and KUCHEL; January 9, 1959 (Public Works): Provides Federal assistance, loans for up to 50 years and grants, to encourage the planning and construction of non-Federal municipal and industrial water development projects on a multiple purpose, comprehensive basis.

S. 943. Mr. ENGLE and others; February 5, 1959 (Interstate and Foreign Commerce): Authorizes $10 million over a 10-year period for a program of weather modification directed at increasing the annual average usable supply of water in the Colorado River Basin.

Senate Resolution 48, Messrs. MANSFIELD and MURRAY; January 27, 1959 (Interior and Insular Affairs): Establishes a select committee to make studies of water resources and future needs thereof.

H.R. 8, Mr. TRIMBLE; January 5, 1959 (Public Works): Water Conservation Act of 1959 establishes a national policy and procedure for the development of water resources on a comprehensive multiple-purpose basis.

H.R. 289, Mr. TRIMBLE; January 7, 1959 (Interior and Insular Affairs): Establishes criteria for the utilization by the Secretary of the Interior in the determination of the feasibility of constructing or modifying any reclamation project.

H.R. 1863, Mr. CLEMENT W. MILLER; January 9, 1959 (Public Works): Authorizes loans and grants to provide Federal cooperation in non-Federal municipal and industrial water development projects.

H.R. 2145, Mr. BECKWORTH; January 12, 1959 (Interior and Insular Affairs): Authorizes $200 million annually for Federal aid, on a 50–50 basis, to assist States and local governments to plan, construct, operate, and maintain projects for water conservation and storage.

Fourth. We need to review our foreign policy so that bold, new, imaginative programs can be recommended to responsible officials.

S. 1094 (H.R. 4452), Mr. FULBRIGHT (by request); February 17, 1959 (Foreign Relations): Authorizes the U.S. Governor of the International Monetary Fund to request and consent to an increase of $1,375 million in the U.S. quota for such fund, to vote for increases in the capital stock of the International Bank for Reconstruction and Development and, if such increase becomes effective, to subscribe to 31,750 additional shares of stock. (Passed House, amended, March 25, 1959.)

H.R. 2159, Mr. CURTIS of Missouri; January 12, 1959 (Foreign Affairs): U.S. Trading Corporation Act establishes the U.S. Trading Corporation to undertake such measures as will effectively meet the threat to the free world of long-range economic penetration of world markets by the Soviet bloc.

H.R. 4452 (S. 1094), Mr. SPENCE; February 12, 1959 (Banking and Currency): Laid on table March 25, 1959; S. 1094 passed in lieu.

House Resolution 113, Mr. MORGAN; January 15, 1959 (Rules): Authorizes the Committee on Foreign Affairs to conduct an investigation of policies, etc., of the State Department and other departments and agencies engaged primarily in the implementation of our foreign policy. (Passed by House January 29, 1959.)

House Resolution 114, Mr. MORGAN; January 15, 1959 (House Administration): Provides for expenses of conducting investigations under House Resolution 113. (Passed by House February 24, 1959.)

Fifth. We need a consistent policy for Latin America which will help our neighbors to help themselves.

Senate Resolution 17, Mr. SMATHERS; January 12, 1959 (Foreign Relations): Favors the establishment of an inter-American regional development bank.

Senate Resolution 31, Mr. GREEN; January 20, 1959 (Rules and Administration): Authorizes a study of U.S. foreign policy, with special reference to Latin American and Canadian Affairs. (Passed by Senate February 2, 1959.)

House Resolution 49, Mr. O'HARA of Illinois; January 7, 1959 (Rules): Creates a select committee composed of members of the Committee on Foreign Affairs to make an investigation of our affairs with the Latin American countries.

Sixth. We need a new farm program because there is something wrong when the Government must spend 53 cents for every net dollar the farmer takes in.

S. 1211, Mr. HUMPHREY and others; March 2, 1959 (Agriculture and Forestry): Family Farm Yardstick Credit Act of 1959 provides for the reactivation of the program of assisting farmers and creditors with voluntary farm debt-adjustment procedures and the policy of adjusting repayment schedules to the net earnings of borrowers from year to year. Provides for long-term, low-interest loans to farmers.

Authorizes $200 million annually for loans and an additional $25 million for the guaranty fund for insurance of loans.

Family Farm Development Act of 1959 provides for the determination of counties, up to 500, having the largest low-income farm population and the assistance of families therein with low-interest, long-term loans for the enlargement and/or development of such owner-operated family-type farms.

H.R. 838, Mr. MARSHALL; January 7, 1959 (Agriculture): Agricultural Relations Act of 1959 creates an Agricultural Elections Committee to establish regulations and practices for the election of community, county, and State agricultural committees. Provides for a National Agricultural Board to establish national production and marketing goals and to allot such goals to farmers.

Provides for referendums to be held on programs proposed by the Board and, if not opposed by a majority of the producers, then provides for such programs to become effective.

Seventh. We need a program to help the people in those areas which are economically depressed to help themselves in restoring their region to prosperity.

S. 1631, Mr. JOHNSON of Texas and others; April 8, 1959 (Labor and Public Welfare): Establishes a Commission on Unemployment Problems. (Passed by Senate April 10, 1959.)

S. 722, Mr. DOUGLAS and others; January 27, 1959 (Banking and Currency): Area Redevelopment Act creates an Area Redevelopment Administration, an Area Redevelopment Advisory Board, and a National Public Advisory Committee on Area Redevelopment. Provides for the designation of redevelopment areas those areas having certain levels of unemployment. Authorizes $300 million for revolving funds to provide aid in industrial redevelopment areas, rural redevelopment areas, and for public facilities. Authorizes $75 million for grants for public facilities under certain conditions; $4,500,000 annually for technical assistance; $10 million for retaining subsistence grants. (Passed Senate March 23, 1959.)

(NOTE.—In the House over 45 bills providing assistance in depressed areas have been introduced, most of which are similar to S. 722.)

Eighth. We need to face up to the high interest rates which are slowing the needed growth of our economy.

S. 860, Mr. PROXMIRE; February 2, 1959 (Banking and Currency): Authorizes member banks to count currency and coinage as reserves.

S. 1120, Messrs. ROBERTSON, FULBRIGHT, and CAPEHART; February 19, 1959 (Banking and Currency): Authorizes member banks to count currency and coinage as reserves. Reduces to 10 percent (now 13) the minimum aggregate amount of demand deposits required to be kept on hand by reserve banks.

S. 1560, Mr. HUMPHREY; March 25, 1959 (Government Operations): Capital Budget Act of 1959 provides for the separation of operating and capital expenditures in the Presidential budget.

Ninth. We need a labor bill to protect honest, constructive labor from the selfish schemes of the racketeers.

S. 1555, Mr. KENNEDY and others; March 25, 1959 (Labor and Public Welfare): Labor-Management Reporting and Disclosure Act of 1959. This is a committee version of legislation designed to control and prevent abuses by labor organizations. Sets forth certain findings of fact; requires full and complete disclosure of financial affairs of labor unions and transactions by unions, union officials, and other parties which might give rise to conflicts of interest; sets limits on the establishment of and periods during which trusteeships may be maintained; requires democratic methods for the election of union officials; and establishes an Advisory Committee on Ethical Practices to advise the Secretary of Labor with respect to the administration of the act. (Scheduled to be reported April 13, 1959.)

WAGES

S. 1046, Mr. KENNEDY and others; February 16, 1959 (Labor and Public Welfare): Extends coverage of the Fair Labor Standards Act of 1938 to employees of large enterprises engaged in retail trades or services and other activities affecting commerce. Increases the minimum wage to $1.25 an hour.

UNEMPLOYMENT

S. 791, Mr. KENNEDY and others; January 29, 1959 (Finance): Unemployment Compensation Act of 1959 provides for unemployment reinsurance grants to the States. Revises, extends, and improves the unemployment program. Sets forth certain standards which States plans must meet.

Tenth. We need a bold housing program which will set as its goal a home for every American family.

HOUSING

S. 57, Mr. SPARKMAN and others; January 9, 1959 (Banking and Currency): Housing Act of 1959, omnibus housing bill, extends the home improvement programs; increases maximum mortgage amounts; increases dollar limitations on rental housing; increases maximum loan-to-value ratio; increases by $4 billion annually for each year 1959 and 1960 the FHA's general mortgage insurance authorization; extends benefits for displaced families; establishes a new program of housing for elderly persons; provides a 6-year $2.1 billion slums clearance and urban renewal program; permits local agencies to set rents, etc., for low-rent projects; increases funds available for college housing; extends military housing program and provides additional funds for VA direct loans. (Reported in House Feb. 27, 1959; scheduled to be brought before Rules Committee Apr. 13, 1959.)

H.R. 2357, Mr. RAINS; January 15, 1959 (Banking and Currency): Housing Act of 1959, omnibus housing bill similar in many respects to S. 57.

(NOTE: S. 57 was passed by the Senate on Feb. 5, 1959, with an amendment. The act was reported in the House on Feb. 27, 1959 with an amendment. The Rains bill with minor amendments was substituted by the House committee for S. 57 as passed by the Senate. As now before the House the bill provides for (1) lower FHA downpayments; (2) larger FHA repayment periods; (3) reduction (authorized) in FHA insurance premiums, (4) a $500 million yearly (for 3 years) program of slum clearance; (5) an extended low-rent public housing program; (6) a $400 million additional loan authority for college housing; (7) a new program for housing for the elderly; and (8) an extension of the military housing program.)

Eleventh. We need to reexamine our airport program because we are entering a jet age of transportation and present facilities are totally inadequate.

S. 1., Mr. MONRONEY and others; January 9, 1959 (Interstate and Foreign Commerce): Extends the Federal aid program for the development of airports through fiscal 1963 and authorizes $95 million each year for fiscal 1960, 1961, 1962, and 1963. Authorizes additional amounts for projects in Alaska, Hawaii, Puerto Rico, and the Virgin Islands. Authorizes an additional $75 million for a discretionary fund for such aid. Disallows as project costs the construction of parking areas, bars, cafes, etc. (Passed House, amended, Mar. 19, 1959.)

H.R. 1011, Mr. HARRIS; January 7, 1959 (Interstate and Foreign Commerce): Similar to S. 1.

Twelfth. We need a courageous urban renewal program to bring new health and vitality to our cities.

S. 57, as summarized above, contains certain provisions dealing with urban renewal. In general, urban renewal programs may be found in the major housing bills.

Thirteenth. We need a liberal new Federal program of aid to education—aid in loans and scholarships, aid in classroom construction and teachers' compensation.

EDUCATION

S. 2, Mr. MURRAY and others; January 9, 1959 (Labor and Public Welfare): School Support Act of 1959 provides Federal aid for the construction of classrooms, etc., and compensation of teachers.

S. 8, Messrs. MCNAMARA and HART; January 9, 1959 (Labor and Public Welfare): School Construction Assistance Act of 1959 sets forth a $1 billion annual program for Federal aid for the construction of school facilities.

S. 57, as summarized above, contains a program providing aid for the construction of college housing.

S. 234, Mr. LANGER; January 12, 1959 (Labor and Public Welfare): Sets forth a program of loans for students desiring to continue their education beyond the high school level.

H.R. 22, Mr. METCALF; January 7, 1959 (Education and Labor): Identical to S. 2.

We have a lot of work to do before adjournment. With this formidable program in our sights, it is necessary that we assess our progress from time to time.

All Senior Citizens on Fixed Federal Pensions and Annuities Should Be Permitted To Have Adequate Outside Earnings and Should Be Given Proper Exemption From Taxation in Keeping With the Present Day Cost of Living

EXTENSION OF REMARKS
OF
HON. WILLIAM C. CRAMER
OF FLORIDA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 7, 1959

Mr. CRAMER. Mr. Speaker, I am introducing today a series of bills to relieve some of the hardships now facing the senior citizens on fixed incomes in the United States.

Most of our senior citizens live on fixed incomes and a considerable portion is from pensions and annuities. These pensions and annuities were much larger in terms of purchasing power a decade or more ago. Today the same pensions and annuities have shrunk to a fraction of their worth. Pensions and annuities and fixed incomes are caught between the devalued dollar and the higher cost for purchases of processed goods, food, and other necessities of life.

Our senior citizens for the most part derive little benefit from the substantial increase in wages which came about since World War II. Few people beyond the age of 65 are able to be gainfully employed in more than part-time pursuits. However, since they cannot live on the depreciated fixed incomes, more and more of our senior citizens are turning to odd jobs for help and many are feeling the pinch of taxes.

I have been greatly concerned about these two problems, that is, the limitation on outside earnings contained in many of the annuities and pensions of the Federal Government as well as the areas in which those pensions and annuities are taxable. I have had an exhaustive study made of this problem during this session of Congress and I am introducing today a series of bills to rectify some of the inequities that exist, to provide for addition of $600 in outside earnings in all funds that have such a limitation, and further providing for nontaxability on all such pensions and annuities where such are taxable in the types of funds where contributions have been made to the fund or disabilities have been incurred by the employee.

The social security system was inaugurated in 1937 as a supplement to other savings and other income for persons over 65, and yet Congress has limited outside earnings to $1,200.

Let us examine some of the changes that have come about since 1938, the first year of monthly payments under the social security plan, and let us contrast that with the situation as we see it today.

In 1938, the Department of Labor cost of living index stood at 60.3. In February of 1959, the index stood at 123.7. In other words, the cost of living has doubled in the past 21 years.

In this period of time, from 1938 to today, our population has risen from 130 million to 172 million. Yet, in spite of this increase in numbers of people, the per capita national debt has gone from $286 to $1,650 per person. How high it would or could conceivably go if complete retirement were paid to all senior citizens is purely a matter of conjecture because we are already finding difficulty in raising funds to meet the requirements of our current national budget.

Back in 1938, a single person with no dependents and an income of $3,000 per year paid a Federal income tax of $68. Today, a single person with no dependents and an income of $3,000 per year is paying a Federal income tax of $488.

Furthermore, the excise taxes, those "consumer" taxes that we pay on cosmetics, women's handbags, household equipment, radios, new automobiles, and many other items that we regard as essential, have increased from $13.50 per capita in 1938 to $58.38 per capita. In other words, the Federal Government takes proportionately a much bigger chunk out of the incomes of the retired people than it did back in 1938.

Yet, what the Federal Government takes in taxes is far from all. The increase in local taxation per capita has risen from $71.47 in 1938 to $253.32 last year.

In other words, in addition to the double cost of living, we have a greatly enhanced tax burden which bears down on the old and the young alike. The taking of a heavy tax burden out of fixed incomes of the elderly is truly a serious matter.

The Government recognizes this inequity and already the people over age 65 have been granted an extra exemption under the income tax. They may deduct all of their medical expenses except medicines. However, there are many more ways in which we can ease the burden on those who are retired on fixed incomes without materially adding to the cost of Government.

The best of these opportunities is to increase the allowable earnings of those who receive social security and other Federal benefits. In 1937, when the social security system was adopted, a beneficiary could only earn $14.99 per month without losing his social security payment. Incidentally, the payment at that time was $41.20 for a man plus $20.60 for his wife, or a total of $61.80 for a couple. This $14.99 limitation on earnings continued until 1950 when Congress increased the allowable earnings to $50 a month. In 1952, this was increased to $75 a month and in 1955 became the present $1,200 a year. Today the maximum social security payment is $116 for a man and $58 for his wife, or a total of $174 per couple. I have introduced a bill which would again increase the earned income limitation and make it $1,800 a year instead of $1,200 a year.

In this connection, I want to say that I feel that $1,800 is a realistic figure that has a real chance of becoming law, although I would personally favor a larger amount. There are many part-time jobs, particularly in the smaller communities of the United States, which can be filled by people who have retired from full employment and who have many unique qualifications. In too many cases, $1,200 a year is not adequate or sufficient pay for such part-time employments. It is much better to raise this figure to $1,800 and have more of our senior citizens gainfully employed, than to continue today's needless hardship.

If, however, we are going to make such an increase for those under social security, a similar $600 a year increase in the income limitation should apply to disabled annuitants under the Railroad Retirement Act. They now are limited to $100 a month and I am introducing a bill increasing this to $150. It is wholly incongruous anyway for nondisabled railroad retirees to have no limitation and disabled annuitants to be so limited.

A similar increase in the Veterans' Administration pensions as relates to outside earnings for World War I, World War II, and the Korean conflict is raised under my bills from $1,400 to $2,000 for a veteran with no wife or child and from $2,700 to $3,300 a year if he does. The same figures apply for a widow.

Earlier this year I introduced H.R. 2469, a bill to equalize the pay of retired members of the uniformed services. After further study and considerable correspondence with those involved, I am today submitting a further bill which I think will achieve the purpose of equalizing the rates of retired pay for all members of the uniformed services who have previously retired, including those who are now prejudiced by their election made to not come under the Career Compensation Act of 1949. It was unfortunately the case that the recent revision of the Career Compensation Act of 1949 and when applying the 1958 increase created some inequalities for those who elected to not come under the 1949 act. The bill I am introducing today irons out these differences.

At this point I would like to submit for the RECORD a letter received from the legislative counsel in regard to my bill to "restore the traditional relationship between active duty and retired pay for members of the uniformed services":

HOUSE OF REPRESENTATIVES,
OFFICE OF THE LEGISLATIVE COUNSEL,
March 24, 1959.

Hon. WILLIAM C. CRAMER,
House of Representatives,
Washington, D.C.

DEAR MR. CRAMER: You have asked that I prepare for you a summary of the provisions of a bill I drafted for you entitled "A bill to restore the traditional relationship between active duty pay and retired pay for members of the uniformed services." The bill, in general, provides (with one exception) that where it is to the advantage of a member of a uniformed service retired before June 1, 1958, his retired pay will be computed on the basis of the rates of pay prescribed by the Career Compensation Act of 1949, as amended by Public Law 85-422.

The first section of the bill repeals section 3 of Public Law 85-422. That section today provides that, with exceptions specified therein, the changes in rates of pay under the Career Compensation Act of 1949 (ranging from no increase at all for some grades to over 40 percent for other grades) shall not operate to increase the retired pay of any person.

Section 2 of the bill revises section 4 of Public Law 85-422. Such section 4 today

provides, with exceptions specified therein, for an increase of 6 percent in the retired pay of all persons entitled to retired pay as of May 31, 1958.

As revised by the bill, such section 4 would provide—

(1) in section 2(b) of the bill, that all persons whose retired pay is computed on the basis of the rates prescribed by the Career Compensation Act of 1949 would have that pay computed on the basis of the rates prescribed by that act, as amended by Public Law 85–422;

(2) in section 2(a) of the bill, that all persons entitled to retired pay (other than for disability) under laws in effect before the effective date of the Career Compensation Act of 1949 (October 1, 1949), would have that pay (A) computed on the basis of the rates otherwise applicable as of May 31, 1958, plus 6 percent thereof, or (B) computed, in accordance with the formulae prescribed in section 511(b) of the Career Compensation Act of 1949 (37 U.S.C. 311(b)), on the basis of the rates prescribed in the Career Compensation Act of 1949, as amended by Public Law 85–422; and

(3) in section 2(b) of the bill, that all persons entitled to retired pay for disability under laws in effect before October 1, 1949, would have a 5-year period in which to elect (A) to continue to receive retired pay at the rates otherwise applicable as of May 31, 1958, plus 6 percent thereof (B) to receive retired pay computed under the formulae prescribed by the Career Compensation Act of 1949 for disability retirement, with the rates of pay on which such retired pay would be based being the rates prescribed by the Career Compensation Act of 1949, as amended by Public Law 85–422, or (C) to receive retired pay computed, in accordance with the formulae prescribed in section 511(b) of the Career Compensation Act of 1949 (37 U.S.C. 311(b)), on the basis of the rates prescribed in the Career Compensation Act of 1949, as amended by Public Law 85–422. This method parallels the method prescribed by section 411 of the Career Compensation Act of 1949, as originally enacted, for the computation of disability retired pay for persons on the retired lists as of October 1, 1949.

Section 3 of the bill amends Public Law 85–422 by striking out language included therein which was necessary in view of the provisions of that act providing that retired pay of persons already on the rolls would not be affected by the changes in rates of pay made by that act.

Section 4 of the bill strikes out, as superseded by your bill, two subsections in section 7 of Public Law 85–422 which provided increases in retired pay for certain classes of retired officers. These officers will receive greater increases under the amendments made by your bill.

Section 5 of the bill is a savings provision. Because of the amendments made by Public Law 85–855, it is possible that there are individuals presently on the disability retired lists who are receiving larger amounts of retired pay than they would be receiving if their retired pay were computed on the basis of the rates of pay prescribed by the Career Compensation Act of 1949, as amended by Public Law 85–422. Section 5 of the bill provides that these individuals shall not have their retired pay reduced by reason of the enactment of the bill.

I hope that this analysis is of assistance to you. If I can be of any further assistance, please do not hesitate to call on me.

Respectfully submitted,

JAMES M. MENGER, Jr.,
Assistant Counsel.

Mr. Speaker, in connection with these problems raised by our senior citizens, I found that not all pensions were treated alike in terms of the payment of income tax. These are the ones that are not taxable: Social security pensions, Veterans' Administration pensions, railroad retirement pensions and annuities, Panama Canal employees pensions, civil service pensions by reason of death or injury, military pensions based on percentage of disability, firemen and policemen disability pensions, and widows pensions.

The Government still has under study the question concerning the taxation of pensions to widows of Supreme Court Justices and to wives of former Presidents of the United States. Income taxes are collected on civil service annuities, State pensions and annuities for teachers, firemen, policemen, and so forth, military pensions, industrial pensions, insurance annuities, and endowments, and on pensions of retired ministers and widows of ministers. In these taxable pensions, excepting one, the custom is for the beneficiary to make no contribution whatever. The one exception is the Federal civil service annuity. The retired Federal employee may recover against income in the first 3 years the sum of money that he personally paid in but he cannot collect on the interest which his savings provided. The military, by contrast, pay nothing toward their pensions and their pensions are fully taxable unless said pension is based on disability or partial disability.

I am also introducing today a new bill as a substitute for H.R. 489, one I previously introduced, which would exempt the U.S. civil service pensions from the Federal income tax, thus giving these recipients equal treatment with other similar pension and annuity groups.

A moment ago I listed the types of pensions and annuities that are nontaxable. I append herewith the reasons given by the Treasury Department for these exemptions. Mostly the exemptions were set up by statute which is precedent enough for my bill in regard to civil service pensions:

NONTAXABLE PENSIONS

1. Social security: The Supreme Court has held that insurance benefit payments made to individuals under title II of the Social Security Act, as amended, are made pursuant to the authority of Congress to appropriate money in aid of the general welfare. (*Helvering* v. *Davis*, 301 U.S. 619, 640 (1957)). In view of that characterization of the payments by the Supreme Court, which characterization was urged before the Court by the United States, the Internal Revenue Service has concluded that the payments do not constitute taxable income in the hands of the recipients. (I.T. 3447, C.B. 1941–1, 191.)

2. Veterans' Administration pensions: Section 1001 of the Veterans' Benefits Act of 1957 (71 Stat. 83), replacing section 3 of the act of August 12, 1935 (49 Stat. 607), provides in part as follows: "(a) Payments of benefits due or to become due under any law administered by the Veterans' Administration * * * and such payments made to or on account of, a beneficiary shall be exempt from taxation."

Based on the foregoing the Service has concluded that pensions and other payments made by the Veterans' Administration to veterans and their beneficiaries under the acts and laws referred to in the act of 1957, are not subject to Federal income tax.

3. Railroad retirement pensions and annuities: Section 12 of the Railroad Retirement Act of 1935, as amended by Public Law No 162, 75th Congress (50 Stat. 307), approved June 24, 1937, provides that no annuity or pension payment shall be assignable or subject to any tax or to garnishment. Accordingly, the Service holds that annuities or pensions paid under the provisions of this act are not subject to Federal income tax. (I.T. 3115, C.B. 1937–2, 62.)

4. Panama Canal employee pensions: Amounts received by former employees of the Isthmian Canal Commission or the Panama Railroad Company under the provisions of Public Law 319, 78th Congress (58 Stat. 257), approved May 29, 1944, constitute gifts under section 22(b)(3) of the 1939 Code and are not includible in gross income. (I.T. 4098, C.B. 1952–2, 74.) This ruling follows the decision in the case of *Andrew W. Dewling* v. *United States* (101 Fed. Supp. 892).

5. Civil service (death or injury incurred in line of duty): Amounts received under the Federal Employees' Compensation Act (39 Stat. 742), as amended, are exempt from Federal income tax under the provisions of section 104(a)(1) of the 1954 code. This act, which is similar to the so-called workmen's compensation acts in the various States, provides that the United States shall pay compensation on account of death or disability of an employee of the Federal Government resulting from a personal injury sustained while in the performance of his duty (I.T. 3281, C.B. 1939–1 (pt. 1), 97).

6. Military pensions (exempt to the extent of the percentage of disability): Section 104(a)(4) of the 1954 code excludes from gross income "amounts received as a pension, annuity, or similar allowance for personal injuries or sickness resulting from active service in the Armed Forces of any country. The Internal Revenue Service has held that under the aforecited provision of law the retired pay of a member of the Armed Forces who retired for physical disability is excluded from gross income (I.T. 3641 and I.T. 3691, C.B. 1944, 70 and 73). By section 402(h) of the Career Compensation Act of 1949, 63 Stat. 802, 37 U.S.C. 272, now 10 U.S.C. 1405, however, Congress limited the amount equal to the retiree's basic pay multiplied by his percentage of disability at the time of his retirement.

7. Firemen and policemen disability pensions: Section 104(a)(1) of the 1954 code continues without change the exclusion provided in section 22(b)(5) of the 1939 code with respect to amounts received under workmen's compensation acts as compensation for personal injuries or sickness. Section 1.104–1(b) of the regulations provides that the exclusion applies not only to amounts received under workmen's compensation acts but also to amounts received under a statute in the nature of workmen's compensation act which provides compensation to employees for personal injuries or sickness incurred in their employment. The principle stated has been established in numerous court decisions and Internal Revenue Service rulings (*Frye* v. *United States* (D.C. 1947), 72 F. Supp. 405; *William L. Neill* (1951), 17 T.C. 1015; I.T. 3281, C.B. 1939–1 (pt. 1), 97; I.T. 3877, C.B. 1947–2, 15; and I.T. 3917, C.B. 1948–2, 10).

8. Widows' pensions: Pensions received by soldiers' widows from the U.S. Government held not taxable income (O.D. 957, C.B., June 1921, 84).

In conclusion, Mr. Speaker, I want to repeat that the greatest hardship in our domestic economy is the privation faced by our senior citizens on fixed income. To be unemployed and in want is certainly not pleasant, but the average American can look forward to new em-

ployment and another job as long as health and youth are enjoyed. I have every sympathy for the unemployed, particularly for those with families, but they have hope, while the future of many of our senior citizens seems hopeless under present laws. Oldsters cannot look forward to earned incomes, to youthfulness, or the bloom of health. Consequently, I consider that the series of bills I am introducing today covers a problem area of utmost importance to the present Congress. I plead with my associates for action and for help for millions of senior citizens on fixed incomes who have done their part to make this great land.

They now are in need of our due recognition of their problem.

SENATE

WEDNESDAY, APRIL 8, 1959

The Chaplain, Rev. Frederick Brown Harris, D.D., offered the following prayer:

Our Father God, we thank thee for the inward voice which ever and again calls us away from the clamor and dusty strife of confusing days into the cool, quiet cloisters of the eternal, from whose revealing windows of faith our souls are strengthened by the far look.

In a baffled and bewildered day, save us from any panic of spirit.

May we draw our inner strength from deep wells.

O God, to whom the future belongs, use us as pioneers of a better world for ourselves and for all peoples.

Hasten the day when the black remnants of savagery, which now blight our social order, shall haunt the memory of a new generation as but an evil dream of a night that has passed.

In the midst of desperate and difficult days, deliver us from the evil of moral cowardice.

For those here set apart in perilous times to keep clean the springs of freedom, and to minister to the common welfare of the Nation, we pray for eyes to see, for minds to understand, and for hearts that claim kinship with all Thy children everywhere.

May we lift others by a faith that will not shrink, though pressed by every foe.

Pilgrims of the night, may we be heralds of the morning.

We ask it in the Name that is above every name. Amen.

THE JOURNAL

On request of Mr. JOHNSON of Texas, and by unanimous consent, the reading of the Journal of the proceedings of Tuesday, April 7, 1959, was dispensed with.

COMMITTEE MEETINGS DURING SENATE SESSION

On request of Mr. JOHNSON of Texas, and by unanimous consent, the NASA authorization legislative subcommittee of the Committee on Aeronautical and Space Sciences was authorized to meet during the session of the Senate today.

On request of Mr. DIRKSEN, and by unanimous consent, the Committee on Interior and Insular Affairs was authorized to meet this afternoon during the session of the Senate.

LIMITATION OF DEBATE DURING MORNING HOUR

Mr. JOHNSON of Texas. Mr. President, under the rule, there will be the usual morning hour for the introduction of bills and the transaction of other routine business. I ask unanimous consent that statements in connection therewith be limited to 3 minutes.

The PRESIDENT pro tempore. Without objection, it is so ordered.

EXECUTIVE SESSION

Mr. JOHNSON of Texas. Mr. President, I move that the Senate proceed to consider executive business.

The motion was agreed to; and the Senate proceeded to the consideration of executive business.

The PRESIDENT pro tempore. If there be no reports of committees, the nominations on the calendar will be stated.

DIPLOMATIC AND FOREIGN SERVICE

The Chief Clerk read the nomination of Carl W. Strom, of Iowa, to be Ambassador Extraordinary and Plenipotentiary of the United States of America to Bolivia.

The PRESIDENT pro tempore. Without objection, the nomination is confirmed.

The Chief Clerk read the nomination of Ellis O. Briggs, of Maine, to be Ambassador Extraordinary and Plenipotentiary of the United States of America to Greece.

The PRESIDENT pro tempore. Without objection, the nomination is confirmed.

Mr. JOHNSON of Texas. Mr. President, I ask unanimous consent that the President be notified immediately of the confirmation of these nominations.

The PRESIDENT pro tempore. Without objection, the President will be notified forthwith.

Mr. FULBRIGHT. Mr. President, I am very much pleased, indeed, with the two nominations which have just been confirmed—namely, the nomination of Mr. Carl W. Strom, of Iowa, to be our Ambassador to Bolivia; and the nomination of Mr. Ellis O. Briggs, of Maine, to be our Ambassador to Greece. These are examples of two excellent appointments by the administration. I only hope it will maintain that standard in the case of all its appointments.

LEGISLATIVE SESSION

Mr. JOHNSON of Texas. Mr. President, I move that the Senate resume the consideration of legislative business.

The motion was agreed to; and the Senate resumed the consideration of legislative business.

ORDER FOR CALL OF THE CALENDAR ON FRIDAY

Mr. JOHNSON of Texas. Mr. President, I ask unanimous consent that on Friday the calendar of bills and other measures be called, for the consideration of those to which there is no objection.

The PRESIDENT pro tempore. Without objection, it is so ordered.

LEGISLATIVE PROGRAM — ORDER FOR ADJOURNMENT TO FRIDAY

Mr. JOHNSON of Texas. Mr. President, I announce that I have conferred with the distinguished minority leader [Mr. DIRKSEN]; and on Friday we expect to have a call of the calendar. I should like to have the legislative review committees on both sides of the aisle to be prepared for that call.

At the conclusion of the call of the calendar, we may bring up by motion other measures; and I shall make an announcement on that subject to the Senate as soon as I am able to obtain the consent of some of the committee chairmen.

We hope to be able to dispose of the unfinished business and the pending business today.

Mr. President, I ask unanimous consent that when the Senate concludes its business today it stand in adjournment until Friday, at noon.

The PRESIDENT pro tempore. Without objection, it is so ordered.

Mr. DIRKSEN. Mr. President, will the majority leader yield?

Mr. JOHNSON of Texas. I yield to the Senator from Illinois.

Mr. DIRKSEN. I do not know how much controversy there is in regard to the measures on the calendar. On the calendar is a bill relating to educational television. I wonder whether it is the purpose of the majority leader to have the Senate act on all the measures on the calendar, or to omit from the call those that are controversial and may take some time to dispose of.

Mr. JOHNSON of Texas. There are only three that previously have been passed over; and I do not think it will take more than a few minutes to dispose of them, even if any Senator wishes to debate them. Therefore, I ask that the call of the calendar begin with Calendar No. 52, Senate bill 12, to expedite the utilization of television transmission facilities in our public schools and colleges, and in adult training programs. Of course, objection will be made to the consideration of that measure during the call of the calendar, because on both sides of the aisle there are Senators who will object. However, we shall begin the call with Calendar

No. 52, and shall proceed through the entire calendar.

Mr. DIRKSEN. Very well.

EXECUTIVE COMMUNICATIONS, ETC.

The PRESIDENT pro tempore laid before the Senate the following letters, which were referred as indicated:

REPORT ON DISPOSITION OF CONTRIBUTIONS TO INTERNATIONAL ORGANIZATIONS

A letter from the Acting Secretary of State, transmitting, pursuant to law, a report on the extent and disposition of U.S. contributions to international organizations, for the fiscal year 1958 (with an accompanying report); to the Committee on Foreign Relations.

REPORT OF ADVISORY COMMISSION ON INFORMATION

A letter from the Chairman, U.S. Advisory Commission on Information, Washington, D.C., transmitting, pursuant to law, a report of that Commission, dated March 1959 (with an accompanying report); to the Committee on Foreign Relations.

REPORT OF DIRECTORS OF FEDERAL PRISON INDUSTRIES, INC.

A letter from the Secretary, Federal Prison Industries, Inc., Department of Justice, transmitting, pursuant to law, a report of the Directors of that agency, for the fiscal year 1958 (with an accompanying report); to the Committee on the Judiciary.

RESOLUTIONS OF MINNESOTA VALLEY COOPERATIVE LIGHT AND POWER ASSOCIATION

Mr. HUMPHREY. Mr. President, I ask unanimous consent that three resolutions adopted this past month by the Minnesota Valley Cooperative Light & Power Association be printed in the RECORD and appropriately referred.

There being no objection, the resolutions were received, appropriately referred, and ordered to be printed in the RECORD, as follows:

To the Committee on Public Works:

"RESOLUTION ON TVA SELF-FINANCING BILL

"Whereas the Tennessee Valley Authority is supplying power to our 5 million people in the area and to national defense installations; and

"Whereas the TVA power system is running short of capacity to meet the demands in the area; and

"Whereas the TVA project has demonstrated that TVA power system is self-supporting and self-liquidating, and that the resale of TVA power at low rates by consumer-owned distributors is economically sound as well as socially advantageous; and

"Whereas it is due concern of this Nation and our Government that TVA be provided with adequate financing plan to provide needed funds for expansion: Now, therefore, be it

"Resolved at this meeting of the board of directors of Minnesota Valley Cooperative Light & Power Association, Montevideo, Minn., this 31st day of March 1959, upon motion by Henry Hanson, seconded by Donald Sundin, That we go on record to support the passage of TVA self-financing bill, S. 931 and H.R. 3460, which would give TVA authority to issue revenue bonds to finance power generating capacity; and be it further

"Resolved, That copies of this resolution be mailed to Senators and Representatives asking for their wholehearted support of the above bills.

"GEORGE TIMM,
"Secretary, Minnesota Valley Cooperative Light & Power Association, Montevideo, Minn."

To the Committee on Finance:

"RESOLUTION ON PROPOSAL TO TAX COOPERATIVES

"Whereas business enterprises are made up of several types of business organizations, including proprietorships, partnerships, corporations, and cooperatives all of which have contributed greatly to the tempo of economic activity within the Nation; and

"Whereas the tax position of cooperatives has been thoroughly investigated by the Congress of the United States over a long period of time and these investigations have revealed that under the present laws, the cooperatives have faithfully abided by the principles and regulations under which they have been organized; and

"Whereas cooperatives do pay taxes and in many communities of this Nation are the largest taxpayers; and

"Whereas the Secretary of the Treasury has recommended to Congress to require cooperative patronage savings to be paid in cash within 3 years and to draw not less than 4 percent interest, or otherwise to be classified as income to the cooperative and be thereby subjected to corporation income taxes; and

"Whereas this alteration of the present tax status would seriously hamper and restrict the services which the cooperatives are performing within the Nation; and

"Whereas a number of legislative bills have been proposed by the administration which would place prohibitive taxes on cooperatives: Now, therefore, be it

"Resolved by the board of directors of the Minnesota Valley Cooperative Light & Power Association, Montevideo, Minn., this 31st day of March 1959, upon motion by Alfred Reishus, seconded by George Timm, That we ask Senators and Representatives in Congress to oppose any measures which would affect our present cooperative tax laws causing hardships to cooperatives, and that bills such as Mason, H.R. 198; Curtis, H.R. 3150; and Davis bill, H.R. 3848, be opposed from passing through Congress."

To the Committee on Agriculture and Forestry:

"RESOLUTION ON REA INTEREST RATE INCREASE

"Whereas a resolution was adopted at the annual membership meeting of Minnesota Valley Cooperative Light & Power Association, Montevideo, Minn., held March 24, 1958, opposing any legislation which would increase the present 2 percent REA interest rate to rural electric cooperatives: Now, therefore, be it

"Resolved, That upon motion made by Mr. Barkus and carried that the membership at this annual meeting held March 23, 1959, of the Minnesota Valley Cooperative Light & Power Association, reaffirm our 1958 resolution opposing to any interest rate increases on REA loan funds; and be it further

"Resolved, That being Congress entered into contract with the rural electric cooperatives in 1944, to lend money at a fixed 2 percent interest charge that these contracts or any future contracts must not be changed in order to allow all the cooperatives in the Nation to complete their area coverage and to heavy up systems to provide adequate service to existing consumers.

"GEORGE TIMM,
"Secretary, Minnesota Valley Cooperative Light & Power Association, Montevideo, Minn."

REPORTS OF A COMMITTEE

The following reports of a committee were submitted:

By Mr. ANDERSON, from the Committee on Interior and Insular Affairs, without amendment:

S. 72. A bill to authorize the Secretary of the Interior to construct, operate, and maintain the Navajo Indian irrigation project and the initial stage of the San Juan-Chama project as participating projects of the Colorado River storage project, and for other purposes (Rept. No. 155).

By Mr. KUCHEL, from the Committee on Interior and Insular Affairs, with amendments:

S. 44. A bill to authorize the Secretary of the Interior to construct the San Luis unit of the Central Valley project, California, to enter into an agreement with the State of California with respect to the construction and operation of such unit, and for other purposes (Rept. No. 154).

BILLS INTRODUCED

Bills were introduced, read the first time and, by unanimous consent, the second time, and referred as follows:

By Mr. JAVITS:

S. 1609. A bill to provide assistance to small business concerns to facilitate adjustments made necessary by the foreign trade policy of the United States, and for other purposes; to the Committee on Banking and Currency.

(See the remarks of Mr. JAVITS when he introduced the above bill, which appear under a separate heading.)

By Mr. JAVITS (for himself and Mr. KEATING):

S. 1610. A bill to authorize the issuance of special nonquota immigrant visas to certain alien orphans; to the Committee on the Judiciary.

(See the remarks of Mr. JAVITS when he introduced the above bill, which appear under a separate heading.)

By Mr. HARTKE:

S. 1611. A bill for the relief of Adeodato Francesco Piazza Nicolai; to the Committee on the Judiciary.

By Mr. SMATHERS:

S. 1612. A bill to amend section 170 of the Internal Revenue Code of 1954 to treat contributions to certain organizations of Reserve officers in the same manner as contributions to organizations of war veterans; to the Committee on Finance.

S. 1613. A bill for the relief of Matilda Kolich; to the Committee on the Judiciary.

By Mr. McCARTHY:

S. 1614. A bill to reduce the import duty on cigars; to the Committee on Finance.

By Mr. YOUNG of North Dakota (for himself and Mr. LANGER):

S. 1615. A bill to authorize the Chief of Engineers to enter into a contract with the Standing Rock Indian Tribe to provide for the clearing of certain portions of the Oahe Reservoir area; to the Committee on Public Works.

By Mr. McCLELLAN:

S. 1616. A bill to direct the Secretary of the Army to convey the Army and Navy General Hospital, Hot Springs National Park, Ark., to the State of Arkansas, and for other purposes; ordered to lie on the table.

(See the remarks of Mr. McCLELLAN when he introduced the above bill, which appear under a separate heading.)

(Subsequently, on request of Mr. McCLELLAN, and by unanimous consent, the above bill was referred to the Committee on Government Operations.)

By Mr. McCLELLAN (for himself and Mr. BENNETT):

S. 1617. A bill to provide for the adjustment of the legislative jurisdiction exercised by the United States over land in the several States used for Federal purposes, and for other purposes; to the Committee on Government Operations.

(See the remarks of Mr. McCLELLAN when he introduced the above bill, which appear under a separate heading.)

By Mr. HOLLAND:

S. 1618. A bill for the relief of certain aliens; to the Committee on the Judiciary.

By Mr. WILLIAMS of Delaware:

S. 1619. A bill to provide for the installation of a public address system in the Senate Chamber; to the Committee on Rules and Administration.

By Mr. BEALL:

S. 1620. A bill for the relief of Costas Forakis; to the Committee on the Judiciary.

By Mr. BEALL (for himself and Mr. BUTLER):

S. 1621. A bill to permit the flying of the flag of the United States for 24 hours of each day on the estate known as Terra Rubra, the birthplace of Francis Scott Key, in Carroll County, Md., and at the grave of Key in Mount Olivet Cemetery in Frederick, Md.; to the Committee on the Judiciary.

By Mr. CASE of South Dakota:

S. 1622. A bill for the relief of Shigeki Tokunaga of Tokyo, Japan; to the Committee on the Judiciary.

By Mr. ELLENDER (by request):

S. 1623. A bill to repeal section 8f of the Agricultural Adjustment Act of 1933, as amended; to the Committee on Agriculture and Forestry.

By Mr. CASE of New Jersey:

S. 1624. A bill for the relief of Ivan Curko; to the Committee on the Judiciary.

By Mr. HENNINGS:

S. 1625. A bill for the relief of Moshe Nadir; to the Committee on the Judiciary.

By Mr. BENNETT:

S. 1626. A bill to retrocede to the State of Utah concurrent jurisdiction over certain lands within such State which are under the jurisdiction of the United States; to the Committee on Armed Services.

(See the remarks of Mr. BENNETT when he introduced the above bill, which appear under a separate heading.)

By Mr. MUNDT:

S. 1627. A bill for the relief of Mrs. Paula Deml; to the Committee on the Judiciary.

By Mr. HILL:

S. 1628. A bill to provide for the vesting of primary responsibility for the protection of the public health and safety from radiation hazards in the Public Health Service of the Department of Health, Education, and Welfare, and for other purposes; to the Committee on Labor and Public Welfare.

(See the remarks of Mr. HILL when he introduced the above bill, which appear under a separate heading.)

By Mr. HUMPHREY:

S. 1629. A bill to amend section 9(b)(3) of the National Labor Relations Act so as to eliminate the provision thereof prohibiting the certification, as bargaining representative of persons employed as guards, of a labor organization which admits to membership, or is affiliated with an organization which admits to membership, employees other than guards; to the Committee on Labor and Public Welfare.

(See the remarks of Mr. HUMPHREY when he introduced the above bill, which appear under a separate heading.)

By Mr. HRUSKA (for himself, Mr. CURTIS, Mr. LAUSCHE, Mr. CAPEHART, Mr. YOUNG of North Dakota, Mr. LANGER, Mr. HUMPHREY, Mr. HICKENLOOPER, Mr. BENNETT, and Mr. ALLOTT):

S. 1630. A bill to amend the Federal Property and Administrative Services Act of 1949 to require the disposal of certain surplus land for use in the production of crops through the operation of family-type farms, and for other purposes; to the Committee on Government Operations.

(See the remarks of Mr. HRUSKA when he introduced the above bill, which appear under a separate heading.)

By Mr. JOHNSON of Texas (for himself, Mr. DIRKSEN, Mr. MANSFIELD, Mr. KUCHEL, Mr. HENNINGS, Mr. SALTONSTALL, Mr. HILL, Mr. RANDOLPH, Mr. BYRD of West Virginia, Mr. DODD, Mrs. SMITH, Mr. SMATHERS, Mr. HUMPHREY, Mr. HARTKE, Mr. YOUNG of Ohio, Mr. KENNEDY, Mr. YARBOROUGH, Mr. BEALL, Mr. GOLDWATER, Mr. FULBRIGHT, Mr. TALMADGE, Mr. CASE of New Jersey, Mr. MOSS, Mr. KERR, Mr. BRIDGES, Mr. COTTON, Mr. SYMINGTON, Mr. McCARTHY, Mr. ANDERSON, Mr. WILLIAMS of New Jersey, Mr. ENGLE, Mr. FREAR, Mr. BIBLE, Mr. CHURCH, Mr. HART, Mr. CARROLL, Mr. BARTLETT, Mr. NEUBERGER, Mr. JAVITS, Mr. JACKSON, Mr. MAGNUSON, Mr. ERVIN, Mr. O'MAHONEY, Mr. McGEE, Mr. KEATING, Mr. MUSKIE, Mr. GRUENING, Mr. JORDAN, Mr. AIKEN, Mr. CHAVEZ, Mr. SCHOEPPEL, Mr. CARLSON, Mr. BENNETT, Mr. HOLLAND, Mr. WILEY, Mr. LANGER, Mr. CANNON, Mr. JOHNSTON of South Carolina, Mr. MURRAY, Mr. GREEN, Mr. LAUSCHE, Mr. CAPEHART, Mr. KEFAUVER, Mr. PASTORE, Mr. SPARKMAN, Mr. McCLELLAN, Mr. PROXMIRE, and Mr. LONG):

S. 1631. A bill to provide for the establishment of a Commission on Unemployment Problems; to the Committee on Labor and Public Welfare.

(See the remarks of Mr. JOHNSON of Texas when he introduced the above bill, which appear under a seperate heading.)

ASSISTANCE TO SMALL BUSINESS ADVERSELY AFFECTED BY FOREIGN TRADE POLICIES

Mr. JAVITS. Mr. President, I am today introducing a bill to provide assistance to small-business concerns and their employees adversely affected by U.S. foreign trade policies. The bill would enable businesses to obtain loans from the Small Business Administration, permit them to pool their resources, and make them eligible for rapid amortization of certain investments, in order to help them to meet foreign competition and to assist them in converting to new lines of enterprise. The bill would also assist unemployed workers from such businesses through retraining and reemployment aid and, where necessary by helping them to relocate to areas where job opportunities are available.

A liberal foreign trade policy with a minimum of protectionism and quotas is fundamental to the continued expansion of our domestic economy and is an important aspect of our foreign policy which seeks to foster the prosperity and friendship of the free world nations. It is equally fundamental that this overriding national policy will adversely affect the economic welfare of some businesses and employees and that we must assist them in meeting this economic impact without restricting our much larger foreign trade.

This bill will assist small businesses and their employees, who are often hit hardest by imports and whose problems have been used as justification to secure protection for the entire industry. I introduced a similar measure in the last Congress with Senators Ives and Potter.

The effect of imports and exports on our economy is clear: between 1950 and 1957 our gross national product increased 55 percent and our imports increased 45 percent, while our exports nearly doubled; the recession in 1958 brought about a 1-percent decrease in the gross national product and in imports, while exports decreased by 11 percent. It is estimated that about 4½ million persons derive their employment from foreign trade, while only 200,000 to 400,000 are employed in industries adversely affected by imports. Less than 120,000 of these were employed at peak periods in plants producing the 28 commodities for which the Tariff Commission recommended escape clause action between April 1948 and March 1959. Small businesses making smoking pipes, silk screen scarves, and umbrella frames in New York City, glassware throughout West Virginia, and velveteen in Massachusetts have been among those most severely affected.

The Senate has recognized the importance of this problem in the Depressed Areas Act of 1959 which contained provisions giving preference to those areas which contain industry adversely affected by foreign trade policy.

We cannot meet these problems by restricting our trade. What we should do is provide those affected with concrete assistance, which will enable them either to meet their competition or to make a smooth transition into other lines which can compete economically and successfully in the open market.

A section-by-section explanation of the terms of the bill is as follows:

Section 1: Where a finding is made by the Tariff Commission of a substantial injury to an industry under the so-called escape clause of the Trade Agreements Act and a recommendation has been made to the President which the President fails to approve, small business concerns within that industry become eligible for loans from the Small Business Administration. Such loans are based upon the disaster loan provisions of the present law—which are substantially easier to obtain than normal small business loans.

Section 2: The bill further contemplates that small businesses which have been adversely affected by the foreign trade policies of the United States may pool their productive capacities with the consent of the Federal Trade Commission and Attorney General without violating the antitrust laws. This will enable them in some cases to make their own operations more economical and less subject to foreign competition.

Section 3: The Secretary of Commerce, acting through the Office of Area Development, is charged with the general coordination of governmental assistance to these businesses which are so affected.

Section 4: The Secretary of Labor is authorized to provide assistance for retraining individuals whose last employment was in business eligible for assistance under this program and to cooperate with existing vocational training agencies. In addition, where he finds

that no job opportunities exist for such an individual in his own area, the Secretary may assist his relocation to another area where there are employment opportunities for him, including the payment of relocation costs of up to $150.

Section 5: Finally, the bill provides amendments to the Internal Revenue Code of 1954 providing for a rapid amortization—and therefore a tax abatement—as follows:

First. Where the line of business, and hence the capital investment of a company has been hurt by the U.S. trade policy described above, and where the facilities are not fully depreciated for tax purposes, the bill would permit a step-up in the depreciation rate of the existing equipment; the justification being that as trade policies have adversely affected the company, they have had a serious economic effect on the investment of the small business in its capital equipment. It is not illogical that this should be reflected in a tax reduction based upon the economic loss incurred.

Second. The bill also provides for rapid amortization of facilities of a small business acquired for the purpose of converting the business and developing new and different lines of production or improving old ones in order to cope with the adverse effect of the trade policies. This will, of course, provide an incentive for the small business to take account of the changed condition brought about by the trade policies of the United States and develop other fields of enterprise.

The PRESIDING OFFICER (Mr. LONG in the chair). The bill will be received and appropriately referred.

The bill (S. 1609) to provide assistance to small-business concerns to facilitate adjustments made necessary by the foreign-trade policy of the United States, and for other purposes, introduced by Mr. JAVITS, was received, read twice by its title, and referred to the Committee on Banking and Currency.

ISSUANCE OF SPECIAL NONQUOTA IMMIGRANT VISAS TO CERTAIN ALIEN ORPHANS

Mr. JAVITS. Mr. President, on behalf of myself and the junior Senator from New York [Mr. KEATING] I introduce, for appropriate reference, a bill extending for an additional 2 years the law granting nonquota immigrant status to orphans under 14 years of age who have been or will be adopted by an American citizen upon admission to the United States. The present statutory authority under which these orphan children may be admitted—Public Law 85–316, approved September 11, 1957—expires on June 30, 1959.

Under the terms of this bill an orphan includes children under 14 where either both parents are dead, have disappeared, or have abandoned the home, or where one parent is dead, disappeared or has abandoned the home and the other parent is unable to provide proper care. It covers orphans who are adopted abroad, orphans who are abroad and assured of adoption in the United States, and orphans in the United States for whom adoption would regularize their immigration status.

More than 11,000 orphans have been admitted to the United States since the adoption of the first alien orphan statute 11 years ago as part of the Displaced Persons Act of 1948. The program has been extended three times since then, by the act of July 29, 1953, by the Refugee Relief Act of 1953 and by Public Law 316. It has been a great source of personal satisfaction to me as a member of the House of Representatives and later as a member of the Senate to have participated actively in the passage of these measures and to have joined in their sponsorship.

I have received many heartfelt requests from my constituency, from citizens wishing themselves to adopt individual orphans, urging continuation of the present law. In the debates and testimony on this legislation much has been said—and rightly so—regarding the unfortunate, parentless child for whom adoption is sought. I should for a moment like to add a thought for the childless couples and the many couples who have room in their hearts for another child who look to the Congress to extend the provisions of section 4 of Public Law 85–316, the alien orphan adoption section, beyond the June 30 expiration date. These are the Americans who think not in terms of immigration or foreign policy but rather in the personal terms of the Italian boy, the Greek girl, the Korean waif, whom they so earnestly desire to take into their homes as their own. The Congress can do naught but share in their blessings by the speedy enactment of this proposed legislation; I trust that the Judiciary Committee to which it will be referred will give it early consideration and prompt approval.

Mr. President, I point out that the situation to which I have referred applies very often to American service men and women and to Americans working abroad either for the Government or for private industry. I hope the measure will have the early attention of the Committee on the Judiciary.

The PRESIDING OFFICER. The bill will be received and appropriately referred.

The bill (S. 1610) to authorize the issuance of special nonquota immigrant visas to certain alien orphans, introduced by Mr. JAVITS (for himself and Mr. KEATING), was received, read twice by its title, and referred to the Committee on the Judiciary.

CONVEYANCE OF CERTAIN REAL PROPERTY TO STATE OF ARKANSAS

Mr. McCLELLAN. Mr. President, I introduce for appropriate reference a bill to direct the Secretary of the Army to convey the Army-Navy General Hospital, Hot Springs National Park, Ark., to the State of Arkansas.

I ask unanimous consent that the bill remain on the desk subject to being referred to committee on request.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. McCLELLAN. Mr. President, the conveyance of this property is for the purpose of establishing a regional vocational rehabilitation center. The bill provides for the conveyance of approximately 25 acres upon which the hospital is situated, together with certain personal property deemed necessary for the project. The bill further contains the usual reversionary clause in the event the property is not utilized as a vocational rehabilitation center or other public health or education purposes. In addition, there is the usual reversionary clause in the event of war or other national emergency.

Mr. President, for a number of years the Department of the Army has insisted upon the closing of the Army-Navy Hospital in Hot Springs and declaring the property surplus. For the past 4 years, over their objection, the hospital has been operated under a directive from the Congress. The Army still persists, as it has all along, that the facility should be closed and declared surplus. During this period of time there has been much discussion as to the best use of the hospital for Federal purposes since it is recognized as the finest facility of its type in the continental United States. Although some 25 agencies of the Federal Government have inspected the facility to determine its suitability for their specific use, as yet none have considered it suited.

I have strenuously opposed the closing of the hospital, or the deactivation of it and putting it into mothballs, because I know that some use can be found for it, instead of abandoning it, when there is so much need in our land for medical services and for educational facilities.

Considerable interest has been manifested on a National, State, and local level, in a proposal to convert the hospital into a comprehensive rehabilitation center. In order to assure a detail knowledge and understanding of the existing facility, its suitability for a rehabilitation center, and to determine the existing needs for a national research and demonstration center, the Arkansas Vocational Rehabilitation Service made application to the Office of Vocational Rehabilitation, Department of Health, Education, and Welfare, for a grant to finance a study. The application was approved and the grant was made.

A study committee was appointed by the Arkansas Vocational Rehabilitation Service with the advice and counsel of the Office of Vocational Rehabilitation composed of 10 experts from various sections of the United States. After the study, the committee reported its findings and recommendations to the Arkansas Vocational Rehabilitation Service and the Federal Office of Vocational Rehabilitation December 5, 1958, that should the hospital be declared surplus, a national comprehensive rehabilitation center should be established at that facility. The report points out the need for such facilities in the field of vocational rehabilitation and recommends that it be operated by a State agency with funds provided both by the State

and Federal Government through Federal rehabilitation grants.

Mr. President, the recent session of the General Assembly of the State of Arkansas passed legislation that would permit the State of Arkansas to obtain title to the property, real, personal, or mixed, for the purpose of establishing and operating the rehabilitation facility. In addition, the State appropriated $200,000 annually of State funds for the maintenance and operation of the facility contingent upon the availability of the hospital and allocation of Federal funds from the Office of Vocational Rehabilitation, Department of Health, Education, and Welfare.

Mr. President, this is unquestionably a worthwhile project and in line with existing policies of the Federal Government to assist in the rehabilitation of our handicapped people.

Finally, Mr. President, I would like to point out that the investigating committee found that Arkansas has a vigorous and balanced program of rehabilitation and that the State has surpassed others in the provision of funds and rendering the services when considered on a population per capita income basis. The State agency, according to the report, has the philosophy and concept necessary to the successful administration of the comprehensive rehabilitation center.

The PRESIDING OFFICER (Mr. MCCARTHY in the chair). The bill will be received; and without objection, the bill will lie on the table, as requested by the Senator from Arkansas.

The bill (S. 1616) to direct the Secretary of the Army to convey the Army and Navy General Hospital, Hot Springs National Park, Ark., to the State of Arkansas, and for other purposes, introduced by Mr. MCCLELLAN, was received, read twice by its title, and ordered to lie on the table.

Mr. MCCLELLAN. Mr. President, while I have asked that the bill be held temporarily at the desk until committee reference of it is requested, nevertheless, I deem it important that the processing of the proposed legislation proceed expeditiously.

The operation of the hospital will be discontinued at the end of this fiscal year. Immediately upon its being deactivated, preparation would have to be made to put it on a standby basis. Therefore, if the facility is to continue in the service of the people of the country and not be virtually abandoned by the Government, it is important in my judgment, that the bill be considered promptly and acted upon favorably, in order that the State may take possession of the property and immediately begin its conversion into a rehabilitation center. Otherwise, there will be an unnecessary lapse of time. There will also be an unnecessary waste of funds to put the hospital on a standby basis and then, again, to reactivate it should the bill be enacted.

I should like to confer with the chairman of the Committee on Armed Services, the distinguished Senator from Georgia [Mr. RUSSELL], before reference of the bill is made. As soon as it has been referred, I hope that early committee action will be taken on it, so that the bill can be placed on the Senate Calendar for disposition at this session. I hope it can be disposed of favorably before the end of the fiscal year.

Mr. MCCLELLAN subsequently said: Mr. President, earlier today I introduced Senate bill 1616, which would convey the Army and Navy Hospital at Hot Springs, Ark., to the State of Arkansas for specific purposes, if and when the property becomes surplus to the needs of the Government, which we anticipate will occur at the end of this fiscal year.

At the time I introduced the bill I requested that it lie on the desk until I could consult with the distinguished Senator from Georgia [Mr. RUSSELL], chairman of the Armed Services Committee, with respect to the referral of the bill.

I have now consulted with him, and he has no objection to the bill being referred to the Senate Committee on Government Operations. Apparently, as of the present time, the Armed Services Committee might have jurisdiction of the bill. But once the hospital facilities are declared surplus, the jurisdiction will be reposed in the Committee on Government Operations.

For that reason, unless there is objection, I ask that the bill be referred to the Committee on Government Operations.

The PRESIDING OFFICER. Is there objection to the request of the Senator from Arkansas? The Chair hears none, and it is so ordered.

ADJUSTMENT OF LEGISLATIVE JURISDICTION OVER CERTAIN LAND USED FOR FEDERAL PURPOSES

Mr. MCCLELLAN. Mr. President, on behalf of myself and the Senator from Utah [Mr. BENNETT], I introduce, for appropriate reference, a bill to provide for the adjustment of the legislative jurisdiction exercised by the United States over land in the several States used for Federal purposes.

The bill is identical with S. 1538, reported by the Committee on Government Operations and passed by the Senate in the 85th Congress. After the bill had been referred to committee in the House of Representatives, due to a misinterpretation of certain aspects of the proposal, a motion was made to reconsider the passage of the measure. The motion was agreed to and the House was requested to return the bill to the Senate. The bill was returned to the Senate and placed upon the Senate Calendar under motions for reconsideration, where it remained until the close of the session.

The subject bill, in its original form, was prepared under the direction of the Interdepartmental Committee for the Study of Jurisdiction Over Federal Areas Within the States, appointed by the President. The staff of the Committee on Government Operations, assisted by the Legislative Counsel of the Senate and a special committee appointed by the Council of State Governments, perfected the bill in its present form, after many months of careful study. Following the completion of this work, the bill was approved unanimously by the Committee on Government Operations.

The bill and report made by the Committee to the Senate in the 85th Congress were submitted to the Governors and attorneys general of all of the States. In its present form, it incorporates a number of suggestions made by certain of these officials, and now has the approval of all officials and organizations concerned with the problems involved.

On March 14, 1959, the Attorney General transmitted to the President of the Senate a letter and an identical draft of the bill which were referred to the Committee on Government Operations. I am sending to the desk the Attorney General's letter which sets forth the general purpose of the legislation, and ask that it be incorporated in the RECORD at this point as a part of my remarks.

The PRESIDING OFFICER. The bill will be received and appropriately referred; and, without objection, the letter will be printed in the RECORD.

The bill (S. 1617) to provide for the adjustment of the legislative jurisdiction exercised by the United States over land in the several States used for Federal purposes, and for other purposes, introduced by Mr. MCCLELLAN (for himself and Mr. BENNETT), was received, read twice by its title, and referred to the Committee on Government Operations.

The letter presented by Mr. MCCLELLAN is as follows:

MARCH 13, 1959.

The VICE PRESIDENT,
U.S. Senate, Washington, D.C.

DEAR MR. VICE PRESIDENT: Enclosed for your consideration and appropriate reference is a legislative proposal "To provide for the adjustment of the legislative jurisdiction exercised by the United States over land in the several States used for Federal purposes, and for other purposes."

This measure is the end product of 16 months of intensive study by an Interdepartmental Committee for the Study of Jurisdiction over Federal areas within the States, prolonged study by the Council of State Governments' Committee on Legislative Jurisdiction over Federal lands, suggestions invited from Governors and attorneys general of the several States, comments received from numerous Federal agencies, recommendations from various other governmental and nongovernmental groups interested in the subject, and diligent work by the Senate Committee on Government Operations and its staff.

The general purpose of the legislation is to permit Federal agencies, in appropriate cases and with the consent of the States involved, to restore to the States certain legislative jurisdiction now vested in the United States over federally owned or operated lands and to assure that in the future the United States will receive only so much legislative jurisdiction as is essential to the proper performance of Federal functions. This would mean that persons residing on such properties would no longer, by virtue of the accident of the place of their abode, suffer disabilities with respect to voting, education, public health and safety, marriage and divorce, adoption, descent and distribution of property, and numerous other matters which are ordinarily provided for by State law.

Enclosed for your assistance is the comprehensive report, in two parts, submitted

to the Attorney General by the Interdepartmental Committee and transmitted to the President. The factual aspects of the problem to which the legislation is addressed and the original committee recommendations are contained in part I. Part II constitutes a textbook of the applicable law.

The Bureau of the Budget has advised that there is no objection to the submission of this recommendation.

Sincerely,

WILLIAM P. ROGERS,
Attorney General.

RETROCESSION OF CONCURRENT JURISDICTION OVER CERTAIN LANDS IN STATE OF UTAH

Mr. BENNETT. Mr. President, I introduce, for appropriate reference, a bill to retrocede to the State of Utah concurrent jurisdiction over certain lands within such State which are under the jurisdiction of the United States. I ask unanimous consent that a statement, prepared by me, explaining the purposes of the bill, be printed in the RECORD.

The PRESIDING OFFICER. The bill will be received and appropriately referred; and, without objection, the statement will be printed in the RECORD.

The bill (S. 1626) to retrocede to the State of Utah concurrent jurisdiction over certain lands within such State which are under the jurisdiction of the United States, introduced by Mr. BENNETT, was received, read twice by its title, and referred to the Committee on Armed Services.

The statement presented by Mr. BENNETT is as follows:

STATEMENT BY SENATOR BENNETT

I have today introduced a bill which is most important to the State of Utah. It is a bill to retrocede to the State concurrent jurisdiction over certain lands within the State over which exclusive jurisdiction was previously ceded to the United States. The lands in question are all part of the huge military reservations in Utah which are utilized by the various armed services of the Federal Government.

Commencing with the outbreak of World War II, the U.S. Government began to acquire in Utah and in other States, huge tracts of land for the erection of buildings and the establishment of installations to support and maintain our Armed Forces and to carry out the important defense functions so vital to our Nation. The State of Utah responded to the request of the Federal Government and granted to the United States exclusive jurisdiction over many thousands of acres of land which were ceded and utilized by the Army, Navy, and Air Force. Utah today has four major military installations: Clearfield Naval Depot, Hill Air Force Base, Utah General Depot, and Tooele Ordnance Depot. We also have several other smaller installations which are of lesser significance.

With the end of the Korean conflict, there was an appreciable cutback in the missions of these military installations and consequently many of the buildings and some of the real estate became surplus to the needs of the Federal Government. A small part of this property has been sold by the United States and thus found its way back into private ownership and has been placed on the tax rolls. However, the large bulk of the property in question is still owned by the Federal Government. In recent years, the United States has commenced a practice of leasing warehouses and other buildings, which are excess to the needs of the Government, to private companies and contractors who may or may not be connected in some way with the defense effort.

This practice of the Government in leasing land, buildings, and other facilities for commercial purposes has created serious tax problems for the State of Utah. A number of companies have availed themselves of these excellent buildings at a fair rental rate from the Government, and then received an unexpected windfall because they have not had to pay State taxes on equipment and inventories located on these military reservations. In some instances, some of these companies have recognized a moral, although not a legal obligation, to pay taxes to the State of Utah, and have in the past willingly paid such taxes assessed by the State.

However, the Federal Government has now created a situation which has dried up even this source of voluntary tax revenue. Both the Treasury and the Defense Department have raised a question as to the legality of such companies paying these taxes, inasmuch as such payments are voluntary and not mandatory. The Defense Department has raised the question in regard to cost-plus contracts and has denied such voluntary tax payments as a necessary item of cost in arriving at the contractual amount to which a contractor might be entitled for services or goods produced for the Government. Likewise, the Treasury has looked askance at such voluntary tax payments, and has denied some of these companies permission to take such payments as a legal deduction on their Federal tax returns.

Consequently, it can readily be seen that Utah faces a real dilemma in that it does not have the necessary legal authority to assess and collect taxes against these companies using military reservations to do private business. And now, it is denied any hope of obtaining voluntary compliance with tax assessments against companies who lease facilities on Federal reservations where the United States has exclusive jurisdiction.

Moreover, companies which have been able to obtain leases of buildings on Federal reservations are given a distinct competitive advantage over other businesses which must pay State taxes.

Therefore, an urgent need exists to approve the legislation which I have today introduced to restore to Utah concurrent jurisdiction over the lands in question, so that the State might have the proper authority to levy and collect the taxes to which it is rightfully entitled.

The problem is especially acute in Utah, since the Federal Government owns almost 70 percent of the entire land area of the State, thus leaving very little private property to bear the brunt of taxes and pay the costs of operating the local, county, and State governments. I hope the Senate will take immediate action to approve this bill, or as an alternative, pass legislation similar to that contained in the adjustment of legislative jurisdiction bill which was before Congress during the last session, and which I understand will shortly be reintroduced by the senior Senator from Arkansas [Mr. MCCLELLAN], and which I will certainly be happy to cosponsor.

I attach a resolution of the Legislature of the State of Utah, memorializing Congress to enact legislation similar to that which I have introduced today in the Senate. The resolution reads as follows:

"Resolution memorializing Congress and requesting that Congress consent to section 63–8–4, Utah Code Annotated, 1953

"Whereas in 1943 the Legislature of Utah ceded exclusive jurisdiction to the United States over all lands theretofore or thereafter acquired or leased by the United States for military or naval purposes and for forts, magazines, arsenals, dockyards, and other needful buildings of whatever kind authcrized by act of Congress, reserving to the State the right to execute civil and criminal process only; and

"Whereas in 1951 the Legislature of Utah enacted section 63–8–4, Utah Code Annotated, 1953, as follows:

'The State of Utah retains concurrent jurisdiction, both civil and criminal, with the United States over all lands affected by this act'; and

"Whereas private persons and companies are now leasing warehouse space on military reservations in Utah for the purpose of storing personal property not connected with any defense effort of the United States; and

"Whereas the State of Utah is being deprived of property taxes upon such privately owned personal property for the reason that such military reservations were acquired by the United States prior to 1951, and are therefore beyond the legislative jurisdiction of the State of Utah; and

"Whereas the Legislature of the State of Utah does not desire to impose any taxes upon property owned by the United States, but only upon such privately owned personal property located on land owned by the United States: Now, therefore, be it

"*Resolved*, That the Legislature and the Governor of the State of Utah do hereby request that Congress consent to section 63–8–4, Utah Code Annotated, 1953, in order that the State of Utah may exercise concurrent jurisdiction with the United States over all lands in Utah acquired or leased by the United States prior to 1951; be it further

"*Resolved*, That copies of this resolution be forwarded to Congress, to Senator BENNETT, to Senator Moss, to Congressman DIXON, and to Congressman KING with the request that the Utah delegation in Congress take such action as may be necessary to secure congressional approval hereof."

AMENDMENT OF SECTION 9(b)(3) OF TAFT-HARTLEY ACT, RELATING TO AFFILIATION OF GUARDS' UNION

Mr. HUMPHREY. Mr. President, section 9(b)(3) of the Taft-Hartley Act deprives any guards' union from affiliating with any other union which admits employees other than guards to membership.

The International Guards Union of America has called to my attention this serious discrimination in the present law. I firmly believe that guards ought to have the right to join in unified action on the same basis as other members of organized labor.

Therefore, I have prepared an amendment to repeal that part of the Taft-Hartley Act to which I have referred. I send the bill to the desk and ask that it be referred to the appropriate committee.

The PRESIDING OFFICER. The bill will be received and appropriately referred.

The bill (S. 1629) to amend section 9(b)(3) of the National Labor Relations Act so as to eliminate the provision thereof prohibiting the certification, as bargaining representative of persons employed as guards, of a labor organization which admits to membership, or is affiliated with an organization which admits to membership, employees other than guards, introduced by Mr. HUMPHREY, was received, read twice by its title, and referred to the Committee on Labor and Public Welfare.

COMMISSION ON UNEMPLOYMENT PROBLEMS

Mr. JOHNSON of Texas. Mr. President, I introduce for appropriate reference a bill to create an 11-member Commission on Unemployment Problems. Six of the members are to be appointed by Congress: three by the Senate and three by the House of Representatives. The remaining five members are to be appointed by the President from among representatives of labor and industry. No more than three of the Presidential appointees can be from one group.

The Commission would be charged with making a full and complete investigation and study of unemployment conditions in the United States, giving particular consideration to areas of critical unemployment, for the purpose of determining what can be done to alleviate these conditions.

The Commission is to begin its work as soon as all appointments have been made, and is required to make its findings and recommendations to the President within 60 days after it has begun its work.

The Commission is authorized to make studies and to hold hearings at such times and places as its duties require. The members of the Commission or designated subcommittees will obtain firsthand information with respect to these problems in areas where unemployment conditions exist.

The PRESIDING OFFICER. The bill will be received and appropriately referred.

The bill (S. 1631) to provide for the establishment of a Commission on Unemployment Problems, introduced by Mr. JOHNSON of Texas (for himself and Senators DIRKSEN, MANSFIELD, KUCHEL, HENNINGS, SALTONSTALL, HILL, RANDOLPH, BYRD of West Virginia, DODD, SMITH, SMATHERS, HUMPHREY, HARTKE, YOUNG of Ohio, KENNEDY, YARBOROUGH, BEALL, GOLDWATER, FULBRIGHT, TALMADGE, CASE of New Jersey, MOSS, KERR, BRIDGES, COTTON, SYMINGTON, MCCARTHY, ANDERSON, WILLIAMS of New Jersey, ENGLE, FREAR, BIBLE, CHURCH, HART, CARROLL, BARTLETT, NEUBERGER, JAVITS, JACKSON, MAGNUSON, ERVIN, O'MAHONEY, MCGEE, KEATING, MUSKIE, GRUENING, JORDAN, AIKEN, CHAVEZ, SCHOEPPEL, CARLSON, BENNETT, HOLLAND, WILEY, LANGER, CANNON, JOHNSTON of South Carolina, MURRAY, GREEN, LAUSCHE, CAPEHART, KEFAUVER, PASTORE, SPARKMAN, MCCLELLAN, PROXMIRE, and LONG), was received, read twice by its title, and referred to the Committee on Labor and Public Welfare.

Mr. JOHNSON of Texas. Mr. President, this country is confronted with a situation which demands action.

If one American is willing and eager to work but unable to find a job, that is one too many. But when that number is multiplied by nearly 4½ million, it is 4½ million reasons for action.

I have introduced today on behalf of myself, the distinguished minority leader, and other Senators whose names I send to the desk, a bill. I ask unanimous consent that Members of the Senate who wish to add their names to it be permitted to do so until Friday noon.

The bill would create an 11-member Commission. Three members of this Commission would be appointed by the Senate; three by the House; and five by the President of the United States.

The Commission would be charged with the responsibility of going to the areas of critical unemployment in this country. They would be asked to hold hearings; to make inquiries; to feel and weigh the bitter despair which attends the lives of so many of our fellow Americans.

Then within 60 days they would be asked to report back with recommendations for action.

It is my hope that the bill will secure the action of both branches of Congress and the President, so that we can shed light into the dark corners of poverty in our land.

Mr. RANDOLPH. Mr. President, will the Senator from Texas yield?

Mr. JOHNSON of Texas. I yield.

Mr. RANDOLPH. The distinguished majority leader, in submitting the resolution for himself and other Members of the Senate, is focusing attention on a program which is not less than tragic in some of the States of the Union. The most recent figures indicate that 6½ percent of the working force of the country is unable to find employment. In West Virginia, the percentage of unemployment is more than twice the national figure. So, we in West Virginia are intensely interested in the creation of such a commission.

I feel especially privileged to be a cosponsor of this measure and to know that among other sponsoring Senators are the distinguished minority leader and others on his side of the aisle.

It is heartening to find among provisions of the resolution the requirement that within 60 days after the date on which all appointments to the Commission have been made it shall submit its findings and recommendations to the President for transmittal to the Congress.

The urgency of the unemployment problem in many depressed labor surplus areas of the country demands prompt committee consideration and early passage of such a purposeful resolution as the able majority leader has introduced.

I am sure that West Virginians generally will hope that a program of survey and recommendations will be forthcoming very speedily. We have real concern for the problems of our unemployed and the distress which bears down heavily upon all too many families in our State and in areas of our sister States where conditions have grown from the chronic into the acute in their labor surplus areas, too.

I congratulate the senior Senator from Texas [Mr. JOHNSON] for his initiative in this matter.

Mr. JOHNSON of Texas. I appreciate what the Senator from West Virginia has said. I have discussed the subject with the distinguished minority leader, and on a number of occasions I have discussed it also with the Senators from West Virginia. No one has been more aware of the serious situation which exists in West Virginia than the majority leader and the minority leader. I myself have listened with great interest to the Senators from West Virginia as they have spoken of the problems with which their great State is concerned. I hope that West Virginia will be one of the first areas to receive the attention of the Commission.

Mr. BYRD of West Virginia. Mr. President, will the Senator from Texas yield?

Mr. JOHNSON of Texas. I yield.

Mr. BYRD of West Virginia. Mr. President, I am grateful to the distinguished majority leader for his kindness in yielding to me. As a cosponsor of the bill I am proud to rise in its behalf. I feel that the proposal to establish a temporary Commission to make a full and comprehensive study of America's unemployment and depressed areas problem may constitute a very significant step toward the alleviation of the problem.

I commend the distinguished majority leader for his authorship of the bill. I congratulate him for his deep interest in our country's grievous dilemma of joblessness.

I also wish to commend the U.S. Senate as a whole for the excellent work it has done so far this session in the passage of the Area Redevelopment Act, the Omnibus Housing Act, the Airport Extension Act, and other measures which will result in the creation of more jobs and thus combat the unemployment problem.

But, Mr. President, while these steps are important, I feel that much more must be done. Let us not forget that unemployment still is the single most crucial economic problem facing America today. Just 2 days ago, it was announced that unemployment had receded slightly in the month of March, and now stands at the level of 4,362,000. This is heartening news, even though most of the improvement probably is due to the yearly arrival of warm weather and the seasonal increase in construction and agriculture work.

But this slight improvement is not grounds for forgetting America's unemployment problem. Let us not be so cheered by the news that 387,000 fewer men are out of work that we forget about the staggering number—more than 4 million—who still are unable to find jobs.

When O. Henry wrote his book, "The Four Million," at the turn of the century, it was an entertaining volume of fiction. But there is nothing entertaining about the story of today's 4 million. The 4 million Americans who are walking the streets today, desperately looking for any sort of employment, constitute a distressing and disturbing picture. A large percentage of these unfortunate men and women are in the so-called depressed areas. Such depressed areas exist in my own State of West Virginia, as I have stated in the Senate at other times. West Virginia has more than 80,000 unemployed—or more than 13 percent of the State's entire work force.

What is needed is an intensive study which will summarize the problem and find new approaches to the matter of returning these persons to productive, worthwhile employment.

It is my belief that the bill which has just been introduced will help to achieve that purpose. I feel that it will be the vehicle by which appropriate, immediate, and direct action will be taken to aid the depressed areas of West Virginia and other States.

I again congratulate the majority leader, and I urge prompt consideration and early adoption of the bill.

Mr. JOHNSON of Texas. I thank the distinguished Senator from West Virginia. No two Senators have contributed more to the preparation of the bill or to the submitting of it than have the Senators from West Virginia.

Mr. DODD. Mr. President, I commend the distinguished Senator from Texas for introducing this bill.

Since the advent of the industrial revolution, mass unemployment has been one of the continuing evils afflicting society. Governments have devised a number of stopgap remedies. We have tried doles, government work projects and a variety of forms of government spending. But all of these have been treatments of the effects of unemployment, not the causes. Therefore, I am pleased to cosponsor Senator JOHNSON's proposal for the establishment of a commission that would study the root causes of unemployment.

I am particularly pleased that his proposal calls for a report within 60 days.

In coming months Congress will act upon a number of proposals which bear directly on the unemployment problem. We need an authoritative guide as to the extent of unemployment, the causes of it, and the role each of the proposals before Congress can be expected to play in solving it.

We cannot accept unemployment for millions as a permanent factor of our economic system. We must make a coordinated and intelligent attack upon this problem.

I believe that the Commission proposed today by Senator JOHNSON provides an excellent starting point. If it properly carries out its task, probes the basic causes of unemployment, and makes comprehensive recommendations to remedy this evil, then we will have a proper basis for enacting a many-pronged program to wipe out unemployment in this country.

AMENDMENT OF TARIFF ACT OF 1930 RELATING TO FREE IMPORTATION OF TOURIST LITERATURE—AMENDMENTS

Mr. JAVITS submitted amendments, intended to be proposed by him, to the bill (H.R. 2411) to amend paragraph 1629 of the Tariff Act of 1930 so as to provide for the free importation of tourist literature, which were referred to the Committee on Finance and ordered to be printed.

AMENDMENT OF FEDERAL RESERVE ACT RELATING TO CERTAIN RESERVES — ADDITIONAL COSPONSOR AND PRINTING OF AMENDMENT

Mr. BUSH. Mr. President, yesterday I submitted an amendment to Senate bill 1120, the bill relating to Reserve requirements for member banks of the Federal Reserve System, which would eliminate from the Federal Reserve Act and other banking laws the classification "central Reserve city" and reclassify New York and Chicago as Reserve cities.

The distinguished Senator from Illinois [Mr. DIRKSEN] advises me that he desires to be a cosponsor of the amendment. I ask unanimous consent that his name be added to the list of sponsors of the amendment, and that the names of other Senators may be added before the close of business today, if they so desire.

The PRESIDING OFFICER (Mr. YOUNG of Ohio in the chair). Without objection, it is so ordered.

Mr. BUSH. I had intended to have the amendment lie at the desk through Friday for additional cosponsors. However, the Committee on Banking and Currency will meet tomorrow morning in executive session to consider Senate bill 1120. Accordingly, I now ask unanimous consent that the previous order of the Senate be rescinded and that the amendment be printed and referred to the Committee on Banking and Currency at the close of business today.

The PRESIDING OFFICER. Without objection, it is so ordered.

PRINTING AS A SENATE DOCUMENT BIBLIOGRAPHY ENTITLED "WHAT POLICY IN LABOR-MANAGEMENT RELATIONS WILL BEST SERVE THE PEOPLE OF THE UNITED STATES?" (S. DOC. NO. 22)

Mr. KENNEDY. Mr. President, the committee on discussion and debate materials and interstate cooperation of the National University Extension Association has announced that the national high school forensic problem for the academic year 1959–60 is "What policy in labor-management relations will best serve the people of the United States?" The problem comprehends three propositions for debate and three questions for discussion, as follows:

DISCUSSION QUESTIONS

1. How can the public interest best be protected in labor-management disputes?

2. What should be the responsibilities of labor and management in solving the current labor-management problems?

3. What should be the responsibility of Government in solving the current labor-management problems?

DEBATE PROPOSITIONS

1. *Resolved*, That section 14b of the National Labor Relations Act should be repealed.

2. *Resolved*, That the Federal Government should substantially increase its regulation of labor unions.

3. *Resolved*, That the Federal Government should require arbitration of labor disputes in all basic industries.

In response to numerous requests for material, the Senator from Arizona [Mr. GOLDWATER] and I have had the Legislative Reference Service of the Library of Congress and the staff of the Senate Labor and Public Welfare Committee compile a bibliography which the high school students of America may use in preparing for their debates next year.

If printed as a Senate document, this bibliography will provide material which Senators can send to people who write to them requesting debating material. It will also be useful to any person studying this question.

Last year, when the subject chosen for debate was education, a similar bibliography was printed as a Senate document and proved extremely useful, saving many of us the labor and time of continually duplicating material to comply with requests from our constituents.

I ask unanimous consent on behalf of the Senator from Arizona and myself, that this material, which will not exceed 50 printed pages, be printed as a Senate document.

The PRESIDING OFFICER. Is there objection to the request of the Senator from Massachusetts? The Chair hears none, and it is so ordered.

ADDRESSES, EDITORIALS, ARTICLES, ETC., PRINTED IN THE RECORD

On request, and by unanimous consent, addresses, editorials, articles, etc., were ordered to be printed in the RECORD, as follows:

By Mr. LONG:

Address delivered by Senator ELLENDER before the Red River Valley Association, Shreveport, La., on March 31, 1959.

By Mr. WILEY:

Address entitled "The Warmth of America in the Cold War," delivered by Senator RANDOLPH, of West Virginia, before United Service Organization's National Council, at the Sheraton Park Hotel, Washington, D.C., on April 8, 1959.

By Mr. KEFAUVER:

Address delivered by Senator TALMADGE before the annual meeting of the Tennessee Agricultural Council in Memphis, Tenn., on April 3, 1959.

NOTICE OF HEARING ON FREEDOM OF INFORMATION AND SECRECY IN GOVERNMENT BY SUBCOMMITTEE ON CONSTITUTIONAL RIGHTS

Mr. HENNINGS. Mr. President, I wish to announce, as chairman of the Subcommittee on Constitutional Rights of the Committee on the Judiciary, that the subcommittee has scheduled a public hearing on the subjects of freedom of information and secrecy in government, on Friday, April 17, 1959, beginning at 10 a.m., in room 318—caucus room—of the Old Senate Office Building, Washington, D.C.

The witnesses to be heard by the subcommittee are outstanding leaders in the field of journalism, who are expected to present their views not only

on the general subjects of freedom of information and secrecy in government, but also on S. 186, the freedom of information bill which has been referred to the Committee on the Judiciary.

This particular date was selected for convenience during the period the American Society of Newspaper Editors is meeting this year in Washington, D.C.

OPPRESSION OF TIBET BY COMMUNIST CHINA

Mr. FULBRIGHT. Mr. President, a little while ago some 200 million Asians of the Buddhist faith recalled with prayers and veneration the 2,500th anniversary of Buddha's death. Buddhism, now moving into its third millenium, is not only the living religion of millions of people in Ceylon, Burma, Siam, Cambodia, Laos, Japan, Red China, and Nationalist China, but is also undergoing a vigorous renaissance.

Three years ago the Buddhist stronghold of Burma was the scene of large Buddhist conclaves. The great council meeting then held there was only the sixth of its kind during the past 2,500 years. As a mark of the resurgence and continuing vitality of this most ancient religious faith, a re-editing of Buddhist texts was completed after years of effort by scholarly priests from Burma, Thailand, Ceylon, Cambodia, Laos, and other Asian countries. Then, the task done, the texts were published in a definitive, authorized form.

Today, throughout vast reaches of Asia, there is a surge of anger as Tibet, a citadel of Buddhism, is brutally suppressed by its Red Chinese overlords bebecause it attempts to secure the autonomy that was promised it by Red China. There is, as well, a brutal repudiation by Communist China's Premier Chou En-lai of the principles of nonviolance and nonintervention in other countries' internal affairs that he made at the 1955 Bandung Conference of Asian nations.

Today, the Dalai Lama, the god-king of Tibet, has reached India, after a perilous flight from his own country, while his people—one of the most unoffending of all the world's peoples—continue their struggle for religious freedom, although they are few and are armed with primitive weapons, and are opposed by Communist China with its more than 600 million people whose forces are equipped with modern arms.

In this melancholy situation we note with interest the reactions of the free Asian press, and its expressed fears that communism threatens to extinguish the freedom of Asian peoples and to crush freedom of worship.

The Hindustan Times, in non-Buddhist India, said:

> A small country on our border has paid the ultimate penalty for its temerity to aspire to independence. Much else could die with Tibet if we do not, even now, heed the warning.

The powerful Times of India said:

> What trust can India place in Chinese Communist declarations after their open violation of repeated pledges they gave to the Tibetan people that they would respect their autonomy.

In Burma, the Rangoon Daily said Red China's action against the Dalai Lama was an "attempt to suppress Buddhism by the forces of communism."

The Nation, Burma's leading newspaper, said:

> The brutal machinegunning and bombing of the Tibetan people was a gross violation of the Bandung principles and should be condemned by all Asians who cherish freedom and independence.

It is a measure of free Asia's sense of shock at the outrages perpetrated on Tibet by Red China that comments such as these are made by the Burmese press, for small Burma has a long frontier with her giant neighbor who does not brook expressions of freedom and independence of thought by those upon whom her shadow falls.

There is little we can do to succor a Tibet in agony. But our deepest feelings are engaged, for although we are not of the Buddhist faith, it is nonetheless true that he who lays rough hands upon the followers of Buddha lays rough hands upon all who believe in freedom of worship, independence of spirit, and the dignity of man. Our Nation is founded upon these principles. It has never departed from them. It has never ceased to hope that they will become the guiding principles of all the peoples of the world. Hence our national sorrow that they are being stifled today in the devout and brave country of Tibet by Communist China.

TRIBUTE TO CHANCELLOR KONRAD ADENAUER

Mr. WILEY. Mr. President, we in the United States and the other people of the free world recognize that during the years in which Dr. Konrad Adenauer has been Chancellor of West Germany the programs and policies which he has proposed and supported constitute an outstanding record in German, and world, history.

Within this period, the Federal Republic of Germany was revived from a shattered and impoverished nation to one of the most prosperous and forward-moving countries in Europe. Under his leadership, also, West Germany has risen to an honored and influential place in the councils of the Western World.

After yesterday's announcement by Chancellor Adenauer of his decision to be a candidate for the Presidency of West Germany, the world now is "taking stock" of what effect his action may have on international affairs.

As Chancellor, Dr. Adenauer has proven himself to be a strong, courageous statesman, dedicated to the cause of freedom. Furthermore, he has acted as a rock of Gibraltar, standing against the efforts of communism, overt and covert, to extend its influence to West Germany and the Western World.

As a long time friend of Konrad Adenauer, I have a particularly high respect for the outstanding ability with which he has served his country and the free world so admirably and honorably.

In reviewing Dr. Adenauer's splendid record, the world will reflect upon the constructive contributions which he has made toward close cooperation with the Western allies; improving French-German relations and cooperation; uncompromising policies for opposing efforts of communism to expand in Europe, and particularly to penetrate West Germany; willingness to share the burden of armament against Soviet power on the European Continent; and many other policies designed not only in the interests of West Germany, but also to strengthen the free world alliance.

In his candidacy for the presidency this summer, I, of course, wish him every possible success.

Although it is recognized that the presidency is a position of diminished authority and power, the people of West Germany and the free world can be gratified that—if he is elected as predicted—we shall continue to have the benefit of the wisdom, experience, and high qualities of statesmanship and leadership demonstrated by Dr. Adenauer over the years.

LABOR REFORM LEGISLATION

Mr. GOLDWATER. Mr. President, on previous occasions the press has reported my remarks on labor reform legislation, citing the fact that there is a demand on the part of the public and labor union members for effective legislation in this field. I should like at this time to elaborate on this subject.

During the Easter recess I had an opportunity to research correspondence in my files concerning labor-reform legislation. There is an unmistakable trend on the part of private individuals, labor union members, and businessmen, to support a bill which would curb abuses in the labor movement.

There is one striking feature of this research to which I should like to direct attention, Mr. President. Among the 422 pieces of correspondence which came from States other than my own State of Arizona, not one indicated approval of S. 505, the bill which was favorably reported from the committee, and the bill which I voted against. It is clear to me that the public feels as I do, that this is an ineffective proposal for labor reform legislation.

Again I should like to point out that in this sampling of correspondence not one individual voiced disapproval of S. 1137, the labor reform bill introduced by the Senator from Arkansas [Mr. McCLELLAN], who presided over the hearings which disclosed the abuses and racketeering of power-hungry labor bosses in the labor union field.

Equally important is the demand on the part of private individuals who expressly request that Congress enact legislation to curb the abuses of secondary boycotts and blackmail picketing. I feel it is important that we recognize the desires of these citizens. I request to have printed in the body of the RECORD

at this point a chart covering 422 letters in which there was stated a position on labor reform legislation.

There being no objection, the chart was ordered to be printed in the RECORD, as follows:

Sampling of 422 out-of-State letters concerning labor reform legislation

	Pro 1555	Improve 1555	Anti 1555	Pro 748	Anti 748	Pro 1137	Anti 1137	Specifically requesting strong bill to curb abuses
Individuals	None	4	35	9	6	16	None	80
Business firms, organizations, and construction companies	None	3	83	6	25	12	None	41

Mr. GOLDWATER. Mr. President, again today, as I have done on several previous occasions, I wish to insert at this point in the body of the RECORD several newspaper editorials which are critical of the Kennedy-Ervin approach to labor legislation as proposed by S. 505 and S. 1555.

There being no objection, the editorials were ordered to be printed in the RECORD, as follows:

[From the St. Louis Post-Dispatch, Feb. 19, 1959]

THE SECOND PACKAGE

Commenting on the Democratic proposal for a "two-package" approach to labor reforms, Secretary of Labor Mitchell says, "Whatever the packaging, it's the product that counts." Both the administration and Senator KENNEDY, of Massachusetts, have proposed legislation for union financial reports and internal reforms. They should be able to agree on at least one package.

Senator KENNEDY, however, has voiced objections to the administration's proposals which would go into the second package, yet these are as important as the first. The administration seeks Taft-Hartley Act changes to deal with blackmail picketing and some secondary boycotts. Mr. Mitchell says:

"The McClellan committee has disclosed a number of cases where racketeers have moved into unions, beat up dissenters, milked the union treasury and used picket lines to throw out of work people whose employers refused to have them organized from the top down."

The administration bill would deal with such racketeering without outlawing all boycotts or organizational picketing. The bill would prohibit picketing of an employer whose employees showed no interest in joining the union; it would prohibit boycotts of an employer not a party to a labor dispute. Such measures should protect employers and employees alike without hindering honest unionism.

It makes little difference whether these essential labor reforms are wrapped in one package or two, but the two-package approach should not be employed to bury the second package. Both types of labor reforms should be passed.

[From the Cincinnati (Ohio) Post, Mar. 14, 1959]

BILL OF PARTICULARS

Members of the Senate Labor Committee are working on legislation to curb the labor rackets exposed by the McClellan investigation. So far, the action does not point toward a very strong bill.

The reluctance of the Democrats on the committee, under pressure from the union lobby, to write a tight law is frightening, in view of the McClellan disclosures.

Just this week in a New York speech, Senator MCCLELLAN spelled out a bill of particulars in support of stronger measures he himself has proposed.

"The instability or lack of integrity prevalent today in labor-management relations in this country is appalling," he said.

In the investigation, "We have had to deal constantly with people of low character or no character at all." Of 1,200 witnesses so far summoned, more than 200 ducked behind the fifth amendment for fear of incriminating themselves. The evils which have been exposed, he said, "are outrageously cruel, corrupt and contemptible."

"No legitimate union, properly administered by honest and decent officials, would be penalized to any extent or degree whatsoever," the Senator said. "If these provisions are enacted into law, however, the power and opportunity of crooked labor bosses and criminal elements to continue the abuse and exploitation of union members and working people in this country will be substantially curbed and reduced."

How can any honest and decent union officials or Senators of like attributes, hesitate about on which side they stand?

[From the Roanoke (Va.) Times, Mar. 14, 1959]

THE PUBLIC INTEREST COMES FIRST

President Meany of the AFL–CIO has denounced the Eisenhower administration's labor reform bill as "stupid" and antilabor. In testimony before the House labor subcommittee, he contended the administration bill represents a deliberate attempt to obscure the issues.

Mr. Meany favors, with some reservations, the Kennedy-Ervin bill introduced in the Senate. This deals mainly with protection of union funds and other safeguards against racketeering. The administration measure has similar provisions but it would deal more severely with "blackmail" picketing. It proposes to ban picketing of a plant in the absence of evidence of sufficient interest in union membership among employees.

But there is a much more significant difference between the bills. This has to do with secondary boycotts. Despite the prohibition of the Taft-Hartley Act, it is possible for a union to force employers with whom it has no dispute, to stop doing business with a concern against whom it has called a strike. The administration bill seeks to close Taft-Hartley loopholes which permit the abuse of union power; the Kennedy-Ervin measure would make no change in the existing Taft-Hartley provision.

The power to shut down businesses having no quarrel with the union in order to compel another business to bow to union demands has been used frequently to paralyze a whole industry or a whole section of the country. Under the circumstances can such monopoly power in the hands of labor leaders be defended as in the public interest. The public welfare must take precedence over union interest. To claim that legislation aimed at preserving that principle is antiunion is simply befogging the issue.

[From the Terre Haute (Ind.) Tribune, Mar. 15, 1959]

WISHY-WASHY LABOR LAW

A new labor bill offered to Congress is practically the twin brother of the Kennedy-Ives bill of last session. This measure was pushed through the Senate on a hurry-up basis which allowed no time or opportunity for intensive hearings or consideration. It then was defeated in the House—for the simple reason that it just wasn't capable of doing the needed job.

There are good things in the currently proposed measure, just as there were in its predecessor. But the good is heavily outweighed by the negative aspects. To take one example, it would do nothing about two of the worst labor abuses perpetrated on business and the public—secondary boycotts, and "blackmail" picketing.

Newspapers throughout the country are now asking for a stronger bill. An interesting instance is provided by the Richmond Times-Dispatch. This leading southern paper editorially rebuked the House for voting down the Kennedy-Ives bill, on the grounds that any law was better than none. But now it takes a different view. It calls the proposed law wishy-washy, and says; "This year the need to halt the inflationary wage-price spiral is even more urgent. The threat of sympathy strikes and secondary boycotts carries the full weight not only of the striking union, but also the threat inherent in the 16 million membership of the full AFL–CIO syndicate. Therein lies the greatest danger of 'union monopoly.'

"The right to unionize, to bargain collectively, and to strike locally should not be impaired (so long as public welfare and national security are not endangered). But unless the threat of nationwide strikes in key industries is removed, the inflationary trend cannot be checked."

The country has the right to a labor law which will protect the legitimate interest of us all, including union members. The Congress has the responsibility to pass such a law.

[From the High Bridge (N.J.) Gazette, Mar. 5, 1959]

A CRY FOR HELP

Congress, we are told, is in a mood to enact labor legislation. As for what kind it may be, there is the distressingly likely prospect of getting the ineffectual, labor-dictated, 1959 version of the Kennedy-Ives bill—now known as the Kennedy-Ervin bill or S. 505. Debate on this innocuous measure begins any day now, and—in the absence of protests from home—there is good reason to expect passage.

A vote for the Kennedy bill is an easy out for the nervous lawmaker who, for a number of reasons, may prefer not to irritate the labor bosses, and whose constituents are uninformed or indifferent or both. He can then please the labor barons and pose at the same time as a champion of labor union reform. On the other hand, the conscientious Congressman or Senator who realizes what a phony this bill is must be a very brave man to vote against it when there is no hint of support or appreciation from the homefolks.

Whatever you may have heard, this is no reform bill. It does not strike down the vicious and indefensible secondary boycott, under which unions may attack at will any customer of any business against which they claim a grievance, real or fancied. It does not outlaw organizational or recognition picketing, whereby unions may victimize a business and abuse workers who have previously voted against unionizing. It does nothing to wipe out in free and democratic America the double standard of conduct under which the plain people are expected to be law-abiding and labor goons have come

to be considered as having extralegal rights in the departments of intimidation, skull-cracking and the destruction of property. It does not even protect union members against the very sort of exploitation revealed in the McClellan labor rackets hearings.

But, once this bill is passed, it will be seized upon by union gauleiters as a Federal "health certificate," as evidence that they have been purified and as a new weapon in more aggressive membership drives than we have yet seen. Correction and control of racketeering, hoodlumism and assorted mayhem will be farther off than ever. Historically, labor legislation is passed by Congress approximately every 10 years.

Useful as this bill could be to the union hierarchy—whose "fat cats" will bring every pressure to bear for its passage—it is a disservice to the rank and file union member and an insult to the public at large.

It is therefore the privilege of the people to resent the Kennedy bill. And it is their duty to demand of their servants in Congress that it be thrown out—bodily. They now have the choice of acting immediately—or repenting at long leisure.

[From the New York (N.Y.) World Telegram & Sun, Mar. 20, 1959]

LOOK WHO'S OPPOSED

While Congress timidly toys with labor legislation, New York has set an example of action.

The legislature has passed a bill designed to protect rank-and-file union members—and their dues—from the kind of larceny, misuse, and assorted hanky-panky exposed repeatedly in the hearings of the McClellan rackets committee.

It is axiomatic that Governor Rockefeller will sign the measure, since it was he who proposed it.

The bill outlaws mishandling of funds by union officers or agents. It bars them from engaging in conflict-of-interest transactions. It outlaws acceptance of payoffs from employers—the kind of thievery inherent in sweetheart contracts. It requires full financial reports to the State and the membership. It sets penalties of fines up to $1,000 and prison terms up to a year for willful violators of the prescribed fiduciary obligations. And it gives labor organizations and union members the right to bring court action for redress against officials who violate those obligations.

The bill also sets forth similar financial responsibilities for employers, employer associations, and labor relations consultants—and outlaws connivance and bribery on their part.

In short, it is basic protection—long overdue—for union members and their dues money. As one legislator put it in Albany, the only union officials who have anything to fear from the bill are hoodlums and racketeers.

And yet—

The State AFL–CIO opposed the measure. It argued that the States should let the Federal Government enact a law that would be uniform throughout the country.

But what happens when the merest hint of any such action by Congress arises? The AFL–CIO marshals its national strength to prevent any genuinely remedial legislation.

So, in effect, the AFL–CIO was saying to the legislature: "Let's coordinate all labor reform legislation at the national level, where we can knock it over the head."

This puts the supposedly responsible heads of American organized labor in the anomalous position of working against the interests of rank-and-file union members.

We think these AFL–CIO leaders, State and Federal, better take a look in the mirror, observe the egg on their faces, and wise up. On them it looks especially bad.

Mr. GOLDWATER. Mr. President, at the time the Kennedy-Ervin bill was ordered reported I asked my staff to prepare an analysis of the bill, setting forth its shortcomings. The analysis, which is entitled, "The Gimmicks in the Labor Reform Bill Favorably Reported by the Senate Labor Committee," is now complete and I ask that it be printed at this point in the body of the RECORD. It is equally applicable to the reported version of S. 505, as well as the new bill, S. 1555.

There being no objection, the analysis was ordered to be printed in the RECORD, as follows:

THE "GIMMICKS" IN THE LABOR REFORM BILL FAVORABLY REPORTED BY THE SENATE LABOR COMMITTEE

Even if the committee bill effectively did everything it appears to do, it would still be largely inadequate to accomplish the job of eliminating or even substantially diminishing abuses, corruption, and racketeering in the labor-management field. Its serious omissions in this respect must, however, be left for full consideration in the forthcoming minority report. In this analysis the sole purpose will be to demonstrate that many of the provisions of the committee bill belie their own appearance, and in fact do not give employees and union members the rights, benefits, and protections which are claimed for them.

I. Fiduciary obligation of union officials (sec. 2(b)): The bill does no more than declare that it encourages the faithful observance of fiduciary responsibilities by union officials by requiring them to make certain financial reports. But by the use of the word "fiduciary" in what is in fact merely the bill's preamble, an impression is created that something is being done about the fiduciary obligations of union officials. The Democrats rejected a Republican amendment imposing fiduciary status on union officials and giving union members a right to sue in the Federal courts for breach thereof.

II. Who is a union officer? The sanctions of the committee bill are exclusively criminal and are directed mainly at union "officers" who fail to comply with its requirements—reporting of financial matters, and regulation of trusteeships, and of union elections. The U.S. Supreme Court has held that a union's "officers" are only those officials who are so designated by the union's constitution and that function is not the test. Thus, a union can rewrite its constitution so as to have only a single officer, its president for example. That means that those officials who perform the duties of vice president, secretary, treasurer, business agent, organizer, manager, member of an executive board or other union governing body are not officers and hence completely free from the bill's requirements or sanctions. The Democrats rejected a Republican amendment defining "union officers" to include all of these governing or policymaking officials.

III. Loans by unions to union officers, members, and employees (sec. 101(b)(4)): Unions must report all loans to union members and officials aggregating more than $250. This enables the union leadership to make loans of $250 or less to favored members or officials, to deny them to those union people who for one reason or another oppose the leadership, and to act in this discriminatory fashion without letting the membership know about it. A more effective device for permitting an incumbent union leadership to use union funds for perpetuating itself in office is difficult to imagine. Nevertheless, the Democrats rejected a Republican amendment to require reporting of all such loans, regardless of amount, which is just what the bill requires with respect to loans made by a union to any business enterprise.

IV. Conflict-of-interest reporting by union officials (sec. 102(a)): Section 102(a) requires every union officer and every union employee receiving an annual gross of more than $5,000 (except mere clerical employees) to report any conflict-of-interest transaction as set forth in the bill. Generally, these transactions are such as to put the union man on both sides of a labor-management situation at the same time, and they thus constitute a breach of his duty to his union. Because of the lack of definition of "officer" in the bill, all union policymaking and governing officials not designated as officers in the constitution, and who, if they are on the union payroll, receive less than $5,000 per year, are freed from the requirement of reporting these fundamentally unethical transactions. This provides a gaping loophole for those dishonest union officials whose main source of income is derived not from their union salaries but from their conflict-of-interest transactions. The Democrats rejected a Republican amendment to eliminate the $5,000 salary limitation which would have then required all nonclerical union employees to report these transactions. The Democrats, however, did knock out the $2,500 limitation on reporting of expenditures by employers for the purpose of influencing employees.

V. Conflict-of-interest benefits derived through a dummy or strawman setup: The Democrats rejected a Republican amendment designated to require reporting of benefits derived by a union official in a conflict-of-interest situation where the union official gets his unethical take from a third party intermediary.

VI. Exemption of small unions (sec. 101(d)): Having agreed in subcommittee to a Republican amendment eliminating the power of the Secretary to exempt small unions and employers from the financial reporting requirements, the Democrats, in full committee, put it back in again. Their argument was that such reporting would be burdensome to many small unions. However, the bill already contains a provision authorizing the Secretary to prescribe simplified reports where full reports would be burdensome. The result of retaining this exemption is to make it possible for some of the most corrupt unions, such as the Johnny Dio paper locals, having few, or even no members, to evade the financial reporting requirements of the bill.

VII. Information in required financial reports to be made available to union members (sec. 101(c)): This provision sounds as if union members would be given the information necessary for them to keep their union officials honest. Nothing could be more deceptive. Neither the union member, nor even the Secretary, can tell by looking at one of these required financial reports whether it is accurate, erroneous, or deliberately falsified. In order to determine that, it would be necessary to compare the report with the basic union books, records, and accounts from which the reports have been prepared. It is only then that discrepancies might become evident. The bill fails to provide that union members be given access to these basic documents. A Republican amendment to that effect was rejected. It was argued that the bill gives the Secretary access to these records and that is enough to assure that reports filed will not be falsified. This assertion is entirely unsound. The best source of information would be alert union members who had discovered falsifications after comparing the basic union records with the filed reports. Having no access to these basic records, union members are rendered largely useless as sources of information for such misconduct. The Secretary, under the bill, must rely either on the hit-and-miss method of spot checking a sampling of the filed reports, or on complaints unsupported by concrete evidence. Which of these is he to investigate? No one can say. This omission

renders the financial filing requirements of the bill almost entirely worthless despite its specious appearance of effectiveness.

VIII. Preservation of basic union records (sec. 105, 108(c)): The committee bill requires the making and preservation of the records upon which the filed financial reports are based and imposes severe penalties for their destruction or concealment. This adds to the impression that the bill's procedure for public disclosure of union financial affairs is being effectively safeguarded. But the very people who are most vitally concerned in the matter, the union members, are denied access to these carefully safeguarded records, a right enjoyed by corporate stockholders with respect to corporation records in almost every State in the Union.

IX. Embezzlement of union funds (sec. 109(a)): This makes embezzlement of union funds a Federal crime. Embezzlement of any kind is already a crime in every State and Territory of the United States, and there is no evidence that these local laws are not being properly enforced. This provision gives union members nothing they do not already have.

X. Suits by union members to recover embezzled union funds (sec. 109(b)): Union members seem to be given the right to sue in a Federal or State court any union officer who has been convicted of embezzling union funds, for the recovery of such funds for the benefit of the union. But this right accrues so long after the act of embezzlement occurred that even if the suit is successful there is small likelihood that the stolen funds will not have been dissipated. Thus, the officer must first be suspected, then investigated, then indicted, tried, and finally convicted. Even then the suit can't be brought by the union member until 6 months after the union's officers have rejected his demand that they bring such suit themselves. The period between the indictment and the suit by the union member could easily span several years. Furthermore, this apparent right of the union member to sue is so hedged about by restrictions and limitations that he is far better off suing in a State court under State law. In most States he could bring suit as soon as the money was misappropriated; he would not need to wait even for indictment of the embezzling official; he would not have to show criminal intent; and he could secure a judgment upon a preponderance of the evidence rather than wait for a criminal conviction requiring proof beyond a reasonable doubt. And finally the committee bill, as a further condition of bringing this suit, requires the union member to get leave of the court upon a sworn application and for good cause shown. These three additional conditions transform what appears to be a right to sue into a mere privilege dependent upon the court's discretion. Under State law, he could sue as of right without being subject to these conditions, conditions incidentally, which the law imposes very rarely, only in unusual types of cases, and never heretofore in this type of legal action. Thus, upon examination, this so-called right to sue for recovery of embezzled funds turns out to be a snare and a delusion which no lawyer would ever advise his client to utilize. It should be added that the Republicans secured acceptance of an amendment preserving the remedies of union members under State law in this type of proceeding. Without this amendment, union members would have been stripped of their existing rights and given literally nothing in return.

XI. Payments by employers to representatives of his employees (sec. 111): The committee bill makes it a crime for an employer to give anything of value "to any representative of his employees." The Supreme Court has ruled that the term "representative" is not limited to a representative for collective bargaining purposes. Thus it is possible for an employer to commit a crime if he gives a material reward to the president of his employees' bowling league for his success in running a bowling tournament. Such president is a "representative of his employees" within the meaning of the bill. A Republican amendment to eliminate this possibility was rejected.

XII. Payments by employers to union officials (sec. 111): This section also makes it a crime for an employer to give or lend anything of value to an officer or employee of a union with intent to influence his decisions, actions or duties as a "representative of employees" (again that dangerous phrase) or as a union "officer or employee." If this were merely intended to outlaw bribery of union officials, that is already illegal under all State laws. But the term "influence" includes acts which are not technically bribery—what seems to be aimed at is prohibiting the subversion of union officials in the performance of their union duties. But why should such subversion be criminal only if it is committed by an employer, even if the employer and the subverted official's union have absolutely no relations with each other? (The bill's language includes such a situation in its scope). If the subversion of union officials is reprehensible and merits outlawing, why shouldn't it be outlawed regardless of who does the subverting? As the bill now reads, a Jimmy Hoffa or Dave Beck can subvert the president of the Retail Clerks Union by paying him to give up an organizing campaign so that the Teamsters can take it over, and no crime is committed. But if an employer in the steel industry gives something of value to his acquaintance, the head of a textile workers union, to persuade him to influence his union to change its political line, that would be a crime under the bill. A Republican amendment to make it a crime for any person (not merely an employer) to subvert a union official was rejected by the Democrats.

XIII. Extortion to permit the unloading of freight-carrying motor vehicles (section 111): This section makes it a crime for a union or any of its representatives or employees to demand from a truck driver or his employer a fee or charge for the unloading of the truck's cargo. This is extortion and is already illegal under State law and in all probability under Federal law (the Hobbs Act) as well. Hence, the extortion rarely takes this obvious form. What usually happens is that the union or union official seeking to exact a fee for permitting the truck to be unloaded, requires the operator to join the union and pay a sizable initiation fee even if he lives and works in another locality and belongs to another union, even if it is merely another local of the extorting union. This gives the deal an appearance of legitimate labor activity but it is nothing but disguised extortion The Democrats rejected a Republican amendment designed to outlaw this kind of racket.

XIV. Extortion picketing (section 111): This makes it a crime to picket for the purpose of compelling the picketed employer to pay off an individual in order to get rid of the picket line. Again, this is naked extortion and is already a crime both under State and Federal law (the Hobbs Act). Hence, this provision, like the previous one, is mere window-dressing designed to create an impression that the committee bill does something effective about certain indefensible types of picketing which are just as frequent as this type of extortion picketing is rare. It does nothing of the kind. Recognition and organizational picketing where the employees clearly do not want to be represented by the picketing union and which frequently is carried on to force the employer to violate the law by recognizing such a union is left completely untouched. Moreover, even within its own narrow scope, the provision is specious. The picketing is illegal only if it is for the enrichment of an individual—if the ill-gotten gains go to the racketeering union itself, it is not illegal. And there is no illegality involved in threats to engage in such picketing nor in causing or attempting to cause others to so engage. The Democrats rejected Republican amendments to remedy these defects, and they remain to mislead the public into thinking that another labor abuse has been corrected.

XV. Reporting requirements in connection with trusteeships imposed on locals by international unions (section 201): This section requires international unions to file reports giving specified information about any trusteeships over a local. The documents, books, records, etc. which the union makes or keeps and upon which these reports are based must not be destroyed or concealed. But union members (including even those in the trusteed locals) are not given access to these basic records and hence can rarely know if the filed reports are accurate or falsified. There is, moreover, no requirement that such basic records must be made and kept by the union in the first instance. The only applicable provision in this connection is section 105 which merely requires unions to make and keep basic records in connection with financial transactions. Inasmuch as the trusteeship reporting requirements include nothing of a financial nature, the only requirement is that they not be destroyed or concealed if the union chooses to make or keep them, which it need not do.

XVI. Probable cause in connection with the Secretary's authority to bring suit to enforce the trusteeship and election provisions of the bill (secs. 204 and 302): At Republican insistence, an amendment was adopted giving the Secretary power similar to that of other regulatory agencies to investigate for violations of the bill's financial reporting requirements. This was done by striking out the restrictive phrase "probable cause" to believe violations had been committed and permitting the Secretary to investigate when he believes violations had been committed or are about to be committed. Retention of the original language, particularly the phrase "probable cause" would have completely nullified the Secretary's investigative effectiveness. Nevertheless, the restrictive phrase "probable cause" is still retained in two other significant parts of the bill. Section 204 gives the Secretary authority to sue in a Federal court to remedy violations of the bill's trusteeship provisions and section 302 to remedy violations of the provisions dealing with the election and removal of union officers. In each case, however, the same three conditions are imposed upon the Secretary's bringing suit. First, he must have a complaint from a union member; and second, he must have probable cause to believe (1) that a violation has occurred, and (2) that it has not been remedied. And just as the Secretary's power to investigate was limited by the phrase "probable cause," so is his power to sue on behalf of those complaining union members to whom the bill does not guarantee the access to the basic union records which would enable them to furnish the evidence necessary to meet the requirement of a showing of probable cause. Thus, this combination of lack of access to basic union records, coupled with the requirement to show probable cause, in effect, renders the remedies under the trusteeship and election provisions almost wholly illusory. Suffice it to say that no comparable Federal statute in the labor field conditions a suit upon probable cause, neither the Taft-Hartley, Fair Labor Standards, nor Walsh-Healey Acts. The Democrats rejected Republican amendments to strike out probable cause as was done in connection with the Secretary's investigative powers, but no reason for this difference in treatment has yet been forthcoming.

XVII. Rights of candidates for union office (sec. 301(b)): This section purports to guarantee rival candidates for union office the same facilities for reaching the membership as the incumbent officers. Senator Prouty's proposal to give them access to the union membership lists for 30 days was first accepted, then rejected by the Democrats in favor of a provision which does not give such access but purports to provide equal campaigning facilities for all candidates. The joker in this one is that the machinery all remains in the hands of the incumbent officers.

XVIII. Secret ballot in union elections (sec. 502(j)): This section defines "secret ballot," but does not exclude voting by proxy. The Democrats rejected a Republican amendment to assure that proxy voting was prohibited, thus leaving a loophole for election abuses.

XIX. Preservation of election and convention records (sec. 301): This section requires union officials to preserve for 1 year all ballots, election records, credentials of convention delegates, and all minutes and other convention records pertaining to the election of officers. But again there is no provision requiring that access be given to these records to union members or even rival candidates. Inasmuch as the Secretary can begin court action for violation of the election provisions only upon complaint of a union member, and upon a showing of probable cause, it is obvious that his remedial powers are sadly restricted. How can a complaining union member secure evidence amounting to probable cause of a violation if he is denied access to the basic election records and documents? Again we have an appearance of a remedy without the reality.

XX. Preemption of State laws by bill's election provisions (sec. 303): This section specifically preempts all State laws dealing with challenging a union election which has already been conducted, thus making the bill's provisions in this respect the sole remedy available to union members. The catch here is that many State laws provide more expeditious and effective remedies in this area than does the committee bill. The Democrats rejected a Republican amendment to preserve remedies available under State law.

XXI. Union organizations known as conferences, joint councils, State and district councils, and other associations of unions (sec. 501(h)(i): The McClellan Rackets Committee hearings revealed that some of the worst manifestations of corruption and racketeering in the labor movement were to be found in organizations which are associations of labor unions rather than of individual employees, such as conferences, joint boards, State and district labor councils, etc. The most notorious example, of course, are the regional conferences into which the Teamsters are divided, particularly the Western Conference of Teamsters formerly headed by Frank Brewster. Associations of this kind are not labor organizations under existing law nor would they be under the committee bill for they do not bargain collectively, do not represent employees for collective bargaining purposes, do not enter into collective bargaining agreements, and employees neither participate in their activities nor hold direct membership therein. Hence, these organizations, many of them extremely corrupt, as well as their officers and employees, are left completely untouched by the committee bill. Republican amendments to remedy this were rejected.

XXII. The no man's land problem (sec. 601): The no man's land is one of the most serious problems in labor-management relations. Senator KENNEDY himself has admitted that his own original proposal in his bill to compel the National Labor Relations Board to exercise all of its jurisdiction and take every case even if it was primarily local in character, is not an acceptable solution. Nevertheless the majority accepted Senator MORSE's amendment, now in the committee bill, which for all practical purposes, does exactly what the original Kennedy bill would have done but appears to be doing something different. It requires the Federal Board to assert all of its jurisdiction but permits it to cede jurisdiction (in cases which are primarily local) to the States to administer the Taft-Hartley Act but only through an administrative agency and not through the State courts. Under the provisions of the bill, these State agencies would be mere arms of the Federal Board subject to its control in every significant respect, and all judicial appeals would be through the Federal courts exclusively. To implement this provision would require every State in the Union to enact new legislation and 40 of them, which do not now have such an agency, to create one. Under normal circumstances it might well take decades before they all took the necessary legislative action. But the scheme so completely negates the sovereign character of the several States, that it is impossible to believe that any of them would voluntarily submit one of their independent governmental agencies, to the subordinate, even degrading status, to which the proposal would reduce them. But behind this completely unrealistic provision, hidden like a raisin in a cake, is the concrete fact that if the proposal is adopted, the Federal Board would be compelled to take every case affecting interstate commerce. The present time lag of the Board in case handling is about 2 years. This provision would extend it to 3, possibly 4 years. The small employer, his employees, and the unions which deal with them would be given a forum which they do not now have, but they still wouldn't get the quick and effective relief they so urgently need. The "no man's land" would be eliminated, but the "no man's land" problem would remain as unsolved as it is now.

XXIII. Communications between attorney and client: From time immemorial the communications made by a client to his lawyer, like those between patient and doctor, priest and penitent, etc., have been regarded as sacred, and the right to keep these communications confidential is protected by law in every State in the Union. Some of the provisions of the committee bill, particularly those that require reporting by labor relations consultants, experts or advisers raise a problem in this regard because many of these people are lawyers and the people for whom they act are their clients. The American Bar Association within the past few weeks vigorously urged that the labor bills specifically protect this traditional aspect of the attorney-client relationship. The Republicans offered an amendment to that effect which the Democrats rejected, their position seeming to be that it is already protected under existing law. As indicated, that is certainly true under State law—but it is questionable if there is any Federal law which provides similar protection.

XXIV. Allocation of jurisdiction as between the States and the Federal Government as contained in various provisions of the committee bill: The committee bill distributes its remedies as between the States and the Federal Government in accordance with no discernible standard or consistent principle. Some remedies are exclusively Federal, some are left to the States and denied to the Federal Government, some are given to the States but only if they apply Federal law, and some are allocated to both the States and Federal Government. In some instances, the majority insisted upon exclusive Federal jurisdiction asserting that absolute uniformity was essential; in others, it was insisted that diversity of treatment under varying State laws was preferable. The following are the eight major provisions in which an allocation of jurisdiction was made:

1. Fiduciary obligations: The bill creates no Federal fiduciary nor remedy. This is left entirely to the States, which in fact, have no statutory law on the subject and very little case law. Interestingly, New York State has just enacted a labor reform bill which imposes stringent fiduciary obligations on union officials and gives union members themselves the right to sue for breach thereof. But the New York State AFL–CIO, the largest State labor federation in the country, with over 2 million members, opposed the bill, its principal objection being that State governments should permit the Federal Government to enact a law that would have a uniform effect throughout the country. This is exactly the reverse of the position taken by the Democrats in committee on the subject of fiduciary obligations and remedies.

2. Suits to recover embezzled union funds: But, having taken this position on fiduciaries, the Democrats made an exception permitting union members to sue in either State or Federal courts under Federal law to recover embezzled union funds while preserving their right to bring a similar suit under State law in State courts. No reason for the distinction in treatment is discernible.

3. Embezzlement of union funds: This is made a Federal crime while preserving the right of the States to prosecute in State courts as a State crime.

4. Extortion picketing: This adds a new Federal crime although it is already a crime under State law (which is not preempted) and probably a Federal crime as well under the Hobbs antiracketeering statute. What the effect is on the Hobbs Act, nobody knows.

5. Extortion to permit unloading of trucks: Adds a new Federal crime although it is already a crime under State law (which is not preempted) and probably a Federal crime as well under the Hobbs Act, the effect upon which is again unknown.

6. Trusteeships:

(a) Creates a Federal court action by the Secretary of Labor for violation.

(b) Doesn't preempt State law remedies, but if union member chooses the Federal remedy (through the Secretary) he can't use the State remedy.

7. Election safeguards:

(a) Creates a Federal court action by the Secretary to challenge an election which has already been held and preempts any similar State remedy. The Secretary's remedy is exclusive and is the only one the union member may use—he loses his State remedy.

(b) But if there are abuses in connection with an election prior to its being held, the bill provides no Federal remedy at all. The union member's only relief can come only through whatever State law may exist on this subject.

8. The no man's land: Here, everything is turned over entirely and exclusively to the Federal Government with the sole unrealistic exception that the States may administer the Federal law only (Taft-Hartley) through administrative agencies and not the courts. These agencies would be virtually arms of the Federal Labor Board with little or no independent power or status, and in any event would be permitted to take only those cases which were primarily local in character, and where although technically there was an effect on interstate commerce, such effect was remote and insubstantial.

CALL OF THE ROLL

The PRESIDING OFFICER. Is there further morning business? If not, morning business is closed.

Mr. GOLDWATER. Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

The Chief Clerk proceeded to call the roll.

Mr. JAVITS. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

HATE BOMBINGS

Mr. JAVITS. Mr. President, we received word over the news tickers the radio, and television this morning of an explosion which damaged the home of Mr. and Mrs. George Rayfield, of Collins Park, a suburb of Wilmington, Del. Mr. and Mrs. Rayfield are Negroes.

This represents one of those situations which indicate that a home has been bombed by way of intimidation, to keep people from living in a certain section of a town.

Mr. President, there are now pending before the Senate Committee on the Judiciary a number of measures to deal with such incidents, which are popularly called "hate bombings," such as that which occurred in Collins Park last night. I am sponsoring one bill. The administration has such a bill. The majority leader has such a bill.

I think this is a rather grim punctuation mark showing the urgency for getting action upon those bills. I direct the attention of the committee to this situation, and I hope very much that we shall have early action upon the so-called hate bombing bills, in an effort to make some measurable progress at an early date, and to enable the FBI to act on these situations which we have now observed occur not only in the South, but in a northern State—in this instance—in Delaware.

PRESIDENTIAL INABILITY

Mr. KEFAUVER. Mr. President, on December 31, 1958, the committee on Federal Constitution of the New York State Bar Association issued a report on Presidential inability. I am glad to be able to say that the report comes out wholeheartedly in favor of the solution contained in Senate Joint Resolution 161 of the 85th Congress, which was not acted upon by the Senate last year, and Senate Joint Resolution 40 of the present Congress, which I introduced along with Senators DIRKSEN and HENNINGS, and which is pending before the Subcommittee on Constitutional Amendments. I ask unanimous consent to have published at this point in the RECORD this report by the committee and a letter from the chairman, Mr. Cornelius W. Wickersham, to Senator EASTLAND, bringing the committee's report to the attention of the Judiciary Committee.

I also call attention to an article on this same subject which was contained in the December 19, 1958, edition of the Yale Law Review. This is an article by the ex-Attorney General, Mr. Herbert Brownell, Jr., and it, too, comes out wholeheartedly in favor of this same solution to this vexing problem. Mr. President, this question of Presidential inability was discussed at a meeting of the Subcommittee on Constitutional Amendments on March 9, 1959. There was a general disposition in favor of Senate Joint Resolution 40, with minor subcommittee amendments. The subcommittee favored prompt action on this measure, but it was decided to invite the present distinguished Attorney General, Mr. Rogers, to give further testimony, before taking final action on the measure. However, I hope that the subcommittee can make a recommendation to the full Judiciary Committee in the very near future.

There being no objection, the letter and report were ordered to be printed in the RECORD, as follows:

CADWALADER, WICKERSHAM & TAFT,
New York, March 19, 1959.

Hon. JAMES O. EASTLAND,
Chairman, Senate Judiciary Committee, Senate Office Building, Washington, D.C.

DEAR SENATOR EASTLAND: You will recall that former Attorney General Brownell, when he submitted his statement on Presidential inability to a subcommittee of the House Committee on the Judiciary on April 1, 1957, stated that the problem of continuation of orderly government if a President was unable to act was a practical problem of Government which should be met without delay.

The committee of the New York State Bar Association which has considered the question of Presidential inability for some time past made a unanimous report which was approvad in January of this year by the executive committee of the New York State Bar Association by unanimous vote, copy of which I enclose.

As chairman of the committee I am instructed to request that your committee give consideration to this vital question and it is our hope that you will agree with us that a constitutional amendment is necessary and that it should take the form that we have recommended as set forth at the top of page 3 of our report.

You will note also our conclusion that last year's Senate Joint Resolution 161, which died with final adjournment of the 85th Congress, seems to us to be preferable to the other methods that have been suggested in the event that your committee should not agree with our recommendations.

In the sincere hope that your committee will not allow this vital question to die again in committee, we urge you to bring the matter before your committee for consideration and action.

In this atomic age the present nebulous situation is not only dangerous, but unless corrected could easily lead to disaster.

With personal regards.

Faithfully yours,

CORNELIUS W. WICKERSHAM.

NEW YORK STATE BAR ASSOCIATION—REPORT OF COMMITTEE ON FEDERAL CONSTITUTION, DECEMBER 31, 1958

To the Members of the New York State Bar Association:

REPORT RECOMMENDING AMENDMENT ON PRESIDENTIAL INABILITY

The Federal Constitution now leaves open the determination of what constitutes inability of the President of the United States, and fails to provide the method of determining either the beginning or the end of the disability. This fact has been a matter of embarrassment to the Government in the past and could be a matter of national disaster in the future.

The problem arises under the fifth clause of section 1 of article II, which reads as follows:

"In case of the removal of the President from office, or of his death, resignation, or inability to discharge the powers and duties of the said office, the same shall devolve on the Vice President, and the Congress may by law provide for the case of removal, death, resignation or inability, both of the President and Vice President, declaring what officer shall then act as President, and such officer shall act accordingly, until the disability be removed, or a President shall be elected."

Thus Congress is authorized to provide for the case of removal, death, resignation or inability of both President and Vice President, declaring what officer shall then act as President, until the disability is removed, or a President elected. In consequence, Congress has enacted the so-called Succession Acts, designating who shall so act.

But the Constitution fails to give similar authority to Congress with respect to the matter here discussed. Only an amendment to the Constitution can cure this defect.

Several suggestions have been made proposing an act of Congress or an amendment, none of which appear to be adequate to meet the issue in a manner that would be understood by or acceptable to the American people—a consideration of highest importance. These include proposals that the President should make the determination, or the Vice President or the Cabinet or both; or that a commission either of selected officials or distinguished citizens should be appointed for the purpose. Another proposal is that the matter be referred to the courts. And there are other suggestions.

But these are matters that by proper constitutional practice should be decided by Congress—the representatives of the people of the country. Just as the Constitution now authorizes Congress to provide by law for succession where both President and Vice President are unable to act, so should similar authority be given to Congress to provide the method of determination of the vital question of inability to act.

Moreover, each of the various proposed methods of determination is untried and open to objections. To freeze any one method into the Constitution now would make correction in the light of future experience or change of circumstances extremely difficult, because it would require an additional constitutional amendment. This danger can be avoided by a constitutional amendment which gives Congress the power to select the method; then correction or improvement could be made at any time by Congress enacting a new law.

The question of what happens on the death of the President and whether the Vice President then succeeds to the office, or succeeds only to the powers and duties of the office, has been settled by historical tradition. As we all know, the Vice President is sworn in as President upon the death of the President.

Presumably, the same thing would happen in case of the resignation of the President or of his removal from office. Presumably also, in case of Presidential inability, the Vice President would only be authorized to act as President, succeeding to the powers and duties of the office only. But this conclusion has been questioned. The words "the same" have never been construed and this fact adds to the confusion which is apparent in the recent discussions on the subject in Washington and elsewhere. It is of the highest importance that the Constitution should be clear on this point, and that the text should be readily understandable not only to lawyers but to laymen as well.

As a result it is felt by this committee that a constitutional amendment is necessary, and that the amendment should provide in substance: (a) That the commencement and termination of any inability should be determined by such method as Congress shall by law provide; and (b) in case of the inability of the President, that the Vice President should succeed only to the powers and

duties of the office and not to the office itself.

At best it is extremely doubtful whether Congress has power to deal with the matter without a constitutional amendment and clearly any ambiguity of the present provisions cannot be cured by act of Congress alone.

This committee concludes that a constitutional amendment is necessary for any final or authoritative solution of the problem and recommends that the fifth clause of section 1 of article II of the Constitution should be amended to read as follows:

"In case of the removal of the President from office, or of his death or resignation, the said office shall devolve on the Vice President. In case of the inability of the President to discharge the powers and duties of the said office, the said powers and duties shall devolve on the Vice President, until the inability be removed. The Congress may by law provide for the case of removal, death, resignation, or inability, both of the President and Vice President, declaring what officer shall then be President, or in case of inability, act as President, and such officer shall be or act as President accordingly, until a President shall be elected or, in case of inability, until the inability shall be earlier removed. The commencement and termination of any inability shall be determined by such method as Congress shall by law provide."

If this amendment is adopted it would mean that in case of the death, resignation or removal from office of the President, the Vice President would be sworn in as President. In case of the President's inability, however, the Vice President would only act as President, having his powers and duties, until the inability was removed or a President elected. Congress would be called upon to enact legislation providing the method by which the commencement and termination of any inability should be determined.

In view of the amount of time that would necessarily pass before the adoption of the amendment there would be plenty of opportunity for the congressional committees to consider what method should be adopted by Congress for this determination.

In case of the inability of both the President and Vice President, the change contained in the amendment proposed above is designed to make it plain that the officer who shall then act as President under and pursuant to the Succession Act shall do so on a temporary basis until the inability is removed or a President elected.

It is believed that no amendment would be sufficient to meet the problem without (1) providing for the determination of the question of commencement and termination of inability of the President or the Vice President, and (2) without separating the provisions relating to inability from those relating to death, resignation or removal, thus removing any ambiguity involved in the present language.

The committee does not believe that the amendment should prescribe the methods for determination of the facts relating to inability. It is better constitutional practice to leave that matter to Congress, which under our proposed amendment Congress would be authorized to provide for by legislation. As already indicated, we believe the best solution to be a constitutional amendment such as that which we have recommended above. We have, however, examined other proposals, and of these we believe that Senate Joint Resolution 161, introduced in the Senate March 4, 1958, by Senator KEFAUVER, on behalf of himself and Senators DIRKSEN, HENNINGS, HRUSKA, JOHNSTON of South Carolina, LANGER, WATKINS, JENNER, and BUTLER, offers a solution which we would favor as second best to the proposal of our committee. Senate Joint Resolution 161, proposing a constitutional amendment, was reported favorably by a subcommittee of the Senate Judiciary Committee, and its bipartisan sponsors constituted more than a majority of that committee. However, the full committee took no action. (Hearings had been held in 1957 by a subcommittee of the House Judiciary Committee, at which our committee's proposal was submitted, and in 1958 by the subcommittee of the Senate Judiciary Committee, at which our committee's report was submitted substantially as above set forth and a member of our committee testified.)

In brief, Senate Joint Resolution 161 first provides that the Vice President shall become President for the unexpired portion of the current term in case of the removal from office, death, or resignation of the President (sec. 1). It then provides that if the President declares his inability in writing his powers and duties shall be discharged by the Vice President as Acting President (sec. 2). If the President does not so declare, the Vice President, if satisfied that inability exists, and upon written approval of a majority of the Cabinet, shall assume the discharge of the powers and duties, as Acting President (sec. 3). Then follow somewhat elaborate provisions for determination of the end of the disability by the President, and his resumption of powers and duties, subject to action by Congress if the Vice President, with similar Cabinet approval, declares his opinion that inability has not ended (sec. 4). A further section authorizes Congress to provide by law for the case of removal, death, resignation, or inability, both of the President and Vice President (sec. 5).

Also in March 1958 the House Judiciary Committee rejected Representative KEATING'S proposed constitutional amendment (creating a disability commission similar to that contemplated by Representative CELLER'S proposed statute, which had been reported favorably by a House Judiciary Subcommittee) and referred the whole matter back to the subcommittee. Subsequently Representative KEATING issued a statement endorsing Senate Joint Resolution 161, which he characterized as the administration proposal. Senate Joint Resolution 161 died with the final adjournment of the 85th Congress, and no proposal was reported out by either the House Judiciary Committee or the Senate Judiciary Committee.

Senate Joint Resolution 161 specifies the method and machinery for determining the commencement and termination of disability. This precludes leaving to Congress the details which might have to be changed in the future because the method selected proved to be unsatisfactory. Senate Joint Resolution 161 appears to us to be preferable, however, to other methods that have been suggested.

Now that extended hearings have been held by both Judiciary Committees, and much thought expressed by a wide variety of informed persons, and much education accomplished by public discussion, we urge the committees of the new Congress to come to a conclusion and submit to Congress a solution for this most urgent national problem.

Dated: December 31, 1958.

Respectfully submitted.

Cornelius W. Wickersham, *Chairman;* Theodore Pearson, *Secretary;* Eli H. Bronstein; John W. MacDonald; Leonard P. Moore; Joseph J. Perrini; Churchill Rodgers; Arthur H. Schwartz; Arthur H. Dean; Martin Taylor; Orison S. Marden; Welles V. Moot; George Roberts; Elihu Root, Jr.; Harrison Tweed.

MORE POLARIS SUBMARINES BEING ORDERED

Mr. COTTON. Mr. President, for more than a year I have been prodding, pushing, and pleading for faster production of nuclear-powered Polaris missile submarines.

I am convinced possession of sufficient numbers of these weapons will achieve more for our national defense and security than any other single thing we can do.

Polaris submarines can give our defense the most punch for the least money. They do not require great escort fleets or elaborate foreign bases. They will operate as mobile and elusive launching platforms, capable of firing hydrogen-tipped ballistic missiles against enemy targets 1,500 miles away, even when they are submerged beneath the seas or the polar icecap.

Congress has already authorized the construction of nine of these submarines, but only six have been started.

As a first step in a drive to expand our fleet of Polaris submarines, I have urged the Secretary of Defense to order an immediate start on the construction of the three already authorized. Funds for them have already been appropriated by Congress, and the authority to build them has been lying idle at the Pentagon since last summer.

The Defense Department has now responded. Assistant Secretary of Defense McNeil advised me this morning that the Secretary of Defense has approved a Navy plan to proceed with the immediate construction of these three submarines. He indicated that bids are now being sought and that contract awards will be made by July 1 or shortly thereafter.

Secretary McNeil also indicated that the Navy has been authorized to proceed with the procurement of very long lead-time items for three additional Polaris submarines, authorization for which will be required in subsequent years.

This evidence of faster action on Polaris submarines is heartening as a first step in the expansion of our fleet of these submarines to the size required by our national safety and security. I hope the Department of Defense will follow through and order the construction of Polaris submarines as rapidly as they can be built. I shall continue to urge this course.

I ask unanimous consent to insert in the RECORD, as a part of my remarks, a copy of my telegram to Secretary McElroy dated March 28, and a copy of the reply I received today from Assistant Secretary McNeil. I also ask unanimous consent to include an editorial from the Manchester, N.H., Union Leader of April 1, 1959, on this subject.

There being no objection, the communications and editorial were ordered to be printed in the RECORD, as follows:

MARCH 28, 1959.

Hon. NEIL MCELROY,
Secretary of Defense,
Department of Defense,
Washington, D.C.:

Voyage of *Skate* provides solid new evidence of ability of nuclear-powered submarines to operate under and through polar ice, and a graphic illustration of how Polaris submarine can use icecap to mask its moves until it breaks through and fires its 1,500-mile missile against an enemy target.

Urge you to order immediate start on three Polaris submarines funded by Congress last year. Authority to build three is lying idle

now. I am convinced prompt action to build these submarines will do more for our national defense and security than any other move we could make. It gives the most punch for the least money, with no great escort fleet and no foreign bases.

NORRIS COTTON,
U.S. Senator.

OFFICE OF THE
SECRETARY OF DEFENSE,
Washington, D.C., April 8, 1959.

DEAR SENATOR COTTON: This is in response to your telegram of March 28, 1959, urging the early construction of the three Polaris submarines for which appropriations have been made by Congress.

The Secretary of Defense has approved the plan of the Navy to proceed with construction of these submarines, bids are now being sought and contract awards will be made by July 1 or shortly thereafter.

In addition, the Navy has been authorized to proceed with the procurement of very long lead time items for three additional Polaris submarines, authorization for which will be required in subsequent years.

Sincerely,

W. J. MCNEIL,
Comptroller, Assistant Secretary of Defense.

[From the Manchester Union-Leader, Apr. 1, 1959]

WEAPONS FOR WAR AND PEACE

When Vice Adm. Hyman G. Rickover, father of the atomic submarine, pleads for a fleet of nuclear-powered killer submarines to meet the threat of missile attacks by Soviet underwater vessels, it is not because of pride in his own pet projects. Rickover is too practical a man for that.

On the contrary, it is because he shares the feeling of alarm so often expressed by this newspaper that Soviet submarines might hit Atlantic coast cities with a veritable torrent of atomic or hydrogen bombs carried by missiles, and thus irreparably damage this Nation's retaliatory potential.

As in everything he does, Admiral Rickover has once again insisted that the Nation face up to facts. "The Russians," he warns, "have about 450 or 475 submarines to our 110. We have built 25 since the end of World War II and they have built about 350." Complacent officials in the Defense Department have continually assured us that, as far as is known, the Russians do not have atomic submarines. But, as Rickover so pointedly observed, even conventional subs can carry and fire missiles and destroy our large industrial cities.

The atomic submarine, of course, is a dual-purpose weapon. This point was made clear when Senator NORRIS COTTON almost simultaneously with Admiral Rickover demanded a stepup in production of missile-firing Polaris submarines. COTTON's demand, which he has frequently voiced in the past, was prompted by the recent under-ice North Pole voyage of the atomic submarine *Skate*. Senator COTTON stressed the importance of using the polar icecap to hide fleets of submarines which can break through and fire their missiles against targets deep in Russia.

It is of course, true that while preparing for war we must also pray for peace. That is why the weapons demanded by Admiral Rickover and Senator COTTON are so vitally important. They are not only our surest guarantees of victory if war ever comes, but also effective deterrents to surprise attack by the Communists.

YESTERDAY'S CELEBRATION OF WORLD HEALTH DAY

Mr. HUMPHREY. Mr. President, yesterday, April 7, represented an important landmark in human relations.

It marked the day of the coming into force 11 years ago of the constitution of the World Health Organization—the world's chosen instrument for spearheading health advances.

It was a particular source of interest that World Health Day, 1959, was dedicated to one particular health problem—that of the mental health of mankind. The day's theme was world "Mental Health and Mental Illness."

My colleagues are aware that mental illness in the United States and other countries is a scourge of incalculable magnitude. The figures show that 550,000 hospital beds in the United States—every other bed in our country—is occupied by a patient suffering from some mental disorder.

The number of Americans who are ill with less serious mental problems runs into the millions. When one thinks of the impact of mental ill health on children particularly, one realizes that here is a health problem of tremendous concern to ourselves and to all mankind.

In paying tribute, therefore, to the World Health Organization, we recall mental health specifically, as a key element in international and national well-being.

Upon sound, healthy minds depends the future of this, or any other country.

Let me note, too, in this connection, that in 1960 there will be observed World Mental Health Year. Under the able auspices of the World Federation for Mental Health, a WHO-affiliated organization, all of the countries will be invited to redouble their efforts in prevention and treatment of mental illness. I know that the United States will contribute effectively to the success of World Mental Health Year.

Here in the United States, the National Association of Mental Health is the principal private voluntary channel for stimulating mental health advance, just as the National Institute for Mental Health is our major public channel.

A great many other fine organizations are, of course, active on a private basis, such as the American Psychiatric Association, the National Committee Against Mental Illness, and others.

For World Mental Health Year, 1960, five specific areas have been singled out by the World Federation for intensified worldwide effort: First, worldwide study of childhood mental health; second, cross-cultural surveys of attitudes to mental disorder; third, mental health teaching in professional education; fourth, mental health and developing industrialization; and fifth, psychological problems of migration.

World Mental Health Year, 1960, will serve as an interesting forerunner of the International Public Health and Medical Research Year, which it is believed, will commence in June 1961. The latter year will, of course, embrace all of the diseases known to mankind.

It has been my pleasure to discuss plans for World Mental Health Year with two of the leaders who are playing a most active role in bringing it into being: Dr. Jack Rees, of London, director of the World Federation; and Dr. Frank Fremont-Smith, of New York, medical director of the Josiah Macy, Jr., Foundation. Both of these distinguished physicians are past presidents of the World Federation.

On May 12 in Geneva, the 12th World Health Assembly will open its sessions. The International Public Health and Medical Research Year will, of course, be on its agenda.

Shortly before that date, I shall issue my personal report to the Senate Committee on Government Operations on the subject of WHO, based on my consultations with it during my trip to Europe in November and based on my subsequent review of that great organization.

I invite now the attention of my colleagues to Committee Print No. 3 of the international health study being made by the Government Operations Subcommittee of which I am chairman. This print is entitled "The Status of World Health." It reports through 81 pages of charts and text on the present situation in world health.

I send to the desk and ask to have printed in the RECORD the text of a fine editorial, published in yesterday's New York Times in tribute to WHO and World Health Day.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

WORLD HEALTH DAY

Today is being observed as the annual World Health Day of the World Health Organization. The purpose of this observation is to emphasize the world aspect of various health problems and seek the widest range in meeting them.

This year the theme will be "Mental Health and Mental Illness." It is appropriate because it foreshadows the World Mental Health Year, to be observed in 1960, under the auspices of the World Federation for Mental Health. Such a project deserves strong public support.

The realization of the extent of the mental health problem has appalled many persons. In some countries it is probably the largest single obstacle to individual and community health. But against that feeling of apprehension should be placed two great positive gains. First, the whole social attitude toward mental illness has changed for the better in many countries. The change makes it possible to discuss this question as a health problem. Second, there have been enormous advances in diagnosis and therapy. This suggests, at the least, the possibility of far greater gains than those already made.

This should be a day, therefore, of recognizing need and responsibility. It can also be a day of gratification and of hope.

USE OF BITUMINOUS COAL AS ROAD MATERIAL

Mr. CLARK. Mr. President, a development in coal research which could benefit thousands of families dependent upon coal as a means of livelihood was announced this week by the Curtiss-Wright Corp. If proposed tests bear out initial claims, bituminous coal, and possibly anthracite, will be used as a base for new materials to be used in highway construction, roofing, shingles, floor tiles, and similar products.

The Philadelphia Inquirer of April 8 carries detailed information on this development. Because of its importance to the economy of the Commonwealth of Pennsylvania, as well as to that of other

coal-producing States, I ask unanimous consent that the text of these articles be printed in the RECORD.

There being no objection, the articles were ordered to be printed in the RECORD, as follows:

[From the Philadelphia Inquirer, Apr. 8, 1959]

NEW ROAD MATERIAL MAY AID COAL AREAS

(By John M. Cummings)

HARRISBURG, April 7.—Impressed by what they saw and heard at a demonstration of a new blacktop road paving material, Pennsylvania legislators from the coal producing counties are hopeful chemistry has solved the unemployment problem in their sorely afflicted areas.

The new material, a binder with bituminous coal as its base, was described as having qualities that make it superior to asphalt in highway construction. Its developers, the Curtiss-Wright Corp., so far have not tested it against concrete, but confidence in its ability to meet this competition was freely expressed.

So far, the immediate hope is confined to the bituminous producing counties. But Roy T. Hurley, chairman and president of Curtiss-Wright, said research in anthracite has produced some satisfactory and promising results.

Just what the researchers expect to develop from hard coal is something of a mystery. The ingredients that go into the road binder, other than soft coal, also are a closely guarded secret.

So many and varied are the products of the chemists' laboratory, that no great surprise would be occasioned if the new creation should prove the basis of a revival in the bituminous fields, for a starter.

Republican and Democratic legislators who saw the demonstration last night readily agreed with Curtiss-Wright that a practical test should be given the material without undue delay. To this end there is to be bipartisan sponsorship of a bill earmarking a half million in highway funds for the construction of 12 half-mile sections on well-traveled roads to determine if in actual use it comes up to laboratory promise.

For years hardheaded businessmen have been seeking methods of using coal other than combustion. The collapse of the anthracite industry due to the encroachment of oil and gas, has created virtually blight conditions in some of the eastern counties. In the western and central counties, where bituminous underlies the surface in vast quantities, there is a widespread unemployment because of the decline in the use of this fuel in industry.

Curtiss-Wright chemists have found uses for the new material other than in road-building. Roofing, shingles, floor tiles, tar paper, pipes, conduits and automobile undercoating may be fashioned from the process.

The material was developed at the Curtiss-Wright research center located at Quehanna in Clearfield County.

We may be in for quite an industrial fight. Asphalt interests, centered in Pittsburgh, are not expected to receive the intruder with open arms. Secretary of Highways Martin, who witnessed last night's demonstration, was reserved in his comment. His was a wait-and-see attitude, natural enough in the circumstances.

If the material holds up under road tests, it could mean a new day in the coal fields. It is estimated 2,200 tons of coal would be used in a mile of two-lane highway. And when you think of all the roadbuilding going on these days, with more to come, you have the reason for the new gleam in the eyes of lawmakers from the soft coal counties at the conclusion of the demonstration.

[From the Philadelphia Inquirer, Apr. 8, 1959]

COAL PLAN OK BY LAWRENCE

HARRISBURG, April 7.—Gov. David L. Lawrence said today he was "very much impressed" by a new process to use coal for road building and other purposes. He said he would be "very happy" if the legislature would provide funds to support the process on an experimental basis.

Curtiss-Wright Corp., which developed the process, unveiled it at a dinner for legislators and State officials here Monday night. Roy T. Hurley, chairman and president of the corporation, said $500,000 would be needed to build a pilot plant and construct 12 half-mile stretches of roadway to test the material.

Governor Lawrence said he thought the new development might prove to be a tremendous spur to the use of coal and thereby improve the State's economy and create jobs.

Hurley estimated it would take up to 2,200 tons of coal to build a mile of two-lane roadway with the new material.

AMENDMENT OF REORGANIZATION PLAN NO. 2 OF 1953

Mr. JOHNSON of Texas. Mr. President, I ask unanimous consent that S. 144, the REA bill, be now considered and that notwithstanding the arrival of the hour of 2 o'clock, its consideration, if not disposed of, be continued at that time.

The PRESIDING OFFICER (Mr. MCCARTHY in the chair). Without objection, it is so ordered. The Chair lays the bill before the Senate.

The Senate resumed the consideration of the bill (S. 144) to amend Reorganization Plan No. 2 of 1953.

MICHIGAN'S DEMOCRATIC DECADE

Mr. MCNAMARA. Mr. President, there are few instances in American political history which can match the dramatic rise of the Democratic Party in Michigan in only a single decade.

Under the banner of our Governor, G. Mennen Williams, dedicated party workers and millions of citizens interested in the welfare of their State have achieved victory after victory.

This rise was climaxed on Monday of this week when the results of Michigan's spring election gave the Democrats victories in 11 of 14 State offices which were at stake.

For the first time in Michigan history, the Democratic Party gained control of all four major State educational boards.

It gained one Republican seat each on the State board of education, the governing boards of the University of Michigan and Michigan State University, and it took five of the six seats on the newly created Wayne State University board of governors.

Despite these impressive Democratic results, the Republicans and some of their newspapers have frantically sought just one little ray of sunshine so that they could call Monday's election a GOP victory.

They found their excuse in the fact that the Republicans were able to hold on to three unsalaried offices which they already occupied. Thus was the basis for victory claims.

Joining this rose-colored glasses crew was none other than the Vice President of the United States.

In what probably will go down as the biggest political laugh of the year, he sent a telegram to Michigan Republicans congratulating them for their first statewide victory since 1955.

Mr. President, if the Republicans score another such victory, they are dead.

Simple statistics show that Republican officeholders in Michigan are becoming about as extinct as the dodo bird.

In 1948, for example, the Democrats held but 2 of the 35 statewide offices.

In 1959, after Monday's election, the Democrats now hold 32 of the 41 State posts.

From that comparison, one can see why the Republicans can become ecstatic over the fact that there were three unsalaried jobs they did not lose.

I ask unanimous consent that a chart comparing statewide elective offices in Michigan during the past decade be printed in the RECORD at this point in my remarks.

I also ask unanimous consent that an article describing the election appearing in today's New York Times and one giving the reply of Democratic Chairman Paul M. Butler to the Vice President's telegram also be printed in the RECORD.

There being no objection, the material was ordered to be printed in the RECORD, as follows:

Comparison of statewide elective posts in Michigan, by party, 1948–59

Office	1959		1948	
	Democrat	Republican	Democrat	Republican
Administrative board (Governor, Lieutenant Governor, department heads)	8	0	0	8
U.S. Senators	2	0	0	2
State supreme court	5	3	2	6
University of Michigan	5	3	0	8
Michigan State University	5	1	0	6
Wayne State University	5	1	(1)	(1)
Board of education	2	1	0	3
Total	32	9	2	33

[1] Not in existence as a State university.

[From the New York Times, Apr. 8, 1959]

DEMOCRATS GAIN IN MICHIGAN VOTE—WIN 11 OF 14 STATEWIDE POSTS—REPUBLICANS HEARTENED BY THEIR THREE VICTORIES

(By Damon Stetson)

DETROIT, April 7.—Michigan Democrats capped 10 years of steady election gains today by winning control of the State's four major educational boards.

Nearly complete returns from yesterday's biennial spring election also gave the Democrats a 2-year continuance of their 5-to-3 majority on the State supreme court, although candidates nominated by party conventions ran with a nonpartisan designation.

In strengthening their hold on key offices in Michigan, the Democrats elected 9 of 12 candidates for educational positions, plus the two incumbent supreme court justices nominated by their party.

Republicans, on the other hand, appeared heartened by narrow victories in three contests. Lawrence Lindemer, Republican State

chairman, called these triumphs a breakthrough that he interpreted as a "definite resurgence in the party."

Gov. G. Mennen Williams, a Democrat and chief architect of his party's recent rise in power, said the election results were a rebuke to Republicans who had played politics with the State's solvency and credit.

The Governor had urged voters to oppose Republicans because of the State senate's inaction in the fiscal crisis, which he has said could result in payless paydays for State employees next month unless action is taken.

The State senate has before it a bill providing for the mortgaging of the veterans' trust fund as a means of raising the cash needed to relieve the situation.

Dr. Lynn M. Bartlett, superintendent of public instruction and a Democrat, was reelected by a margin of about 40,000 votes over his Republican opponent, Hugh H. Holloway.

In several of the other races the margins were even smaller. But in the court contests Justice George Edwards had a plurality of more than 260,000 votes, and Justice John D. Voelker, author under a pseudonym of the novel "Anatomy of a Murder," won by nearly 200,000 votes.

The Democrats, in addition to retaining the superintendent of public instruction, gained a Republican seat on the State board of education and thereby achieved a two to one majority for the first time.

They also increased the Democratic majority from four to two to five to one on the State board of agriculture governing Michigan State University, gained a five to three advantage on the board of regents of the University of Michigan, which was formerly split four to four, and won five of six seats on the board of governors of Wayne State University.

Republicans and Democrats elected one new member each to the State house of representatives. The new representatives will fill vacancies and will keep the 110-member house evenly divided, with 55 members from each party.

BOTH SIDES CLAIM VICTORY

WASHINGTON, April 7.—Both Republican and Democratic leaders claimed victory today in Michigan's elections.

Vice President RICHARD M. NIXON sent a telegram to Lawrence B. Lindmer, a Republican leader in Michigan, congratulating the GOP for scoring their first statewide victories since 1955.

The Democratic national chairman, Paul M. Butler, referred to the Nixon telegram in a telegram to Governor Williams. Mr. Butler said it was "the first time I ever heard of a team being congratulated for losing a ball game 11 to 3."

Mr. DIRKSEN. I suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

The legislative clerk proceeded to call the roll.

Mr. DIRKSEN. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER (Mr. MCCARTHY in the chair). Without objection, it is so ordered.

THE BREAKDOWN IN OUR UNEMPLOYMENT INSURANCE SYSTEM

Mr. McNAMARA. Mr. President, there are many reasons why we face a difficult task in preventing the kind of breakdown in our unemployment insurance system that has characterized the last several years. I have already pointed out the shortcomings in our own congressional attention to this vital question.

It is still true, however, that the largest single roadblock is the failure of the Eisenhower administration to face up to facts and to its own responsibility. Yesterday, two articles which appeared in Washington newspapers detailed the reasons why the administration has turned its back on the unemployed. The main reason is the pipeline which the large employers in the country have to the White House.

The influence they enjoy, through White House advisers, amounts to a national scandal. A man who was hired to fight the employers' legislative battles against decent and adequate unemployment insurance standards is now the President's chief adviser on unemployment insurance.

I ask unanimous consent that an excerpt from the article by Drew Pearson, in the Washington Post, and the article by John Herling, in the Washington Daily News, be printed in the RECORD at this point, so the country will know who will determine the fate of the Nation's unemployed.

There being no objection, the excerpt and the article were ordered to be printed in the RECORD, as follows:

[From the Washington Post]

THE WASHINGTON MERRY-GO-ROUND

(By Drew Pearson)

INSIDE LOBBYING

Behind President Eisenhower's firm refusal to liberalize the unemployment aid program has been the quiet lobbying of big business representative Stanley Rector, who operates very adroitly through the back door of the White House.

His inside contact man is none other than the President's chief counsel, Gerald Morgan, whose former law firm helped Rector fight Federal unemployment insurance. Now Morgan is carrying on the same fight from the vantage point of the President's elbow.

Rector works out of a three-room suite in the Washington Hotel, just around the block from the White House. Last year he spent over $100,000 lobbying against jobless benefits.

His board of directors includes executives from United States Steel, General Motors, Chrysler, Goodyear Tire & Rubber, Socony Mobil Oil, and Allis-Chalmers Manufacturing Co. Over 500 companies contribute from $200 to $2,500 apiece to Rector's operation.

In 1947, Rector hired Morgan's law firm, Morgan & Calhoun, as registered lobbyists. After Morgan entered the White House, he served as adviser to the President on unemployment compensation. As recently as last month, Morgan helped persuade Ike to reject liberal recommendations from Secretary of Labor Mitchell.

What Mitchell wanted to do was extend temporary benefits for jobless workers and overhaul unemployment insurance standards. In the showdown, the President sided with Morgan.

LOBBY LANGUAGE

Earlier, lobbyist Rector argued against these proposals in a letter, dated March 9, to his backers. He contended that any reforms should be left up to the States.

Three days later, President Eisenhower used the same, identical argument at a press conference.

Rector made one interesting concession: "In view of the fast developing showdown fight on Federal benefit standards, a 3- to 6-month extension might well, in the end, prove helpful."

Ike also agreed to this same concession.

"I haven't got such a rigid position about this that I wouldn't listen to something," he told the press. At the same time, he notified Republican congressional leaders that he would accept a 3- to 6-month extension.

It had all the earmarks of a triple play—Rector to Morgan to Eisenhower.

NOTE.—The President repeated his views to eight Governors who belong to the Governors' Executive Committee. The only missing member was New Jersey's Gov. Robert Meyner, who happened to be in the South Pacific on temporary naval duty and who also happens to favor strong Federal unemployment benefits. Meyner asked the White House to fly him to the conference, pointing out that the President as Commander in Chief could relieve him from his naval assignment. Ike flatly refused.

[From the Washington Daily News]

WHAT MITCHELL COULD SAY

(By John Herling)

Tomorrow James P. Mitchell, the troubled Secretary of Labor, stands up to the toughest test of his career. He faces 5,000 delegates to the unemployment conference of the AFL–CIO in the National Guard Armory. Its leadership knows that his private position on unemployment insurance differs sharply from the official position now saddled on him. What will be running through Mr. Mitchell's mind as he looks into the whites of 10,000 union eyes?

Mr. Mitchell's public personality has now been axed down the middle by President Eisenhower. Ike has repeatedly chosen to disregard his Labor Secretary's advice and adopt that of his bitter opponents, whom Mr. Mitchell himself calls reactionary.

"For 5 years now," Mr. Mitchell could tell the assembled delegates, "I have been among those urging the States to raise unemployment benefits and lengthen the payment period. The State legislatures paid not the slightest attention."

Mr. Mitchell might recall: "I told the President this latest recession was the payoff. We had every reason—as a Federal Government—to tell Congress that the law should now be amended by requiring the States to conform to higher standards of benefits, payment and duration.

"It seems to me the Federal responsibility is clear. The President is worried about balancing the budget. But I had important news for him. The higher unemployment insurance standards which we and he thought desirable could be put into effect without its costing the Federal Treasury a cent. There are $7 billion in State unemployment reserve funds which could be used for meeting these higher standards. I told Budget Director Maurice Stans about this. He was jubilant.

"What's more, Stans sees at once that instead of spending nearly $500 million more of Federal money on emergency unemployment compensation, we could save that by bringing permanent Federal standards into action."

This is the way Mr. Mitchell's thinking goes.

"Stans and I prepared a memorandum along these lines. We worked up support in the Cabinet: Health, Education, and Welfare Secretary Arthur Flemming is for this. The ball was rolling. We knew we had to work fast. But somebody in the White House was quicker.

"It was none other than Ike's special counsel, a nimble fellow named Gerald Morgan. Gerry, a chief architect of the Hartley or tougher part of the Taft-Hartley Act, is a close friend and law partner of Leonard Calhoun, hard shell who has fought every step

of the way against liberalizing social security. He, Morgan, and a man named Stanley Rector make up a trinity of reaction. Chief prong, Rector, heads up an outfit supported by most big business groups, masterminds their strategy against improvements in unemployment insurance, State or Federal."

Mr. Mitchell could then tell the audience: "To shorten a painful story, Gerry Morgan told Stans and me, supposedly the labor policy man in the administration, to lay off. He said the President was in his corner, not mine.

"Well, the next thing I knew was what I heard from Ike's news conference. A reporter asked the President what the administration's policy was on unemployment insurance. Ike replied, as Morgan predicted, that the policy remains the States' responsibility. No use arguing. It was clear to me that the voice was the voice of Ike, but the words were those of Morgan, Calhoun, and Rector."

All this keeps tumbling through Mr. Mitchell's mind. But tomorrow, when AFL–CIO President George Meany announces, "We will now hear from our friend, Jim Mitchell," the Labor Secretary will shake off his moment of truth, pick up his official speech, and begin to read it through his glasses darkly.

AMENDMENT OF REORGANIZATION PLAN NO. 2 OF 1953

The Senate resumed the consideration of the bill (S. 144) to amend Reorganization Plan No. 2 of 1953.

The PRESIDING OFFICER. The question is on agreeing to the amendment proposed by the Senator from Nebraska [Mr. CURTIS], on behalf of himself and the Senator from Georgia [Mr. RUSSELL], as a substitute for the language proposed to be inserted by the committee.

Mr. DIRKSEN. Mr. President, is the pending question on agreeing to the Curtis substitute?

The PRESIDING OFFICER. It is.

IMPORTANCE OF THE WORLD CONGRESS OF FLIGHT

Mr. YOUNG of Ohio. Mr. President, at this time I wish to refer to the World Congress of Flight. I feel that it promises to be not only the first international exposition of its kind in America, but also the most comprehensive aero-space program ever presented in the United States.

Mr. President, the World Congress of Flight is to be held from April 12 through 19 in Las Vegas, Nev. I am certain my colleagues are aware that a World Congress of Flight is about to be held, since items about it have appeared in the press. As a member of the Senate Aeronautical and Space Sciences Committee, I have studied the details of the program of the World Congress of Flight. Some Senators may not have had an opportunity to examine this forthcoming program; hence, I should like to report that the plan is to present the latest information on aircraft, missiles, and space craft through 11 major conferences, 3 major aero demonstrations, and the largest static display of related equipment which has ever been assembled in one area.

Symposiums and conferences which have been planned for the World Congress of Flight will explore flight in terms of international security and human welfare. The social, economic, political, and moral problems which accompany the progress of flight will be analyzed. Flight in its broadest concept as an instrument for all mankind will be presented and scrutinized. The project, in short, Mr. President, is dedicated to the belief that greater world knowledge of aircraft, missiles, and space craft will help bring the world closer to permanent peace.

Representatives from more than 50 nations will participate in this magnificent venture, which is sponsored by the Air Force Association, in cooperation with a number of other well-known, nonprofit private organizations.

The World Congress of Flight will bring together ambassadors and air attachés of the NATO and SEATO nations, educators from more than 30 countries, State superintendents of schools from more than 40 States, flight safety specialists from some 20 countries, and executives from more than 1,000 American companies. Engineers and technicians will come to the World Congress of Flight from more than 50 countries. Executives and chief pilots will represent the world's airlines. Directors of aviation will come to the World Congress on Flight from 35 States. The roster of scientists who will be present includes several hundred distinguished names. Test pilots and private pilots from a host of nations will be present.

Time does not permit me to dwell in great detail on the specifics of the World Congress of Flight; but I should like to call attention to the Jet Age Conference, which will be attended by such outstanding persons in the field of aviation as Gen. Curtis E. LeMay, Vice Chief of Staff of the U.S. Air Force; Sir William P. Hildred, director-general, International Air Transportation Association; the Honorable E. R. Quesada, Administrator, Federal Aviation Agency; and the Honorable Walter Binaghi, president of the council, International Civil Aviation Organization.

Another of the conferences which will be held at the World Congress of Flight will be the Missile Management Conference. Here, industry in an accelerating technology will be examined by a galaxy of experts and technicians, including Peter J. Schenk, president of the Air Force Association; Dr. Edward Doll, vice president and associate director, Systems Engineering Division, Space Technology Laboratories; and David R. Hull, president, Electronic Industries Association, to name only a few.

As an American, Mr. President, I believe in the urgency of having men of the free world sharpen their appreciation and understanding of the space age, which is moving upon us with great speed. I feel that Mr. Edward P. Curtis, general chairman of the World Congress of Flight, should be congratulated for his part in arranging this outstanding program which promises to enhance appreciation and understanding of the space age by men of the free world. For my part, I look forward to being present at the World Congress of Flight. The scope of aerospace topics which will come under discussion at its sessions, the diversity of related equipment to be demonstrated and displayed, and the caliber of scientific, educational, and military representatives who will participate can only produce a number of the most constructive results. For one thing, these features of the program will highlight many of the opportunities and problems which are associated with the present and with the future course of aerospace progress. In addition, they will bring to bear on these subjects the tremendous fund of knowledge, skill, and experience of experts in the technological, the educational, and the military areas of airspace operations. Certainly many of the answers which will come from these deliberations will help chart the future course of our own national aerospace endeavors.

Looked at from another standpoint, I feel that the World Congress of Flight will also yield a valuable dividend by focusing free world attention on the benefits in terms of economic stimuli, closer relationships through travel, and mutual-defense enterprises which can be realized through cooperative international action. Where my own particular interest and responsibilities are concerned, the World Congress of Flight will provide assistance of tremendous value, since there are now under consideration literally dozens of legislative proposals on which the question of aerospace progress has an important bearing. As you know, Mr. President, these proposals cover such vitally important items as national security, civil aviation, and technical education.

Mr. President, I am aware that a number of my distinguished associates are striving to adjust their busy schedules so as to be able to attend and participate in the unique World Congress of Flight, where they will have the opportunity to meet the leaders of aviation, to confer on subjects of the greatest magnitude, and to see demonstrations of equipment which will play an increasingly important role in the future of the world. The knowledge to be gained by us from the World Congress of Flight can be invaluable as a basis for our subsequent evaluations and analyses of technical publications and committee reports. This, Mr. President, is truly a unique opportunity to follow the progress and work of a great free world enterprise.

Mr. CANNON. Mr. President, I thank the distinguished Senator from Ohio [Mr. YOUNG] for his impressive account of the forthcoming World Congress of Flight. It is a great honor for me to remind the Senate that the World Congress of Flight is being held in the State which I have the honor in part to represent—Nevada. We are extremely proud of the vast auditorium, the exhibition hall, the splendid facilities which will house the conferences, the meetings, and the exhibits at the World Congress of Flight scheduled to be held in Las Vegas, Nev., from April 12 to 19. The facilities at Las Vegas will seat more than 7,500 in the great circular auditorium. Space is provided for 22 additional meetings, each seating from 25 to 1,000, and there is in excess of 100,000

square feet of exhibit space. Adjacent to the vast auditorium and exhibit hall are some 2 million square feet of outdoor exhibit area, as well as a stadium before which aviation aircraft and helicopters can be demonstrated.

Ample facilities are available to house the participants and the visitors to the World Congress of Flight.

My distinguished colleague from Ohio has provided Senators with an overall picture of the World Congress of Flight. I should like to mention some specific facets of the program. For example, speakers from Western Europe, from Japan, and Bazil will make presentations on international research for the Air Force at a symposium being sponsored by the Air Research and Development Command of the U.S. Air Force during the World Congress of Flight. At this ARDC symposium, 1 of the 11 major conferences in the basic research necessary to military aeronautics and astronautics will be examined.

Another conference which is certain to attract worldwide attention is one scheduled on the space age. Here such men as Col. John P. Stapp, USAF, president, American Rocket Society; Gill Robb Wilson, chairman, Space Education Foundation; Dr. James W. McRae, vice president, American Telephone & Telegraph Co.; the Honorable Roy Johnson, Director, Advanced Research Projects Agency, Department of Defense; and Dr. Edward Teller, director, Radiation Laboratory, University of California, will contribute.

It seems fitting to recall the words of Mr. Edward P. Curtis, general chairman of the World Congress of Flight, when he said:

> No one in any country has attempted to combine in a single event and on such a large scale conferences and forums, outdoor displays and indoor exhibits with air and ground demonstrations, each dedicated to the advancement of aeronautics and astronautics, the twin sciences of flight. It is fitting that this huge effort should be undertaken first in America, the cradle of aviation.

As a Senator from Nevada, the State favored for housing the First World Congress of Flight, I am pleased to report that we Nevadans are proud of the role which we will play as hosts.

I reiterate my words of appreciation and congratulation to my colleagues and associates who will follow the work of this World Congress of Flight. My feeling, as a member of the Senate Armed Services Committee and of the Senate Aeronautical and Space Sciences Committee, is that this is a signal opportunity for men of the free world to further their appreciation and understanding of this important, fast moving, and competitive field.

Mr. BIBLE. Mr. President, I, too, should like to supplement and augment the remarks which have just been made by the distinguished junior Senator from Ohio [Mr. YOUNG] and my colleague, the distinguished junior Senator from Nevada [Mr. CANNON].

As a member of the Senate Appropriations Committee and as the senior Senator from the great State of Nevada, I wish to thank my distinguished colleagues, the Senator from Ohio [Mr. YOUNG] and my esteemed associate from Nevada [Mr. CANNON], for the vivid picture they have painted of the forthcoming World Congress of Flight. We in Nevada are honored and eager to serve as the host State and to participate in this unique enterprise, the World Congress of Flight, which is to be held at Las Vegas from April 12 through April 19. I have noted that Joseph B. Burns, president, National Business Aircraft Association; David R. Hull, president, Electronic Industries Association, Thomas G. Lamphier, Jr., president, National Aeronautics Association; and Jacqueline Cochran, president, Federation Aeronautique Internationale, are each playing a key role in the arrangements for the World Congress of Flight.

To refer again to the program which my colleagues have so ably discussed, I call the attention of Senators to additional presentations which are also parts of the Space Age Conference. Here Dr. Joseph M. Goldsen, of the Rand Corp., will discuss "Outer Space and the International Scene." Project Mercury which, of course, relates to man in space, figures significantly in this space age forum. My understanding is that the mission and operation will be discussed by Dr. Abe Silverstein, Director of Spaceflight Development, National Aeronautics and Space Administration; and Dr. W. Randolph Lovelace will discuss our first space man.

Dozens of individuals, organizations, and industries are joining hands to make this project a success. There will be the most complete display of aircraft, missiles, and space craft equipment ever assembled. Important emphasis will be placed on civil aviation and on the impact of modern flight on world trade and world understanding. The program which is planned for those who will have the privilege of participating is timed to mark the first full year of jet-powered commercial transportation on an international scale. The program is also timed to mark the availability of long-range missiles as major deterrents of war, as well as the completion of the first International Geophysical Year, with its impact on space exploration.

I also call specific attention to a symposium to be devoted to aerospace education, which will consider the ways whereby dedicated men and women in the field of education can expose the minds of the young people in the free world to this new dimension. Presentations will be made by such men as Boyd Graber, Department of Public Instruction, Iowa, James G. Harlow, dean, College of Education, University of Oklahoma, Leslie A. Bryan, director, Institute of Aviation, University of Illinois, and Ross Willmot, secretary-general, International Society of Aviation Writers.

Another symposium to which I should like to call specific attention is that on flight safety. Here such topics as economics and safety, and aircraft accident prevention in the jet age, will be carefully considered by Jerome Lederer, managing director, Flight Safety Foundation, the Honorable James R. Durfee, Chairman, Civil Aeronautics Board, James T. Pyle, Deputy Director, Federal Aviation Agency, and Maj. Gen. Joseph D. Caldara, Director of Flight Safety Research for the U.S. Air Force.

In addition to the discussions, the conferences, the examination of static displays and models, those present will have an opportunity to see a variety of important air demonstrations scheduled to be held at nearby Nellis Air Force Base.

We in Nevada are proud that this outstanding program is slated to be held in our State. Las Vegas was selected as an ideal site since the necessary facilities for air-ground displays and demonstrations, hotel accommodations for 7,500 individuals, and generous auditorium and conference hall facilities are all in the immediate area. We look forward with pleasure and pride to welcoming warmly those Members of the Senate who plan to be present, and the other Americans, as well as the international visitors, who will attend this unusual event.

THE LONG ARM OF THE FBI

Mr. SMATHERS. Mr. President, I ask unanimous consent to have printed in the body of the RECORD, an article entitled "The Long Arm of the FBI," by the very able and remarkable columnist, Bob Considine, which appeared in the New York Journal American of April 2, 1959.

This article focuses attention on the numerous and varied activities undertaken by this great organization under the able and brilliant leadership of its Director, the Honorable J. Edgar Hoover, whose name is held in high esteem in every household throughout this great Nation. The confidence in this great agency which he has instilled in the American public has been a measure of strength to all of us. His zeal and patriotism in carrying out his duties as the Nation's top law-enforcement officer has won the gratitude, respect, and admiration of the public.

The article gives a bird's-eye view as to the vast number of activities placed under the able leadership of this great American, and I recommend its reading to every Member of the Congress.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

THE LONG ARM OF THE FBI

(By Bob Considine)

WASHINGTON.—Stop 10 people on the street and ask them the mission of the Federal Bureau of Investigation and at least 8 may pinpoint the tracking down and capture of public enemies and kidnapers.

That is, indeed, part of the picture. But it's a comparatively small part. It is a mark of the enormous respect which successive Congresses and Executive Offices hold for the FBI that the Bureau is saddled with additional responsibilities each year.

Here are some of the bewilderingly varied activities now assigned to J. Edgar Hoover's compact 6,000-man force:

It is asked to prevent the accumulation in this country of arms for rebels seeking to overthrow the reigning governments of nations with which we have diplomatic relations. It must check on the interstate transportation of strikebreakers. It is expected to nab offenders of the Migratory Bird Act.

It protects the symbol of the American Red Cross from use by commercial houses (except Johnson & Johnson, which had it before the Red Cross did). It steps in if a blackmailer or extortionist drops a threatening note into your mailbox, threatening physical harm if you do not abide by the demands (but turns the matter over to the Post Office Department if the note is sent through the mails).

The FBI is the teeth of the Selective Service Act, investigates the claims of conscientious objectors. It hovers over patent and copyright abuses, is expected to be the scourge of white slavery and mail frauds, fights impersonation of Federal officers or military personnel, stalks crimes committed beyond the 3-mile limit, false claims by veterans.

If you go into bankruptcy the FBI sends around one of its crack accountants, for the Founding Fathers—trying to avoid slipshod debtors jails—put bankruptcy on the Federal level. If you are forced into slavery, it is the FBI who rides up to the rescue. Mess around with any Government property, commit a crime of passion on an Indian reservation, fail to report an act of treason, violate the 8-hour day law, neglect to report accurately if you're engaged in the interstate shipment of cigarettes, and the FBI is involved.

Tamper with a member of a Federal jury or panel, jump bail in a Federal case, rob any bank, phony up a Government travel voucher, violate probation or parole, wreck a train, steal an airplane and fly it across a State line, touch off a bomb near the mail car of a train, fail to register under the Voorhis Act if you represent a foreign government as a lobbyist, take a punch at or kill a Federal officer, desert from the Armed Forces, tell the judge you couldn't show up for the hearing because your wife was having a baby (and she didn't), and, well, there's an FBI man in your life.

If you want to get in trouble with the FBI, misuse a railroad pass, transport gambling devices, lottery tickets, obscene matter, or prison-made goods across the State line, travel across a State border with a switchblade in your pocket, ship an unsafe refrigerator from one State to another, hijack a load of anything that has moved interstate, mosey around any Atomic Energy Commission property.

In dizzying addition, the FBI is expected to check on the loyalty of all Americans who work at the United Nations, scrutinize suspicious looking claims for welfare and pension checks, keep an eye on those who would like to overthrow the U.S. Government by force, chase prostitutes away from military installations, clamp down on violators of civil rights, spot any man or woman falsely wearing a civil defense insignia.

There are a few dozen other duties. They all add up to an appallingly complicated and difficult task, performed with dedication, skill, a minimum of fanfare and, astonishingly, a profit. Last year, fines, savings, and recoveries in cases investigated by the FBI reached $132,706,098, which was $27,144,098 more than Congress appropriated to operate the Bureau.

DISCLOSURE OF INCOME OF CERTAIN OFFICERS AND EMPLOYEES OF THE UNITED STATES

Mr. LAUSCHE. Mr. President, yesterday the senior Senator from Oregon [Mr. MORSE] introduced a bill which would require public disclosure of the names of senatorial employees and the salaries which they receive. It further provides that public officials earning salaries in excess of $10,000 shall be compelled to disclose their incomes and the sources of their incomes outside their governmental pay.

We know that within the last 2 months there has been considerable discussion in the newspapers, in the public forums, and in the homes about the fact that the U.S. Senate by a self-imposed rule has adopted the policy of refusing to reveal to the public the salaries paid to its employees.

I do not feel I exaggerate when I say that the public of our country feels it is entitled to know who are our employees and what are their salaries. More than that, we conduct public business, and under any philosophy we have no justification for keeping to ourselves information which is the proper and undeniable property of the citizens of the United States.

Someone might say to me, "Why do you not disclose the salaries of your employees?" In my opinion the disclosure of salaries by one Senator, without disclosure by all, would not reveal to the public a true picture.

The beginning of bad government is secrecy in management and operation, and that bad government's beginning becomes aggravated when the secrecy is perpetrated by the Congress of the United States.

Under the rule of the House of Representatives the identity and the salaries of employees are public property. It is my understanding that a similar rule once prevailed in the Senate, but that about a decade ago the rule was changed so that now we are not required by law to disclose the salaries received by the employees of the Senators.

I cannot help but put myself in the place of a citizen who is groaning about his tax-paying responsibility. I cannot help but think that the citizen who is groaning about his taxpaying responsibility frequently says, "If the Senate is extravagant with its own employees, and if the Senate refuses to disclose what it is paying them, what restraint can we expect of Senators when they deal with the general revenues and the moneys of the taxpayers as a whole?"

It is a pretty heavy burden to bear when citizens write to us, "Why do you not disclose what you are paying your employees?"

So far as my office is concerned, I have refused to divulge the information because of the self-imposed rule of the Senate and because of the fact that disclosure by one Senator will not reveal the true picture. I am firmly of the opinion that the Senate ought to pass whatever law is necessary making mandatory the disclosure of the salaries which they are paid.

Much has also been said about the hiring of relatives by Members of the Congress. The mere hiring of a relative is not wrong, but it is fairly obvious on the face of the situation that there have been revelations about the salaries paid measured against the abilities of the persons receiving the salaries which disclose a great disproportion.

The Senator from Oregon is not present today. I tried to reach him.

I repeat that the breakdown of Government, whether it be the executive branch, the judicial branch, or the Congress, starts with secrecy of operations. If I have too many employees on my payroll or if I am paying salaries to the employees which are grossly disproportionate to their worth and to the general average of salaries paid throughout the country, how can I turn down the requests of other citizens when they come to the Senate to say, "Give to me of the taxpayers' money"?

In my judgment, it is essential that we have a citizenry with faith in the U.S. Congress. If the citizenry does not have faith in us, woe to the country. There is grave doubt about the justification of asking for faith, trust, and confidence from the citizenry when we boldly and brazenly say to them, "It is none of your business what we are paying to our employees." That is wrong, regardless of the standpoint from which it is approached.

Therefore, I want the RECORD to show my subscription to the views expressed by the Senator from Oregon yesterday dealing with his proposal for the adoption of a rule of the Senate compelling a public disclosure of salaries paid.

Mr. JAVITS. Mr. President, will the Senator yield?

Mr. LAUSCHE. I do not have the floor.

Mr. DIRKSEN. Mr. President, I yield to the Senator from New York.

Mr. JAVITS. I was going to ask the Senator from Ohio a question. As he knows, this subject has been a hotly debated one. I am deeply interested in it myself.

Mr. LAUSCHE. I cannot hear the Senator.

Mr. JAVITS. I will come nearer to the Senator.

The question of the disclosure of the details of salaries paid to Senate employees by individual Senators has been a hotly contested one. I have been rather actively engaged in it myself.

I feel entirely pleased about disclosing these details, as I did in the House of Representatives, where I served for 8 years. I did not seem to suffer under it then, nor did I feel my office suffered.

Does the Senator from Ohio feel that disclosure ought to be adopted as a general policy by the Senate? Is that essentially the Senator's point of view? Does the Senator believe no Senator ought to disclose the information unless all Senators do, or does the Senator feel it can be left, as it is today, strictly a matter of individual option, so that if I wish to do it or if the Senator wishes to do it we are perfectly free to act accordingly? There is no inhibition, but, on the other hand, there is no Senate resolution which requires the disclosure to be made by the Secretary, as there is in the other body.

Mr. LAUSCHE. Obviously the Senator from New York did not hear what I had to say on this matter. In my opinion there ought to be disclosure by all or by none.

Mr. JAVITS. I understand.

Mr. LAUSCHE. When only one or two Senators disclose the information it does not reveal to the public a true picture of what is happening. A full and

just conclusion can be reached only by making a comparison of the payments which are being made by the 98 Senators.

Mr. JAVITS. So the Senator does feel it ought to be the subject of a Senate resolution, requiring disclosure by all or by none?

Mr. LAUSCHE. Yes, I do. I will say to the Senator from New York that he puts his finger on a very vital aspect of this problem.

When the Senator was a Member of the House, and the identity of his employees and their salaries were revealed, he did not suffer thereby, did he?

Mr. JAVITS. I did not.

Mr. LAUSCHE. But we are suffering by reason of our seemingly clandestine efforts to conceal.

Mr. JAVITS. Let me say to the Senator that, speaking for myself, I should like to see the Senator's proposal operate in both directions. In other words, I agree that there is room for and need for action by the Senate. I also feel that if, in the interim, individual Senators chose to make their own disclosure, their colleagues should not take it amiss, provided that there has been adequate time for discussion and consideration. That is the basis on which I am trying to operate.

I do not believe that the public would expect any of us to feel that he must move immediately, in absence of the adoption of a general policy, if such a policy is agreeable. I do not wish to make the two alternatives mutually exclusive.

Mr. LAUSCHE. I do not know what the Senator's mail discloses, but I can say to him and to the people of Ohio that, from the standpoint of my mail, there is no subject so vital as this one in the minds of the people of my State.

Mr. JAVITS. Mr. President, if the Senator from Illinois will allow me 30 seconds further, I shall appreciate it.

Mr. DIRKSEN. I yield.

Mr. JAVITS. My own mail is not necessarily that strong upon this subject. I do not mean that individual letters are not strong. However, in my State the problems of the Berlin crisis, unemployment, and other problems overshadow this particular subject.

I feel that this is a subject so much within our own control, and representing to such a great extent, as the Senator from Ohio has well said, an earnest of our own good faith toward the country, that, whether my mail were large or small, I would feel very much as does the Senator from Ohio.

Mr. LAUSCHE. My conviction is not based solely on the quantity of my mail. What I have said is the consequence of a search of my own thinking and my own conscience. I think the Senator from New York must agree with me, that the more brutal the dictatorship the more secret the method of its operation.

Mr. JAVITS. The Senator from New York certainly agrees with the Senator from Ohio as to the end result. I feel that our colleagues in the Senate are collectively searching their own souls. The Senator from Ohio and I have found the answer in our souls. I think we should be understanding, and give our colleagues a reasonable opportunity to do the same thing.

I thank the Senator from Illinois.

Mr. DIRKSEN. Mr. President, I do not wish to have the Senator from New York leave the Chamber. I should like to ask him to yield to me. Also, I hope our distinguished friend from Ohio will not leave the Chamber for a moment.

I have certain convictions on the subject, and I have ventilated them very freely, both publicly and privately. I recall addressing the Press Club a week or two ago, when the specific question arose as to how I felt about the disclosure which the questioners had in mind. I said that I was unequivocally opposed to it.

Let me say also to my distinguished friend from New York that I think it would be informative, from time to time, if Members of the Senate were to fortify themselves with a copy of the report of the Secretary of the Senate. It is issued regularly. It contains more than a thousand pages. Senators will find a vast amount of information in this report.

For example, the report contains the names of all those employed in the office of every Senator. In addition, it shows the amount of money which is disbursed by each senatorial office, for each quarter. If one were to divide by three, the total for each quarter, he could determine what every senatorial office disbursed every 30 days.

The only thing that is lacking is the specific amount which each employee receives monthly.

I have contended that quite often such a disclosure would develop a morale factor, because if an office manager feels that one employee is worth a little more than another, it is not desirable to have the others sitting around and talking about it, saying that they are worth more than they receive. But if the public interest is to be served, the entire amount of money which goes out of every Senator's office every quarter is shown in the report of the Secretary of the Senate. Those who receive the money are mentioned by name. I believe that is contrary to the impression which has been created from time to time, that the Senate, so to speak, has "taken the fifth amendment." Recently an editorial was published in the New York Herald Tribune under the caption "The Senate Takes the Fifth," which is very intriguing. I am sure the editorial makes most engaging reading.

The report of the Secretary of the Senate contains all the information necessary properly to serve the public interest. Anyone, including Senators, who wishes to learn what the disbursements are, can find them in the report of the Secretary of the Senate. But he can find more. He can find all the costs incurred and the disbursements made by investigating committees. The name of every one who is on the roll is contained in this report. Every miscellaneous item is listed. The other day someone told me that in one of these reports there was an item of $18 for a cord of wood which some Senator had sold to the Government. I do not know anything about it. I have not found the item. However, if I were to take 2 or 3 days off and go through all the items, I might find it.

Not even the most insignificant item escapes the keen, scrutinizing eye of the Secretary of the Senate, because he must balance his books. So if anyone wishes to determine what the disbursements are from the contingent fund, and the amount of money which comes out of the Treasury, he will find the information in this compendium, which is almost the size of a Sears Roebuck catalog. It makes good reading on a winter night.

Mr. LAUSCHE. Let me suggest to the Senator from Illinois that I understand that the names are listed. However, as the Senator from Illinois concedes, the fact is that the salaries paid individual employees are not listed. I submit to the Senator that it is not adequate for a Senator merely to be proper in the operation of his office. From the standpoint of the public mind, we should occupy a position in which we are beyond suspicion. We do not occupy such a position; and we fail to occupy it because of the refusal to let the public know what properly is its business.

Let me make one further point. The Senator from Illinois says that such disclosure might create discord in the morale of the personnel. I recognize that possibility. I am certain that there will be discord when the salaries paid in my office are compared with the salaries paid by other Senators. But such discord could be completely eliminated if each of us knew what the other was paying. We could establish some semblance of balance and uniformity in the payment of salaries, having relationship to the skill of the individual worker.

Mr. DIRKSEN. Let me say again to the distinguished Senator from Ohio that there is no restriction in the statute, and there is no inhibition in any Government regulation which would prevent any Senator from disclosing the names and the salaries of all persons in his employ. He is perfectly free to do so.

When it comes to measuring the volume of work in various senatorial offices, I do not know how that can be done. We have recognized the factor of volume by dividing the States into several categories—those below 3 million population, those with a population between 3 million and 5 million, those with a population between 5 million and 10 million, and those with a population of 10 million or more. We make additional clerk hire allowances available on that basis.

Secondly, Senators do not themselves disburse the money. If anyone has such an idea, I think I should disabuse his mind of it now. The employees go on the roll. They receive their checks automatically, and the Senator has nothing to do with the operation, except to place them on the roll. So I must say that, so far as I know, every activity in that field has been most circumspectly administered by the Senate.

Mr. LAUSCHE. I should like to add that I feel deeply certain, from the standpoint of the people of the country, our work could be done and enjoy far greater respect on their part if we did not try

to justify the fact that we are concealing from them the knowledge to which they are entitled, not by will, but by law.

Mr. CAPEHART. Mr. President, will the Senator yield?

Mr. DIRKSEN. I yield to the Senator from Indiana.

Mr. CAPEHART. I should like to comment on how the situation should be handled. I believe that the Senate itself should classify the various positions in a Senator's office and designate the salary which each employee occupying a position in his office should receive. Under such a practice every Senator would be paying the same wage for comparable work.

If we did that first, we could make the list public. It should be made public. However, the situation which exists today in the offices of the 98 Senators is that each Senator sets the wages for his employees. On the average, I believe, there are 10 or 15 employees in a Senator's office. Nevertheless, no two Senators pay exactly the same wage for the same kind of work, and no two employees are receiving the same wage.

If we were to publish the wages paid our employees at this time, we would create a great deal of chaos. Therefore, if we wish to cure the situation—and I will vote for such a proposal—let the Senate first adopt a rule classifying the various positions and specifying the wage to be paid to the person who occupies each position in the office of a Senator. Let us first make certain that every Senator is paying exactly the same wage for the same kind of work.

Unless we do that we will only create a great deal of confusion if we publish the list of our employees and their salaries. Unless we do that we will be doing the public no good by merely publishing a list of the employees and their salaries. The public will be confused, and our employees will be confused. In my opinion we would be confusing everyone, and we would not be helping anyone. To clear up the confusion we must first adopt a rule in the Senate to cover the situation. We must first, by a rule of the Senate, specify the various wage scales to be paid in a Senator's office. Let us first make certain that every Senator pays the same wage for the same kind of work. If we do that, it will be proper for us to publish the list of employees and their wages. The information will then become public property. I see no reason why that should not be done.

Even if we proceed in the way I have suggested, I can see some trouble, and I can see some drawbacks to my suggestion, because Senators from some States have more work to do in their offices than Senators from other States. There are a great many problems connected with this subject. Many difficulties will be encountered even if we proceed as I have suggested. However, that is the only way we can proceed and be perfectly fair with the employees who work for the 98 Senators, fair with the public, and fair with the Senate itself. At the moment there is no classification of the various positions in a Senator's office. We would not be doing anyone any good to have the information about the present situation relayed to the families of the employees. They would see that one person, for example, was getting more than another for doing the same kind of work. We would be doing more harm than good. If we wish to cure the situation—and I will vote for such a suggestion—we must first classify the various positions in Senators' offices, and pay the same wages to all persons who hold similar positions. We must pay the wage which the particular classification covers. Every Senator would then be paying exactly the same for comparable work. If we could put such a procedure into effect we would be doing something worthwhile.

Mr. LAUSCHE. Mr. President, I do not believe the Senator from Indiana heard my statement——

Mr. CAPEHART. No; I did not.

Mr. LAUSCHE. He did not hear my statement when I said that if there were a disclosure, the very necessity of the situation would compel the adoption of uniform scales of pay for similar work. The suggestion the Senator from Indiana has made excels the one I have made. We should put our offices on a business-like basis, as he suggests, and his recommendation in that regard is sound. I also believe that whatever we do will be better than what we do now.

Mr. CAPEHART. Mr. President, will the Senator yield?

Mr. DIRKSEN. I yield.

Mr. CAPEHART. I question whether we would do anyone any good, including the taxpayers and ourselves, if we were to publish the various wages at this time inasmuch as the wage scales were arrived at by each Senator. What we ought to do first is adopt a rule classifying the various positions, and pay the same wages for the same kind of work. If we were to make such a classification first, that information would automatically become public property, just as is the case with respect to civil service employees. We know that X amount, for example, is paid in a specific job classification under civil service. Therefore, we should first classify the jobs. Then the people of the country will understand what we are doing, and what each employee is paid.

Mr. JOHNSTON of South Carolina. Mr. President, will the Senator from Illinois yield?

Mr. DIRKSEN. I yield.

Mr. JOHNSTON of South Carolina. Along the same line we should take into consideration the fact that a civil service employee obtains a status in civil service employment. That is not the case with an employee of a Senator. If a Senator is defeated or dies, the employee probably must go home to his State or seek employment elsewhere. The same situation is true in the House. Therefore, in discussing this subject we will have to take all these matters into consideration.

Mr. CAPEHART. That, of course, is true. I have been in business, and I know that in business the various jobs are classified. If an employee leaves his job and a new employee is engaged, the man in business knows what the classification for that job is and what the wage for it is, and he, accordingly, engages a new employee at that rate to do the work called for by the classification which applies to that particular job. In business the wages of the various employees are not published, but the classification into which they fall are published. The same thing is done in union contracts.

Mr. COTTON. Mr. President, will the Senator yield?

Mr. DIRKSEN. I yield.

Mr. COTTON. Mr. President, I have great respect for my friend the Senator from Ohio [Mr. LAUSCHE], and I admire his fearlessness and fairness always. I came to the Senate as a young man, to work as an attaché. I believe that my experience goes back, perhaps, longer than that of almost any other Member of the Senate.

The Senate is not a factory. It is not possible to put every employee into a rigid category and pay the same wage to all employees in that classification. It is just as impossible to separate into uniform classification the assistants who do research, who write letters, who go downtown on errands, or who work on constituent's problems, as it is to classify uniformly all the flowers of the field.

Ever since the beginning of the Senate men of private means and wealth have been Members of the Senate. They engage assistants, whom they pay out of their own pocket to prepare speeches for them, to do research for them, and perform other work. Senators have a right to do that. I wish I could do it, too.

However, how are we going to deal with the staff of a Senator who has no means of his own and all of whose assistants are paid by the Government? How can we uniformly catalog the employees of such a Senator and compare them with the employees of a wealthy Senator who—and very properly so—engages outside assistants and research experts and other experts and speech writers?

I do not criticize my friend from Ohio, but I believe it would be nonsense to attempt either to install a uniform pay schedule, or to make public the amounts paid individuals without such uniformity.

Our people back home have a right to know whether we engage relatives, whether some of the money paid in salaries comes back to our own families. They have a right to know that, and they do know it. It is a matter of public record. They have a right to know how much money is being used in our offices, and they do know it. It, too, is a matter of public record. They have a right to know who our employees are, where they are working, and what they are doing. Having access to their names, they can find out. Furthermore, so far as I am concerned, if being a Senator of the United States should deprive me of such privacy, I am perfectly willing to disclose my income and the small amount of stock I own.

If the time ever comes when it is necessary to make it a matter of public knowledge that the girl who works at one desk gets $100 a year or $500 a year more than a girl who works at another desk, and thus impair the efficiency of the office staff in doing the work of our constituents, I think we must be getting pretty

scared and starting to run in all directions. I doubt that the people of the country distrust their Senators to the extent that they expect that from us.

So far as I am concerned, there is nothing to preclude any Senator from making public anything he desires to disclose. But if we as a Senate are to say, first, that we must classify our employees—which we never can do; and, second, that we must disclose what we are paying the daughter of John Jones, who comes from one town in the State, and what we pay the daughter of Sam Smith, who comes from another town in the State—if we cannot trust ourselves more than that, I do not know how we can expect the public to trust us. The Senate will, indeed, have fallen pretty low in our own esteem, as well as the esteem of the country if we go to that extent.

Mr. JOHNSTON of South Carolina. Mr. President, it is true that under the Reorganization Act and under other statutes, we are limited in the salaries we can pay to administrative assistants, secretaries, and stenographers, or clerks, as they are usually called. Let me show how impossible it is to set up a classification system. One woman in my office has been working with me for 25 years, although not that entire length of time in the Federal service. She started with me in my law office, worked with me during my two terms as Governor, and then came with me to Washington when I was elected Senator. Another woman started to work with me when I was Governor, in 1935 or 1936, almost 25 years ago.

If a system of classificatien were to be established based upon the time when these employees entered my service, it can be seen what would happen. It would be almost impossible to do that and be fair to persons who fit into these categories.

Furthermore, on Capitol Hill, when the Republican Party takes control, many of the jobs which are held by the Democrats go to the Republicans. When the Democrats come into control, many of the jobs held by the Republicans go to the Democrats.

The woman of whom I just spoke, who has been in my offices for 25 years, is so experienced that when a letter comes to my office, she can tell immediately whether the writer of it is a crackpot, or whether he is a person who deserves a detailed reply. Likewise, she can tell whether to address the person as John, Tom, Dick, or Harry; because to call a person by his first name, as Senators, know, is very important if one wants to remain in the U.S. Senate. [Laughter.] All those things must be taken into consideration.

Limitations are placed on us at present. Beyond those limitations, we cannot pay higher salaries.

Mr. DIRKSEN. Mr. President, perhaps I should conclude this discussion. It really was not on the agenda this afternoon. I did present to the distinguished Senator from Ohio [Mr. LAUSCHE] a copy of a bill introduced in the present session. I allude to it only because he prefaced his remarks with a reference to a bill introduced, or to be introduced, by the distinguished senior Senator from Oregon [Mr. MORSE] with respect to the disclosure of income by Members of the Senate and House.

It is certainly not telling any tales out of school to say that the present occupant of the Chair, the distinguished junior Senator from Ohio [Mr. YOUNG], made some disclosure of his holdings so as to make certain that there would be no conflict of interest so far as his votes in a given committee of the Senate might be concerned.

I direct attention to the bill providing for disclosures because it provides that every Member of Congress, every civil officer or every military officer and each employee in the legislative or executive branch, whose salary is in excess of $12,500, and any candidate for the House or Senate, must file with the Comptroller General a report containing a full and complete statement which would include the following:

Each item of income, each item of reimbursement for any expenditure, each gift or aggregate of gifts from one source, other than gifts received from any relative or his spouse, which exceeds $100 in value; including any fee or other honorarium received by him for or in connection with the preparation or delivery of any speech or address, or attendance at any convention or other assembly of individuals.

In addition, he would be required to schedule the value of each asset held by him or by him and his spouse jointly; the amount of each liability owed by him or by him and his spouse jointly; all dealings in securities or commodities by him or by him and his spouse jointly, or by any person acting on his behalf or pursuant to his direction; and all purchases or sales of real property or any interest therein.

The report would be filed with the Comptroller General, and would be maintained as a public record, open to inspection by anyone.

That would mean that for the first time elective officers and all civil and military officers whose salaries from the Government were in excess of $12,500 a year would be placed in a special class. Their incomes would be disclosed as public records. They would be the only ones, among all the taxpayers under the jurisdiction of the Internal Revenue statutes, whose incomes would be disclosed in that fashion. They would be in a separate class in matters of that kind.

I never felt that being elected to office divested me of my rights as a citizen of the United States. I still think I have the same rights as has the humblest taxpayer and the humblest voter in the State I have the honor to represent, in part. Frankly, I do not propose to be divested of my rights as a citizen without a protest if matters or proposals of this kind shall be at any time seriously considered.

The electorate, of course, has the opportunity to ask questions when a candidate submits himself for their suffrage. They can ask him at any meeting he might attend: "Do you own any stock or bonds? Do you own any income property?"

The candidate can answer or not answer, as he chooses. But that, of course, is a part of the free elective system under which we operate.

I simply think we should be reasonably careful before we go so far as to make public officials second-class citizens and divest them of certain rights which are so carefully safeguarded under the statutes of the land.

Mr. LAUSCHE. Mr. President, will the Senator yield?

Mr. DIRKSEN. I yield to the Senator from Ohio.

Mr. LAUSCHE. I conclude by saying that the discomfort and disappointment which Senators would suffer through a revelation of the salaries paid in their offices would be inconsequential and unimportant compared with the distrust which is created in the minds of the citizenry by our insisting that the salaries shall not be revealed. I understand that each Senator has a right to reveal the salaries he pays; but I believe it would be of interest to the country for us to adopt a rule which would make mandatory the publication of the salaries we pay.

Mr. DIRKSEN. Mr. President, actually I secured recognition earlier today, in order to make a political speech; and I might just as well confess it at the outset, because I am going to give somebody the devil.

Mr. LAUSCHE. I thank the Senator from Illinois very much for giving me the time I have used, and I regret that I took so much of it.

Mr. DIRKSEN. It is a genuine pleasure, I assure my friend, the Senator from Ohio.

Mr. President——

The PRESIDING OFFICER (Mr. YOUNG of Ohio in the chair). The Senator from Illinois.

PAMPHLET ISSUED BY THE ADVISORY COUNCIL OF THE DEMOCRATIC NATIONAL COMMITTEE

Mr. DIRKSEN. Mr. President, I wish to speak for a brief time about the Democratic National Committee's Advisory Council; and I expect to be a little pointed in my remarks.

Last week I was gratified to read in our national press two items which to a high degree reflect my own thoughts and judgments. They appeared in newspapers which are known and respected for their fairness and sense of responsibility and, generally, their journalistic excellence.

The first is an editorial, published in the Washington Star of Thursday, April 2, under the title "Burned Child." I shall read a portion of the editorial, and then I shall ask unanimous consent to have the entire editorial printed in the RECORD.

The editorial begins as follows:

The latest screed—

Mr. President, that is a good, earfilling word—

to emerge from the Democratic Advisory Council is a massive exercise in irresponsible nonsense.

Mr. President, that is a pretty good phrase. I was going to suggest to my distinguished friend, the Senator from Indiana [Mr. CAPEHART], that he should give good ear to it and should keep it in mind.

The editorial continues as follows:

Sponsored, as it is, by men and women of some stature, the truth-torturing nature of this foreign policy report is astonishing. Its ostensible purpose is to unload a partisan H-bomb on the Eisenhower administration. But even as a flagrantly political document it is self-defeating. For example, the report charges, with reference to the Formosa resolution, that President Eisenhower "heedlessly dropped a time bomb into the already explosive Far Eastern situation."

The editorial continues in that fashion. It contains one phrase which I believe reads with sheer elegance, namely—

To read the phrenetic language of the report is to understand why the responsible Democratic leaders in Congress have shunned the advisory council.

Mr. President, I submit the rest of the editorial; I have read enough of it to indicate the key to what I wish to say. At this time I ask unanimous consent that the entire editorial be printed at this point in the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

BURNED CHILD

The latest screed to emerge from the Democratic Advisory Council is a massive exercise in irresponsible nonsense.

Sponsored, as it is, by men and women of some stature, the truth-torturing nature of this "foreign policy report" is astonishing. Its ostensible purpose is to unload a partisan H-bomb on the Eisenhower administration. But even as a flagrantly political document it is self-defeating. For example, the report charges, with reference to the Formosa resolution, that President Eisenhower "heedlessly dropped a time bomb into the already explosive Far Eastern situation." It does not mention the fact that an almost unanimous Congress voted for the Formosa resolution. Does the advisory council's indictment extend to the Democrats who approved the resolution? Also ignored is the fact that the expression of American purpose contained in this resolution, time bomb or not, has served for nearly 5 years to discourage a Chinese Communist attack on Formosa. If this is catastrophic error, as the advisory council would have the people believe, we could do with more of the same.

This incredible document concludes on a questioning note. "Must we sit in paralyzed horror for 2 more years," it asks, "watching our strength, our influence, our position in the world, and our alliance dissolve, as just a hundred years ago men watched the Union dissolve under the weak and palsied hand of Buchanan"? The best that can be said for this kind of gibberish is (we hope) that no one will take it seriously—except, perhaps, the members of the Democratic Advisory Council.

To read the phrenetic language of the report is to understand why the responsible Democratic leaders in Congress have shunned the advisory council. They are better acquainted with the facts of life, and they have a better understanding of the harm which this kind of ranting partisanship could do to the country in a time of danger. It is not so easy, however, to understand why Dean Acheson would serve as chairman of the committee which presumably drafted the report.

In his days as Secretary of State, Dean Acheson was subjected to much the same kind of outrageous abuse, and one might think that as a burned child he would dread the fire. But evidently he does not. In partisan politics, apparently, the familiar maxims do not apply.

Mr. DIRKSEN. Mr. President, the next is an article which was written by Arthur Krock, a man of distinction and stature in the journalistic field. The article appeared in the New York Times of Friday, April 3, 1959. The title of the article is "NATO Is Told 'We Sit in Paralyzed Horror.'"

Mr. President, I shall let Mr. Krock speak for himself; so I ask unanimous consent that the article be printed at this point in the RECORD, as a part of my remarks.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

NATO IS TOLD "WE SIT IN PARALYZED HORROR"

(By Arthur Krock)

WASHINGTON, April 2.—The Foreign Ministers assembled here for the 10th anniversary of the North Atlantic Treaty Organization might have abandoned hope of the U.S. Government as an effective partner if they had accepted as unvarying fact the "greeting card" issued under the authority of the advisory council of the Democratic National Committee. Since the council includes former President Truman, Adlai E. Stevenson, and a few Democratic Governors and Senators, this bitter attack on the administration's foreign policy that it authorized, for publication in the week the Ministers were gathering, might have had that deplorable consequence in the very midst of the Berlin crisis.

But, according to one Ambassador from a NATO country, his Foreign Secretary understood that the pamphlet and its timing were "just internal American partisan politics." And probably this is true of any of the other Foreign Ministers who read a summary of the publication.

"Just internal American politics" is a sound evaluation of this most intemperate political critique. Its angry tone and harsh personalities would have earned the document that estimate whenever published. Yet not only was it authorized for release, and at this time, by the distinguished advisory council. It is the product, specifically, of the group which is the voice of the council on foreign policy matters, and the editor and principal author of this group's pamphlets is Dean G. Acheson, former Secretary of State.

During his term of office some critics assailed Acheson and his policies with language matching the abusive quality of several of the passages. So it may be argued that this history is sufficient justification for repayment in kind. At any rate, the parallel is provided by the pamphlet.

Here is a sample:

"Must we sit in paralyzed horror for 2 more years watching our strength, our influence, our position in the world and our alliances dissolve, just as a hundred years ago men watched the Union dissolve under the weak and palsied hand of Buchanan? Must we watch in silence the creation of an artifact, the new NIXON, out of a sullied creature who participated in every one of these decisions, who once defended them but who now tries to turn his face away while the surgeons of publicity lift it?"

Apparently we must, because the only means proposed to arrest the dissolution is Congress, which "can provide the means by which policies are carried out." But, as the pamphlet concedes, "the constitutional power to conduct our relations with foreign countries lies with the President." And he—whom the pamphlet accuses of "passive detachment as our alliances disintegrate and our power declines"—will be President until January 21, 1961.

Congress, on this same authority, can "point out lines of action * * * investigate inaction as well as wrong action," and the Senate can make constructive use of its special power to reject Presidential appointments. But the Democratic leaders of Congress have carefully kept aloof from the Democratic advisory council and its Acheson foreign policy committee. And both Senator JOHNSON, of Texas, and Speaker RAYBURN have made it plain they do not endorse the violent approach of the council and the committee to partisan issues.

This violence, the harsh personal references, and one remarkable instance of political amnesia are the flaws in what in many places is a brilliant and documented critique. The political amnesia is provided by an attack on the administration for "having no Far East policy at all" from a source whose negative Chinese policy of letting the dust settle was a failure, at colossal cost to the West, and whose proposal of a mixed Communist-Nationalist government was at least naive.

Furthermore, though this pamphlet assails the Taiwan resolution as a "time-bomb * * * heedlessly dropped into the already explosive Far Eastern situation," the Democrats supported it in an almost unanimous Congress. The pamphlet's implicit indictment of this support will hardly add to the already slight influence of the council and the committee at the Capitol. Hence, if the only hope—against the utter national and world disaster toward which the administration, says the committee, is carrying the United States—is the acceptance of its counsels by Congress, the dread inevitable is at hand.

Mr. DIRKSEN. Mr. President, these items refer to a pamphlet which recently was published by the Advisory Council of the Democratic National Committee. The pamphlet is No. 3 in a series, and is entitled "How To Lose Friends and Influence: The Decline of American Diplomacy, 1953–59."

The Star editorial describes this publication as "a massive exercise in irresponsible nonsense," "truth-torturing," "a flagrantly political document." The Times article refers to the "violence," the "harsh personal references," the "political amnesia" of the pamphlet. And so on and so forth. As I have hinted, Mr. President, I agree with this evaluation.

Mr. President, the pamphlet represents a remarkably creative achievement in the literary area of political brainwashing.

Recently, one of my distinguished colleagues on the other side of the aisle, and one for whom I have abiding affection, said, in a speech in which he attacked the Eisenhower budget, that he classified "budgeteer" with "racketeer." Mr. President, I do not like to become engaged in a semantic contest; but sometimes I think that the word "pamphleteer" would perhaps rhyme better with the word "racketeer."

I have said that more glorified tripe might flow from some typewriter at the Democratic National Committee's Advisory Council, but I have some grave doubts about it. The prefabricated

phrases used in this tract are rather cunning. I made it Sunday reading. Actually, it was an engaging experience. The style is almost Rooseveltian. There is a journalistic flow and measured cadence about it; and I believe the blithe allegagations would do credit to Baron Munchausen. It is almost as plausible as five-and-dime store costume jewelry.

I do not believe this publication is worthy of serious and sustained discussion, Mr. President, but I know it gets around among the people of the country. Mr. President, we have important and constructive work to do here; but ever so often one has to defend his administration against some of these attacks.

I suppose the actual authorship of this document will remain rather obscure. But we can easily note that it has had the approval of a rather interesting mixture of both professionals and amateurs in the foreign affairs field. Actually, Dean Acheson is a professional. I can hardly say that the Mayor of Pittsburgh is exactly a professional in the foreign affairs field. I do not know about the distinguished chief executive of the State of Michigan, who is affectionately known as "Soapy." He might be considered an expert in the fiscal field. I am advised, Mr. President, that the favorite beverage nowadays in some of the better emporiums in Michigan is a delightful little concoction known as "Michigan on the rocks." [Laughter.] He may be an expert in that field; I do not know. But I have grave doubt that "Soapy"—I know him by his nickname, and I use the term in the ultimate affectionate sense—is an expert in the foreign affairs field.

I see my distinguished friend the Senator from Michigan [Mr. HART] rise to his feet, and I am glad to yield to him.

Mr. HART. Mr. President, I rise only to observe that I think the status of Michigan's Governor as a fiscal expert will soon be acknowledged by the members of the Michigan Legislature, which is organized by the members of the party of the distinguished minority leader. I believe the Michigan Legislature will adopt the fiscal proposals the Governor made in January. If that happens, I assume the minority leader will acknowledge the Michigan Governor is a fiscal expert.

Mr. DIRKSEN. I do not know. I shall find out about that later on.

But, Mr. President, I know he "put the bite" on the leaders of the automotive field to get them to make advance payments of taxes to the State of Michigan in order to keep the State's fiscal head above water, and I think he has found himself in some difficulty in that field. I shall be delighted to examine—and I shall do so with a maximum of interest—any proposal he may suggest.

Mr. President, I have spoken about these "experts." Among them is James Patton, president of the National Farmers' Union. Mr. Patton may be an expert in the foreign-affairs field; I do not know. I have never arrogated to myself any claim of expert knowledge in that field. Mr. Patton may be an expert in it. At any rate, he is on the council.

Then there is our old friend Bill Benton, who used to serve in the Senate, and who at one time was Assistant Secretary of State. I love him almost like a brother. I used to council with Bill. We lived in the same hotel in Washington for a long time. He is a great fellow. He made a robust effort to return to this august body, but, for reasons which the people of Connecticut can best explain, he did not return. It may be that he was a little short on expert knowledge in this field.

But I refer to this matter in order to indicate that these gentlemen were the sponsors of this interesting document entitled "How To Lose Friends and Influence."

There are 26 members of the advisory council. I am at a loss to know exactly whom they advise, other than the Democratic National Committee itself. A copy of this pamphlet can be obtained for 10 cents. I thought perhaps they would break down and send every Member of the House and the Senate a free copy, but I think I shall have to send them a little note and ask for a copy for myself.

Mr. President, the timing of this publication is extremely unfortunate. I should think they would have been better advised. I freely admit that Dean Acheson, former Secretary of State, is a pretty "heady" individual. I respect his endowments and background in his field. But, somehow, at a time when we are in the process of trying to achieve unity between the United States and some of the other countries, having had all the NATO leaders here last week, when a statement of this kind is published, it certainly is not conducive to unity and to the best kind of feeling. I think, in a sense, it destroys some of the work which has been done to build up good feeling in this field.

Frankly, Mr. President, I do not support a moratorium on public discussion of foreign policy. Let it be recommended, evaluated, and discussed. However, we should bear in mind that rather complex issues are involved. I say now what I have said before: Members of the House or the Senate, and also of political committees, who undertake to advise the country, ought to exercise some careful restraint.

Two statements on the inside of the front page of this pamphlet, the first thing I noted about it, gave me a little pause. One statement was that the purpose of the series of pamphlets is "to bring about the widest discussion and understanding of public questions." The other little statement was that they "do not necessarily reflect the precise views of all members of the advisory council."

That is really very ducky, Mr. President, because as I read the statement, I thought it was like trying to build a nice house with nothing but an ax, or using a shotgun approach to the problem of developing some unity in this field and thawing the cold war, if it can be done.

The pamphlet stated everything was wrong. I could not find a thing in it that was complimentary to the administration, except possibly where the group said President Eisenhower really got his training in this field under prior administrations, which may be a bit of damning with faint praise.

Mr. CAPEHART. Mr. President, will the Senator yield?

Mr. DIRKSEN. I yield.

Mr. CAPEHART. Is that not the same advisory group of which the able majority leader of the Senate and the Speaker of the House refused to become members?

Mr. DIRKSEN. I do not know that they refused; perhaps they were not invited. But I am delighted they do not take too much advice from them. At least, it would appear they do not.

Mr. CAPEHART. Is it not a fact that many of the members of that group were advising and were helping to conduct the affairs of this country during the period when we got into so much trouble, and when we agreed to place Berlin in the middle of East Germany, surrounded by Russian territory? Is it not a fact that those gentlemen were making policy and were making the mistakes which have caused the Congress and the President of the United States so much trouble?

Mr. DIRKSEN. I do not know that all of them were so engaged. Some of them were, no doubt.

Mr. CAPEHART. Were they not the same group who were in prominent positions when we got into World War II and into the Korean war? Were they not in authority when we recognized Communist Russia in 1933? Were they not around here when the Yalta and Teheran Agreements were made? Were they not the same group who were advising the then President of the United States?

Mr. DIRKSEN. Certainly some of them were.

Mr. CAPEHART. Some of them were. There is no question about that.

Mr. DIRKSEN. But the point I made was that this is a rather unrestrained document and its publication was untimely. The pamphlet speaks about pernicious abstractions, and of the complete separation of words and deeds. It deplores the erosion of Western influence, and yet the very existence of this tract at this crucial moment seems ironically calculated to accelerate the erosion of Western influence. Its words are insistently of dark and suspicious gloom; clarity is smothered, hidden; understanding is destroyed. Certainly, it contains many items which are not documented. The use of insinuations is masterful, but the pamphlet can be terribly dangerous in view of the problems which confront the whole free world and this country at the present time.

The publication contains a bill of particulars. It is a little on the partisan particular side, I should say. It states that everything is wrong; everything starting away back in 1953 is criticized. Before that time, everything was apple pie and honey. Everything was lily white. Everything was pure, undefiled, and perfect—except one thing, the young boys who were being interred in the soil of Korea. Let us never forget that. This administration may have its faults, but no youngster has forfeited his life on a foreign battlefield since June 1953, when President Eisenhower went to

Korea and secured an armistice. From that day on no young American has had to let his lifeblood flow on some foreign hill or in some foreign valley or upon some sodden, soggy foreign battlefield. But that fact is not mentioned in the pamphlet. Its authors start with 1953. If they wanted to tell the whole story, they should have done so.

Mr. CAPEHART. Mr. President, will the Senator yield?

Mr. DIRKSEN. I yield.

Mr. CAPEHART. I refer to the chapter or paragraph wherein it is asserted that they and two former Presidents were responsible for President Eisenhower's success, and therefore they taught him what he knows, or what he ought to know, about foreign affairs.

Mr. DIRKSEN. That is the assertion in this pamphlet.

Mr. CAPEHART. It is asserted that they taught him. It seems to me what they taught President Eisenhower was how not to do things as they had done them. I think he learned much from them. He learned not to follow their ideas and their kind of foreign policy. I think that is what he learned as a result of his experience. President Eisenhower has not put into practice the things he learned not to do when he was working as an American, as a general, and as a soldier, under the supervision of other administrations.

I congratulate President Eisenhower for learning what not to do, and how not to follow the advice and the recommendations of former administrations, and not to do the things they tried to teach him.

In President Eisenhower's memoirs I remember he stated he tried to sell those in power on the idea of permitting the general of the armies to go east so the Russians would never get into Germany or never go farther west than the Warsaw, Poland, line. He was told no, that they had made other arrangements at Yalta, or somewhere else, and that he should withdraw his armies and let the Russians come through.

I am sure President Eisenhower was taught what not to do. Since he has been President he has practiced what he learned. Perhaps the greatest lesson he learned when he was working for them was what not to do and how not to conduct foreign affairs.

Mr. DIRKSEN. In the pamphlet it is alleged that helping Pakistan has upset India. It is stated that the Marines in Lebanon landed without a doctrine. It is stated the Formosa resolution was a time bomb dropped into the already explosive Far Eastern situation. The concept of massive retaliation is obliquely criticized.

Congress adopted the Formosa resolution. It adopted the resolution affecting the Middle East situation.

I have only picked out a few particulars from this tract, Mr. President, but they are good examples, fair examples, and I should like to ask some questions and make some observations about them.

Are the authors of the Democratic Advisory Council in favor of stopping arms aid to Pakistan in order to appease India? I wonder. They never say. Do the Democrats who approved this pamphlet forget that the Eisenhower doctrine was overwhelmingly approved by Congress, as House Joint Resolution 117? The vote on the resolution was 72 to 19 in the Senate on March 5, 1959. A large number of Democrats supported it. And, although I point out that no administration could ever be so naive as to believe that a single policy or program could be expected to solve all the problems of that tragically troubled area, some peace and stability does exist: the Middle East is, at present, free from war. This is an accomplishment, and one which was assisted in no small part by the Eisenhower doctrine.

The marines in Lebanon, I submit, did have a doctrine. Contrary to this pamphlet, they most certainly acted in accordance with a clearly discernible mission. They were there to keep the peace. And they kept it. When they finished their work they left, and without having fired a shot. It was a truly unusual and successful action, Mr. President. It demonstrated both to the Communists and to the Nationalists of the Middle East that the United States meant business, and it constituted a major influence for the maintenance of stability and the repulsion of a subversive war threat at that particular time. Were the Democrats who approved this report against sending the marines to Lebanon? Again, they do not say.

Concerning the Formosa resolution, I am confused again. This was also approved by Congress almost unanimously. As the editorial in the Star states:

> Does the advisory council's indictment extend to the Democrats who approved the resolution?

Also, I must point out, there is no war in the Formosa Strait. The fact that stands out is that it was the policy of the administration—and of Congress—to prevent war in that area and it has been prevented.

In regard to massive retaliation—there has been much ranting and raving. It seems we lose sight of the fact that our present defense policy is predicated on the principle of deterrence, and that the ability to retaliate massively—or call it what we will—constitutes the main vital element of the active principle. How can Democrats one minute call for more defense expenditures for missiles, which will enable us to increase the massiveness of our massive retaliation—to "overkill," as at least one member of the Joint Chiefs has called it—and then, the next minute, cry out loudly against the very concept?

One more particular, Mr. President. One thing I could not find in the Democratic Advisory Council pamphlet was any account of Americans being killed under the Eisenhower administration. Nor was there any mention of the 32,000 dead and the 100,000 wounded in the $19 million police action in Korea under Truman and Acheson. There was no mention of young blood, of cemeteries, of anguished hearts. There was plenty about agonizing reappraisal, but nothing about the lacerated hearts of American mothers.

It is an incredible fact that this pamphlet has nothing affirmative in it—except the most obscure partisan hopes for the future. No suggestions, no alternatives, no advice, no proposals—nothing affirmative. The tract is against everything that has been done and is being done under this Republican administration. The pamphlet is simply a diatribe of negativity. Is this, I ask, a program for action, as it is advertised? Is that all that can be offered? Is this tract supposed to persuade the American people that they should vote for the kind of leadership demonstrated thereby?

Mr. President, I came to the conclusion of this pamphlet when the shadows were getting a little longer on a Sunday afternoon, and I thought, "This is it." I was almost tense and breathless. I was waiting for some concrete conclusion. But I did not find it.

The one conclusion this brochure offers, Mr. President, is that Congress can help. Congress, we are told, can "point out lines of action." Although "the constitutional power to conduct our relations with foreign countries lies with the President," Congress "can provide the means by which policies are carried out." I agree wholeheartedly. Just as Congress did do with the Formosa resolution and the Eisenhower doctrine—with overwhelming Democratic support. The Chief Executive does need the help, the wisdom, the ideas, the support of Congress. And that has been sought, offered, and received in the past and will continue. Congress will continue to give this assistance and without the help of the Democratic advisory council.

I think we all remember that this body was originally intended as a group with which the Democratic representation in Congress would have to confer before presenting legislative programs. This outside body would, presumably, guide congressional leaders in their own work. This idea, Mr. President, was immediately and correctly repudiated by the Democratic leadership in Congress, and I commend them for it. The Democratic congressional leadership have their own ideas about both the substance and method of their role within the two-party structure and the American system of the separation of powers. As the editorial in the Washington Star so aptly pointed out:

> To read the phrenetic language of the report is to understand why the responsible Democratic leaders in Congress have shunned the advisory council. They are better acquainted with the facts of life, and they have a better understanding of the harm which this kind of ranting partisanship could do to the country in a time of danger.

In closing, I wish to address myself to the American people, to the people of the free world, and to the Communist leaders. I speak for my colleagues across the aisle here, if I may, as well as for the Congress and America itself. This pamphlet does not represent any of us. We are a united people concerning the desire for and the need of standing firm in Berlin—and everywhere else where communism threatens. We are a people whose leaders, regardless of party or governmental branch, work together constructively, with strength, wisdom, and

unity, to advance policies dedicated to solving the problems which confront us—toward a peaceful, secure world.

I commend the Democratic leadership of Congress—with whom, to be sure, I do not always agree—for its nonpartisan, responsible, and constructive support advanced on the grave issue of Berlin. This is the type of thing which makes America great: statesmanship standing above party politics.

Frankly, Mr. President, I do not always agree with the very distinguished—and I use the adjectives advisedly—the very distinguished chairman of the Committee on Foreign Relations of the Senate, but I would rather take his advice any time than the compound advice of the committee which sponsored this document at an untimely hour.

I want the record to be straight. In reply to this report, I wish to make strong and reassuring protestations about American strength and solidarity on these gravest issues, so that no one, either here or abroad, can reach any incorrect judgments about the real leadership of either party or either branch of our Government, and so that no disastrous miscalculation of war can possibly be courted.

REPORT BY SENATOR JAVITS TO THE PEOPLE OF NEW YORK, 86TH CONGRESS, SPRING 1959

Mr. JAVITS. Mr. President, this is the first report on the 1st session of the 86th Congress; it is intended to keep citizens of our State informed of the activities of the Senate and my part in them.

PROSPECTS FOR PEACE AND FOREIGN AFFAIRS

In the Berlin crisis the President has stated clearly that the United States intends to stand behind our commitments in Europe to our NATO allies. This position is indispensable to our security and freedom. Our willingness to negotiate up to the summit level certainly shows good faith in the effort to preserve the peace. The peace we preserve must be one of justice and dignity, for the free world has learned from bitter lessons the price of appeasement.

I undertook the opposition to a suggestion made by one of my colleagues that the German Federal Republic—West Germany—and the East German regime should negotiate the fate of Berlin. It was my view that such a negotiation really made West Germany negotiate with the U.S.S.R., the actual boss of East Germany, and this had grave dangers for the free world of being a signal to West Germany that it should seek a Soviet alliance.

We find ourselves today in a world position which requires a utilization, at the very least, of all our national capabilities and resources. To help meet this need I introduced a joint resolution to establish an Advisory Council on National Security consisting of all living ex-Presidents and 25 of the leading citizens of the Nation. The Council is to recommend to the President and Congress programs for the establishment and implementation of national policies to meet the responsibilities and dangers faced by the United States in the world struggle for free institutions.

Recent events in Iraq point up the importance of Israel as a strong, convinced democracy in a stragetic area of the free world; Israel's continued viability is important to the welfare and security of the free world and of our country in this critical area. I will continue my efforts for the maintenance of U.S. aid to Israel and to the whole area, and for the resettlement in the Arab lands of the Arab refugees.

The administration requested for the current fiscal year a supplemental appropriation—$700 million has already been appropriated—of $225 million for the Development Loan Fund which was created in the last Congress to give economic aid to underdeveloped free world countries. This amount was cut to $100 million by the House of Representatives and the appropriation is presently pending in the Senate. I will support the full amount as essential to U.S. policy and security. Sound applications are pending for many times this amount.

The administration also has asked for a $3.93 billion program of foreign military and economic aid for the next fiscal year. Last year Congress voted $3.23 billion which was $650 million less than the President had requested; no congressional action has yet been taken this year. Legislation has been passed increasing the U.S. subscriptions by $3.175 billion to the International Bank for Reconstruction and Development and by $1.375 billion to the International Monetary Fund.

I have long advocated economic and military aid for the security and for the development and strengthening of the economies of the nations of the free world and the raising of the standards of living of the peoples living in these nations. The President has called this aid as vital as our own defense preparations.

We should continue to try to achieve an effective cessation of the testing of nuclear weapons under international control through the United Nations, safeguarded by inspection. However, unilateral discontinuance of such tests without entry into an international control system by the U.S.S.R. would be a serious threat to the free world without commensurate benefit in peace.

The peaceful settlement of the extended dispute in Cyprus has restored peace to that strategic island, serving to strengthen the free world's position in the eastern Mediterranean.

BUDGET, THE ECONOMY, AND TAXES

The President has proposed a budget for the fiscal year 1960 of $77.1 billion. This budget will be in balance only if the Congress enacts requested increased revenues raising the gasoline tax 3 cents to 4½ cents per gallon to provide $700 million in revenues, increasing postal rates to bring in an additional $350 million, and other tax increases including $200 million annually in taxes on the income of life insurance companies. The Senate will shortly consider the various appropriation bills that make up the budget.

The Government's financial situation requires close scrutiny of the budget to eliminate wasteful and unnecessary items, such as pork-barrel spending and unrealistic farm price support programs. On the other hand, we need to be wise about our realization of defense and security needs and the requirements of a developing economy and society. As our national prosperity increases, so will revenues increase. We must look as far as possible to an expanding economy for needed Federal income rather than increasing general tax rates. Also, a review of items favored under the revenue laws such as the 27.5 percent oil depletion allowance must be undertaken.

I have been designated a member of the Joint Economic Committee.

Although nationally the economic recession is now largely behind us, there are a number of areas, such as those centered on Buffalo and Schenectady, where there remains substantial unemployment and economic stress. I joined in sponsoring the Depressed Areas Act of 1959, which was intended to assist areas with high continuing unemployment to attract new industry and to help the people in those areas to readjust to new employment opportunities. However, changes which were made in the bill drastically reduced its application to New York State communities, and the amendment which I offered to prevent its use for raiding industry from one area to another was not accepted by the Senate. As a result, the effect of this program on our State would have been limited to three small areas—excluding, for example, Utica-Rome—while the bill could support attraction of other industries away from New York and therefore I had to vote against it on final passage.

The President in his message to the Congress indicated that there may be opportunity for a reduction in the taxes imposed upon our people should there be a sufficient balance remaining after the budget requests have been enacted; he has also recommended the closing of certain specific tax loopholes and the remittance of specified tax privileges. Our problems are complicated by the urgent needs of national security and domestic security which must be met. I am most understanding of the tax burden on our citizens and will endeavor to bring nearer the time when tax reductions may be feasible. Relief is especially needed from those excise levies, such as the telephone tax, imposed as an emergency measure and which have remained on the books due to Government revenue needs.

I have reintroduced my bill to give to the physically handicapped the same $600 tax exemption now extended the blind.

NATIONAL DEFENSE

There can be no question that we must exert the maximum effort in order to maintain our defense capacity at the highest necessary level; to do less is to court disaster. It is the responsibility of the Congress, therefore, to weigh carefully all the evidence and to act in accordance with these facts to assure maximum defense effort, not only in terms of quantity and of money ex-

pended but in qualitative terms—sound in strategy and tactics. The President's opinion that we have adequate defense within the budget should be controlling unless the contrary can be affirmatively demonstrated. I am therefore awaiting with great interest the report of the Senate Preparedness Subcommittee now considering this matter. You may be sure that I shall do my utmost in this regard.

The Senate Committee on Banking and Currency, of which I am now a member, has partial legislative jurisdiction of civil defense. I continue active in my work here for an adequate civil defense system in our Nation, prepared to meet not only the emergencies of war but those of peace, as well, such as flood, and other natural disasters.

The draft has been extended for an additional 4 years beyond the expiration date of June 30, 1959. I supported this extension as necessary as under present conditions our basic security needs afford us no real alternative. It is hoped that the day will not be too distant when it will no longer be necessary for the United States to spend such a high proportion of its resources for defense or require its young men to spend such a fruitful part of their lives in the armed services.

AGRICULTURE

Our farm problem is not one of shortages and poverty but rather one of surplus and plenty; yet problems persist for the Government, the farmer and the consumer. Already we have some $5.4 billion worth of surplus crops in storage costing over $1 billion annually in storage and other costs. The bill for farm price supports for the next fiscal year is estimated at $4.5 billion, some 6 percent of our national budget. Yet farm income is far below what it should be especially for the family sized farm. Dairymen in New York feel the maladjustment very keenly, too.

The administration has taken the position that the price support and production control program have not worked and has recommended that Congress either abandon the parity price concept and relate mandatory farm price supports to average market prices, or, if it insists on keeping parity, allow the Secretary of Agriculture to set supports anywhere from zero to 90 percent of the parity price—parity is a theoretical price that is supposed to give farmers a fair return based on the relationship between prices and costs in 1910–14.

I have consistently opposed high, fixed price supports for agricultural commodities both as a burden upon the taxpayer and upon the consumer. It is vital that our agricultural policy move forward with the technological advances that have benefited the farmer and the country. Generally, I have favored flexible price supports keyed to supply and demand, Government help for research in industrial uses of farm products and farm operations, credit for farm mechanization, homes, schools, telephones, electrification and roads, better marketing and selling practices and disaster insurance to help the farmer.

The Department of Agriculture has announced that dairy price supports will be kept at present levels during the marketing year which began April 1, 1959.

COMMERCE AND INDUSTRY

I have been designated a member of the Subcommittee on Securities—of which I am the senior minority member—and the Subcommittee on Banking of the Senate Committee on Banking and Currency.

Commuter problems are very grave. The service is essential and a way must be found to continue it at reasonable cost to the consumer. Governor Rockefeller's initiative in a New York program has been widely welcomed and deserves full support. Much support has been evinced for my bill, S. 858, which would enable the railroads to take full advantage of any tax abatement granted them by cities, counties, and States in order to help them continue commuter services. Thus the tax relief would directly benefit the railroad and not be absorbed by increased Federal levies. Also, I have joined in legislation to hold up on further summary discontinuances of commuter services.

The Senate passed the Federal airport bill providing for $465 million to help States and communities develop airports in a 4-year period starting July 1. Under the program, Federal grants must be matched equally by the States. The bill originally called for expenditures of $565 million over 5 years. I voted in favor of the bill on final passage but supported the amendment to reduce the program to $250 million and to restrict expenditures to runways, hangars, and necessary supporting facilities, thus barring moneys for terminals. While the bill on final passage was not everything that I would have liked, I nevertheless believed—as did the administration, which had proposed a $200 million program—that in the light of increased air traffic and the requirements of the jet age some program of Federal assistance is needed. The House passed the bill in an amended form and it is now being adjusted between the two bodies.

I am seeking reconsideration by the Tennessee Valley Authority regarding the order placed with a British firm for a steam turbine, in the light of heavy unemployment in the Schenectady area. I am actively concerning myself here not only with this turbine generator question but also with other Federal activities which affect the unemployment situation in our State, such as the diminution of defense orders and the deactivation of military bases and other Government establishments.

A measure has been introduced to amend the Robinson-Patman Antidiscrimination Act to eliminate the defense of good faith in cutting a price for a particular customer allegedly to meet the quotation of a competitor. I will consider this proposal in the light of the necessity of maintaining practical rules of competition, not only for the benefit of the businessman but also for the protection of the ultimate consumer.

LABOR

As this report is written the Senate Committee on Labor and Public Welfare, of which I am a member, has reported out the Labor-Management Reporting and Disclosure Act of 1959—S. 1555. This is a new bill which has evolved as the result of weeks of work by the committee on the Kennedy-Ervin bill—S. 505—which was similar to the bill passed last year in the Senate by a vote of 88 to 1 but which failed of passage in the House. I have joined as a sponsor of this new bill.

S. 1555 represents a distinct improvement over the earlier bill. Every labor organization is required to file with the Secretary of Labor a copy of its constitution and bylaws and a report as to initiation fees, dues, and practices as well as file an annual report as to its finances and both labor and employers must file on dealings with each other's officials and agents and with labor consultants.

Suit by individual members of labor organizations to recover embezzled or diverted funds is authorized in certain cases. Bribery by an employer of representatives of a labor organization is prohibited. "Blackmail picketing" which is for the personal benefit or enrichment of an individual is also prohibited. The requirement of the filing of a non-Communist affidavit by union officials is extended to employers; provision is made to control excesses in trusteeships of union locals, for fair elections of the officers and executive boards of labor organizations by secret ballot, to make ineligible for union office certain persons convicted of crimes of violence except with the permission of the Secretary of Labor, and for the promulgation of codes of ethical practices by labor organizations. The bill includes an arrangement to deal with the so-called no man's land gap of jurisdiction between the National Labor Relations Board and State agencies. The bill also deals with union representation problems in the building construction industry, a long-needed reform.

This bill, which will be debated in the Senate very shortly, is an important step toward eliminating the abuses disclosed by the McClellan Committee. Passage of this measure does not preclude enactment of further legislation in this Congress dealing with labor-management relations and amendments to the Taft-Hartley Act.

The extent of unemployment and the inadequacy of many State unemployment compensation systems continue to present grave problems. The 3-month extension of the temporary Federal unemployment compensation program now law is inadequate to the purpose. It covers only those already entitled to draw the Federal supplement by virtue of exhaustion of State benefits on April 1, 1959, who are still within the one benefit year.

An estimated 405,000 jobless workers will keep getting payments until they have received benefits for a period equal to half the duration of their exhausted

regular State benefits. The program will involve additional costs of about $78 million, almost all in the current fiscal year ending June 30. No newly unemployed workers can be added to the rolls, nor can any now receiving aid collect money beyond July 1.

I joined in sponsoring an amendment which passed the Senate whereby newly unemployed workers could participate in the benefits of the bill during this 3-month extension period. This would have been some improvement; however, the House did not accept this amendment and it was omitted from the final bill. I anticipate the unemployment situation will result in long-range legislation during this Congress; the 3-month extension gives time for such action. I support Federal standards of unemployment compensation to be met by the States as minimums. These are necessary for the national economy to prevent unfair competition between the States for business.

I joined in sponsorship of S. 226 to provide improvements in the Railroad Retirement program.

I introduced the National Act Against Age Discrimination in Employment, which deals with unjust discrimination in employment because of age by firms engaged in interstate commerce; S. 739 to prevent age discrimination by Government contractors; and the District of Columbia Act Against Wage Discrimination in Employment, which is similar to the law enacted last year for New York State. I have also introduced a bill to designate the month of May as Senior Citizens Month.

SMALL BUSINESS AND CONSUMERS

As a member of the Senate Select Committee on Small Business and the Small Business Subcommittee of the Senate Committee on Banking and Currency, I am deeply concerned with small business problems.

I have joined in the sponsorship of S. 59 to provide a program of tax adjustment for persons engaged in small business; S. 1010 to permit the use of the new methods and rates of depreciation for used machinery and equipment; and the Individual's Tax Retirement Act of 1959, which would encourage the establishment of voluntary retirement plans by self-employed individuals analogous to the tax treatment accorded to labor-management pension plans.

The cost-of-living index, while relatively stable, still continues to rise. The danger of inflation, as of unemployment, persists. It is the consumer, especially those who must live on fixed or limited incomes, who bears the heaviest share of the burden of rising prices.

I have protested the restrictions on imports of oil and petroleum products (and on lead and zinc) and have called attention to the serious domestic problem that would be created for homeowners and apartment dwellers who would have to pay higher fuel bills.

HOUSING

The Senate passed major housing legislation, the Housing Act of 1959, early in the session, and it is now pending before the House of Representatives. This bill would liberalize FHA mortgage terms for homeowners, authorize $2.1 billion additional funds for urban renewal and slum clearance; extend the public housing provisions and improve other Federal activity in the housing field. The bill as passed in the Senate included my amendment to increase the amount payable to a family displaced from an urban renewal site from $100 to $200. Also included were my amendments to extend urban planning grants to counties and communities of up to 50,000 population and to make urban renewal sites available to New York State's low- and middle-income housing programs.

In order to meet the needs of middle-income families, I also sponsored a bill to create a Limited Profit Mortgage Corporation in the Federal Government modeled after New York State's successful middle-income housing program which is intended, at no cost to the Federal Government, to make available long-term, low-interest loans to private and nonprofit builders who will supply housing for middle-income families who cannot pay the rents of new, private housing, yet who are ineligible for low-rent public housing. The bill contemplates 150,000 such housing units in the first instance.

I also sponsored legislation to help avoid foreclosures of FHA mortgages in case of a temporary default, in order to assist families who are subject to a temporary economic setback to keep their homes.

CIVIL RIGHTS AND CIVIL LIBERTIES

The passage of effective civil rights legislation has in the past been repeatedly prevented by the threat of the filibuster in the Senate. On the first day of this Congress I renewed my fight to change the rules under which filibusters were possible. Although the Senate did adopt a slight change in the rules, I did not feel that this made a meaningful change; however, the real effectiveness of the change which reduced the number of Senators required to close off a filibuster, from two-thirds of the Senate membership—66—to two-thirds of those present, will be tested when civil rights legislation comes to the Senate floor.

I sponsored legislation to deal with the serious problem of hate bombings which have struck at churches, synagogues, schools, community centers and homes in a number of communities, especially in the Southern States where opposition to desegregation of the public schools is the greater. As part of the means for dealing with this problem, while at the same time carefully preserving our traditional freedoms of speech and press, I have introduced bills to bar from the mails literature which directly incites such criminal acts.

One of our most serious domestic problems continues to be the need for assuring all our citizens their constitutional rights, particularly in public school desegregation. I have introduced legislation to permit the Justice Department to take the initiative in local Federal courts in protecting the constitutional rights of individuals.

I also joined in sponsoring civil rights bills which would assist localities to meet the technical and financial problems of public school desegregation, to assure school facilities to children of military personnel when local schools are closed in an attempt to prevent desegregation, and to give statutory standing to the President's Commission on Equal Job Opportunities.

I continue to oppose enactment of legislation which would restrict the power of the Supreme Court to protect the rights of individuals or interfere with its jurisdiction to declare laws unconstitutional. While I do not believe that the Supreme Court or any other branch of Government should be immune from criticism, I consider the general attacks on the Court as posing a threat to the traditional balance of powers inherent in our form of government. I therefore reintroduced, with a bipartisan group of my colleagues, my constitutional amendment which would assure the appellate jurisdiction of the Supreme Court in constitutional cases; this proposal has received the support of bar associations throughout the country. While the Congress may and should pass laws to close up any loopholes in legislation it thinks have been opened up by Court decisions, these laws should in turn be subject to the Court's constitutional law jurisdiction.

I joined in sponsorship of the Federal Equal Pay Act to prohibit discrimination on account of sex in the payment of wages.

IMMIGRATION

Time is growing short in the necessity for enactment now of legislation to deal with modern immigration needs. Our law now does not reflect our national history and tradition of hospitality, asylum and equal opportunity or our national needs.

July begins the World Refugee Year. Both the Zellerbach Commission of the International Rescue Committee on the European Refugee Situation and the U.S. Committee for Refugees have made constructive recommendations on American policy in this regard, to which the Congress should give urgent attention. I am also preparing legislation looking for the admittance of a portion of these refugees and fourth-preference quota immigrants as well as the general rectification of the McCarran-Walter Immigration Act to eliminate discriminations and inequities.

EDUCATION, HEALTH, AND SOCIAL SECURITY

As a member of the Subcommittee on Education of the Senate Committee on Labor and Public Welfare, I have found that despite efforts by the States and localities, an acute national shortage of classrooms and qualified teachers persists. Moved by this need for a major national defense emergency program of Federal assistance, I introduced in the Senate the Education Assistance Act of 1959 which provides for a 5-year program of Federal aid for expanded school construction and for increasing teachers' salaries with special provision for science and mathematics teaching. Provision is made that the Federal Government shall not exercise any direction or control over the personnel or pro-

gram of instruction in any local school system.

The need continues for the program of Federal aid to schools in federally impacted areas established in 1950 and I am supporting the necessary appropriation for this purpose.

I joined in sponsorship of legislation to authorize loans to colleges and universities for the construction, rehabilitation, alterations, conversion, and improvement of classroom buildings and other academic facilities. The substance of this measure was passed by the Senate and is presently pending in the House.

Four of my colleagues have joined me in introducing legislation to establish a Health Services Study Commmission which would determine the health service needs of all our citizens with particular reference to the coverage required by and actually extended to certain groups like the aged, unemployed, mentally ill, minorities, and others, including families in thinly populated areas, by the many voluntary prepaid health insurance plans now in operation.

To help combat the problem of drug addiction, I introduced proposed legislation to establish a Federal narcotics hospital in New York State.

Social security benefits were increased by 7 percent on the first day of this year in accordance with legislation enacted in the last Congress, which I had supported. The increase enacted was not altogether a satisfactory one in the light of the needs of our citizens; I shall work this year for a better law not only as it applies to the amount of benefits but also as regards the extent of coverage and benefits, and elimination of the inequitable earnings limitations.

To help provide needed day care for the millions of children of working mothers, I introduced the Day Care Assistance Act of 1959 to authorize a program of Federal aid for the day care of children outside the home.

I am working for early consideration of legislation dealing with juvenile delinquency and have also introduced the Juvenile Delinquency Control Act to strengthen and improve State and local programs to combat and control juvenile delinquency and youth crime, with a portion of the costs to be shared by the Federal Government with the States.

POST OFFICE AND CIVIL SERVICE

The budget request contains a $350 million increase in postal rates, including raising first-class mail rates from 4 to 5 cents. However the likelihood of enactment of this proposal this year depends on budget and defense expenditure considerations.

I have reintroduced my bill to grant employees of the postal field service time off for one State holiday each year.

VETERANS

I have joined in sponsoring the measure which would create in the Senate a Committee on Veterans' Affairs and am also cosponsoring the bill to provide a 1-year period during which certain veterans may be granted National Service Life Insurance.

Both the House and the Senate voted to increase the GI mortgage rate from 4¾ to 5¼ percent. Senate-House differences must be resolved before the legislation can go to the President to be signed into law. Although I have in the past opposed such interest rate increases, I supported this one as the only practical way money could be made available at this time for GI home mortgage loans since lending institutions have not been making loans at the lower rate.

MATTERS OF SPECIAL INTEREST TO NEW YORK STATE

Unemployment persists in several areas of our State. In an effort to ease the situation and in cooperation with my colleagues from both parties in the New York congressional delegation, I have been active to see that New York obtains its full, fair share of defense orders and have also protested the shift from New York to California and other States of Government contracts. To further help New York in this effort, I am joining in legislation to stimulate Armed Forces procurement on the basis of competitive bidding rather than by privately negotiated contracts.

In several instances in which defense contracts of New York firms have been terminated, I have taken effective action to minimize the effect of the termination of contracts in order to avoid as far as possible hardships to the employees of these firms as the result of layoffs and discharges. In a number of cases where there have been layoffs in Federal installations, such as the Scotia Naval Supply Depot, the Brooklyn Navy Yard, and the Stewart Air Force Base, among others, I have worked to minimize the extent of layoffs and substitute new activities at these installations for those which were terminated.

In order to relieve the heavy burden on our courts which has resulted in unfortunate delays in litigation, I introduced a bill providing for the appointment of seven additional judges for three Federal courts in the New York area.

I have sponsored legislation to provide for an additional payment of $165,000 to the village of Highland Falls toward the cost of the water infiltration plant constructed by such village; to authorize the conveyance to the city of New York of certain surplus lands comprising the Manhattan Beach Air Force Station at Sheepshead Bay; to recognize Samuel Wilson, of Troy, as the progenitor of America's national symbol, "Uncle Sam"; and to request the President to issue a proclamation designating 1959 for the observance of the 350th anniversary of the historic voyages of Hudson and Champlain.

I supported before the Civil Aeronautics Board the applications for MacArthur Airport, in Long Island, and Oneonta Airport, at Oneonta, to be certified as airports for use by scheduled commercial airlines.

MISCELLANEOUS

Alaska and Hawaii have now been voted admittance as our 49th and 50th States. I supported this legislation.

I have introduced legislation to modernize the tariff laws for works of art and other exhibition material. I am also sponsoring a bill to permit the importation of trademarked articles, like certain perfumes, now restricted, when the item *is* for personal use.

The question of publicity for payrolls of Members of Congress is one which has received much and deserved public attention of late. I favor full disclosure. I am the sponsor of several measures looking toward the maintenance of the highest possible standards of ethics in Government service. Needless to add, never have I had a relative on my official payroll.

To stimulate throughout the United States advancement of the performing arts, I introduced a bill to establish an Arts Foundation.

CONCLUSION

It becomes increasingly important that the people have a better understanding of what goes on in the Federal Government and what their elected legislators are doing. I am endeavoring to further this undertaking through this report and frequent reports to the State on radio and television; I ask from my constituents, on their part, letters and expressions of opinion; these are a valuable aid in my work here. In addition, the citizen's Federal problems are an important part of my duty. I sincerely hope that you will continue to express your views to me; also that you will feel free to visit my office in New York City—341 Ninth Avenue—or in Washington.

AMENDMENT OF REORGANIZATION PLAN NO. 2 OF 1953

The Senate resumed the consideration of the bill (S. 144) to amend Reorganization Plan No. 2 of 1953.

Mr. JOHNSTON of South Carolina. Mr. President, 25 years ago, as Governor-elect of South Carolina, I came to Washington to see the late President Roosevelt to seek funds to start a rural electrification program in South Carolina.

Early in 1935 the South Carolina General Assembly created the South Carolina rural electrification program which preceded action on the national level. Later that spring, by Executive order, President Roosevelt sent $100,000 to my State to help initiate this program. In 1936 Congress passed legislation creating the national rural electrification program. It was patterned after the program initiated in South Carolina. The South Carolina act was drafted in Washington at that time by the administration.

I know well the story, history, and good record of REA from top to bottom. When the REA was first created, the Congress established the office of Administrator of REA. Besides the paperwork and administrative functions, the REA Administrator was charged with the duty of approving or disapproving loans for rural electric programs. For over 23 years this function was performed by the REA Administrator.

Then, in May of 1957, the Secretary of Agriculture, within whose Department REA had functioned independently, decided to assume the loanmaking powers of the REA Administrator. There

is no justification for this assumption of power by the Secretary of Agriculture.

The REA program has been efficiently operated without the slighest blight on its record. Cooperatives in a great part of the country are ahead of schedule on their repayments, and the REA has not lost a thin dime of the Government's money. I point out that $1 billion has been repaid the Government by cooperatives on loans. It is a self-sufficient agency of the Government which has assisted the rural people of this Nation to come out of the Dark Ages and join the rest of the lighted world.

Before REA existed, more than 90 percent of rural America was still living at night by candlelight and lanterns. After years of futile pleading for extension of city lines to rural areas, the rural electric cooperatives were organized by the rural people themselves to do the job.

Today more than 90 percent of rural America is lighted with electricity. This commendable job was done under the administration of REA which, until 1957, was headed by the Administrator of REA, who made decisions on placing loans.

This bill, of which I am a cosponsor, would not change the REA program or its personnel in any way. It would only restore the REA to its original organization and operation which worked so successfully and above reproach for so many years.

The rural electric cooperatives in my State of South Carolina and the cooperatives all over America have endorsed this proposed legislation.

I certainly endorse this legislation for, if the Secretary of Agriculture plans to administer the rural electric program in the future as he has administered the farm programs in the past, the REA program will be wrecked in a short time.

I would much rather have a very weak law on the statute books and have a good Administrator than to have a strong law on the statute books and have a poor Administrator to administer it—one who was trying his best to kill it.

REA is a continuous program. As people buy more electrical equipment and modernize their farm operations, they will be needing more and more electrical energy. As this need grows, so grows the need for heavier distribution lines, and with such growth comes the need for new loans and new authorizations. The Administrator of REA, and not the Secretary of Agriculture, should be in the position of judging the soundness and need for such loans.

An unfriendly Secretary of Agriculture with no sympathy for the programs of REA, and not sworn to defend REA, could render havoc to our local REA programs. Farmers without adequate electricity do not buy electrical appliances and do not modernize their operations. A stagnant cooperative, like any other business, will degenerate. Incompetence in Washington can result in the bleak picture of a rural America being dotted with dying cooperatives.

The very existence of rural cooperatives and the REA program may depend on passage of this legislation or some similar legislation; I urge the Senate to support this bill, in order to defend the Rural Electrification Administration against the present Secretary of Agriculture. If we do not enact such legislation, I fear that rural electrification is in great danger.

Mr. SYMINGTON. Mr. President, I wish to associate myself with the remarks made by the very able senior Senator from South Carolina with respect to the rural electrification program.

At least as much as any other program, the rural electrification program has contributed to a better way of life for farmers, and others, all over rural America.

The accomplishments of the REA in the past 24 years are well known.

In my own State, at the time the REA was created in 1935, but 6 percent of the farm families were receiving electric service.

Now, more than 95 percent of Missouri's farms are being served by this great institution.

The REA is an outstanding example of the type of achievement that can be had when individual farmers, in cooperation with both their neighbors and their Government, set out to do a job.

In recent years, there has been a growing feeling of apprehension on the part of the REA members of Missouri. When it became known that the Secretary of Agriculture was exercising final authority in passing on certain loans, our people became even more concerned.

As a member of the Government Operations Subcommittee in the last Congress, I was privileged to hear witnesses from all over the country request that the REA Administrator be given full authority for the loanmaking policy and functions of the REA.

Recently, at the national REA convention here in Washington, I also had the privilege of visiting with the leaders, as well as many members of the electric cooperatives in Missouri.

These people reiterated their support for the principles embodied in S. 144. They expressed their sincere view that the rural electrification program was created to provide electric service to farmers and farm areas.

The REA has been, and should continue to be, an organization of farmers, for farmers; therefore it should continue to be associated with those agencies of the Government primarily concerned with agricultural matters.

For a few years after the REA was created, it was an independent agency. In 1939, after 4 years of operation and study, the Congress decided to place the REA as part of the Department of Agriculture—in other words, as an independent agency of that Department.

As the chairman of the Agriculture Committee, the distinguished Senior Senator from Louisiana, said in the Senate Agriculture Committee on March 5 and 6:

> As far as I am concerned, I don't recall having heard very much criticism of the operations of the REA so long as it was under Agriculture as a more or less independent agency * * * It made its greatest progress while it was under Agriculture, where it received sympathetic review by the Department that was interested in the farmer.

Mr. President, the best interests of the REA will be served if we follow the philosophy of S. 144—to keep the REA within the Department of Agriculture; and give the Administrator of the REA full and complete authority with regard to the loanmaking and financial functions of the program.

Mr. CURTIS obtained the floor.

Mr. CAPEHART. Mr. President, will the Senator from Nebraska yield so that I may suggest the absence of a quorum?

Mr. CURTIS. I yield for that purpose.

Mr. CAPEHART. Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER (Mr. LAUSCHE in the chair). The clerk will call the roll.

The Chief Clerk proceeded to call the roll.

Mr. CURTIS. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. CURTIS. Mr. President, I am pleased to offer an amendment in the nature of a substitute for the bill now under discussion. The distinguished senior Senator from Georgia [Mr. RUSSELL] has joined me in offering the amendment. Our amendment, if enacted, would recreate the Rural Electrification Administration as an independent agency of government. It would recreate the agency in the status originally conceived and originally intended.

Mr. President, I should like to call the attention of the Senate to the text of S. 144. It consists of 15 lines on page 2, from line 7 to line 22.

I ask anyone to inform us who will run REA if the bill shall be enacted. I ask anyone who reads the amendment offered by myself and the distinguished Senator from Georgia [Mr. RUSSELL] whether he has any doubt in his mind as to who would run REA under the substitute. I shall refer to that point later.

I suppose that, if we were asked to select the greatest accomplishment in farming, in our generation, it would be very easy to point out the electrification of our farms. In 1935, 11 percent of our farms were receiving central station electric service. Today, 96 percent of our farms are getting such service.

One of the most interesting and praiseworthy aspects of our rural electric program, through its first 23 years of operation, is that it has enjoyed the strong support of Members of Congress from farming States. When REA was created, in 1935, it was set up to be a nonpartisan agency dedicated to the bringing of electricity to our farms. While there have been, at different times, political charges and counter charges surrounding some REA side issues, involving controversial power projects proposed for construction by the Department of the Interior, the program for authorization and appropriations of REA funds have had the votes of Republicans and Democrats alike, representing our farm States in Congress.

President Roosevelt created the REA by Executive order in 1935. A year later, Representative SAM RAYBURN, in the House, and Nebraska's Senator George W. Norris, in the Senate, sponsored legislation to prescribe its governing rules.

Permit me to cite a few facts. Since 1952, there has never been any year in which money for loan authorization was insufficient. In the 1957 fiscal year, a volume of applications exceeded the expected demand for new loans. The administration hurriedly requested $200 million for additional loans, and the authority to make the loans was speedily approved by the Congress.

Since 1952 the backlog of loan applications made to the REA headquarters has been wiped out and loans are being processed faster by Administrator Hamil than ever before in the history of REA. At this point let me relate that Davy Hamil, our REA Administrator, is doing the best job ever performed by any REA Chief. He is a farmer who worked with REA problems as a consumer and as an official of his co-op. In the legislature of his native State he labored effectively on legislation to promote REA. He is a diligent man, and is performing an excellent public service.

Because of the criticism of this administration's handling of the REA program, I have spent much time studying REA matters. About 2 years ago, the Secretary of Agriculture asked Administrator Hamil to submit, for review by him, all loan applications in excess of $500,000. This has resulted in much strife, noise, and name calling. The Secretary's request was based on two reorganization plans—one in 1939 and the other in 1953. The earlier plan, authored by President Roosevelt, removed REA from its independent status and placed it within the Department of Agriculture "under the general direction and supervision of the Secretary of Agriculture." The reorganization plan of 1953 further implemented the 1939 act and gave to the Secretary of Agriculture "all functions" of other departmental employees "not now vested in him." When the Secretary asked for review of all REA loans over $500,000, the concern in some places caused the Senator from Minnesota [Mr. HUMPHREY] to introduce a bill in the Senate, and Representative MELVIN PRICE to introduce a bill in the House, nullifying the 1953 reorganization plan. I am a member of the committee, along with the Senator from Minnesota, which studied his bill, and sat in the hearings on it.

The interesting feature of the hearings was not the heated politics, but the fact that officials of local REA's who came before the committee to support the Humphrey bill all stated, to a man, that review of loans had not slowed down, at any time, the making of loans. Davy Hamil testified that every loan approved by him has been made, and that review of the loans over $500,000 has not, in one single instance, reversed any loan he has approved.

During the past fall, I gave much thought to REA matters. I discussed REA with many Nebraskans who are interested in it. I reread hearings and debates on REA legislation. It occurred to me that the best interests of our fine and progressive rural electric program will be served by reestablishing its independent status. I discussed my plans with the Senator from Georgia [Mr. RUSSELL]. He agreed with me and, on January 9, 1959, we introduced a bill to reestablish the Rural Electrification Administration as an independent agency of the Federal Government. Our bill, if enacted, will permit REA to operate as originally conceived in 1935, and as authorized by the Norris-Rayburn Act of 1936.

There is a logical background for the amendment. In 1944, Senator E. D. Smith, as chairman of the Committee on Agriculture, introduced a bill, S. 2034, to return the Rural Electrification Administration to independent status. This followed 5 months of hearings on REA problems, and the issuance of a subcommittee report recommending the proposed legislation which was signed by two Democrats and two Republicans.

Senator Lucas, on January 6, 1945, introduced a so-called postwar planning bill for REA—S. 89—which contained, among other provisions, the reestablishment of REA as an independent agency. It passed the Senate on May 14, 1945, without a record vote.

During the hearings on Reorganization Plan No. 2 of 1953, Mr. Clyde Ellis stated in behalf of the National Rural Electric Cooperative Association:

> Rural electric leaders have never become reconciled to the placing of REA in the Department of Agriculture and have continued to feel that the program would be better served by a completely independent agency.

Some fears have been expressed, and I believe with absolute sincerity, that disadvantages might accrue to the Rural Electrification Administration should it become an independent agency. These fears can be allayed by taking notice of REA's stature with Members of Congress of both parties. The widespread support for REA and its progress should certainly assure a wholesome continuation of its objectives. All members of Congress knowledgeable of the benefits of central station electric service to rural America will accord REA the support it deserves and merits. Those Members comprise a substantial majority in both Houses of Congress.

I have received many letters and resolutions from officials of REA districts supporting the amendment in the nature of a substitute which I have offered for myself and the Senator from Georgia [Mr. RUSSELL]. In addition, I am proud that the Nebraska Rural Electric Association, in a State convention on February 2, 1959, adopted a resolution supporting this proposal and a bill similar to it introduced in the House of Representatives by Representative LAWRENCE BROCK, of Nebraska.

Many arguments both pro and con were made at the time the Rural Electrification Administration was transferred to the Department of Agriculture in 1939. Regardless of the merits of those arguments, the great changes which have occurred in the electric industry since 1939 require a reappraisal of the justification for moving REA into the Department of Agriculture. Probably no other industry in the country has gone through greater changes than that of the generation, transmission, and distribution of electric energy. The borrowers from REA play an important part in this work. The rapid growth and peculiar problems of supplying electricity to people in rural areas require that REA be subject directly to Congress as an independent agency. While the supplying of electric energy to persons in rural areas has some factors common with other activities of the Department of Agriculture it is increasingly clear that the problems of the future with respect to REA work will not be the type of agricultural problems with which the Department is concerned.

It is my belief that the creation of REA as an independent agency will not violate the principles of the Hoover Commission report.

Having determined that the agency should be independent, it is necessary to assure that it will be completely free. Any attempt to give the Administrator partial control, and at the same time to retain some control in the Department of Agriculture, could only lead to utter confusion and the disadvantage of the program. Overlapping areas of judisdiction and control are the fertile fields of confusion and delay which lead to a breakdown of the service being rendered to the farmers by the REA program.

The discussions before the subcommittee of the Committee on Agriculture clearly show that there is confusion as to the intent and purpose of Senate bill 144. If it is intended to mean that the bare act of affixing or refusing to affix his signature to a loan is the sole responsibility of the Administrator, the bill is meaningless. If it means that all decisions as to policies, procedures, and personnel, which are the ingredients of the loan process, are to be made by the Administrator, then the enactment of the bill would result in removing the REA from the Department of Agriculture.

The substitute offered by me and the Senator from Georgia [Mr. RUSSELL] removes all doubt as to the authority of the Administrator with respect to the loan programs authorized by the Rural Electrification Act of 1936, as amended. Senate bill 144 creates confusion and doubt as to who has the final responsibility for carrying out the objectives of this act. Even the most charitable view of Senate bill 144 means that there will be two administrative heads of the REA. The extent of the authority of either of these heads is not made clear by the provisions of Senate bill 144. Having two bosses with their jurisdiction undecided could lead to only one end, namely, hopeless confusion and a serious adverse effect on the accomplishments of the REA program. The Congress should not at this time take any action which might defeat the objectives of the act.

For example, Senate bill 144 proposes to repeal the part of Reorganization Plan No. 2 of 1953 which transferred

to the Secretary of Agriculture authority in addition to that given him by Reorganization Plan No. 2 of 1939. That is proposed in an effort to give to the Administrator sole responsibility for the making of loans. At the same time, if Senate bill 144 is enacted, the Administrator will have, according to title I of the Rural Electrification Act of 1936, with amendments—

all of the powers of which shall be exercised by an Administrator under the general direction and supervision of the Secretary of Agriculture.

There is no effort to clarify what "general direction and supervision" the Secretary of Agriculture will then have, should Senate bill 144 be enacted.

Mr. President, I now come to the very crucial point of the distinction between these two proposals. I believe that the authors of Senate bill 144 have acted in good faith and with good intentions. But I am convinced that the language they have used is such that it defeats the whole objective they seek; and I call attention to this particular point:

Section 3 of the Rural Electrification Act of 1936, as amended, provides:

The Secretary of the Treasury is hereby authorized and directed to make loans to the Administrator, upon the request and approval of the Secretary of Agriculture.

Mr. President, that provision is not changed by the Humphrey bill, Senate bill 144. This is obviously an important policy function still vested in the Secretary of Agriculture, which is not dealt with in Senate bill 144.

In other words, Mr. President, suppose there were to develop a situation in which the Secretary of Agriculture and the Administrator of the REA disagreed. Under the Humphrey proposal, the Administrator of the REA would have the sole authority to approve or to disapprove an application made by a local REA for a loan. But the authority to obtain the money from the Treasury, so the local REA could obtain its loan, would rest solely with the Secretary of Agriculture.

Could there be more confusion; could there be a greater blow to the fine REA program, than to have such dual authority? It is true that if such a proposal were enacted, nothing might happen under it for a time. But if there were a Secretary of Agriculture and an REA Administrator who were not working in harmony, then a proposal of this kind would result in such a situation that the REA Administrator would be the only one who could approve a loan which was sought by a local REA; but the only one who could obtain from the Treasury the funds with which to make the loan would be the Secretary of Agriculture. Such legislation would not be good; it would not result in sound governmental procedure; it would not be in accord with the Hoover Commission's report; it would not be fair to the American farmers. Instead, it would create legislative chaos.

I am thoroughly convinced that the authors of Senate bill 144 did not intend any such thing. But all the consideration and endorsement of Senate bill 144 by various organizations occurred prior to the writing of the present language of Senate bill 144 and prior to full discussion of the meaning of the language used.

Mr. President, it is my hope that the authors of Senate bill 144 will withdraw their bill and will reconsider it, or else will accept our substitute.

I suggest that all the Members of this body read Senate bill 144 and try to determine who will run the REA program. The bill says that the program shall be operated under the direction and supervision of the Secretary of Agriculture; but then the bill provides that only the Administrator can approve or disapprove an application for a loan, although the bill leaves in the Secretary of Agriculture the sole responsibility of obtaining from the Treasury the money with which to make the loans.

I suggest that all Senators read the bill, and determine who will administer the REA program; and I suggest that then they read the substitute, and then see whether they have any doubt about what will happen.

Our amendment in the nature of a substitute provides:

There is hereby created and established in the executive branch of the Government an independent agency to be known as the Rural Electrification Administration.

A little later our amendment provides:

The Administrator shall have direction, supervision, and control of the Rural Electrification Administration and all of its operations and functions as authorized in the Rural Electrification Act of 1936, as amended.

Mr. President, the substitute may not prevail. It ought to; and I believe it may. But if this issue is carried back home to the local REA's, Senate bill 144 will be a bad one to take to them. All one has to do is read the 15 lines of the Humphrey bill to find that no one can say that there is central authority and responsibility provided for the REA program.

During hearings on the Curtis-Russell substitute before the subcommittee of the Senate Committee on Agriculture, headed by the Senator from Florida [Mr. HOLLAND], it was stated that our substitute would "make possible the arbitrary discharge of experienced, capable and loyal employees of the Rural Electrification Administration."

The Curtis-Russell substitute has been drafted in accordance with standard provisions contained in all reorganization bills coming before the Congress. The authority to transfer personnel is always designated in this type of legislation. It is inconceivable, and almost ridiculous, to presume that Davy Hamil, as Administrator of the independent agency, would want to discharge capable and loyal employees of the REA. These apprehensions, however sincere, are not supportable. For example, our substitute bill duplicates the procedure taken under the act of August 6, 1953, which established the Farm Credit Administration as an independent agency. Does any colleague know of any instance wherein capable and loyal employees of the Farm Credit Administration were arbitrarily discharged as a result of that reorganization plan?

To allay any other fears, the Curtis-Russell substitute proposes that the substantive legislation relating to REA and its appropriations shall come before the Committees on Agriculture of both Houses, and before the same Appropriations Subcommittees now possessing jurisdiction.

The broad consideration and support which REA has received from a large majority of the Congress, representing both political parties, give me full assurance that our Rural Electrification Administration can best operate and grow and prosper as an independent agency. I sincerely believe that enactment of S. 144, as reported, can only serve to compound a confusion which we know exists, and make it worse, to the detriment of America's rural community.

Mr. President, the question has been raised, Do either of these proposals violate the principles of the Hoover Commission report? I say that S. 144 as reported by the committee violates the basic principles of the Hoover Commission recommendation. The objective of the Hoover Commission was to centralize authority, to establish a direct chain of command. The Humphrey bill defeats the principle of centralized authority and of a direct chain of command. For instance, if it shall become law, only the Administrator will be able to approve a loan, but only the Secretary will have final authority to secure funds from the Treasury to make the loan.

Could anything be more confusing? I hope the distinguished Senator from Minnesota [Mr. HUMPHREY], who is so devoted to rural America, will withdraw his bill and consider the language again.

Mr. President, during yesterday's debate, as shown on page 5447 of the CONGRESSIONAL RECORD, the senior Senator from Minnesota cited certain examples to support his bill as reported from the committee. Among these examples he cited the Federal Maritime Board, the Bureau of Mines, and the General Counsel of the National Labor Relations Board. To my knowledge, neither the Bureau of Mines nor the General Counsel of the National Labor Relations Board has any loan programs under their respective jurisdictions.

However, in the case of the Federal Maritime Board, I should like to remind the distinguished senior Senator from Minnesota that Reorganization Act 21 of May 4, 1950, gave absolute control to the Chairman of the Federal Maritime Board over regulatory and personnel functions. The regulatory functions contained in the Shipping Acts of 1916 and 1933, and certain few ones contained in the Merchant Marine Act of 1936, were brought under the absolute control of the Chairman of the Maritime Board. On the contrary, there was reserved in that Reorganization Act to the Secretary of Commerce authority for general policy direction over the granting of subsidies for the construction and operation of merchant and passenger vessels under contract with the Federal Maritime Board. The Federal Maritime Board disburses very large amounts of

money for construction and operating subsidies and, as previously stated, the general policy over these subsidies has been reserved to the Secretary of Commerce by Reorganization Act 21 of May 4, 1950.

In closing, I wish to say there is no precedent and no pattern for S. 144. Its enactment would result in utter confusion. It would not do what its authors think it would. Some of the authors of the bill have expressed the opinion that S. 144 would create a situation such as exists in the case of the Farm Credit Administration. That is absolutely incorrect. The Farm Credit Administration is an independent agency, with all the power vested in one place.

Again I say, read the two proposals, and see if it can be determined who would run the REA if either one of the proposals were enacted.

There is no doubt what would happen under the Curtis-Russell proposal. The agency would be an independent agency. The Humphrey bill is condensed confusion in 15 lines. Admittedly, it vests with the REA Administrator the authority to make a loan to an REA in any of our States, but vests in the Secretary of Agriculture power over all further functions—legal, general policies, interest policies, and everything else—but, more than that, only the Secretary of Agriculture could get the money out of the Treasury to make the loans.

Mr. President, I yield the floor.

CALL OF THE ROLL

Mr. CAPEHART. Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

The legislative clerk called the roll, and the following Senators answered to their names:

Aiken	Fulbright	Morse
Allott	Goldwater	Morton
Anderson	Gore	Moss
Bartlett	Hart	Mundt
Beall	Hartke	Muskie
Bennett	Hayden	Neuberger
Bible	Hennings	O'Mahoney
Bridges	Hickenlooper	Pastore
Bush	Hill	Prouty
Byrd, W. Va.	Holland	Proxmire
Cannon	Hruska	Randolph
Capehart	Humphrey	Robertson
Carlson	Jackson	Russell
Carroll	Javits	Saltonstall
Case, N.J.	Johnson, Tex.	Schoeppel
Case, S. Dak.	Johnston, S.C.	Scott
Church	Jordan	Smathers
Clark	Keating	Smith
Cotton	Kefauver	Sparkman
Curtis	Kennedy	Stennis
Dirksen	Kerr	Symington
Dodd	Kuchel	Talmadge
Douglas	Langer	Thurmond
Dworshak	Lausche	Wiley
Eastland	Long	Williams, N.J.
Ellender	McCarthy	Williams, Del.
Engle	McClellan	Yarborough
Ervin	McNamara	Young, N. Dak.
Frear	Martin	Young, Ohio

Mr. HENNINGS. I announce that the Senator from New Mexico [Mr. CHAVEZ], the Senator from Rhode Island [Mr. GREEN], the Senator from Alaska [Mr. GRUENING], the Senator from Montana [Mr. MANSFIELD], the Senator from Wyoming [Mr. McGEE], the Senator from Oklahoma [Mr. MONRONEY], and the Senator from Montana [Mr. MURRAY], are absent on official business.

I further announce that the Senator from Washington [Mr. MAGNUSON] is absent because of illness and that the Senator from Virginia [Mr. BYRD] is absent because of illness in his family.

Mr. KUCHEL. I announce that the Senator from Maryland [Mr. BUTLER] is absent on official business for the Committee on Interstate and Foreign Commerce.

The Senator from Kentucky [Mr. COOPER] is absent on official business.

The PRESIDING OFFICER. A quorum is present.

AMENDMENT OF REORGANIZATION PLAN NO. 2 OF 1953

The Senate resumed the consideration of the bill (S. 144) to amend Reorganization Plan No. 2 of 1953.

Mr. CAPEHART. Mr. President, I am opposed to Senate bill 144, on which I filed minority views. I do not wish to speak for the majority leader or the minority leader, but it is my understanding that only three or four Senators may wish to speak for perhaps 3 or 4 minutes, and that after they have concluded their remarks the Senate will vote on the substitute offered by the Senator from Nebraska [Mr. CURTIS].

The substitute, of course, would make REA an independent agency. That would be much better than the situation which would result under Senate bill 144. I am a member of the Committee on Government Operations. The able Senator now presiding [Mr. LAUSCHE] and I listened to all the testimony a year ago.

Senate bill 144 is nothing more than what might be termed spite legislation. There is absolutely no more need for Senate bill 144 than there is for my having a third leg. Every person who testified before the committee, even those who were in favor of Senate bill 144, testified that the present administration of REA under Secretary Benson and Mr. Hamil had been 100-percent perfect; that they had never had an application for a loan rejected; that there never had been any delay in the granting of loans; that the operation of the agency, so far as they were concerned, had been excellent. The only reason the witnesses gave for wanting to change the procedure was that they were afraid of what might happen in the future. That is the only reason they gave in their testimony for wishing to change the present act.

I call attention to the committee report, at page 11. REA has been in existence for 24 years. In the 6 years in which it has been operated by Mr. Benson and Mr. Hamil half as many loans were made as were made during the two previous administrations. I am not criticizing the previous administration. During the past 6 years half as many loans were made as were made in the previous 18 years. There is nothing in the record anywhere which indicates that the Department of Agriculture has not been cooperating with REA. In fact, the record is just the opposite. For example, the record shows the total new loan funds appropriated amount to $1,545 million during the 6-year administration of Benson and Hamil; and $2,954 million during the previous 18 years under the former administrations.

The record shows, for gross loans made, under Benson and Hamil, $1,227 million; during the 18 years from 1935 to 1953, under previous administrations, $2,619 million.

For loans for generation and transmission facilities—and this is the item to which I wish to call particular attention, because it is the one about which some persons have expressed fear, apprehending that they will not get loans—under Benson and Hamil, for 6 years, $400 million; during the previous 18 years, the amount was $469 million. I could continue to recite additional facts. However, no showing has been made to indicate that we should deny the Secretary of Agriculture the right to veto loans.

I ask Senators to believe me when I say that the whole purpose of the proposed legislation contained in S. 144 is to embarrass Secretary Benson and the Department of Agriculture. There will be other Secretaries of Agriculture. Secretary Benson will not be in office forever.

The substitute offered by the able Senator from Nebraska [Mr. CURTIS] calls for establishing REA as an independent agency. That would be a great deal better than to take authority away from the Secretary of Agriculture. Under S. 144 the REA remains in the Department of Agriculture, the moneys for it are appropriated to the Secretary of Agriculture, and he has the responsibility for them, but he has absolutely nothing to say about the loans.

If we adopt the substitute and make REA an independent agency, we will be where we were when the agency was first established. President Roosevelt, after it had operated 4 years as an independent agency, put it in the Department of Agriculture. It has been there ever since. The Department of Agriculture has done well with it. We should not be taking up the time of the Senate debating a proposal such as Senate bill 144. It is not needed. As I said a minute ago, it would be 100 percent spite legislation. Not one good reason has been advanced to support the enactment of such legislation.

Therefore, Mr. President, after a vote has been taken on the substitute proposed by the Senator from Nebraska, I shall make a motion to recommit the bill to the Committee on Government Operations for further study. I do not believe the Senate is ready to act upon this measure. I do not believe we can foresee what the consequences of the proposed action would be. If we are to do anything, we should make REA an independent agency. If we pass S. 144, no one will know who has the authority, whether it be the Director of REA or the Secretary of Agriculture. After the vote is taken on the substitute, I shall make a motion to recommit the bill.

Mr. AIKEN. Mr. President, has the motion to recommit been made?

Mr. CAPEHART. No; I shall make it after the vote is had on the substitute.

Mr. AIKEN. Mr. President, I know that there are not many Members of the Senate who have supported the REA program longer and more earnestly than I have. I yield to no one in the support of the program at the present time. If I thought either of the proposals now before the Senate would improve the REA program, I would certainly support the one which I thought would advance its work the best.

I do not agree with some of the recommendations made by the administration relating to the work of the Rural Electrification Administration. I do not believe that this is the time to raise the interest rates. After all, if there is a subsidy involved in the low rate of interest at which money is loaned to REA cooperatives, that amount is small in comparison with the subsidies which were paid to corporate utilities through the rapid writeoff of a few years ago.

I do not agree that we should cut out loans for generating and transmission facilities for rural cooperatives. I do not agree with the Comptroller General's ruling, issued last fall, to the effect that the rural electrification program cannot serve any rural resident who lives within an area which is served by any other utility.

I do not believe that now is the time to force REA cooperatives to go to banks to borrow money at a high rate of interest, and at a time when the interest rate is going higher every day. The work of a large percentage of the rural cooperatives is not completed. It must be completed before we begin to think in terms of high interest rates or of eliminating Government loans altogether.

The REA program has done tremendous good. It has resulted in the development of sparsely settled areas, and in the introduction of small industries, the building of homes, and the improvement of farms in those areas. I cannot say too much for the good work which has been done. I will support the REA program to the best of my ability.

If I thought that either of the proposals now before the Senate would improve the work of the REA, I would be advocating them. However, we should not want to build up additional independent agencies in our Government. We went through that back in the 1930's, when a great many independent agencies were established. When the first Hoover Commission was created in 1947, there were 65 such independent agencies. That did not make for good government. The Hoover Commission recommended the elimination of a great many of them. The number has now been reduced from 65 to 40. I do not want to start in the other direction at this time, because to do so would not be conducive to good government.

In a report to the 81st Congress, relating to a study of the Department of Agriculture, the Hoover Commission said:

> We have urged in our first report that the foundation of good departmental administration is that the Secretary shall have authority from the Congress to organize and control his organization, and that separate authorities to his subordinates be eliminated.

That recommendation was approved by Congress.

The concluding report of the Hoover Commission to the same Congress stated:

> Once the practice of exempting certain agencies and excepting particular functions has begun, the chance of achieving substantial improvements in the efficiency of the Government will speedily diminish.

Although Congress accepted those recommendations of the Hoover reports, both the proposals now before the Senate would tend to start a movement the other way, a movement toward poorer and less efficient government than we now have.

Senate bill 144 takes from the Secretary of Agriculture only the right to approve loans. It leaves the control over all the rest of the REA in his hands. The Secretary of Agriculture, as I understand the REA law, is the only one who can get money to make the loans. Yet the proposal would take the disposition of the money out of his hands and place it in the hands of a subordinate official.

The bill appears to be aimed at Secretary Benson. I have disagreed with him frequently, even vigorously at times; but I do not like to have legislation directed at one person. I do not expect that he will be Secretary of Agriculture forever. I do not believe we should legislate now to eliminate a legitimate and proper function of the Secretary of Agriculture simply because some Senators do not happen to like the present occupant of that Office.

Furthermore, so far as I know, the present Secretary of Agriculture has not denied or vetoed any worthy loan which was proposed by the Rural Electrification Administrator. This proposal will not help. I have been tempted to vote for it as an antidote for the vigorous and vicious attacks which are being made upon the REA program; but I do not believe I would be doing anyone any good by voting in that way simply to get even with someone else.

I believe we had better leave the law and the program as they now are. I shall oppose any attempts on the part of the administration to make things more difficult for the REA program to carry on; but I shall support the administration—and I believe it is the administration's position—in not wanting to have these proposals adopted, because in this case the administration is right.

The only way we can and should vote is to vote for what we think is right, regardless of whether we like or dislike the supporters or the opponents of a certain measure.

Mr. KUCHEL. Mr. President, will the Senator yield?

Mr. AIKEN. I yield.

Mr. KUCHEL. As always, the views of the distinguished Senator from Vermont are most persuasive. Am I to understand the Senator to indicate that if Senate bill 144 were passed, the control of the funds which might thereafter be used for loans would remain in the Secretary of Agriculture, so that there would be some hiatus?

Mr. AIKEN. The bill reads as follows:

> That the functions and activities of the Rural Electrification Administration and the Administrator of the Rural Electrification Administration which were transferred to the Department of Agriculture and to the Secretary of Agriculture by Reorganization Plan No. II of 1939 and Reorganization Plan No. 2 of 1953 are hereby transferred to the Administrator of the Rural Electrification Administration, and shall be exercised and administered within the Department of Agriculture by such Administrator under the general direction and supervision of the Secretary of Agriculture; except that insofar as such functions relate to the approval or disapproval of loans authorized to be made under the Rural Electrification Act of 1936, as amended, their exercise by the Administrator shall not be subject to the supervision or direction of, or to any other control by, the Secretary of Agriculture.

The Secretary of Agriculture is required under the law to get the money; but once he gets it, the bill would give a subordinate official the full and final authority over the lending of it. That would not be in accord with the thesis of good government which requires some kind of control from the top down through subordinate agencies.

Mr. KUCHEL. I thank the Senator from Vermont.

Mr. CURTIS. Mr. President, will the Senator yield?

Mr. AIKEN. I yield.

Mr. CURTIS. Under existing law, the Secretary of Agriculture can borrow from the Secretary of the Treasury such amount as he thinks necessary. Is that not correct?

Mr. AIKEN. That is as I understand.

Mr. CURTIS. He could reduce the amount, or he could enlarge it.

Mr. AIKEN. That is correct.

Mr. CURTIS. That makes the Humphrey proposal meaningless, because if at a future time—5 years or 10 years from now—there were a Secretary of Agriculture and an REA Administrator who were not getting along, who were following divergent policies, even though the REA Administrator had the power of final approval of the making of a loan to a local REA, the Secretary of Agriculture could withhold a request to the Secretary of the Treasury for the amount of the loan or a part of the amount.

Mr. AIKEN. The Secretary, in effect, would have full control over the making of the loan, simply by refusing to furnish the money with which the Administrator could make the loan. Therefore, I think this arrangement would be an idle gesture.

Although I have disagreed frequently with the policies of the Secretary of Agriculture, I do not feel we should take a gratuitous slap at him in this matter, because he has not so far denied, and I do not think he would in the future deny—I hope he would not, anyway—any legitimate request from REA cooperatives for funds. In fact, it has been pointed out that the loans which have been made in the 6 years from 1952 to 1958 have amounted to $1,227 million, while in the previous 18 years loans were made amounting to $2,619 million.

Mr. President, I know it is said that the Secretary is going to do some harm

to the REA. However, the fact remains that he has not yet done such a thing. The fact also remains that even if Senate bill 144 were enacted, if he were minded to do harm to the REA, he still would have authority to do so.

Mr. LAUSCHE. Mr. President, I was a member of the Government Operations Committee which took testimony on this bill. I attended practically every meeting of the committee. An examination of the testimony there taken will disclose that the record of the hearings does not contain a single piece of competent, tangible evidence to show that a single application for an REA loan was ever delayed or rejected under the present method of administering the loans.

There was discussion about a Hoosier application, in Indiana. But when inquiry was made into the application for the Hoosier loan, the testimony disclosed that that cooperative was promised that an aluminum company would build an $8 million plant in Indiana. Based upon that commitment, the application for a loan was made. The application was being considered and procesed when the cooperative in Indiana learned that the aluminum company was not going to build the plant there. When that fact was established, of course, the validity for the loan came to an end.

I have tried to determine the reasons for asking that the administration of this function of Government be taken from the Department of Agriculture and be placed in the centralized authority of the Administrator of the Rural Electrification Administration. If the record is examined, it will show that three reasons were given:

First, dissatisfaction with the farm policy of Mr. Benson.

Second, dissatisfaction with the position the administration took on the Hells Canyon project.

Third, dissatisfaction with the proposal of the administration that the Government collect on its loans interest equal to that which it has to pay on whatever it borrows.

Those are the three reasons which were stated, in asking that the administration of this function be taken from the Department of Agriculture and be given to a separate agency.

Mr. President, I believe in centralized control. I think the Hoover Commission recommended it. And I believe common sense dictates that there cannot be two heads on one body and that it is not wise to attempt to have four hands hold the reins of one horse.

For that reason, in 1936 and in 1953 the administration of this agency was placed in one man.

In conclusion, let me say this effort is one to reorganize the Government to suit the whims and the desires of particular sponsors and groups at a particular time. My experience has been that whenever one tries to reorganize the Government to suit himself he gets into trouble.

If Mr. Benson is not acceptable now, there will be—probably 2 years from now—someone other than Mr. Benson in the administration. Will it be proper then, for those who believe that the one who now is under the control of Mr. Benson is not administering these matters in the way they want them administered, to come to the Congress and say to the Congress, "Reorganize the Government to suit our convenience"?

Mr. President, I have watched that game played in politics. I have seen political parties in Ohio change the rules of the game, thinking that the change would gain them privilege. But it never works out that way; there comes a reaction to such a proceeding; there comes a day for the payment of compensation.

In substance, this bill contemplates reorganizing the Government to suit the whims and caprices of some who are not satisfied with what is being done by a particular person in the administration.

Mr. HUMPHREY. Mr. President, I cannot let the recent statements go unchallenged, because the purpose of the bill is not to reorganize at the whim of someone. Instead, the purpose is to reorganize on the basis of what was the organization for 14 happy and successful years.

There is an expressed desire on the part of a large number of Members of the Senate for an independent agency for rural electrification. There is a greater expressed desire for no political control over the making of the loans, because the making of the loans is the very heart and substance of the REA program.

There are those of us who believe that the proliferation of independent agencies is not a desirable development in a great government such as ours. For years there has been an attempt to coordinate and consolidate agencies, rather than to have a proliferation or extension of them.

Therefore, Senate bill 144 is designed to do the following: To maintain within the Department of Agriculture an agency which not only is interested in kilowatts and loans, but also in the needs of the people of rural America. The bill concerns itself with the Rural Electrification Administration. Such a decision—as is well-known by the distinguished Presiding Officer [Mr. HARTKE], because he himself has given great attention to this matter—was made back in the 1930's, when the REA was getting its start. In 1939 it was incorporated in the Department of Agriculture, so it could become a fundamental part of the overall agricultural and social policy of the Nation. That worked well from 1939 to 1953.

I remind the Senate that in 1952 a reorganization plan was presented, by the then Truman administration, to give the same authority that the reorganization plan of 1953 gave. The Senate in its wisdom rejected the reorganization plan of 1952.

In 1953 the Senate, in what I believe to have been an unfortunate judgment, did not reject the reorganization plan of 1953.

I say most kindly and most respectfully that if anyone changed the rules, they were changed in 1953. It is not proposed that they be changed now. Our attempt is to reestablish at this time the rule that a Presidentially appointed administrator—namely, the REA Administrator, who serves for 10 years, on a nonpartisan basis, for a term longer than any 2 terms of a President, and surely longer than the term of a Secretary of Agriculture; and the Administrator is a Presidential appointee, whose nomination must be confirmed by the Senate—shall not have his authority diluted or negated by an appointee of the Secretary of Agriculture, an appointee not nominated by the President and not confirmed by the Senate.

The existing situation is that one Mr. Scott—and I refer to him by name, because currently he is the head of the Farm Credit Services of the Department of Agriculture, under the reorganization plan of 1953—presently has veto authority in the name of the Secretary of Agriculture. Testimony to that effect is to be found in the record of the hearings before the Senate Committee on Government Operations. Mr. Scott—and no nomination of Mr. Scott ever was confirmed by the Senate, and he is not a Presidential appointee, but, instead, he is a political appointee of the Secretary of Agriculture—can cast a negative vote upon a loan application that an REA Administrator approves.

The answer, of course, is that this has never happened. That is true. The Senator from Ohio was eminently correct when he stated there were no instances of interference on the part of the appointee of the Secretary. However, I think we should hear at least from the junior Senator from Indiana [Mr. HARTKE], who has made some reference to that particular situation, and it was also referred to by the Secretary.

What we are attempting to do here is to leave the loanmaking authority unrestrained, unrestricted, in the hands of the Administrator appointed by the President and confirmed by the Senate.

We are attempting to leave REA in the Department of Agriculture, so its orientation will be in agriculture, so the social policies which affect agriculture will likewise be somewhat concerned with the general policies relating to REA.

Our proposal is the middle ground. Senate bill 144 is not an extreme or radical proposal for the establishment of an independent agency. S. 144 is not a political fix of the Reorganization Act of 1953. S. 144 provides for a doctrine of independence in loanmaking policy.

I may say to my economy-minded friends that it provides for centralized purchasing, centralized personnel procedures, centralized travel procedures, which an independent agency would not follow. An independent agency would require separate purchasing, travel, auditing, and bookkeeping procedures. We preserve everything that needs to be preserved in the name of policy, and at the same time permit economizing in terms of administration.

Mr. CAPEHART. Mr. President, will the Senator yield?

Mr. HUMPHREY. I yield.

Mr. CAPEHART. With respect to Mr. Scott, whose name was mentioned by the Senator from Minnesota, it should be

said that he is an appointee of the Secretary of Agriculture. The Secretary of Agriculture appointed Mr. Scott to coordinate the spending of money, not only in REA, but in all other functions of the Department of Agriculture. He is not a special appointee, particularly. What the Senator from Minnesota has said could also be said about any Assistant Secretary of Agriculture or any other employee of the Department, because they all report to the Secretary of Agriculture. Mr. Scott was simply an agent of the Secretary of Agriculture in checking into REA matters. He checked into many other matters. He has no particular authority. He cannot act upon his own responsibility without consulting the Secretary of Agriculture. He has no particular authority except that which is given to him by the Secretary of Agriculture.

Any department head or any Cabinet officer has the right, if he so wishes, to designate different employees within his organization to do certain work and to gather certain information for him. He can delegate authority, if he so desires. I think in this case the Secretary of Agriculture did that. What the Secretary of Agriculture was trying to do, as the testimony so well proved, was to make certain he saved some money and that there was coordination in spending of the money. What occurred took place at a time when there was an effort, which I am sure is still being made, to balance the budget and save money wherever it could be saved, without in any way interfering with the REA.

A moment ago I placed in the RECORD a statement that the administration of the Department under Mr. Benson has spent by far more money for REA each year than was ever spent by any previous administration, and that more loans were made. There is no testimony that REA has been interfered with in any way whatsoever.

As the able Senator from Minnesota so ably explained, the proposal would take away from the Secretary of Agriculture the right to veto loans.

Mr. HUMPHREY. That is correct.

Mr. CAPEHART. Yet, as has been pointed out, money is appropriated directly to him. Only he can borrow money from the Treasury. He has to sign the notes. Yet when he gets the money, it is proposed that he have absolutely no authority over its disposition.

Nobody is trying to hurt the REA. But if any one should want to hurt the REA, all he would have to do would be to put the proposed reorganization into effect. In that event he could easily interfere with its functions, if the Director of the REA should refuse to cooperate. The Secretary of Agriculture could say, "I will not sign any notes for the Treasury, and I will not get any money from the Treasury for this purpose." Then the Director of the REA would be helpless. As I have said before, all that is being proposed here is a piece of spite legislation.

Mr. HUMPHREY. I say, most respectfully that this is not spite legislation. No one is accusing Mr. Benson, Mr. Scott, or Mr. Hamil of a single thing. As a matter of fact, the report of the committee is respectful in every way. I think it is wrong to try to insinuate that there is an attempt made to punish someone. The truth is that when Mr. Benson testified about Reorganization Plan No. 2 he said to the Senate Committee on Government Operations—and it was made a matter of record in the debate at the time of the consideration of Reorganization Plan No. 2 of 1953—that if there were any major change in the administrative establishment or structure of Rural Electrification Administration he would personally tell the proper committees of Congress in advance. That was never done. That word has never come. It is a matter of uncontested fact. The truth is the Secretary not only did not tell us, but after the change was made we were unable to get him to testify before the committee until the Congress had already adjourned.

The senior Senator from Indiana was quite right in saying that all we seek to do is merely to leave the loan-making authority, a function which was designed in the original act to be an independent one, not subject to political control. After all, that is why there is a 10-year term for an REA Administrator. The term of the Administrator is not commensurate with or equal to that of the Secretary or the President. The program is supposed to be one operated without political bias or political interference. The record reveals that the Director of Agricultural Credit Services—whether his name is Smith, Jones, or Scott, whatever his name is—has, in the name of the Secretary, authority to either approve or disapprove an REA loan.

Mr. HARTKE. Mr. President, will the Senator yield?

Mr. HUMPHREY. I yield to the junior Senator from Indiana.

Mr. HARTKE. I thank the Senator for his tireless efforts in behalf of the REA. With all due respect to my senior colleague from Indiana [Mr. CAPEHART] and also the Senator from Ohio [Mr. LAUSCHE] I think the facts concerning the REA in Indiana should be made known. The truth of the matter is that somebody tried to change the rules in the middle of the game. They were attempted to be changed for political reasons in the State of Indiana. That is exactly why this particular bill should be passed.

The truth of the matter is that the loan was on file and then the Public Service Commission, in an unprecedented effort to stop this loan on behalf of certain interests who wanted to cripple the REA, made an administrative change and lobbied against the people of their own State. They practically put a veto power of their own on this application. After there was a possibility that the courts might not uphold that decision, they came to the REA Administrator and the Secretary of Agriculture in Washington, D.C. The loan would have been approved and made if there had been a nonpolitical effort.

This did not involve a question of politics for the people who were seeking help. All they wanted to do was to go ahead with their program.

Years ago, before the REA program began to take shape, there was less than 12 percent electrification in Indiana. Today it is more than 99½ percent.

Four of the seven agencies which have repaid their loans, in the entire United States of America, are located in the State of Indiana. The first REA electric pole was set in the State of Indiana. The Boone County REA program paid its loan first. Every one of the REA programs in the State of Indiana has either paid its loan on time or ahead of time.

I do not see how in good conscience anybody could ever favor not returning to a program which was so successful for 14 years, with nonpolitical interference—no interference from Democrats or Republicans or from any subversive element. The purpose of the program is simply to give the people electricity.

I come from a town which had a problem as to electricity. I did not see electricity in my home until I was 10 years old. I remember the coal oil light. I remember the Aladdin lamp. I remember when electricity was put in my home. I for one appreciate what the REA has done for the rural folk.

For 14 years the program worked very well. Then the organization was changed, although the representation was made that there would not be a change in the administrative procedure or, if there were a change, the Secretary in good grace would inform Congress about it.

When I became a Member of the United States Senate, I went to the Senator from Minnesota [Mr. HUMPHREY] and said to him, "I am deeply moved; I want to join in the effort and in the attempt to take politics from the REA program and to place the program back in the hands of a nonpolitical administrator. I do not want to permit it to be placed in the political realm."

The situation was so bad during the last political campaign that the Governor, who was my opponent, reversed his position at the end of the campaign, when the public pressure became great and it was shown that he was attempting to put the REA into politics, although no one wanted that done.

Mr. CAPEHART. Mr. President, will the Senator from Minnesota yield?

Mr. HUMPHREY. I yield to the senior Senator from Indiana, because I am sure there must be some rejoinder he desires to make.

Mr. CAPEHART. Mr. President, I have been a member of the committee for some time, and I have been a Member of the Senate for 15 years. What my able colleague said about the position certain persons in the State of Indiana took is correct, but I wish to say as a matter of record that there is no connection between the reorganization proposal we are considering at the moment and the so-called Indiana loan.

The Administrator and the Secretary of Agriculture considered the Indiana loan. The loan application was filed. There was no evidence that anyone did anything other than to follow the law

and to handle the loan the same as all other loans were handled. There is no connection at all between the proposed legislation and that particular loan.

We talk about taking this matter out of politics, but the President of the United States appoints the REA Administrator. The President also appoints the Secretary of Agriculture. Under those circumstances we cannot take this matter out of politics, because the President appoints those men. We could not take the matter out of politics by enacting this particular piece of proposed legislation. Would we get it out of politics by voting against the proposal? I do not believe so, because the matter is in politics, since the President appoints these men.

I think in all fairness we should say we would come as near to obtaining the Indiana loan if we should leave the law exactly as it is as we would by adopting a reorganization proposal, because there is no real connection between the two whatsoever.

Mr. LAUSCHE. Mr. President, will the Senator yield?

Mr. HUMPHREY. I yield to the Senator from Ohio.

Mr. LAUSCHE. The junior Senator from Indiana is absolutely correct in his description of some arguments which occurred in Indiana. The testimony discloses that. The testimony also discloses that the administration of REA had in no way interfered with the granting of the loan and was in no way a participant in what went on in Indiana. The Senator's description of what took place is accurate, as was stated by the senior Senator from Indiana [Mr. CAPEHART].

Mr. HARTKE and Mr. CARROLL addressed the Chair.

Mr. HUMPHREY. I shall yield first to the junior Senator from Indiana.

Mr. HARTKE. I should like to point out to my distinguished senior colleague from Indiana that we are very happy about the fact that the President has the power of appointment.

I think there is a fair distinction between the Secretary of Agriculture, who is appointed technically speaking, at least, at the pleasure of the President, and the REA Administrator, who is appointed for a term of 10 years. There is a considerable difference between the two. All I say is that I think a man who is appointed for 10 years can operate in a field in which he can be completely devoid of any political pressure of the moment.

I should like to point out that the Indiana loan is again being proposed by the REA people in the State of Indiana. It is now being processed. An endeavor is now being made to have the loan processed through the administration, and it is felt that political pressure is going to keep them from getting it. If there were no political pressure it is felt there would be no doubt the loan would be granted because, on the surface, it is a very difficult situation and there is an honest to goodness effort to help the people of the State of Indiana.

I wish to say that this is not partisan politics in the State of Indiana, because I have had Republican after Republican ask me to help in this matter. I refer to persons who have been interested in the affairs of the State, and who have helped to nominate and to elect Republican officials, yet they have come to me and asked me to help release the REA from the control which the present political system has upon it. They have asked me to help return the REA program to a strictly nonpartisan basis.

Mr. HUMPHREY. Mr. President, I now yield to the distinguished Senator from Colorado.

Mr. CARROLL. Before I ask the Senator a question, I wish to state that according to the statement on page 60 of the printed hearings, David Hamil, who is a Republican from Colorado, and an old friend of mine, who was appointed REA Administrator by the President, confirmed by the Senate, and took office on June 26, 1956.

Mr. HUMPHREY. The Senator is correct.

Mr. CARROLL. I am trying to narrow this down a bit. It seems to me there is a very simple issue involved, if I am correct in my premise.

When the REA Administrator took office, what was the policy with reference to the making of loans? What was the Administrator's jurisdiction? What was his authority? What was his discretion?

Mr. HUMPHREY. There was complete discretion over the loans, because the reorganization plan ultimately went into effect in 1957. The authority was exercised by Mr. Scott.

Mr. CARROLL. The Senator from Minnesota in his remarks indicated there was a change in policy.

Mr. HUMPHREY. Yes.

Mr. CARROLL. What sort of a change in policy was there, and when did it take place?

Mr. HUMPHREY. I can give my recollection.

Mr. CARROLL. State it approximately. We do not have to pin ourselves down to exact dates. Was it subsequent to June of 1956?

Mr. HUMPHREY. It was June of 1957.

Mr. CARROLL. It was June of 1957?

Mr. HUMPHREY. I was trying to find the exact citation in the testimony. I am informed by the staff counsel it was June of 1957.

Mr. CARROLL. What was the change in policy with reference to the authority and the discretion of the REA Administrator?

Mr. HUMPHREY. It was that loans of $500,000 or more must have the final approval of the Secretary and that new borrowers must have the final approval of the Secretary.

Mr. CARROLL. Did the Congress prescribe that policy?

Mr. HUMPHREY. It did not.

Mr. CARROLL. Who prescribed it?

Mr. HUMPHREY. It was prescribed by the Secretary. It was the view of Members of this body that such a fundamental change in policy was a matter which should have been at least discussed with the appropriate committees of the Congress.

Mr. CARROLL. When was that policy disclosed to the committees of the Congress? When was it first brought to our attention?

Mr. HUMPHREY. It was never brought to our attention. It was finally discovered—it was never brought to the attention of Congress officially.

Mr. CARROLL. Let me say to the Senator from Minnesota that the Denver Post, which is a Republican, independent newspaper at the very time the discussions and the debate took place on the floor of the Senate, editorialized and published news articles against the policy established by the Secretary of Agriculture, attempting to curb the jurisdiction, the authority, and the discretion of the REA Administrator.

As I understand the proposal before us, the distinguished Senator from Minnesota is attempting to correct and change that policy back to its original state.

Mr. HUMPHREY. That is correct; and to preserve unquestioned the authority of the Administrator. There was discussion, doubt, and debate as to whether or not the Secretary of Agriculture, under the Reorganization Act of 1939, had veto authority if he wished to exercise it. There was a ruling to that effect. Therefore we have made it crystal clear in Senate bill 144, the plan which is now before the Senate, that the loan-making authority shall be entirely in the hands of a presidential appointee whose nomination is confirmed by the Senate for a 10-year term; namely, the nonpartisan REA Administrator.

Mr. CARROLL. Let me summarize by asking this question: If the pending bill is passed, shall we be restoring the authority in the REA Administrator to the status which existed on June 26, 1956, when his nomination was confirmed by the Senate?

Mr. HUMPHREY. We will restore it as it existed in 1935 and 1936, when REA was established, when the Administrator had complete jurisdiction over all the loanmaking authority.

I say, most respectfully, to the Senator from Colorado that the loan-making authority was respected under the Reorganization act of 1939, so far as actual usage was concerned. However, in terms of the legal authority of the Secretary, if he wished to exercise it, there were honest differences as to whether the Secretary had the authority to veto if he wished to do so, or whether he was denied the veto right.

We have clarified the situation in our bill. We say, first, that the powers of general supervision, for housekeeping purposes, for accounting purposes, for budgetary purposes, and for personnel purposes, rest in the Secretary of Agriculture and the Department of Agriculture; but the power of loanmaking, which was in the original REA act, the power to grant or disapprove loans, rests solely and unqualifiedly in the Administrator.

Mr. CARROLL. Let me ask one final question. Are those who have most to do with the rural electrification program supporting the bill? What position do

the cooperatives and the farmers themselves take with reference to the proposed legislation?

Mr. HUMPHREY. They support it. The most recent conference of the National Rural Electric Cooperative Association, meeting at Washington, D.C., in the month of February 1959, supported the bill and the proposals before us at the present time.

Mr. CARROLL. I thank the Senator from Minnesota.

Mr. LAUSCHE. Mr. President, will the Senator yield?

Mr. HUMPHREY. I yield.

Mr. LAUSCHE. I am sure the Senator from Minnesota will agree with what I was saying in trying to explain to the Senator from Colorado the status of the law in 1953. The law enacted in 1953 provided as follows:

SECTION 1. Transfer of functions to the Secretary: (a) Subject to the exceptions specified in subsection (b) of this section, there are hereby transferred to the Secretary of Agriculture all functions not now vested in him of all other officers, and of all agencies and employees, of the Department of Agriculture.

That provision gave the Secretary complete supervision and control over the functions of his entire Department. However, as the Senator from Minnesota has said, there was some understanding that if there was to be a change in policy, some disclosure would be made to the committee.

Mr. CARROLL. And the Congress would be notified.

Mr. HUMPHREY. That is correct.

Mr. LAUSCHE. But the law is clear, that the Secretary was vested with full authority and power at the time.

Mr. HUMPHREY. That is correct; but the fact is that none of the authority under the law had been exercised. However, the residual power existed. We now propose to clarify the situation by making it clear that the original REA Act, which provided for an Administrator having authority over loanmaking functions shall be restored, and that the administration shall be independent and autonomous within the Department.

Mr. YARBOROUGH. Mr. President, will the Senator yield?

Mr. HUMPHREY. I yield.

Mr. YARBOROUGH. I commend the distinguished senior Senator from Minnesota for his leadership. He is the principal author and the leader in this movement to protect the REA; I have the honor of being a coauthor of S. 144 with the distinguished Senator from Minnesota.

As I pointed out in my statement before the committee, at the time the REA Act of 1936 was passed, only 2.3 percent of the farms in my State had electric power; but under the beneficent influence of that act, at the present time more than 95 percent of the farms in my State have electric power. We have more family-sized, family-type farms in my State than there are in any other State of the Union. There are more REA connections and users in my State than in any other State.

The people are vitally interested in this question. In the legislative history of the Nation few acts have proved to be as beneficial to as many people, with as little cost to the Government, as the REA Act. It is one of the most beneficial pieces of legislation the country has ever seen.

The program worked well until a change was slipped over in the reorganization bill, in a so-called efficiency reorganization. Ezra Taft Benson, as Secretary of Agriculture, began to get his thumb on the neck of REA, as he has placed it on the neck of practically every other family-type operation in the agricultural economy.

Thanks to those who first enacted the law, darkness has been eliminated from farm life, and a great deal of drudgery has been lifted from the farm.

The REA operates under the Lincolnian concept that it is the duty of the Government to help the people to do that which they cannot do for themselves, or cannot do as well.

The REA program is good government. The purpose of the program shows how good government can be employed to help the American people in their pursuit of happiness.

The pending measure is designed to protect the REA program from those who would, accidentally or intentionally, do violence to that program. The pending bill, if enacted into law, will make certain that the program cannot be curtailed or crippled by the Secretary of Agriculture exercising authority unwisely.

As I understand, it is proposed merely to reaffirm the statutory authority of the Administrator of the REA to grant REA loans. We shall now be restoring to the Administrator the authority which was used by the Secretary of Agriculture a year ago.

Mr. HUMPHREY. Mr. President, I wish to be most fair. We are proposing to reaffirm the statutory authority of the REA Administrator to grant loans. I believe that the colloquy has revealed that the residual authority of the Secretary under the Reorganization Act of 1939, to have general control over the REA, will remain. However, we are making it crystal clear that the authority over loan making shall be independent.

I have not attempted to abuse Mr. Benson, or to make a partisan issue out of this question. All I have attempted to do is to say that what we are proposing is sound administration.

We are attempting to do two things—first, to restore the loan-making function to the REA Administrator, without qualification; second, to maintain in the Department of Agriculture, for centralized administrative purposes, the Rural Electrification Administration.

Mr. YARBOROUGH. I thank the Senator from Minnesota. It is true that the power was not illegally used. The residual power existed, but it had not been exercised by the Secretary. Is that correct?

Mr. HUMPHREY. The Senator is correct.

Mr. YARBOROUGH. It was not illegally seized, but it had not been used.

Mr. HUMPHREY. It had not been exercised.

Mr. YARBOROUGH. If the pending bill is passed, the REA program will be administered by the people, as was originally intended, and as was done for years, until the current administration decided to hamstring the program by having the Secretary of Agriculture take over power from the Administrator.

Mr. HUMPHREY. The Senator is correct.

Mr. YARBOROUGH. I think the Senate has seldom had an opportunity to pass a measure which would be so constructive, with so little cost to the Government of the United States. This proposal would leave in the Administrator of the REA the power to pass on loans.

Mr. HUMPHREY. The Senator is correct.

Mr. YARBOROUGH. And there would be no appellate power in the Secretary of Agriculture.

Mr. HUMPHREY. The Senator is correct.

Mr. YARBOROUGH. We often debate the question of how much money we shall spend in connection with certain measures. Often we are doubtful whether a proposed solution would be a wise solution. Is it not true that the wisdom of this measure has already been proved by the administration of the law from 1936 to 1953?

Mr. HUMPHREY. It is my considered judgment that that is absolutely a fact. From 1936 to 1953 we got along very well. I think there is no evidence that we are not getting along well now. However, I, for one, object to the appointee of a Secretary, whoever the Secretary may be, having superior authority over a Presidential appointee under a basic law such as the REA Act of 1936, when the nomination of the such appointee does not come before the Senate for confirmation.

Mr. YARBOROUGH. I believe we are acting here to protect and perpetuate one of the great programs in American history.

Mr. HUMPHREY. I thank the Senator from Texas, whose cooperation I deeply appreciate. I now yield to my friend and colleague, the Senator from Florida.

Mr. HOLLAND. Mr. President, I appreciate the action of the Senator from Minnesota in yielding to me. I also appreciate greatly the fact that he has handled this subject on the floor without casting aspersions either on the present Secretary of Agriculture or on any of his agents.

Mr. President, this is not a personal matter. It should be handled impersonally and objectively and with full knowledge of the fact that Congress shares some of the responsibility in this situation.

Mr. HUMPHREY. The Senator is right.

Mr. HOLLAND. I have before me Reorganization Plan No. 2 of 1953, which really brought on the trouble and disagreement which are responsible, I believe, for the present proposed legislation and for the amendment offered by the Senators from Nebraska and Georgia.

The Senator from Ohio [Mr. LAUSCHE] has already read one section from that unfortunate reorganization plan. I may say, in passing, that I opposed it vigorously when it was before the Senate. Other Senators also opposed it. However, the Senate refused to cast the requisite vote to reject that reorganization plan. Let us not get away from the fact that the Senate has some responsibility in this matter. The first section reads as follows:

SECTION 1. Transfer of functions to the Secretary: (a) Subject to the exceptions specified in subsection (b) of this section, there are hereby transferred to the Secretary of Agriculture all functions not now vested in him of all other officers, and of all agencies and employees, of the Department of Agriculture.

I may say that subsection (b), which covers the exceptions, does not cover the REA.

Mr. President, I opposed the approval of the reorganization plan which contains that as its first provision. The Senate refused to disapprove that reorganization plan. The reorganization plan in effect gives to the Secretary of Agriculture—and I do not refer only to the present Secretary of Agriculture, but to all Secretaries of Agriculture so long as this reorganization plan is a part of the law of the land—the authority to exercise any power ever given to any of the agencies in the Department of Agriculture, and to any officer in the Department of Agriculture. There are a few which are excepted in a later subsection.

Then the reorganization plan contains section 4, which reads as follows:

Sec. 4. Delegation of functions: (a) The Secretary of Agriculture may from time to time make such provisions as he shall deem appropriate authorizing the performance by any other officer, or by any agency or employee, of the Department of Agriculture of any function of the Secretary, including any function transferred to the Secretary by the provisions of this reorganization plan.

Mr. President, if we had tried for 10 years we could not have written a provision which gave more fully to the Secretary of the Department the power to transfer any function to anyone he saw fit.

I am glad—and I think there are many others who believe as I do—that these provisions have not done violence to the REA. I judge, from the very temperate and moderate position of the Senator from Minnesota, which I fully approve, that he also believes that to be the fact.

Mr. President, although I believe something should be done about this unfortunate situation, I shall oppose the amendment offered by the Senator from Nebraska [Mr. CURTIS] because, in my opinion, it would do great harm to the REA program.

The REA program necessarily has at heart the welfare of the agricultural segment of the Nation. When we seek to divorce that program from the Department of Agriculture, where it belongs, and where it has served the interests of the rural population, we attempt to take it out of its proper place and put it where it will be unbefriended and unsheltered by the sturdy wings of the mother hen, the Department of Agriculture, which is safeguarding all agricultural rights throughout the Nation, and whose function it is to do so.

I strongly oppose making the REA a completely independent agency. I voiced that opposition in the hearing recently attended by the Senator from Minnesota in the Committee on Agriculture and Forestry, and before the subcommittee of which I am the chairman. At that time I called the attention of the Senator from Nebraska to the fact that under his bill as then drafted he would take REA away from the Department of Agriculture and take it away from the subcommittee on appropriations which handles appropriations for the Department of Agriculture. I cited an illustration of what had happened recently in another field.

By offering an amendment to his bill, he in effect says that although he would make an independent agency of the REA, he would leave it in the legislative committee and in the appropriations subcommittee where it should be left.

In admitting that much, I believe he is admitting himself out of court, because he admits what to me is the potent fact that this very important agency—important more to agriculture than to any other segment of our economy—should certainly be left in the Department of Agriculture, where it may have the benefit of the advisory committee of the Secretary of Agriculture which represents the Nation's farmers, and of the whole set-up of the Department of Agriculture, which works for the benefit of the Nation's farmers, from morn to night, 365 days a year.

I commend the Senator from Minnesota for his moderate approach, and I regret that any Senator should consider the measure as being motivated in any way by personal resentment to our present Secretary of Agriculture or any of his agents.

I do not believe anyone can accuse me of being hostile to the present Secretary of Agriculture. I have supported him sometimes when a majority of his own party did not support him. I have not hesitated to support him when I thought he was right, and that has been most of the time. I believe that anyone who believes that the reorganization plan, from which I have read a part, can continue to be the law and leave the Department of Agriculture in a sound position, is wrong, or has not read the reorganization plan. It is the most vicious thing of its type we have ever adopted.

Mr. AIKEN. Mr. President, will the Senator yield?

Mr. HOLLAND. I yield.

Mr. AIKEN. Does not the Senator believe that we would be setting a dangerous precedent by moving REA out of the Department of Agriculture, because certainly there would then be attempts made to take other functions away from the Department of Agriculture? We might even expect an effort to take the administration of Public Law 480 away from the Department of Agriculture and repose its administration in an independent agency or put it in another department of the Government. The Senator knows what that would do to agricultural sales.

Mr. HOLLAND. That certainly would be possible. I am glad the Senator from Vermont has mentioned that point.

Mr. AIKEN. I may say that normally I would like to be able to vote for the proposal of the Senator from Minnesota, but when we come right down to it, all the proposal says is "We do not like Ezra Taft Benson."

Mr. HUMPHREY. I should like to say most respectfully—and the Senator from Vermont knows that I have on many occasions demonstrated my sharp difference of opinion with the Secretary of Agriculture—that I am not engaging in that kind of contest. The best argument which has been made for my proposal has been made by the Senator from Florida [Mr. HOLLAND], who has refererd to what is not alone the mistake of the Secretary of Agriculture, but the mistake also of Congress when it permitted the reorganization plan to be adopted. Some of us had doubts about it then. Others had some doubts later, because this plan was tried in two administrations, first during the last year of the Democratic Truman administration, and then during the first year of the Republican administration.

That is the only partisan reference I am making here. I think the delegation of functions which is in the reorganization plan of 1953 lends itself, if left on the books, to further abuse. I do not make any accusations. Not a word can be found in what I have said in the report of the committee, for which I have some responsibility, or in my speech on the floor of the Senate which attempts to accuse the Secretary of Agriculture or anyone else of malfeasance of office or any kind of maladministration. All I am saying is that it is bad administrative structure. I think the time to correct it is now.

Mr. AIKEN. I accept the Senator's explanation of his devotion to the Secretary of Agriculture.

Mr. HUMPHREY. I thank the Senator from Vermont for including me in the very limited membership of this club.

Mr. HOLLAND. Mr. President, I hope the Senator from Vermont will feel that I have shown considerable fondness for the Secretary of Agriculture, both personally and by my votes and statements on the floor of the Senate. But whether the Senator from Vermont feels that way or not—and I believe he does—I think he knows that in this matter I am following a course which I established way back in the administration of President Truman.

At that time, substantially the same reorganization plan came before the Senate. I see in the Chamber the distinguished senior Senator from Kansas [Mr. SCHOEPPEL]. He and I decided that the plan was bad. We fought against it, and enough of the Senate stood with us to knock the plan down.

Later it came up in the first bloom and blush of the new administration. Some of our friends, who had stood with us before, decided it was not so bad as they

thought it was earlier. I see some of those good friends here. But all of us make mistakes. We could not muster the vote the second time which we had the first time. If we had we would not now be struggling with this problem.

The point I am making is that I think it completely unrealistic, completely unfair, and completely unfriendly to the REA, and the millions of people who have been so blessed by it, to divorce it from the Department of Agriculture just at the time when the REA is becoming so strong that there will be more questions from now on as to whether it is competing with private power. It would be the unfriendliest thing that could be done to divorce it from the Department of Agriculture, its natural friend and shelterer, and to place it out in the cold, cruel world as an independent agency, where it would share the fate of some of the other independent agencies which have to fight to get anything at any time.

I am thinking of another public power agency—the TVA. Compare the friendly attitude of so many Senators toward REA with the questioning, if not suspicious, attitude which some of those Senators show toward TVA. I think Senators will concede that I have a valid point which deserves their thoughtful consideration.

I hope the amendment will be rejected.

Mr. JOHNSON of Texas. Mr. President, I ask unanimous consent that the Senate may proceed to vote in 15 minutes from now, and that 10 minutes be alloted to the Senator from Illinois (Mr. DIRKSEN), with 5 minutes to be controlled by the Senator from Minnesota (Mr. HUMPHREY).

The PRESIDING OFFICER. Is there objection? The Chair hears none, and it is so ordered.

Mr. DIRKSEN. Mr. President, it seems to me that a good many nongermane matters have been discussed in connection with the pending bill. The only thing involved is whether the Secretary of Agriculture, who holds the top post in one of the largest departments of the Government, shall have a little something to say about the activities and functions of a subordinate agency in his department.

After listening to the discussion, I think we should send Ezra Benson a letter saying: "Dear Ezra: We are going to leave the baby in your tender hands. You provide the room and board and all the other things which are necessary. But if the baby gets a little spunky, if it needs a little discipline or a little conduct, do not put your hands on the baby, because we are saying in the bill before us that you shall have no authority to supervise, direct, or control anything with respect to the approval or disapproval of the loans made by your subordinate baby."

Frankly, the Senate has an astonishing proposal before it. I think the Senate will rue the day it ever enacted the bill, assuming it may become law. First of all, if we look through the hearings, it is the beneficiaries of the credit and the money of the people who are asking less supervision rather than more. I think that is one of the most astounding things I have ever seen or heard advanced in the Senate.

The point is made on the other side of the aisle that the Secretary of Agriculture is a Presidential appointee, while the Administrator of REA holds a 10-year job. That very fact argues against the bill, because the Secretary cannot discipline the Administrator of REA. The Secretary cannot remove him. If the Administrator is weak, the trail will lead right to the White House. Then there will be confusion compounded.

The REA is growing. It has probably $3 billion in unpaid balances today.

It seems to me that we would be doing the REA a favor by providing for it a little more supervision, rather than less, and not concentrating the supervision in the hands of a single person. I cannot imagine that any business enterprise anywhere in the country would follow the line of reasoning which has been advanced on the Senate floor. Try to imagine General Motors Corp., with the Frigidaire Corp. as a component, and with the president or the chairman of the board of the Frigidaire Corp. saying, "We are within the General Motors fold, but only up to a limited degree. Beyond that do not interfere; we will run our own show." But that is exactly what Senators propose in this case. If that is good business sense, certainly I have never known such a thing to be proposed in business.

No one on this floor has ever contended that Mr. Hamil, the REA Administrator, does not have a good record. Even the chairman of the committee will admit that Mr. Hamil has a good record.

It must be admitted that the REA's record in the past 6 years is the best in the entire history of that agency.

I was a Member of the House of Representatives when the REA was created; and I would say to my distinguished friend, the junior Senator from Indiana [Mr. HARTKE], that I was here when I made a Hoosier by the name of Claude Wickard, who was then the Secretary of Agriculture, investigate the REA; and I got the Deputy Administrator fired, before I got through. The record is here; that was in March 1941. It was "a rough go", and it took a rather long time. But Senators should not think that there have not been some difficulties there, as elsewhere. I have lived through this for a long period of time.

Everything in the field of good business tactics, everything in the field of proper governmental supervision and surveillance, argues that when there is such a $3 billion corporation, there should be some supervision, some direction, some authority in the hands of the Secretary of Agriculture, in whose department this agency is located. There could be a weak Administrator; but let us not forget that any Administrator of the REA will serve for 10 years. The Administrator might be weak in the whole loaning field; he might be weak in the administrative field. But under the present proposal the Secretary of Agriculture—whoever he may be, whether Henry Wallace, or Claude Wickard, or Ezra Benson, or anyone else—will never be able to remove him.

It seems to me that under those circumstances, if there were no recourse but to go to the top boss at 1600 Pennsylvania Avenue, we would have some trouble on our hands before we got through.

I am not going to play ducks and drakes in such a careless fashion with $3 billion of the people's money. If the REA is to continue to make progress, it requires careful supervision on the part of the Federal Government. And the proper supervisor should be the Secretary of Agriculture.

At the present time the technique is scarcely even to look at an REA loan application for less than $1 million. Only loan applications for larger amounts and the new telephone loan applications are looked at, for all practical purposes. I am advised from the Department of Agriculture that that has been the technique for quite some time.

So, when $3 billion of public credit is involved—money and credit which belong to the people of the United States, not only to those in the farming areas, but also to those in all the other areas of the country in which taxpayers live—I think the Senate has the responsibility to make sure that there is adequate supervision, because in proportion as we give attention to the REA, it will grow and will become an effective instrumentality for taking the country out of darkness.

Yet at this time, when we clamor, in respect to every other field, for more supervision, it is proposed by this means to destroy such supervision in this instance. I cannot imagine a greater step backward.

Mr. President, the sensible thing for the Senate to do tonight is to send the bill back to the committee, under a motion to recommit. I hope the Senator from Indiana, who is a member of the Committee on Government Operations, will soon return to the floor and will make such a motion. If he does not make it, I will, for I think that is where the bill should go. I will not vote to take a backward step and, by that vote, undertake to hurt future confidence in the REA, because that is what the action now proposed will add up to, before we get through.

Mr. President, I think that is the entire story, so far as I am concerned; and I am prepared to vote on the amendment in the nature of a substitute, and also for a motion to recommit.

The amendment in the nature of a substitute would again make this agency an independent one. I was a Member of the House of Representatives when the REA was created as an independent agency. Three years later it was placed under the Department of Agriculture. Then, in 1953, under a Reorganization Act, the Congress gave the Secretary of Agriculture the additional supervisory functions. Contrary to expressions made on the floor, I think that was a wise course; and evidently the Senate thought likewise, because that action only adds to adequate supervision of the handling of billions of dollars of the taxpayers' money—money which does not belong to the Federal Treasury or to the REA, but

belongs to all the people of the United States; and we are co-stewards, to make sure that the money is well and wisely administered.

Mr. President, that is my case.

Mr. BENNETT addressed the Chair.

The PRESIDING OFFICER (Mr. HART in the chair). The Senator from Illinois has 2 minutes remaining under his control.

Mr. BENNETT. Mr. President, will the Senator from Illinois yield 2 minutes to me?

Mr. DIRKSEN. Mr. President, I yield 2 minutes to the Senator from Utah.

The PRESIDING OFFICER. The Senator from Utah is recognized for 2 minutes.

Mr. BENNETT. Mr. President, with respect to the pending bill, I have only one observation to make: After listening to the very wise counsel and approach of the Senator from Florida [Mr. HOLLAND], I believe that if the Senator from Florida really wants to undo what was done in 1953, he should move that it be undone in its entirety, and should not limit the action to the REA. Instead, he should move to take away whatever authority the Secretary of Agriculture received by means of that program.

It seems to me that in this case we are dealing with two different things.

Mr. DIRKSEN. Mr. President, I ask unanimous consent that the distinguished Senator from Nebraska [Mr. CURTIS], the author of the pending amendment in the nature of a substitute, be allowed 2 minutes in which to discuss the substitute.

Mr. JOHNSON of Texas. Mr. President, I agree to that request.

The PRESIDING OFFICER. Is there objection to the request of the Senator from Illinois? Without objection, it is so ordered; and the Senator from Nebraska is recognized for 2 minutes.

Mr. CURTIS. Mr. President, I thank both the distinguished minority leader and the distinguished majority leader.

I wish to have the attention of Senators who will oppose the pending bill, on the question of its final passage, and who believe nothing should be done. I also wish to have the attention of Senators who believe that the Congress should legislate in this field. I ask all of them to read Senate bill 144, and then try to determine who will run the REA if that bill is enacted into law.

The bill contains only 15 lines. It provides, in substance, that the functions and activities of the REA shall be exercised and administered within the Department of Agriculture by such Administrator under the general direction and supervision of the Secretary of Agriculture. Then the bill takes away from the Secretary of Agriculture any authority over either the approval or disapproval of the loans. But there is the odd provision that only the Secretary of Agriculture can borrow money from the Secretary of the Treasury.

So, if the bill is enacted into law, it will mean that if at a later time the Secretary of Agriculture and the REA Administrator disagree with each other, the Secretary of Agriculture can still withhold the necessary funds. I do not believe the proponents intend that to be done; but that legislative confusion would then exist.

As to the amendment in the nature of a substitute, which I have submitted on behalf of myself and the distinguished senior Senator from Georgia [Mr. RUSSELL], it establishes an independent agency, and provides that the Administrator shall have direction, supervision, and control of the REA and all its operations and functions, as authorized in the REA Act of 1936, as amended; and it retains jurisdiction in the same committees which now have jurisdiction.

Mr. President, I appeal to Senators who are opposed to doing anything in this case: Let us perfect the bill, and not create confusion.

To Senators who believe some legislation in this field should be enacted—and let me say that I respect both groups—I say that certainly the Senate should not pass Senate bill 144 as it now stands, because it will not do what its authors intend it to do. No one who reads the amendment in the nature of a substitute can have any doubt as to who will run the REA if the amendment in the nature of a substitute becomes law.

The REA was an independent agency from 1935 to 1939.

I remind the Senate that on January 6, 1945, Senator Lucas introduced a bill, S. 89, that reestablished it as an independent agency, and the bill passed this body unanimously, without a record vote.

The PRESIDING OFFICER (Mr. HART in the chair). The time of the Senator has expired.

Mr. HUMPHREY. Mr. President, I yield myself 1 minute.

The purpose of the bill is simply to do two things: to take up that part of the history of the REA from 1935 to 1939 in which the independence of REA in respect to loan-making was established, and to keep the reorganization plan of 1939, for the purpose of administration, intact, thereby providing for the REA to be within the Department of Agriculture.

Mr. JOHNSON of Texas. Mr. President, as I understand, all time on the amendment has been yielded back or consumed. Is that correct?

The PRESIDING OFFICER. That is correct.

Mr. JOHNSON of Texas. I ask unanimous consent that there be a quorum call, without the time being charged to either side. The Senator from Indiana [Mr. CAPEHART] has indicated that after the Senate acts on the amendment, he wishes to make a motion to recommit. When the Senate acts on that motion, I understand it will proceed to act on the committee amendment and the bill.

The PRESIDING OFFICER. Is there objection to the request of the Senator from Texas that there be a quorum call without the time being charged to either side? The Chair hears none, and the clerk will call the roll.

The legislative clerk proceeded to call the roll.

Mr. JOHNSON of Texas. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. CURTIS. Mr. President, I ask for the yeas and nays on the pending amendment.

The yeas and nays were ordered.

The PRESIDING OFFICER. The question is on agreeing to the amendment offered by the Senator from Nebraska [Mr. CURTIS] for himself and the Senator from Georgia [Mr. RUSSELL] as a substitute for the committee amendment. The yeas and nays having been ordered, the clerk will call the roll.

The legislative clerk called the roll.

Mr. HENNINGS. I announce that the Senator from New Mexico [Mr. CHAVEZ], the Senator from Rhode Island [Mr. GREEN], the Senator from Alaska [Mr. GRUENING], the Senator from Montana [Mr. MANSFIELD], the Senator from Wyoming [Mr. McGEE], the Senator from Oklahoma [Mr. MONRONEY], and the Senator from Montana [Mr. MURRAY] are absent on official business.

I also announce that the Senator from Washington [Mr. MAGNUSON] is absent because of illness and that the Senator from Virginia [Mr. BYRD] is absent because of illness in his family.

I further announce that, if present and voting, the Senator from New Mexico [Mr. CHAVEZ], the Senator from Rhode Island [Mr. GREEN], the Senator from Alaska [Mr. GRUENING], the Senator from Washington [Mr. MAGNUSON], the Senator from Montana [Mr. MANSFIELD], the Senator from Wyoming [Mr. McGEE], the Senator from Oklahoma [Mr. MONRONEY], and the Senator from Montana [Mr. MURRAY] would each vote "nay."

Mr. KUCHEL. I announce that the Senator from Maryland [Mr. BUTLER] is absent on official business for the Committee of Interstate and Foreign Commerce.

The Senator from Kentucky [Mr. COOPER] is absent on official business.

The result was announced—yeas 13, nays 74, as follows:

YEAS—13

Capehart	Hickenlooper	Talmadge
Case, S. Dak.	Hruska	Thurmond
Cotton	Lausche	Wiley
Curtis	Russell	
Goldwater	Schoeppel	

NAYS—74

NOT VOTING—11

Butler	Green	McGee
Byrd, Va.	Gruening	Monroney
Chavez	Magnuson	Murray
Cooper	Mansfield	

So the Curtis-Russell amendment in the nature of a substitute, offered by Mr. CURTIS, for himself and Mr. RUSSELL, was rejected.

Mr. HUMPHREY. Mr. President, I move that the vote by which the Curtis-Russell amendment in the nature of a substitute was rejected be reconsidered.

Mr. JOHNSON of Texas. Mr. President, I move to lay that motion on the table.

The PRESIDING OFFICER. The question is on the motion of the Senator from Texas.

The motion to reconsider was laid on the table.

Mr. HUMPHREY. Mr. President, may we now proceed to the next motion?

The PRESIDING OFFICER. As the Chair understands, there is a previous order that the Senate now proceed immediately to consider a motion to recommit the bill.

Mr. CAPEHART. Mr. President, I move that the bill be recommitted to the Committee on Government Operations, and I ask for a division on that motion.

On a division, the motion was rejected.

The PRESIDING OFFICER. The question is on agreeing to the committee amendment in the nature of a substitute.

The amendment was agreed to.

The PRESIDING OFFICER. The question now is on the engrossment and third reading of the bill.

The bill was ordered to be engrossed for a third reading, and was read the third time.

The PRESIDING OFFICER. The bill having been read the third time, the question is, Shall it pass?

Mr. HUMPHREY. Mr. President, I ask for the yeas and nays on final passage of the bill.

The yeas and nays were ordered.

Mr. MUNDT. Mr. President, a parliamentary inquiry.

The PRESIDING OFFICER. The Senator will state it.

Mr. MUNDT. Has all time for debate expired?

The PRESIDING OFFICER. All time for debate has expired.

The question is, Shall the bill pass? On this question the yeas and nays have been ordered, and the clerk will call the roll.

The legislative clerk called the roll.

Mr. HENNINGS. I announce that the Senator from New Mexico [Mr. CHAVEZ], the Senator from Rhode Island [Mr. GREEN], the Senator from Alaska [Mr. GRUENING], the Senator from Montana [Mr. MANSFIELD], the Senator from Wyoming [Mr. MCGEE], the Senator from Oklahoma [Mr. MONRONEY], and the Senator from Montana [Mr. MURRAY] are absent on official business.

I also announce that the Senator from Washington [Mr. MAGNUSON] is absent because of illness, and that the Senator from Virginia [Mr. BYRD] is absent because of illness in his family.

I further announce that, if present and voting, the Senator from New Mexico [Mr. CHAVEZ], the Senator from Rhode Island [Mr. GREEN], the Senator from Alaska [Mr. GRUENING], the Senator from Washington [Mr. MAGNUSON], the Senator from Montana [Mr. MANSFIELD], the Senator from Wyoming [Mr. MCGEE], the Senator from Oklahoma [Mr. MONRONEY], and the Senator from Montana [Mr. MURRAY] would each vote "yea."

Mr. KUCHEL. I announce that the Senator from Maryland [Mr. BUTLER] is absent on official business for the Committee on Interstate and Foreign Commerce.

The Senator from Kentucky [Mr. COOPER] is absent on official business.

The result was announced—yeas 60, nays 27, as follows:

YEAS—60

Bartlett	Hartke	Mundt
Bible	Hayden	Muskie
Byrd, W. Va.	Hennings	Neuberger
Cannon	Hill	O'Mahoney
Carroll	Holland	Pastore
Case, S. Dak.	Humphrey	Proxmire
Church	Jackson	Randolph
Clark	Johnson, Tex.	Robertson
Curtis	Johnston, S.C.	Russell

NOT VOTING—11

Butler	Green	McGee
Byrd, Va.	Gruening	Monroney
Chavez	Magnuson	Murray
Cooper	Mansfield	

So the bill (S. 144) was passed, as follows:

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That the functions and activities of the Rural Electrification Administration and the Administrator of the Rural Electrification Administration which were transferred to the Department of Agriculture and to the Secretary of Agriculture by Reorganization Plan No. II of 1939 and Reorganization Plan No. 2 of 1953 are hereby transferred to the Administrator of the Rural Electrification Administration, and shall be exercised and administered within the Department of Agriculture by such Administrator under the general direction and supervision of the Secretary of Agriculture; except that insofar as such functions relate to the approval or disapproval of loans authorized to be made under the Rural Electrification Act of 1936, as amended, their exercise by the Administrator shall not be subject to the supervision or direction of, or to any other control by, the Secretary of Agriculture.

The title was amended, so as to read: "A bill to modify Reorganization Plan No. 2 of 1939 and Reorganization Plan No. 2 of 1953."

Mr. HUMPHREY. Mr. President, I move that the Senate reconsider the vote by which the bill was passed.

Mr. MORSE. Mr. President, I move to lay that motion on the table.

The PRESIDING OFFICER. The question is on the motion of the Senator from Oregon.

The motion to reconsider was laid on the table.

Mr. AIKEN. Mr. President, the Senate has passed a bill which, while it does not do any great harm, does not do any good for the REA, and is virtually meaningless so far as the operation of the REA program is concerned.

On January 14, 13 other Senators and I submitted a resolution, Senate Resolution 21, which is of very vital importance to the future of the REA. I ask unanimous consent to have the text of the resolution, together with a list of the sponsors, printed in the RECORD.

There being no objection, the resolution was ordered to be printed in the RECORD, as follows:

SENATE RESOLUTION 21

Mr. AIKEN (for himself, Mr. KUCHEL, Mr. HUMPHREY, Mr. SPARKMAN, Mr. KENNEDY, Mr. YOUNG of North Dakota, Mr. COOPER, Mr. MANSFIELD, Mr. HILL, Mr. HENNINGS, Mr. CURTIS, Mr. MURRAY, Mr. LANGER, and Mr. CLARK) submitted the following resolution; which was referred to the Committee on Agriculture and Forestry:

"Whereas the Comptroller General of the United States in decisions (B–134138) dated July 21, 1958, and October 15, 1958, in questioning the validity of a portion of a loan made by the Rural Electrification Administration to the Central Iowa Power Cooperative, Cedar Rapids, Iowa, interpreted the Rural Electrification Act, in the first decision, as not authorizing loans for service to persons who are actually without central-station service if they are located in an area generally served by a power supplier; and, in the second decision, as not authorizing loans to serve persons, in fact without service, if they are located "on", "along side of", or "within a reasonable distance" of a line of a power supplier; and

"Whereas the Acting Secretary of Agriculture, in a letter dated August 7, 1958, to the Comptroller General, requested reconsideration of the first decision because it was inconsistent with the express provisions of the Rural Electrification Act, its legislative history, congressional understanding, uniform administrative practice, and legal interpretations and opinions during the 22 years following enactment of the Rural Electrification Act and, by letter dated October 29, 1958 informed the Comptroller General that these objections were equally applicable to the interpretation of the Rural Electrification Act expressed in the second decision and could therefore not be agreed to; and

"Whereas the interpretation of the Rural Electrification Act proposed by the Comptroller General in either of his decisions, if it had been applied to the rural electrification program from its inception, would have prevented that program's great contributions to agriculture and the rural areas of the Nation and to the national economy generally and, if now applied, would drastically curtail the future great potential of the rural electrification program: Now, therefore, be it

"Resolved, That it is the sense of the Senate that the Rural Electricfication Act of 1936, as amended, continue to be interpreted to authorize the making of loans for the construction of facilities to bring electric service to persons who are in fact not receiving central-station service, and to continue to serve those who are presently being served, in accordance with the Acting Secretary of Agriculture's letters of August 7, 1958, and October 29, 1958, to the Comptroller General, and that the proposed limitation on the authority of the Rural Electri-

fication Administration introduced in the Comptroller General's decisions of July 21, 1958, and October 15, 1958, be rejected as contrary to the clear intent of the Congress."

Mr. AIKEN. Mr. President, at this point I express the hope that the leadership of the Senate will work as hard and earnestly for the adoption of this vital resolution as they have worked to pass the bill which the Senate has just passed, and which, in my opinion, means very little, if anything.

Mr. HUMPHREY. I should like to say to the distinguished Senator from Vermont, inasmuch as I am a cosponsor of the resolution to which he has referred, that I pledge to him the same kind of zeal, energy and, I hope, effective work as was indicated in the recent vote. I believe that both of these measures are important. The Senator from Vermont can be assured of my cooperation.

Mr. AIKEN. I may add that the resolution to which I have referred is completely bipartisan.

Mr. HUMPHREY. The Senator is correct.

Mr. JOHNSON of Texas. Mr. President, I am much pleased that the bill has been passed. I wish to congratulate and commend the Senator from Minnesota for his diligence and for his interest in the proposed legislation, as well as for the fine work he has done.

Mr. HUMPHREY. I am deeply grateful to the Senator for his kind remarks and for his leadership in making it possible to pass the bill.

DEATH OF ROBERT AUFDERHEIDE, SUPERVISOR OF WILLAMETTE NATIONAL FOREST

Mr. MORSE. Mr. President, it is with deep regret that I have learned, from an article published in the Eugene Register-Guard, of the passing of Robert Aufderheide, of Eugene, Oreg., the supervisor of the Willamette National Forest.

Bob Aufderheide was an outstanding conservationist, and the monument which he leaves behind is one which can be seen by all the people of the Nation as they visit our national forests.

I ask unanimous consent that the article published in the Register-Guard be printed at this point in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

WILLAMETTE FOREST SUPERVISOR, ROBERT AUFDERHEIDE, DIES

Robert Aufderheide, supervisor of the Willamette National Forest, and a U.S. Forest Service employee for nearly 25 years, died Saturday morning in a Eugene hospital. He had been ill with cancer.

Mr. Aufderheide was 50 years old. He had been seriously ill since September 1958.

Survivors include his widow, Muriel; a daughter, Roberta, 17, and two sisters. The family lives at 2240 Friendly Street, Eugene.

Funeral services will be announced by Simon-Lounsbury Mortuary.

OSC GRADUATE

A native of Minnesota, Mr. Aufderheide was graduated from the School of Forestry, at Oregon State College in 1935. He had been supervisor of the Willamette National Forest, one of the largest in the Nation, since 1954.

He began his professional career by working on various assignments, in 1934. He received his forester's appointment in 1935 and was assigned to the Rogue River National Forest.

In 1936 he was transferred to the Siuslaw National Forest. There he worked through the ranks from assistant ranger to the supervisor's staff in Corvallis.

In recognition for his knowledge in the field of research, Mr. Aufderheide was promoted, in 1946, to be forester in charge of the Western Oregon Work Center (now Willamette Research Center) of the Pacific Northwest Forest and Range Experiment Station at Corvallis.

Four years later, he was made supervisor of the Umpqua National Forest at Roseburg. This was his assignment until 1954, when he replaced retiring J. R. Bruckart as supervisor of the Willamette Forest at Eugene.

WILLAMETTE SUPERVISOR

Mr. Aufderheide was recently cited for outstanding work in connection with his administration of the Willamette forest. For his overall accomplishments, he was given a $300 cash award by the regional forester, J. Herbert Stone.

Stone said Saturday morning that "Mr. Aufderheide has set a splendid example of public service, particularly in the field of timber management and research—his loss will be keenly felt.

A soft-spoken man, Mr. Aufderheide during his professional career made many friends within the service and also in the timber industry.

GET WELL NOTE

At a recent meeting of forestry school alumni at Oregon State College, more than 300 signatures were placed on a "get well" note.

During his administration of the Willamette forest, an era of expansion and change took place, including an accelerated program of timber sales and considerable increased attention to recreational demands.

Much in demand as a public speaker, Mr. Aufderheide appeared at dozens of meetings in Lane County to explain various phases and purposes of forest service policy.

During a visit to Eugene last summer, Secretary of Agriculture Ezra Taft Benson, who has responsibility for the forest service, sent a personal message to Mr. Aufderheide at the hospital.

THE LACK OF A FARM BILL

Mr. LANGER. Mr. President, I ask unanimous consent to have printed in the body of the RECORD a statement by me concerning the lack of a farm bill.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

STATEMENT BY SENATOR LANGER

On several occasions this year, I have asked the leadership when are we going to have a farm bill? The majority leader graciously stated "that as soon as the Committee on Agriculture reports out a farm bill, I will see to it that it gets top priority."

During the recent campaign in North Dakota, the opposition to the Republican Party made great use of paid advertisements, showing the prices the farmer received for his products in 1952 as compared to that he was receiving in 1958 and further, what the farmer was paying for farm machinery in 1952 and what he had to pay in 1958. These advertisements were placed in every county newspaper and undoubtedly had a profound effect on the election results. As I have stated on the floor, I have been patiently waiting for a good farm bill to be reported out by the Committee on Agriculture. I have received thousands of requests, and I do not exaggerate that figure, asking me what Congress is going to do about a new farm bill and whether Congress will pass such a bill before seeding time.

In previous years, the division of votes between Republican and Democratic Senators was very narrow and the Democrats took great delight in placing the blame of the farm situation on the President and Secretary Benson, but now the Senate is predominantly Democratic, 2 to 1, and they must assume the full blame for the lack of the passage of a good farm bill.

I have written my constituents repeatedly that the Congress is controlled by the Democrats and if they present a good farm bill, I will vote for it and if President Eisenhower should veto it, I will vote to override his veto. The new farm bill is solidly and unequivocally on the back of the Senators from the Democratic side of the aisle. January, February, March, and now we are approaching the middle of April and still no farm bill and further, from what I have been able to observe, there doesn't even appear to be a new farm bill on the horizon.

Recently I appeared before a subcommittee of the Committee on Agriculture, urging that they take action immediately on a farm bill. Several farm bills supported by North Dakota constituents were being discussed. What I am saying here, I said before that Committee on Agriculture. I urged them to act immediately. I don't want to appear overbearing but at least once a week, I shall stand on the floor of the Senate and remind the Senators that although they were most stirring in their appeals to the farmer before November election, however, they appear to be very silent since November in the passage of a good farm bill.

I simply do not believe in hyprocrisy. If these farmers were being robbed and cheated and put out of business, as was so strongly stated by the Democratic opposition last fall, why haven't they done something to remedy the situation; why haven't they at least reported a bill out of the committee which they control 2 to 1? Certainly the farmers of the Midwest are entitled to better treatment than they have been getting. Because I know they should get a better deal, I wish to add my voice to those of the farming population who are asking for a square deal from the Congress. I reiterate, I, also, wish to assure the Democratic leadership that if they will report out a decent farm bill, I will not only vote for it, but if the President vetoes it, I will vote to override the veto.

USE OF MAILS FOR DISTRIBUTION OF OBSCENE MATERIAL

Mr. LANGER. Mr. President, an Associated Press story reveals an announcement by Postmaster General Summerfield of the simultaneous raids on the New York City headquarters of three men, whom he described as among the east coast's largest dealers in obscenity. I am most happy to read of these raids which followed the opening of a sealed indictment returned by a Federal grand jury in New York, charging the men with using the mails to distribute obscene and pornographic films, slides, pictures, and circulars.

I am glad the Post Office Department as well as the U.S. attorney's offices and State and city law enforcement groups are constantly striving to wipe from the face of this country peddlers of filth who are contaminating the minds of our young.

As the ranking Republican on the Senate Juvenile Delinquency Subcommittee for a number of years, I am happy to note that our subcommittee conducted investigations and hearings into the distribution and sale of pornographic material, which amounted to a $500 million-a-year business. As a result of our hearings, we were able to wipe out five or six of the largest producers and distributors of pornographic material. Some went to jail; others were forced out of business by injunction.

I have received thousands of letters from parents and religious and civic organizations urging the subcommittee to do everything it can to stop the production and distribution of pornographic material.

I ask unanimous consent that the article which was published in the Washington Evening Star of March 7 be printed at this point in my remarks.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Washington Star, Apr. 7, 1959]

POSTAL OBSCENITY RAIDS NET THREE BIGGEST DEALERS

Postmaster General Summerfield today announced simultaneous raids on the New York City headquarters of three men whom he described as among "the east coast's largest dealers in obscenity."

The raids, by postal inspectors and U.S. marshals, followed the opening of a sealed indictment returned by a Federal grand jury in New York charging the men with using the mails to distribute obscene and pornographic films, slides, pictures, and circulars.

DESCRIBED AS DEFIANT

Mr. Summerfield described those involved as "defiant and ruthless purveyors of mail order filth."

Those named in the indictment, Mr. Summerfield said, were:

Ben Himmel, 43, of Forest Hills, Long Island, operator of Pigalle Imports.

William Glanzman, 33, Atlantic Beach, N.Y., operator of Monart, Inc., and Bowery Enterprises.

Sidney Poss, 40, Brooklyn, operating Jefferson Creations, Milco Specialties, and Glamacolor Productions.

Mr. Summerfield said each of the men had a long record of using the mails to sell obscene material, and had, in the past, adopted fictitious names when the Department attempted to bar them from using the mails.

FLOOD OF COMPLAINTS

He said the Post Office Department has had a flood of complaints from clergymen, parent-teacher associations, high school principals, college presidents, newspaper editors, and alarmed parents.

"The purpose of today's coordinated raids, which is the largest single action of record," Mr. Summerfield said, "was to seize the operators and impound enough evidence to once and for all put these offenders out of business."

RADIATION HAZARD ACT OF 1959

Mr. HILL. Mr. President, I introduce for appropriate reference a bill which will vest in the U.S. Public Health Service the primary responsibility for developing, in consultation with State and local health authorities, a program to protect the public health and safety from the perils implicit in manmade sources of ionizing radiation.

Shortly before the Easter recess a report was made to the Surgeon General of the U.S. Public Health Service by the National Advisory Committee on Radiation. That committee made it clear that the absence of a comprehensive program through which the health hazards of all sources of ionizing radiation may be brought under supervision appears to be an important weakness in this Nation's efforts to control radiation. The bill which I am introducing, Mr. President, is based upon the report of this committee of outstanding scientists and has as its objective the carrying out of the committee's recommendation that primary responsibility for the Nation's protection over radiation hazards be established in a single agency of the Federal Government and that that agency should be the U.S. Public Health Service.

Here, briefly stated, is what the bill will do. It declares it to be the policy of this Government that primary responsibility for the protection of the public health from radiation hazards shall be vested in the Public Health Service and in State and local health authorities. It instructs the Surgeon General to develop, in consultation with Federal, State, and local agencies exercising responsibilities in connection with the control of radiation hazards, uniform standards of radiation protection. It authorizes the Surgeon General to conduct research, studies, investigations, and training programs with respect to the control of radiation hazards both directly and through grants-in-aid. It establishes a National Advisory Council on Radiation Hazard Control, to be appointed by the President and to consist of 15 members, including the Surgeon General of the U.S. Public Service, the Secretary of Defense, the Chairman of the Atomic Energy Commission, and the Director of the National Science Foundation. And finally, it requires the Surgeon General to submit to the Congress not later than February 28, 1960, a comprehensive program for the control of radiation hazards emanating from all manmade sources. This program will be developed by the Surgeon General after consultation with Federal, State, and local agencies exercising responsibilities in connection with the control of radiation hazards.

The problem which this bill is meant to help resolve, Mr. President, is that of the peril to ourselves, our children, and to the future of the entire human race which has resulted from the creation and the rapid development of manmade sources of potentially destructive radiation.

It is a problem to which many of our colleagues have persuasively addressed themselves. Only a few days ago the Senator from New Mexico [Mr. ANDERSON], chairman of the Joint Committee on Atomic Energy, the Senator from Minnesota [Mr. HUMPHREY], chairman of the Foreign Relations Subcommittee on Disarmament, and other Senators joined in a most thought-provoking discussion of the radiation hazard which confronts us all. On several occasions the Senator from Rhode Island [Mr. PASTORE] whose concern with the protection of the people's health is so well known to us all, has spoken on this problem. And the record shows that many Members of the House of Representatives have spoken to alert the Nation to the necessity of coming to grips with the risks and hazards of ionizing radiation.

It is because what they have said has been so well said that I will speak but briefly of the problem as I see it. Man in the last half century has let loose in the world forces which we do not as yet fully understand. We do not fully know either their potentialities or their hazards. The data on which to base conclusions is scanty. The conclusions so far arrived at are altogether tentative. The one single and apparently universally accepted conclusion is that we are dealing with forces capable of producing such ionizing radiation as may well decimate or obliterate human life.

The developments with which we are concerned began with the invention of the roentgen ray just before the turn of the century. That discovery, we all realize, has resulted in much that has meant life and better health for our people. It has, however, also resulted in problems which would, of themselves, be most serious even if they were the only radiological problems currently besetting us. But when in recent years man unleashed the power of the atom he concurrently began to bring into being still further and more alarming problems involving still greater exposure of human beings to ionizing radiation. The problem with which we are concerned is a problem of health. It is the health of our people that is being increasingly threatened by the cumulative forces of ionizing radiation to which mankind is becoming exposed.

Most people think of this problem solely in terms of the danger of radioactive fallout. The fact is that throughout all history mankind has been exposed to ionizing radiation from natural sources. A further and most important fact is that beginning in 1895 we added to these natural sources of ionizing radiation the first manmade sources of such radiation—the X-ray. Assuming that we can express the amount of radiation to which we are exposed from natural sources as having remained at a constant 100 units throughout the past, we must next note the fact that, whereas in 1925 our people on the average began to be exposed to an additional 15 such units from X-ray sources, this latter exposure increased to 40 units by 1935, to 75 units in 1945, and to 135 units in 1955. In short, in the brief span of 30 years we have so developed the use of X-ray in this country that today exposure to its resulting radiation far exceeds the amount to which we are subjected through natural sources. When we add to this the ionizing radiation to which mankind already has been and in the future may be exposed as a result of emanations from atomic sources, I think it becomes obvious that some effective control over all sources of ionizing radiation must be brought into being. I think it obvious, too, that such controls must be vested in that agency of Government which has but one responsibility—that of protecting the Nation's health. I would point out that such

responsibility does not exist today. Some governmental agencies have responsibilities for protecting the public's health from radiation hazards resulting from their own activities. No agency has the responsibility of devising ways and means of protecting our people from the totality of exposure to ionizing radiation.

What I have said explains the reasons why I am introducing this bill. Now let me speak for a moment on why the bill has taken the form in which it now appears. I recognize that the problem is both serious and urgent, but I am also aware that it is so complex and has such far-reaching implications that we must not permit ourselves to be stampeded into precipitous regulatory action. For this reason the bill does not create any new powers in the field of radiation hazard control but instead calls for a report in February of 1960 from the Surgeon General, in which he is directed, after consultation with Federal, State, and local agencies exercising responsibilities in connection with the control of radiation hazards, to submit to the Congress a comprehensive program for the adequate control and regulation of such hazards.

Senators will notice, I hope, that the bill does not affect the activities of the Atomic Energy Commission, the Department of Defense, or other Federal agencies concerned with the development or utilization of atomic power. Nor does the bill in any way affect the existing responsibilities of the Food and Drug Administration for protecting us against contaminated or dangerous foods, drugs, or X-ray equipment. It would, if enacted, immediately put Federal, State, and local public health services in a position to begin accumulating the knowledge and training the personnel which they will need to control radiation hazards already in existence and stemming from non-Federal activities. It will enable the Public Health Service to begin work on the formulation of standards needed to measure the totality of the radiation to which a community may be exposed with safety. But when it comes to the question of how best to vest primary responsibility for protecting our health against the hazards of all forms of manmade radiation, including those resulting from our need to protect the Nation against totalitarian threats and our desire to expand the peaceful uses of the atom, then the bill proposes that we proceed with the caution and the care necessitated by the seriousness of the problems involved. Here we propose that the Surgeon General, in cooperation with the Atomic Energy Commission, the Department of Defense, and every agency exercising responsibilities in connection with the control of radiation hazards, including State and local health agencies, develop and submit to the Congress such a plan as will, within the limits of our power, provide for the protection of our people from radiation hazards.

The PRESIDING OFFICER. The bill will be received and appropriately referred.

The bill (S. 1628) to provide for the vesting of primary responsibility for the protection of the public health and safety from radiation hazards in the Public Health Service of the Department of Health, Education, and Welfare, and for other purposes, introduced by Mr. HILL, was received, read twice by its title, and referred to the Committee on Labor and Public Welfare.

FAMILY-SIZED FARMS

Mr. HRUSKA. Mr. President, I introduce for appropriate reference a bill relating to the sale of surplus lands at the Hastings, Nebr., Ammunition Depot.

While this bill is brought about by the situation near Hastings, it will deal with a problem which does and will soon exist in several of the 50 States.

There is a great deal of talk and writing about the family type or family size farm. But not much is done about it.

There is one area in which concrete progress can be made. It comes about by sale by the Federal Government of those of its landholdings which are declared surplus.

Mr. President, the Navy Department has announced that its large ammunition depot near Hastings, Nebr., will soon be disestablished as a result of a general reduction of its shore installations. As a result of the cutback, the tract of land occupied by the depot, which is approximately 53,000 acres in size, will be available for disposal.

Considerable oppostion has been expressed by the people in the Hastings region to the idea that a single landowner, or a very small number of them, might obtain possession of this surplus land. From a thorough study of the situation, I have become convinced that it would promote the well-being of our country generally, and American agriculture particularly, for the land to be disposed of in family-size units, which type farms remain the backbone of our rural economy.

The tract now occupied by the naval depot was assembled through the purchase or condemnation of numerous farm units. As the land is better suited for agricultural uses than to any other purpose, we should take every step to insure that the individual farm operator will not lose this extraordinary opportunity to establish a home and a means of livelihood for his family from this land.

The bill I am introducing is designed to insure the disposal of this and similar surplus tracts of land in family-type farm units. It provides that any tract exceeding 2,000 acres in area determined to be surplus which has been devoted to the production of crops and is immediately suitable for agricultural uses shall not be disposed of in parcels of more than 320 acres to each individual or family group.

This acre limitation would not apply to any such surplus land upon which buildings are located if they are still in usable condition for industrial, commercial, or residential purposes. The present law would remain effective in such instances. Every encouragement should be given to induce industry to locate upon and activate buildings and areas suitable to its purposes.

One of the most contentious and controversial legislative subjects is that of agriculture, with its almost limitless areas and varieties of activities and aspects.

Yet there is one feature of it upon which there is general agreement: the desirability of the family type and operated farm.

Its place and importance in the building of America was first realized and established in colonial times. The sources of strength which it creates were in the mind of Lincoln when he strongly advocated, and later signed into law, the far-reaching National Homestead Act of 1862, which authorized freehold farm tracts of 160 acres to citizens agreeing to make their homes on them for not less than 5 years.

My native State of Nebraska has participated in this tradition. The first homestead application under the act of 1862 was filed in Brownsville, Nebr., on January 1, 1863. A national monument marks the 160-acre tract near Beatrice, in Gage County, where Daniel Freeman lived and farmed after his filing.

HIGH PLACE OF FAMILY-TYPE FARM IN AMERICA

By tradition over decades and decades, the family type and operated farms come honestly and firmly to high place and estimate.

They spell the difference between the life of a tenant or laborer, on the one hand, and an independent operator, on the other hand. They determine so much the character of the neighborhood in which he will raise his family.

Not only is the farmowner in charge of his own destiny to the maximum one may be these days, but he has a chance to get ahead, and to rear a family in one of the most wholesome of circumstances.

Where smaller, owner-operated farms exist, there will be good, progressive schools, hospitals, churches, and various community enterprises that make for useful citizenship and enjoyable, healthful living.

Such things are possible because of the number of people which many small farms can support. The farmer's family in the first place. The grocer from whom they buy food; the clothing merchant; the farm implement dealer; the lumberyard; the dealer in autos and trucks, and the gas, oil, and repairs to run them; the neighbor from whom they buy their seed, feed, and fertilizer; the man who supplies wells and irrigation equipment; the doctor, dentist, lawyer, the builder, and so on and so on.

It is such as these that Senators Hans O. Jensen, 25th district, and Richard Marvel, 31st district, had in mind when they proposed in the Nebraska Unicameral Legislature a resolution, reading in part, "Whereas, the family-sized farm remains the backbone of American agriculture."

But such things do not come about, Mr. President, if the prairies are changed into farms so large that a man standing at one end of a furrow cannot see its other end because of sheer distance—a furrow so long and a field so

wide that only the largest, most specialized, and most expensive farm machinery can successfully cultivate it.

Too many forces which we cannot control are driving our farms into the automation which comes with large operations.

But when we encounter a situation arising where such trend can be stopped, we surely should take vigorous, courageous action.

ANNOUNCEMENT TO CLOSE HASTINGS NAVAL DEPOT

Mr. President, this surely was done by Nebraskans of Adams and Clay Counties when announcement was made last December by the Navy Department of plans to discontinue and dispose of the 53,000-acre Navy Ammunition Depot, located near Hastings, and in the two counties named.

This installation, which proved to be a defense bulwark in World War II and in the Korean war, was formed at heavy cost, not only in dollars, but in eliminating scores upon scores of family-operated farm units.

With announcement of impending sale of this land as surplus, came the dread fear to the many fine folk of that area, that large land investors—either individual or corporation—would come into the scene to buy the land in a single or large tracts, and thus hasten the many other factors which are working so relentlessly toward further defeat of the family-type farm tradition.

TWO PROBLEMS ARE PRESENT

Situations of this kind, which exist the Nation over, as I shall show presently, really bring two problems because while the land on which the depot is located is in large part suitable for farming, parts of it have been improved by the erection of buildings of various kinds. In each instance, the highest possible use should be made of both. The problems, then, are these:

First. To put to full and beneficial use that part of the improvements which lend themselves to industrial, commercial, or even residential purposes. The desirability of establishing payrolls in farming States and areas, is well known. Full advantage should be taken of such opportunities.

Second. The sale and operation of the agricultural land in question in family-type and size farms, "the backbone of rural, farming America."

FEARS ARE JUSTIFIED UNDER PRESENT LAWS

As to the second of these goals, research of statutes shows that the expressed fears of citizens of Adams and Clay Counties are justified. Family-type and operated farms are not favored by the laws under which surplus lands of this kind are sold. They do not provide any preference or priority to former owners.

In an effort to enable these former owners to bid for the property as effectively as possible under present laws, the General Services Administration which is in charge of the sale, tried to offer the property in separate tracts as much as practicable, and then offers them for sale at public auction.

The result of the public auction, however, is a dismal one for the normal individual farmer who seeks to bid. The competition of the large, well-capitalized investor—whether personal or corporation—is too strong and weighted against the man who seeks to acquire the land for the purpose of tilling it himself.

CORRECTIVE BILL IS PROPOSED

To overcome these difficulties and to be of as much help as possible to reach the desired goals, I have prepared and am sending to the desk, a bill which is designed to insure the disposal of this and similar surplus tracts of land in family-type farm units. The bill is proposed as an amendment to the Federal Property and Administrative Act of 1949, under which surplus property is disposed of.

It provides that any tract of surplus land exceeding 2,000 acres in area which has been devoted to the production of crops and is immediately suitable for agricultural uses, shall be disposed of in parcels of not more than 320 acres to any one individual or family group, as specified in the bill.

These limitations would not apply to any such surplus land upon which there are buildings or improvements if they are still in usable condition for industrial, commercial, or residential purposes. The present law would remain effective in such instances, since every encouragement should be given to induce proper persons or companies to locate upon and activate buildings and areas suitable to their uses.

The bill contains provision for preference to former owners. It is realized that the Surplus Property Act of 1944 did contain such a provision for former owners, and 5 years later the experience was so unfavorable that it was left out when the 1949 act was passed.

It is my plan, Mr. President, to make further inquiry into the reasons for the omission of the former owner preference from the 1949 act, when the hearings are held on this bill. If the reasons for such omission no longer exist and if some practical way can be worked out to reinstate it into law, I would strongly advocate that such preference be accorded. In this way, some equity will be done in favor of owners who were forced to part with the land for defense purposes which have now been served.

THE BILL IS GENERAL LEGISLATION

While the introduction of this bill is brought about because of a situation arising near Hastings, Nebr., it is designed to deal with a problem which has or shortly will exist in several of the 50 States.

The Navy Department recently announced that several such depots in various States, including the Hastings Depot, are no longer needed and will be disestablished as soon as it is feasible to do so. This may take several years to accomplish. In the meantime, the operations will be continued at reduced levels, and as soon as any portions of a given depot no longer serve any purpose, it is planned to declare it excess land, and prepare it, through proper departmental procedures, for disposition by the General Services Administration as surplus land.

The Navy's decision to close such depots is based upon radical and vast changes in weapons and methods of modern warfare and defense needs.

In addition to the several Navy depots to be disposed of, there will undoubtedly be other tracts of land which the Government will relinquish from time to time.

Insofar as such land was taken from family operated farm units and insofar as it can be returned to that use, it should be made possible to get that job done. The proposed bill will enable this to be done.

THE WILL AND DETERMINATION OF PEOPLE INVOLVED

What has happened in Nebraska when this situation was presented will no doubt happen in other areas when their time comes. It was heartening to see how these ideas which are so elementary, yet so fundamental, took quick, wide, and enthusiastic hold.

The Blue Hill, Nebr., Leader, of which Byron Vaughan is editor, put it this way:

> The thousands of acres of farmland comprising the Hastings Naval Ammunition Depot was purchased from farmers. * * * Today there is no longer need for the depot and the land will be returned to the farmers * * * that is, to those who are able to buy.
>
> * * * Since the depot is apparently situated over the best irrigation water supply in Nebraska, an ideal situation would result if the return to the farmers were handled with care.
>
> What a farming area it could be if the depot could be divided into small farms, well irrigated and highly tilled. To gain that end, it seems to us that farmers with limited financial means should be permitted to buy this land.

The Clay County News—Mr. King, editor—of January 29, carried an account of one of the mass meetings held in the community to discuss this subject. In part, this news story stated:

> As expressed at the meeting, sentiment is overwhelming for family-size farms; not more than a half section at the most—preferably quarter section farms. * * * Clay County, with more than 42,000 acres of its area seized by the Government, was dealt a hard blow by this seizure. Now Federal authorities, and the Navy Department in particular, have an opportunity to make amends. All that is asked is that the sales of NAD lands be restricted to individual buyers; no buyer be permitted to buy more than 320 acres—directly or indirectly.
>
> If possible, original owners from whom the land was seized be permitted to bid in former holdings; next, veterans be given preference.

POSITIVELY NO AUCTION SALE OF THE LANDS IN A SINGLE UNIT

The Nebraska Unicameral Legislature debated and adopted a resolution which was proposed by Senator Hans O. Jensen, 25th district, and Senator Richard Marvel, 31st district. The sense of the

resolution is pretty well stated in these words:

Whereas the family-sized farm remains the backbone of American agriculture. * * *

This legislature respectfully requests the General Services Administration offer the Hastings Naval Depot for sale in seperate tracts of such size as to be economically feasible family-sized farm units.

While I have received many, many letters from many fine folks on the subject, I should like to refer to the one written by S. W. Moger, who was for many years county attorney of Clay County. He is a good lawyer, and a sound citizen; I am proud to have had him for a personal friend for many years. He has been very active in the drive to make suitable progress on the matter of eventual sale of the depot lands.

Mr. President, I ask unanimous consent that the full text of his letter be printed at the conclusion of my remarks, together with the January 29, 1959, news article of the Clay County News, the full text of the resolution of the Nebraska Unicameral Legislature, and the text of the bill.

The PRESIDING OFFICER. Without objection, it is so ordered.

HOW THE LAND BECOMES SURPLUS

Mr. HRUSKA. Mr. President, when the Navy will have no further use for the land, it will declare it to be excess land. Thereupon the Secretary of Defense will inquire as to whether any other agency of the Department of Defense has any use for it. If not, it will be certified to the General Services Administration, which will make inquiry if there is any other public use to which it can be put within the provisions of the 1949 act. If no such other use is found, then the land is ready for advertising and sale.

It will take the Navy several years to disestablish the depot, and be ready to move off of the place. The handling of ammunition is expensive. It should be done not only in an economical way, but also in a safe way.

But surely as time goes on, the Navy will be ready to release tracts of land of substantial size for which they do not have any use. An example of that is to be found in the sections at the eastern portion of the depot. Such areas should not be leased out again, when their present leases expire. They should be offered for sale, so as to get them back into private ownership, and preferably into individual owner's hands.

CONCLUSION

It is my earnest hope that the bill which I hereby introduce will be promptly and favorably considered, so that it will be operative by the time such sales will be made.

It should be repeated that this bill does not propose legislation for a special project. It will be of wide application. It will be wholesome and is much needed. I request that it be appropriately referred, and urge that it be considered favorably as speedily as possible.

The PRESIDING OFFICER. The bill will be received and appropriately referred.

The bill (S. 1630) to amend the Federal Property and Administrative Services Act of 1949 to require the disposal of certain surplus land for use in the production of crops through the operation of family-type farms, and for other purposes, introduced by Mr. HRUSKA (for himself, Mr. CURTIS, Mr. LAUSCHE, Mr. CAPEHART, Mr. YOUNG of North Dakota, Mr. LANGER, Mr. HUMPHREY, Mr. HICKENLOOPER, Mr. BENNETT, and Mr. ALLOTT), was received, read twice by its title, and referred to the Committee on Government Operations.

The letter, resolution, article, and bill, which were ordered to be printed in the RECORD, are as follows:

CLAY CENTER, NEBR.

Hon. ROMAN HRUSKA,
U.S. Senate,
Washington, D.C.

Re Naval ammunition depot land, Hastings.

DEAR SENATOR HRUSKA: No doubt you wonder why I have not written you before because I imagine you have heard from a great many people in this locality concerning the sale of the Navy depot land.

I am a member of one of the committees regarding our proposals and we have put in quite a good deal of study as to what we think ought to be the fair and reasonable way of handling the sale of this kind and we have taken upon ourselves considerable time to talk with the different people who once owned the land, which was taken from them and with the general public.

After considerable discussion we feel that it is very important to our community that the several recommendations be requested to help our community.

I think you will recall what a tremendous hardship that was placed upon the farmers who lived in the area, who were required to move and leave everything behind and in some instances within a very few hours notice. In addition to that you will recall the values and appraisement that was made on this land in the land acquisition actions. Some of these parties had new modern buildings and I think that probably the top price of their farms was appraised at $75, some of them as low as $25 using the depressed values of land at that time. It was unpatriotic to demand the Government more than the appraised values. No one was able to purchase like land for the money that was paid them by the Government and it caused extreme hardship to many of them.

I know that you are familiar with the location of this land and when it was taken one-half of the trade area was taken away from the business men in the community.

Now we hope that this land will be turned back as you know they really have no use for much of this land particularly the three tiers of sections on the east side of the area. There are no roads, no buildings, no fences or improvements of any kind on this property. We are in hopes that the Government will not be too hard upon them to put this land back in family sized units where people can afford to buy and reimprove this land. We suggest that no one person be eligible to purchase more than 320 acres.

We feel that the persons who lost their land or their families be given the opportunity to purchase the land which they lost.

We feel that this land should not be sold at the competitive bid but that it be appraised in the same manner in which it was taken, that consideration be given in the appraisement of the fact that there are no roads, no fences, no improvements and not even a fence post that they could use.

We feel that if there is a second choice that veterans be given the opportunity to purchase or file on the same and if necessary a drawing be had among them, after which the land be sold to any individuals in family sized units.

Now we realize that this is a big assignment that we are passing on to you but I know your ability and know that if anyone can do it you and your colleagues can. I know what it means to this community.

I appreciate your announcements that you have made to the press with reference to our requests.

If you can spare the time I would certainly appreciate any suggestions or any information as to the progress that is being made. If there is anything that any of us should do to further this cause, such information would certainly be honored.

I trust that I will get to talk with you personally about this and any other matters or information that you might wish for me.

With personal regards, I am,

Yours very truly,

S. W. MOGER,
Attorney.

LEGISLATIVE RESOLUTION 15—LEGISLATURE OF NEBRASKA

Whereas the Hastings Naval Depot has been declared surplus by the United States Navy and its sale by the General Services Administration is expected; and

Whereas the tract of land of which such depot is composed was assembled through the purchase or condemnation of numerous farm units; and

Whereas such land is better suited to agricultural uses than to any other purpose; and

Whereas the family-sized farm remains the backbone of American agriculture: Now, therefore, be it

Resolved by the members of the Nebraska Legislature in 69th session assembled:

1. This legislature respectfully requests that the General Services Administration offer the Hastings Naval Depot for sale in separate tracts of such size as to be economically feasible family-size farm units.

2. That a copy of this resolution, suitably engrossed, be sent to the General Services Administration and to each Member from Nebraska in the United States Senate and House of Representatives.

DWIGHT W. BURNEY,
President of the Legislature.

I, Hugo F. Srb, hereby certify that the foregoing is a true and correct copy of Legislative Resolution 15, which was passed by the Legislature of Nebraska in 69th regular session on the 6th day of February, 1959.

HUGO F. SRB,
Clerk of the Legislature.

[From the Clay County News, Sutton, Nebr., Jan. 29, 1959]

CLAY CITIZENS ASKING FAMILY SIZE FARMS AT NAVAL AMMUNITION DEPOT—MORE THAN 100 ATTEND CLAY CENTER MEETING—ORGANIZING FOR HASSLE WITH POWERS THAT BE IN WASHINGTON

If the Clay Center meeting Monday night, attended by citizens from nearly every town and township of Clay County, represents the wishes of Clay County citizens generally, anything less than a return of Naval Ammunition Depot grounds to their status quo prior to World War II, if not possible to return to original family ownership, will be a flouting of public will. Worse, it will be a callous disregard of what is fair and equitable for Clay County as a whole.

WIDE INTEREST SHOWN

Wide interest in Monday night's meeting was shown. County co-ops are interested; the CCA of Kansas City phoned and expressed

complete accord with the meeting's objectives; this is a matter of concern to farmers generally, as well as to citizens of the towns. Sutton's representation Monday night included Martin Lewis, Demas Griess, and Paul Bender.

As expressed at the meeting, sentiment is overwhelmingly for family size farms; not more than a half section at the most—preferably quarter-section farms.

Corporation landownership is feared should the lands in any considerable quantity be offered for sale. Clay County, with more than 42,000 acres of its area seized by the Government, was dealt a hard blow by this seizure. Now, Federal authorities and the Navy Department in particular, have an opportunity to make amends. All that is asked is that the sales of Naval Ammunition Depot lands be restricted to individual buyers; no buyer be permitted to buy more than 320 acres—directly or indirectly.

If possible, original owners from whom the land was seized be permitted to bid in former holdings; next veterans be given preference.

Positively no auction sale of the lands in a single unit.

The preference is appraisal valuations of the tracts offered be determined and then the preference rule.

At this time the land is worth not less than twice as much, if not more, than was paid by the Government.

Use of local appraisers, as originally assigned, is also suggested.

In this manner, the Government will profit; the land will again be occupied by families; Clay County will again have a population growth that will restore some prestige and privileges lost because of the loss occasioned by seizure of the land.

Which seems fair and reasonable.

Actually, little has yet been learned of Navy plans for the properties. Reportedly, an effort is being made to sell to a large arms corporation some of the land and buildings.

In another column on this page is found the Curtis report as released in Washington Saturday.

What the county organization hopes for is a flood of letters from Clay citizens to our two U.S. Senators, CURTIS and HRUSKA, and our Congressmen. Later, perhaps, a local delegation will be sent to Washington.

At this time, the brunt of the activity is centered in the committee which called the meeting: Attorneys John Sullican, S. W. Moger, and J. T. Massie; Dale Thomas, James Stych, and R. R. Byrkit.

Volunteer committeemen were also named at the Monday night meeting. They are Demas Griess and Dale Pope, Sutton; Gerald Stahl, Harvard; Vernon Grummert, Edgar; Howard Hanson, Fairfield; Fred Ellermeier, Glenvil; Melvin Salmon, Trumbull; Jack Hubbell, Deweese; Lyle Hinrichs, Inland; Herbert Johnson, Ong; Wayne Erickson, Saronville; and Jack Peshek, Fairfield.

The number of acres involved total 48,752.77, of which 42,747.53 are in Clay County.

Whether two section areas on the east are presently involved, with a three-section area with 29 sections, is speculation. But if the land is held to quarter sections, it would mean 80 to 116 additional farm families on our farm lands if sales are confined to quarter-section tracts.

The important thing at this time, as the countywide committee sees it, is for as many citizens to write as many letters as they can to Senators HRUSKA and CURTIS; to Congressmen WEAVER, BROCK, MCGINLEY, and CUNNINGHAM.

SENATOR CURTIS SUGGESTS PLAN FOR NAVAL AMMUNITION DEPOT LANDS—BUILDINGS TO INDUSTRY; SMALL TRACTS FOR NEW OWNERSHIP OPERATION

Washington dispatches to Nebraska newspapers from Senator CURTIS Monday told how the Senator was working toward a plan for using naval ammunition depot lands and buildings. He offers a four-point program that should be satisfactory to citizens of the area generally telling the Navy Department his plan is the result of personal reactions presented to him by citizens affected.

He urges the Navy Department to consider:

Any land or buildings which will not be used by the Navy be made available for farming and industry.

Farm land, when offered for sale or leasing should be in parcels suitable for individual family-sized operations.

Former owners to be given every possible consideration.

Study the problem of making payments in lieu of taxes from income producing property which may be leased by the Navy.

Senator CURTIS said he has been informed that only 200 acres of land is being offered for sale at present.

He also states definite plans have been announced for the closing of the vast installation, which was commissioned in 1943, covering some 85,000 acres of farm land in Adams and Clay Counties. Not all of the land is used by the Navy and a number of farming operations are now being carried on by leaseholders.

S. 1630

A bill to amend the Federal Property and Administrative Services Act of 1949 to require the disposal of certain surplus land for use in the production of crops through the operation of family-type farms, and for other purposes

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That (a) section 203 of the Federal Property and Administrative Services Act of 1949 (40 U.S.C. 484) is amended by adding at the end thereof the following new subsection:

"(p) (1) Any tract of land exceeding two thousand acres in area which has been determined to be surplus property may be disposed of only in conformity with the requirements of this subsection if the major portion of such tract (A) has been devoted to the production of crops before its acquisition, or during its ownership or control, by any executive agency, and (B) is suitable for use in the production of crops.

"(2) Before disposal, any such tract shall be divided into separate parcels, no one of which may exceed three hundred and twenty acres in area, in such manner as to provide the maximum practicable number of parcels suitable for use in the production of crops through the operation of family-type farms.

"(3) Whenever any such tract includes land acquired by an executive agency after January 1, 1940, from one or more private owners who, before such acquisition, used that land chiefly for the production of crops in the operation of family-type farms, the boundaries of the separate parcels of land into which such tract is divided pursuant to paragraph (2) shall conform to the greatest practicable extent to the boundaries of the farms which existed at the time of their acquisition by such executive agency. In the disposal of any parcel of land the boundaries of which are so determined, appropriate notice of the proposed disposal thereof shall be given by publication made pursuant to regulations prescribed by the Administrator. The former owner of the major portion of any such parcel shall be entitled to purchase that parcel, at any time within 90 days after publication of such notice, upon the payment of the fair market value thereof for use in the production of crops, as determined by appraisal made in conformity with regulations prescribed by the Administrator. As used in this paragraph, the term 'former owner' means the person or persons from whom the major portion of any parcel of land, or any interest therein, was acquired by an executive agency; or if any such person is deceased, his spouse, if living; or if such spouse is also deceased, one or more of his natural or adopted children. If no former owner purchases any such parcel within the prescribed period of time, that parcel may be disposed of pursuant to paragraph (4).

"(4) Any parcel of land contained in any such tract which is not subject to, or disposed of pursuant to, the provisions of paragraph (3) may be disposed of by sale, after advertisement for bids, to any one individual, or to a husband and wife, or to a parent and one or more natural or adopted children.

"(5) No individual who has acquired by any means an interest in any parcel of land which has been disposed of pursuant to this subsection shall be eligible to acquire through any transfer made under this subsection any interest in any other such parcel contained in any tract of land if that other parcel is situated less than three miles from any such parcel in which that individual previously has acquired an interest.

"(6) Each instrument executed for the transfer of any parcel of land pursuant to this subsection shall contain such provisions as the Administrator shall determine to be effective to insure that for a period of not less than five years after the execution of that instrument that parcel will not be used for purposes other than the production of crops and uses incidental thereto."

(b) The amendment made by this Act shall take effect on the first day of the second month beginning after the date of enactment of this Act.

UNEMPLOYMENT

Mr. KENNEDY. Yesterday the Department of Commerce announced that 4,362,000 people were still out of work in March.

Perhaps the most serious domestic failure of this administration is its refusal to deal adequately with this high plateau of unemployment which blocks our economic recovery. For not only have its economic policies restricted our productive growth but, even more seriously, they have failed to recognize the human problems of economic lag—the problems facing men and women who are out of work for a sustained period of time.

It is for this reason that I again introduced this year, as in 1954 and 1958—and joined this year by the junior Senator from Minnesota [Mr. MCCARTHY], the senior Senator from New Jersey [Mr. CASE], and 31 other cosponsors—proposed legislation which would increase the coverage and establish nationwide minimum standards for the payment of unemployment compensation benefits, both as to amount and duration. The average person out of a job today, if he receives any benefits at all under the present system of limited coverage, is required to support his family while looking for a new job on an average benefit check of $31 per week. Obviously, this cannot be done. According to a University of Michigan survey, about 44 percent of these unemployed workers have at least some savings on which they can draw during an emergency, but the savings will not last long. About 23 percent are forced to take help from rel-

atives; about 6.5 percent must fall back on help from public relief and welfare agencies.

Moreover, even this inadequate protection provided by the law lasts, in some States, for less than 90 days. Some attempt was made last year, and again this year, to enact an emergency program to meet the needs of the unemployed. Last year I offered, as a part of the bill for Federal minimum standards, a program of temporary benefits which would tide the jobless workers over until the permanent program could become effective. Unfortunately, both the temporary program and the permanent amendments to the unemployment compensation law which were in that bill were sidetracked in favor of an administration-backed bill, which simply permitted each State legislature, if it so wished, to use its own resources or credit to extend its own benefit period by up to 50 percent.

That bill did nothing for the great bulk of our unemployed workers. It did little to restore purchasing power. It was wholly inadequate even as an emergency bill.

On April 1 that bill was scheduled to expire, and a valiant effort was made to substitute a more meaningful measure. On March 9, the Senator from Michigan [Mr. MCNAMARA] and 17 other Senators, of whom I was one, introduced a bill to provide an emergency unemployment extension program of much wider scope than the one which was adopted last year. Thirty-eight Senators voted for this program. Then, by an overwhelming vote of 52 to 32, the Senate adopted an amendment offered by the Senator from Minnesota [Mr. MCCARTHY] which would have made some slight improvement in the measure under consideration. But even this token acknowledgement of the existence of a serious unemployment insurance problem was rejected by the conference committee, and we now have a temporary bill under which no person who exhausts his benefits after April 1 can have them extended unless the State voluntarily, with no help from the Federal Government, is able to and does take some action.

If the temporary bill I introduced last year, or the McNamara bill, which I cosponsored this year, had been enacted, it would temporarily extend the coverage, raise the benefits, provide for a substantially extended duration of benefits, and be a reasonably adequate stopgap solution for the unemployment crisis we face today.

But we need more than stopgap solutions. The inequities and inadequacies of our unemployment compensation system preceded this emergency; and they will long outlive it, if Congress does not correct them now. If the system is not now adequate to the test of the current recession, it will not be adequate for any future recession. If it offers little help to unemployed workers and their creditors now, it will offer them no more help in better times.

I therefore urge that this session of the 86th Congress make it a primary order of business to enact a law which will give to every unemployed man and woman, who is seriously seeking work, a jobless insurance payment equal to at least one-half of his weekly wage—up to a maximum of two-thirds of the average wage in his State—and continue that payment up to a uniform maximum of 39 weeks.

This will restore our unemployment compensation system to the role it was intended to play in the life of our economy and in the life of our jobless workers. Instead of perpetuating the weaknesses and inequities of the present program, this will remove them. Instead of widening the gaps in employers' taxes in the various States, it will narrow them. Instead of delaying relief while legislators debate and lawyers argue, it will put money into the hands of the unemployed. In short, it offers a nationwide solgution, for all States, for a national problem.

The House of Representatives has begun hearings upon this bill. I urge that the Senate follow suit; and I hope that a measure may be sent to the President before another stopgap measure is necessary and before our unemployment rolls grow even larger.

But we cannot wait for the President to act, for he has already made it clear that he does not share our concern, and that he wants to leave this problem to the States. We cannot wait for the States to act, for the fear of an unequal tax burden has prevented them from meeting these standards since they were first urged by the President some 6 years ago. It is up to the Congress to take appropriate steps.

There will be objections to this legislation; there will be powerful forces against it. But to do less would be to fail in our basic responsibility to a group of fellow Americans whose plight bears comparison, in its desperation and need, to any the world over.

Mr. President——

The PRESIDING OFFICER. The Senator from Massachusetts has the floor.

ADJOURNMENT TO FRIDAY

Mr. KENNEDY. Mr. President, if there is no further business to come before the Senate at this time, under the previous order I move that the Senate adjourn until Friday, at noon.

The motion was agreed to; and (at 6 o'clock and 1 minute p.m.), the Senate adjourned, the adjournment being under the order previously entered, until Friday, April 10, 1959, at 12 o'clock meridian.

CONFIRMATIONS

Executive nominations confirmed by the Senate April 8, 1959:

DIPLOMATIC AND FOREIGN SERVICE

To be Ambassadors Extraordinary and Plenipotentiary of the United States of America to the countries indicated:

Carl W. Strom, of Iowa, to Bolivia.

Ellis O. Briggs, of Maine, to Greece.

HOUSE OF REPRESENTATIVES

WEDNESDAY, APRIL 8, 1959

The House met at 12 o'clock noon.

Rev. Charles W. Holland, Jr., pastor, Fountain Memorial Baptist Church, offered the following prayer:

Jesus said, John 14: 16: *I will pray the Father, and He shall give you another Comforter, that He may abide with you forever.*

Completely righteous and omnipotent Father God, as we pause to invoke Thy guidance upon this group, teach us to pray.

We thank Thee that Thou hast promised the presence and guidance of the Holy Spirit to Thy children.

Spirit of the living God, fall fresh on those who have made Thee Lord and Master of their lives. We thank Thee, God, that we can feel and depend on His presence in our midst.

Teach us as we study and work together to know His perfect will.

These requests and thanks we offer through Thy Holy Spirit. Amen.

The Journal of the proceedings of yesterday was read and approved.

MESSAGE FROM THE PRESIDENT—APPROVAL OF BILLS AND A JOINT RESOLUTION

A message from the President of the United States was communicated to the House by Mr. Miller, one of his secretaries, informing the House that on the following dates the President approved and signed bills and a joint resolution of the House of the following titles:

On March 23, 1959:

H.R. 2260. An act to extend the induction provisions of the Universal Military Training and Service Act, and for other purposes.

On March 25, 1959:

H.J. Res. 198. Joint resolution to provide for the reappointment of Robert V. Fleming as citizen regent of the Board of Regents of the Smithsonian Institution; and

H.R. 1776. An act to amend the act of June 28, 1958, entitled "An act to provide for a National Outdoor Recreation Resources Review Commission, and for other purposes."

On March 31, 1959:

H.R. 2294: An act for the relief of the Ellis Timber Co.; and

H.R. 5640. An act to extend the time during which certain individuals may continue to receive temporary unemployment compensation.

On April 3, 1959:

H.R. 5247: An act to increase the authorized maximum expenditure for the fiscal year 1959 under the special milk program.

PERMISSION TO SIT DURING GENERAL DEBATE

Mr. MCCORMACK. Mr. Speaker, I ask unanimous consent that Subcommittee No. 2 of the Committee on Banking and Currency may be permitted to sit during general debate today.

The SPEAKER. Is there objection to the request of the gentleman from Massachusetts?

There was no objection.

TRANSFER OF SPECIAL ORDERS

Mr. McCORMACK. Mr. Speaker, I ask unanimous consent that the special orders obtained by the gentleman from Florida [Mr. SIKES], the gentleman from Montana [Mr. METCALF], and the gentleman from California [Mr. GEORGE P. MILLER], for today, be transferred to Friday, April 10.

The SPEAKER. Is there objection to the request of the gentleman from Massachusetts?

There was no objection.

ADJOURNMENT OVER

Mr. McCORMACK. Mr. Speaker, I ask unanimous consent that when the House adjourns today, it adjourn to meet on Friday next.

The SPEAKER. Is there objection to the request of the gentleman from Massachusetts?

There was no objection.

COMMUNIST SUPPRESSION OF INDEPENDENCE MOVEMENTS

Mr. MONAGAN. Mr. Speaker, I ask unanimous consent to address the House for 1 minute and to revise and extend my remarks.

The SPEAKER. Is there objection to the request of the gentleman from Connecticut?

There was no objection.

Mr. MONAGAN. Mr. Speaker, the bloody suppression of the movement for independence in Tibet has once again dramatically and tragically demonstrated to the world the essential nature of the Communist movement.

Just as in Hungary and in Lithuania, a proud and freedom-loving people are being systematically trampled under by this tyrannical movement which can brook no opposition.

The leader of the Tibetan religion has been driven from his country and the holy religious places have been shelled and badly damaged.

Religion, tradition, human values mean nothing to the small dedicated clique which rules Red China. The values which we hold dear are to them outmoded shibboleths which stand in the way of their progress and must be brushed aside.

Tragic though this present Communist aggression may be, it has had one helpful effect in that it has brought home to the uncommitted nations of Asia the fate that communism holds for them if they succumb to the blandishments of its leaders.

Tibet has two lessons for us in free America.

The first is that the essence of communism does not change and is antagonistic to our way of life without respect for the individual, our reverence for religion, and our regard for free institutions.

The second and more crucial lesson for us is the warning implicit in the Chinese action that we must look to our own resources and strengthen them in every particular in order to succeed in our struggle against communism.

Militarily, politically, and socially, we must do everything in our power to insure our continued progress as a nation and thereby show to all nations the capacity of our system to surpass the efforts of the totalitarians.

REDUCTION IN GREAT BRITAIN'S ANNUAL BUDGET

Mr. FINO. Mr. Speaker, I ask unanimous consent to address the House for 1 minute.

The SPEAKER. Is there objection to the request of the gentleman from New York?

There was no objection.

Mr. FINO. Mr. Speaker, I do not believe any news is more disturbing to our American taxpayers than to read in today's press that Great Britain's annual budget includes nearly $1 billion in tax cuts.

This kind of news from overseas is further aggravating to our wage earners in view of the disheartening reports from here in Washington that tax relief for the taxpayers in this country will not be possible for many years to come.

Mr. Speaker, the citizens of the United States who are already heavily burdened with Federal, State, and local taxes have a right to gripe. They have a right to begrudge the Britons their tax relief. They have a right to ask: How can the British reduce taxes while we cannot?

Mr. Speaker, the American taxpayers are entitled to know that as a result of our foreign aid program we have lessened the military and civilian expenditures in some of these countries with the result that their budgets show a surplus while ours reflects a continuing deficit.

Mr. Speaker, while we know and appreciate the fact that there are great merits to our foreign aid program, it should be operated on the basis of need and not to produce surpluses in foreign budgets so that our foreign friends can enjoy tax relief while our citizens continue to be soaked with more and more taxes.

THE UNEMPLOYED IN DISTRESSED AREAS OF OUR COUNTRY

Mr. RABAUT. Mr. Speaker, I ask unanimous consent to address the House for 1 minute, to revise and extend my remarks, and to include an article entitled "I Had To Go on Welfare.")

The SPEAKER. Is there objection to the request of the gentleman from Michigan?

There was no objection.

Mr. RABAUT. Mr. Speaker, today in the Nation's Capital we have thousands of unemployed from the distressed areas of our country and I am placing in the RECORD a breadwinner's own story, "I Had To Go on Welfare," as set forth recently in the Detroit Times and published without advance knowledge or participation of the Department of Public Welfare. It clearly sets forth the determination of an agency to do an effective job in guarding public funds and at the same time meeting the needs of the unfortunate citizen. The department of welfare in the city of Detroit is in the able hands of its general superintendent, Daniel J. Ryan, under the welfare commissioners.

Mr. Speaker, the article referred to above follows:

BREADWINNER'S OWN STORY: I HAD TO GO ON WELFARE

Seven hundred and four East Jefferson Avenue. The numbers, dimly seen above the entrance to the dark, forbidding building, proclaim that this is it—Welfare Department, Central Intake—the last hope.

Inhaling deeply, imagining this to be your last breath of fresh air, you shove the door open and walk in. Although you got out of bed early—5:30 a.m.—to avoid a long line, you find others have already arrived. From the single barred window marked "information" the line extends back to the entrance and then reverses itself, turns and continues across the far end of the room.

You place yourself at the end and get set for the endless wait. But it isn't too long. Before opening time, 8 a.m., the "information girl," a perfect characterization of someone's grandmother, gray-haired, bent, and seemingly senile, collects the application cards, numbers each, and sends the applicants to their seats, efficiently erasing the line in something less than 15 minutes.

Promptly 8 the loudspeakers begin summoning clients. Some are instructed to come to window 2, or window 4; others, not so directed, seem to know where to go—pushing through a swinging gate next to the windows, disappearing somewhere beyond.

TIME MATTERS NOT

You've barely had time to drink in the atmosphere: the high ceiling, the dirty walls, the subdued conversation, when your name is called—"Report to window 3." At the window you produce papers and birth certificates, you were told to bring, and swear that statements therein are true, having some difficulty shifting hat and overcoat and bundle of documents before raising your right hand. The clerk, pleasant and courteous, sends you back to your seat to await still another call.

In the coming weeks you are going to spend many hours here, becoming thoroughly familiar with the room and its occupants. One day you will wait from 7:30 in the morning till 3.30 in the afternoon before being interviewed by your "worker"—the interview taking up but 15 minutes time. But time matters not—you have plenty—what does matter, the thoughts you can't put out of your mind, remain to constantly gnaw and nag at your being.

You will study these people, people on welfare, unfortunate people—and you are one of them. You can't look down upon them as inferior beings as you once might have; they, like you, probably don't like being a welfare case, would be just as willing to work and make their own way if they possibly could.

NOT HAPPY, NOT SAD

One thing is apparent about each of them, and that is the acceptance of their situation. They appear neither happy nor sad. Nor desperate. You feel they are here because this is the only honest way left for them to put food on their tables; the last decent way to allow their families to exist.

You wonder what direction they would take if welfare help didn't exist. These people are rational, they are not hungry; their children do not cry for food. Hungry people in other ages have reacted differently, have tossed aside fear, and driven by hunger to irrational deeds, have revolted. Hungry people in this age, in less humane countries, have been forced to accept communism * * * further conjecture along this

line is temporarily interrupted by the loudspeaker.

Your name is called and you are met at the gate by your worker and escorted to his desk in a huge room at the rear of the building.

When you first applied for relief you were given an application blank—four pages—and a full sheet listing required documents and certificates. The application, when completed, thoroughly uncovers your employment and financial history for the past 10 years.

The required papers include birth certificates for each member of your family, marriage license and certificate, service discharge papers, financial statements as well as a form to be completed by your bank, a declaration of resources, proof of residence for each month during the past 2 years, utility and any other bills, a form to be completed by your last employer, social security cards for yourself and wife, and MESC identification and forms.

While your worker examines the documents, you have time to examine the room. Room 106 extends the full length of the building at the rear; possibly 100 by 75 feet. One end is framed, giving the impression that in former years it may have been an auditorium with the framed end a stage.

Approximately 75 desks occupy the area now and the workers manning these desks seem busily undisturbed by the classical FM music emitted by the hi-fi rig set up near the stage end of the room. Better times may have been had in this room, but not better music.

The papers examined with a minimum of questions, your worker informs you that it will be necessary to visit the employment and medical department on the second floor, and your wife is also given an appointment for possible employment—"bring her with you next week."

EMERGENCY FOOD ORDER

It is explained that, having three children, you are eligible for an emergency food order of $22 a week, but having declared $20 cash, the food order this week will be for $2. The home mortgage payments will not be paid by the welfare department at this time—"we can't take action until your home is foreclosed." The same is true of gas and electric bills—"if you get a shutoff notice, bring it in, we'll have 5 days to work on it."

The impression is that this is a temporary procedure, that after a more extensive investigation your case will be opened, and if all requirements are in order, you will be accepted and better arrangements can be expected.

Next stop, employment and medical section, second floor. There are more people here than seats; an overcrowded, poorly ventilated room. Some are leaning against the walls, others standing in the entrance hall.

As you wait, anxiety comes. You want employment, but what will be offered? A demeaning job, lacking dignity and offering substandard pay? You are willing to work, but working decently you also expect to be paid decently, to earn a respectable living for your family.

An unwelcome possibility filters into your thoughts—that you will be asked to accept a job in a car wash, or with a snow-clearing crew. It is unlikely that jobs available here will require a college education.

True, you don't have a degree, just 2 years college, the greater part received while in service, and impossible to verify. So you will take whatever is offered, being in no position to be choosy.

A seat is vacated near you and you find yourself near a disgruntled, talkative individual, shabbily dressed even for these surroundings, and unshaven. His remarks are directed at no one in particular.

He seems to be a chronic complainer and his complaint now is against the long wait—"before this depression you never spent more than an hour or two waiting; now it's more likely a full day."

It is difficult to decide whether he is bitter toward the welfare department or the newcomers to the welfare ranks. Probably both.

This man undoubtedly represents the small percentage of welfare recipients which has lately become the target of the ire of "Taxpayer" and "Citizen" and "Worker" writing their abusive and ofttimes inaccurate letters to the editor.

You are relieved when a clerk announces that it is lunch time, "no business transacted until 1 o'clock." You won't be forced to listen to the whining voice, and a breath of fresh air will be invigorating and most welcome.

Outside, a half snow, half rain fails to drive you back into the building. Lunch would cost about 75 cents and you are hungry—but 75 cents will buy about a gallon of milk, so food is put out of mind. A walk up Woodward Avenue and a check of civil service job openings in the City-County Building. Nothing available unless a bachelor or master degree is possessed. A stop at the University of Detroit Dental Clinic seeking a much-needed appointment for the 10- and 12-year-olds. Disappointment again—a wait of at least 6 months is necessary—aching teeth refuse to be ignored that long.

Shortly after 1, hungry, but somewhat refreshed, you are interviewed; the usual job application questions result in the information that nothing is available at present, but a part-time job may be secured for you sometime in the future.

A CARD FOR DOCTOR

You are given a card for presentation to the doctor and are called into his office almost immediately. A few questions and the brusque though efficient-appearing doctor signs your card and returns you to your worker.

You've barely had time to notice the old-fashioned furnishings in his office, and the framed certificate signed by Harry S. Truman, before departing.

Your worker is busy with another client, so it is nearly 3 o'clock before you are again called to his desk. A few more questions and a repetition of previous instructions before you are sent upstairs to await your check.

Upstairs, past the mezzanine, you find another room running the entire length of the building along the front.

In another era this room may have been a gameroom, or more likely, a grand ballroom. The south wall has a narrow balcony along its full length; the corners of the north wall each boast a huge archway over a staircase leading down to the main floor. The entire ceiling is a skylight.

The wire cage centered against the north wall is the immediate goal of every welfare recipient. Here, checks and bus tickets are dispensed. Many of the familiar green benches are unoccupied, for the waiting period is not so long.

It takes but 10 or 15 minutes before the punched business card sent up by your worker is translated to an emergency food check. The paymaster calls your name, hands over your check and two bus tickets, and you are finished for the day.

YOU TELL YOUR WIFE

After several delays you hesitantly inform your wife that it is necessary for her to be interviewed the following week. You know that it is distasteful to her, but there is no complaint.

The day before your appointment, she makes the necessary arrangements for a babysitter and decides which clothes she will wear.

In a humorous effort you chide her for selecting a skirt and sweater of some vintage and a coat somewhat older, "Why not your 'Sunday best'—or are you trying to impress them that we're really in desperate need?"

The straightforward answer, "They might have a job for me," stops further attempts at levity.

The bus ride downtown is completed in almost total silence, and you reluctantly seat your partner and place yourself in line.

Back beside her, after having your card numbered, you find her determinedly making the best of it, displaying more solicitude for a coughing baby than for herself.

THE FORMULA IS SIMPLE

You will be separated from your wife shortly after being called to your worker's desk. While she is sent through the employment channels, you will find yourself questioned at great length as your complete file is rechecked.

At this time you are told that it won't be necessary to come in the following week; you have received a pension check and consequently will not be eligible for a relief payment.

The formula is quite simple.

For example, a veteran receiving a 30-percent disability compensation check ($55) and having a weekly food allowance of $24, would spend $48 of his pension in a 2-week period for food, and would receive no payment from welfare. The following week the $7 balance from his Government compensation would be deducted from the usual $24 welfare check. He would receive an emergency food order for $17 and would add to that amount the cash balance of $7.

This brings to mind one other pertinent financial arrangement. The welfare recipient is not required to repay the department. The only return realized by the Welfare Department is whatever income tax return you have coming. You will be required to sign a statement acknowledging this liability.

It is shortly before 10 when you are reunited with your wife. She appears somewhat relieved although still a bit nervous. She is agreeably surprised to have been treated with consideration; she confides that she had expected it to be more of an ordeal.

Check and three bus tickets received; wives must be considered angels and able to fly home—the return trip is in a lighter and more talkative mood.

Being on welfare has its humorous side. A humorous secret not shared with the kids.

Any reference to welfare in the newspapers will be called to the attention of your partner without arousing the children's curiosity. When the TV script calls for one of the actors to relate, "ma and pa were on relief," sly glances will be exchanged.

Somehow there is a stigma attached. You tell yourself it is nothing to be ashamed of, it is not degradation you tell yourself, if there were another way you would willingly accept it. It is not your fault.

You find causes for it. Politics. The administration. Big business. Automation. Any reason. But not yourself. Outwardly. But it is a bravado which fails to completely convince. A defense mechanism, a sham.

Down deep you realize that you have failed somewhere. The failure is you. You know it and your wife knows it. You cannot hide it from her. So you attempt to cover it with a false humor and your wife, understanding, somehow finds humor, too.

But the kids don't have to know. So they are spared the humor, and the failure, and the stigma, attached to "being on welfare."

Cashing the first check poses a problem. Having no car, a $24 load of groceries can be quite a burden. Your pride dictates that you shop "away from your neighborhood," making the load even more difficult.

To save possible embarrassment, you call the grocer of your choice and inquire as to

the procedure followed in cashing welfare orders. You learn that you purchase whatever amount that you wish and a credit slip will be issued for the balance.

You decide to purchase $8 worth of groceries, a reasonable load to be carried the 10 or 12 blocks. You shop for the same items you ordinarily shopped for while employed, with few exceptions.

Now you buy powdered milk to mix half and half with regular milk. A roast or chicken for Sunday, but nothing fancy. More hamburger than usual. Versatile, it can make a meal of spaghetti, chili, or sandwiches. No extras—the imprinted food order plainly reads, "For essential food only."

Bananas, even sale priced at 10 cents a pound, seem a luxury when you are shopping for "essential" foods. But common sense overrides any feeling of guilt and they go into your cart.

Remembering the letter to the editor in last week's paper which should have been signed "Envious," you don't even think of purchasing cigarettes. The letter had stated you could easily spot the lucky welfare shopper. Best cuts of meat, etc., to be sold to friends and relatives, while the welfare family, presumably rolling in illgotten money, lives on surplus food handouts.

Your groceries are checked out and the check furtively handed over to the cashier. The manager or head cashier is called over to complete the transaction.

While your purchases are being packaged, a credit slip is made out for whatever balance you have coming. The delay and embarrassment you expected fail to materialize, and the worst part of the shopping trip is yet to come—the long walk home.

The department of welfare has lately been the subject of much public discussion, most of it controversial. An unprejudiced viewpoint would undoubtedly demonstrate that the department is doing a creditable job.

The majority of the people comprising the work force are doing the best they are capable of doing under adverse conditions. The entire program is hampered by a high turnover rate which is not conducive to perfection, in this or in any other business.

Since the first week of January, personal experience has brought contact with various welfare workers each week. While, without exception, each has been courteous and considerate, each has been businesslike and impersonal. No rudeness has been noted—nor condescension. They have a job to do, it's as simple as that.

Honest mistakes have been made and will continue to be made. In less than 2 months this particlular case was twice the victim of a clerical error.

On one occasion an overpayment was made. Upon discovery a readjustment was ordered and the proper deduction put through the following week.

Recently, it was necessary for a cartful of groceries to be replaced on the grocer's shelves because the food order lacked the signature of a welfare department official. This occurred on a late Friday afternoon, too late to have the check corrected before the weekend.

It is unusual to have bacon and eggs for Sunday dinner and ready-mixed cake in place of bread, but it is more desirable than hunger; the meal itself was not unpleasant, appetites being whetted by laughter at our comic plight.

Despite the shortcomings which have been noted, the Department of Welfare is admirably serving its purpose. In contrast to another aid agency, the Michigan Veterans Trust Fund, its humane attitude stands out.

In applying for aid from the trust fund, the veteran will spend a full day waiting; will be under the surveillance of an armed guard; will be unable to smoke. He will most likely be treated curtly, if not downright discourteously.

A typist here was pained and obviously put out because a veteran with a service-connected hearing defect had difficulty hearing his questions.

Another veteran, his arm in a cast, was virtually pushed out into the hall with the admonition, "Go down to the welfare, we can't help you."

I have spent 4 or 5 days at this agency and have there talked to scores of veterans. They, too, without exception, received the same advice to "go down to the welfare."

There are, of course, some who have been assisted, but the percentage must be extremely small. I can be numbered among the fortunate few, having been aided only after a protesting letter to Governor Williams resulted in an interview with a representative of the Lansing headquarters of the Trust Fund.

During this interview I had a run-in with a pompous individual of the local office who apparently resented the fact that I had requested the appeal.

It would be interesting to determine the outcome of the proposal to use the 50-million-dollar veterans' fund to help the State out of its present financial difficulty if the result were left to the decision of needy veterans who have requested aid.

Besides its primary purpose of giving immediate aid to the needy, the welfare department achieves a more important goal.

It is an immediate bulwark against crime and communism; it is a living example of the disadvantages of socialism.

Even the most adamant critic of welfare must admit that the man receiving assistance for his family is unlikely to turn to crime, to rob or steal to put food on his table. Neither is he a likely candidate for the blandishments of the Communist recruiter, whose propaganda is more deceiving if received while the stomach is empty and the heart discouraged.

The Socialist state will certainly lose luster in the eyes of the welfare recipient.

Being "on welfare" is not the utopian state. It is neither a life of luxury nor a "milk and honey affair." It is a bare living, and to the normal man, a temporary arrangement.

A small minority may see it in another light, may convince themselves that the bare existence offered by welfare is desirable when compared with the futility of their past. They may look back upon years of honest endeavor, may recall the bank account slowly and painfully accrued over a period of years, only to disappear in a few short months of adversity.

The cliche, "the poor workingman hasn't a chance," will ring true to a few. These few will remain as permanent welfare cases, satisfied with their lot. These few will be the "do-nothings," the cheaters and chiselers we are hearing so much about at the present time.

Thankfully, the majority will not be so easily satisfied. The honest, average person aided by welfare will be thankful for the "helping hand" and will endeavor to help himself when the opportunity presents itself.

These are the deserving, the majority, whom it is unfair to brand as "welfare bums."

BRITAIN SLASHES TAXES

Mr. GROSS. Mr. Speaker, I ask unanimous consent to address the House for 1 minute and to revise and extend my remarks.

The SPEAKER. Is there objection to the request of the gentleman from Iowa?

There was no objection.

Mr. GROSS. Mr. Speaker, I read in a morning newspaper the headline "Britain Slashes Taxes." In reading the story I got the definite impression that the British are slashing income and beer taxes by about $1 billion a year. That ought to make those who voted for the suspension of Britain's debt payments to the United States feel real good, especially in view of the fact that American taxpayers are digging deep in their pockets to find the money today to pay the interest on the money the U.S. Government borrowed to provide Britain with billions of dollars in so-called loans, loans that are uncollectible.

CONSENT CALENDAR

The SPEAKER. This is Consent Calendar Day. The Clerk will call the first bill on the calendar.

ACQUIRE LAND ALONG MOUNT VERNON MEMORIAL HIGHWAY

The Clerk called the bill (H.R. 2228) to provide for the acquisition of additional land along the Mount Vernon Memorial Highway.

Mr. WEAVER. Mr. Speaker, I ask unanimous consent that this bill may be passed over without prejudice.

The SPEAKER. Is there objection to the request of the gentleman from Nebraska?

There was no objection.

CENTENNIAL OF ESTABLISHMENT OF LAND-GRANT COLLEGES

The Clerk called the bill (H.R. 4012) to provide for the centennial celebration of the establishment of the land-grant colleges and State universities and the establishment of the Department of Agriculture, and for related purposes.

The SPEAKER. Is there objection to the present consideration of the bill?

Mr. FORD. Mr. Speaker, I would like to reserve consideration of this bill and ask a question about an amendment which I understand it about to be proposed by the committee. Could the committee indicate to the Members what this amendment will do, if approved?

Mr. ASHMORE. Mr. Speaker, if the gentleman will yield to me, this amendment will first put a limitation on the amount of money that might be expended. It cannot exceed $200,000. It will also provide that no funds from any department shall be used to carry out the provisions and the purposes of this Commission. In other words, the expenses of the Commission will be covered, such as travel and any other expenditures, through the funds within the $200,000. There will be no hidden funds and no way of getting money from a department, outside of the $200,000.

Mr. FORD. In other words, if an employee of the Department of Agriculture does some work on behalf of this project, the funds of the Centennial Commission will be charged rather than the appropriations for the Department of Agriculture?

Mr. ASHMORE. That is correct.

Mr. FORD. Mr. Speaker, I withdraw my reservation of objection.

The SPEAKER. Is there objection to the present consideration of the bill?

Mr. SMITH of Iowa. Mr. Speaker, reserving the right to object, there is no greater friend in this House of the land-grant colleges than myself. I have been a recipient of the services of one of them. One of the greatest of all is located in the district I represent. It is the Iowa State College of Agriculture. But certainly the economists who are the products of these colleges would never agree that the way to spend $200,000 is for a centennial celebration. If we want to spend $200,000, let us get some milk to some needy children, or spend it in some other constructive way. I cannot sit by and fail to object to the consideration of this bill to spend $200,000.

The SPEAKER. Does the gentleman object?

Mr. SMITH of Iowa. I do object.

The SPEAKER. Objection is heard.

WATER RESOURCES—SALT FORK AND PRAIRIE DOG TOWN FORK, TEX.

The Clerk called the bill (H.R. 4405) to authorize and direct the Secretary of the Interior to conduct studies and render a report on the feasibility of developing the water resources of the Salt Fork of the Red River in the State of Texas.

The SPEAKER. Is there objection to the present consideration of the bill?

Mr. MORRIS of Oklahoma. Mr. Speaker, reserving the right to object, I call attention to the fact that on March 16 I requested that this bill be passed over without prejudice. On March 18 I wrote a letter to the Secretary of the Interior, and on March 23 I had his reply to that letter, through his assistant. In view of my letter and the reply, I ask unanimous consent, Mr. Speaker, that the copy of my letter and the copy of the Secretary's letter be incorporated in the RECORD at this point.

The SPEAKER. Is there objection to the request of the gentleman from Oklahoma?

There was no objection.

The matter referred to follows:

CONGRESS OF THE UNITED STATES,
HOUSE OF REPRESENTATIVES,
Washington, D.C., March 18, 1959.

Hon. FRED A. SEATON,
Secretary of the Interior, Interior Building, Washington, D.C.

DEAR MR. SECRETARY: The House Interior and Insular Affairs Committee has reported H.R. 4405 to the House Calendar. A copy of the bill and report are attached for reference.

I am writing to ask what effect this bill, if enacted by the Congress, might have on the development of any projects in Oklahoma, in the drainage areas of the Prairie Dog Town Fork or Salt Fork. I call special attention to the present activities of the Oklahoma City Development Office of the Bureau of Reclamation in regard to the Mangum project on Salt Fork.

I want to be a good neighbor to my colleagues from Texas, and if enactment of the bill, as reported, would have no adverse effect on any potential project in my district, I would wish to withdraw objection to the pending measure.

I think you should know that I have proposed an amendment which would make the survey applicable to the total drainage area of both streams in both Texas and Oklahoma.

Sincerely yours,

TOBY MORRIS,
Member of Congress.

U.S. DEPARTMENT OF THE INTERIOR,
OFFICE OF THE SECRETARY,
Washington, D.C., March 23, 1959.

Hon. TOBY MORRIS,
House of Representatives, Washington, D.C.

DEAR MR. MORRIS: Your letter of March 18 asked what effect enactment of H.R. 4405 might have on the development of projects downstream, with special reference to the Mangum project.

We believe that, if H.R. 4405 is enacted into law, the immediate requirement will be a basin-type reconnaissance study, which will, among other things, bring together data on streamflow, water quality, and potential water uses. This study should not in any way be in conflict with or delay the scheduled investigations of the Mangum project. On the contrary, it should expedite the collection of data which will be needed for a report on the Mangum project, since we must establish the adequacy of the water supply, and the possibility of future upstream development as part of our finding of feasibility.

The bill authorizes and directs us only to make a study and report. Such activities could not adversely affect any proposed project. Accordingly, we have reported favorably to the enactment of this bill to the House Committee on Interior and Insular Affairs.

Sincerely yours,

FRED G. AANDAHL,
Assistant Secretary of the Interior.

Mr. MORRIS of Oklahoma. Mr. Speaker, I am happy to withdraw my reservation of objection to this bill.

The SPEAKER. Is there objection to the present consideration of the bill?

There being no objection, the Clerk read the bill as follows:

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That the Secretary of the Interior is hereby authorized and directed to conduct the necessary studies and render a report to the Congress on the feasibility of developing the water resources of that portion of the drainage area of the Salt Fork of the Red River lying in the State of Texas and that portion of the drainage area of the Prairie Dog Town Fork of the Red River lying in the State of Texas for furnishing municipal and industrial water and for other purposes.

The bill was ordered to be read a third time, was read the third time and passed.

The title was amended so as to read: "A bill to authorize and direct the Secretary of the Interior to conduct studies and render a report on the feasibility of developing the water resources of the Salt Fork and the Prairie Dog Town Fork of the Red River in the State of Texas."

A motion to reconsider was laid on the table.

AMENDING FEDERAL CROP INSURANCE ACT

The Clerk called the bill (H.R. 306) to amend the Federal Crop Insurance Act.

There being no objection, the Clerk read the bill, as follows:

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That section 508(a) of the Federal Crop Insurance Act (7 U.S.C. 1508(a)), as amended, is amended by amending the tenth sentence thereof to read as follows: "Insurance shall not be provided on any agricultural commodity in any county in which the Board determines that the income from such commodity constitutes an unimportant part of the total agricultural income of the county, except that insurance may be provided for producers on farms situated in a local producing area bordering on a county with a crop-insurance program."

With the following committee amendment:

Page 1, line 5, strike out "tenth" and insert "eleventh".

The committee amendment was agreed to.

Mr. ALBERT. Mr. Speaker, I ask unanimous consent that the gentleman from Mississippi [Mr. ABERNETHY] may extend his remarks at this point in the RECORD.

The SPEAKER. Is there objection to the request of the gentleman from Oklahoma?

There was no objection.

Mr. ABERNETHY. Mr. Speaker, the object of this bill is to provide more administrative flexibility in designating counties in which crop insurance shall be made available by the Crop Insurance Corporation.

Present provisions of the Crop Insurance Act provide that insurance with respect to any crop shall not be provided in any county unless written applications therefor are filed covering at least 200 farms or one-third of the farms normally producing the agricultural commodity.

While this arbitrary limitation was valuable during the earlier years of the crop-insurance program, it has now outlived its usefulness and has placed the program within rigid limitations which are proving most undesirable. The amendment made by this bill removes from the act the arbitrary limitation of 200 producers or one-third of the farms normally producing the commodity, and leaves to the discretion of the Crop Insurance Board the determination as to when there is sufficient demand for crop insurance in a county to warrant the program being established there.

There will be no additional cost as a result of this legislation; and its enactment might, in fact, result in some administrative savings since the corporation will not be placed in the position of conducting a preliminary insurance program only to find that its time and effort have been wasted because a few farmers less than the required 200 have signed up for the insurance.

This bill is identical to a bill—H.R. 13262—which was favorably reported by my committee in the 85th Congress and passed the House on August 23, 1958. Due to the lateness of the session, it was not acted upon in the Senate.

The legislation has the unqualified support of the Department of Agriculture and of the House Committee on Agriculture.

The bill is most desirable. Not only will it provide for economies in the administration of the program but it will at the same time have the effect of making crop insurance available to more farmers throughout the United States.

The bill was ordered to be engrossed and read a third time, was read the third time, and passed, and a motion to reconsider was laid on the table.

INCREASING PERIOD FOR COMMENCING HIGHWAY CONSTRUCTION

The Clerk called the bill (H.R. 4695) to amend section 108(a) of title 23 of the United States Code to increase the period in which actual construction shall commence on rights-of-way acquired in anticipation of such construction from 5 years to 7 years, and for other purposes.

There being no objection, the Clerk read the bill, as follows:

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That the second sentence of subsection (a) of section 108 of title 23 of the United States Code is amended by striking out "five years" and inserting in lieu thereof "seven years".

SEC. 2. Each agreement entered into before the date of enactment of this Act by the Secretary of Commerce and a State highway department under authority of section 110(a) of the Federal-Aid Highway Act of 1956, or section 108(a) of title 23 of the United States Code shall be deemed to provide for actual construction of a road on such rights-of-way within a period of seven years following the fiscal year in which such request was made.

The bill was ordered to be engrossed and read a third time, was read the third time, and passed, and a motion to reconsider was laid on the table.

AMENDING THE ORGANIC ACT OF GUAM

The Clerk called the bill (H.R. 4603) to amend the Organic Act of Guam for the purpose of permitting the government of Guam, with the consent of the legislature thereof, to be sued.

There being no objection, the Clerk read the bill, as follows:

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That the second sentence of section 3 of the Organic Act of Guam (64 Stat. 384, 48 U.S.C. 1421a) is amended to read as follows: "The government of Guam shall have the powers set forth in this Act, shall have power to sue by such name, and, with the consent of the legislature evidenced by enacted law, shall have the power to be sued."

With the following committee amendment:

Page 1, line 3, strike out the words "shall have the power to" and insert in lieu thereof the word "may".

The committee amendment was agreed to.

The bill was ordered to be engrossed and read a third time, was read the third time, and passed, and a motion to reconsider was laid on the table.

BOY SCOUTS WORLD JAMBOREE, PHILIPPINES, 1959

The Clerk called the bill (H.R. 296) to authorize the Secretary of Defense to lend certain Army, Navy, and Air Force equipment and to provide transportation and other services to the Boy Scouts of America in connection with the World Jamboree of Boy Scouts to be held in the Philippines in 1959; and for other purposes.

The SPEAKER. Is there objection to the present consideration of the bill?

Mr. PELLY. Reserving the right to object, Mr. Speaker, may I inquire as to whether or not there are any private transportation companies who would be in a position to extend special rates comparable to those of the Military Air Transport Service for transporting these Boy Scouts?

Mr. KILDAY. I am not informed that there are such, but as the gentleman knows, this bill does require that the Government be reimbursed for the expense. I would not know what the rate charged by private companies might be.

Mr. PELLY. I think the gentleman from Texas will recognize that we are all very much interested in the Boy Scouts. We would certainly like to have the Military Air Transport Service at no expense to the Government transport these Scouts. However, I just wondered whether or not there are any private companies who would like to compete at the same cost.

Mr. KILDAY. There is no cost to the Government at all here. The Boy Scouts of America are undertaking this and giving bond that all of our property will be returned and that there will be no cost to the Government; but there is no reason why the Boy Scouts cannot make a contract with an individual carrier if there is one able to provide this transportation.

Mr. GROSS. Mr. Speaker, will the gentleman yield?

Mr. PELLY. I yield to the gentleman from Iowa.

Mr. GROSS. Is this limited to the Boy Scouts of America or may foreigners be transported?

Mr. KILDAY. This is for the Boy Scouts of America to participate in the international jamboree.

Mr. GROSS. I thank the gentleman.

The SPEAKER. Is there objection to the present consideration of the bill?

There being no objection, the Clerk read the bill, as follows:

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That (a) the Secretary of Defense is hereby authorized, under such regulations as he may prescribe, to lend to the National Council, Boy Scouts of America, for the use and accommodation of the approximately five hundred Scouts, Scouters, and officials who are to attend the World Jamboree, Boy Scouts, to be held in the Philippines in July and August 1959, such tents, cots, blankets, commissary equipment, flags, refrigerators, and other equipment and services as may be necessary or useful to the extent that items are in stock and available and their issue will not jeopardize the national defense program.

(b) Such equipment is authorized to be delivered at such time prior to the holding of such jamboree, and to be returned at such time after the close of such jamboree, as may be agreed upon by the Secretary of Defense and the National Council, Boy Scouts of America. No expense shall be incurred by the United States Government for the delivery, return, rehabilitation, or replacement of such equipment.

(c) The Secretary of Defense, before delivering such property, shall take from the National Council, Boy Scouts of America, good and sufficient bond for the safe return of such property in good order and condition, and the whole without expense to the United States.

SEC. 2. (a) The Secretary of Defense is hereby authorized, under such regulations as he may prescribe, to provide, without expense to the United States Government, transportation from the United States or military commands overseas, and return, on vessels of the military sea transportation service or aircraft of the military air transportation service for (1) those Boy Scouts, Scouters and officials certified by the National Council, Boy Scouts of America, as representing the National Council, Boy Scouts of America, at the jamboree referred to in the first section of this Act, and (2) the equipment and property of such Boy Scouts, Scouters, and officials and the property loaned to the National Council, Boy Scouts of America, by the Secretary of Defense pursuant to this Act to the extent that such transportation will not interfere with the requirements of military operations.

(b) Before furnishing any transportation under this section, the Secretary of Defense shall take from the National Council, Boy Scouts of America, a good and sufficient bond for the reimbursement to the United States by the National Council, Boy Scouts of America, of the actual costs of transportation furnished under this section.

SEC. 3. Amounts paid to the United States to reimburse it for expenses incurred under the first section and for the actual costs of transportation furnished under section 2 shall be credited to the current applicable appropriations or funds to which such expenses and costs were charged and shall be available for the same purposes as such appropriations or funds.

SEC. 4. Under regulations prescribed by the Secretary of State, no fee shall be collected for the application for a passport by or the issuance of a passport to, any Boy Scout, Scouter, or official who is certified by the National Council, Boy Scouts of America, as representing the National Council, Boy Scouts of America, at the jamboree referred to in the first section of this Act.

With the following committee amendment:

On page 2, line 23, strike "or aircraft of the military air transportation service".

The committee amendment was agreed to.

The bill was ordered to be engrossed and read a third time, was read the third time, and passed, and a motion to reconsider was laid on the table.

FIFTH NATIONAL JAMBOREE, BOY SCOUTS OF AMERICA

The Clerk called the bill (H.R. 7) to authorize the Secretary of Defense to lend certain Army, Navy, and Air Force equipment and provide certain service to the Boy Scouts of America for use at the Fifth National Jamboree of the Boy Scouts of America, and for other purposes.

There being no objection, the Clerk read the bill, as follows:

Be it enacted by the Senate and House of Representatives of the United States of

America in Congress assembled, That (a) the Secretary of Defense is hereby authorized, under such regulations as he may prescribe, to lend to the Boy Scouts of America, a corporation created under the Act of June 15, 1916, for the use and accommodation of the approximately fifty thousand Scouts and officials who are to attend the Fifth National Jamboree of the Boy Scouts of America to be held as a part of the celebration of their fiftieth anniversary of service to the youth of the Nation during the period beginning in June 1960, and ending August 1960 at Colorado Springs, Colorado, such tents, cots, blankets, commissary equipment, flags, refrigerators, vehicles, and other equipment and services as may be necessary or useful to the extent that items are in stock and available and their issue will not jeopardize the national defense program.

(b) Such equipment is authorized to be delivered at such time prior to the holding of such jamboree, and to be returned at such time after the close of such jamboree, as may be agreed upon by the Secretary of Defense and the National Council, Boy Scouts of America. No expense shall be incurred by the United States Government for the delivery, return, rehabilitation, or replacement of such equipment.

(c) The Secretary of Defense, before delivering such property, shall take from the Boy Scouts of America a good and sufficient bond for the safe return of such property in good order and condition, and the whole without expense to the United States.

SEC. 2. The Secretary of Defense is hereby authorized, under such regulations as he may provide, to permit, without expense to the United States Government, the Boy Scouts of America to use such portions of the undeveloped lands of the United States Air Force Academy adjacent to such encampment as may be necessary, or useful, to the extent that their use will not interfere with the activities of such Academy, and will not jeopardize the national defense program.

SEC. 3. Be it further enacted that the various and several departments of the Federal Government are hereby authorized under such regulations as may be prescribed by their Secretaries to assist the Boy Scouts of America in the carrying out and the fulfillment of the plans for the celebration of their fiftieth anniversary and the Fifth National Jamboree.

With the following committee amendment:

Page 2, line 24, strike the last four words and on line 25 strike "lands" and insert "services and portions of the lands and buildings".

The committee amendment was agreed to.

The bill was ordered to be engrossed and read a third time, was read the third time, and passed, and a motion to reconsider was laid on the table.

AMENDMENT OF LONGSHOREMEN'S AND HARBOR WORKERS' COMPENSATION ACT

The Clerk called the bill (H.R. 451) to amend the Longshoremen's and Harbor Workers' Compensation Act, with respect to the payment of compensation in cases where third persons are liable.

Mr. FORD. Mr. Speaker, I ask unanimous consent that the bill be passed over without prejudice.

The SPEAKER. Is there objection to the request of the gentleman from Michigan?

There was no objection.

TRAINING OF POSTMASTERS UNDER GOVERNMENT EMPLOYEES TRAINING ACT

The Clerk called the bill (H.R. 4597) to provide for the training of postmasters under the Government Employees Training Act.

There being no objection, the Clerk read the bill, as follows:

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That section 4(a)(5) of the Government Employees Training Act (72 Stat. 329; 5 U.S.C. 2303(a)(5)) is amended by inserting "(other than a postmaster)" immediately following the word "Senate".

The bill was ordered to be engrossed and read a third time, was read the third time, and passed, and a motion to reconsider was laid on the table.

ADMINISTRATIVE AUTHORITIES FOR NATIONAL SECURITY AGENCY

The Clerk called the bill (H.R. 4599) to provide certain administrative authorities for the national agency, and for other purposes.

There being no objection, the Clerk read the bill, as follows:

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That section 202 of the Classification Act of 1949, as amended (5 U.S.C. 1082), is amended by changing the period at the end thereof to a semicolon and adding the following new paragraph:

"(32) the National Security Agency."

SEC. 2. The Director of the National Security Agency is authorized to establish such positions and to appoint such officers and employees as may be necessary to carry out the functions of such Agency. The rates of basic compensation for such positions shall be fixed by the Director in relation to the rates of basic compensation contained in the General Schedule of the Classification Act of 1949, as amended, for positions subject to such Act which have corresponding levels of duties and responsibilities. Except as provided in section 4 of this Act, no officer or employee of the National Security Agency shall be paid basic compensation at a rate in excess of the highest rate of basic compensation contained in such General Schedule. Not more than fifty such officers and employees shall be paid basic compensation at rates equal to rates of basic compensation contained in grades GS–16, GS–17, and GS–18 of such General Schedule.

SEC. 3. Section 1581(a) of title 10, United States Code, as modified by section 12(a) of the Federal Employees Salary Increase Act of 1958 (72 Stat. 213), is amended by striking out ", and not more than fifty civilian positions in the National Security Agency," and the words "and the National Security Agency, respectively,".

SEC. 4. The Director of the National Security Agency may establish not more than fifty civilian positions in such Agency involving research and development functions, which require the services of specially qualified scientific or professional personnel, and fix the rates of basic compensation for such positions at rates not in excess of the maximum rate of compensation authorized by section 1581(b) of title 10, United States Code, as amended by paragraph (34)(B) of the first section of the Act of September 2, 1958 (72 Stat. 1456; Public Law 85–861).

SEC. 5. Officers and employees of the National Security Agency who are citizens or nationals of the United States may be granted additional compensation, in accordance with regulations which shall be prescribed by the Secretary of Defense, not in excess of additional compensation authorized by section 207 of the Independent Offices Appropriation Act, 1949, as amended (5 U.S.C. 118h), for employees whose rates of basic compensation are fixed by statute.

SEC. 6. (a) Except as provided in subsection (b) of this section, nothing in this Act or any other law (including, but not limited to, the first section and section 2 of the Act of August 28, 1935 (5 U.S.C. 654)) shall be construed to require the disclosure of the organization or any function of the National Security Agency, of any information with respect to the activities thereof, or of the names, titles, salaries, or number of the persons employed by such Agency.

(b) The reporting requirements of section 1582 of title 10, United States Code, shall apply to positions, established in the National Security Agency in the manner provided by section 4 of this Act.

SEC. 7. The total number of positions authorized by section 505(b) of the Classification Act of 1949, as amended (5 U.S.C. 1105(b)), to be placed in grades 16, 17, and 18 of the General Schedule of such Act at any time shall be deemed to have been reduced by the number of positions in such grades allocated to the National Security Agency immediately prior to the effective date of this Act.

SEC. 8. The foregoing provisions of this Act shall take effect on the first day of the first pay period which begins later than the thirtieth day following the date of enactment of this Act.

With the following committee amendments:

Page 1, lines 8 to 11, inclusive, strike out "The Director of the National Security Agency is authorized to establish such positions and to appoint such officers and employees as may be necessary to carry out the functions of such Agency." and insert in lieu thereof "The Secretary of Defense (or his designee for the purpose) is authorized to establish such positions, and to appoint thereto such officers and employees, in the National Security Agency, as may be necessary to carry out the functions of such Agency.".

Page 2, line 1, strike out "by the Director" and insert in lieu thereof "by the Secretary of Defense (or his designee for the purpose)".

Page 2, lines 11 and 12, strike out "grades GS–16, GS–17, and GS–18" and insert in lieu thereof "grades 16, 17, and 18".

Page 2, lines 19 and 20, strike out "The Director of the National Security Agency may establish" and insert in lieu thereof "The Secretary of Defense (or his designee for the purpose) is authorized to establish in the National Security Agency".

Page 2, lines 20 and 21, strike out "in such agency".

Page 4, line 5, strike out "Act" and insert in lieu thereof "section".

The committee amendments were agreed to.

The bill was ordered to be engrossed and read a third time, was read the third time, and passed.

The title was amended so as to read: "A bill to provide certain administrative authorities for the National Security Agency, and for other purposes."

A motion to reconsider was laid on the table.

AMENDMENT OF BANKRUPTCY ACT—TRANSMISSION OF CERTAIN PAPERS

The Clerk called the bill (H.R. 4345) to repeal clause (9) of subdivision a of section 39 of the Bankruptcy Act (11 U.S.C. 67a(9)), respecting the transmission of papers by the referee to the clerk of the court.

There being no objection, the Clerk read the bill, as follows:

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That clause (9) of subdivision a of section 39 of the Bankruptcy Act (11 U.S.C. 67a(9)), as amended, is hereby repealed and clause (10) of such subdivision is renumbered (9).

The bill was ordered to be engrossed and read a third time, was read the third time, and passed, and a motion to reconsider was laid on the table.

SIMPLIFYING FILLING OF REFEREE VACANCIES

The Clerk called the bill (H.R. 4340) to amend sections 43 and 34 of the Bankruptcy Act (11 U.S.C 71, 62) to simplify the filling of referee vacancies.

There being no objection, the Clerk read the bill, as follows:

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That subdivision b of section 43 of the Bankruptcy Act (11 U.S.C. 71b) is hereby amended to read as follows:

"b. A vacancy in the office of referee may be filled on the existing basis upon the recommendations of the Director, the district judge or judges, and the circuit council that the office be so continued. If a change in the existing salary or arrangements is recommended by the Director, the district judge or judges, or the circuit council, a vacancy shall not be filled until the Conference has acted thereon."

SEC. 2. Subdivision a of section 34 of the Bankruptcy Act (11 U.S.C. 62a) is hereby amended to make the last sentence thereof read as follows: "Upon the expiration of his term, a referee in bankruptcy shall continue to perform the duties of his office until his successor is appointed and qualifies provided the filling of the vacancy has been authorized as provided in subdivision b of section 43 of this Act."

The bill was ordered to be engrossed and read a third time, was read the third time, and passed, and a motion to reconsider was laid on the table.

AMENDING BANKRUPTCY ACT—AUTOMATIC ADJUDICATION AND REFERENCE

The Clerk called the bill (H.R. 4692) to amend sections 1, 18, 22, 331, and 631 of the Bankruptcy Act (11 U.S.C. 1, 41, 45, 731, 1031) to provide for automatic adjudication and reference in certain cases.

There being no objection, the Clerk read the bill, as follows:

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That (a) paragraph (2) of section 1 of the Bankruptcy Act (11 U.S.C. 1) is amended to read as follows:

"(2) 'Adjudication' shall mean a determination, whether by decree or by operation of law, that a person is a bankrupt;".

(b) Paragraph (12) of such section is amended to read as follows:

"(12) 'Date of adjudication' shall mean the date of the filing of any petition which operates as an adjudication, or the date of entry of a decree of adjudication, or if such decree is appealed from, then the date when such decree is finally confirmed or the appeal is dismissed;".

SEC. 2. (a) Subdivision f of section 18 of the Bankruptcy Act (11 U.S.C. 41), as amended, is hereby repealed.

(b) Subdivision g of such section is hereby relettered subdivision f and amended to read as follows:

"f. The filing of a voluntary petition under chapters I to VII of this Act, other than a petition filed in behalf of a partnership by less than all of the partners, shall operate as an adjudication with the same force and effect as a decree of adjudication."

SEC. 3. Subdivision a of section 22 of the Bankruptcy Act (11 U.S.C. 45a) is hereby amended to read as follows:

"a. Unless the judge or judges direct otherwise, the clerk shall refer to a referee all cases filed under chapters I to VII, chapter XI, and chapter XIII of this Act."

SEC. 4. Section 331 of the Bankruptcy Act (11 U.S.C. 731) is hereby amended to read as follows:

"SEC. 331. The clerk shall, unless the judge or judges direct otherwise, refer the proceeding to a referee."

SEC. 5. Section 631 of the Bankruptcy Act (11 U.S.C. 1031) is hereby amended to read as follows:

"SEC. 631. The clerk shall, unless the judge or judges direct otherwise, refer the proceeding to a referee."

The bill was ordered to be engrossed and read a third time, was read the third time, and passed, and a motion to reconsider was laid on the table.

AMENDMENT OF BANKRUPTCY ACT—REFEREES' SALARY AND EXPENSE FUNDS

The Clerk called the bill (H.R. 4693) to amend the Bankruptcy Act so as to consolidate the referees' salary and expense funds.

There being no objection, the Clerk read the bill, as follows:

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That (a) the title of section 40 of the Bankruptcy Act (11 U.S.C. 68) is amended to read as follows:

"§ 40. Compensation of Referees; Referees' Salary and Expense Fund; Retirement of Referees".

(b) Subdivision c.(1) of such section is amended to read as follows:

"c.(1) Except as otherwise provided in this Act, there shall be deposited with the clerk, at the time the petition is filed in each case, and at the time an ancillary proceeding is instituted, $32 for each estate for the referees' salary and expense fund, as herein below established: *Provided, however,* That in cases of voluntary bankruptcy such fee, as well as the filing fees of the clerk and trustee, may be paid in installments, if so authorized by general order of the Supreme Court of the United States."

(c) Subdivision c.(2) of such section is amended to read as follows:

"(2) Additional fees for the referees' salary and expense fund shall be charged, in accordance with the schedule fixed by the conference (a) against each estate wholly or partially liquidated in a bankruptcy proceeding, and be computed upon the net proceeds realized; (b) against each case in an arrangement confirmed under chapter XI of this Act, and be computed upon the amount to be paid to the unsecured creditors upon confirmation of the arrangement and thereafter, pursuant to the terms of the arrangement, and where under the arrangement any part of the consideration to be distributed is other than money, upon the amount of the fair value of such consideration; and (c) against each case in a wage earner plan confirmed under chapter XIII of this Act, and be computed upon the payments actually made by or for a debtor under the plan. Such schedule of fees may be revised by the Director, with the approval of the conference, not more than once during each calendar year, so that the total amount of fees, allowances, and charges collected and to be collected from all sources for the referees' salary and expense fund will, as near as may be equal the total amount of salaries paid and to be paid to referees in active service, and the total amount of their expenses: *Provided, however,* That such schedule of fees shall not be so revised for any year that the total collections estimated by the Director for such year shall exceed by more than 10 per centum the total collections in the preceding year. The Director, with the approval of the conference, may make, and from time to time amend, rules and regulations prescribing methods for determining net proceeds realized in asset cases, fair values of considerations, other than money, distributable in arrangement cases, and payments actually made by or for a debtor under the plan in wage earner cases; prescribing the procedure for collection by the clerk of fees and allowances for the referees' salary and expense fund; and providing for the effective administration of the provisions of this paragraph (2)."

(d) Subdivision c.(4) of such section is amended to read as follows:

"(4) A referee's salary and expense fund shall be established in the Treasury of the United States, and the amounts of the various fees and allowances collected by the clerks for the services of referees, and for their expenses, including the fees, allowances, and charges for their services and expenses as conciliation commissioners and as special masters under this Act, shall be covered into the Treasury of the United States for the account of such salary and expense fund. The salaries of the referees in active service and the expenses of the referees, including the salaries of their clerical assistants, shall be paid out of annual appropriations from such salary and expense fund by the United States. Any deficiencies of such salary and expense fund shall be paid out of any funds in the Treasury of the United States not otherwise appropriated, and appropriations to pay such deficiencies are hereby authorized: *Provided, however,* That there shall be covered into miscellaneous receipts of the Treasury of the United States in any subsequent year so much of the surplus, if any, arising in the salary and expense fund as may be necessary to reimburse the Treasury of the United States for payments made on account of such fund in any prior year."

(e) Subdivision c.(5) of such section is amended to read as follows:

"(5) As of the day preceding the date when the referees, as provided by paragraph (2) of subdivision b of section 37 of this Act, are to take office, an allocation shall be made by the judge or judges of the several courts of bankruptcy of all filing and other fees, commissions, and allowances, and of all expense funds, due the then existing referee for services rendered and expenses incurred in the cases pending before them, whether as referee, conciliation commissioner, or special

master under this Act. The balances of such filing and other fees, commissions, and allowances and the expense surpluses shall be covered into the Treasury of the United States by the referees and the clerks, to be deposited to the credit of the salary and expense fund. All cases pending before outgoing referees shall be referred, and no additional filing fees shall be required, but additional salary and expense charges may be assessed in such cases in such amounts as the judge or judges of the several courts of bankruptcy may deem equitable, taking into consideration the schedules of additional fees fixed by the Director and the payments previously made therein."

SEC. 2. (a) Clause (2) of section 51 of the Bankruptcy Act (11 U.S.C. 79) is amended to read as follows:

"(2) collect the fees of the clerk and trustee and the fees for the referees' salary and expense fund provided in paragraph (1) of subdivision c of section 40 of this Act in each case instituted before filing the petition, except where installment payments may be authorized pursuant to section 40 of this Act, and collect the various other fees, allowances, and charges for the services of referees and for their expenses, including their services and expenses as conciliation commissioners and as special masters under this Act;".

(b) Clause (5) of section 51 of such section is amended to read as follows:

"(5) transmit to the Treasury of the United States all fees, allowances, and charges collected for the referees' salary and expense fund, and transmit to the trustee, within ten days after a case had been closed the fee collected for him at the time of the filing of the petition."

SEC. 3. Clause (1) of subdivision a of section 64 of the Bankruptcy Act (11 U.S.C. 104) is amended to repeal the words "the fees for the referees' salary fund and for the referees' expense fund;" from the phrase following the first semicolon and to enact in their place the words "the fees for the referees' salary and expense fund;".

SEC. 4. That the second paragraph of section 72 of the Bankruptcy Act (11 U.S.C. 112) is amended to read as follows:

"No referee shall receive any compensation for his services under this Act other than his salary; and allowances made to a referee for compensation or expense while acting as a conciliation commissioner under section 75, or as a referee or special master under any chapter or section of this Act, shall be paid to the clerk, and by him transmitted to the Treasury of the United States for deposit in the referees' salary and expense fund."

SEC. 5. That paragraph (2) of section 624 of the Bankruptcy Act (11 U.S.C. 1024(2)) is amended to read as follows:

"(2) where a petition is filed under section 622 of this Act, by payment to the clerk of $15 to be distributed, $10 to the Treasury of the United States for deposit in the referees' salary and expense fund and $5 to the clerk, in lieu of the fees of $32 and $8 as prescribed in sections 40 and 52 of this Act: *Provided, however,* That such fees may be paid in installments, if so authorized by general order of the Supreme Court of the United States."

SEC. 6. That paragraph (2) of section 633 of the Bankruptcy Act (11 U.S.C. 1033 (2)) is amended to read as follows:

"(2) the debtor shall submit his plan, and deposit with the clerk, for payment into the referees' salary and expense fund a fee not to exceed $15, to be graduated and charged in the manner outlined in paragraph (2) of subdivision c of section 40 of this Act: *Provided, however,* That such fee may be paid in installments, if so authorized by General Order of the Supreme Court of the United States;".

SEC. 7. That paragraph (3) of section 659 of the Bankruptcy Act (11 U.S.C. 1059(3)) is amended to read as follows:

"(3) an additional fee for the referees' salary and expense fund, to be graduated and charged in the manner outlined in paragraph (2) of subdivision c of section 40 of this Act, and to be computed upon the amount of the payments actually made by or for a debtor under the plan; and commissions to the trustee of 5 per centum to be computed upon and payable out of the payments actually made by or for a debtor under the plan;"

SEC. 8. This amendatory Act shall take effect on the first day of the first fiscal year following the date of its approval.

With the following committee amendments:

Page 1, line 5, strike out the word "Referees' " and substitute in lieu thereof "Referees' ".

Page 1, line 6, strike out the word "Rund" and substitute in lieu thereof "Fund."

Page 2, line 5, strike out "general order" and substitute in lieu thereof "General Order".

Page 2, line 7, insert a period after "c" where it occurs after the word "Subdivision".

Page 2, line 25, insert a comma after the word "conference".

Page 3, line 20, insert a period after "c" where it occurs after the word "Subdivision".

Page 3, line 22, strike out "referee's" and insert in lieu thereof "referees' ".

Page 4, line 1, strike out the comma following the word "allowances".

Page 4, line 19, insert a period after "c" where it occurs after the word "Subdivision".

Page 5, line 2, strike out "referee" and insert in lieu thereof the word "referees".

Page 5, line 24, strike out the comma following the word "allowances".

Page 6, line 6, strike out the comma following the word "allowances".

Page 7, line 14, strike out "general order" and insert in lieu thereof "General Order".

The committee amendments were agreed to.

The bill was ordered to be engrossed and read a third time, was read the third time, and passed, and a motion to reconsider was laid on the table.

FLORIDA QUADRICENTENNIAL ANNIVERSARY

The Clerk called the concurrent resolution (H. Con. Res. 103) to commemorate the quadricentennial anniversary of Florida and to recognize the quadricentennial commission of that State.

There being no objection, the Clerk read the concurrent resolution, as follows:

Whereas the State of Florida proposes to celebrate the four hundredth anniversary of the permanent colonization of La Florida, the lands of which now, constitute an important part of the continental United States; and

Whereas said period of colonization commenced on August 14, 1559, with the establishment of a colony at Pensacola, Florida, by Don Tristan De Luna, pursuant to the direct orders of the Spanish King, but such colony was later abandoned; and

Whereas thereafter a French settlement was made in 1564 on the Saint Johns River near Jacksonville, Florida, at which point Fort Caroline was constructed and was occupied until it was conquered and resettled by a Spanish force under Menendez; and

Whereas the above period of colonization came to a close in September 1565 with the establishment at Saint Augustine, Florida, of the oldest permanent and continuous settlement in the continental United States; and

Whereas other events occurring at approximately the same time were events of national and international significance, and were matters of great historical importance in the colonizing of the United States which should be commemorated; and

Whereas a celebration of the character planned by the State of Florida will contribute greatly to the educational and cultural welfare of the people of the United States and will preserve the traditions of such period to posterity: Now, therefore, be it

Resolved by the House of Representatives (the Senate concurring), That the Congress of the United States join the people of Florida in commemorating the quadricentennial anniversary of the first permanent colonization by Europeans of any area now constituting a part of the continental United States, which will commence in the year of 1959 at Pensacola, Florida, and end in the year of 1965 at Saint Augustine, Florida, with celebrations being held in the intervening years at Jacksonville, Florida, and other cities of the State.

SEC. 2. That the Congress of the United States recognizes the establishment by the State of Florida of the Quadricentennial Anniversary Commission of Florida which has been charged with the responsibility and duty of planning the anniversary celebrations above described in coordination with any organizations now or hereafter designated by the State of Florida and any foreign nations participating in such celebrations.

SEC. 3. A copy of this resolution, suitably engrossed and duly authenticated, shall be transmitted to the Governor of the State of Florida and the Quadricentennial Commission of Florida.

The concurrent resolution was agreed to.

A motion to reconsider was laid on the table.

AMENDMENT OF TITLE 10, UNITED STATES CODE

The Clerk called the bill (H.R. 470) to amend title 10, United States Code, to authorize the Secretary of Defense and the Secretaries of the Military departments to settle certain claims for damage to, or loss of, property or personal injury or death, not cognizable under any other law.

There being no objection, the Clerk read the bill, as follows:

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That title 10, United State Code, is amended as follows:

(1) Chapter 163 is amended—

(A) by adding the following new section at the end thereof:

"§ 2736. Property loss; personal injury or death; incident to use or operation of property of the United States and not cognizable under other law.

"(a) Under such regulations as the Secretary of a military department may prescribe, he or his designee may settle, and pay in an amount not more than $1,000, a claim against the United States, not cognizable under any other provision of law, for—

"(1) damage to, or loss of, property; or

"(2) personal injury or death;

caused by a civilian officer or employee of the office of the Secretary of Defense, a civilian officer or employee of a military department, or a member of the Army, Navy, Air Force, or Marine Corps, as the case may be, incident to the use and operation of Government vehicles, or incident to the use of other property of the United States on a Government installation.

"(b) A claim may not be allowed under subsection (a) if the damage to, or loss of, property, or the personal injury or death, was caused wholly or partly by a negligent or wrongful act of the claimant, his agent, or his employee.

"(c) A claim for personal injury or death under this section may not be allowed for more than the cost of reasonable medical, hospital, and burial expenses actually incurred, and not otherwise furnished or paid by the United States.

"(d) No claim may be allowed under this section unless it is presented in writing within two years after it accrues.

"(e) A claim may not be paid under subsection (a) unless the amount tendered is accepted by the claimant in full satisfaction.

"(f) Any payment made under this section shall be reduced by any amount received by the claimant in the form of insurance payments or compensation based on the same damage, loss, personal injury, or death. A payment made under authority of this section is not subject to any claim for reimbursement by any insurance company or compensation insurance fund; and such a payment does not absolve any insurer, in whole or in part, of any obligation under any contract of insurance."; and

(B) by adding the following item at the end of the analysis:

"§ 2376. Property loss; personal injury or death; incident to use and operation of government property and not cognizable under other law."

(2) Chapter 653 is amended—

(A) by repealing section 7625; and

(B) by striking out the following item in the analysis:

"Claims against the United States; private property; loss or damage."

With the following committee amendment:

Strike out all after the enacting clause and insert the following:

"That title 10, United States Code, is amended as follows:

"(1) Chapter 163 is amended—

"(A) by adding the following new section at the end thereof:

"'§ 2736. Property loss; personal injury or death: incident to use of property of the United States and not cognizable under other law

"'(a) Under such regulations as the Secretary of a military department with the approval of the Secretary of Defense may prescribe, he or his designee may settle and pay, in an amount not more than $1,000, a claim against the United States, not cognizable under any other provision of law, for—

"'(1) damage to, or loss of, property; or

"'(2) personal injury or death; caused by a civilian official or employee of that department or a member of the Army, Navy, Air Force, or Marine Corps, as the case may be, incident to the use of a vehicle of the United States at any place, or any other property of the United States on a Government installation.

"'(b) Under such regulations as the Secretary of Defense may prescribe, he or his designee has the same authority as the Secretary of a military department with respect to a claim, not cognizable under any other provision of law, for—

"'(1) damage to, or loss of, property; or

"'(2) personal injury or death; caused by a civilian official or employee of the Department of Defense not covered by subsection (a), incident to the use of a vehicle of the United States at any place, or any other property of the United States on a Government installation.

"'(c) Under such regulations as the Secretary of the Treasury may prescribe, he or his designee may settle and pay, in an amount not more than $1,000, a claim against the United States, not cognizable under any other provision of law, for—

"'(1) damage to, or loss of, property; or

"'(2) personal injury or death; caused by a member of, or a civilian official or employee of the United States Coast Guard, incident to the use of a vehicle of the United States at any place, or any other property of the United States on a Government installation.

"'(d) A claim may not be allowed under subsection (a), (b), or (c) if the damage to, or loss of, property, or the personal injury or death, was caused wholly or partly by a negligent or wrongful act of the claimant, his agent, or his employee.

"'(e) A claim for personal injury or death under this section may not be allowed for more than the cost of reasonable medical, hospital, and burial expenses actually incurred, and not otherwise furnished or paid by the United States.

"'(f) No claim may be allowed under this section unless it is presented in writing within two years after it accrues.

"'(g) A claim may not be paid under subsection (a), (b), or (c) unless the amount tendered is accepted by the claimant in full satisfaction.

"'(h) No claim or any part thereof, the amount of which is legally recoverable by the claimant under an indemnifying law or indemnity contract, may be paid under this section. No subrogated claim may be paid under this section.

"'(i) So far as practicable, regulations prescribed under this section shall be uniform for the military departments.'

"(B) by adding the following item at the end of the analysis:

"'2736. Property loss; personal injury or death incident to use of property of the United States and not cognizable under other law.'

"(2) Chapter 653 is amended—

"(A) by repealing section 7625; and

"(B) by striking out the following item in the analysis:

"'7625. Claims against the United States: private property; loss or damage.'"

The committee amendment was agreed to.

The bill was ordered to be engrossed and read a third time, and was read the third time, and passed.

The title was amended so as to read: "A bill to amend title 10, United States Code, to authorize the Secretary of Defense, the Secretaries of the military departments, and the Secretary of the Treasury to settle certain claims for damage to, or loss of, property, or personal injury or death, not cognizable under any other law."

A motion to reconsider was laid on the table.

SPECIAL POSTAGE RATES FOR EDUCATIONAL, CULTURAL, AND LIBRARY MATERIALS

The Clerk called the bill (H.R. 4595) to clarify and make uniform certain provisions of law relating to special postage rates for educational, cultural, and library materials, and for other purposes.

There being no objection, the Clerk read the bill, as follows:

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That (a) section 204(d) of the Postal Rate Revision and Federal Employees Salary Act of 1948, as amended (72 Stat. 140; 39 U.S.C. 292a(d)), is amended—

(1) by inserting "except that the rates now or hereafter prescribed for third- or fourth-class matter shall apply in every case where such rate is lower than the rate prescribed in this subsection," immediately following "for each additional pound or fraction thereof,";

(2) by striking out in clause (1) thereof "for students' notations" and inserting in lieu thereof "for notations"; and

(3) by striking out in clause (5) thereof "phonograph recordings" and inserting in lieu thereof "sound recordings".

(b) Section 204(e)(1) of such Act, as amended (72 Stat. 140, 141; 39 U.S.C. 292a-(e)(1)), is amended—

(1) by striking out in clause (i) thereof "for students' notations" and inserting in lieu thereof "for notations"; and

(2) by striking out in clause (iv) thereof "phonograph recordings" and inserting in lieu thereof "sound recordings".

With the following committee amendment:

Page 2, strike out lines 7 to 14, inclusive, and insert in lieu thereof the following:

"(b) Section 204(e)(1) of such Act, as amended (72 Stat. 140, 141; 39 U.S.C. 292a(e)(1)), is amended by striking out '(i) books consisting wholly of reading matter or scholarly bibliography or reading matter with incidental blank spaces for students' notations and containing no advertising matter other than incidental announcements of books; (ii) printed music, whether in bound form or in sheet form; (iii) bound volumes of academic theses in typewritten or other duplicated form and bound volumes of periodicals; (iv) phonograph recordings; and (v) other library materials in printed, duplicated, or photographic form or in the form of unpublished manuscripts.' and inserting in lieu thereof the following: '(i) books consisting wholly of reading matter or scholarly bibliography or reading matter with incidental blank spaces for notations and containing no advertising matter other than incidental announcements of books; (ii) printed music, whether in bound form or in sheet form; (iii) bound volumes of academic theses in typewritten or other duplicated form; (iv) periodicals, whether bound or unbound; (v) sound recordings; and (vi) other library materials in printed, duplicated, or photographic form or in the form of unpublished manuscripts.'.

"(c) Section 204(e)(2) of such Act, as amended (72 Stat. 141; 39 U.S.C. 292a(e)(2)), is amended by striking out 'and catalogs of such materials' and inserting in lieu thereof 'catalogs of such materials, and guides or scripts prepared solely for use with such materials'."

The committee amendment was agreed to.

The bill was ordered to be engrossed and read a third time, was read the third time, and passed, and a motion to reconsider was laid on the table.

DECLARING CERTAIN PROPERTY IN THE STATE OF NEW MEXICO TO BE HELD IN TRUST FOR THE PUEBLO OF SANTO DOMINGO

The Clerk called the bill (H.R. 2493) directing the Secretary of the Interior to convey certain property in the State

of New Mexico to the pueblo of Santo Domingo.

There being no objection, the Clerk read the bill, as follows:

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That the Secretary of the Interior is authorized and directed to convey by quitclaim deed, without consideration, to the pueblo of Santo Domingo, Pena Blanca, New Mexico, all right, title, and interest of the United States in and to the following described tract of land, together with all buildings and other improvements thereon, situated in the pueblo of Santo Domingo, New Mexico: Commencing at a point 342 feet from the southeast corner of the church in the Santo Domingo Pueblo, on a line running north 52 degrees 45 minutes west, thence running 443 feet south 63 degrees east, thence north 400 feet 47 degrees 49 minutes east, thence north 470 feet 52 degrees 45 minutes west, thence south 474 feet 42 degrees west to the point of beginning, containing 4.45 acres, more or less.

SEC. 2. The conveyance authorized by this Act shall be subject to the condition that the Public Health Service, Department of Health, Education, and Welfare, be authorized to continue to utilize that portion of the aforementioned described tract of land, together with any building thereon, which it now occupies and uses for providing health services for so long as the Public Health Service continues to use such land and building for providing such services.

With the following committee amendment:

Strike out all after the enacting clause and insert in lieu thereof the following: "That all of the right, title, and interest of the United States in the land described below, together with the buildings, and improvements thereon, are hereby declared to be held in trust for the Pueblo of Santo Domingo, New Mexico, subject to the right of the United States to occupy and use for so long as they are needed for providing health services a parcel of approximately .10 acre of land and the buildings and improvements thereon that are now occupied and used by the Public Health Service, and the Public Health Service, upon termination of its use of such .10 acre parcel, may remove the temporary building occupied by it without obligation to restore the site to its former condition: Commencing at a point 342 feet from the southeast corner of the church in the Santo Domingo Pueblo, on a line running north 52 degrees 45 minutes west, thence running 443 feet south 63 degrees east, thence north 400 feet 47 degrees 49 minutes east, thence north 470 feet 52 degrees 45 minutes west, thence south 474 feet 42 degrees west to the point of beginning, containing 4.45 acres, more or less."

The committee amendment was agreed to.

The bill was ordered to be engrossed and read a third time, was read the third time, and passed.

The title was amended so as to read: "A bill declaring certain property in the State of New Mexico to be held in trust for the pueblo of Santo Domingo."

A motion to reconsider was laid on the table.

TO AUTHORIZE PARTICIPATION BY THE UNITED STATES IN PARLIAMENTARY CONFERENCES WITH CANADA

The Clerk called the joint resolution (H.J. Res. 254) to authorize participation by the United States in parliamentary conferences with Canada.

Mr. ASPINALL. Mr. Speaker, I ask unanimous consent that the joint resolution be passed over without prejudice.

The SPEAKER. Is there objection to the request of the gentleman from Colorado?

There was no objection.

PRIVATE CALENDAR

The SPEAKER. This is the day set for the call of the Private Calendar. The Clerk will call the first individual bill on the Private Calendar.

MRS. ELBA HAVERSTICK CASH

The Clerk called the bill (H.R. 1434) for the relief of Mrs. Elba Haverstick Cash.

Mr. AVERY. Mr. Speaker, I ask unanimous consent that this bill be passed over without prejudice.

The SPEAKER. Is there objection to the request of the gentleman from Kansas?

There was no objection.

GEORG GAHN AND MARGARETE GAHN

The Clerk called the bill (H.R. 1546) for the relief of Georg Gahn and Margarete Gahn.

There being no objection, the Clerk read the bill, as follows:

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That the Alien Property Custodian be, and he is hereby, authorized and directed to pay to Georg Gahn $6,537.07 and to Margarete Gahn $6,537.08. Such amounts represent the distributive share of Georg Gahn and Margarete Gahn under the will of their deceased sister, Lena Steeger, who died in Massachusetts on August 9, 1944: *Provided,* That no part of the amount appropriated in this Act in excess of 10 per centum thereof shall be paid or delivered to or received by any agent or attorney on account of services rendered in connection with this claim, and the same shall be unlawful, any contract to the contrary notwithstanding. Any person violating the provisions of this Act shall be deemed guilty of a misdemeanor and upon conviction thereof shall be fined in any sum not exceeding $1,000.

The bill was ordered to be engrossed and read a third time, was read the third time, and passed, and a motion to reconsider was laid on the table.

THOMAS A. HOWE

The Clerk called the bill (H.R. 1601) for the relief of Thomas A. Howe.

Mr. AVERY. Mr. Speaker, I ask unanimous consent that this bill be passed over without prejudice.

The SPEAKER. Is there objection to the request of the gentleman from Kansas?

There was no objection.

MR. AND MRS. MOSES GLIKOWSKY

The Clerk called the bill (H.R. 1766) for the relief of Mr. and Mrs. Moses Glikowsky.

Mr. ASHMORE. Mr. Speaker, I ask unanimous consent that this bill be recommitted to the Committee on the Judiciary.

The SPEAKER. Is there objection to the request of the gentleman from Colorado?

There was no objection.

The bill was ordered recommitted to the Committee on the Judiciary.

JOSEPH E. MILLER

The Clerk called the bill (H.R. 2954) for the relief of Joseph E. Miller.

There being no objection, the Clerk read the bill, as follows:

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That the Comptroller General of the United States is hereby authorized and directed to credit the account of Joseph E. Miller, Lockport, New York, in the sum of $630. Such sum represents an overpayment of an allotment in favor of his father, Joseph A. Miller, 128 Erie Street, Lockport, New York, for the period September 1944 through February 1946.

The bill was ordered to be engrossed and read a third time, was read the third time, and passed, and a motion to reconsider was laid on the table.

MRS. CLARE M. ASH

The Clerk called the bill (H.R. 3240) for the relief of Mrs. Clare M. Ash.

There being no objection, the Clerk read the bill, as follows:

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That, for purposes of section 202(3) of the Social Security Act, Mrs. Clare M. Ash, of Racine, Wisconsin, shall be held and considered to be the widow (as defined in section 216(c) of such Act) of Frank S. Ash (social security account number [redacted]).

The bill was ordered to be engrossed and read a third time, was read the third time, and passed, and a motion to reconsider was laid on the table.

PAUL NELSON

The Clerk called the bill (H.R. 3798) for the relief of Paul Nelson.

The SPEAKER pro tempore (Mr. ALBERT). Is there objection to the present consideration of the bill?

Mr. AVERY and Mr. CONTE objected, and under the rule the bill was recommitted to the Committee on the Judiciary.

DR. GORDON D. HOOPLE ET AL.

The Clerk called the bill (H.R. 3825) for the relief of Dr. Gordon D. Hoople, Dr. David W. Brewer, and the estate of the late Dr. Irl H. Blaisdell.

Mr. CONTE. Mr. Speaker, I ask unanimous consent that this bill be passed over without prejudice.

The SPEAKER pro tempore. Is there objection to the request of the gentleman from Massachusetts?

There was no objection.

JOSEPH B. KANE, JR.

The Clerk called the bill (H.R. 1631) for the relief of Joseph B. Kane, Jr.

There being no objection, the Clerk read the bill, as follows:

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That the Comptroller General of the United States is hereby authorized and directed to reimburse Joseph B. Kane, Junior, of Detroit, Michigan, in the sum of $124.22. Such sum represents leave ration and accrued leave while serving in the United States Army during the years 1952 and 1953,

With the following committee amendment:

Page 1, line 3, strike out all of lines 3, 4, 5, 6, and 7, and insert: "That the Secretary of the Treasury is authorized and directed to pay, out of any money in the Treasury not otherwise appropriated, the sum of $124.22 to Joseph B. Kane, Junior, of Detroit, Michigan, in full settlement of his claims against the United States for the amounts he repaid representing overpayments for leave ration and accrued leave in connection with his Army service during the years 1952 and 1953: *Provided,* That no part of the amount appropriated in this Act shall be paid or delivered to or received by any agent or attorney on account of services rendered in connection with this claim, and the same shall be unlawful, any contract to the contrary notwithstanding. Any person violating the provisions of this Act shall be deemed guilty of a misdemeanor and upon conviction thereof shall be fined in any sum not exceeding $1,000."

The committee amendment was agreed to.

The bill was ordered to be engrossed and read a third time, was read the third time, and passed, and a motion to reconsider was laid on the table.

JOSE SANTIAGO SAVEDRA CALZA

The Clerk called the bill (H.R. 3817) for the relief of Jose Santiago Savedra Calza.

The SPEAKER pro tempore (Mr. ALBERT). Is there objection to the present consideration of the bill?

Mr. CONTE. Mr. Speaker, I ask unanimous consent that this bill be passed over without prejudice.

The SPEAKER pro tempore. Is there objection to the request of the gentleman from Massachusetts?

There was no objection.

JACOB NAGGAR

The Clerk called the bill (H.R. 4549) for the relief of Jacob Naggar.

There being no objection, the Clerk read the bill, as follows:

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That, for the purposes of the Immigration and Nationality Act, Jacob Naggar shall be held and considered to have been lawfully admitted to the United States for permanent residence as of the date of the enactment of this Act, upon payment of the required visa fee. Upon the granting of permanent residence to such alien as provided for in this Act, the Secretary of State shall instruct the proper quota-control officer to deduct one number from the appropriate quota for the first year that such quota is available.

The bill was ordered to be engrossed and read a third time, was read the third time, and passed, and a motion to reconsider was laid on the table.

M. E. BOALES

The Clerk called the bill (H.R. 5362) for the relief of M. E. Boales.

There being no objection, the Clerk read the bill, as follows:

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That the Secretary of the Treasury is authorized and directed to pay, out of any money in the Treasury not otherwise appropriated to M. E. Boales, of Daytona Beach, Florida, the sum of $5,000. The payment of such sum shall be in full settlement of all claims against the United States of M. E. Boales arising out of damage to his real property on and near the Halifax River in the State of Florida which was caused by dredging operations being carried out by the Secretary of the Army during the year 1952: *Provided,* That no part of the amount appropriated in this Act shall be paid or delivered to or received by any agent or attorney on account of services rendered in connection with this claim, and the same shall be unlawful, any contract to the contrary notwithstanding. Any person violating the provisions of this Act shall be deemed guilty of a misdemeanor and upon conviction thereof shall be fined in any sum not exceeding $1,000.

The bill was ordered to be engrossed and read a third time, was read the third time, and passed, and a motion to reconsider was laid on the table.

PARK NATIONAL BANK

The Clerk called the bill (H.R. 5733) for the relief of Park National Bank.

There being no objection, the Clerk read the bill, as follows:

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That the Secretary of the Treasury is authorized and directed to pay out, of any money in the Treasury not otherwise appropriated, to the Park National Bank, Knoxville, Tenn., the sum of $194. The payment of such sum shall be in full settlement of all claims of such bank against the United States arising out of the refusal of the Secretary of the Treasury to make payment in the original amount of $194 on a United States Treasury check drawn in favor of Joseph Orton Smith, private, United States Army, dated September 30, 1955, which, before being cashed by such bank was fraudulently raised to the amount of $494: *Provided,* That no part of the amount appropriated in this Act in excess of 10 per centum thereof shall be paid or delivered to or received by any agent or attorney on account of services rendered in connection with this claim, and the same shall be unlawful, any contract to the contrary notwithstanding. Any person violating the provisions of this Act shall be deemed guilty of a misdemeanor and upon conviction thereof shall be fined in any sum not exceeding $1,000.

With the following committee amendment:

Page 2, line 4, after the word "Act" strike out "in excess of 10 per centum thereof".

The committee amendment was agreed to.

The bill was ordered to be engrossed and read a third time, was read the third time, and passed, and a motion to reconsider was laid on the table.

GERALD M. COOLEY

The Clerk called the bill (H.R. 1758) for the relief of Gerald M. Cooley.

There being no objection, the Clerk read the bill, as follows:

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That the Secretary of the Treasury is authorized and directed to pay, out of any money in the Treasury not otherwise appropriated, to Gerald M. Cooley, San Carlos, California, the sum of $679.93. The payment of such sum shall be in full settlement of all claims of Gerald M. Cooley against the United States for back wages due him from the Cooley-Cain Aircraft Corporation under the provisions of the Act of June 30, 1936, commonly referred to as the Walsh-Healey Act: *Provided,* That no part of the amount appropriated in this Act in excess of 10 per centum thereof shall be paid or delivered to or received by any agent or attorney on account of services rendered in connection with this claim, and the same shall be unlawful, any contract to the contrary notwithstanding. Any person violating the provisions of this Act shall be deemed guilty of a misdemeanor and upon conviction thereof shall be fined in any sum not exceeding $1,000.

With the following committee amendment:

Page 2, line 1, after the word "Act" strike out "in excess of 10 per centum thereof".

The committee amendment was agreed to.

The bill was ordered to be engrossed and read a third time, was read the third time, and passed, and a motion to reconsider was laid on the table.

NORTH COUNTIES HYDRO-ELECTRIC CO.

The Clerk called the resolution (H. Res. 189) for the relief of North Counties Hydroelectric Co.

The SPEAKER pro tempore. Is there objection to the present consideration of the resolution?

Mr. CONTE. Mr. Speaker, I ask unanimous consent that this bill be passed over without prejudice.

The SPEAKER pro tempore. Is there objection?

There was no objection.

CERTAIN CLAIMANTS AGAINST THE UNITED STATES

The Clerk called the bill (H.R. 2594) for the relief of certain claimants against the United States who suffered personal injuries, property damage, or other loss as a result of the explosion of a munitions truck between Smithfield and Selma, N.C., on March 7, 1942.

There being no objection, the Clerk read the bill, as follows:

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That the Secretary of the Treasury is authorized and directed to pay, out of any money in the Treasury not otherwise appropriated, to the claimants hereinafter named, the sums hereinafter specified, representing the amounts reported by the United States Court of Claims to the Congress in response to H. Res. 319, Eighty-second Congress (congressional numbered 17876, decided January 15, 1958), plus, as a part of just compensation, interest at the rate of six per centum per annum from March 7, 1942, in full satisfaction of their respective claims against the United States for compensation for property losses or

damages sustained by them as the result of an explosion which occurred when a truck in which munitions were being transported for use by the United States Army collided with a privately owned passenger automobile at the intersection of United States Highways Numbered 301 and 70, between Selma, North Carolina and Smithfield, North Carolina, on March 7, 1942.

(14) ———.

SEC. 4. No part of the amount appropriated in this Act in excess of 25 per centum thereof shall be paid or delivered to or received by any agent or attorney on account of services rendered in connection with these claims, and the same shall be unlawful, any contracts to the contrary notwithstanding. Any person violating the provisions of this Act shall be deemed guilty of a misdemeanor and upon conviction thereof shall be fined in any sum not exceeding $1,000.

With the following committee amendments:

Page 2, line 1, strike out "plus, as a part of just compensation, interest at the rate of six per centum per annum from March 7, 1942".

Page 2, line 12, strike out all numbers beginning with (1) through (159) on page 12, line 11.

Page 12, line 19, strike out "plus, as a part of just compensation, interest at the rate of six per centum per annum from March 7, 1942".

Page 12, line 11, insert "A. G. Boone Company, Charlotte, North Carolina, $726.50".

Page 13, line 18, strike out "plus, as a part of just compensation, interest at the rate of six per centum per annum from March 7, 1942".

Page 12, line 23, strike all numbers beginning with (1) throughout the remainder of the bill.

The committee amendments were agreed to.

The bill was ordered to be engrossed and read a third time, was read the third time, and passed, and a motion to reconsider was laid on the table.

JOHN F. CARMODY

The Clerk called the bill (H.R. 2100) for the relief of John F. Carmody.

Mr. CONTE. Mr. Speaker, I ask unanimous consent that this bill may be passed over without prejudice.

The SPEAKER. Is there objection to the request of the gentleman from Massachusetts?

There was no objection.

RELIEF OF CERTAIN ALIENS

The Clerk called the resolution (H.J. Res. 322) for the relief of certain aliens.

Mr. HEMPHILL. Mr. Speaker, I ask unanimous consent that this bill may be passed over without prejudice.

Mr. GEORGE P. MILLER. Mr. Speaker, this bill pertains to some 15 or more individuals. I wonder if the gentleman would elucidate his objection.

The SPEAKER pro tempore (Mr. ALBERT). The gentleman cannot reserve the right to object on the Private Calendar.

Is there objection to the request of the gentleman from South Carolina?

There was no objection.

The SPEAKER pro tempore. This concludes the calling of the Private Calendar.

AIR FORCE NOW CONSIDERS AN AIRBORNE ALERT

Mr. STRATTON. Mr. Speaker, I ask unanimous consent to extend my remarks at this point in the RECORD.

The SPEAKER. Is there objection to the request of the gentleman from New York?

There was no objection.

Mr. STRATTON. Mr. Speaker, some weeks ago I called in this House for a so-called airborne alert of our Strategic Air Command, so as to be fully defended in the event of a Soviet missile attack against this country. I referred to testimony presented to the Committee on Armed Services by Gen. Nathan M. Twining in which he implied that no such alert was needed.

Today I desire to bring to the attention of Members of this House the fact that the outspoken Commander of SAC, General Power, has indeed indicated to one of the committees of this House that such an alert is necessary and desirable after all.

I sincerely hope that the administration will now see fit to support the request of General Power.

Under leave to extend my remarks, I insert herewith an article that appeared in the Washington Post this morning by Joseph Alsop, exploring some of the implications of General Power's testimony:

GENERAL POWER'S WARNING

(By Joseph Alsop)

"I think you are just risking the whole country. That is how important I feel it is."

This comment, on the inadequacy of the administration's program for maintaining our deterrent power, was not made by an ignoramus, or a crisismonger, or a partisan. It was made by the wise and moderate man who carries the lonely and terrible responsibility for the American deterrent, the U.S. Strategic Air Commander, Gen. Thomas B. Power.

Now that a much-censored version has been released, General Power's grim testimony before the Military Subcommittee of the House Appropriations Committee has already attracted some attention. The attention has been ludicrously inadequate, however; and almost no attention at all has been paid to the statements by General Power which had the highest immediate significance. These concerned the need for an airborne alert of the Strategic Air Command.

To put this part of the Power testimony in a comprehensible context, it is necessary

to note that the "missile gap" has two phases. In the later phase, the United States will have some intercontinental missiles in hard or semihard pads, and some measure of warning against the Soviet missile attack. In this later phase, the business-as-usual defense budget will permit the Soviets to gain an enormous preponderance of nuclear striking power, by permitting the Soviets to outbuild this country in both long and medium range ballistic missiles. Concerning this later phase, General Power in effect said that it was insanely imprudent not to maintain a more reasonable balance of striking power, by building more of the Atlas ICBM's for instance.

In the present phase, however, the problem is quite different. This year and next year—for at least 18 months and maybe an even longer period—the United States will have no ICBM's in hard pads and no warning whatever against a Soviet missile strike. A small number of Atlas ICBM's will indeed become operational during this phase. But these first Atlas missiles will be "soft," which means cheap, easy targets.

The immediate question, therefore, is whether the Soviets can produce enough ICBM's to knock out America's deterrent power in this first phase of our maximum softness. As of today, for instance, the Soviets could win the world in one stroke, with just enough ICBM's to launch a surprise missile attack on about 50 targets in this hemisphere. The realistic requirement (which was seriously understated in an earlier report in this space) is approximately 350 Soviet ICBM's. This small number of these weapons, plus the admitted Soviet stock of medium range missiles to cover SAC's overseas air bases, would be enough to do the job.

They would be enough to do the job, because General Power's Strategic Air Command is only authorized at present to maintain a 15-minute ground alert. This kind of alert will be useful when the missile-seeing radars are at last in place, and ready to give SAC 15 minutes warning. But a ground alert is obviously worthless in the present phase, when there can be no warning whatever against a Soviet missile strike.

The only possible remedy, the only thing that can be done now is to run a continuous airborne alert. If a maximum percentage of SAC bombers are always in the air, ready to go, and beyond reach of a surprise missile strike, the entire American deterrent can never be knocked out. But since the problem of the air-borne alert began to be discussed, the great men of the Pentagon have been pouring out the customary flood of lies, inspiring statements that an air-borne alert was not feasible, that it could not be made to work, and so on and so on. General Power's testimony has now given the lie direct to the smooth, easy liars, as follows:

"Warning is the crux of the problem. We may not get any warning of a missile attack. Mr. Khrushchev knows that, and he might feel these are very favorable circumstances. What can you do? We in the Strategic Air Command have developed a system known as air-borne alert. * * * This is a difficult way to live. It never has been attempted in * * * military history. [But] we have tested it and we know we can do it.

"I do not want to see an air-borne alert [after] any responsible person in this country says: 'I will guarantee you warning'. However, I feel we must get on with this airborne alert to carry us over [the period of no warning]. For the minute [Khrushchev] thinks he can strike this country with impunity, we will get it in the next 60 seconds." You could have no clearer statement, from a more impressive source.

THE KINZUA DAM STORY

Mr. DULSKI. Mr. Speaker, I ask unanimous consent to extend my remarks at this point in the RECORD.

The SPEAKER. Is there objection to the request of the gentleman from New York?

There was no objection.

Mr. DULSKI. Mr. Speaker, I rise to speak against the proposed construction of the Kinzua Dam as a part of the Allegheny Reservoir project contained in the Public Works Appropriation Act for 1958 and I am particularly concerned with the plight of the Indians of the Seneca Nation.

The Seneca Nation was and still is the largest of the Six Nations or Iroquois Confederation. The lands to be flooded by the reservoir created by the erection of the Kinzua Dam are the property of the Seneca Nation and the Government of the United States has given its solemn promise never to claim this land or disturb the Seneca Indians in the free use and enjoyment of these lands. The permanent, seasonal, and occasional flooding created by the erection of a dam near Kinzua, as proposed, violates the spirit and intent of the treaty guarantees pledged by our Government in 1794 over the signature of our first President, George Washington.

I feel that the time has come for Congress to stop enacting legislation that is inconsistent with prior treaties, for the arbitrary abrogation of Indian treaties without any compelling national interest is immoral, and shows bad faith on our part toward the Indians. The Seneca Indians have lived up to their side of the treaty for the past 165 years and it is about time the United States followed their example.

Long ago, the Indian said, "White man, many times, he speaks with a forked tongue."

A study of the treaty of 1794 and the Kinzua Dam proposal reveals how farsighted the Indian adage was.

The rights of the Seneca Nation have not been considered, and good faith has not been exercised in the planning, the design, and the proposed construction of the Kinzua Dam. It is not necessary to flood these Indian lands—it is merely economically convenient, although morally indefensible.

The Seneca Indians have a vested property right that should not be swept aside by administrative selection based upon tenuous economic arguments. The promises made in the treaty must be kept, and their title to these lands should remain sacred instead of being destroyed by implication, innuendo, and unauthorized acts.

We recognize the Seneca Indians as a distinct people, vested with rights which constitute a State or separate community. They are now a defenseless people, wards of the Nation, and dependent wholly upon it for protection and good faith.

The Kinzua Dam proposal will, in effect, make refugees out of these Indians, for it is an out-and-out land grab—destroying homes, buildings, and forcing them to leave their homes and move elsewhere.

Hallowed cemeteries will be desecrated and relocated to prevent artificial, man-made flooding of Indian graves. It is important to the Seneca Nation not to have their ancestral graves under water.

Congress has never, to this date, removed any of the restrictions of the 1794 treaty which was a voluntary restriction by our Government, modifying the inherent sovereign right of eminent domain.

For the record, let me emphasize that I believe wholeheartedly in flood control, but with proper regard for the rights and privileges of the affected residents of the area involved.

There is a serious question as to whether the Kinzua Dam project is a flood-control project. The CONGRESSIONAL RECORD shows argument for the project on the basis of supplying water for the domestic and industrial life of the Allegheny Valley and Pittsburgh antipollution and waterflow regulation as a major reason for the proposed dam. These industries can well afford to pay the expense of chemically treating their own waste, rather than pass the bills along to the Federal Government and the Seneca Indians.

The Kinzua Dam, like other bureaucratic daydreams, has grown from a 40-foot dam to a 180-foot monstrosity, all on paper.

Sportsmen leagues have condemned the man-made lake to be formed by it because it will destroy the existing, excellent recreational facilities of the Allegheny Valley.

The CIO Greater Buffalo Industrial Union Council supports the Seneca Indians in their fight against this proposed dam.

The city of Salamanca, N.Y., casts a wary eye on the proposal because of the possibility of the southwestern section of Salamanca being occasionally flooded by the backwaters of the reservoir created by the proposed Kinzua Dam.

I do not concur that it is impractical to have this project in a location other than that selected to prevent menace to the national welfare by destructive floods causing loss of life and property and the obstruction of commerce. I call for a reevaluation of the existing plans for the Allegheny Reservoir project and serious consideration of an alternative proposal labeled the "Conewango Diversion" whereby the flood flows of the Allegheny River can be diverted to Lake Erie through the construction of a diversion canal. This proposal has decided advantages over the Kinzua Dam proposal, for the additional water diverted to Lake Erie would be welcome for power potentials at Niagara Falls, would provide greater flood protection to the Pennsylvania cities concerned, would destroy no Indian lands, would be cheaper to construct and save millions of tax dollars, would create new recreational areas rather than destroy existing ones. I call upon the Army engineers to take an openminded, impartial, engineering approach to this alternative proposal of a diversion canal and to call a halt to the expenditure of any public funds in the direction of the construction of a dam at Kinzua.

DECENTRALIZATION PROGRAM AT WRIGHT-PATTERSON AIR FORCE BASE

Mr. SCHENCK. Mr. Speaker, I ask unanimous consent that the special order heretofore granted me for today be vacated and that I may have permission to extend my remarks at this point in the RECORD.

The SPEAKER. Is there objection to the request of the gentleman from Ohio?

There was no objection.

Mr. SCHENCK. Mr. Speaker, most of the Members of the Congress will recall that a decentralization program was undertaken at Wright-Patterson Air Force Base, Ohio, several years ago. Many of us are also aware of the fact that the changes made were very expensive, both in funds and in time lost by relocation. Currently some of the relocated functions have been returned to Wright Field for greater efficiency.

Last week when I was in my district, I learned of a situation which is causing me a great deal of concern, and I feel that all Members of Congress will also be concerned. I have learned that the Air Force is contemplating moving the responsibility for research and development of rockets from Wright Air Development Center, Dayton, Ohio, to Edwards Air Force Base, Calif.

Let me say right now that I have no selfish motive in opposing such a move but do so in the overall interest of our national defense. While all of us are properly concerned with keeping jobs in our own districts, the problem here transcends local considerations. This is especially true at this very time when so much depends on the elimination of unnecessary time lags and on the procurement of defense needs in the most economical manner possible.

In the present instance it is my understanding this proposed move would not only affect the research and development of rockets but that it would also affect about 200 scientifically trained personnel. The conditions at Edwards Air Force Base, I am told, are not conducive to attracting technical personnel to its desert location. Consequently, a great number of these people will be lost to the critical rocket work until replacements can be trained.

Of prime consideration, however, is the fact that the Wright Air Development Center area is best for rocket research and development because of its location in the Wright-Patterson Air Force Base complex. Procurement and contracting headquarters are here. In research procurement at Wright-Patterson there is a constant need for personal contact between the laboratories and the procuring agency. Joint daily review of documents is necessary to cut down the already long lead time in developing this country's research. When all the liaison between procurement and Wright Air Development Center has to be done by telephone or writing, this doubles the procurement cycle and has a very harmful effect on the Air Force surveillance of the program. It is my understanding that it is absolutely essential from the standpoint of efficiency for project engineers managing various projects to have frequent personal contact with appropriate procurement personnel.

Also of importance is the fact that many contractors are located in the Wright Field area, and company technical personnel are able to meet with Air Force research and procurement people. Thus an ideal situation now exists with development, procurement, and manufacturing representatives all working in closest cooperation and with a minimum of lag time on projects. As it becomes necessary to require the technical personnel of the various manufacturers to travel long distances, this cannot help but necessarily add to procurement costs, thereby increasing the costs of these projects to our Government. If the propulsion engineering is moved to Edwards, then because of the advantages of having the project engineering team close to procurement, Air Materiel Command will find it necessary to move all of the rocket propulsion procurement from Dayton, Ohio, to ballistic missile center, California. Supposedly there is a strong move afoot in the Air Force to put all of the propulsion procurement at ballistic missile center. Some of the recent programs in this category have already been shifted from Wright Field to the west coast.

Similar moves have been accomplished by the Air Force before, and a good example was when they moved armaments from the armament laboratory at Wright Air Development Center to Eglin Air Force Base. The key people involved did not transfer to Eglin, and thus a break in the project engineering surveillance came about with the result, I am told, that some of the programs were without Air Force engineering for some time. The Air Force lost the key people and eventually lost the armaments area itself to the Army.

The weapon system project offices are supported by the rocket group in the propulsion laboratory; and if this propulsion group is transferred, it will leave the weapon system project office without engineering support. Rocket propulsion is one of the key problems with the Air Force, National Aeronautics and Space Administration, and Advanced Research Projects Agency. Removal of this Wright Air Development Center function at Wright Field will leave many other laboratories with only a partial picture of the complete Air Force research area.

Prominent military men are continually pointing out the need for a stepup in our programing and the need for a reduction of lead time. In this instance, however, both of these objectives will be adversely affected. I cannot stress too greatly the need for a complete investigation of this contemplated move, and I urge immediate action by the appropriate committee of the Congress.

Mr. BROWN of Ohio. Mr. Speaker, will the distinguished gentleman from Ohio [Mr. SCHENCK] yield to me?

Mr. SCHENCK. I am happy to yield to my distinguished colleague from Ohio who so ably represents the adjoining Seventh District of Ohio, in which Wright-Patterson Air Force Base is also located in part.

Mr. BROWN of Ohio. Mr. Speaker, I want to commend my distinguished friend and neighbor for the clear and splendid way in which he has presented this important matter. I also want to commend him for his constant vigilance and work not only in behalf of the district he represents so well here but also for his very effective efforts in behalf of the best interest of our entire Nation.

Mr. Speaker, these are indeed critical times, filled with worldwide tensions and problems; and we can ill-afford to take needless chances with our national security and safety. I want to associate myself, Mr. Speaker, with the timely remarks made by my associate and to urge that the most careful study and consideration be given to this matter by the U.S. Air Force Headquarters before they make a final decision. I also join with my friend, the distinguished gentleman from Ohio [Mr. SCHENCK] in urging the appropriate committees of the Congress to take every step available to them to inquire into the merits of this proposed move.

Mr. SCHENCK. I thank the distinguished gentleman for his remarks and support.

A BILL TO ESTABLISH A U.S. ARTS FOUNDATION

Mr. WOLF. Mr. Speaker, I ask unanimous consent to extend my remarks at this point in the RECORD, and to include a bill I introduced today.

The SPEAKER. Is there objection to the request of the gentleman from Iowa?

There was no objection.

Mr. WOLF. Mr. Speaker, I am introducing a bill to establish a U.S. Arts Foundation. This foundation, I hope, will stimulate the growth throughout the United States of the performing and composing arts. It is the intention of my bill, which is similar in scope and purpose to that of S. 1598, introduced yesterday by Senator JAVITS, of New York, and Senator CLARK, of Pennsylvania, to foster, encourage, and stimulate the production of plays, concerts, ballet, and other performing art forms throughout the United States. My bill calls for the encouragement and aid by the arts foundation to playwrights and composers.

Mr. Speaker, we are the greatest Nation in this world. We have raised our standard of living to a level unparalleled in the history of civilization. We have a technical and scientific colossus that has no equal. Our military might is very great. The freedom that we have and the sense of pride that we have in our Nation is not matched by any other people for their nation.

Yet, there is one vital element of our national character that is not strong. There is no question that the cultural life of America as it manifests itself in support of the arts can and must be improved.

The United States as a nation lags far behind almost every nation in Europe in aid that is given to composers, playwrights, and the performing arts.

For example, in Great Britain and Canada, respectively, there is a British and Canadian Arts Council. These councils do much to stimulate the performing arts in their respective countries. In Italy there are literally scores of government-aided opera houses and orchestras. Almost every city has a state opera, orchestra, and theater financed by grants from the federal, state, and local governments. In France, there is strong support by the French Government for the opera. There is also strong support in Austria, which spends a relatively high percentage of its budget on the performing arts.

Senator JAVITS has pointed out in an article first appearing in the New York Times on Sunday, and now appearing on page 5438 of the CONGRESSIONAL RECORD, April 7, 1959, that "while the proposed bill for an arts foundation might be considered precedent shattering in the United States, it would be taken for granted nearly anywhere else in the world."

Let us hope that the United States will not continue to lag behind in an area which is of paramount importance to the greatness of our Nation.

In closing I would like to state our interest in this proposal out in the Middle West. As we all know, most of our performing and creative arts center in just a few big cities in this Nation. Obviously, this does not help the people who do not live in these three or four big cities. Through stimulation and encouragement by the arts foundation, community theater groups, orchestras, ballet, choral singing will become an important part of the lives of the small communities of this land. Art and the performing arts are not only for the big cities. They are for people wherever they might live.

Without objection, Mr. Speaker, I would like to introduce this bill into the body of the RECORD.

A bill to establish the United States Arts Foundation

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled,

ESTABLISHMENT OF FOUNDATION

SECTION 1. There is hereby established in the executive branch of the Government an independent agency to be known as the United States Arts Foundation (hereinafter referred to as the "Foundation").

DECLARATION OF POLICY

SEC. 2. The Congress finds that a large and progressively increasing proportion of the people of the United States are deprived of the opportunity to view and enjoy living theatrical performances, musical concerts, opera, dance, ballet, and choral recitals, and the performing arts generally; that the general welfare will be promoted by providing national recognition of the status of the theater and other performing arts as a cherished and valued part of the Nation's cultural resources since colonial days, and as a valued means for the building of morale among the civilian components engaged in defense production and among the Armed Forces, and for the promotion of education, national culture, recreation, skill in the arts, and beneficial utilization of leisure time; that it is desirable to establish a United States Arts Foundation to provide such recognition and also to consider how the presentation to and appreciation by the people of theatrical and other performing arts and productions may best be stimulated in civic and educational groups as well as professional companies throughout the Nation and regions thereof (including ships, airfields, posts, camps, and stations of the Armed Forces and mines, plants, and offices of the civilian component production forces) and to take steps appropriate to stimulate such increased and more widespread presentations.

TRUSTEES OF FOUNDATION

SEC. 3. (a) The Foundation shall be subject to the general supervision and policy direction of a board of trustees which shall consist of twelve members to be appointed by the President, by and with the advice and consent of the Senate. The President shall endeavor to provide representation to the several performing arts, to both civic, educational, and professional groups concerned with and engaged in productions of the performing arts, to the trade unions and trade associations concerned with the performing arts, and to the attending public. The President is requested, in the making of nominations, to give due consideration to recommendations for nomination which may be submitted to him by the representative associations of the foregoing and of organizations and associations concerned with the encouragement and development of the performing arts.

(b) The term of office of each trustee of the Foundation shall be six years in duration, expiring on April 30, except that the terms of the trustees first taking office after the enactment of this Act shall expire, as designated by the President at the time of appointment, four at the end of two years, four at the end of four years, and four at the end of six years, subsequent to the April 30 following the enactment of this Act. A vacancy shall be filled only for the unexpired portion of the term. Any person who has been a trustee of the Foundation for twelve consecutive years shall be ineligible for appointment during the following two-year period.

(c) The President shall call the first meeting of the trustees of the Foundation, at which the first order of business shall be the election of a Chairman and a Vice Chairman.

PRINCIPAL POWERS AND DUTIES OF THE FOUNDATION

SEC. 4. (a) The Foundation is authorized and directed to—

(1) stimulate and encourage throughout the United States the study of and the advancement of the performing arts and public interest therein;

(2) stimulate and encourage within such reasonable limitations as it shall determine the presentation throughout the United States, and to the widest practicable audiences, of productions of the performing arts, of both new works and works drawn from the existing literature of those arts, which have substantial artistic or historic significance, giving preference to stimulating and encouraging the works of citizens and residents of the United States and of the Americas;

(3) foster and encourage professional and civic and nonprofit, private, public, educational, institutional, or governmental groups which are engaged in or directly concerned with the performing arts and productions;

(4) foster and encourage maintenance of registers, as may be deemed advisable, of theaters, personnel, or otherwise; and make such surveys and analyses as may be deemed advisable in the interest of the performing arts throughout the country;

(5) promote, encourage, and provide financial assistance through grant, fellowship, and scholarship for composers and students of composition, playwrights and students of playwrighting, for the purpose of encouraging new plays and musical compositions; and

(6) provide through direct grant or otherwise financial assistance and support from the funds appropriated to the Foundation or otherwise obtained pursuant to this Act or other Acts, to professional groups, and groups meeting professional standards, and educational groups, engaged in or concerned with the performing arts and productions, for the purpose of enabling such groups to provide productions of such type, or in such regions, as would be unavailable to the prospective audience without such assistance, or to provide instruction in the performing arts, but such groups shall be eligible for financial assistance only if no part of the net earnings of such groups inures to the benefit of any private stockholder or stockholders, or individual or individuals, and if such groups satisfy the standards of subsection (c) of section 170 of the Internal Revenue Code of 1954 so as to authorize deductions from gross income of donations to such groups. The Foundation shall wherever practicable develop the principle of matching funds with interested agencies public or private.

(b) The Foundation shall not produce or present any production.

(c) The trustees of the Foundation shall meet four times each year, beginning on the first Monday in February, May, August, and November, and at such other times as the Chairman may determine. The Chairman shall also call a meeting whenever one-third of the trustees so request in writing. A majority of the trustees of the Foundation shall constitute a quorum. Each trustee shall be given notice, by registered mail mailed to his last-known address of record not less than fifteen days prior to any meeting, of the call of such meeting.

(d) The first Chairman and Vice Chairman of the Foundation shall be elected by the Foundation to serve until the first Monday in May next succeeding the date of election at which time a Chairman and Vice Chairman shall be elected for a term of two years. Thereafter such election shall take place at the annual meeting occurring at the end of each such term. The Vice Chairman shall perform the duties of the Chairman in his absence. In case a vacancy occurs in the chairmanship or vice chairmanship, the Foundation shall elect a trustee to fill such vacancy.

(e) The Foundation shall render an annual report to the President for submission on or before the 15th day of January to the Congress, summarizing the activities of the Foundation and making such recommendations as it may deem appropriate.

DIRECTOR OF FOUNDATION

SEC. 5. There shall be a Director of the Foundation (hereinafter referred to as the "Director"), who shall be appointed by the President, by and with the advice and consent of the Senate. In the appointment of the Director of the Foundation, the President is requested to give due consideration to the recommendations for such an appointment which may be submitted to him by the Board of Trustees, and the Board of Trustees in making such recommendations shall give due consideration to the recommendations which may be submitted to them by the representative associations referred to in section 3(a) of this Act. The Director shall serve as an ex officio trustee of the Foundation. In addition, he shall be the chief executive officer of the Foundation. The Director shall receive compensation at the rate of $22,500 per annum and shall serve for a term of six years unless sooner removed by the President: *Provided*, That at any time a majority of the Board of Trustees may recommend such removal to the President.

ADMINISTRATION AND ENABLING AUTHORITY

SEC. 6. (a) The Foundation may appoint committees or councils or panels concerned

with particular regions of the country or with particular aspects of the performing arts, or both, and composed of persons who need not be trustees of the Foundation, or of organizations. The Foundation shall maintain an office in the District of Columbia, and in such other places through the country as it may deem appropriate.

(b) The Director shall have general authority to carry out and execute the programs of the Foundation on a full time, continuous basis, to recommend programs to the Foundation and to discharge such other functions as the Foundation may delegate to him, including functions vested in the Foundation by this Act. Except as specifically approved by the Foundation, the Director shall not hold any office in, or act in any capacity for, any group or institution with which the Foundation makes any contract, or to which it gives any award or assistance.

(c) The Foundation is specifically authorized to—

(1) prescribe such rules and adopt such bylaws as it deems necessary governing the manner of its operation and its organization and personnel;

(2) make expenditures, and enter into contracts or other arrangements, as may be necessary for administering the provisions of this Act, without regard to the provisions of section 3709 of the Revised Statutes (41 U.S.C. 5);

(3) make advance, progress, and other payments which relate to research in the performing arts without regard to the provisions of section 3648 of the Revised Statutes (31 U.S.C. 529);

(4) acquire by purchase, lease, loan, or gift, and to hold and/or dispose of by sale, lease, or loan, real and personal property, to receive and use funds or property donated by others, and such donations shall be classified as contributions deductible from gross income within the meaning of section 170 of the Internal Revenue Code of 1954;

(5) publish or arrange for the publication of information relating to the performing arts and productions, or personnel engaged therein, without regard to the provisions of section 11 of the Act of March 1, 1919 (44 U.S.C. 11);

(6) accept and utilize the services of voluntary and uncompensated personnel;

(7) pay fees for and to enter into contracts with persons for the performance of services required by the Foundation; and

(8) pay to employees of the Foundation, and to all other persons rendering services to the Foundation, whether on an uncompensated basis or on a fee or contract basis, actual and necessary traveling and subsistence expenses (including, in lieu of subsistence, per diem allowances at a rate not in excess of $15) when engaged away from home, in business of the Foundation.

(d)(1) The Foundation is authorized to make loans to any professional group, or any group meeting professional standards, or any educational group meeting standards prescribed by the Foundation engaged in or connected with the performing arts and productions or in instruction therein. Such loans may provide for payment to the Foundation of a percentage of the net profits of the production or productions, or of interest, or both, as may be determined by the Foundation.

(2) A group shall not be eligible for assistance under subparagraph (1) unless (A) such group satisfies the standards of subsection (c) of section 170 of the Internal Revenue Code of 1954, so as to authorize deductions of donations to such group from the gross income of the donor, and (B) no part of the net earnings of such group inures to the benefit of any private stockholder or individual.

INTERNATIONAL COOPERATION

SEC. 7. (a) The Foundation is authorized, with the approval of the President and to the extent specified by such approval, and in consultation with the Department of State, to cooperate in, assist, and sponsor international activities relating to the performing arts, including the assistance to or sponsorship of performances in other countries.

(b) The Director, with the approval of the Foundation, and subject to consultation with the Secretary of State, may defray the expenses of trustees or employees of the Foundation, and members of councils or committees of the Foundation, in attending meetings, congresses, and performances in other countries relating to the performing arts, whenever he deems it necessary in the promotion of the objectives of this Act.

APPROPRIATIONS

SEC. 8. (a) There is authorized to be appropriated to the Foundation for each fiscal year such sums as shall be necessary to carry out the provisions of this Act. The moneys appropriated to the Foundation shall remain available for expenditure for two years following the expiration of the fiscal year for which appropriated.

(b) Moneys received by the Foundation pursuant to paragraph (4) or (5) of section 6(c), or pursuant to section 6(d), of this Act, shall not be covered into the Treasury as miscellaneous receipts, but shall be kept in a special account, maintained by the Treasury Department, or may be kept by the Foundation in commercial banking institutions, or invested in securities eligible for trust funds in the District of Columbia.

GENERAL PROVISIONS

SEC. 9. (a) The Director shall, in accordance with such policies as the Foundation shall from time to time prescribe, appoint and fix the compensation of such personnel as may be necessary to carry out the provisions of this Act. Such appointments shall be made and such compensation shall be fixed in accordance with the provisions of the civil-service laws and regulations and the Classification Act of 1949, as amended, except that the Director may, in accordance with such policies as the Foundation shall from time to time prescribe, employ such technical and professional personnel or personnel with experience in or relating to any of the performing arts, and fix their compensation, without regard to such laws, as he may deem necessary for the discharge of the responsibilities of the Foundation under this Act. The Deputy Director hereinafter provided for, and the members of the councils or committees, shall be appointed without regard to the civil-service laws or regulations. Except with the approval of the Foundation, neither the Director nor the Deputy Director shall engage in any other business, vocation, or employment than that of serving as such Director or Deputy Director, or hold any office in, or act in any capacity for, any organization, agency, or institution with which the Foundation makes any contract or other arrangement under this Act.

(b) The Director may appoint, with the approval of the Foundation, a Deputy Director, who shall perform such functions as the Director, with the approval of the Foundation, may prescribe and shall be acting Director during the absence or disability of the Director or in the event of a vacancy in the Office of the Director, and who shall receive compensation at a rate not to exceed $20,000 per annum.

(c) The trustees of the Foundation, and the members of the council and committees, shall receive compensation at the rate of $50 for each day engaged in the business of the Foundation pursuant to authorization of the Foundation, and shall be allowed actual and necessary traveling and subsistence expenses (including, in lieu of subsistence, per diem allowance at a rate not in excess of $15) when engaged, away from home, in the duties of their offices.

(d) Persons holding other offices in the executive branch of the Federal Government may serve as members of the committees or councils, but they shall not receive remuneration for their services as such members during any period for which they receive compensation for their services in such other offices.

(e) Service of an individual as a trustee or employee of the Foundation, of a committee or council, shall not be considered as service bringing him within the provisions of section 281 or section 283 of title 18 of the United States Code unless the act of such individual, which by such section is made unlawful when performed by an individual referred to in such section, is with respect to any particular matter which directly involved the Foundation or in which the Foundation is directly interested.

(f) Agencies of the United States Government are authorized to render assistance to the Foundation by the donation or loan of employee services and by the donation or loan of supplies, office or building space, or other property, either on a reimbursable or nonreimbursable basis.

(g) The Foundation shall provide a reasonable system for control and accountability of all funds of the Foundation, and shall consult with and consider the suggestions of the Comptroller General with regard thereto.

DEFINITION AND TITLE

SEC. 10. As used in this Act—

(a) The term "performing arts" means the arts related to performances of theatrical plays, dance, ballet, and choral performances, and performances of musical works (instrumental, voice, and/or operatic); and includes the arts of playwriting, acting, directing, staging, scenic and costume design, and composition and performance of music, opera, and dance and ballet.

(b) The term "productions" means plays (with or without music), ballets, dance and choral performances, readings, concerts, recitals, operas, and any other performances before members of the public involving the execution or rendition of any of the performing arts and meeting such standards as may be established by the Foundation.

(c) The term "group" includes any society, institution, organization, or association, whether or not incorporated.

SHORT TITLE

SEC. 11. This Act may be cited as the "United States Arts Foundation Act."

BATAAN DAY

Mr. McCORMACK. Mr. Speaker, I ask unanimous consent to address the House for 1 minute and to revise and extend my remarks.

The SPEAKER. Is there objection to the request of the gentleman from Massachusetts?

There was no objection.

Mr. McCORMACK. Mr. Speaker, 17 years ago tomorrow the world saw the strength and vitality of American ideals and it is good to recall the historic event that showed it beyond the peradventure of a doubt. Filipino and American troops fought side by side to the bitter end in Bataan. That they faced odds that taxed their courage and

endurance seldom undergone by men in the history of all wars is an epic that will live forever. What gave them the fortitude and the valor to withstand what they so heroically endured was the unity that welded them together as no two nations of two different races were united before: a unity brought about by the ideals of democracy and freedom for which they fought.

Faced as the world is today by the threat of communism which is the antithesis of democracy and freedom as Americans and Filipinos have learned to value them, it is important to recall the epic that is Bataan, for it underscored what can be brought about by mutuality and understanding between two nations. When we first went to the Philippines we were misunderstod. It is possible that some of our actions then were subject to misinterpretation. The Filipinos who loved freedom fought us for 3 years. Gradually, however, we showed that we meant well by them, that the overwhelming sentiment among the American people was to help them to develop into a self-governing nation. All our subsequent acts proved this. At first we promised them independence as soon as they are able to maintain a stable government. Then we fixed a definite date for independence. When the date came, independence was proclaimed as pledged.

When war was declared by Japan, the Philippines was still a Commonwealth. It was an American Territory. It was the American flag that was attacked. But the Filipinos rallied to defend our flag with loyalty and devotion. The Philippine Army resisted the enemy in a manner that won the admiration of the world. The Filipino guerrillas organized and maintained a resistance movement that harassed the occupation troops for more than 3 years. With their guerrilla tactics they not only weakened the enemy but they helped save thousands of American lives. The memory of this loyalty and devotion to the United States we cannot forget and I recall them today with gratitude and admiration.

Bataan will always live in the heart of every American. It will always be a symbol not only of human courage but of an undying faith in those spiritual values that are inseparable from the democratic way of life. It ennobles us as a people to cherish the memory of the loyalty of our allies, the Filipinos. Theirs is a friendship tested and true and it is a friendship that we must never subordinate to any consideration dictated by expediency or self-interest. Only thus can we prove to the world that we know how to appreciate the loyalty of friends. As Gen. Carlos P. Romulo, Philippine Ambassador to the United States, said in a recent speech in New York City:

> Friendship is a thing of the spirit and loyalty to it cannot be bought with dollars or with rubles. Peoples who are used to have little of consumer and capital goods but who have depended only on their spirituality for their happiness in the past may more easily be attracted by that leadership now which can offer them a friendship that is steadfast and abiding, a friendship that will be loyal to them no matter what the shifts and changes may be in the world's balance of power.

In honoring the memory of the fallen brave of Bataan today let us reassure our Filipino friends with our deeds that American friendship for them is steadfast and abiding and that as a Nation we will always keep faith with them as it is our sincere and devout hope they will always keep faith with us.

AMERICAN DEMOCRACY PROGRAM

The SPEAKER pro tempore. Under the previous order of the House, the gentleman from Illinois [Mr. O'HARA] is recognized for 1 hour.

Mr. O'HARA of Illinois. Mr. Speaker, today it is my privilege and my pleasure to report to the House and to the American people on the amazing and most heartening progress of a program aimed at winning the hearts and the minds of people everywhere. I have selected April 8 as the date for this report because it was on April 8, 1954, just 5 years ago, that a constituent of mine, Thomas B. Stauffer, wrote me a letter that started a chain of activities that resulted in the program that now is known the world around as the classics of American democracy program.

Five years ago, when first I was alerted by this letter from a constituent at that time unknown to me, there were no copies available anywhere in the world on a grassroots level of the books in which our forefathers found their inspiration. Not even the Constitution of the United States and the Declaration of Independence had been translated into languages so that they could be read and understood by the peoples in awakening lands and as hungry for democratic inspiration as were our forefathers.

Five years ago, when I received this letter from a constituent then unknown to me, I could not believe what he told me that such outstanding classics of democracy as the "Federalist" had not been translated into other languages. But a check by my administrative assistant, Marie Crowe, herself a student of history and an author of textbooks on American history and on our Constitutional convention, revealed that the Federalist papers had been translated into only two or three European languages in limited editions, then long out of print.

That was 5 years ago. We then had been spending, and this expenditure I am not criticizing, large sums of money on our mutual security program. We had been building up the military strength and the economic stability of the nations that were joined with us in the cause of democracy.

But we had not been reaching into the minds and the hearts of people. Mr. Speaker, this should be self-evident that you do not have an ally who will stand with you steadfastly in the sunshine and in the storms unless he is bound to you in heart and in mind by an understanding that the cause in which he and you are enlisted is worth more to him and to you than life itself. Men can be armed to fight, and the arms may be the last word in modern armaments, but they will not stand up under assault and laugh scornfully as the odds against them grow unless there is something in their minds and in their hearts that bids them stand fast.

Five years ago we were losing the fight for the minds and the hearts of the peoples of the world. The classics of American democracy that had inspired our forefathers were not anywhere available on the grassroots level. There were a few copies, in expensive bindings and in English, on the shelves of embassies and of libraries that relatively few people visited and none except from the elite. Meanwhile, in every bookstall and in every language and at prices within the reach of everyone were the works of the architects of the ideology of communism.

Today the picture has been changed. It has all happened in the period of 5 years since the receipt 5 years ago today of a letter from a constituent of mine then unknown to me. Today the classics of democracy, and by that I mean those immortal works that gave inspiration to our own forefathers, have been translated into many languages, have been printed, sometimes on old delapidated presses by publishers in many countries, have by these publishers been distributed to booksellers and sold at prices within the reach of everyone. The response has been tremendous. Today in all the countries of the world these classics are being purchased from local booksellers, not as propaganda forced upon them but as something for which they feel the need as blueprints in democracy to guide them in their search for governmental structures that will assure to them government of, for, and by the people. As our forefathers sought to place the dignity of man beyond the perils of selfish government and the frailties of human nature, so are these peoples in lands now awakening looking for guidance and inspiration to the same sources.

Five years ago the Soviet was in complete command of the situation.

Mr. Speaker, today the picture has completely changed. Our country today is gaining in the fight for the hearts and the minds of peoples everywhere. Today the classics of democracy, that inspired our forefathers, in inexpensive translated editions are in the hands of readers all over the world. They are not being given away. They are not being forced upon the people. They are not under suspicion as American propaganda because in fact and in truth they are the products of local publishers and sold at popular prices in local bookstores. This grassroots program has worked so well that the Soviet has been forced to revise its own techniques. What we have done has shown up the Soviet giveaway program as pure propaganda.

Mr. Speaker, we hear so much of anti-American feeling in Latin America, in Africa, and throughout the world that it is most heartening to know that our

program aimed solely and unselfishly at reaching the hearts and the minds of people everywhere is meeting with this response.

The record must speak for itself. This is the first public announcement of what has been accomplished. I am sure it will be heartening to all Americans. We Americans do have faith in our democracy, and that faith has descended into every succeeding generation by the faith that was instilled in our forefathers by the books they read, books that were written by many persons in many different countries, but which together form a bible of democracy somewhat comparable to the Bible of religious faith. It will be heartening in every American home to know that this bible of democracy translated into many tongues and made available in inexpensive editions is being grasped as food to the hungry by peoples everywhere just as it gave understanding of democracy and inspiration to achieve democracy to our own forefathers.

Mr. Speaker, here is the report. It is prefaced by a letter to me under date of March 6, 1959, from the Honorable George V. Allen, the able Director of the U.S. Information Agency. It is a complete statement of the languages into which the classics of democracy have been translated, the size of the various editions, and the prices at which they have been offered for sale in native bookstores. Here is the report:

DIRECTOR ALLEN'S TRANSMITTAL LETTER

MARCH 6, 1959.

DEAR MR. O'HARA: I am enclosing two copies of the latest report on the classics of democracy which I understand you wished to have. I hope you will find the comparison between your hopes of a few years ago for bringing these important books to the attention of foreign readers and the accomplishments of American publishers and the U.S. Information Agency both satisfying and rewarding.

In addition to the publications noted in the report, American and foreign publishers have produced a number of classics titles for distribution abroad, in English and translated editions of 10,000 copies or more, in projects not associated with standard agency translations programs. Most of the titles so published are included on the attached list. Among those not listed are: "The Political Writings of John Adams"; "A Disquisition on Government" by John C. Calhoun; "David Hume's Political Essays"; "Selected Writings of Thomas Paine"; "Second Treatise on Government," by John Locke; and "Representative Government," by John Stuart Mill.

We are proud to play a part in this undertaking and are grateful to you for your continued support and interest.

Sincerely,

GEORGE V. ALLEN,
Director.

Report on classics of democracy

[1] Expected date of publication December 1959.
[2] Expected date of publication April 1959. No definite plans presently for Tamil, Telugu, Kannada, Malayalam editions; however the posts in India expect to place "The Federalist Papers" in 1 or more of these south Indian languages by the end of the year.
[3] Free distribution.
[4] A set.

GERMAN EDITION—THE FEDERALIST PAPERS

The German translation of The Federalist Papers was published in October in Vienna by the Manzsche Verlags- und Universitaetsbuchhandlung under the title "Der Federalist"

USIS Bonn received 400 copies. USIS Bern requested, and received, 25 copies for the mission's use. Sample copies were sent, as usual, to USIS posts in Sidney, Ankara, São Paulo, Buenos Aires, Asunción, Belgrade and Zagreb.

It has been deemed wiser and more effective to leave the promotion of this capital work to the Austrian publisher and to the editor, Prof. Felix Ermacora, both of whom are well known and respected in the German speaking countries. The latter, a renowned Austrian authority on international law and political science, who also wrote an excellent preface, has recently been appointed to a professorship at the University of Munich.

In addition to routine publicity in publisher's magazines in Austria, Switzerland, and Germany, advertisements in the trade journals, and distribution of leaflets, the Austrian publisher sent reviews and examination copies to the following professional journals:

Oesterreichische Juristenzeitung, Wein I., Justizpalast.

Zeitschrift fuer oeffentliches Recht, Wein I., Moelkerbaste 5.

Salzburger Nachrichten, Wein I., Rotenturmstrasse 25.

Juristische Blaetter, Wein I., Moelkerbastei 5.

Juristen-Zeitung, 14b Tuebingen, Wilhelmstrasse 18.

Frankfurter Allgemeine-Zeitung, Frankfurt/Main, Boersenstrasse 2.

Archiv des oeffentlichen Rechtes, 14b Tuebingen, Wilhelmstrasse 18.

Zeitschrift fuer die gesamte Staatswissenschaft, 14b Tuebingen, Wilhelmstrasse 18.

Zeitschrift fuer auslaendisches Recht und Voelkerrecht, Berlin W 35. Genthinerstrasse 13.

Archiv fuer Rechts- und Sozialphilosophie, Budenheim bei Mainz, Ernst-Ludwig-Strasse 1.

At the instigation of Professor Ermacora, the publisher has already presented copies of The Federalist Papers, in German, to Austrian Federal Chancellor Raab Education Minister Drimmel, and to most of the prominent professors of political science and constitutional law in Austria and Germany. The post has limited itself by agreement with the publisher, to an institutional presentation program in Austria aimed at schools of higher learning, university and government libraries, radio stations and daily newspapers as well as trade union periodicals.

At a recent conference of German, Swiss, and Austrian political scientists in Vienna, Professor Ermacora held a lecture on "The Federalist Papers" and distributed copies to interested participants.

ITALIAN EDITION—THE FEDERALIST PAPERS

Our latest communication (June 6, 1958) regarding the success of the Italian edition of "The Federalist Papers" states:

" 'The Federalist' still continues to be of high interest to students and professors of political science and government, and also to European federalists. Last March, it was the basic text for a seminar on American federalism held at the University of Pavia.

"The publisher of 'The Federalist' is interested now in doing a series of related books on the American Constitution. This month, the first of these will appear: 'The Constitution and What It Means Today,' by Edward S. Corwin. Meanwhile, members of the original group of scholars who translated 'The Federalist' are at work on an anthology of documents relating to the origins of the Constitution, for which they have also received important assistance from the Ambassador (who originally encouraged translation of 'The Federalist').

"In short, it may be said that publication of 'The Federalist Papers' has been one of the most successful undertakings of our translation program."

SPANISH EDITION—THE FEDERALIST PAPERS

The publication of "The Federalist Papers" enjoyed immediate acceptance by the Argentine press. Its appearance at the time immediately preceding the meeting of the Argentine Constitutional Delegates contributed to its rapid sale. The agency's support contributed to the lowering of the retail price and thereby made the book a popular edition. Ninety-five percent of the 10,000-copy edition has been sold and a large second edition is under consideration by the publisher.

The following review of the Spanish edition of "The Federalist Papers" appeared in a leading Buenos Aires newspaper El Pueblo: " 'The Federalist Papers' is the name under which political science has gathered the series of 83 newspaper articles which were the first commentary on the Constitution of the United States, edited by two Philadelphia Convention delegates—Hamilton and Madison— and by an intimate collaborator—Jay—of the great men whom, with filial respect, the Americans have named "Founding Fathers." Apart from the juridical interest—which for us has particular importance since 'The Federalist Papers' was basic reading for the original Argentine Constitutional Delegates—this work occupies an outstanding place in the history of political ideas, equivalent without a doubt to that of 'Spirit of the Laws' (Montesquieu) or to the 'Treatise of Civil Government' (Locke). As an absolute archetype, 'The Federalist Papers' is expressive of that which we might call the liberal thought of rights. The present edition does not consist of an integral reproduction of all the articles. It is, rather, a selection that constitutes the essentials of the work, systematized, on the other hand, in a clear manner which makes it more accessible to the nonspecialized reader. With the last Spanish language version out of print, it is worth while to call attention to the edition under review, which fills an appreciable void at a moment when the reform of the Argentine Constitution is under debate."

La Epocha: "These 'Federalist Papers' should be read by those who will go to the 'Reforming' Constitutional Convention in Santa Fe and by all those interested in constitutional problems—in sum ('The Federalist Papers') is an enlightening book especially since its spirit continues to be current in all the federal republican forms of government—such as ours."

Critica: "Thus it ('The Federalist Papers') constitutes a body of homogenous doctrine, a lucid exposition of motives, a living document from the past. This text acquires great actuality during these momentous and historic moments which we are now living in and the Constitutional Delegates would do well to read this book, as was done by the leaders of 1789."

El Laborista: "As much in our country as in many others of this hemisphere the wise pronouncements of 'Publius' are inscribed as in bronze in the spirit of these fundamental laws which preceded not only the progress and the security, but the liberty and justice of the New World. Its ('The Federalist Papers') reading is useful and obligatory for all those citizens interested in the future of Argentina."

SPANISH EDITION—"LINCOLN, THE PRAIRIE YEARS AND THE WAR YEARS," SANDBURG

This is a great book by a great poet about a great man. It is the fruit of 40 years of patient labor that the renowned American poet dedicated to the study of the personality of the exemplary President—Abraham Lincoln, the authentic champion of popular democracy, without a doubt merited this homage. The biography is as vast as his immense figure demands. But this book by Sandburg is like a hymn to his greatness, like the solemn consecration of his glory. (Review from Clarin, Jan. 19, 1958, Buenos Aires.)

BURMESE EDITION—"ABRAHAM LINCOLN," DAUGHERTY

Three editions of "Abraham Lincoln" by James Daugherty, totaling 20,000 copies, have been published in Burmese. The book was extremely popular with the Burmese reading public and may be considered as one of the alltime bestsellers in that country.

ITALIAN EDITION—"DEMOCRACY IN AMERICA," DE TOCQUEVILLE

Published in the fall of 1957 in a 12,000 copy Italian language edition, "Democracy in America," by De Tocqueville, had sold approximately 90 percent of its stock by January 1, 1959.

ENGLISH EDITION

Among the English paperback editions Lord Charnwood's "Abraham Lincoln" is one of the most popular items. It has sold approximately 45,000 copies.

HISTORY OF THE PROGRAM

Members of the House who were also present in the 84th and 85th Congresses will recall that on a number of previous occasions the distinguished gentleman from Ohio [Mr. FEIGHAN] and I have urged that it would be desirable that the U.S. Information Agency should, among its many and divers activities, include a program tending to promote the publication in very inexpensive form, both in English and in translation, into the principal languages of the world, of the historic basic books of democratic political thought. They have developed in free debate in the common international spiritual heritage of Western civilization. I call these books the classics of democracy.

When the classics of democracy program was first proposed, three basic objections were raised. First, it was said that over the years these basic classics had undoubtedly already become available in all countries. However, researches confirmed by the Library of Congress showed that this was in fact not the case, either through the years or currently; for instance, in 1954, The Federalist Papers, the great fundamental exposition of the rationale of a Federal republic and of the United States Constitution, by James Madison, Alexander Hamilton and John Jay, was not in print in any language other than English.

Further, in the 167 years which had then passed, since the publication of The Federalist Papers no edition had been published in any of the languages of Asia and there had been complete editions in only three of the languages of the Western civilization. The case with the other international classics of democracy is generally similar to that of The Federalist Papers.

By contrast, as a result of the vigorous execution of the classics of democracy plan by the U.S. Information Agency, The Federalist Papers are now in the hands of readers in more languages than ever before—in all continents, and plans are maturing for the publication of this

work, which next to the Constitution itself is perhaps America's greatest intellectual achievement, in whole or in part in all of the principal languages of all parts of the world.

At last and for the first time, everyone everywhere will be able to read in his own tongue the fundamental thought of America, not on our current problems, but on the basic problems of a free government, of which the generation who wrote the Constitution intended America to be an example to all mankind.

A second objection to the Classics of Democracy plan was that the American people would not understand or support such an intellectual approach to the problem of getting the peoples of the free world to think and act democratically. In order to test the validity of this objection. Congressman FEIGHAN and I, working together on the project, through all the stages of planning, undertook a poll of leaders of American opinion in all parts of the country and in all branches of American life. This poll included officers of all national labor unions, and all directors of the National Association of Manufacturers; a broad panel of clergy of all faiths; veterans' and patriotic organizations, educators and professors of political science—in each of these fields the list of those polled was either inclusive or was selected for us by experts in the field.

About 3,000 questionnaires were mailed out. The response was very large and overwhelmingly favorable to the Classics for Democracy plan. This entire correspondence was introduced into the CONGRESSIONAL RECORD of January 18, 19, 20, and 21, 1956. The basic statement of the plan as formulated for this poll was made in a circular letter of December 12, 1955, which I include as part of this statement. The letter follows:

FULL TEXT OF QUESTIONNAIRE

DECEMBER 12, 1955.

In the next session of Congress a group of Members plan to push for enabling legislation directing the U.S. Information Agency to publish for nominal prices, in the principal languages of the world, a small library of basic statements of democratic political philosophy.

Before stating the proposal in final form, however, we wish to consult the experience and judgment of experts, and leaders and representatives of American opinion.

If you would give us your opinion of the plan as stated in enclosure, part 1, and of the list of books in enclosure, part 2, it would be a much appreciated help. This list is suggestive and illustrative only, and we will welcome any recommendations of yours—additions, omissions, substitutions—of books which you think better meet the purpose of the plan.

Our objective is a list of from 15 to 20 books which, in the majority judgment of this jury of American public opinion, are basic classics of American democracy. The list so selected will be presented for the action of Congress.

We hope you will give prompt and careful thought to this proposal, and we will give attentive consideration to your reply.

Cordially and sincerely,

BARRATT O'HARA,
Member of Congress.

ENCLOSURE, PART 1—PLAN FOR PUBLICATION OF DEMOCRATIC CLASSICS

It is proposed that the U.S. Information Agency shall translate and publish in the principal languages of the world a select list of the time-tested classical statements of democratic theory in their original forms. These books should be published in large quantities at nominal, subsidized cost, not more than a few cents a volume, and should be widely available in each country, not alone from U.S. agencies. Existing editions should also be widely sold abroad in quantity and at cheap prices.

These works should represent the broad historic and international character of the discussion and theory of democratic society and constitutional government, distinct from present domestic or international controversies. Advocacy of fundamental democratic ideas and methods is different from discussion of exclusive or short-run U.S. interests in current problems.

This program would be in addition to the present program and plans of the U.S. Information Agency, which do not include a similar operation.

The principle of this plan has been approved by the President's U.S. Advisory Commission on Information and by the Commissions Committee on Books Abroad.

America is known abroad mainly for autos and tractors, for riches and technology, but the specifically American political philosophy and the fundamental ideas of political and social democracy, are not widely known in most countries. Therefore, much in the practice of the United States and other constitutional democracies is misunderstood, and democratic methods are not effectively applied to the problems of the various countries, or to international problems.

The Communists owe part of their success to massive, heavily subsidized publication in many languages of the classics of Communist social, economic, and political theory—the works of Marx, Engels, Lenin, Stalin, and Mao—in addition to a large general and current publishing program.

All available reports indicate that American books of any kind are scarce and expensive in most countries, and democratic political philosophy almost unavailable.

In most of the few cases in which books like those on the attached list (enclosure, pt. 2) have been translated, it has often been in connection with the historic movements for constitutional democracy in the various countries.

There is abundant evidence from various international intellectual agencies that there is in many countries an effective demand for books of this type which is not being met, as this proposal would attempt to do.

This proposal has been advanced by a group of Chicagoans, including the Reverend Harold Fey, executive editor of the Christian Century; Dr. Richard McKeon, professor of philosophy at the University of Chicago and a former member of the U.S. National Commission for UNESCO; Dr. Jerome Kerwin, professor of political science and chairman of the Walgreen Foundation for the Study of American Institutions at the University of Chicago; John McGinness, president of Pennsylvania Railroad Lodge, No. 225, of the Brotherhood of Railroad Trainmen. The Chicago Daily News has taken an active and sympathetic interest in the plan and its editorial article of June 6, 1955, was reprinted in numerous papers. Preliminary discussions by Congressman FEIGHAN, of Ohio, and myself, on the floor of the House of Representatives evoked much interest and support.

ENCLOSURE, PART 2—SUGGESTED AUTHORS AND WORKS

Bryce: "The American Commonwealth," "Modern Democracies."

Burke: "Reflections on the Revolution in France."

Dewey: "The Public and Its Problems."

Emerson: "Moral and Political Essays" (which?).

Hamilton and Madison: "The Federalist Papers."

Hand: "The Spirit of Liberty."

Von Humboldt: "The Sphere and Duties of Government."

Jefferson: "Selected Writings" (which?).

Kant: "Perpetual Peace."

Lincoln: "Selected Papers" (which?).

Locke: "Letters on Toleration," "On Civil Government, Book II."

Mazzini: "The Duties of Man."

Mill: "On Liberty," "Representative Government."

Rousseau: "The Social Contract."

Thoreau: "Walden," "Civil Disobedience."

De Tocqueville: "Democracy in America."

Wilson: "The New Freedom."

PRESS GIVES ENTHUSIASTIC SUPPORT

As a result of this very broad and powerful expression of the judgment of representative leaders of American opinion, in support of this plan, in December of 1955 and January of 1956, to which I have referred, and of the deliberations of the President's National Advisory Commission on Information, the essentials of the Classics of Democracy publishing plan were included in the policy and plans of the Information Agency: Congressman FEIGHAN and I were informed of this in a letter dated January 27, 1956, from Theodore C. Streibert, then the director of the Agency.

There has continued to be a broad and vigorous recognition and support for the classics plan from the American public, and the Agency as well as the Chicago committee have asked me to thank those responsible for it. I refer in particular to an article in the New York Sunday Times of September 22, 1957, by Dan Adams Schmidt; an editorial in Labor, the national weekly newspaper of the standard railroad unions, dated October 5, 1957; an editorial of the Christian Century—Protestant—dated May 8, 1957; an editorial of Commonweal—Catholic—dated October 4, 1959; an editorial of America—Catholic—dated September–October 1957; an article in Family weekly newspaper magazine, dated April 21, 1957; an article and editorial in the Chicago Daily News, dated October 8, 1957 and October 14, 1957, respectively. The full text of these articles I shall give hereafter in my remarks.

CREDIT TO ALLEN AND STAFF

The third objection was that there would not be a receptive public in other countries for these books. The report by the U.S. Information Agency which is the occasion for this statement and which I am submitting to the House is an abundant and final refutation of this contention. The Information Agency, acting with increased enthusiasm for this plan under the experienced guidance of Mr. Allen, who has a distinguished record as one of America's best diplomats, has taken this project beyond the state of experiment. I venture to predict that as this program is carried forward its growing success will contribute to the intellectual prestige of the United States, to understanding and respect for America, and to the ability of the peoples of all the free countries to

attack their own problems with the same intellectual tools and the same success which are the pride and the strength of our own country.

The work of the Agency in carrying out this plan has gone forward as fast as circumstances would permit. I had hoped in this statement to mention by name the able and dedicated officers of the Information Agency who are carrying out this plan but I think that the spirit of this group is better expressed in the following quotation from the Agency's reply to my inquiry on this point than anything I could myself say:

Because of the extensive turnover of USIA personnel in the last couple of years, it is impossible to single out individuals for credit for the initiative and work involved in putting out (these translations). It was, in any event, the result of teamwork and cooperation on the part of the Embassy and USIA personnel, from the local employees all the way up to the Ambassador.

COMMENTS ON PROGRAM PROGRESS

Let me comment on the particular content of the Information Agency's status and progress report which is the occasion for these remarks to the House. The contents of the report can be summarized in the words of a European radio correspondent, writing from the Middle East to an American friend about the success of the program:

The books are selling better than I expected. They are used in courses in both Cairo and the Syrian University. Hurrah.

This brief comment makes two essential points about the results achieved under this program.

First, the public reception of them has been better than many U.S. or foreign experts had believed likely, and in some cases has astonished even the most convinced advocates of the program.

Second, these publications are not serving merely as material for the general reader, or as sources of information about the United States, but are affecting the very thought processes of the countries where they are now available, and are circulating under the sponsorship of the leaders of thought in each country. They are not functioning as U.S. propabanda but are entering into and enriching the culture of the whole world.

PROGRAM'S RECEPTION IN SYRIA

On July 16, 1958, the U.S. consulate at Damascus, even while U.S. troops were stationed in adjoining Lebanon in the last summer, sent us an account of the reception of the great English classic, "On Liberty," by John Stuart Mill. The Mill book is explicity a study of problems of personal and political liberty, and in particular of freedom of thought and debate, which Europeans of Mill's time felt had arisen in the United States; it is one of the most famous books of its kind, and this was the first edition in any Asiatic language or any of those of the great Moslem world.

I am quoting from a letter from Robert A. Lincoln, public affairs officer at that time at Damascus:

"On Liberty" was issued in Syria with some misgivings on the part of the publisher, who was uncertain whether an intellectual title of this nature would have much appeal. The translator, however, played a strong role in convincing him that both sales and reader interest would be high, and this proved to be correct. For example, although it is unusual for the Syrian press to review books, six Damascus newspapers carried reviews of "On Liberty." Excerpts are enclosed; I hope they will be useful to Congressman O'HARA in his report. Syrian University professors and students were among the principal buyers of the book. I know of several professors who purchased copies for presentation to selected members of their classes.

FOUR THOUSAND COPIES OF THE ARABIC TRANSLATION WERE PUBLISHED

The price of the book was 2½ Syrian pounds or about 56 cents. In terms of Syrian purchasing power, that will buy three packs of a good grade local cigarette or one locally manufactured undershirt. It is a moderate price for a locally printed book. The publisher, incidentally, felt that a lower price would cheapen the title in the eyes of prospective readers.

American paperback distributors have made quite an effort to place their product in the Syrian market. Limited knowledge of English, of course, prohibits the kind of sale which might occur in a country such as India. However, paperbacks are available in four well-known Damascus bookstores and in stores in larger cities in the Syrian region.

Quotations from Syrian press reviews of "On Liberty" follow:

"On Liberty" is an honest explanation of liberty in its widest sense * * * it has served millions of people struggling for their freedom. * * * (We) thank Papyrus House for presenting such a valuable book to the Arab library and the Arab peoples. (Al Manar, Damascus daily.)

Although the essay was written in the 19th century, it discusses the problems of the hour. * * * (We urge) educated young men to read carefully the contents of this valuable book (for) we need minds which will weigh and balance new ideas. Al Jamhur, Damascus daily.)

"On Liberty" is still new in subject and analysis. * * * I am convinced there can be no final solutions (to the problem of individual liberty versus authority) * * * (but) this book contains valuable ideas and discussions. It is worth lengthy study, especially because we are in the early stages of independence. (Al-Alam, Damascus daily.) (This review was only half favorable—but the fact that it called attention to the book is a net plus.)

This immortal book * * * emphasizes individual liberty as an element of well-being and an essential in building the life (which) everyone wishes. * * * We encourage every Arab intellectual to read such a fascinating work. (Al-Raquib, Damascus weekly.)

The book is not a political discussion, but a discussion of the rights of the individual. * * * We wish Papyrus House success in its service to culture and education. (Al-Insha, Damascus daily.)

A sound, calm discussion, strong in its meanings and ideas. (Sawt al-Arab, Damascus daily.)

This is the more striking in a country such as Syria, with a small population and comparatively low literacy.

SOME OF THE ACHIEVEMENTS

The report of USIA I have included in its entirety with this statement in order that my colleagues easily can grasp the wide range of achievements of the classics plan, but let me cite a few examples. There are many publications listed, the larger part of them first editions or replacements of editions long outdated. It has not been possible in every case to achieve the very low prices for which we had hoped, or prices as low as those of Communist books of comparable kind. But notice 18,000 copies of the works of Jefferson in the main languages of India for about 30 cents a copy; 75,000 copies of Lord Charnwood's "Great Life of Lincoln" sold in English in India for a dime; 25,000 of Locke's "Second Treatise on Government," the source of much of the thought and language of our own Declaration of Independence, also a dime each; 150,000 copies of Tom Paine in various Asiatic languages, also a dime. This is the kind of volume and price at which I think the program should aim generally. It may further interest the House to know that when in our poll of American opinion in 1955 we asked for suggestions of other additional titles, Tom Paine was a very popular write-in. Note again 25,000 copies of the great work of the Frenchman, Alexis de Tocqueville, "Democracy in America," in the Hindi language, for 16 cents each. Truly, this is an amazing achievement of USIA.

FEDERALIST IN GERMAN

There are two editions of special interest. They are translations of the "Federalist Papers," which have met with an unusual success. Incredible as it may seem, this great work had never been translated into German, although Germany has always been a federal state, and again became so under our military government. At the time of the democratic revolutions in 1848, there had been a fugitive publication of extracts, but this has long been a rare and obscure book. Now, for the first time, the entire work is available in German. As to the quality and importance of the edition, let me quote a distinguished bilingual scholar:

JANUARY 14, 1959.

I am much obliged to you for having given me an opportunity to look over the German edition of the "Federalist." The publication of that German version fills a demand of long standing. Lawyers as well as scholars of political science and people engaged in political activities have long been interested in Germany in the problems of federalism. The successive German constitutions since that of the North German Federation of 1866 have been considerably influenced by the American model. It appears, however, that the basic American work on the "Structure and the Problems of Federalism" has hardly been known in Germany. The book will be of interest also in the two other German-speaking countries, i.e., Austria and Switzerland, which are also organized on the federal pattern, and where the American model has also played a considerable role. The German translation seems to me to be very well done. It appears to be correct, at least as far as my survey would reveal, and it has even succeeded in conveying to the reader some of the flavor of the original English of the late 18th century. The introduction by Professor Ermacora neatly determines the historical place and role of the American classic, lucidly analyzes its main contents, and tells readers of the German-speaking countries why the book is of importance for them at the present time. The format of the book is attractive. I trust that it will find a wide circulation in Germany, Austria, and Switzerland.

Sincerely yours,

MAX RHEINSTEIN,
Professor of Comparative Law; Director, Comparative Law Research Center, University of Chicago.

The reception of the book in the whole German-speaking heart of Europe is amazing; an important businessman procured a large number of copies to be sent with his personal recommendations to his friends in the universities, the press, and public life; the Wall Street Journal of central Europe, so to speak, the Neue Zuricher Zeitung, devoted a third of its front page to a roundup of recent political philosophy of democratic tendencies, on the occasion of the publication of the book. Several professors in various universities have at once put this into their classrooms in Tuebingen, Heidelberg, Freiburg, with such comments as the following:

[Translation]

TUEBINGEN, *November 20, 1958.*

Mr. CHARLES D. CHAMBERLIN,
American Consulate General, Stuttgart.

DEAR MR. CHAMBERLIN: Thank you very much for your kind letter of November 12 and the transmittal of the "Foederalist". I can hardly tell you how pleased I am that the "Foederalist" has been published in the German language. It is one of the most sublime political works that I know of. For a couple of years I have repeatedly tried to induce German publishers to publish a translation, but to my regret without any success so far. The greater is my pleasure that finally such a translation is available. I thank you for your kindness in sending me a copy and I am with my earnest compliments.

Sincerely yours,
Prof. Dr. THEODOR ESCHENBURG.

FREIBURG, *November 30, 1958.*

Mr. CHARLES D. CHAMBERLIN,
Public Affairs Officer,
American Consulate General, Stuttgart.

DEAR MR. CHAMBERLIN: Please accept my warmest thanks for the kind transmittal of the "Foederalist" (Federalist papers). The essays combined herein, which I had not known yet, are not only very attractive as a historical document (but) they also possess a more than historical and lasting value, because men of special standards and judgment, who at the same time stood on the high spiritual level of enlightenment, had to solve problems of permanent importance practically in an effective and responsible way.

After all this I am glad to add your present to my library and I beg to transmit my best thanks to your Embassy and Prof. Max Rheinstein.

With best compliments.

Sincerely yours,
Prof. FRITZ VON HIPPEL.

Quoting from a letter dated December 19, 1958, from Michael Barjansky, chief, Information Center Branch, American Embassy at Vienna:

First, I am enclosing a copy of our recent report to the Agency; second, you will find a review dated December 10 from the Linzer Volksblatt, a Catholic (People's Party) daily newspaper with a circulation of 38,000; third, I am adding a general comment on the importance of "The Federalist" which appeared in the Neue Zuercher Zeitung, a very prominent Swiss newspaper mostly devoted to matters of commerce and finance. (You understand, of course, that while the translation was made in Austria, the distribution of "The Federalist" is being carried out systematically throughout the German speaking world, including Switzerland.)

We don't expect any important reviews before January, at which time, we are told, the Austrian radio and the important Catholic weekly Die Furche as well as the Trade Union Journal OeGB Bildungsfunktionaer will devote considerable space to "The Federalist."

You may be interested to know that the school of Journalism of Vienna University bought the German language "Federalist" to be used in conjunction with a lecture series on early American journalism. Finally, USIS Ankara has ordered five copies for presentation to the appropriate schools of the Turkish universities.

OTHER REPORTS FROM GERMANY

The president of the constitutional court and administrative court of appeals of the state of North Rhein-Westphalia says:

I hope the "Federalist" will do much good in Germany, and I shall do my best to publicize it.

The president of the Union for the Advancement of European Federation wrote, in requesting a review copy for the bulletin of the union:

That up to now, although they had often referred their readers to the "Federalist," they always had to refer them to the French of English edition.

There have been strongly favorable reviews in many papers; for instance, the principal newspaper of the Austrian trade unions, the Gewerkschaftliche Rundschau, for December 1958, recommended it to the attention of every union member in Austria.

I should mention that the USIA has also produced in German the Carl Sandburg "Life of Lincoln," which has had an equal success in circles of intellectual leadership, and perhaps even more of a popular one.

FEDERALIST IN ITALIAN

One story, however, remains to be told: that of the "Federalist" in Italy. It is of especial interest, although it does not directly result from the classics program, as Congressman FEIGHAN and I proposed it to Congress; it does exactly the same thing in principle, and has had a brilliant success, which further confirms the belief on which our advocacy of the program was based.

The first Italian edition of the "Federalist" was published in the fall of 1956, before this program had been adopted by the Information Agency. While USIA was instrumental in carrying out this specific publication, the initiative in this case did not come from Washington, but from the U.S. Ambassador in Rome, the Honorable James David Zellerbach, and it is my understanding that much of the cost of the edition came from his private purse. Now, surely, this is a function of an Ambassador beyond the call of duty, and beyond praise; I trust that this princely action is sufficiently rewarded by the great success of the book.

Ambassador Zellerbach formed a group of eminent Italians, some scholars, some men active in affairs, such as Signor Olivetti, of the business machine company. This group is proceeding, on the basis of the success of their "Federalist," to produce a series of similar works, such as Corwin's great commentary on the Constitution. The very high intellectual standard of this undertaking may be seen from the fact that Professor Ambrosini, who wrote the learned introduction, was appointed to the Italian Supreme Court at about the time the book came out; this is not the kind of publicity a press agent can rig. The sales and reviews of the book have been extraordinary. It was a bestseller for some months. The University of Rome held an international symposium on American constitutional theory on this occasion. Some of the reviews from leading Italian papers I have in my files and on request would be happy to loan them to my colleagues familiar with the Italian language.

In these remarks I have gone beyond the contents of Mr. Allen's report attached to his letter of March 6, and have supplemented it with researches by my staff and the Library of Congress. But the net effect of all this material should be to remove from all minds the belief that readers overseas do not welcome the classics of democracy.

GRASSROOTS BIRTH OF PROGRAM

The way in which the classics of democracy program came into being is worthy of note, not only a part of the record concerning it itself, but as an example of how the action of Congress and of Government agencies may be guided and stimulated by the intelligence and energy of private citizens.

On April 7, 1954, a constituent wrote me a letter inquiring what in the program of the USIA tended toward the goals which are now embodied in the classics program. His letter follows:

APRIL 7, 1954.

DEAR CONGRESSMAN O'HARA: Your newsletter accounting for your stewardship as our Representative in Congress is welcomed and read regularly and with satisfaction by our entire family. But to perform your duties, heavy as they are, so conscientiously and well, is only to ask for more duty, as you know. However, perhaps even amidst all their other burdens your staff can secure for me the answer to the following inquiry.

Among the problems of the U.S. information program overseas, is the choice of a mass audience, or of attempts to influence the opinion-forming elites of the various countries, and thus to reach the mass audiences more indirectly, but with a longer view. I had myself some experience with this problem in government service overseas.

Among the difficulties of the latter approach, was the fact that the intellectual bases of our democracy were both unknown and unavailable in most countries. I refer to such works as Hamilton and Madison's "Federalist"; Mill's "Liberty" and "Representative Government"; De Tocqueville's "Democracy in America"; Locke's "Civil Government" and "Letters on Toleration." Other works could be named, such as Corwin's "Constitution and What it Means Today." You will doubtless be shocked, as I was once, to learn that the Constitution itself was, as I personally ascertained, at one time not available in the American library in Rome, in English or Italian.

Is it not worth inquiring, which of our political classics, such as those named in particular, are available in the principal languages of the world? To what extent they are available through U.S. programs, either in the local tongues or in English? Where translations do not exist (as for instance I believe the "Federalist" is not in print unabridged in a modern German edition), what steps the U.S. Information Service is taking to make them widely and easily available?

I recall the very extensive circulation in Germany of Soviet communist classics, in very cheap but readable editions, at a time when none of the classics of democracy were

available at all. The same is reported in the press as being true in India.

In some cases there are old editions which could with great advantage be reprinted by our services. For instance there is a French edition of the "Federalist," now excessively rare, translated by Trudaine de la Sabliere, supposedly with the assistance of Jefferson himself, which was an important influence in France's own history (printed at Paris by Buisson, 1792). A "prestige" republication of this work could be quite an event in France.

Would it be possible to inquire of the responsible executive agencies what is the case on the points enumerated in the fourth paragraph above?

Yours truly,

THOMAS B. STAUFFER.

Mr. Stauffer, who resides at 5021 Dorchester Avenue in Chicago, is now a member of the faculty of Chicago City Junior College but was formerly an officer of the Army and of the Department of State, serving overseas in both capacities. The present status of the classics of democracy plan is attributed in large measure to the continued efforts and drive of Mr. Stauffer. He felt that the comments of the Information Agency on his inquiry did not deal adequately with the points he had raised, and organized a committee of persons with distinguished qualifications for judging activities in this field. This committee consisted of Dr. Richard P. McKeon, distinguished service professor of philosophy and classical languages at the University of Chicago, a former member of the U.S. delegation to UNESCO, and a president of the Internation Federation of Academies of Philosophy; the Reverend Dr. Harold E. Fey, then managing editor, now editor of the Christian Century; John W. McGinness, president of Pennsylvania Railroad Local 225 of the Brotherhood of Railway Trainmen; Prof. Jerome G. Kerwin, of the political science department, University of Chicago, chairman of the Charles R. Walgreen Foundation for the Study of American Institutions and a most eminent and active Roman Catholic layman; and Dr. Emery T. Filbey, vice president emeritus of the University of Chicago.

I am proud to be able to say that all of these men except Mr. McGinness are residents of the Second Congressional District of Illinois which it is my privilege to represent in this House, and I think it may be of interest to remark that Dr. McKeon was a former teacher of Mr. Stauffer, and that Mr. McGinness was a student of Mr. Stauffer's. It is this committee which formulated and documented the proposals which Congressman FEIGHAN joined with me in presenting to the Congress, and which are now part of the policy of the Information Agency, and on whose success I am now reporting.

VALUABLE RESEARCH BY VOLUNTEERS

This committee has had assistance from a number of persons and the committee has asked me to give public expression of its thanks and appreciation for this help. In particular, two young men, undergraduates at the time, did indispensable research on the problem with which the committee was concerned and had an important part both in formulating the outlines and in rendering precise the detail of the committee's proposals.

Leland G. Stauber, then an undergraduate of the University of Chicago and now a graduate student in political science and government at Harvard University, made the basic research as to whether the classics were in fact available in the languages of the world and had a great part in the conception and execution of the committee's correspondence in the first years of its work.

Walter T. Schoch, then an undergraduate at the University of Illinois, and now in the sales department of the Signode Steel Strapping Co., had a hand in all the deliberations of the committee up to the present; in particular in the fall of 1955 he discussed the outlines of the classics plan with a large number of students from other countries at the University of Illinois, many of whom were educators or professional leaders in their own countries. The result was a most useful report covering the thought of the members of this group on the reception of the classics to be expected in the various countries from which they came. I gave this report in January of 1956 to the President's National Advisory Commission on Information.

Warren A. Deutsch of Chicago, brought to the attention of the committee the publications of UNESCO to which I have referred elsewhere.

Lawrence and Jean O'Connor, of Chicago, have the peculiar distinction of having given the committee, in addition to sincere and enthusiastic encouragement, the only material assistance it has received. Mr. O'Connor, an eminent attorney, put the facilities of his office at the disposal of the committee, to reproduce their basic presentation of the classics plan for wide circulation.

VOICE OF THE PRESS RAISED

The committee having begun its work, the first public voice raised in behalf of the program was that of the Christian Century, in an editorial of June 2, 1954, which I introduced into the CONGRESSIONAL RECORD at that time.

Very shortly, however, the Chicago Daily News, joined its powerful voice to those who were urging that this whole matter be examined and the classics plan be undertaken, if formulated along sound lines. A. T. Burch, the associate editor, and Van Allen Bradley, the literary editor, have taken a continuing and very personal interest in the classics plan and have repeatedly put the resources of the News at the disposal of its advancement. It has been a source of great satisfaction to me personally to work closely with my friends on the Daily News staff in this matter and I want to add my own thanks to those which Mr. Stauffer and the committee have asked me to express for them.

How completely the Soviet was in command of the situation in this vital area, and how lamentably we were lagging, could not have been adequately brought to the attention of the Congress and of the American people except for the reports from the foreign correspondents of the Chicago Daily News stationed throughout the world. These reports were carried at great length in the Chicago Daily News and the many newspapers that it services.

For the first time they gave to the American public the full documented picture of American books, expensively bound, ornamenting shelves in libraries far from the great mass of the people and which relatively few ever visited. The spot reports of the foreign correspondents of the Chicago Daily News showed that nowhere at grassroots were inexpensive and translated editions of the literature of democracy available to counteract the flood of communistic literature. They constituted journalism in its highest and most constructively patriotic expression. In my judgment, the service rendered in this respect by the Chicago Daily News deserves recognition as one of the outstanding journalistic contributions in the field of international relationships in the troubled times in which we live. Now that our country is making the rapid strides forward shown in this report, too much credit cannot be given the Chicago Daily News for its pioneering contribution.

Nor can too much credit be accorded to the eminent members of the American Book Publishers Council, who at personal sacrifice render an outstanding service to their country, and to the American publishers as a whole. Without exception, in the effort to get widely distributed the classics of our democracy, they have put patriotism above profit and country before individual advantage. The program could not have succeeded without their full and unselfish cooperation.

INTERNATIONAL DEMOCRATIC PHILOSOPHY

Mr. Speaker, I have dealt at some length with the circumstances of the origin and development of the classics of democracy program to stress its grassroots nature. I doubt if ever there has been a Federal undertaking that has enjoyed so large a measure of spontaneous popular acclaim. The answer, I would say, is that it appeals to the common sense of our people. There will be some differences of opinion as to which books should be included, and which should be excluded, if we were to select, let us say, any 20 books constituting our bible of democracy. But on some there is a universal argument and thus far in the progress of the program there has been pretty largely an adherence to those works, such as the Federalist Papers, on which there is no disagreement.

The "Classics of Democracy" are in fact a sort of Bible for the politics of our civilization. Sharing a common inspiration, they come from various countries, various ages; all have stood the test of time, all have been sources to which men of democratic faith have turned for spiritual and intellectual armaments in previous critical battles of mankind against tyranny. The list of classics which has been included in this project, therefore, has been selected to typify this permanent and international character of democratic philosophy. Many countries are represented, and all of the authors listed are out of the way of present controversy and the tactics of present international quarrels.

The classics are intended to typify the moral message of the Western civilization, of which America is heir and part, which I like to think would be important to the world even if all the problems of communism and of Soviet imperialism had been solved or had never arisen. And yet I think too that in these books the most fundamental secular demonstrations of why the ideas and practices of communism are wrong are still to be found, and that as they become more widely available to all men, communism will be less likely to prevail.

In presenting this progress report to the House jointly for the distinguished gentleman from Ohio [Mr. FEIGHAN] and myself it is with the acknowledgment that we were but humble workers in the vineyard whose contribution to a good work was small indeed compared to that of so many others, both in and out of the Congress, and certainly including the able, astute and dynamic gentleman from New York, the Honorable JOHN ROONEY, chairman of the subcommittee of the Appropriation Committee who annually does an outstanding job in pinpointing the virtues and as he views them the possible weaknesses or imprudent undertakings in the vast and vitally important worldwide range of the activities of the U.S. Information Agency. From the first, Congressman ROONEY has been a dedicated friend of the classics of democracy program.

Mr. REUSS. Mr. Speaker, will the gentleman yield?

Mr. O'HARA of Illinois. I am very happy to yield to my very good friend from Wisconsin, and to tell him that during the Easter recess I read with interest and profit his splendid speech in Milwaukee on our foreign policy.

Mr. REUSS. May I commend the gentleman from Illinois [Mr. O'HARA] on his magnificent contribution to our democracy in sponsoring this program to get the ideas and the ideals of democracy throughout the world. As the gentleman from Illinois knows, the most striking difference, I think, between our free world and the other side is not so much in military power—both sides have that—not so much in economic power—both sides have that—but from our side in the notion of human freedom and in the idea that man may work to perfect himself by the device of democracy.

To the extent that we can get these ideas ranging around the world, to the extent that we can make the Spirit of 1776 really live, we will have done, it seems to me, a wonderful thing for the furtherance of our foreign policy.

The gentleman certainly deserves all our heartfelt thanks for what he has done.

Mr. O'HARA of Illinois. I thank the gentleman from Wisconsin so much for his contribution. I might add that much of what the gentleman is now saying he projected in his really remarkable speech recently in Milwaukee.

Mr. ALFORD. Mr. Speaker, will the gentleman yield?

Mr. O'HARA of Illinois. I yield to the gentleman from Arkansas.

Mr. ALFORD. I, too, wish to join the gentleman from Wisconsin in his commendation of the Classics of Democracy. In a small way I have been a student of American history. I certainly wish to commend the gentleman on his efforts. We are deeply engaged in psychological warfare throughout the world. I can conceive of no better way of educating the peoples of the world in the democracy that he represents than through the method he has presented today.

Mr. O'HARA of Illinois. I am deeply indebted to the gentleman for his contribution.

I might observe that there are matters in our American democracy on which there are differences of opinion, but I found in reading the responses to our questionnaire that there was no division of opinion among the American people sectionally or by groups as to the inspirational value of our Classics of Democracy.

Mr. WOLF. Mr. Speaker, will the gentleman yield?

Mr. O'HARA of Illinois. I yield to the gentleman from Iowa.

Mr. WOLF. I, too, commend the gentleman from Illinois on his presentation. I had the experience in 1957 of making a trip to Russia and seeing what they had been able to do there in connection with textbooks on their theories and ideologies. I think they have done a better job sometimes than we have. I think it is a wonderful thing the gentleman has done, and I am glad to be here to hear his report.

Mr. O'HARA of Illinois. I thank the gentleman. I know that my good friend from Iowa would be interested in knowing that one of the encouraging reports we are getting is that our program has been so successful that the Russians are changing their technique and are now copying our technique.

AS SEEN BY DANA ADAMS SCHMIDT

I am including in my remarks an article by the eminent journalist, Dana Adams Schmidt, in the New York Times of September 22, 1957, as follows:

CLASSICS OF UNITED STATES BIG HIT IN INDIA

(By Dana Adams Schmidt)

WASHINGTON, September 21.—Probably more people are reading the Classics of American Democracy in India today than in the United States.

This is the report of American publishers who, with the help of the U.S. Information Agency, have been conducting a successful campaign to sell the basic texts of democracy in cheap paperback editions in competition with the basic texts of communism.

Fortified by the success of their pilot project in India the publishers are branching out, into the vast area from the west coast of Africa to Japan, which appears to be a special target for Communist penetration.

And local publishers, again with help from the U.S. Information Agency, are beginning the task of translating the classics of democracy into scores of languages.

In June of last year, when the first of the Classics of Democracy appeared in English in Indian bookstores, the Soviet Union appeared already to have saturated the market with cheap and even give-away editions of Lenin, Stalin, Marx, Engels and the like.

Commercially it was a shot in the dark. No one knew how the Indian book market would react.

EIGHT BOOKS OUT FIRST

The experiment started with editions of 10,000 each of eight books, all selling for the equivalent of 10 or 15 cents each. They were:

Selected Writings on Nature and Liberty: Henry D. Thoreau by Oscar Cargill.

Benjamin Franklin: The Autobiography and Selections from his Other Writings by Herbert W. Schneider.

Hamilton, Madison, and Jay on the Constitution: Selections from the Federalist Papers by Ralph H. Gabriel.

John C. Calhoun: A Disquisition on Government by C. Gordon Post.

The Political Writings of John Adams: Representative Selections by George A. Peek, Jr.

From the Declaration of Independence to the Constitution; the Roots of American Constitutionalism by Carl J. Friedrich, Robert G. McCloskey.

The Political Writings of Thomas Jefferson: Representative Selections by Edward Dumbauld.

Thomas Paine: Common Sense and Other Political Writings by Nelson F. Adkins.

SOLD 4,000 IN 9 WEEKS

Nine weeks after they had been placed on the market the initial edition of Thoreau, Franklin's autobiography and the Roots of American Constitutionalism had sold 4,000 copies each. Adams, Hamilton and Jefferson were not far behind.

At the end of a year, sales ranged from 4,200 to 8,500. Meanwhile, the publishers had added Abraham Lincoln by Lord Charnwood and selections from Emerson by Lindeman.

These two were in editions of 25,000. In less than 6 months Lincoln was sold out and plans were afoot for another edition of 25,000. Emerson in the same period sold 10,000 copies.

Indian critics, meanwhile, set up a clamor for some of the basic texts of democracy that originated in England, and 3 months ago the publishers obliged with 10,000 copies each of three works:

Political Writings by David Hume; Second Treatise of Government by John Locke, and On Liberty by John Stuart Mill.

NO DUDS DISCOVERED

Forum books, a subsidiary of Liberal Arts Press, which brought out these editions, and the USIA, watched the circulation of these titles for duds. But they found none. Expansion to other lands seemed advisable.

Now 20,000 copies of each of the basic 13 books have been distributed to other countries of Asia and Africa in proportion to their estimated English reading audience. Thus Japan is getting 5,000 each, some African countries only 500.

First reports from Japan are enthusiastic. Twenty percent of the available books were sold in the first 6 weeks.

The next step in combatting the Soviet avalanche of cheap and basic political tomes will be to publish these and other classics of democracy in paperback translation. For the Soviet Union operates mainly in translations.

During the first 6 months of 1957, Soviet book publishing activities in translation expanded greatly. The largest percentage increases, according to U.S. Government analysts, were in languages of the Middle East and south Asia.

Thus in the first 6 months of this year the Soviet Union published three titles in 61,000 copies in Arabic; five titles in 69,100 copies in Bengali; five titles in 59,000 copies in Hindi; and six titles in 55,000 copies in Urdu. The total of books in these languages was 130 percent greater than the number published during all of 1956, and the trend is accelerating.

The total translation program for the year ended in June 1957 consisted of 709 titles

translated into 46 languages with 5,500,000 copies.

But the Soviet Union published 15,631,700 copies of 372 titles during the half year from January to June in 1957.

The success of the American project was a triumph especially for a group of Chicago citizens and two Democratic Representatives BARRATT O'HARA, of Chicago, and MICHAEL A. FEIGHAN, of Cleveland, who helped put their plea across in Washington.

EDITORIAL FROM LABOR

This is the lead editorial in the October 5, 1957, edition of Labor:

SPREADING THE CLASSICS OF U.S. DEMOCRACY

Congratulations to Congressman BARRATT O'HARA, Democrat, Illinois. He has scored a great victory for democracy and against communism, without firing a shot or spending a lot of public money. The best way to describe his victory is to begin with a news story in the New York Times. In part, it says:

"More people are reading the Classics of American Democracy in India today than in the United States. That is the report of the American publishers who, with help from the U.S. Information Agency, have been conducting a successful campaign to sell the basic texts of democracy in cheap paperback editions, in competition with the basic texts of communism. Fortified by their success in India, the publishers are branching out into the vast area from the west coast of Africa to Japan, which appears to be a special target for Communist penetration."

The Classics of American Democracy, which are being sold abroad by a private publisher, with the help of U.S. Government agencies, are listed as works of such men as Thomas Jefferson, James Madison, Benjamin Franklin, Alexander Hamilton, John C. Calhoun, Thomas Paine, and other great forefathers who helped write the Declaration of Independence, the Constitution, and books and pamphlets which inspired and defended the American Revolution.

As Labor reported several times, this plan to put cheap editions of these classics into the hands and minds of millions of people of other countries was originated and put through Congress by O'HARA, who himself is deeply imbued with American democracy of the most genuine kind. Hats off to O'HARA.

FROM CHRISTIAN CENTURY

This is the editorial that appeared in the Christian Century of May 8, 1957:

WHO WINS THE BATTLE FOR MEN'S MINDS?

While Congress was happily chopping $30 million plus from the funds allocated to the United States Information Agency, books by Communist authors dominated news stands, bookstores, and libraries throughout most of the world. Evidence that democracy may be losing the battle for men's minds is contained in a study of "the world's most translated authors for 1948–55," published in the February 1957 issue of the UNESCO Courier. First in the list stood what? Not the Bible. Not Shakespeare. Not Jefferson, Mill, Tocqueville, Burke, Madison, Locke or any other author of the classics of democracy. First stood the works of Lenin, of which 968 translations were published during that period. Then came the Bible, with 887. Third stood Stalin's writings, with 689. Tenth and eleventh on the list were Marx, with 415 translations, and Engels, with 409. The American writer highest on the list of over 100 whose books had been translated was Jack London, who stood fourteenth. Next Americans to follow were Pearl Buck, Mark Twain, E. S. Gardner, and James Fenimore Cooper. None of the 22 American authors on the list wrote on politics, economics or religion, whereas nearly all the Communist authors wrote on politics and economics, with a strong antireligious bias. How can we expect the world to understand the basis for democracy unless it receives help in obtaining access to such essential interpretations as "The American Commonwealth," "The Federalist Papers," and "Democracy in America"? Communist authors are translated and disseminated by agencies of the Russian Government, which expects to be repaid. It knows how richly it was compensated for flooding the bookstalls of China with Communist writings in the twenties and thirties. We should be expanding the facilities of the USIA instead of slashing them today. To attain that end, we again suggest that this agency undertake a serious program of translation and distribution at competitive prices with Communist publications of the classics of democracy. Why should not Wilson's "The New Freedom" and the state papers of Abraham Lincoln, for example, be made available in the principal languages of India? The Bible, whose translation and wide distribution does not depend upon government subsidies, will not remain high on the list of translations unless it receives in time the support of the literature of freedom.

On October 4, 1957, this editorial appeared in the Christian Century:

TEXTS OF DEMOCRACY

It would seem unlikely that the Classics of American Democracy are being read more widely in India than in the United States, but such, apparently, is the case. Working with the U.S. Information Agency, publishers introduced a series of cheap paperback editions of basic texts in English. Indians were able to buy works of people such as Thoreau, Franklin, Hamilton, Adams, Jefferson, and Paine, as well as selections from the "Federalist Papers" and constitutional documents. They not only bought these but asked for additional texts of English writers.

This project and its evident success should be heartening not only to the publishers, the USIA, and the group of Chicago citizens who initiated the project, but to all who are interested in furthering democratic principles. Democracy is too difficult to be either easy or safe. In the countries where it exists it is always under attack, and always being tested. There is a constant need, which recent years have only emphasized, to return to the fundamental and classic statements. From these statements the democracies continue to draw sustenance.

It is well that the citizens of other countries should be able to read the classic documents of democracy so that the democracies can be judged not only by the accomplishments and failures they display, and the distortions which hostile countries offer, but also by the ideals to which they aspire. We need not underrate the importance of supermarkets to suggest that we have other things to export.

These texts are now in competition in India with the many cheap texts of Marx, Lenin, Engels, and Stalin which the Soviet Union has already distributed. This is the kind of competition that will have long-range consequences. The initial project, already successful, well deserves to be expanded. Additional texts, translations into various languages, and distribution to other countries are all being considered and are extensions which should clearly be encouraged.

FROM THE FAMILY WEEKLY

Mr. Speaker, I am further extending my remarks to include the following article from the Family Weekly of April 21, 1957:

WE'RE EXPORTING AMERICAN IDEALS

(By Jack Ryan)

A Sicilian law student, a future leader of his community, decides to learn for himself about the conflicting ideologies of East and West, both fighting for his loyalty.

He goes to a nearby bookstall and finds that by skipping cigarets today he can afford to buy the Communist teachings of Marx, Engels, and Lenin in paperbound editions in his own language.

What books can he buy to learn about America? Mostly cheap novels about dope addiction, sadism, or unscrupulous business executives.

To read a copy of "The Federalist," a basic explanation of our Constitution, the Sicilian would have to travel hundreds of miles to Rome where he'd find three copies—in English. Lincoln's writings might be even harder to find. We've distributed only 25 copies throughout the world to show why we think our Government is best.

But this failure in providing the world with "the bibles of democracy" is being remedied. The political and social philosophies of Jefferson, Madison, and Franklin—to name a few—are being translated into 25 languages and will be made available in crucial areas of the globe at prices within the reach of the poorest student, teacher, or worker.

The books represent democracy in theory; how they came to be translated and distributed represents democracy in action.

In 1952 a Chicago teacher, Thomas B. Stauffer, returned home after Government service abroad during which he saw many situations like that confronting the Sicilian student. Something, he decided, should be done. In American fashion he wrote his Congressman, BARRATT O'HARA.

O'HARA was immediately interested in Stauffer's suggestion that our information centers not only tell the free world what is wrong with communism, but what is right with democracy. But he pointed out that Congress would need additional facts before it could consider subsidizing a library of American political classics for oversea book markets.

At O'HARA's suggestion, Stauffer's neighbors—such people as ministers, office and factory workers, and college students—pitched in to assemble those facts. They contacted 3,500 leaders in industry, religion, journalism, politics, and other fields for suggestions on exporting our most precious commodity, political ideals.

Without any prompting, many of the 3,500 wrote their own Congressmen about "bibles of democracy," and soon O'HARA was beset by legislators asking, "What is this book idea my constituents are deluging me about? How is it important?"

Thanks to his hard-working group at home, O'HARA had the answer.

We were losing the battle of books—and minds. In Moscow, the Russian Printing Bureau, working on a budget larger than that of our entire information service, was on a 24-hour schedule turning out Communist writings in 40 languages. Foreign students in our own universities told how their lands were flooded with Marx and Lenin while they heard only references to Madison and Hamilton.

"America," said O'HARA, "is known abroad for autos and tractors, for riches and technology, but the specifically American political philosophy and the fundamental ideas of political and social democracy are not widely known in foreign lands."

The big danger in this, historians pointed out, was that whenever a nation adopted democratic government, it did so on the basis of political ideals, not material wealth.

Still there was the question—would people read the "heavy" writings of America's political thinkers? This answer came independently from two U.S. industrialists who helped finance publication of "The Federalist" in Italian. Although relatively expensive, the publication skyrocketed to second place on Italy's best-seller list, was hailed

in speeches and editorials, and excited deep interest in similar American writings.

The U.S. Government, responding to citizen opinion, next tried a test in Asia by distributing a "year's supply" of "The Federalist." In 3 months, all were sold.

The last doubt about the worth of the program was dispelled, and Congress appropriated funds for 20 million books. They will be translated and sold in bookstores which now sell only Communist ideology.

The first of these translations already are in the hands of people who influence opinion in their countries. Should they ever feel the books are merely words, dreams, or ivory-tower theories, they have only to remember how the books came to them—through people like themselves who wrote a lawmaker and moved a government.

PETER LISAGOR'S REPORT

On October 8, 1957, Peter Lisagor, famous journalist and now head of the Washington bureau of the Chicago Daily News, made the following report in the News:

IN AFRICA AND THE MIDEAST U.S. BOOKS TO SOW IDEALS OF FREEDOM

(By Peter Lisagor)

WASHINGTON.—Representative BARRATT O'HARA, Democrat, Illinois, looks forward to the day when the classics of American democracy are published in the native languages of the Arab and African world.

This is no idle dream of the veteran Chicago Congressman. He was largely responsible for a successful pilot project in India, where cheap paperback editions of the basic writings on democracy have sold like tranquilizers on Madison Avenue.

And now O'HARA is preparing for a trip to the Middle East and Africa, as a member of a House foreign affairs subcommittee, to explore at firsthand the potential market for the writings of Thoreau, Benjamin Franklin and Thomas Jefferson.

The idea of cheap editions of American classics as a counter to the basic texts of communism distributed free by Moscow originated with a group of Chicago citizens and was pushed by the Chicago Daily News.

O'HARA, together with MICHAEL A. FEIGHAN, Democrat, Ohio, took hold of the project then and succeeded in getting the U.S. Information Agency enough funds to allow it to help underwrite the plan for American publishers.

The books sold for the equivalent of 10 to 15 cents, and the Indians probably are reading more of them than people in the United States, in O'HARA's judgment.

"The response to the translations has been thrilling," says O'HARA.

"People abroad don't want things they think are just American propaganda. But when they read what inspired our forefathers—and our democracy—I'm sure it will have the same appeal as it did for us."

O'HARA compares the classics on democracy with the Bible.

"The Bible was written by many hands and published in many languages. It emerges as the basis of the Christian philosophy. In the same way, these books give the basis of American democracy."

He believes the United States must intensify its efforts to persuade the people of the Middle East and Africa of the virtues of this democracy.

"Europe is like an overworked New England farm," he says. "The Orient is aborning. So is our hemisphere. Africa is undeveloped but it has the resources and the people, and it is the bridge to the East.

"That makes it of prime importance in the future."

O'HARA hopes ultimately to arrive at about 15 basic works, agreed upon by educators and legislators as well.

Besides the works of Thoreau, Franklin and Jefferson, the books now being sold include selections from the Federalist Papers, John C. Calhoun's disquisition on government, the Declaration of Independence and the Constitution and the works of Thomas Paine.

O'HARA's trip next month will take him to Lebanon, Israel, Egypt, Sudan, Ethiopia, Kenya, Uganda, Ghana, Liberia, French West Africa and north Africa.

In the Chicago Daily News of October 14, 1957, appeared the following editorial:

BOOKS VERSUS REDS

Peter Lisagor of our Washington bureau has reported on the success of the U.S. Information Agency in selling the classics of democracy to readers in India.

This is a program that is familiar to readers of this newspaper, for it was originated in Chicago. It is a joint effort of U.S. publishers and the USIA to sell the basic texts of democracy in inexpensive paperbound editions in competition with the basic texts of communism.

The Daily News led editorially in the effort in Congress to get the program underway.

The success has prompted the USIA to extend the program to other countries in Asia and Africa. Its next step is to translate books into native languages, as the Communists do.

These are encouraging results in the effort to match the Soviet cheap-book program in neutral areas. We are glad to have had a part in it. We believe it will yield dividends for years to come.

INFORMATIONAL MEDIA GUARANTEE

Mr. Speaker, I am further extending my remarks to include a letter from Curtis G. Benjamin, president of the American Book Publishers Council, in the New York Times of April 5, 1959. While the matter of which Mr. Benjamin writes does not have direct relation to the classics of democracy program, it certainly is indirectly related and the work American publishers are doing in this field is valuably supplemental to the classics program. While the appropriation was cut to $2½ million in the last Congress, it was due almost entirely to Congressman ROONEY that the item was not completely wiped out. I happen to know because at that critical period I had several conversations with the gentleman, having been alerted to the situation by Dr. Jerome Kerwin of the University of Chicago and a member of the Chicago committee to which I have previously referred as the originators of the classics of democracy program. Mr. Benjamin's letter follows:

TO SEND BOOKS ABROAD—APPROPRIATION SUFFICIENT TO MEET MASS DEMAND URGED

(The writer of the following letter is president of the American Book Publishers Council, Inc.:)

To the EDITOR OF THE NEW YORK TIMES:

J. Donald Adams, in his "Speaking of Books" column in your book review section of March 15 drew attention to the need for more American books in Asia and Africa. He then appealed to the American Book Publishers Council to give the matter its earnest consideration.

The tremendous growth in the export of books from the United States to Indonesia, the Philippines, Formosa, Vietnam, Burma, Pakistan, and Turkey in the past few years has been made possible only by the informational media guaranty program of the U.S. Information Agency. Last August Congress cut a requested appropriation of $7 million for this program to $2½ million. This compelled a serious reduction in U.S. book exports to these countries.

U.S. publishers—unlike the Russians—cannot use local currencies accepted abroad in payment for books. The I.M.G. program, by guaranteeing conversion of other currencies into dollars, has facilitated U.S. book exports to countries which would have been deprived by their own exchange restrictions of the books they need.

FORM OF AID

While removing no obligation from the exporting publisher to sell his books or from the customer overseas to buy them, the I.M.G. program has insured, through a revolving fund, that publishers are paid in dollars. Here is one inexpensive form of economic aid which is neither a giveaway nor forced feeding, yet is being allowed to wither.

But even an unlimited I.M.G. program could not solve the problem of price, to which Mr. Adams also refers. The comparatively high cost of producing a book in the United States places it out of reach of a majority of Asian or African book buyers.

Here again the Russians have no problem, since their books are sold at nominal prices without relation to cost. In 1957 the Russians printed 30 million books exclusively for export, all in the languages of the non-Communist world, including many in English. The Russians are far ahead of us in supplying books to Asia and Africa and are likely to pull even further ahead unless Congress awakens to the fact, as Mr. Adams says, that the cold war is primarily and fundamentally a battle for men's minds.

MASS MARKET

The publishing industry is playing its part within its resources by vigorous cultivation of the market for books in Asia and Africa. Several publishers have begun to reprint important textbooks in English in Asia at one-half to one-third of the U.S. prices, thus bringing them to the mass student market in Asian countries.

The United States Information Agency and the International Cooperation Administration are also doing everything they can, with the limited funds they are allowed to spend on books, to break the barrier of price. But the sad fact is that there are many Asian and African countries today where students, professors, engineers, doctors, scholars, administrators—book users of every description—need American books.

Congress should see to it that the I.M.G. program receives an appropriation sufficient to insure that any country willing to sign an agreement to buy American books, at their full price, with its own currency, should be able to do so. Secondly, the United States Information Agency and the International Cooperation Administration should receive more funds to make books available to individuals and institutions in Asia, Africa and South America.

There is no other way to insure that the American book will play its full part as this country's most penetrating and effective ambassador at large.

CURTIS G. BENJAMIN.

NEW YORK, *March 31, 1959.*

AMENDING LONGSHOREMEN'S AND HARBOR WORKERS' COMPENSATION ACT

Mr. McCORMACK. Mr. Speaker, I ask unanimous consent for the present consideration of the bill (H.R. 451) to amend the Longshoremen's and Harbor Workers' Compensation Act, with respect to the payment of compensation in cases where third persons are liable; and before the Chair puts the unanimous consent request, I would like to state for the benefit of the House and for the RECORD that when this bill was reached

on the Consent Calendar today, the distinguished gentleman from Michigan [Mr. FORD] asked that it be passed over without prejudice. I have talked with the distinguished gentleman from Michigan [Mr. FORD] and he told me that he had asked that it be passed over because he had not had an opportunity to look into it as thoroughly as he would like to. Then another of our distinguished colleagues, the gentleman from Washington [Mr. PELLY] made the observation that there was no departmental report and nothing indicating the attitude of the Department in the committee report. Thereafter, the gentleman from Michigan [Mr. FORD] talked with me and said that if I found out or obtained any information as to the position of the Department, and if it was of a favorable nature or interposed no objection to the legislation, that I might ask unanimous consent to bring the bill up for consideration today. I called the committee and talked with the acting clerk of the Committee on Education and Labor, Mr. Derrickson. Mr. Derrickson said that there was a report on a similar bill which was made on March 12, 1958, by the Department of Labor, and that the Department did not object to the favorable reporting of the bill, and the Department suggested certain technical changes which were made in the bill which was reported out of the committee last year, which bill passed the House last year but did not pass in the other body, and that the bill, as reported out of the committee this year, is identically the same bill as was reported out of the committee last year. So, Mr. Speaker, on the basis of that information and the talk that I had with my friend, the gentleman from Michigan [Mr. FORD], I am asking unanimous consent for the present consideration of the bill, the purpose of which is to allow an employee who comes under the jurisdiction of the Longshoremen's and Harbor Workers' Compensation Act who is injured, to receive compensation as provided by law while he is suing the person who injured him, or is claiming that the injury was caused through the negligence of others and brings action in court, a tort action. Under the present law, such an employee has to elect whether he will sue or take the compensation. If he elects to bring suit, he cannot get the regular compensation and this bill will enable him to receive his compensation while he is proceeding in the court. Of course, if he gets a larger verdict than the amount of his compensation, there has to be a reimbursement. It seems to me that it is a just proposition. Having cleared up the matter now in connection with the departmental report, I will be happy and I feel that we would all be happy if the bill passed the House today.

Mr. CUNNINGHAM. Mr. Speaker, will the gentleman yield?

Mr. McCORMACK. I yield.

Mr. CUNNINGHAM. I just wanted to be clear on one thing. Will the gentleman repeat what he said about the departmental report?

Mr. McCORMACK. The information I received from Mr. Derrickson is that on March 12, 1958, the Department made a report. They do not object to the bill and they recommend certain technical changes, which were incorporated in the bill last year, and the bill was reported out of the committee, and which changes are incorporated in the bill at the present time.

Mr. CUNNINGHAM. In other words, their objections have been taken care of.

Mr. McCORMACK. They did not object.

Mr. CUNNINGHAM. They just wanted certain technical amendments?

Mr. McCORMACK. That is correct. The Department suggested certain technical amendments which were adopted so that the position of the Department is clearly expressed in the bill, as I have been informed.

Mr. CUNNINGHAM. Mr. Speaker, I withdraw my reservation of objection.

The SPEAKER pro tempore. Is there objection to the present consideration of the bill?

There was no objection.

The Clerk read the bill as follows:

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That section 33 of the Longshoremen's and Harbor Workers' Compensation Act is amended to read as follows:

"COMPENSATION FOR INJURIES WHERE THIRD PERSON IS LIABLE

"SEC. 33. (a) If an employee entitled to compensation under this Act be injured or killed by the negligence or wrong of a third person not in the same employ, such employee or, in case of death, his eligible survivors or legal representative, if any, need not elect whether to take compensation and medical benefits under this Act or to pursue his remedy against such third person but may take such compensation and medical benefits and (within the time periods hereinafter set forth) pursue his remedy against such third person subject to the provisions of this Act. If such employee, or, in case of death, his eligible survivors or legal representative, if any, takes compensation under this Act and desires to bring action against such third person, such action should be commenced not later than six months after the entry of an order awarding compensation or not later than nine months after the enactment of such law or laws creating, establishing, or affording a new or additional remedy or remedies. In such case, the carrier liable for the payment of such compensation shall have a lien on the proceeds of any recovery from such third person, whether by judgment, settlement, or otherwise, after the deduction of the reasonable and necessary expenditures, including attorney's fees, incurred in effecting such recovery, to the extent of the total amount of compensation awarded under, or provided, or estimated, by this Act for such case and the expenses for medical treatment paid or to be paid by it, and to such extent such recovery shall be deemed for the benefit of such carrier. Notice of the commencement of such action shall be given thirty days thereafter to the Secretary of Labor, the employer, and the carrier upon a form prescribed by the Secretary.

"(b) If such employee or, in case of death, his eligible survivors or legal representative, if any, has been awarded compensation under this Act but has failed to commence action against such third person within the time limited therefor by subsection (a), such failure may operate as an assignment of the cause of action against such third person to the carrier liable for the payment of such compensation. The failure of such employee or his eligible survivors or legal representative to commence an action pursuant to the provisions of subsection (a) of this section, shall operate as an assignment of the cause of action: *Provided only, however,* That the carrier shall first, after award of compensation, have notified the employee, or in the event of his death, the employee's eligible survivors and legal representative if any has been appointed, in writing by personal service or by registered mail at least thirty days prior to the expiration of the longer time limited for the commencement of an action by subsection (a), that such failure to commence such action shall operate as an assignment of whatever cause of action may exist from the employee to the carrier. If the carrier shall fail to give such notice, the time limited for the commencement of an action by subsection (a) shall be extended until thirty days after the carrier shall have served the notice required by this section, and in the event the claimant fails to commence such action within thirty days after service of such notice, such failure shall operate as an assignment of such cause of action to such carrier. If such carrier as such an assignee, recovers from such third person, either by judgment, settlement, or otherwise, a sum in excess of the total amount of compensation awarded for the death or injury of such employee and the expenses for medical treatment paid by it, together with the reasonable and necessary expenditures incurred in effecting such recovery, it shall forthwith pay to such employee or his eligible survivors at the time of death two-thirds of such excess, and to the extent of two-thirds of any such excess such recovery shall be deemed for the benefit of such employee or his eligible survivors. When the compensation awarded requires periodical payments, the number of which cannot be determined at the time of such award, the Secretary shall, when the injury or death was caused by the negligence or wrong of another not in the same employ, estimate the probable total amount thereof upon the basis of the survivorship annuitants table of mortality, the remarriage tables of the Dutch Royal Insurance Institute, and such facts as he may deem pertinent, and such estimate shall be deemed the amount of the compensation awarded in such case, for the purpose of computing the amount of such excess recovery, subject to the modification thereof as hereinafter provided.

"(c) In the event of a modification of an award increasing the compensation previously awarded or in the event that the total amount of periodical payments made pursuant to an award under which the number of such payments could not be determined at the time of the award, shall exceed the total thereof as estimated by the Secretary, the principal of any of such excess recovery theretofore paid to such employee or his eligible survivors shall be credited against such increase or such excess. In the event of a modification of an award ending or diminishing the compensation previously awarded or in the event that the total amount of periodical payments made pursuant to an award under which the number of such payments could not be determined at the time of the award, shall be less than the total thereof as estimated by the Secretary, such carrier shall forthwith pay to the person entitled to compensation any additional amount of such excess recovery to which such person may be entitled by reason of such modification or such deficiency determined as hereinbefore provided.

"(d) If such employee proceeds against such third person the carrier shall contribute only the deficiency, if any, between the amount of the recovery against such third person actually collected, and the compensation provided or estimated by this Act for such case, except that in the case where the amount of settlement of a claim or action against a third party is less than the compensation provided or estimated by this Act,

prior approval of the employer or insurance carrier shall be required or else the carrier shall be relieved of all liability for such deficiency.

"(e) The right to compensation or benefits under this Act, shall be the exclusive remedy to an employee when he is injured or killed by the negligence or wrong of another in the same employ."

With the following committee amendments:

Page 3, line 18, after "registered" insert "or certified".

Page 6, line 10, strike out "killed" and insert the following: "to his eligible survivors or legal representatives if he is killed,".

The committee amendments were agreed to.

The bill was ordered to be engrossed and read a third time, was read the third time, and passed, and a motion to reconsider was laid on the table.

NATIONWIDE REFERENDUM—NATIONAL FLOWER

The SPEAKER pro tempore. Under previous order of the House, the gentlewoman from New York [Mrs. WEIS] is recognized for 5 minutes.

Mrs. WEIS. Mr. Speaker, in the spring of the year in this beautiful city of Washington, I wish to speak briefly not on the serious problems before this House and the country, but on a lighter but seemingly as controversial a subject.

Mr. Speaker, some weeks ago there was a serio-comic debate held in what I understand is sometimes erroneously called the upper House on the subject of our national flower. The virtues of a large number of flora were extolled—including some which at first blush would not seem to fall into the category under discussion at all.

Senator GORDON ALLOTT nominated the carnation as the "symbol of fertility, virility, stability, and courage," while his colleague from Iowa, Senator HICKENLOOPER, in defense of the corn tassel, characterized the carnation as the flower most used for funerals.

Senator THRUSTON MORTON, a true Kentucky gentleman, placed his own Kentucky blue grass in the running, and somehow during the debate, even John Barleycorn reared his ugly head.

My predecessor, Senator KEATING, once again took up the cudgels for the rose, which he had championed so many times when he was a Member of this august body.

As usual, this debate produced no action, but it did arouse sufficient interest so that Dave Garroway asked these distinguished Senators to continue their discussions on his television program at 7:10 in the morning. But unlike the flowers which unfold fresh and dewy with the rising of the sun, these gentlemen were unable to rise to the occasion. Therefore, perforce, Mr. Garroway turned to this lower but sturdier House.

Mr. McCORMACK. Mr. Speaker, will the gentlewoman yield?

Mrs. WEIS. I yield.

Mr. McCORMACK. I think I understood the gentlewoman to say in her opening statement that "the other body, erroneously called the upper House."

Mrs. WEIS. Sometimes erroneously.

Mr. McCORMACK. I thoroughly agree with the gentlewoman. That is a pet hobby of mine. It is a coordinate branch of Congress.

Mrs. WEIS. In view of the remarks by our Speaker recently, I was sure I was on safe ground.

Mr. McCORMACK. I want the gentlewoman to know that I not only admire what she said but I thoroughly agree. The more we emphasize it the more some of these columnists and editorial writers will be aware that they should read the Constitution again.

Mrs. WEIS. That is true.

Mr. CUNNINGHAM. Mr. Speaker, will the gentle lady yield?

Mrs. WEIS. I yield.

Mr. CUNNINGHAM. I have heard that expression originated because of the fact that they are continuously upping the appropriation bills.

Mrs. WEIS. That makes a certain amount of sense.

My colleague the gentleman from Pennsylvania [Mr. CURTIN] flung himself into the breach as a late starter in defense of the marigold, while I came to the support of the rose.

For this reason, and because my district in New York lovingly harbors the largest shippers of roses in the world, I am proposing that we end this debate once and for all by taking the issue to the country at large.

Admittedly, many public-opinion polls have been taken in the past, including a recent Gallup poll which showed the rose winning by a margin of 14 to 1. But Dr. Gallup has predicted landslides before—erroneously, to my regret.

It is obvious that periodic debate in the Congress is not going to settle this question. In fact, if the discussions continue, I dare say there will soon be as many flowers nominated as there are Members sitting in either House. Though my preference for the rose must be apparent by now, I am willing to abide by the will of the majority. Therefore, I suggest a nationwide referendum to determine the people's choice of a national flower, the results to be reported to the Senate which has scheduled another debate on this issue on May 5.

I would urge that every man, woman, or child in the United States who has an interest in this matter write a postcard to me, at my Washington office, listing the flower of his choice. I would urge also that my colleagues in the four States which have already selected the rose as their State flower—Iowa, Georgia, North Dakota, and my own State of New York—and those who represent areas such as California and Arizona, where roses are grown in great profusion, join with me in this effort. I would welcome, too, the cooperation of all those who are protagonists for the other floral nominees.

Though this maiden effort of mine may seem to have had facetious overtones, there are millions of flower lovers who are seriously interested in this question, and, after all, if America is to have a national flower, it should represent in every sense the wishes of the majority of the American people.

OUR DEBT MANAGEMENT POLICIES, II: HOW ABOUT PRACTICING WHAT WE PREACH?

The SPEAKER pro tempore (Mr. ALBERT). Under the previous order of the House, the gentleman from Wisconsin [Mr. REUSS] is recognized for 20 minutes.

Mr. REUSS. Mr. Speaker, on March 17 I urged that the Congress take a new look at our debt management policies. Particularly, I pointed out that our present debt management practices squarely collide with a number of principles that ought to be fundamental.

First among such principles, I pointed out, was that the debt to the maximum extent should be held by real savers, not by the commercial banks. This is so because a large bank-held national debt stockpiles an inflationary credit potential that may prove impervious to restrictive monetary policies if and when they become necessary.

No one can say that the administration has not, from almost the day it took office, preached the observance of this principle vigorously.

Former Secretary of the Treasury Humphrey said in April 1953:

> The concentration of short-term debt in the banks by the previous administration was one of the causes of inflation in the cost of living which has cost the American people billions of dollars. A gradual placing of more securities in the hands of nonbank investors is a necessary step for economic stability.

Former Under Secretary of the Treasury Burgess had this to say on May 12, 1953:

> When the Treasury meets a deficit by borrowing from the banks, it is inflationary—creates more money—tends to raise the cost of living.
>
> Bank borrowing may be cheap in terms of interest cost to the Treasury, but it is exceedingly expensive for the country as a whole, as all Americans who have been hurt by inflationary prices in the past decade should know.
>
> The reasons are simple but deserve spelling out.
>
> When the Treasury sells short-term securities to banks the money supply is increased by the amount of the borrowing. There is more money—but there is no increase in the things people can buy for their own use. Borrowing outside of banks, on the other hand, reaches genuine savings. Money which might have gone into other investment outlets goes instead into governments. The Treasury competes for available loan funds rather than creating new money.
>
> This avoids inflation—it keeps the price of food, clothing, and shelter from going up.
>
> These simple principles constitute the bases for the program of the Treasury Department for financing the public debt.

More recently, on February 5, 1959, Mr. Charles J. Gable, Jr., Assistant to the Secretary of the Treasury for Debt Management, told the Joint Economic Committee:

> The Treasury would have preferred that a larger part of its financing outside of the banks during the second half of the calen-

dar year [1958] had been through longer term savers—such as individuals and savings institutions. (Joint Economic Committee, hearings on 1959 Economic Report of the President, p. 409.)

Mr. Gable further assured the committee:

We will continue to secure our funds as largely as possible from true savers rather than from commercial banks in order to reduce the inflationary potential of our financing operations during a period of rising economic activity. (Ibid., p. 413.)

Here are the preachments, then, clear and forthright as anyone could ask: Place the national debt with the real savers, and avoid the commercial banks. What is the practice?

On March 19 the Treasury announced the offer of a $500 million, 10-year, 4-percent bond issue.

On March 26, by Treasury Department press release A–484, came the good news. Treasury press release A–484 reported that:

Reports received thus far from the Federal Reserve banks show that subscriptions for the bonds total about $1,477 million, of which about $238 million were received from subscribers in the savings-type investor groups, $918 million from commercial banks for their own account and $321 million from all others.

The press release went on to describe savings-type investors as follows:

Pension and retirement funds—public and private.

Endowment funds.

Insurance companies.

Mutual savings banks.

Fraternal benefit associations and labor unions' insurance funds.

Savings and loan associations.

Credit unions.

Other savings organizations—not including commercial banks.

States, political subdivisions or instrumentalities thereof, and public funds.

But then came the thunderbolt. Instead of rejoicing, and announcing that the savings-type investors were to receive the full $238 million subscribed, the Treasury announced that it was cutting down the allotment to savings-type investors by 35 percent of their subscription. In other words, although savings-type investors were ready, willing, and eager to take $238 million of the issue, they were only to be allotted some $155 million. The remainder of the issue was to be allotted to the commercial banks and to "all others."

When I saw this press release on the morning of Friday, March 27, I immediately asked the Treasury what possible excuse there was for diverting from the hands of real savers to the commercial banks more than one-third of the long-term Government bonds which the real savers wanted to buy and had legally obligated themselves to buy. The Treasury's answer was that it guessed that maybe some of the real savers who had legally obligated themselves to buy the bonds might not want to do so.

Here was the Treasury, which makes so much of the need for selling the debt as much as possible to real savers, and as little as possible to commercial banks, deliberately cutting down on the real savers in order to sell to the commercial banks.

I thereupon, later Friday morning, March 27, sent the following telegram to the President:

MARCH 27, 1959.

The PRESIDENT,
The White House,
Washington, D.C.:

According to my information, subscriptions from savings institutions, corporations, and individuals, exceeded the $500 million total offering of the new Treasury 10-year 4-percent bond issue. Commercial banks also submitted subscriptions in excess of the total amount offered. I am now informed that unless you stop them, the Treasury intends to sell $320 million to the commercial banks, leaving only $180 million to the real savers. As no one knows better than you, the financing of the national debt through the commercial banking system has highly undesirable and potentially inflationary consequences. I earnestly request that you immediately direct the Treasury to cease undermining the national credit and to allocate this issue to the real savers of the Nation.

HENRY S. REUSS,
Member of Congress.

The receipt of my March 27 telegram has been acknowledged, but it has had no effect. On March 31, 1959, the Treasury, by press release A–487, announced that the allotment had been made according to plan, with savings-type investors restricted to 65 percent of their subscription, even though they could have been allotted 100 percent of the amount of their subscription.

Let me make my position very clear. The commercial banks and the "all others"—very largely the bond houses specializing in U.S. obligations—serve a most useful purpose in the marketing of Government securities. We are not here concerned with the Treasury's selling to the commercial banks and to "all others" U.S. bonds that savings-type investors refuse to take. But a Treasury policy of actually preventing savings-type investors from buying the U.S. bonds which they are ready, willing, able and legally obligated to buy is indefensible. Diverting these bonds to the commercial banks then leads to further doses of tight money by the Federal Reserve in order to neutralize this inflationary tinder. So the recovery of the economy is further retarded.

Congress has the constitutional duty to safeguard the national credit. For that reason I have today introduced House Concurrent Resolution 111:

HOUSE CONCURRENT RESOLUTION 111

Concurrent resolution expressing the sense of Congress with respect to allotments of subscriptions for Treasury bonds by savings-type investors

Whereas the expansion of the money supply which results from the acquisition of Government bonds by the commercial banking system is potentially inflationary; and

Whereas it is of vital importance that every legitimate means be used to facilitate the purchase of United States bonds with funds generated by true saving; and

Whereas the first section of the Second Liberty Bond Act confers upon the Secretary of the Treasury full authority to reject or reduce allotments upon applications from incorporated banks and trust companies for purchase of bonds issued under that Act, and to make allotment in full or larger amounts to others: Therefore be it

Resolved by the House of Representatives (the Senate concurring), That it is the sense of Congress that the Secretary of the Treasury, in making allotments to subscribers for bonds having maturities of 5 years or more after the offering date, shall allot in full the subscriptions of savings-type investors before any bonds of the offering are allotted to other types of investors.

Mr. Speaker, I hope that the Treasury in its upcoming bond issues will make an effort to practice what it preaches, and to place no obstacles in the way of real savers who want to buy long-term U.S. obligations.

Mr. JOHNSON of Colorado. Mr. Speaker, will the gentleman yield?

Mr. REUSS. I yield to the gentleman from Colorado.

Mr. JOHNSON of Colorado. I want to commend the gentleman for calling to public notice the tragic difference between pronounced policies and actual policies. Also I would like to ask the question of the gentleman from Wisconsin whether the Treasury could not have achieved his purposes by their own direct action without the need of this resolution, if it so chose?

Mr. REUSS. Absolutely. The Treasury proceeds in these bond sales under the Second Liberty Bond Act of 1918. That act which I have taken the trouble to read and to reread in the last day or so, clearly and specifically authorizes and permits the Treasury to cut down the commercial banks and certain other classes of subscribers to zero, if need be, in order to market the national debt to the largest extent possible to true savers. This is to enable people and savings institutions to buy bonds, giving up the power to buy something else, as opposed to the commercial banks, useful as their role may be, who by a stroke of the pen and by enlargement of their credit, purchase the national debt, thus creating an inflationary tender.

The Second Liberty Bond Act of 1918 expressly permits the Secretary of the Treasury to exclude nonsaving investors from these issues. Here, of course, it was not even necessary to do that. The Secretary of the Treasury could have given several hundred million dollars worth of these bonds to the commercial banks, instead of the larger amount that they did give to the banks, and to the so-called all others, and still have taken care of the real savers 100 cents on the dollar. Every other true saver could come to the Treasury and say, "Look, these are my savings. I would like to buy Uncle Sam's obligations."

It seems to me absolutely indefensible for the Treasury to do what it did do, to turn aside these citizens and savings institutions that wanted to buy the national debt by saying, "We are sorry, but we will have to place you on a quota."

Mr. JOHNSON of Colorado. I commend the gentleman for his statement, and I hope the resolution is adopted. I regret its apparent necessity, and I trust that the Treasury will be sufficiently warned that they will use their discretionary power with more attention to their own pronounced policies. Because if they are to fail, it seems to me that we might be led into a situation where the

Congress would have to pass more restrictive legislation on the Treasury powers. I concur in the wisdom of the original decision to give the Secretary broad authority, but I regret that that authority was used in a manner inconsistent with public policy.

Mr. VANIK. Mr. Speaker, will the gentleman yield?

Mr. REUSS. I yield to the gentleman from Ohio.

Mr. VANIK. I want to express my appreciation to the gentleman from Wisconsin for his splendid contribution this afternoon in pointing this out to the attention of the Congress. I think far too little attention has been paid by Congress to the great problems of debt management. I think the gentleman is perhaps too gentle with these indefensible Treasury policies. I wish his resolution would establish mandatory guideposts to the Treasury Department in issuing these securities. It seems to me that a charge could be properly leveled against the Treasury Department for mismanagement and mishandling of the public debt, because it has engaged in policies which have caused the cost of managing our debt to skyrocket during the past 6 or 7 years.

I certainly hope that the gentleman's resolution will be given very careful and prompt consideration by the Congress. I think it is time that Congress provided a very careful analysis of the complete debt structure of the country and consider ways and means to reduce this tremendous burden upon our people.

Mr. REUSS. I thank the gentleman from Ohio. I am glad he has pointed out the self-defeating nature of the action by the Treasury in loading up the commercial banks with the national debt by turning aside the real savers who want to buy it. In its Newsletter for April, which reached my desk yesterday, the First National City Bank of New York pointed out, for example, that the recent rise in the rediscount rate of the Federal Reserve of a few weeks ago, an increase which many of us in this body deplored, was necessitated very largely by the fact that commercial banks were holding such an increasingly large portion of the national debt. Well, do you not see what happens: To the extent that the Treasury loads up the commercial banks, the Fed comes around, raises the rediscount rate, with its attendant disastrous effects on small business, on the farmer, and the other weaker elements of the community? So we just chase our tail around, complicating rather than alleviating the problem of debt management.

Mr. VANIK. I have the feeling that the Federal Reserve discount rate is usually raised just before the Federal Government itself must apply for an extension of credit and sell large issues of its debentures on the public market. Does the gentleman concur with this reaction?

Mr. REUSS. To a limited degree, since the Treasury is in the market almost every month nowadays, marketing the national debt, and since the Federal Reserve is extremely quick on the trigger to raise the rediscount rate, you usually find that they raise it just before, during, and after these marketings.

Mr. WOLF. Mr. Speaker, will the gentleman yield?

Mr. REUSS. I yield to the gentleman from Iowa.

Mr. WOLF. I want to commend the gentleman for his splendid remarks. I would like to say that I hope the resolution will be given immediate consideration, and I hope it will pass in order to give us something to help this situation. One of the things that impressed me the most on my trip back to my district during the holidays was the demonstration and concern by many people in all walks of life that there is something wrong with our fiscal policy and it does need thorough consideration.

I was happy to be able to be back from Iowa in time to hear the gentleman's remarks. I hope he will continue the work he is doing in bringing this matter to the attention of the Congress.

Mr. CUNNINGHAM. Mr. Speaker, will the gentleman yield?

Mr. REUSS. I yield to the gentleman.

Mr. CUNNINGHAM. The only thing wrong with our fiscal policy is that we are spending more money than we are taking in. If the gentleman would propose the taxes to take care of the increased expenditures and balance the budget, he would not have to make this presentation today.

Mr. REUSS. Yes; that is the answer of the administration to all constructive attempts on this side of the aisle to develop sound policies of debt management. I wish, however, that the gentleman, as the representative of the administration here this afternoon, would defend if he can the practice of the Treasury in deliberately turning down real savers, people who want to buy the national debt, and instead loading the national debt onto the commercial banks. That is the subject of my remarks. I would agree with the gentleman's observation in the abstract that balanced budgets are good things.

Mr. CUNNINGHAM. Mr. Speaker, will the gentleman yield further?

Mr. REUSS. I yield.

Mr. CUNNINGHAM. May I say that I worked 2 years for the Treasury Department, and I do not think there is any skulduggery in that shop. I think that they are doing an honest, sincere job. Their policies today are practically the same as they have been for 20 years. As far as real savers are concerned, there is an avenue for them through our savings bond program, which has been liberalized. Savings bonds can now be purchased in large amounts. They are available to the real savers whom the gentleman has mentioned. All they have to do is to take advantage of it.

Mr. REUSS. Nobody has mentioned the word "skulduggery" until the gentleman brought it up. I do not myself think that there is skulduggery on the part of the Treasury. I think, however, that there is inept debt management on the part of the administration and the Treasury, and it is our hope that by debating the matter here openly today and on other days we may make some contribution to the solution of the problem. The gentleman still has not answered my central point which is, Is it wise or is it foolish to turn down real, live savers who reach down into the mattress for their money and want to buy U.S. bonds, and instead to sell those bonds to the commercial banks? I cannot believe that it is, but I gather that the administration's position, as set forth this afternoon, is that this is wise.

Mr. CUNNINGHAM. I would say that the real savers can take that opportunity through the savings bond program.

Mr. REUSS. Does the gentleman suggest that the opportunities for real savers to participate in the national debt ought to be restricted to savings bonds?

Mr. CUNNINGHAM. I just do not accept the premise upon which the gentleman based his remarks, that is all.

Mr. JOHNSON of Colorado. Mr. Speaker, will the gentleman yield?

Mr. REUSS. I yield to the gentleman from Colorado.

Mr. JOHNSON of Colorado. I would not like the RECORD at this point to show, Mr. Speaker, that if we had a balanced budget there would be no problem of debt management. I think the RECORD should show that even if we had a perfectly balanced budget, down to the last dime, the Treasury would still have, according to my recollection, something like a $55 billion turnover in the debt in the coming year. Is that not approximately correct?

Mr. REUSS. I believe that is right.

Mr. JOHNSON of Colorado. In other words there would still be the problem of where to place the debt which is coming due and payable during the next fiscal year, which must be replaced. You simply cannot maintain it as a volume of debt. The problem of debt management would be here whether we had a balanced budget, an underbalanced budget, or an overbalanced budget.

Mr. REUSS. I agree thoroughly with the gentleman. Indeed, if the budget were balanced, then the position of the Treasury in turning aside true savers and placing so large a portion of the debt with the commercial banks would be that much more indefensible.

Mr. VANIK. Mr. Speaker, will the gentleman yield further?

Mr. REUSS. I yield.

Mr. VANIK. I think the gentleman from Wisconsin is much too kind in permitting the word "skulduggery" to be taken out of the RECORD. I think it belongs in the RECORD, because Treasury skulduggery is the sort of thing that makes the gentleman's resolution a necessary thing. It is the Treasury action which favors the commercial banks by allocations of Treasury issues, that makes it necessary.

The very thing that makes the gentleman's resolution necessary are the Treasury efforts to look out for the interests of the commercial bankers of America rather than the taxpayers.

Mr. REUSS. I have tried not to use inflammatory language this afternoon. I certainly do not use the word "skulduggery." At the same time, I deeply regret that the only answer of the administration to my disquiet about the administration's debt management

policy is that real savers have the series E bonds available, and that that ought to be enough for them—let the other issues, or 80 percent of the national debt, be held by the commercial banks. To me this is economic madness, fiscal irresponsibility, and the most inflationary kind of talk I have ever heard.

Mr. PATMAN. Mr. Speaker, will the gentleman yield?

Mr. REUSS. I yield to the gentleman from Texas.

Mr. PATMAN. I believe the gentleman's resolution is a good one; that is, the Treasury should sell all the bonds it can to people who actually have money to pay for the bonds; but, when they have sold all those bonds, then I believe we should use another method to obtain money rather than sell bonds to the commercial banks that create the money on the books of the banks to buy the bonds. The Treasury should not be allowed to sell securities to commercial banks when others are clamoring for the privilege of buying such securities and have the actual money to pay for them. I congratulate the distinguished gentleman [Mr. REUSS] for presenting his very constructive proposal. I hope it is adopted.

RECREATION AS A FACTOR IN FEDERAL WATER PROJECTS

The SPEAKER pro tempore (Mr. ALBERT). Under previous order of the House, the gentleman from Florida [Mr. SIKES] is recognized for 15 minutes.

Mr. SIKES. Mr. Speaker, I have introduced a bill to provide for additional consideration of recreation and fish and wildlife values in all Federal water-resources projects. The Federal Government should give more attention to the tremendous interest our people have in using the reservoirs and other facilities built by the U.S. Army Corps of Engineers and the Bureau of Reclamation for outdoor recreation. The water projects of these two large agencies provide many recreational opportunities that our Nation can ill afford to overlook.

Many of my colleagues know from experience in their own districts how their constituents are attracted in ever-increasing numbers to these new lakes in order to enjoy fishing and hunting opportunities, to picnic, and participate in other outdoor activities with their families, and to use their boats. These public activities bring a substantial dividend to our Nation in the form of better health from wholesome outdoor recreation and through the release from tensions and worries that have become so much a part of modern living. Nor can we continue to overlook the huge business that is generated for goods and services to supply the needs of these recreationists.

The individuals and families that flock to these reservoirs spend millions of dollars each year at the service stations, restaurants, motels and hotels, and grocery and sporting-goods stores. Businesses and whole communities have been built up in some areas merely to supply the needs of these outdoor enthusiasts. The business that has been created as a result of this widespread recreational use has had a salutary effect on the economy in many parts of the country.

Despite all these obvious benefits, we still are building reservoirs, canals, and levees for flood control, irrigation, and power, without giving full consideration to the growing needs of our people to use those same facilities for fishing, hunting, and other forms of outdoor sports. Over and over again we hear the story of how these water facilities that have been built by the Federal Government are being overwhelmed by the rush of people even though the project features for public recreational use are only slightly developed at some reservoirs and largely nonexistent or grossly inadequate at most.

The growth and the magnitude of public recreation use of civil projects of the Army Engineers is shown in a news release from the Department of the Army, dated March 26, 1959, which states:

> Visitor attendance in 1958 reached a new all-time high of 94,793,000. This compares with 84,704,000 in 1957, and 71,340,000 in 1956. In 1950 it was only 16 million.

In my judgment it is high time that the Congress recognize this situation by providing specifically for public use of these facilities in the planning and construction as well as the operation of Federal water projects. The people who benefit from these projects from a recreational standpoint need not, in all equity, continue to be neglected in favor of the people who benefit directly from flood-control, irrigation, and power aspects of the projects.

The bill which I have introduced would permit the Corps of Engineers and the Bureau of Reclamation to cooperate more fully with the U.S. Fish and Wildlife Service, National Park Service, and the fish and wildlife and recreational agencies of the respective States in building into project plans sound provisions for public recreational use of these projects. There is no valid reason why these projects should not be planned, built, and operated with recreation in mind, along with flood control, irrigation, and power. This will mean that recreation can be a purpose in project planning and not merely an incidental and perhaps accidental byproduct, as now is the case.

Experience demonstrates that the cost of making specific provisions for all types of recreation in these projects is very modest in relation to the cost of building dams, powerplants, and canals for traditional project purposes.

I am confident that my bill will have the enthusiastic support of all of those interested in the better management and wise use of natural resources. Its prompt enactment would do good service to the increasing millions of people who take to the highways every weekend earnestly searching for wholesome, healthful ways of employing their leisure time.

I sincerely hope and urge that the committee to whom the bill is referred will schedule early hearings so that we may have the bill before the House for consideration as soon as possible.

BATAAN DAY

Mrs. ROGERS of Massachusetts. Mr. Speaker, I ask unanimous consent to address the House for 5 minutes and to revise and extend my remarks.

The SPEAKER. Is there objection to the request of the gentlewoman from Massachusetts?

There was no objection.

Mrs. ROGERS of Massachusetts. Mr. Speaker, inasmuch as the House will not be in session tomorrow I should like to join my colleague from Massachusetts, the distinguished floor leader [Mr. MCCORMACK] in extending my thanks and appreciation and respect to all the fighting men who so courageously stood their ground on the Bataan Peninsula in the Philippines. Tomorrow is Bataan Day.

Seventeen years have passed since those heroic days on the Bataan Peninsula and the glorious stand made at Corregidor. Every American owes a debt of gratitude and respect to all of the men of our fighting forces involved in that great struggle. The battles of Bataan and Corregidor occurred in the early days of the war in the Pacific. These battles took place when the enemy had tremendus advantage over the American forces. Our men were few in numbers and poorly equipped. They possessed, however, one factor of strength superior to that of the enemy. This was their determination and their resolve to fight on to the very end. These men were Americans and they were determined to uphold the honor of their country and die as Americans. For the great fight they made, for their character, and for their resolve to place their country ahead of their own well-being and their own very lives, this Nation of American people owes them an eternal debt of gratitude and respect.

Many of us here in the Congress today were Members of Congress on this eventful day 17 years ago. Well can we remember the sickening pain we felt in our hearts when the news was unfolded to us of the heroic struggle these Americans made at Bataan and Corregidor. We remember how we chilled at the thought of their suffering in that famous Bataan death march. We know that their suffering steeled in us a resolve to never stop until we had defeated the enemy in the entire Pacific area. This resolve and determination created in us as a result of their suffering and their determination was indeed a powerful force not only in the determination behind the efforts of the Members of Congress but also in the steeling of the determination of the whole Nation.

Civilized people everywhere revolt at brutality. Regardless of the horrors and tragedy of war, even brutality exercised in the conduct of war causes a shocking and revolting feeling among civilized people. The death march on Bataan was brutal. It was unnecessary. It was inhuman. This inhuman act, so brutal and so unnecessary, reaped its harvest. It was the determination of an aroused America, not only to defeat the enemy but to seek out those responsible for this inhuman act and make them pay for it

in adequate punishment. This was done. This civilization had to do for the honor of civilization.

Back home in Massachusetts there is a sergeant of the U.S. Army from Boston who was one of those heroic men who fought on Bataan, who made the brutal death march, and who was able to survive all of the atrocities of the enemy. He is a very seriously injured man. I am proud to say that for his heroic deeds he possesses the Congressional Medal of Honor. I speak of Sgt. Charles McGilvery. Like a few of the others, Sergeant McGilvery never thought for one moment he would live to survive to this day 17 years afterward. To Sergeant McGilvery and all of his associates and comrades, living and dead, I extend my heartfelt thanks and respect.

Fighting with the American forces in this great battle of Bataan were many soldiers of the present Republic of the Philippines. With the Americans, and shoulder to shoulder, they, too, made their sacrifices and made their resolves and determinations. Now, 17 years later, some of these men, veterans of this great struggle, are denied certain benefits which are given to others who performed comparable service. In view of this fact, on March 12 of 1959, I introduced House Joint Resolution 307, for the purpose of creating a commission to conduct a thorough and comprehensive investigation of the veterans' program of the United States in the Republic of the Philippines with a view to correcting so many of these existing inequities. My resolution has the full support of the Government of the Republic of the Philippines. At this time, I think it is extremely appropriate for me to urge the Members of the Congress to enact this joint resolution. In the creation of this Commission, the Congress would be showing its good faith and its appreciation to those veterans of the Philippines who stood their ground on Bataan. I hope so much the Congress will enact House Joint Resolution 307.

Out of all great catastrophies, and from the oasis of all great events, it is my belief something good, something worthwhile and of benefit to mankind emerges. Surely from the great struggle on Bataan emerged a new way of life and new rules of conduct for many people in the Far East. Above all, however, the meaning of Bataan 17 years ago, at the present time, 17 years in the future, and for all time, is that freemen wherever they are assembled together, will never sacrifice their freedom, and that freedom existing in the hearts of mankind will live forever.

LEAVE OF ABSENCE

By unanimous consent, leave of absence was granted to:

Mr. STRATTON, on account of official business of the Board of Visitors of the U.S. Military Academy.

Mr. HALL, indefinitely, on account of illness.

SPECIAL ORDER GRANTED

By unanimous consent, permission to address the House, following the legislative program and any special orders heretofore entered, was granted to Mr. SIKES, for 15 minutes, today, and for 30 minutes on April 16.

EXTENSION OF REMARKS

By unanimous consent, permission to extend remarks in the CONGRESSIONAL RECORD, or to revise and extend remarks, was granted to:

Mr. WAMPLER and to include extraneous matter.

Mr. RHODES of Arizona (at the request of Mr. BROOMFIELD) and to include extraneous matter.

Mr. SIMPSON of Pennsylvania (at the request of Mr. MILLER of New York) and to include a letter and statement.

Mr. POFF (at the request of Mr. MILLER of New York) and to include extraneous matter.

Mr. AUCHINCLOSS and to include a newspaper article.

Mr. BURKE of Massachusetts and to include extraneous matter.

Mr. KASTENMEIER and to include extraneous matter.

Mr. GAVIN and to include extraneous material.

Mr. CELLAR.

ADJOURNMENT

Mr. SMITH of Iowa. Mr. Speaker, I move that the House do now adjourn.

The motion was agreed to; accordingly (at 1 o'clock and 30 minutes p.m.), under its previous order, the House adjourned until Friday, April 10, 1959, at 12 o'clock noon.

EXECUTIVE COMMUNICATIONS, ETC.

Under clause 2 of rule XXIV, executive communications were taken from the Speaker's table and referred as follows:

828. A letter from the Acting Secretary of State, transmitting the seventh report on the extent and disposition of U.S. contributions to International Organizations for the fiscal year 1958, pursuant to section 2 of Public Law 806, 81st Congress (H. Doc. No. 111); to the Committee on Foreign Affairs and ordered to be printed.

829. A letter from the Secretary, Federal Prison Industries, Inc., U.S. Department of Justice, transmitting the annual report of the Directors of Federal Prison Industries, Inc., for the fiscal year 1958, pursuant to the act approved June 23, 1934 (18 U.S.C. 4127); to the Committee on the Judiciary.

PUBLIC BILLS AND RESOLUTIONS

Under clause 4 of rule XXII, public bills and resolutions were introduced and severally referred as follows:

By Mr. ADAIR (by request):

H.R. 6150. A bill to free farmers from Government control; to the Committee on Agriculture.

By Mr. BARING:

H.R. 6151. A bill to provide for the construction of sewer and water facilities for the Battle Mountain Indian Colony, Nev., and for other purposes; to the Committee on Interstate and Foreign Commerce.

H.R. 6152. A bill to provide for transfer of title to irrigation distribution systems constructed under the Federal reclamation laws upon completion of repayment of the costs thereof; to the Committee on Interior and Insular Affairs.

H.R. 6153. A bill to stabilize the domestic market prices of lead and zinc; to the Committee on Ways and Means.

By Mr. BARRETT:

H.R. 6154. A bill to provide for the entry of certain relatives of U.S. citizens and lawfully resident aliens; to the Committee on the Judiciary.

By Mr. BETTS:

H.R. 6155. A bill to amend the Internal Revenue Code of 1954 to exempt from taxation certain nonprofit corporations or associations organized after August 31, 1951; to the Committee on Ways and Means.

By Mr. BOGGS:

H.R. 6156. A bill to amend the National Defense Education Act of 1958 to provide for Federal grants to the States for the purpose of installing automatic sprinkler systems in elementary and secondary schools not adequately protected against the hazard of fire to safeguard the children of this Nation who will provide the leadership for its defense in the future; to the Committee on Education and Labor.

By Mr. BYRNES of Wisconsin:

H.R. 6157. A bill authorizing the improvement of the Kewaunee Harbor, Wis., in the interest of navigation and other purposes; to the Committee on Public Works.

By Mr. CARNAHAN:

H.R. 6158. A bill to extend certain privileges and immunities to judges of the International Court of Justice; to the Committee on Foreign Affairs.

By Mr. CELLER:

H.R. 6159. A bill to provide for the appointment of additional circuit and district judges, and for other purposes; to the Committee on the Judiciary.

By Mr. FASCELL:

H.R. 6160. A bill to repeal the excise tax on amounts paid for communication services or facilities; to the Committee on Ways and Means.

By Mr. FLYNN:

H.R. 6161. A bill to amend the Federal Credit Union Act; to the Committee on Banking and Currency.

H.R. 6162. A bill to amend title II of the Social Security Act to increase from $1,200 to $1,800 a year the amount of outside income permitted without deductions from benefits, and to provide that all types of income shall be taken into account in determining whether an individual's benefits are subject to such deductions; to the Committee on Ways and Means.

By Mr. FOLEY:

H.R. 6163. A bill to provide for the creation of an Office of Administrator for Legal Assignments for the District of Columbia, and for other purposes; to the Committee on the District of Columbia.

By Mr. FULTON:

H.R. 6164. A bill to amend section 6150 of title 10, United States Code, to provide for advancement on the retired list of officers of the Army or Air Force specially commended for performance of duty before January 1, 1947, in actual combat; to the Committee on Armed Services.

H.R. 6165. A bill to provide for the granting of a nonquota immigrant status to certain immigrants who are the brothers, sisters, sons, or daughters of citizens of the United States; to the Committee on the Judiciary.

H.R. 6166. A bill to revise the tariff laws to facilitate entry of works of art and other exhibition material, and for other purposes; to the Committee on Ways and Means.

H.R. 6167. A bill to provide for Government contribution toward personal health service benefits for civilian officers and employees in the U.S. service and their dependents, to authorize payroll deductions for participants, and for other purposes; to the Committee on Post Office and Civil Service.

H.R. 6168. A bill to amend subchapter III of chapter 15 of title 38, United States Code, to provide pension for widows and children of World War I veterans at the same rates as apply in the case of widows and children of Spanish-American War veterans; to increase the income limitations applicable thereto; and to eliminate annuities in the compensation of such income; to the Committee on Veterans' Affairs.

H.R. 6169. A bill to amend title X of the Social Security Act to enable the States to provide more adequate financial assistance to needy individuals who are blind and to encourage and stimulate needy blind individuals to become self-supporting; to the Committee on Ways and Means.

H.R. 6170. A bill to clarify paragraph 4 of section 15 of the Pay Readjustment Act of 1942 (56 Stat. 368); to the Committee on Armed Services.

H.R. 6171. A bill to establish a temporary Presidential commission to study and to report on problems related to blindness and the needs of blind persons, and for other purposes; to the Committee on Education and Labor.

By Mrs. GRANAHAN:

H.R. 6172. A bill to amend the Civil Service Retirement Act to provide annuities for dependent parents of deceased unmarried employees; to the Committee on Post Office and Civil Service.

H.R. 6173. A bill to amend sections 545 and 415 of title 38, United States Code, to provide for the exclusion of certain death benefits from income in determining the annual income of widows, children, and parents of veterans; to the Committee on Veterans' Affairs.

By Mr. JOHNSON of Colorado:

H.R. 6174. A bill to provide for the entry of certain relatives of U.S. citizens and lawfully resident aliens; to the Committee on the Judiciary.

By Mr. LAIRD:

H.R. 6175. A bill to amend section 161 title 35, United States Code, with respect to patents for plants; to the Committee on the Judiciary.

By Mr. LANE:

H.R. 6176. A bill to amend title 18, United States Code, entitled "Crimes and Criminal Procedure" to provide that prior adjudication on the merits by any court of competence, State or Federal, shall bar prosecution for similar act committed against same person and State; to the Committee on the Judiciary.

By Mr. McFALL:

H.R. 6177. A bill to provide for the admission of 5,000 Assyrian immigrants; and for other purposes; to the Committee on the Judiciary.

H.R. 6178. A bill to authorize the modification of the existing project for the New Melones Dam and Reservoir, Stanislaus River, Calif., and for other purposes; to the Committee on Public Works.

By Mr. McGINLEY:

H.R. 6179. A bill to grant the right, title, and interest of the United States in and to certain lands to the city of Crawford, Nebr.; to the Committee on Interior and Insular Affairs.

By Mr. McSWEEN:

H.R. 6180. A bill to amend the Internal Revenue Code of 1954 with respect to the deduction for medical and dental expenses in the case of the disabled; to the Committee on Ways and Means.

H.R. 6181. A bill to amend the Railroad Retirement Act of 1937 by eliminating the "living with" requirement for purposes of monthly annuities to widows and widowers, and for other purposes; to the Committee on Interstate and Foreign Commerce.

By Mr. MONAGAN:

H.R. 6182. A bill to authorize U.S. district court sessions at Bridgeport, Hartford, New Haven, and Waterbury, Conn.; to the Committee on the Judiciary.

H.R. 6183. A bill to liberalize the tariff laws for works of art and other exhibition material, and for other purposes; to the Committee on Ways and Means.

By Mr. CLEMENT W. MILLER:

H.R. 6184. A bill to direct the Secretary of the Interior to establish a research program in order to determine means of improving the conservation of game fish in dam reservoirs; to the Committee on Merchant Marine and Fisheries.

H.R. 6185. A bill authorizing and directing the Secretary of the Interior to undertake continuing research on the biology, fluctuations, status and statistics of the migratory marine species of game fish of the United States and contiguous waters; to the Committee on Merchant Marine and Fisheries.

By Mr. MINSHALL:

H.R. 6186. A bill to provide for the acquisition of the Cleveland Cavalry Armory, Shaker Heights, Ohio, for the use of the Ohio Army National Guard; to the Committee on Armed Services.

By Mr. MOORE:

H.R. 6187. A bill to amend title II of the Social Security Act to clarify the meaning of the term "disability" and thereby to effectuate the purpose intended by the Congress in enacting the provisions of such act which relate to the payment of disability insurance benefits; to the Committee on Ways and Means.

H.R. 6188. A bill to amend title II of the Social Security Act to reduce the coverage requirements upon which eligibility for disability insurance benefits thereunder is conditioned; to the Committee on Ways and Means.

By Mr. NORBLAD:

H.R. 6189. A bill to exclude certain lands within the Bull Run Division of the Mount Hood National Forest from the provisions of the act of Congress dated April 28, 1904, as amended, thereby opening such lands for public recreational purposes, and for other purposes; to the Committee on Interior and Insular Affairs.

By Mr. NORRELL:

H.R. 6190. A bill to direct the Secretary of the Army to convey the Army and Navy General Hospital, Hot Springs National Park, Ark., to the State of Arkansas, and for other purposes; to the Committee on Armed Services.

By Mr. POFF:

H.R. 6191. A bill to amend the Mutual Security Act of 1954 to restrict the granting of economic aid to any foreign country which has reduced taxes; to the Committee on Foreign Affairs.

By Mr. RABAUT:

H.R. 6192. A bill to authorize the Secretary of the Army, the Secretary of the Navy, and the Secretary of the Air Force to make grants to certain educational institutions for the construction of military and naval science buildings, and for other purposes; to the Committee on Armed Services.

H.R. 6193. A bill to provide for the recognition of the Polish Legion of American Veterans by the Secretary of Defense and the Administrator of Veterans' Affairs; to the Committee on Veterans' Affairs.

By Mr. REUSS:

H.R. 6194. A bill to amend the Historic Sites Act of August 21, 1935, to provide a method for preserving sites, areas, buildings, and objects of national, regional, or local historical significance which are threatened with destruction by federally financed programs, and for other purposes; to the Committee on Interior and Insular Affairs.

By Mr. RIVERS of Alaska:

H.R. 6195. A bill to increase the price of domestically mined gold, and for other purposes; to the Committee on Banking and Currency.

By Mr. ROGERS of Texas:

H.R. 6196. A bill to amend the Internal Revenue Code of 1954 with respect to the size requirements which a corporation must meet in order to qualify to make the special election as to taxable status which is permitted small business corporations; to the Committee on Ways and Means.

By Mr. SCHWENGEL:

H.R. 6197. A bill to authorize and direct the Administrator of General Services to publish on microfilm the original military and naval records of the Civil War, both Union and Confederate; to the Committee on Government Operations.

By Mr. SIKES:

H.R. 6198. A bill to make the evaluation of recreational benefits, and fish and wildlife conservation, resulting from any flood control, navigation, or reclamation project an integral part of project planning, and to provide for the construction of recreational and fish and wildlife facilities in connection with such projects, and for other purposes; to the Committee on Interior and Insular Affairs.

By Mr. SIMPSON of Pennsylvania:

H.R. 6199. A bill to amend title III of the act of March 3, 1933, with respect to the acquisition by the United States of articles, materials, and supplies for public use; to the Committee on Public Works.

H.R. 6200. A bill to amend the Internal Revenue Code of 1954 to provide a 10-year net operating loss carryover for certain regulated public utilities; to the Committee on Ways and Means.

H.R. 6201. A bill relating to the definition of the term "public utility" for purposes of computing the deductions for income tax purposes for dividends paid and received on certain preferred stock of public utilities; to the Committee on Ways and Means.

H.R. 6202. A bill to amend sections 1231, 272, and 631 of the Internal Revenue Code of 1954 with respect to iron ore royalties; to the Committee on Ways and Means.

By Mr. SMITH of California:

H.R. 6203. A bill to require the expenditure of 60 percent of the funds expended for military aircraft and missile repair and overhaul with private industry, and for other purposes; to the Committee on Armed Services.

By Mr. STAGGERS:

H.R. 6204. A bill to amend title II of the Social Security Act to provide that full benefits (when based upon the attainment of retirement age) will be payable to both men and women at age 60; to the Committee on Ways and Means.

By Mr. TELLER:

H.R. 6205. A bill to amend the Internal Revenue Code of 1954 so as to reduce the rate applicable to the first $1,000 of taxable income for taxable year 1958 and to repeal or reduce certain excise taxes; to the Committee on Ways and Means.

H.R. 6206. A bill to amend the Internal Revenue Code of 1954 so as to increase the amount of the personal exemption for taxable year 1958 and to repeal or reduce certain excise taxes; to the Committee on Ways and Means.

H.R. 6207. A bill to amend section 4 of the act of July 6, 1945, as amended, so as to provide for payment of overtime compensation to substitute employees in the postal field service; to the Committee on Post Office and Civil Service.

By Mr. VAN ZANDT:

H.R. 6208. A bill to promote the welfare of the people by authorizing the appropriation of funds to assist the States and Territories in the further development of their programs of general university extension education; to the Committee on Education and Labor.

By Mr. WOLF:

H.R. 6209. A bill to extend rural mail delivery service; to the Committee on Post Office and Civil Service.

H.R. 6210. A bill to establish the U.S. Arts Foundation; to the Committee on Education and Labor.

By Mr. FLOOD:

H.J. Res. 333. Joint resolution designating the period beginning May 1 and ending May 7 of each year as Correct Posture Week; to the Committee on the Judiciary.

By Mr. JUDD:

H.J. Res. 334. Joint resolution authorizing the President to issue a proclamation designating January 22 of each year as Ukrainian Independence Day; to the Committee on the Judiciary.

By Mr. REUSS:

H. Con. Res. 111. Concurrent resolution expressing the sense of Congress with respect to allotments of subscriptions for Treasury bonds by savings-type investors; to the Committee on Ways and Means.

By Mr. DIGGS:

H. Res. 231. Resolution recognizing April 15 as Africa Freedom Day; to the Committee on Foreign Affairs.

By Mr. MILLS:

H. Res. 232. Resolution providing for printing additional copies of the hearings entitled "Mineral Treatment Processes for Percentage Depletion Purposes"; to the Committee on House Administration.

MEMORIALS

Under clause 3 of rule XXII,

The SPEAKER presented a memorial of the Legislature of the State of Wisconsin, memorializing the President and the Congress of the United States to utilize the shipbuilding facilities of Wisconsin and other States in the Great Lakes area, which was referred to the Committee on Merchant Marine and Fisheries.

PRIVATE BILLS AND RESOLUTIONS

Under clause 1 of rule XXII, private bills and resolutions were introduced and severally referred as follows:

By Mr. ANFUSO:

H.R. 6211. A bill for the relief of Franz Lieberman; to the Committee on the Judiciary.

By Mr. CLARK:

H.R. 6212. A bill for the relief of Mariano Vittorio Simeone; to the Committee on the Judiciary.

By Mr. COHELAN:

H.R. 6213. A bill for the relief of Jung Hoo Chew; to the Committee on the Judiciary.

By Mr. CURTIN:

H.R. 6214. A bill for the relief of Ashan Yung; to the Committee on the Judiciary.

By Mr. DADDARIO:

H.R. 6215. A bill for the relief of Mrs. Cornelia Fales; to the Committee on the Judiciary.

By Mr. FORD:

H.R. 6216. A bill for the relief of Ng Thiat Hor and Ng Thiat Keung; to the Committee on the Judiciary.

By Mr. GALLAGHER:

H.R. 6217. A bill for the relief of Frank Roszkowski; to the Committee on the Judiciary.

By Mrs. GRANAHAN:

H.R. 6218. A bill for the relief of Francesco Fazio; to the Committee on the Judiciary.

By Mr. HAGEN:

H.R. 6219. A bill for the relief of Cornelis Jacobus Huvers; to the Committee on the Judiciary.

By Mr. HAGEN (by request):

H.R. 6220. A bill for the relief of Severino Passi Gateb; to the Committee on the Judiciary.

By Mrs. KELLY:

H.R. 6221. A bill for the relief of Henry McDermott; to the Committee on the Judiciary.

By Mr. KILDAY:

H.R. 6222. A bill for the relief of Leonidas G. Papageorgiou; to the Committee on the Judiciary.

By Mr. KIRWAN:

H.R. 6223. A bill for the relief of Dr. Joon Sun Kim; to the Committee on the Judiciary.

By Mr. CLEMENT W. MILLER:

H.R. 6224. A bill for the relief of Mrs. Yoshi Kawai; to the Committee on the Judiciary.

By Mr. MILLS:

H.R. 6225. A bill for the relief of White River Distributors, Inc., and certain other creditors of the Westmoreland Manganese Corp.; to the Committee on the Judiciary.

By Mr. MINSHALL:

H.R. 6226. A bill for the relief of Catalina Properties, Inc.; to the Committee on the Judiciary.

By Mr. RIVERS of Alaska:

H.R. 6227. A bill for the relief of United Contractors; to the Committee on the Judiciary.

By Mr. SMITH of Mississippi:

H.R. 6228. A bill for the relief of Mrs. Immacolata Bassani and her minor daughter, Rita Bassani; to the Committee on the Judiciary.

PETITIONS, ETC.

Under clause 1 of rule XXII,

145. Mr. DADDARIO presented a petition and resolution of the Public Utilities Commission of the State of Connecticut, pertaining to excise taxes on telegraph service, which was referred to the Committee on Ways and Means.

EXTENSIONS OF REMARKS

Foreign Aid for Foreign Tax Cuts

EXTENSION OF REMARKS
OF
HON. RICHARD H. POFF
OF VIRGINIA
IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 8, 1959

Mr. POFF. Mr. Speaker, the American taxpayers, who have been told that they can expect no tax relief this year, have just received news that the British Government has granted their citizens a 6-percent tax cut. This will be the sixth tax reduction the British people have received in the last 8 years, whereas, in that period American taxpayers have received only one tax cut in 1954. Yet England has received from the United States more than $341 million under lend-lease arrangements and nearly $3.8 billion in foreign-aid grants. Every cent of this money, together with additional billions of dollars appropriated under the economic foreign-aid program, have been dollars which America had to borrow and which she still owes as a part of her $280 billion debt. America's national debt is not only greater than England's national debt, it is greater than the combined debts of all the nations of the world to which America extends foreign aid.

Included in the British tax cut was a reduction of 2 pence a glass in the duty on beer. Thus we find that the money of American taxpayers which apparently is insufficient to solve the unemployment problem of American workers is being used to subsidize more beer for British workers.

I have today introduced a bill which would prohibit the loan or donation of economic foreign aid appropriations or foreign aid counterpart funds to any foreign country that reduces taxes on its own citizens during the current fiscal year.

History of the Red River

EXTENSION OF REMARKS
OF
HON. RUSSELL B. LONG
OF LOUISIANA
IN THE SENATE OF THE UNITED STATES

Wednesday, April 8, 1959

Mr. LONG. Mr. President, recently I had the good fortune to listen to my colleague the senior Senator from Louisiana [Mr. ELLENDER] deliver a very fine address to a large audience representing the people who live behind the levees of Red River in the States of Louisiana, Arkansas, Oklahoma, and Texas.

This address does a fine job in tracing the history of the Red River and the efforts which have been made by the Federal Government, the governments of the States, local groups, and individuals to control flood waters and preserve them until they were needed to irrigate the lands or furnish water to the residents of neighboring communities.

I ask unanimous consent that the address delivered by the senior Senator from Louisiana before the Red River Valley Association, in Shreveport, La., on March 31, be printed in the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

ADDRESS DELIVERED BY SENATOR ALLEN J. ELLENDER BEFORE THE RED RIVER VALLEY ASSOCIATION, SHREVEPORT, LA., MARCH 31, 1959

I appreciate the invitation of your president, Cliff Fairbanks, and of my good friend, Roy Matthias, to be present here today since it offers me the opportunity of discussing with you some of the problems facing the Red River Valley and, indeed, the entire Nation, as a result of our very rapid increase in population.

It is always a source of pleasure to participate in your annual meetings, because you are dedicated to a cause in which I am deeply interested—the preservation of two of our most precious resources, soil and water.

Recently in reflecting on my 22 years in the Senate, where I have devoted a great deal of my time to the protection and development of the resources of our country, I had occasion to review some of the history of waterway improvements.

It was interesting to note that the first appropriation for the improvement of our waterways was made in 1824, and that by

1828 the War Department had requested an appropriation for the improvement of navigation on the Red River in the vicinity of Shreveport.

From the earliest days of exploration of our country the Red River was the main artery of entry into the Louisiana Territory. Many years ago a mass of vegetation and driftwood had become tightly packed for a distance of about 150 miles, in the bed of the Red River, forming the so-called great raft. This obstruction blocked the flow of the river, causing it to spread out and deposit its silt in the valley. Thus, the richest soil in America began the process of accumulation to form our fertile valley under this stagnant overflow. But because of the great raft, the valley, as today, was subject to severe flooding.

When it became imperative for the Federal Government to establish a garrison fort on the upper Red River in Texas, the War Department became interested in navigation on the Red River. Supplies for this garrison were sent down the Mississippi River, around the "raft," through the swamps and bayous, and then up the Red River.

On May 23, 1828, Congress appropriated $25,000 for the removal of the "great raft" from Loggy Bayou, 65 miles below Shreveport, to Hurricane Bluff, 27 miles above Shreveport. This was the first attempt on the part of the Government to improve the Red River, and harness it for the needs of man.

You are all familiar with the fact that Capt. Henry Miller Shreve, who helped to establish this modern city of Shreveport, found that the river presented a real flood problem. Before he could lay the foundations for Shreveport, he had to clear away miles of trees and debris in the river channel.

My interest in the beneficial development of the water resources of our Nation stems from my personal conviction that such developments were an important factor in achieving our present high standards of living, not only in this great valley of the Red River, but throughout the entire Nation.

All through history, water has dominated human life. The earliest civilizations appeared in the great river basins of Mesopotamia and Egypt. Settlements were limited to coast lines and river banks; trading centers arose at the confluence of navigable streams. Rainfall and drought set the stage for the drama of human existence.

Unless a well planned and aggressive program of water resource development is carried forward, our children and grandchildren will not have an opportunity to enjoy the many advantages that today we take for granted. We cannot afford to neglect our economic strength and our economic growth. If we ignore the development of our water resources, we jeopardize the expansion of our national economy. This we cannot afford if we are to maintain our position of strength, on which rests the future of the free world.

The benefits that result from completed projects are positive examples of increased national wealth created by such improvements. More startling proof exists in Europe and Asia, where the prosperity of the countries are directly proportional to the effort expended on projects to conserve soil and water. My recent travels through these areas have convinced me that unless we protect our greatest resource, water, unless we keep it inland and do not let it flow to the sea unused, some day many parts of our great country may become as barren as the Gobi Desert, or as the lands which I have seen on my travels in old Persia. Our history books tell us that about 500 years before Christ, the entire area of Persia was capable of sustaining the livelihood of 115 million people. Now it adequately can care for less than 14 million.

Consider the great valley of Mesopotamia between the Tigris and Euphrates Rivers. At one time that area could produce food and fiber for 15 million people. Today it can hardly supply the needs of 2 million people. Why? Because the rulers neglected a great natural resource—water. If it had been possible to retain the waters upstream on those great rivers, and not permit them to steal the rich topsoil and float much of it out to sea, the chances are that the great valley would still be very productive.

The fact is, that those rivers carried millions of tons of earth downstream and among other damage done, clogged the small tributaries and rivers of Mesopotamia. Today that land is not suited for extensive cultivation. It is sour. It is not productive farmland. Certainly we cannot afford to let that happen in our great country.

Two years ago I visited various portions of the Soviet Union for well over a month. This was my third trip to that country in as many years.

I had the opportunity of visiting cities never before seen by an American Government official—cities in the far reaches of Siberia, an area which had been pictured to me before my visit as wastelands of snow and ice—as a vast prison camp. But this was not what I found. To my great surprise, I saw a virgin land being awakened; a land that promises to make Siberia the granary of Russia. Industry was flourishing to a surprising degree. One of the principal tools the Russians are employing in this development is a well planned utilization of their waterways system, both for navigation and the development of hydroelectric power. I visited several hydroelectric power stations that were larger than our biggest, and one that was almost twice as large as any we have in this country. I observed foundations poured for the construction of turbines and generators which will have a rated capacity of 300,000 kilowatts each—almost three times larger than anything we have. And these projects were designed, constructed, and had all their component parts built within the Soviet Union. In fact, much of the work on the large turbines was being done at Novosibirsk, located in central Siberia, which was a small trading post in 1905, and now a city of almost 1 million.

As a result of my inspection of installations in Russia, I am convinced that in water transportation, and hydroelectric power developments, the Russians are inching ahead of us.

In any comparison of time, money and effort expended on resource development in Soviet Russia and the United States, there is, of course, absolutely nothing that we can do about the rate of such developments in Russia. They are proceeding with their own resources to meet the needs of their own economy. We must direct our attention to what we can do to satisfy our own needs.

But it makes my blood boil when the critics of an adequate program to develop our rivers cry "pork barrel." Without the improvements heretofore made, our great sea ports could not handle our vast world trade; our steel industry would starve for lack of the ore that comes through the Soo locks; and the Ohio Valley would not have earned the nickname of the Ruhr of America without providing for an adequate water supply and an excellent water transportation. Critics of this program, because they have no sound basis for attack, cry "log-rolling" and "political back-scratching." Well, Mr. Khrushchev does not need to roll any logs, or scratch any political backs. Russia is developing her natural resources for the simple reason that it is to her economic advantage. Russia will, if she can, do everything in her power to defeat us on the economic front.

Mr. Khrushchev has already announced that this is one of Russia's principal aims—to defeat us on the economic battlefields of the world.

Now, I want to make it crystal clear that I do not approve, condone, or sanction in any manner, the Soviet system, or endorse the means by which Mr. Khrushchev and his followers stay in power. That is not the point at all.

What I am saying, and what I have heretofore said, is that the Russians—well aware of the value of the development of their water resources—are moving ahead rapidly in this field. This is a statement of fact. We cannot hide from it no matter how much we might like to—no matter how much we dislike or abhor the principles of communism.

As a practical matter, if the Russians are intent upon waging economic warfare against our way of life, then it behooves us to assess the capabilities of our opponents. We must be realistic. No field commander ever defeated his enemy by consulting his own personal preferences instead of his intelligence reports.

No general achieves victory by ignoring his opponent's strength.

However, above and beyond the need to maintain economic growth in order to defeat the forces of communism on the present economic battlefront, development of our water resources is just plain good business and common sense.

If we studied our history lessons we would know that water resources development is in the best interests of our own country. History is replete with examples of how societies down through the ages have organized themselves to match resources with needs. Success in this effort has insured survival, as with Switzerland; failure has resulted in decline and ultimate decay, as with ancient Persia.

Water, controlled and navigable, and of good quality, is the most important factor in developing a sound and progressive community.

In any given river basin there are a limited number of good sites for storage of water, and limited areas where distribution channels or protective works are feasible. These sites should not be preempted, or devoted to purposes which will freeze the pattern of development, so that future needs cannot be met or will become so costly as to be impracticable.

Let us discuss for a moment the use and availability of water. As is the case with many nations of the world, our inhabitants settled this country along the river valleys. Two-thirds of our population at the present time resides within 50 miles of navigable water. But the increasing water shortage, which now, more than ever, is an important factor in the determination of proper plant location, requires that the many industries which must base their policies upon long-range future requirements, be located along waterways. In a recent study by the 10th Federal Reserve District, it was concluded that the geographical distribution of water supply may be of such a nature as to conflict with such economic goals as the diversification of industry.

There have been many comprehensive studies of resource developments made in recent years. One of the latest was the Presidential Advisory Committee on Water Resource Policy, dated December 22, 1955. In that report it was stated that the estimated use of water in the United States in 1950 was 185 billion gallons per day and that, based on an estimated population of 200 million by 1975, the requirement would be 350 billion gallons per day.

The November 28, 1958, issue of U.S. News & World Report contained a very penetrating article by Dr. Phillip M. Hauser on the so-called explosion of population in the United States, which sheds more light on one of the factors of increased water use.

Dr. Hauser is head of the department of sociology at the University of Chicago, and

has been Deputy Director of U.S. Census. He points out that the newest projections of the Census Bureau place the population of the United States in 1975 at between 216 and 244 million. That is an increase in the predictions of from 8 to 20 percent in the past 3 years.

Putting it another way, taking a mean of the projections, a population of 230 million by 1975 would mean a 30 percent increase in our population in the next 16 years. Think of the tremendous increase in demand on all elements of our resources, including water. In terms of water we will require about 400 billion gallons per day. In other words, during the quarter century period from 1950 to 1975 we will more than double our water requirements.

I know that you can get almost as many estimates of the consumption of water by the American people as there are authorities making surveys. Some of them tell us that in 1850, the average consumption of water per capita by the people of the United States was 50 gallons per day. They tell us that in 1950 it exceeded 1,000 gallons per capita per day.

The Public Health Service, and others charged with responsibility in that regard, tell us that in 1980 the per capita consumption requirements for water by the people of the United States will be about 2,000 gallons per citizen per day. Unless we stop to think, such figures sound incredible. When you consider that in the transformation of raw material to finished products, 1 bushel of wheat requires 7,500 gallons of water, 1 ton of finished steel takes 65,000 gallons of water, 1 yard of woolen cloth takes 500 gallons of water, a pound of rayon takes 150 gallons of water, and 1 gallon of gasoline requires 25 gallons of water, you begin to appreciate the fact that our domestic consumption is but a small fraction of our per capita consumption.

We are continually reclassifying from luxury to necessity items for our personal comfort which add to our water consumption. Take, for instance, the great increase in air conditioning. This alone adds a huge demand on our water supply systems.

That is the kind of changing economy, industrial and domestic in which we now move.

It has taken this Nation, that you and I regard as the strongest on earth, 350 years to reach a population of 170 million people. At the present rate of increase that population will double in less than 40 years. That means that our annual productive capacity will also have to double in the same period to maintain our present standard of living.

If that be the case, we are going to have to speed up water conservation, rather than slow it down if we are going to meet the requirements of this increasing demand from our economy. Plans must be made now to meet those expanding needs.

When the time required to develop a major project—3 years or more for planning, then 8 to 10 years for construction—is considered, it becomes evident that now is none too early to start projects which are actually needed and justified. They will become critically urgent long before they can be completed on an economical program.

The U.S. Geological Survey found in 1953 that there were 1,000 cities, from fairly good size up to big municipalities, that actually had to maintain a very restricted use of water. If something is not done now, then in 15 or 20 years it may be too late.

The average rainfall in the United States is about 4,300 billion gallons per day. Of that amount, about 3,000 billion gallons goes back into the atmosphere by transpiration and evaporation, leaving a total of about 1,300 billion gallons as runoff in rivers and streams, or for percolation into the ground. This, then, is the ultimate limit of our supply. Our consumption in 1956 was about 200 billion gallons; that means that we are consuming about 15 percent of the maximum available supply. By 1975 we will be consuming about 30 percent of the maximum available supply. These are average figures and do not take into account geographical distributions, distributions throughout the year, or the quality of the water for domestic or industrial uses.

There is a vast difference in the amount of rainfall in the various parts of the country. For instance, in the North Atlantic States the rivers carry about 191 billion gallons, but in the basins of the Red River of the North, in Minnesota and North Dakota, which is about the same area, the runoff is only about 4.5 billion gallons. It is apparent, therefore, that there is a very unequal geographical distribution. In some areas the seasonal distribution is even more unequal.

Perhaps a more important question than our absolute capacity to care for the water problems of our agricultural and urban areas, is the question of the relative cost at which we undertake needed developments. The cost of future water supply development can be held to a minimum by intelligent planning of urban settlements, and by multiple purpose water resource developments.

To help meet that problem, the Congress under the leadership of my good friend the great conservationist, ROBERT S. KERR, the senior Senator from Oklahoma, enacted the Water Supply Act of 1958. That act set the stage for a more farsighted and comprehensive consideration of water supply in river basin planning and development. One of the most important features of this act is that it enables the Corps of Engineers to include storage in reservoir projects to meet future needs for municipal and industrial water where there is no water user immediately at hand to pay the bill. The act, however, provides for equitable reimbursement when the need develops.

This act provides an essential and long-needed basis for planning, as in the past no authority existed to build for future water needs, even though it was obvious that they would develop.

Quantity is only one of the considerations in maintaining an adequate water supply; the quality of the water is of equal importance. The greatest water needs are for mineral-free or lightly mineralized water. The kind of water we need is not found everywhere.

What is the present administration doing to help meet this problem? It has not only failed to recommend funds to start surveys, plans, or new construction on projects that are needed now, but last year built into the budget a planned slowdown which would delay the benefits from the projects underway. This would also increase the overall cost of these projects.

As you all know, last year when the Congress added some new starts for planning and construction, there was a terrific blast from the White House.

On September 2, 1958, the President reluctantly signed the public works appropriation bill. At that time he issued the following statement:

"In the Public Works Appropriation Act, 1959, the Congress has included approximately $39 million in funds to initiate construction on 65 unbudgeted new starts that will ultimately cost almost $700 million. Adding nearly $700 million to the already heavy future commitments for Federal Water Resources projects is but another instance of irresponsibility in the expenditure of public funds. I am compelled to approve the act, however, because it appropriates essential funds for continuing work on river and harbor, flood control, and reclamation projects that were started in previous years."

When you consider that the appropriation for construction in the 1959 act was approximately $870 million, was it really an act of irresponsibility in the expenditure of public funds to start new projects which will ultimately cost nearly $700 million? I do not think so. That is adding less than 1 year's future commitment at the present rate of construction.

Unless it is the desire of the administration that the water resource program wither and die on the vine—and that may be the underlying reason—a fair number of new starts should be added each year.

Perhaps these shortsighted planners in the Bureau of the Budget believe that the Federal Government is spending too large a portion of its budget in developing the water resources of this Nation. Let us examine the facts.

Between 1950 and 1956 our national population increased 11.2 percent. Between 1950 and 1956 the national income increased 42 percent. During the same period the expenditures for rivers and harbors and flood control decreased 14.9 percent.

I believe those figures are very significant. As all of you know, construction costs have increased on an average of 5 percent a year. If that average is applied to the 1950 expenditures of $627 million, we should be spending about $908 million in 1959 on the civil functions of the Corps of Engineers in order to maintain the same level of operations as in 1950. In contrast, the appropriation was just under $814 million. This comparison disregards the increased need for these public works resulting from our expanding population.

I am not unmindful of the fact that it is requiring more capital outlay to carry on this Government than at any time in our history, but I believe that to curtail the development of our natural resources, may be the most expensive economy that we can make.

What is the situation in our own Red River Valley? The Red River, with a drainage area of about 91,000 square miles, flows through Oklahoma, Texas, Arkansas, and Louisiana. The Red River constantly expends a portion of its great energy in attacking the easily eroded materials through which it flows. The river is continually changing its alinement, and the losses from caving banks are very extensive. In Louisiana, alone, the 10 local levee boards have spent in excess of $35 million dollars for flood control and major drainage. In addition, millions upon millions of dollars worth of public improvements, such as highways and bridges, a large portion of which are part of the Federal Aid Highway System, have been damaged or rendered useless by floods and the meandering of the Red River.

Denison Dam was constructed by the Corps of Engineers to control the runoff from the upper 39,700 square miles of the Red River Basin, and thus reduce flood stages downstream.

For the past 2 years, when representatives of the Red River Valley Association appeared before the Public Works Subcommittee of the Committee on Appropriations to seek funds to continue this important work, floods were raging along the Red River. In fact, as I recall, we have had three floods in about 13 months in that area.

The fact that flood disasters still occur is not an indictment of the effectiveness of projects that are in operation. Quite the reverse is true. The effectiveness of the projects in operation emphasizes the fact that we are not progressing fast enough with our authorized projects for relief and control of these floods.

Year after year, waters that should be confined and utilized, flow over farmlands, destroying crops and cattle and driving many of the residents of the valley from their homes. Streets, sewers, water and gas lines, and other public facilities are destroyed. As terrible as are these losses, they can be repaired by the expenditure of millions of dollars for reconstruction. To me, a more serious loss is that resulting from bank

caving, where thousands of acres of rich soil are carried out to sea each year. That is a permanent loss.

The great flood of 1945 demonstrated that the runoff from the uncontrolled areas below Denison can produce floods equal to or greater than the maximum of record. The present plan for flood control on the Red River below Denison Dam was based on that fact. That plan was authorized by Congress in 1946. As subsequently modified by Congress, this plan provides for controlling floods by means of reservoirs, supplemented by local protection such as levees, channel improvements, and bank stabilization measures. It is primarily a reservoir plan, since reservoirs account for about 90 percent of the cost.

Considerable progress has been made on the authorized projects. Denison, Texarkana, Wallace Lake, Ferrels Bridge, and Bayou Bodeau Reservoirs have been built, and they have been very effective in reducing the heavy damage sustained as a result of floods in the past 2 years. But it was never contemplated that these completed reservoirs by themselves would solve the problem. As long as major tributaries—including the Little River—are completely uncontrolled, the Red River Valley is a sitting duck for a disastrous flood.

At long last the control of the Little River by a system of dams, authorized in the Flood Control Act of 1958, which incidentally was one of the plans that was the basis for the previous veto of the bill by the President, offers a ray of hope. Following passage of the authorization act last year, funds were provided for the initiation of the preconstruction planning on the Millwood and Broken Bow Reservoirs.

These were some of the new starts to which the President objected when he signed the Public Works Appropriation Act for the current fiscal year.

As I previously mentioned, we must not only look to the quantity of water, but also its quality. Salt pollutants in the Red River Basin add over 5,000 tons of salt and sulfates each day to the Red River arm of Lake Texoma. Preliminary studies of the U.S. Public Health Service in water quality conservation indicate that there is a possibility of improving the quality of Red River water. The objectives of the investigation are to find the source of pollutants, determine the type and volume, and devise practical means for controlling them.

Project studies now under way indicate promising means of reducing pollution of the Red River. The principal source of natural salt pollution is a rather thin, long rock formation, about 500 miles long and not over 10 miles wide. This formation cuts across many large river systems and pollutes otherwise good quality water.

The fact that major sources of pollution can be isolated suggests the possibility of remedial measures to prevent contamination.

The early completion of this study, and accomplishment of the remedial measures, is essential to the full utilization of the water resources of this great natural asset.

The problems which we have here in the Red River Basin are typical of the problems of water resource development throughout the Nation. Significant progress has been made toward solving these problems, here and elsewhere. Much remains to be done, but the importance of our water resources is becoming more and more widely recognized. With the continued efforts of men of leadership and vision, such as this association has demonstrated in the past, these problems will be solved here, and elsewhere.

It is impossible for me to accept the proposition that the American economy cannot afford the expenditure of funds for wealth-producing projects in this country, at a time when the administration recommends a 26-percent increase in a foreign aid program that in all conscience should be reduced below the 1959 level. I am afraid that the only hope for a nod from the administration for the construction of public works will be those States that border another nation. In such instances it may be possible for such a State to get a few crumbs. Just last month it was announced that the United States and Mexico would jointly build a $100 million dam on the Rio Grande. I wonder if such a project will be subject to the same tests and requirements that a similar project lying wholly within the United States would be required to pass in order to survive?

Could it be that the Bureau of the Budget and the administration actually do not believe that the conservation of water resources makes a major contribution to the economic stability and welfare of the people? No, for that is the basis for requests for large expenditures for economic aid, and for the Development Loan Fund under the mutual security program.

I have frequently been referred to as the Senate's most outspoken critic of the foreign aid program, and I suppose it is true. As I have said many times in the past, I did support foreign aid as originally conceived and I have no apologies to make. I was willing to help our friends get back on their feet. This has long since been accomplished, but we still continue to help them in one way or another. My objections to the present program are based on personal observations of actual operations, and I am convinced that we are not achieving the desired objectives.

In some cases we are sponsoring the wrong projects in the wrong places. For example, we are building flour mills in order to convince the people of Korea that bread is a suitable substitute for rice in their diet. It is hoped that by so doing, the consumption of rice in Korea can be reduced, thus making rice available for export, ignoring the fact that Korea is thus being placed in the position to compete for Far Eastern markets which our own rice industry would desire to obtain. It must be realized that Korea produces very little wheat. Thus, after constructing the flour mills we shall be obligated either to subsidize the importation of wheat into this country, or give it to the Republic of Korea. Consequently, it will be necessary for our aid to continue ad infinitum.

In other cases, the advantages from the projects we sponsor do not inure to the benefit of the peoples of the countries involved. In addition, almost universally, the peoples of the countries we are trying to assist are totally unaware of the millions we are expending in the development of their country. In some instances, because we gave something to one country and did not give a like amount to another, the nonrecipient country begins to pout. The moral of this should be clear to the President—you do not solve problems by giveaways.

One of my principal objections to economic aid projects approved under the mutual security program is the lack of adequate considerations in the overall planning, and the complete disregard of economic justification. A project in a foreign country receives little or no consideration as to its economic soundness, and construction is frequently started before the project is conceived in its entirety, thus increasing unnecessarily the eventual cost. Whereas in this country the project must be specifically authorized after detailed surveys under prescribed standards, and after critical review at the local, State, and National levels.

The project is again subject to critical review in the annual appropriations. Of course, these projects must show a favorable benefit-to-cost ratio, under prescribed conservative standards.

Last year when the House adopted an amendment requiring resource development projects in the foreign-aid program to show economic justification, the administration forces had that proviso removed from the bill, on the basis that it would cripple the program, as indeed it would.

In concluding his message of March 13, 1959, on foreign aid, the President stated:

"If we are wise we will consider it (foreign aid) not as a cost but as an investment—an investment in our present safety, in our future strength and growth, and in the growth of freedom throughout the world."

If the President is really sincere, he will also consider resource development projects as investments in America's future, rather than irresponsible expenditures. Believe me, so long as we consider appropriations for resource development as outright expenditure, instead of as an investment which will return sound dividends, just so long will we allow the chaos of flood and drought to deprive us of the full benefits of our resources.

I am certain that the American people are tired of being told the Federal Government cannot afford to improve our own rivers and harbors—that it needs much of our tax dollars to provide similar facilities in foreign countries. If it provides additional funds to start resource projects it will unbalance the budget.

Our efforts to obtain sufficient funds to keep our public-works program going is becoming more and more difficult. I believe the time has come for the Members of Congress, and the entire Nation as well, to stand up and demand that the administration take a new look at its public-works policy, or else prepare for the entrance of a new administration that will.

Welcome to Italian Foreign Minister Pella

EXTENSION OF REMARKS

OF

HON. EMANUEL CELLER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 8, 1959

Mr. CELLER. Mr. Speaker, it is noteworthy that an agreement has been concluded between the United States and Italy to permit the setting up of Jupiter intercontinental ballistic installations on Italian soil. This is a good omen, especially at this time, when we celebrate the 10th anniversary of the signing of the North Atlantic Treaty, of which Italy is an important component. This momentous event is also accompanied by the arrival on our shores of Giuseppe Pella, Italian Foreign Minister and famous diplomat, who comes here to participate in Washington ceremonies commemorating this anniversary.

The decision of Italy to set up these intercontinental ballistic stations within her territorial confines required tremendous courage. It is the result of the foresight of men such as Premier Antonio Segni and Giuseppe Pella. It was only natural for the Italian Communists and Moscow to criticize Italy for this action.

Foreign Minister Giuseppe Pella has been a consistent champion of the Western Alliance among European statesmen. It is interesting to note that despite changes in the heads of the Government in Italy, that country has consistently

lived up to her commitments in NATO and the Western alliance. That fact should be taken into consideration by the executives in our own Government in this forthcoming conference of Foreign Ministers prior to the so-called meeting at the summit. Italy should be a successful candidate for one of the positions at the Foreign Ministers' conference table.

I had the proud distinction of meeting Giuseppe Pella during one of my visits to Italy. Here we have a peasant's son who has risen to one of the highest official positions in the Italian Government. His life story is a most interesting saga. He was born in the foothills of the Alps—in Valdengo—in 1902 and as a mere stripling, helped his parents who were sharecroppers. He attracted the attention of the village priest with his brilliance of intellect and industry and the prelate induced the lad's parents to continue his education. He made the decision to work in a cotton mill, to help him pay his tuition. He kept his nose glued to his books and received a diploma as an accountant at the University of Turin, where he won high honors in finance and economics. When Giuseppe Pella was 30 years of age, he was more than self-sustaining and made considerable money as an adviser to large firms on their financial and other business matters. He entered politics at the end of World War II and became a member of the conservative wing of the Christian Democratic Party. He was elected a member of the Chamber of Deputies in 1946. His ability as a Deputy and a student of government attracted the attention of De Gasperi and he became Foreign Minister in his Cabinet.

He held that position until the fall of the De Gasperi Cabinet and thereafter, became Prime Minister of Italy, Minister of Foreign Affairs, and Minister of the Budget. He again became Foreign Minister in the present government on February 15 last. I am sure we are all glad to have him in our midst. We roll out the carpet for him and wish him and his dear ones well.

Expenditures of the Executive Office of the President

EXTENSION OF REMARKS

OF

HON. JOHN J. RHODES

OF ARIZONA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 8, 1959

Mr. RHODES of Arizona. Mr. Speaker, recently there has been much comment in the press concerning the expenditures of the Executive Office of the President. One columnist purportedly compared projected expenses for 1960 with the level of expenses for the year 1952, which was the last full year of the administration of President Harry S. Truman. At my request the Bureau of the Budget has furnished figures concerning actual expenses of the Executive Office in 1952 and estimated expenses for 1960.

A summary of these figures reveals that personnel costs for the White House actually increased more and at a greater rate during President Truman's administration than they have during President Eisenhower's administration, and this in spite of the fact that during President Eisenhower's administration Congress has twice increased the pay rates for Federal employees.

Employment figures for 1952 and estimates for 1960 are as follows:

White House and Executive Office of the President—Average employment, fiscal years 1952 and 1960

1952 White House and Executive Office total employment 1,256

	1952	1960[1]	Difference
Employment decreases:			
Executive Mansion and Grounds	74	70	−4
Bureau of the Budget	493	430	−63
Council of Economic Advisers	38	32	−6
Emergency Fund for the President	82	5	−77
Office of Defense Mobilization	[2] 295	[3] 225	−70
Total			−220
Additional employment:			
White House Office	252	274	+22
National Security Council	21	27	+6
Total			+28
New activities established:			
Special projects (some part by transfer from existing agencies)		101	+101
President's Advisory Committee on Government Organization		6	+6
President's Committee on Fund Raising Within the Federal Service		4	+4
Operations Coordinating Board		[4] 49	+49
Total			+160

1960 White House and Executive Office total employment (excluding personnel acquired as result of merger of FCDA and ODM) 1,224

Summary

1952 total employment	1,256
1960 total employment	2,730
Difference	1,474
Increase as result of acquisition of FCDA personnel	1,506
Actual comparative decrease	−32

[1] Estimated.
[2] Includes National Security Resources Board, later merged with ODM.
[3] ODM merged with FCDA, an established independent agency, to form Office of Civil Defense and Mobilization in the Executive Office.
[4] OCB staff is included in NSC budget.

Subject: White House and Executive Office of the President, comparison of employment for the fiscal years 1952 and 1960.

The attached table shows that employment in all units in the White House and Executive Office of the President, with the exception of employment added to the Executive Office as a result of the merger of mobilization and civil defense activities in 1958, actually decreased 2.5 percent from 1952, the last full year in office of the preceding administration, to 1960. The merger in the Executive Office of Office of Defense Mobilization and Federal Civil Defense Administration (an established independent agency) added 1,506 employees, and this tends to make comparisons in total employment misleading.

THE WHITE HOUSE OFFICE

Average employment of the White House Office increased from 252 in fiscal year 1952, to 272 in 1955. Since 1955, employment has remained close to 272, and no increases above the current 274 are anticipated through 1960.

SPECIAL PROJECTS

Certain of the policy development and policy coordinating activities consolidated under "Special projects" in 1956 had previously been carried on in the departments and by interdepartmental committees. Personnel were charged to the appropriation of the agency providing the funds rather than to the White House. This was also a practice of previous administrations.

A part of the increase indicated is attributable, however, to new undertakings which were dictated by the national interest. These include the studies in science and technology under Dr. Killian, and the airways modernization activities headed by General Quesada, which have since been transferred to the Federal Aviation Agency.

NATIONAL SECURITY COUNCIL

Employment of the NSC increased from 21 to 27 during the period 1952–58. Beginning in 1958, the Operations Coordinating Board has been financed from this appropriation. From its creation in 1953 until 1958 financing for OCB was provided by represented agencies and personnel were distributed according to source of funds. The OCB assists in coordinating implementation of national security policies. Total NSC employment for 1960 is estimated to be 76.

OFFICE OF CIVIL AND DEFENSE MOBILIZATION

The consolidation in 1958 of the Federal Civil Defense Administration, an independent office created in 1950, with the Office of Defense Mobilization, within the Executive Office of the President significantly changed overall Executive Office employment. Total OCDM employment in 1960 is estimated to be 1,731, of which 225 relate to the former ODM and 1,506 to the newly merged functions from FCDA.

OTHER ACTIVITIES

Employment of other activities in the Executive Office has remained stable, with the exception of the Bureau of the Budget which will employ 63 fewer people in 1960 than in 1952.

Waukesha, Wis., Daily Freeman: 100 Years of Progress

EXTENSION OF REMARKS

OF

HON. ROBERT W. KASTENMEIER

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 8, 1959

Mr. KASTENMEIER. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to congratulate an outstanding Wisconsin newspaper which celebrated its 100th anniversary on March 29. It seems to me only fitting that we pause long enough today to pay our respects to this militant, dedicated and persevering newspaper, the Waukesha (Wis.) Daily Freeman.

This newspaper, founded 100 years ago on March 29, 1859, is marking its centennial with a series of special editions which depict the growth of the city of

Waukesha, the County of Waukesha, and the Waukesha Daily Freeman.

The year 1959 is a particularly fitting time for the Waukesha Freeman to observe its centennial, because at no time since those first years of this newspaper has our country faced as serious a fight for universal recognition of individual civil rights as it does today.

For 100 years the Waukesha Daily Freeman has adhered to the principles of the abolition movement, and I might add that these principles are no less important today than they were 100 years ago. Through the years we have made considerable progress in the area of human rights, but recent newspaper headlines prove to us that we have not yet achieved in practice the theory of equal rights for all Americans, for all human beings.

The Waukesha Daily Freeman has made a major contribution to our democracy for its strict adherence for 100 years to its founding principles. The fact that this strength is still alive was well illustrated several years ago when the Daily Freeman, published in a community of some 28,000 residents, was nominated for a Pulitzer prize. Nomination for this coveted award throughout our land was based on the Waukesha Daily Freeman's ceaseless efforts to gain public access to local government records and meetings. In addition, this publication—though primarily local and State in news interest—has time and again stood in favor of this same free access to information at the Federal level. Its praiseworthy stand deserves the support of all persons interested in good government—at local, State, and National levels.

I wish to add only that it is my sincere hope and desire that the Waukesha Daily Freeman continue to be equally dedicated to the highest traditions of journalism in a free and democratic society for the next 100 years. This is a newspaper which has fought for a full century for the rights of all human beings, and I have every faith in the leadership of its publisher, Mrs. J. H. Youmans. I know it shall continue to adhere to its founding principle for the next 100 years.

My heartiest congratulations go to Mrs. Youmans and the Waukesha Daily Freeman, and I know that my 435 colleagues in Congress join me in this greeting.

Indiana Flood-Control Construction

EXTENSION OF REMARKS
OF
HON. FRED WAMPLER
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 8, 1959

Mr. WAMPLER. Mr. Speaker, the Public Works Subcommittee of the House Committee on Appropriations has been working long and diligently on the public works money measure for the fiscal year 1960. With the bill in the final legislative stages, I would like to set forth for the information and consideration of all the detailed flood-control problems and needs of the Sixth District of Indiana, the district which I have the honor to represent.

On March 5, 1959, I appeared before the House Appropriations Special Subcommittee on Deficiencies, headed by the gentleman from Texas [Mr. THOMAS], which was then conducting hearings relative to the second supplemental appropriations bill for fiscal 1959.

At that time, I had just returned from an inspection trip in and around my flood-stricken home area, Terre Haute, Ind. The degree of total waste, devastation, and privation was literally heartrending. The annual human, agricultural, and property damage loss and tragedy resulting from Wabash River floodings is incredible.

During the February 1959 flood, to which I have just referred, the small town of Clinton, Ind., with a population slightly in excess of 5,000, was fighting the floodwaters heroically, with some 8,000 sandbags purchased by the local citizenry for 14 cents apiece. As I told Mr. THOMAS' subcommittee, those sandbags were not purchased this year, they were bought several years ago during a previous flood, and when the danger was past they were emptied and stored so they could be used again, when the Wabash would inevitably threaten the area's people and their homes.

West Terre Haute has been flooded out for 3 consecutive years. Flood crestings are so frequent and so severe that Terre Haute no longer records flood levels at the 14-foot mark; the 20-foot mark now is the only recorded level.

In February of this year, floods along the Wabash caused 60 Indiana major highways to be actually impassable, thereby totally isolating many entire communities. Waterworks in the cities of Huntington, Wabash and Peru were so acutely threatened that if the floodwaters had risen 6 inches to 1 foot more, the local water would have become thoroughly contaminated, thus setting off a serious health hazard, conceivably to the epidemic stage.

I have obtained from the adjutant general of the State of Indiana a tally sheet of the expenses and losses incurred during the February 1959 flood. The totals I think are slightly less than astounding. It cost the people of the State of Indiana in expenses and losses—agricultural and property—a computed total of $1,663,211.77; of that total $567,105.46 was spent and lost in the immediate area in and around west Terre Haute.

To fight the floods, not only local volunteers were and are used, the Army and Air National Guard, the Adjutant General's Department, the State highway department, State penal farm labor, the Civil Defense Department, the American Red Cross, the Indiana State Police, the Vigo County Commission, the Terre Haute Street Department and the Army and Navy Reserves were employed. Two hundred and thirty-six State and Federal vehicles were used to fight back the floodwaters for a total of 17,833 hours.

And I am informed by the Indiana State adjutant general that the $1.6 million total is very conservative because it does not include extensive damage to private and personal property. In addition, President Eisenhower, within the last 2 months, has declared the general area a disaster region two times to the extent of emergency disaster Federal funds totaling $500,000.

Note, Mr. Speaker, that this rather staggering tally of expenses and losses is only for the February 1959 flood. The February 1959 flood has been preceded by 22 major Wabash River floodings; 9 within the past 12 years.

Flood damages in 1913 amounted to $11 million; the 1943 flood damage was $10,660,000, and the loss of 6 lives; the 1950 flood resulted in 4 deaths and damage of $1,662,000.

The 1957 and 1958 agricultural losses of acreage along the Wabash tributaries, including the White River, amounted to 487,200 acres, and total crop value losses amounted to $19,064,000.

Indiana highway losses due to floods in 1958 cost the counties and the State $602,770 in road repairs and $912,754 in bridge repairs. The 1957 State flood loss figures were $502,187 for roads and $113,417 to replace washed out or damaged bridges.

All these figures have been compiled by Indiana State officials and are a matter of published record.

And now, for the fifth time during the 4-months-old year of 1959 the Wabash River again is just about to spill over its banks bringing death and destruction. The Lafayette Journal and Courier newspaper for April 28, 1959, just 3 days ago, carried the headline "Wabash Flooding Again."

The accompanying story states, in part:

> The Weather Bureau said the Wabash should go about 3 feet over the 12-foot stage at the city of Wabash sometime Tuesday, then roll downstream and gain in depth.
>
> The river should hit 5 or 6 feet above the 14-foot flooding stage at Montezuma Friday and about 3 feet over banktop at Terre Haute Saturday.

Mr. Speaker, these appalling losses and expenses, not to mention the consequent Wabash Valley population and economic drainage, must be arrested and hopefully stopped. I am not asking for construction that has as one of its multiple purposes recreation. I want flood control project construction that will keep flood-driven, filth-laden waters from washing away homes, stores, factories, schools, and churches, and driving sincere, honest, hard-working people out of the area in which they were born and in which they would like to live and rear their families.

I have asked for, and the Army Corps of Engineers has informed me they have the engineering capabilities to utilize during the fiscal year 1960, the following funds for already authorized projects:

West Terre Haute local protection project: $30,000, to complete preconstruction planning.

Sugar Creek levee: $15,000, to initiate preconstruction planning and bring the planning to 50 percent of completion.

Wabash River Basin study, above the White River: $40,000. The President's budget for fiscal year 1960 asks only $25,000 for this study. General Person, Assistant Chief of the Army engineers, tells me the Corps has the capability to utilize $40,000 during fiscal 1960. The additional $15,000, Mr. Speaker, will allow the Army Corps of Engineers to continue working on Sugar Creek, Wild Cat Creek, and Big Pine Creek.

Clinton levee: $5,000, to enable the Army engineers to restudy the project.

Conover levee, which is a Terre Haute local protection project: $2,000, also to enable the Army engineers to restudy the project.

I understand that because the Adams Levee, Parke County, group's charter is expiring, a new document is needed. And since there is no Raccoon Levee, Parke County, organization, one will have to be established under State-authorized charter. In the case of the Greenfield Bayou levee, the group must reorganize because its current charter is not sufficiently inclusive. For these reasons, I am making no money requests for the Adams, Raccoon, and Greenfield Bayou levees.

I have, however, asked the Indiana Flood Control and Water Resources Commission and the local levee representatives to expedite their reorganizational activity.

The following charts compiled by the adjutant general of the State of Indiana constitute, I think, self-explanatory evidence of the desperate need for flood control construction in Indiana's Sixth District:

Indiana flood costs, by departments, February 1959

TERRE HAUTE AREA, IMMEDIATE AREA IN AND AROUND WEST TERRE HAUTE

Address by Hon. Herman E. Talmadge Before Tennessee Agricultural Council

EXTENSION OF REMARKS

OF

HON. ESTES KEFAUVER

OF TENNESSEE

IN THE SENATE OF THE UNITED STATES

Wednesday, April 8, 1959

Mr. KEFAUVER. Mr. President, I ask unanimous consent to have printed in the RECORD, the thoughtful speech delivered by the Senator from Georgia [Mr. TALMADGE] before the annual meeting of the Tennessee Agricultural Council in Memphis, Tenn., on April 3, 1959. More than 1,000 leading farmers and businessmen were present to hear Senator TALMADGE. These farm leaders were impressed by his analysis of the farm problem and his recommendations for a solution. I am certain that Members of Congress and others who are giving consideration to the plight of the American farmer in trying to do something to better his lot will be interested in the analysis of Senator TALMADGE and will be impressed with the fact that he has a specific program to present, which is deserving of most careful consideration.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

It is a happy occasion for me to have this opportunity to meet with my fellow farmers.

And I do like to regard myself as a farmer even though my principal agricultural pursuit at present is endeavoring to plow under Secretary of Agriculture Ezra T. Benson and his farm policies.

It is a planting which, I am sure you will agree, is long overdue.

And I am pleased to be able to report to you that the climate for doing some major cultivating in that field is improving every day both in Washington and throughout the Nation.

As incredible as it may seem to those unfamiliar with the facts, we in the United States have a Department of Agriculture which is the enemy of the farmer.

Had the Department of Labor for 1 day been as antagonistic to the interests of organized labor as the Department of Agriculture for 6 years has been to the interests of the farmer, Mr. Reuther and his associates in the AFL–CIO would have ridden the Secretary out of Washington on a rail before sundown.

For 6 years now it has been the policy of the Republican administration to ruin rather than to save the farmer.

For 6 years now it has been the program of Mr. Benson and the Department of Agriculture to discredit rather than to help the farmer.

With apologies to the late great Will Carleton, the farmer's present plight might well be summed up like this:

"Worm or beetle—drought or tempest—on
a farmer's land may fall,
Each is loaded full o'ruin, but the Benson
farm plan beats 'em all."

Or to paraphrase that well-known bit of anonymous farm doggerel:

"Some people tell us that there ain't no hell,
But they never farmed under Benson, so
how can they tell?"

Of course, my friends, it is not necessary for me to tell you who earn your living from the soil that the present farm program has been a miserable failure and American agriculture is in the worst mess in this country's history.

It is a situation which is reflected in every compilation of agricultural statistics.

It is a situation which is reflected in the accelerated shift of population from farm to city.

It is a situation which is reflected in last year's election results.

It is a situation which is apparent to everyone except Secretary Benson and President Eisenhower.

These are the irrefutable facts:

Between 1952 and 1958, realized net farm income in this country declined from $14.4 to $13 billion despite substantially increased Government payments. And, when the degree of inflation which has occurred since 1952 is taken into account, it is obvious that realized net income would have to be increased considerably above the $14.4 billion sum merely to put farmers back where they were in terms of purchasing power 6 years ago.

Such an eventuality is hardly likely under the present program, however, inasmuch as the Agricultural Marketing Service itself predicts a reduction of from 5 to 10 percent in realized net income this year.

During the same 1952–58 period, farm production expenses increased from $22.6 to $24.5 billion and the spread between farm and retail prices widened by $75 for each thousand dollars spent for farm produce. The farmer's share of the market-basket dollar dropped from 47 to 39 cents and still is falling.

The Bureau of Labor Statistics index for last January showed prices received by farmers at that time were 10 percent below those realized in 1947–49 while prices paid by farmers were up 19 percent for the corresponding period.

In view of the situation evidenced by those figures it is not surprising that the Department of Commerce reports that between 1950 and 1957 2,349,000 persons migrated from the farms of the Nation to compete for increasingly scarce jobs in urban areas. According to latest reports, that trend is continuing.

Those are the facts which Mr. Benson blithely ignores in insisting that black is white and failure is success.

The essence of his recent testimony before the Senate Committee on Agriculture and Forestry was that—and I am sure this will be news to you—farmers in the United States never had it so good.

As a matter of fact, he told the committee in effect that things are going so good for the farmer that unless Congress does something about it before May 15 the whole country is going to pot.

His prescription for doing something about it turned out to be a bigger dose of Benson brand sulfur and molasses.

The Secretary can claim the distinction of being the first man in history to use his own failures as arguments in favor of his policies.

He is making much of the fact that realized net farm income increased 21 percent during 1958.

What he is not mentioning is the fact that the 1958 total still is considerably below the rate which prevailed at the time he took office.

He is making much of the fact that per capita farm income last year topped the previous high set in 1951.

What he is not mentioning is the degree of inflation which has taken place since the Korean war and the fact that farm income is spread among fewer families now that his

policies have forced more than 2 million persons off the farm.

He is making much of the fact that the national farm surplus continues to increase.

What he is not mentioning is the fact that it was he who kept all surplus commodities off the world market during 1953 and 1954 and that it was not until Congress required by law that he do so that he began to move them into world trade channels.

He is making much of his contention that he could solve the problem of overproduction if Congress would give him authority to reduce prices.

What he is not mentioning is the fact that under authority given him since 1954 he already has reduced supports by an average of 20 percent and, at the same time, the wheat surplus increased by a third and the corn surplus doubled.

He is making much of his contention that he could restore the agricultural economy of the Nation if Congress would give him the laws he wants.

What he is not mentioning is the fact that of the 53 recommendations he has made to Congress, 48—or more than 90 percent—have received favorable legislative action and that those 5 which were turned down were of a relatively minor nature.

It will take more than Mr. Benson's usual pious sermonizing and glib platitudes to disclaim his responsibility for the sad situation which prevails in American agriculture today.

His contention that he should not be held accountable for the mess he has made solely because Congress has not given him everything for which he asked is about as plausible as his claim that he did American farmers a big favor by cutting parity prices by $200 million in January.

With Mr. Benson having his way, the farmers of America would be better off seeking their living at the dice tables of Las Vegas.

After all, even a crapshooter wins sometime, which is more than one can say for the chances of the American farmer under the Benson farm program.

The Benson program has depressed farm prices below the subsistence level.

The Benson program has forced farmers to abandon their farms.

The Benson program has stimulated artificially high prices for consumer goods.

The Benson program has generated unmanageable surpluses of farm commodities.

The Benson program has robbed the United States of its world markets.

The Benson program has resulted in a farm depression which, as we saw in last year's recession, is making itself felt in all other segments of our national economy.

Our experience has proved conclusively that reduced acreage, reduced prices, and rising costs lead only to reducing farm income to a disaster level. It has shown beyond contradiction that it is impossible to reduce production by reducing prices, to control production by reducing acreage, or to bring supply into line with demand through research, which has the effect of increasing supplies.

An openminded appraisal of all the facts affords no other conclusion but that we in the United States have reached the point where it is essential to the future welfare not only of the farmer, but also of the taxpaying consumer, that an entirely new approach be undertaken to solve the Nation's farm problems.

Both the farmers and the consumers of the United States have repudiated the ruinous policies of Secretary Benson at the polls, and they have given Congress a mandate to write a bold, new law which will give farmers the protection they have been denied for the past 6 years without placing an intolerable burden on the taxpayers of the country.

The farmer wants to be returned to a free-enterprise economy, with protection equivalent to that enjoyed by labor through the minimum wage and collective bargaining, and by industry through the tariff and Government subsidies and contracts.

The taxpayer wants a stabilized farm program which will give his pocketbook a break both in the marketplace and at tax time.

Our experience with Mr. Benson's ideas of farming stands as conclusive proof that those ends cannot be achieved through existing concepts.

To effect a realistic and permanent solution to our agricultural problems we are going to have to profit by our mistakes and take advantage of the lessons we have learned at so great cost.

We are going to have to discard completely the present patchwork of discredited farm laws, start all over again, and write an entirely new program which will get away from the compounded failures and the stereotyped concepts of the past.

My long and serious study of this matter has convinced me that such a program must have three fundamental objectives.

First, it must let the farmer farm.

Second, it must guarantee the farmer his proportionate share of the national purchasing power.

And, third, it must put American agricultural commodities back on the world markets at competitive prices.

Those objectives can never be achieved until the Federal Government is removed from the business of buying, storing, transporting, and selling agricultural commodities—which it is now doing at a yearly cost of $1.027 billion to the American taxpayers—and the responsibility for marketing farm produce is returned to the farmer and private enterprise where it belongs.

Those objectives can be achieved only by freeing the farmer to plant and sell his crops as he sees fit and by limiting the role of the Federal Government in agriculture to paying the farmer the difference between the prices he receives for commodities sold for consumption in this country and 100 percent of parity.

Those objectives are encompassed in the Talmadge farm plan which I first introduced during the 2d session of the 85th Congress and which I reintroduced with the cosponsorship of Senator OLIN D. JOHNSTON, of South Carolina, shortly after the beginning of the present 1st session of the 86th Congress.

The overwhelmingly favorable response which my bill has received from all sections of the country encourages me to believe that such an approach has widespread appeal not only among farmers but also among the general public.

While I would not say it can be enacted this year or next, I will make the prediction that when a new farm program is passed—and, if not before, one certainly will be after we install a Democrat in the White House in 1961—it will be along the lines of the measure I have proposed.

The Talmadge farm plan is exceedingly simple and can be understood by even the layman without the necessity of consulting a Philadelphia lawyer or a certified public accountant.

It has five major points, as follows:

First, it would eliminate all acreage controls and Government loans.

Second, it would assign each farmer growing basic commodities a domestic production quota to be expressed in terms of unit measurements—pounds, bushels, bales, etc.—which would be the same percentage of the national consumption of basic commodities that the farmer's average annual production for the preceding 5 years bears to the total national average production for the same period.

Third, it would guarantee and pay to each farmer a sales price support of the difference between the price he receives for his domestic production quota and 100 percent of parity.

Fourth, it would require each farmer to submit a bill of sale with this application for sales price support payments.

And, fifth, it would impose a maximum of $25,000 on the amount of sales price support which any individual farmer could receive in any 1 year.

As an example of how it would work, let's take the case of an average cotton farmer who now has a 5-acre allotment on which he grows 3½ bales of cotton a year. Under the Talmadge formula, his domestic quota would be about 2⅒ bales which, when sold at current prices, would entitle him to a compensatory payment of $105 over and above the $315 he would receive in the market place. Those amounts would be in addition to his income from the sale of whatever additional cotton he might grow in excess of his quota to sell on the open market.

For cotton the Talmadge plan support price would be 40 cents a pound compared with the present market price of around 30 cents and the 81 percent of parity support price of 32.4 cents.

The actual amount of the compensatory payment to the individual farmer would depend upon the prevailing market price. If the market price went down the compensatory payment would go up and vice versa. The farmer thereby would have the firm assurance of a 100 percent of parity price on his domestic production quota regardless of the level of the market price.

The cost of my plan would depend upon the resulting free market price levels of the basic commodities, but in any event would be considerably less than that of the present program. It likely would vary between $1.5 and $2.5 billion and the agricultural experts of the Legislative Reference Service of the Library of Congress estimate its potential saving to the taxpayer at between $2 and $3 billion a year.

While costing less, it would put perhaps as much as $1 billion a year more in the pockets of the farmers. As paradoxical as that might seem, it would be the case because the high costs of administering the present bureaucratic program would be considerably reduced. For instance, one of the costs which would be ended would be the billion dollars a year now being spent to handle surplus agricultural commodities.

Furthermore, whatever its ultimate cost might prove to be, the Talmadge farm plan would assure that every farm program dollar went into the pockets of the American farmers which decidedly is not the case at the present time.

With particular reference to cotton, under my bill American textile mills would get an even break with their foreign competitors who can now buy subsidized American cotton $35 to $40 a bale cheaper than it can be purchased in this country.

In other words, the underlying philosophy of the approach I have proposed is to subsidize Americans instead of foreigners.

While I will match my humanitarian impulses with those of anyone, I do not believe in—nor do I believe the American people believe in—global philanthropy at the expense of the American farmer and the agricultural economy of the United States.

Even more important than the financial considerations are the intangible advantages to be derived from a free enterprise farm program bolstered by compensatory payments.

Such an approach is extremely simple and would take the redtape out of the farm program.

Such an approach would eliminate the regimentation and dictation imposed by acreage controls.

Such an approach would let the farmer plant what he wants and sell it as he pleases.

Such an approach would take the Federal Government out of the business of buying,

storing, transporting and selling farm commodities and place the responsibility for marketing with the farmer and private enterprise where it belongs.

Such an approach would guarantee the farmer his proportionate share of the national purchasing power and restore agriculture to a free enterprise, competitive base.

Such an approach would end the accumulation of the national farm surplus which has glutted the Nation's markets and stagnated its economy.

Such an approach would make the national farm program an estimable budget item which would remain relatively stable over the years.

Such an approach would mean lower prices to both the consumer and industry and would put American agricultural products, both raw and processed, back on the world market at competitive prices.

Such an approach would give the farmer protection equivalent to labor's minimum wage and right to collective bargaining and industry's tariff and Government contracts and subsidies.

Such an approach would take the realistic view that the only justification for a farm program is to increase the income of farmers and would seek to do that by going in the front, instead of the back, door.

Such an approach would mark a new and fresh start which would release agriculture from the bonds of past mistakes and relieve the Nation's economy of the burdens of abortive farm laws.

There are those who contend that we should make agriculture entirely free and have no farm program at all. I do not share that viewpoint.

While I am enough of a Jeffersonian Democrat to believe that we would all be better off if our entire economy were freed and allowed to seek its own level, I am also, by the same token, enough of a realist to know that, with virtually every other segment of the Nation's economy protected by law, the farmer cannot be left as the only person without a legislative guarantee of his proportionate share of the national income.

If the farmer is to share in the general prosperity of the rest of the country—if he is to own an automobile, send his children to school, and give his family a reasonable standard of living—it is essential that a new farm program be devised which will give him that assurance.

The American standard of living is the highest in the world and to deny the American farmer legislative protection in the enjoyment of it would amount to putting him into direct competition with farmers in countries where living standards are minute fractions of our own and to make of him a virtual peon in a land of plenty.

While I would be the last to claim that my idea offers a complete solution to all the Nation's farm problems, I do sincerely believe that it affords a basis upon which agreement on a new national farm program can be reached. And I am now working toward that end with several of my like-minded colleagues in an effort to perfect my bill so as to give it the broadest possible base of support among all commodity groups.

I am hopeful that we can have an omnibus bill ready for consideration in the not too distant future.

Perhaps the most difficult of the problems with which we are wrestling is what to do about the $9-billion-plus surplus which Mr. Benson has accumulated.

My own idea is that a four-way disposal program should be undertaken.

The first step would be to have the National Security Council determine what portion of the surplus is needed as a national strategic reserve and make immediate recommendations to Congress for setting aside and preserving that amount of food and fiber for emergency use.

The second step would be to offer all local, State, national and international charitable, relief and welfare organizations and agencies donations of surplus commodities of whatever amounts they could utilize effectively in their humanitarian programs.

The third step would be to substitute surplus commodities for dollars in the conduct of the economic assistance phases of our foreign-aid programs, including long-term purchase agreements with underdeveloped countries like India.

And the fourth—and perhaps the most important—step would be to absorb the remainder of the surplus in the farm program itself.

The first three steps are self-explanatory and the fourth would be accomplished in this way:

Any farmer so electing could, by agreeing to put into conservation practices without payment the amount of land on which he would grow his domestic production quota, receive for sale on the open market at whatever price it would bring the equivalent of his quota from Government surplus stocks.

No compensatory payments would be paid on such sales as the farmer would have, in effect, received as payment in eliminating the cost of growing his share of the domestic market.

Under such an arrangement existing commodities would be substituted unit for unit for assigned quotas which would assure against disruption of normal trade channels. In addition, farmers electing the option would still be free to grow as much of any commodity as they desired for nonsupported sales on the world market.

Mr. Benson has seen fit in recent speeches to call the Talmadge farm plan "a long step toward a fully socialized agriculture," and to maintain that its proposal has joined the issue of "Goverment control versus freedom."

To the former assertion I would reply that Mr. Benson either is totally ignorant of the provisions of the Talmadge farm plan or he was looking in the mirror at his own program when he coined his description.

To the latter claim I would say that it is true that the issue has been joined but that the roles are the reverse of what he would have them be.

My recollection of elementary economics is that socialism is synonymous with nationalization or government ownership and control.

Now I ask you would American agriculture be more nationalized under my plan whereby the farmer could plant what he pleases and be held responsible for selling what he grows or under Mr. Benson's plan whereby the Government tells the farmer how much he can grow and then buys, stores, transports, and sells it for him?

My knowledge of the present farm program which stems from my own experience as a farmer operating under it is that its basis is drastic and ever-constricting acreage controls.

Now I ask you would the American farmer have more freedom under my plan whereby the farmer would be free to decide for himself what and how much he would grow or under Mr. Benson's plan whereby the Government puts strict limits on his planting and subjects him to stiff penalties for failing to comply with them?

I think the answer is obvious from the observation that under the Talmadge farm plan Stanley Yankus, Jr., the Michigan poultry farmer who has been put out of business by Mr. Benson's regulations, would not find it necessary to emigrate to Australia to find enough freedom to run his farm as he wants to run it.

Mr. Benson in his statements and letters to newspapers has sought to label my proposal a Brannan plan.

Such a label is not supported by the facts of the matter.

The only point of similarity between the Talmadge and the Brannan plans is the compensatory payment idea and, if it is the intent of Mr. Benson to equate that feature of my proposal with the Brannan plan, then by the same logic it also could be called the Eisenhower plan, the Seaton plan, and, yes, even the Benson plan.

That is true because officials by those names have advocated a similar application of the compensatory payment idea to producers of metals and growers of wool and sugar.

It is most unfortunate that there are some to whom playing politics is more important than seeking to serve the best interests of the farmers of America.

The most lamentable aspect of the present national agricultural dilemma is that it is the end product of partisan politics.

The welfare of our farmers and the protection and preservation of our national economy are above any personal considerations. They demand that we cease playing politics with the farm problem and act in unison to restore to the farmer his freedom and his rightful place in the Nation's economic picture.

As Columnist Joseph Alsop recently pointed out with great sagacity the present situation has "sorely endangered" America's great asset of an "independent farming population." He declared with great truth that "socially, biologically, historically, this is a name well worth national investment."

The sands of history are littered with the wrecks of civilizations and nations which perished as the result of dissipating and destroying their independent farming populations.

The vitality of any people stems from the soil and it is an inexorable law of nature that it withers and dies when its roots are transplanted to a wholly-urban culture.

There is something about the tilling of the soil which nurtures in the human breast an appreciation of the true purpose of man's existence which cannot be instilled through any other pursuit.

As Thomas Jefferson put it: "Those who labor in the earth are the chosen people of God * * * whose breasts He has made His peculiar deposit for substantial and genuine virtue."

The worst fate which could befall our country would be for urban Americans to lose sight of the fact that their present and their future are dependent upon the maintenance of a vital and progressive agriculture.

The day we allow ourselves to be deceived by demagogic appeals into believing that the American farmer is an economic liability will be the day which marks the beginning of the end of our great Nation.

Americans must look beyond their own selfish personal interests and recognize the great truth uttered by Daniel Webster when he declared:

"Let us never forget that the cultivation of the earth is the most important labor of man. When tillage begins, other arts follow. The farmers, therefore, are the founders of civilization."

That is why we must look to our farms as the only source of a posterity which cherishes its heritage of freedom and is dedicated to its preservation.

That is why we must do whatever is necessary to sustain our farms as the roots of our great American civilization.

That is why we must insist that Congress act immediately and decisively to write and enact a workable and productive farm program which will assure for all time to come that those roots will continue to nourish and replenish the life's blood of our Nation.

Toward that end I have dedicated my every effort.

Toward that end I beg your advice, help and support.

I thank you.

Launching of the "Sea Diver"

EXTENSION OF REMARKS
OF
HON. JAMES A. BURKE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 8, 1959

Mr. BURKE of Massachusetts. Mr. Speaker, on Sunday, April 5, 1959, there was launched at the Quincy Adams Yacht Yards at Quincy, Mass., one of the most remarkable vessels ever to take the water. She is called *Sea Diver* and is the first boat built from the keel up especially for use in underwater exploration of historical sites. Her owner is the famous inventor of the Link trainer, Edwin A. Link, president of the General Precision Equipment Corp. He gave the vessel his personal supervision and built into it special equipment, some of which he invented himself.

I had the great privilege of being present when *Sea Diver* slid down the ways. She is not a yacht but a work boat constructed for serious scientific purposes.

Made of heavy steel, with the care typical of New England craftsmen, she is 91 feet long, with a 20-foot beam, and will draw about 6 feet. There is ample accommodation for 14. Her cruising range, without refueling, will be more than 7,000 miles. She is powered by two diesel engines and there are two other diesel engines to operate the special equipment. She has radar, sonar, and loran for navigation. She has an underwater viewing compartment, a bay at the stern from which divers can descend, a device called an air lift which can suck sand from the bottom of a harbor so that the sand can be strained through a sieve to recover small objects and a crane capable of lifting 6 tons. In addition, she has a water jet which can be used for excavation under water or on land.

Mr. Link and his wife, Marion, already have made extensive and fruitful explorations off the Florida Keys and in the Caribbean. One of their achievements was the discovery of a 15th century anchor, possibly the anchor of Columbus' flag ship, the *Santa Maria*. Mrs. Link has told the story of their earlier explorations in a book recently published by Rinehart & Co., appropriately entitled "Sea Diver," the name of an earlier and smaller boat which they used in their adventures. She is donating her royalties toward the operating expenses of new expeditions.

The new *Sea Diver*, which I saw launched, soon will depart on a shakedown cruise to the Caribbean and will be used in the exploration of the sunken city of Port Royal in Jamaica under the auspices of the Smithsonian Institution and the National Geographic Society. Port Royal suddenly vanished under the water as the result of an earthquake in 1692. In 1956 the Links did some investigation there and now, with the new boat and equipment, will carry on a more thorough exploration.

It is possible that they will make a further contribution to history.

Upon leaving Port Royal, Mr. Link has told me, he intends to take *Sea Diver*, under her own power, to the coast of Israel, there to explore the sunken harbor of Caesarea, under the auspices of the America-Israel Society, an educational organization of which a number of my colleagues in the Congress of the United States are founders and sponsors and which has its headquarters in the Willard Hotel, here in Washington.

Caesarea was the favorite city of King Herod the Great and the port from which St. Paul sailed on his mission. The Links made a preliminary survey there in 1957, using light diving equipment. They were inspired to do so by the fact that fishermen had been bringing up in their trawls along the coast, jugs, known as amphorae, dating back more than 1,500 years before the Christian era. They found evidence that objects of great interest to archeologists lie buried in the sand beneath the harbor waters.

I am proud that a shipyard in my own State of Massachusetts was chosen for the construction of this unique vessel to be used in the cause of the advancement of knowledge. It seems to me, too, that *Sea Diver*, in exploring the historic past, hitherto hidden from us by the waters of the seas, will demonstrate, wherever she goes, the interest that we Americans take in peaceful pursuits and thus will make a contribution to good will and better understanding wherever she may drop anchor.

The Quincy Adams Yacht Yard is owned and operated by its president, Edward D. Whiting, 363 Adams Street, Milton, Mass. Mr. Whiting has over 35 years in boat building. He has been associated with the Lawley Ship Yards where he directed the boat building program for many years and has served as president of the George Lawley Ship Yard. Edward Whiting is owner and president of the Nevins Yacht Yard, City Island, N.Y., and is also owner of the Quincy Adams Marine Sales, Inc.

Born in South Boston, Mass., Edward Whiting has spent an entire life time amongst those who participate in yachting and boating in the South Boston and Dorchester coastal area.

We in Massachusetts are proud of Edward Whiting and his many accomplishments.

A great future can be predicted for the Quincy Adams Yacht Yard.

USO—The Warmth of America in the Cold War

EXTENSION OF REMARKS
OF
HON. ALEXANDER WILEY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Wednesday, April 8, 1959

Mr. WILEY. Mr. President, it was my privilege this morning to listen to one of the finest talks I have heard in Washington. It was by our friend and associate, the Senator from West Virginia [Mr. RANDOLPH]. The occasion was a breakfast of the United Service Organization's National Council. There were present 75 Members of the Senate and House. There were in attendance 600 members of the USO advisory group, representing every State in the Union. They were here for a 2-day visit. As Senators know, the USO—United Service Organization—has in its membership representatives of all religious groups, business, and labor—in fact, it is a cross-section of America dedicated to selling service, in its broadest interpretation.

The meeting started with a talk by Harvey S. Firestone, Jr., USO chairman. It was following his remarks that the Senator from West Virginia [Mr. RANDOLPH] gave us a most illuminating and inspirational talk on the subject, "USO—the Warmth of America in the Cold War." The Senator's address gave a picture of the world today—the challenges which face us and the successes and failures of the Kremlin.

I ask unanimous consent, Mr. President, that this fine address be printed in the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

THE WARMTH OF AMERICA IN THE COLD WAR

(Address by Senator JENNINGS RANDOLPH, Democrat, of West Virginia, to the United Service Organizations National Council hometown breakfast, Sheraton Park Hotel, Washington, D.C., April 8, 1959)

Mr. Chairman, members of the board of governors, ladies and gentlemen of the national council, and guests, once again we meet to applaud and appraise the work of the USO in servicing the needs of the young men and women of our Armed Forces.

I have been asked to discuss the topic of "The Warmth of America in the Cold War," a subject that admits of wide latitude, to say the least. However broad the title assigned, it bespeaks a particular aspect of the work of the USO and of the national character of America which is of central concern to all of us; it indicates the role of compassion and understanding which lies at the heart of so much of our work, as well as that of the individual affiliated agencies. It challenges also the need for our extending these qualities throughout the range of our national affairs—a point to which I shall return in more detail later.

This month, ladies and gentlemen, we memorialize the 18th year of the USO—a year heavy with symbolic import. For this is the year when the young men who were born—as was the United Service Organizations—in 1941 first become subject to military conscription.

These young men, and we ourselves, face a radically different world from that of 1941. In that year American troops were stationed only on American soil and American Territorial possessions, guarding our national security by means which were determined largely by 19th-century conditions of warfare and by Admiral Mahan's concept of naval power.

Today our national security is intimately involved with that of every nation of the free world, a security cemented by alliances with other nations throughout the Western Hemisphere, in Western Europe, in the Middle East, and in southeastern Asia. American troops have followed these alliances as guarantors of our national commitment to the security of the free world, from the wastes of the Arctic to the sands of Arabia, from Korea to Koblenz.

To a limited extent only is this a world of our own making—and even less so is it one of our own choosing. But this is the world we have and must abide with for an indeterminate future.

Until the turn of the century the world was ruled largely by 13 empires. The First World War led to the collapse of the German, Austrian, Turkish, and Russian Empires. By 1955 most of the remainder had been dissolved—with the British, French, and Dutch Empires eroding under the resurgent tide of colonial nationalism.

Since the end of World War II, 21 new sovereign nations have come into being; so also has a new kind of imperialism—that of the aggressive and militant Soviet-Sino Axis, animated by the dynamism of a new religion of the state. This new imperialism controls the strategic heartland of the Eurasian land mass, and—with its satellite nations—numbers well over a third of the world's population.

This is one measure of the change, ladies and gentlemen, that has taken place within less than two decades. Another, and correlative measure, was the presence in Washington last week of the foreign ministers of the NATO nations—an indication that the free world is not without the strength and the means to oppose the Soviet imperialism.

But let us not be deluded by our own terms. We use the term "imperialism" to apply to the expansionist designs of the Soviet Union—just as we used the same word to apply to Germany and Japan of 20 years ago. The German and Japanese imperialisms, however, were based upon a racial mystique of pan-Germanism and pan-Asianism, respectively—each developed independently of the other, and each relying ultimately upon military conquests as the means of expanding its sphere of influence.

The new imperialism of the Soviet Union is neither so limited in its appeal to other peoples nor in its means of exploiting this appeal. Indeed, military conquest, in the traditional sense, is only one means—and not the most important, either—of the new Soviet imperialistic design.

The successes of the Communists in recent years have been on the propaganda front, in areas of economic and political infiltration, and in exploiting the tensions of colonial nationalism rather than on the military front. There we have successfully opposed them, in Europe and in the Middle East.

Not only has the Soviet Union failed to expand its strategic military position, but it has also felt compelled to retreat from many of the advanced positions it held at the end of World War II. This we have failed to recognize amid the Soviet successes in other fields, but let me note a few of the areas of Soviet withdrawal:

In Europe, they have withdrawn from the Danish island of Bornholm, from the Finnish naval base, and from the strategically valuable section of eastern Austria, while they have been forced also to accept the independence of Yugoslavia and a loosening of their hold on Poland. In Asia they have given up their naval bases in Darien, they have withdrawn from Sinkiang, they have ceded their domain over the Manchurian Railroad to China, and there is even evidence that their hold on Outer Mongolia may be weakening.

Thus, although we have seen some Soviet military withdrawals in Europe, and the ceding of Soviet authority in Asia to Chinese power, we have witnessed also the continued successes of the Soviet in other and equally important areas. Through piecemeal economic competition on a selective basis the Soviet Union has succeeded in gaining an economic and political foothold in many of the underdeveloped nations of Asia, Africa, and Latin America. In the Middle East it has exploited, with varying degrees of success, the tensions of Arab nationalism—falsely appearing there, and elsewhere, as the defender of the very values which have given us our strength—the ideas of freedom, of human dignity and of national sovereignty. Then, too, Russia's recent scientific and technological achievements have been presented to the less industrialized nations as evidence of the superiority of the Soviet economic system over that of a free society.

This, then, is the face of our adversary—a resourceful, aggressive and cunning opponent—equally capable of offering the disarmingly open hand of aid to Iraq or the mailed fist of conquest to Hungary and Tibet.

Against the expansion of this power we have developed our system of economic and military alliances in Western Europe and southeastern Asia, the cornerstone of which, in each instance, is the military power of the United States. This power can be effective only as it exists in force and in readiness, for we will never again be granted—as we were in World Wars I and II—the opportunity of 2 or 3 years in which to prepare behind the shield of our allies. The Armed Forces of the United States are now the main shield of the free world—not the French infantryman of World War I, or the British Navy and Royal Air Force of World War II.

Yet the men and women of our Armed Forces—stationed at the ramparts in England and Western Europe, in Africa and the Middle East, in Okinawa, Japan, and Korea—these young people are more than the sword and buckle of freedom. They are also emissaries of the American culture and American character to the lands in which they serve. And unlike the system of Soviet communism, the ideals of America cannot be extended under the sway of boot and bayonet.

The extent to which the people of other lands will rally to the American cause of freedom is determined in large part by the image created by American service men and women stationed in those lands. In many instances our uniformed youth must overcome local hostilities—created sometimes by Communist agents, and sometimes by nothing more than the natural envy of the poor for the rich. But whatever the source, its most effective antidote is the natural generosity and compassion of the young people in our Armed Forces. For it is they who provide the living image—and sometimes the only concrete one available in those lands—of the meaning of American ideals. Whether it be the American GI who shares his rations with the Korean war orphan, or the American Army doctors who help improve native health and sanitation facilities in Libya—wherever they serve, the members of our Armed Forces are ambassadors of the American ideal.

Today this ideal embodies the concept of a world society which preserves the values of national sovereignty and individual freedom—as opposed to the Soviet ideal of a world superstate, with nationalities as well as individuals in subservience to the state. It is the ideal of the commmunity of man, voluntarily held together by compassion, understanding and respect for individual differences—as opposed to the soulless collectivism of the Soviet, held in thrall by a secret police.

The young men and women of our Armed Forces thus share a large part of the responsibility for making this ideal meaningful to the people of other lands. And in this task—as you ladies and gentlemen know—the USO shoulders its responsibilities as well. For we have gone well beyond the coffee-and-doughnut concept of ministering to the needs of our Armed Forces.

The educational, cultural, and religious programs of the USO, in this country and in our stations abroad, help to illuminate for our service people the values of the culture they are defending. In this respect, the very name of our organization—United Service Organizations, Inc.—comprised of people from a variety of religious faiths and national origins—this very name symbolizes the voluntary and generous aspect of the character we identify as "American."

This national trait of service and voluntary giving is, according to the noted historian, Arthur M. Schlesinger, one of the 10 contributions of America to civilization. He finds it in America on a scale unparalleled in other countries—in our 4,000 philanthropic foundations, in our contributions to the Red Cross, in our United Fund, and in CARE. And, he states, "Thanks to this ingrained trait of the national character, the Government found it easy to mobilize our people behind the Marshall plan, a costly tax-supported program for repairing the war-stricken economies of Western Europe. Though these official undertakings were in part designed to halt the spread of communism, they arose from deeper springs of human compassion and have no parallel in history."

This is a large part, ladies and gentlemen, of what we mean by the warmth of America. But this is not all. We must extend this spirit of warmth and compassion into more than just the areas of national good will and generosity with our own material bounty—important as these are.

For the crisis our Nation faces today encompasses the entire domain of our feelings, our will, and our intelligence. It is a crisis in the human spirit—a crisis which challenges our capacity to know, and to feel the knowledge that we are come to one of the great watersheds of history. As with every such place in man's long travail out of barbarism, it is a moment of danger as well as opportunity—and a moment of choice. This time the choice may be between a planetary holocaust or working toward a new plateau of civilization. We have the technical means for either, but do we have the human means—the imagination, the compassion, and the will to make the right choice?

While history shows many instances of noble causes overwhelmed by the brute forces of evil—man has more frequently brought on his own defeat by failure to pursue the right than by the active forces of evil. We are no exception. We have received no divine dispensation from our own limitations and frailties; it is not written in the stars nor in the flights of birds that our national will is to prevail.

Yet, we may say with assurance that the image of the United States which we present abroad can be no stronger than that which we show to ourselves. Thus, we must answer for ourselves the question of whether the warmth of America is borne of our genuine commitment to the values of a free society, or whether it is in large part merely the expression of exuberance in our national wealth. The issue presented is whether—as individual men and women, and as a free society—we can once again generate as strong a faith in the values of a free society as in the material fruits of a free economy, and without confusing the identity of either.

Ours is the first civilization in history which has developed the means of eliminating poverty among all its members. For the first time in humanity's ageless struggle with nature we find at hand the means to release men from the iron chain of circumstance—from the pain and hunger which have been their daily lot.

The choice is ours to make, namely, either to use our national good fortune for the enlargement of the faith of man, to expand the ideal of brotherhood, and to extend our vision of the truth—or to continue with our present preoccupation with pleasure and profit, submit to a cult of mediocrity, and abide under the tyranny of our own selfish concerns and narrow nationalism.

Perhaps the latter seems a harsh and unfair description of our present national attitudes. This is a conclusion one may draw

when he hears the constant boast of our increasing gross national product—without ever the question of "For what?"—when we spend $10 billion a year on advertising to convince ourselves that we cannot do without the things we don't need, when we spent $10 billion a year on alcohol and $3 billion a year on cosmetics, the two together equal to our total expenditures—public and private—for education? What other conclusion may one draw, when, with a gross national product of approximately $450 billion, we hear calamitous talk of national bankruptcy over the issue of spending $3.5 billion on foreign aid—less than 1 percent of our total product? Is this the image of a strong society?

More than 100 years ago Ralph Waldo Emerson stated that "Things are in the saddle." He followed this comment with the observation that "A man's things soon come between him and himself." Now, this was no prejudice of Puritan asceticism, but an observation on human behavior—applicable to a society as well as to a man.

The evidence surrounds us if we will but open our eyes, for we have many unfinished tasks in our own society: to furnish the conditions of human dignity to the 5 million or so of our own families who live on the squalid edge of poverty—to eliminate the conditions of urban blight that contaminate so many of our cities—to restore education and the life of the mind to their proper role in a democratic society. These are only a few of the problems that press upon us.

We have the means to solve these problems. But not all our wealth of technology and instruments will avail us if we lack the imagination to perceive, the compassion to understand, and the will to act.

This is, in part, the meaning of a recent comment by Archibald MacLeish—one of the most intelligent and perceptive observers of our times. In referring to the defense of freedom in our society, MacLeish stated that, "The man who knows with his mind only, who will not commit himself beyond his wits, who will not feel the thing he knows, or know the thing he feels—that man has no freedom anywhere. He is tugged by the string of whatever is told him, maneuvered by slogans. Sooner or later his life will seem indifferent to him, something managed by others, and he will acquiesce in the management, think about it as little as possible, occupy himself with the only things near enough to seem real—his car, his front lawn, those shadows on the television screen—symbolic shadows."

This retreat into the privacy of selfish and petty concerns is our chief enemy of the human spirit in America today. For our greatness—as individuals and as a Nation—is achieved in the complementary relationship of private rights and public responsibilities. Our finest hours as a people have thus been those when we presented to the world at large the hope of realizing a new moral and spiritual vision of man.

This, I believe, is also what the warmth of American means today.

Analyses of Last Election

EXTENSION OF REMARKS
OF
HON. JAMES C. AUCHINCLOSS
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 8, 1959

Mr. AUCHINCLOSS. Mr. Speaker, as was to be expected, there were a great many post mortems held after the election last year which did not come out very well for the Republican Party. Many people expressed their opinions as to the reasons for the apparent change in public sentiment and the failure of some tried and true Republicans to be reelected to the Congress. Indeed the national committee has conducted research work on this subject along with others and, of course, many reasons were propounded explaining the results and various suggestions given as to what the Republican Party should do to regain favor with the voters.

One of the most constructive analyses of the situation was contained in an article appearing in a recent edition of the Washington Newsletter, which is published by the National Federation of Republican Women. It was written by our colleague, Representative JESSICA MCC. WEIS, of New York, and I am pleased to have permission to insert it in the CONGRESSIONAL RECORD. Mrs. WEIS is a lady of rare judgment, sound and practical vision, and experienced in the ways of politics, and I hope that the leaders of the Republican Party will take to heart the suggestions she submits in her article and incorporate them in a revised and forward-looking policy for the Republican Party. It is a great stimulus to all of us Republicans to have the benefit of JUDY WEIS' views.

(By Representative JESSICA MCC. WEIS, New York)

From many a pessimist these days one hears dire predictions of dark days ahead for the party, and from the worst of these comes the sad lament that the two-party system itself may be in danger.

I personally reject this kind of thinking; for if there is one thing that I have learned from my years of political activity, it is that the pendulum of political opinion is in constant motion. I do not fear for the life of the party, now or at any time in the future. However, the health of the Republican Party would be improved by a massive dose of political vitamin B. The women of the Republican Party and the National Federation have a great opportunity to help administer that dose. This is the time for some real soul searching and factfinding in order to start that pendulum swinging once again in our direction.

The Republican Party, as a party, has managed only two congressional victories in the last 25 years, and has rather consistently given ground at every level. Even where we are still winning the margins are growing smaller, and unless we knuckle down and solve the political problem confronting us we are in very great danger of becoming a permanent minority party.

We can no longer delay in facing up to the grim fact of a weak internal party organization, particularly at the lowest, and most important, grassroots level. In 1958 we were simply outmanned, outworked, and outtalked, and in many cases, outfinanced. We cannot logically expect the opposition to be weaker in 1960. Therefore, it is imperative that we become a great deal stronger.

Since the 1930's, the regular party organizations of both major parties have been slowly disintegrating, but in the case of the Democratic Party, organized labor has been willing and able to take over the party apparatus, and today, the Political Action Committees and the COPE organizations of organized labor provide about 90 percent of the political workers and grassroots organizations for their party. We have yet to develop a comparable party structure, and this is the essential and overriding problem which confronts us. There must be a rebuilding of a strong, effective, dedicated party organization, starting from the ground up.

Having stated the problem, which is always relatively simple, it becomes imperative to look around for an adequate solution, and, in this connection, there are several things which must be done—the sooner the better.

1. We must decide precisely what issues we consider absolutely basic, and we then must enunciate them so clearly that every single citizen knows exactly what being a Republican means (and does not mean).

2. We must launch a fearless and constant attack on the inflationary big government philosophy that is motivating a great majority of the opposition. Here again, we must show in easy-to-understand language exactly how the New Deal-Fair Deal philosophy is slowly but surely stifling individual freedom and initiative, breeding a false sense of security, and corrupting those very economic and political principles which made this Nation great.

In other words—taking a page from the advertising industry—we must step up the selling campaign for our own product in two ways—by a clearer and better explanation of what we're selling ourselves, and by an equally clear explanation of what's basically wrong with our competitor's product. No matter how good the product—and ours is a good one—dynamic salesmen are necessary to do the job. Our salesmen must be appealing candidates, responsible, hard-working party leadership, and dedicated ward and precinct workers. This leads to a third important point.

3. We must make better use of our regular party workers, by providing them with solid, sensible, compelling reasons for putting forth more effort. We must instill in them a sense of purpose, a personal motivation for working as hard, and harder, than those who are being paid for, or coerced into, political activity.

4. Finally, not only must we have a greater effort from present party members, but we must actively recruit new membership, and leadership, for the party. At both ends of the age spectrum, we need new blood. Our party has a great deal to offer both the youth of America as well as our older, senior citizens.

In the final analysis, the only real answer lies in larger numbers of dedicated people with real convictions who are willing to roll up their sleeves and do the tough job of careful precinct-by-precinct organizing all over the country. And where is there a greater reservoir of such a dedicated, experienced and devoted group than in the National Federation of Republican Women? Hell hath no fury like a woman scorned, nor can any candidate withstand the onslaught of women when they are righteously aroused to the defense of those things in which they truly believe. The task will not be easy, but if we all pull together and work like mad, we will win; if not, we are in for another licking. The choice is clearly up to each of us.

Purchase of British Turbogenerating Equipment by TVA

EXTENSION OF REMARKS
OF
HON. RICHARD M. SIMPSON
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 8, 1959

Mr. SIMPSON of Pennsylvania. Mr. Speaker, under leave to extend my remarks, I wish to discuss the recent decision by the Tennessee Valley Author-

ity to purchase certain large turbogenerating equipment from a British firm rather than an American supplier. Specifically, I will comment on the justification cited by TVA for the action it has taken in this matter.

Mr. Speaker, in a release dated February 27, 1959, the Tennessee Valley Authority undertakes to explain its award of a contract for purchase of a turbogenerator to a British concern. Parsons & Co., the British bidder, underbid Westinghouse and General Electric by approximately 31 percent.

TVA says that it was disturbed by the rising price of turbogenerators, claiming that the prices charged by the domestic bidders had risen 50 percent since 1951 while average wholesale prices had increased only 5 percent. However, if we look at wages we find an increase in the electrical machinery industry weekly wage from $61.48 in September 1950 to $85.36 in September 1958. This is an increase of 39 percent. These figures come from the Bureau of Labor Statistics and are much more in point than general wholesale prices.

The building of a turbogenerator is a custom job and labor costs represent a large part of value added.

In such custom jobs our large mass production industries lose a great part of the advantage that comes from mass production. The process of building such a generator cannot be called mass production merely because the contractor is a mass producer of other items. The competitive disadvantage of much higher wages paid in this country reflects itself precisely where our productivity is not boosted by mechanization or automation. It stands to reason that in custom-made items we enjoy little if any differential in productivity over the British.

It would therefore be expected that the British could readily underbid us by a wide margin and would do so unless they allowed for an inordinate profit. Our wage rates are in the nature of 2½ times those of the British in the electrical machinery industry.

To repeat, in custom-built items we largely shed the productivity lead that we enjoy in many mass-produced items. Moreover, wages represent a high percentage of total costs of producing custom-made items.

TVA says that Westinghouse estimated 1,080,000 man-hours to build the turbogenerators; and concludes that the difference in wages between the British and American companies would be only $1.5 million. To arrive at this result it was necessary only to multiply the number of man-hours by the wage differential. This calculation, however, covers only a part of the story. The materials used by our manufacturers also contain American wages all the way back to the mines and the soil whereas the British materials contain the much lower British wages through all the stages of production back to the raw materials.

Therefore should the domestic companies enjoy no advantage in productivity over what appears to be a highly efficient and reliable British company, the advantage of the latter should be about 2½ to 1 costwise. If it is less than that, the British company is not as efficient as claimed by TVA; and our companies are penalized for their greater efficiency. To be sure, there is the duty of about 15 percent on the British product plus ocean transportation, marine insurance, and so forth; but none of these charges would span the 2½ to 1 ratio.

That Parsons should be able to underbid our domestic companies by only 31 percent is therefore a little surprising. That a handsome margin of profit could be hidden in such a bid seems easily possible. That possibility no doubt accounts for the company's ability to accept a penalty clause as noted by TVA whereas the American bidders would not do so even under their higher bid.

TVA's eagerness to send this contract overseas and its rationalization of its position by resort to transparent arithmetic is perhaps explained by its reference to our general foreign trade policy and our international relations.

That Executive domination of our foreign commerce, contrary as it is to the mandate of the Constitution, has now filtered through adminstrative capillaries to the various purchasing agencies is confirmed by the TVA award of the contract to a foreign company and its explanation of the fact. In the end, for example, TVA says that purchase of the power unit from Parsons strengthens the economic position of our ally, Great Britain. This, it should be noted, is an entirely different argument from the preceding ones and explains much better than TVA's ragged arithmetic the reason for the award to a British firm.

The part played by our Executive dominated foreign trade policy emerges very clearly. The State Department's diplomacy must be supported through thick and thin throughout the fabric of our Government. The totalitarian position thus given to our foreign trade policy must brush to one side all considerations of a domestic nature.

"For national security," continues TVA, "strong allies, a healthy world trade, essential industries strengthened by stimulation of competition, are likely to be at least as important as the location of specific powerplant repair facilities."

Westinghouse and General Electric had maintained that the national security would be jeopardized by creating dependence upon foreign sources for repair facilities. TVA was not impressed. It answered as just quoted.

Particular note should be taken of the fact that the view was expressed by TVA that the strengthening of essential industries by stimulation of competition, was desirable. Aside from the question whether TVA is by way of superseding the function of the Federal Trade Commission and the Department of Justice in seeking to assure the stimulaton of competition the question naturally arises whether competition is stimulated when a 40 percent wage level is pitted against one of 100 percent; or could it be argued that such competition is unfair, particularly if wages are not to be used as a source of competitive advantage. If it is the intent on the other hand to undermine the American wage system such competition could become a useful instrument.

Are we to assume that if the British company needs the great wage advantage that it has General Electric and Westinghouse are to be penalized because they are more efficient producers? They must indeed be more efficient if they can pay wages 2½ times as high as Parsons and yet bid only 50 percent higher on a Government contract.

TVA says it was willing to let the domestic bidders go 20 percent above the foreign bidder, as can be done under the controlling Executive order.

But why 20 percent? What possible relation is there between the production costs borne by Westinghouse and General Electric and those of a foreign competitor that operates under entirely different cost burdens? Let us suppose that the bidder had been not British, but Italian or Japanese. Would the differential that might then have been recognized still be one of 20 percent? Obviously, yes, since no discrimination can be drawn among different countries. Yet the 20-percent margin might have fitted even more loosely any other foreign bidder than it fit England.

The whole TVA position comes down simply to the desire, in keeping with our State Department's foreign economic policy, to give more public contracts to foreign countries. Otherwise why does TVA argue so elaborately the extraneous economic points that it presents and why does it bring in elements of foreign policy?

It says that—

> It can reasonably be assumed that these dollars (those garnered by Parsons & Co.) will be used to finance British purchases of other goods either in the United States or in third countries which will in turn use the dollars to make purchases in the United States.

Here we see TVA becoming the Department of Commerce; but it must be said that the TVA economics, like its notion of relative efficiency, will not bear the light of reality. In the past 5 or 6 years some seven or eight billions of dollars have flown overseas and, with the exception of 1957, have shown no signs of returning. In 1958 alone we lost $3.4 billion in our international monetary balance.

In fact, the economics in the TVA reply and the references to foreign policy read very much as if they had been written in the State Department.

As for the conclusion that the higher bids by the domestic concerns represent unreasonable prices and therefore presumably exorbitant profit, there is, of course, no proof. The only yardsticks used are the increase in wholesale prices, allegedly only 5 percent between 1951 and 1959, and the margin of overbid in relation to a foreign bidder. Neither yardstick is suited to the thing to be measured.

Was the American bid price unreasonable? That is all the law asks; although it must be admitted that the

regulations lay down an arbitrary measure; and, further, that TVA was bound by the regulations.

It was because of the unrealistic character of the regulations that the domestic companies made their plea on the basis of national security. On that ground TVA overruled them. The result is simply that the domestic industry loses the contract on grounds that penalize relatively higher productive efficiency. This result is achieved by using an irrelevant yardstick provided by regulations under the Buy American Act, but not by the law itself.

Through this loophole TVA is able to comply with the foreign economic policy of the State Department while at the same time going contrary to the domestic economic policies of the past 25 years, especially the part of it that has had the effect of raising wages in this country to the highest level in history.

By law wages have been taken out of domestic competition. Now the Government turns around and lowers the boom on is own creation. Foreign wages are free to compete and foreign industries paying low wages are free to take full advantage of the higher American level and win awards of public contracts by simple underbidding, a very easy thing for them to do.

Mr. Speaker, still another aspect of this problem has come to our attention and I wish to mention it at this point. My colleagues may recall receiving a letter recently from the United Electrical, Radio and Machine Workers of America. Among other things, the union attempted to prove that the contract in question was lost to American firms because their bids allegedly included an unreasonable percentage of profit, thereby enabling the Parsons firm to underbid their quotations by a substantial amount.

Mr. Speaker, I wish to include as a further extension of my remarks a letter which I have just received from Mr. C. H. Bartlett, vice president of the Westinghouse Electric Corp. The information supplied by Mr. Bartlett will serve to clarify the questions raised by the union. The letter follows:

WESTINGHOUSE ELECTRIC CORP.,
Pittsburgh, Pa., April 3, 1959.

Hon. RICHARD M. SIMPSON,
House of Representatives,
Washington, D.C.

DEAR MR. SIMPSON: Since our dinner in Washington on February 26 at which time we discussed the problem of the import of heavy electric power apparatus, many members of the Pennsylvania delegation have shown an interest in this matter. Therefore, we feel an obligation to write you this letter in order to keep the record straight.

You have received, I believe, a letter from the general president of the United Electrical, Radio and Machine Workers of America, on the subject of the 500,000-kilowatt steam turbine generator ordered by TVA from C. A. Parsons & Co., Ltd., of England. In this letter, this UE official has done a great disservice to the union's membership and to the Nation with absurd charges of 265 percent profits in the electrical industry of the United States. The letter presents an argument based on false assumptions, incorrect figures, and distortions of fact. Its resulting conclusions are ludicrous.

For example, while the UE does not deny that U.S. electrical manufacturers pay wages at least 2½ times those paid in England, they somehow calculate that our labor costs on this $18 million job are only $91,000 more than Parsons labor costs.

They calculate further that the total cost of building this giant steam turbine generator would be only $5,300,000. The fact is that this amount wouldn't cover the cost of materials—to say nothing of wages and salaries, the costs of providing and operating our factories, and their great number of machine tools, transportation, research and development, and many additional expenses.

I am sure that Westinghouse stockholders would be delighted if our profits could be a little closer to the 265 percent that UE says we earn, instead of the 4 percent or slightly less that we actually have earned in the last several years.

The UE letter bases its charges of profiteering on what it says are company figures. It then quotes a statement by Mr. A. C. Monteith which appeared in the Westinghouse News to the effect that the TVA order in question would have meant 1,080,000 man-hours of work for Westinghouse employees at the Lester and East Pittsburgh, Pa., plants and 375,000 man-hours of work for employees in plants of supplier companies.

What the UE does not say is that these figures represent only the direct factory labor which would have been involved in production of the steam turbine generator—the labor of those factory employees who would have been working full time on this particular job and who are directly affected by the loss of this order. When we cited these man-hour figures to show the possible effect of this lost order on employment, we were intentionally conservative, limiting the figure to direct labor only.

The figure does not include the host of service personnel such as crane operators, materials handlers, production clerks, plant guards, supervisors, and others. Such indirect labor costs are at least double the direct labor costs. This means that the total labor cost of manufacturing this type of giant electrical equipment is approximately three times the actual direct labor cost. And that covers only the people in the manufacturing plants. In addition, there is the cost of the people in the research and development departments and laboratories whose efforts keep American electrical apparatus ahead of the world in reliability and efficiency. And there are sales costs and administrative costs. The UE letter ignores all these.

As a second step in its series of miscalculations, the UE takes this small portion of total labor cost and multiplies it by several industry-average wage figures—which also are incorrect when applied to the Westinghouse plants involved. The skilled employees who build these giant machines earn well above the average industry wage.

Then, to muddle even more the already completely inaccurate calculation, the UE applies a mythical productive efficiency advantage which, they imply, the heavy electrical manufacturers in this country have over similar plants abroad. This, they claim, is 244 percent. If such an advantage exists in the production of heavy electric power apparatus, we are not aware of it. And judging from the low bids of foreign electrical manufacturers, they haven't heard of their great disadvantage either.

It is indeed unfortunate that the officers of a national labor union who represent thousands of American workmen spread this type of economic nonsense which can only work against the best interests of their members in a segment of industry where reduced employment has been and still is a problem.

Such propaganda is serious also in that it encourages those who fail to see the dangers involved in our Government buying heavy electric power apparatus from foreign companies which could not provide the necessary repairs and maintenance in time of war.

The UE letter dismisses the security question as a hypocritical issue raised to justify our inability to meet the low bids of foreign suppliers. We are willing to leave to your judgment whether or not the continuous supply of electric power to key defense production areas of the country during a national emergency is a real or a hypocritical issue. In 1957, TVA supplied more than half the power used by the U.S. Atomic Energy Commission, for example.

Despite TVA reassurances on the ability of foreign suppliers to provide service, the fact remains that the Parsons company does not have a steam turbine generator manufacturing plant on this continent. Nor is there any plant in Canada capable of handling major repairs of large steam turbine generators. Parsons, in its bid, said it has just three technical men in all of North America to handle repairs and maintenance. By contrast, Westinghouse has more than 1,000 field service engineers, and, in addition to our major manufacturing plants, we have service and repair plants throughout the United States. Any major repair or replacement on such a steam turbine generator as the TVA Colbert Station unit would require Parsons to ship the unit overseas or ship parts from overseas—something which could be impossible in time of war or other national emergency.

This very real issue of national security should not be screened from view by the smoke of misinformation emanating from UE or any other source.

Sincerely yours,

C. H. BARTLETT,
Vice President.

National Forests

EXTENSION OF REMARKS
OF

HON. LEON H. GAVIN

OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 8, 1959

Mr. GAVIN. Mr. Speaker, my intense and continuing interest over the years in the well-being of our great national forests is well known to this distinguished body. We in the Congress are proud of the fact that when issues affecting our forests are at hand there emerges a singleness of purpose that assures the future safety, conservation, and wise use of these forests.

Mr. Speaker, the report on a "Program for the National Forests" which Secretary of Agriculture Benson sent to you on March 23, and which I inserted in the CONGRESSIONAL RECORD on March 24, 1959, is a significant step forward toward more complete development and intensive management. Secretary Benson, Assistant Secretary Peterson, Chief McArdle of the Forest Service, and the others involved in the preparation of this report are to be congratulated.

On July 31, 1953, in a special message to the Congress about the Nation's natural resources, President Eisenhower stated that the Federal Government has a responsibility to see that the national forests are managed wisely. Secretary

Benson's report clearly states the measures and action needed to achieve the full development and use of the resources involved. It is now the responsibility of the Congress to study this "Program for the National Forests" and to take the necessary action to carry out both the short-term and long-range objectives.

I am interested in this program not only for its impact on the 181 million acres of national forest in 39 States and Puerto Rico, but also for the opportunities it presents to make the one-half million acres of the Allegheny National Forest in my State more productive and more useful to all our citizens.

The national forests are an operating public enterprise. The timber, wildlife, recreation, water and other resources are not locked up or withheld from orderly public use. The total cash receipts from the sale of timber and related resources now exceed a billion dollars. The second billion dollars in receipts should be reached within the next 10 years.

Each resource in the forests, however, must be developed, managed, and used in a coordinated manner if full renewability and adequate supplies are to be maintained for ourselves and the generations ahead.

We are not harvesting the full allowable cut of timber on all national forests. On the Allegheny we are now cutting about 22 percent of the cut the national forest will sustain. Research in new uses for hardwoods, better quality tree growth and better protection from insects and disease is needed. The accelerated forestry research program covered in this report will do much to improve the forests for expanded use.

The Armed Services Committee, of which I am a member, is constantly confronted with the staggering amounts of nonrenewable natural resources which are consumed to maintain a strong position in this nuclear age. We in the Congress must never overlook the need to build up and improve the renewable natural resources of the national forests as an added source of stability and strength. Research, therefore, is a must.

The flood of people from our cities to the national forests for recreation, hunting, camping and fishing and to enjoy the scenic beauty of the out-of-doors is now a major forest use.

The 1950 census showed some 47 million people living within 300 miles of the Allegheny National Forest. This is a day's drive by car. The next census will show more.

In 1958 over 800,000 people visited the forest for some type of outdoor recreation. An additional 930,000 people from Pennsylvania and surrounding States made day visits to the forest to enjoy beautiful scenery. If this present trend continues we anticipate an annual use over the next 10 years of about 1½ million people. This estimate is based on the forest as it now stands without any major developments to increase the recreation potential.

This "program for the national forests" tells us that the recreational use in all our national forests is expected to almost double within the next 10-year period. Where population figures are concerned, estimates are usually on the conservative side. Hence, we might have more than the 130 million people expected in the national forests by 1959.

The report tells us also the kind and number of improvements needed to meet this demand for more outdoor recreation by more millions of our citizens. The major improvements needed to provide better hunting and fishing by the increasing numbers of Americans going to the forests each year is revealing.

As America's population and economy expand, we in the Congress should make sure that the management, protection, and use of the resources of our national forests expand also. The direct benefits to our Nation will be rewarding.

Our small national forest in Pennsylvania now returns cash receipts of over one-fourth million dollars annually. Under this "Program for the National Forests" the cash receipts for all the national forests could be doubled in the next 10 to 15 years to over $210 million annually. The capital value of our forest property would be increased about a billion dollars. Payments to local counties for schools and roads will increase. Some 620,000 people would be employed in the harvesting and processing of national forest timber.

We cannot place a dollar value on the recreation, soil, and wildlife benefits that will accrue to millions of Americans in all walks of life. Better and more ample supplies of water for industrial and domestic uses, so vital in the West, will also be a benefit here in the East.

Mr. Speaker, we have made substantial progress in the development of our national forests over the past 50 years. Our past accomplishments are not sufficient to meet the resource demands of the future.

In this "Program for the National Forests," we now have a solid base for launching the most realistic and responsible national forest improvement program in our history.

SENATE

FRIDAY, APRIL 10, 1959

The Chaplain, Rev. Frederick Brown Harris, D.D., offered the following prayer:

Our Father God, we thank Thee for the sacrament of loveliness which is unveiled when dawn gilds the sky, for chorus of bird song, for unfolding blossoms that make the awakened earth radiant and fragrant and beautiful—all on an April morning.

So set us free, we pray, from the icy grip of wintry natures, from habits of mind and action which smother something we might become. Deep in our hearts are the possibilities of goodness. There stirs within us a desire toward purity, selflessness, sacrifice, heroism, service, and a love that faileth never.

O Thou spirit of the living God, breathe upon the barren garden of our lives, so that we shall know that for us the winter is past, the rain is over and gone, flowers appear upon the earth, and the time for the singing of birds is come.

So in our private lives, known only to Thee, and in our labor as servants of the land we love, may the beauty of the Lord, our God be upon us. Amen.

THE JOURNAL

On request of Mr. JOHNSON of Texas, and by unanimous consent, the reading of the Journal of the proceedings of Wednesday, April 8, 1959, was dispensed with.

MESSAGE FROM THE HOUSE

A message from the House of Representatives, by Mr. Maurer, one of its reading clerks, announced that the House had passed the following bills, in which it requested the concurrence of the Senate:

H.R. 7. An act to authorize the Secretary of Defense to lend certain Army, Navy, and Air Force equipment and provide certain services to the Boy Scouts of America for use at the fifth national jamboree of the Boy Scouts of America, and for other purposes;

H.R. 296. An act to authorize the Secretary of Defense to lend certain Army, Navy, and Air Force equipment and to provide transportation and other services to the Boy Scouts of America in connection with the world jamboree of Boy Scouts to be held in the Philippines in 1959; and for other purposes;

H.R. 306. An act to amend the Federal Crop Insurance Act;

H.R. 451. An act to amend the Longshoremen's and Harbor Workers' Compensation Act, with respect to the payment of compensation in cases where third persons are liable;

H.R. 470. An act to amend title 10, United States Code, to authorize the Secretary of Defense, the Secretaries of the military departments, and the Secretary of the Treasury to settle certain claims for damage to, or loss of, property, or personal injury or death, not cognizable under any other law;

H.R. 1546. An act for the relief of Georg Gahn and Margarete Gahn;

H.R. 1631. An act for the relief of Joseph B. Kane, Junior;

H.R. 1758. An act for the relief of Gerald M. Cooley;

H.R. 2493. An act declaring certain property in the State of New Mexico to be held in trust for the pueblo of Santo Domingo;

H.R. 2594. An act for the relief of certain claimants against the United States who suffered personal injuries, property damage, or other loss as a result of the explosion of a munitions truck between Smithfield and Selma, N.C., on March 7, 1942;

H.R. 2954. An act for the relief of Joseph E. Miller;

H.R. 3240. An act for the relief of Mrs. Clare M. Ash;

H.R. 4340. An act to amend sections 43 and 34 of the Bankruptcy Act (11 U.S.C. 71, 62) to simplify the filling of referee vacancies;

H.R. 4345. An act to repeal clause (9) of subdivision a of section 39 of the Bankruptcy Act (11 U.S.C. 67a(9)), respecting the transmission of papers by the referee to the clerk of the court;

H.R. 4405. An act to authorize and direct the Secretary of the Interior to conduct studies and render a report on the feasibility of developing the water resources of the Salt

Fork and the Prairie Dog Town Fork of the Red River in the State of Texas;

H.R. 4549. An act for the relief of Jacob Naggar;

H.R. 4595. An act to clarify and make uniform certain provisions of law relating to special postage rates for educational, cultural, and library materials, and for other purposes;

H.R. 4597. An act to provide for the training of postmasters under the Government Employees Training Act;

H.R. 4599. An act to provide certain administrative authorities for the National Security Agency, and for other purposes;

H.R. 4603. An act to amend the Organic Act of Guam for the purpose of permitting the government of Guam, with the consent of the legislature thereof, to be sued;

H.R. 4692. An act to amend sections 1, 18, 22, 331, and 631 of the Bankruptcy Act (11 U.S.C. 1, 41, 45, 731, 1031) to provide for automatic adjudication and reference in certain cases;

H.R. 4693. An act to amend the Bankruptcy Act so as to consolidate the referees' salary and expense funds;

H.R. 4695. An act to amend section 108(a) of title 23 of the United States Code to increase the period in which actual construction shall commence on rights-of-way acquired in anticipation of such construction from 5 years to 7 years, and for other purposes;

H.R. 5362. An act for the relief of M. E. Boales; and

H.R. 5733. An act for the relief of Park National Bank.

The message also announced that the House had agreed to a concurrent resolution (H. Con. Res. 103) to commemorate the quadricentennial anniversary of Florida and to recognize the quadricentennial anniversary commission of that State, in which it requested the concurrence of the Senate.

HOUSE BILLS REFERRED

The following bills were severally read twice by their titles and referred as indicated:

H.R. 7. An act to authorize the Secretary of Defense to lend certain Army, Navy, and Air Force equipment and provide certain services to the Boy Scouts of America for use at the fifth national jamboree of the Boy Scouts of America, and for other purposes; and

H.R. 296. An act to authorize the Secretary of Defense to lend certain Army, Navy, and Air Force equipment and to provide transportation and other services to the Boy Scouts of America in connection with the world jamboree of Boy Scouts to be held in the Philippines in 1959; and for other purposes; to the Committee on Armed Services.

H.R. 306. An act to amend the Federal Crop Insurance Act; to the Committee on Agriculture and Forestry.

H.R. 451. An act to amend the Longshoremen's and Harbor Workers' Compensation Act, with respect to the payment of compensation in cases where third persons are liable; to the Committee on Labor and Public Welfare.

H.R. 470. An act to amend title 10, United States Code, to authorize the Secretary of Defense, the Secretaries of the military departments, and the Secretary of the Treasury to settle certain claims for damage to, or loss of, property, or personal injury or death, not cognizable under any other law;

H.R. 1546. An act for the relief of Georg Gahn and Margarete Gahn;

H.R. 1631. An act for the relief of Joseph B. Kane, Jr.;

H.R. 1758. An act for the relief of Gerald M. Cooley;

H.R. 2594. An act for the relief of certain claimants against the United States who suffered personal injuries, property damage, or other loss as a result of the explosion of a munitions truck between Smithfield and Selma, N.C., on March 7, 1942;

H.R. 2954. An act for the relief of Joseph E. Miller;

H.R. 3240. An act for the relief of Mrs. Clare M. Ash;

H.R. 4340. An act to amend sections 43 and 34 of the Bankruptcy Act (11 U.S.C. 71, 62) to simplify the filing of referee vacancies;

H.R. 4345. An act to repeal clause (9) of subdivision (a) of section 39 of the Bankruptcy Act (11 U.S.C. 67a(9)), respecting the transmission of papers by the referee to the clerk of the court;

H.R. 4549. An act for the relief of Jacob Naggar;

H.R. 4692. An act to amend sections 1, 18, 22, 331, and 631 of the Bankruptcy Act (11 U.S.C. 1, 41, 45, 731, 1031) to provide for automatic adjudication and reference in certain cases;

H.R. 4693. An act to amend the Bankruptcy Act so as to consolidate the referees' salary and expense funds;

H.R. 5362. An act for the relief of M. E. Boales; and

H.R. 5733. An act for the relief of Park National Bank; to the Committee on the Judiciary.

H.R. 4405. An act to authorize and direct the Secretary of the Interior to conduct studies and render a report on the feasibility of developing the water resources of the Salt Fork and the Prairie Dog Town Fork of the Red River in the State of Texas; and

H.R. 4603. An act to amend the Organic Act of Guam for the purpose of permitting the government of Guam, with the consent of the legislature thereof, to be sued; to the Committee on Interior and Insular Affairs.

H.R. 4595. An act to clarify and make uniform certain provisions of law relating to special postage rates for educational, cultural, and library materials, and for other purposes;

H.R. 4597. An act to provide for the training of postmasters under the Government Employees Training Act; and

H.R. 4599. An act to provide certain administrative authorities for the National Security Agency, and for other purposes; to the Committee on Post Office and Civil Service.

H.R. 4695. An act to amend section 108(a) of title 23 of the United States Code to increase the period in which actual construction shall commence on rights-of-way acquired in anticipation of such construction from 5 years to 7 years, and for other purposes; to the Committee on Public Works.

HOUSE CONCURRENT RESOLUTION REFERRED

The concurrent resolution (H. Con. Res. 103) to commemorate the quadricentennial anniversary of Florida and to recognize the quadricentennial anniversary commission of that State, was referred to the Committee on the Judiciary, as follows:

Whereas the State of Florida proposes to celebrate the four hundredth anniversary of the permanent colonization of La Florida, the lands of which now constitute an important part of the continental United States; and

Whereas said period of colonization commenced on August 14, 1559, with the establishment of a colony at Pensacola, Florida, by Don Tristan De Luna, pursuant to the direct orders of the Spanish King, but such colony was later abandoned; and

Whereas thereafter a French settlement was made in 1564 on the Saint Johns River near Jacksonville, Florida, at which point Fort Caroline was constructed and was occupied until it was conquered and resettled by a Spanish force under Menendez; and

Whereas the above period of colonization came to a close in September 1565 with the establishment at Saint Augustine, Florida, of the oldest permanent and continuous settlement in the continental United States; and

Whereas other events occurring at approximately the same time were events of national and international significance, and were matters of great historical importance in the colonizing of the United States which should be commemorated; and

Whereas a celebration of the character planned by the State of Florida will contribute greatly to the educational and cultural welfare of the people of the United States and will preserve the traditions of such period to posterity: Now, therefore, be it

Resolved by the House of Representatives (the Senate concurring), That the Congress of the United States join the people of Florida in commemorating the quadricentennial anniversary of the first permanent colonization by Europeans of any area now constituting a part of the continental United States, which will commence in the year of 1959 at Pensacola, Florida, and end in the year of 1965 at Saint Augustine, Florida, with celebrations being held in the intervening years at Jacksonville, Florida, and other cities of the State.

SEC. 2. That the Congress of the United States recognizes the establishment by the State of Florida of the Quadricentennial Anniversary Commission of Florida which has been charged with the responsibility and duty of planning the anniversary celebrations above described in coordination with any organizations now or hereafter designated by the State of Florida and any foreign nations participating in such celebrations.

SEC. 3. A copy of this resolution, suitably engrossed and duly authenticated, shall be transmitted to the Governor of the State of Florida and the Quadricentennial Commission of Florida.

COMMITTEE MEETINGS DURING SENATE SESSION

On request of Mr. JOHNSON of Texas, and by unanimous consent, the Subcommittee on National Aeronautics and Space Administration Authorization, of the Committee on Aeronautical and Space Sciences; the Constitution Rights Subcommittee of the Committee on the Judiciary; and a special subcommittee of the Committee on Government Operations to consider Senate bill 747 were authorized to meet during the session of the Senate today.

LIMITATION OF DEBATE DURING MORNING HOUR

Mr. JOHNSON of Texas. Mr. President, under the rule, there will be the usual morning hour for the introduction of bills and the transaction of other routine business. I ask unanimous consent that statements in connection therewith be limited to 3 minutes.

The VICE PRESIDENT. Without objection, it is so ordered.

EXECUTIVE COMMUNICATIONS, ETC.

The VICE PRESIDENT laid before the Senate the following letters, which were referred as indicated:

LIST OF PRINCIPAL AND ALTERNATE CANDIDATES FOR 1959 REGULAR NROTC PROGRAM

A letter from the Chief of Naval Personnel, Washington, D.C., transmitting, pursuant to law, a list of principal and alternate candidates selected for the 1959 regular NROTC program (with accompanying papers); to the Committee on Armed Services.

PROVISION OF FLEXIBLE RATE OF INTEREST FOR GOVERNMENT FINANCING UNDER MERCHANT MARINE ACT, 1936

A letter from the Under Secretary of Commerce, transmitting a draft of proposed legislation to provide a flexible rate of interest for Government financing under the Merchant Marine Act, 1936, and for other purposes (with an accompanying paper); to the Committee on Interstate and Foreign Commerce.

PETITIONS AND MEMORIALS

Petitions, etc., were laid before the Senate, or presented, and referred as indicated:

By the VICE PRESIDENT:

A resolution adopted by an emergency grand assembly of employees of Federal agencies in Puerto Rico, protesting against the enactment of House bill 5926, to repeal the Federal Relations Act; to the Committee on Interior and Insular Affairs.

By Mr. SALTONSTALL (for himself and Mr. KENNEDY):

Resolutions of the General Court of the Commonwealth of Massachusetts; to the Committee on Banking and Currency:

"RESOLUTIONS MEMORIALIZING THE CONGRESS OF THE UNITED STATES TO ENACT LEGISLATION FOR THE BENEFIT OF DISTRESSED AREAS

"Whereas many communities of the Commonwealth are suffering from substantial and persistent unemployment and underemployment; and

"Whereas it is the responsibility of the Federal Government to help assure maximum employment; and

"Whereas Federal assistance to distressed areas will enhance the national welfare: Therefore be it

"Resolved, That the General Court of Massachusetts respectfully urges the Congress of the United States to give prompt and favorable consideration to the enactment of legislation to provide loans for industrial projects in industrial and rural areas, to provide loans to States or organizations representing redevelopment areas in order to help finance public facilities, to provide information and technical assistance, to provide for participation by industrial areas in the urban renewal program and to provide for expanded Federal participation with State and local agencies in the fields of vocational training and industrial retraining; and be it further

"Resolved, That copies of these resolutions be transmitted forthwith by the secretary of the Commonwealth to the Presiding Officer of each branch of the Congress of the United States and to each Member thereof from this Commonwealth.

"Senate adopted March 16, 1959.

"IRVING N. HAYDEN,
"Clerk.

"House of representatives, adopted in concurrence March 23, 1959.

"LAWRENCE R. GROVE,
"Clerk.

"A true copy.

"Attest:

"JOSEPH D. WARD,
"Secretary of the Commonwealth."

Two resolutions of the General Court of the Commonwealth of Massachusetts; to the Committee on Finance:

"RESOLUTIONS MEMORIALIZING THE PRESIDENT AND THE CONGRESS OF THE UNITED STATES AGAINST RESTRICTING THE FURTHER IMPORTATION OF RESIDUAL OIL

"Whereas, in these days of international tension, the policy of the United States is to promote and foster better political and trade relationships between nations, especially with our neighbors in the Western Hemisphere; and

"Whereas various industries located in the States comprising the New England area utilize large quantities of residual oil, commonly known as bunker seed oil; and

"Whereas the economy of the Commonwealth of Massachusetts would be adversely affected by passage of any legislation restricting the further importation of said oil from friendly nations, particularly Venezuela: Therefore be it

"Resolved, That the General Court of Massachusetts memorializes the President of the United States and the Congress of the United States to enact no legislation restricting the further importation of residual oil from nations friendly disposed toward the United States; and be it further

"Resolved, That copies of these resolutions be sent forthwith by the secretary of the Commonwealth to the President of the United States, to the Presiding Officer of each branch of the Congress, and to each Member thereof from the Commonwealth.

"Senate, adopted March 24, 1959.

"IRVING N. HAYDEN,
"Clerk.

"House of representatives, adopted in concurrence March 26, 1959.

"LAWRENCE R. GROVE,
"Clerk.

"A true copy.

"Attest:

"JOSEPH D. WARD,
"Secretary of the Commonwealth."

"RESOLUTIONS MEMORIALIZING THE CONGRESS OF THE UNITED STATES TO ENACT LEGISLATION FOR THE BENEFIT OF THE TEXTILE AND FISHING INDUSTRIES

"Whereas the textile and fishing industries of the Commonwealth of Massachusetts have continued to be adversely affected by national and international policies without receiving the benefit of supplementary assistance: Therefore be it

"Resolved, That the General Court of Massachusetts memorializes the Congress of the United States to enact legislation to alleviate the burdens presently existing on the textile and fishing industries of the Commonwealth; and be it further

"Resolved, That copies of these resolutions be transmitted forthwith by the secretary of the Commonwealth to the Presiding Officer of each branch of the Congress, and to each Member thereof from this Commonwealth.

"Senate, adopted March 16, 1959.

"IRVING N. HAYDEN,
"Clerk.

"House of representatives, adopted in concurrence March 23, 1959.

"LAWRENCE R. GROVE,
"Clerk.

"A true copy.

"Attest:

"JOSEPH D. WARD,
"Secretary of the Commonwealth."

RESOLUTION OF VOTERS OF TOWN OF GRAFTON, MASS.

Mr. SALTONSTALL. Mr. President, on behalf of myself, and my colleague, the junior Senator from Massachusetts [Mr. KENNEDY], I present, for appropriate reference, a resolution adopted by the voters of the town of Grafton, Mass., protesting against the expenditure of funds to sustain the national farm program. I ask unanimous consent that the resolution may be printed in the RECORD.

There being no objection, the resolution was referred to the Committee on Appropriations, and ordered to be printed in the RECORD, as follows:

RESOLUTION UNANIMOUSLY ACCEPTED BY THE VOTERS OF THE TOWN OF GRAFTON AT ANNUAL MEETING HELD MARCH 7, 1959

Whereas the national farm program is budgeted for an expenditure of $7 billion in the fiscal year 1959; and

Whereas this enormous sum averages out to $41 for every man, woman, and child in these United States of America which must be contributed to support this program; and

Whereas Grafton's share of this support for this year alone will come to about $410,000, a sum which could provide school buildings, better roads, or many other badly needed facilities: Therefore be it

Resolved, That the citizens of Grafton assembled in this town meeting, strongly protest this wanton waste of our hard earned tax dollars; and be it further

Resolved, That this protest be made known to our Representatives in the National Legislature and the town clerk be instructed to forward a copy of this resolution to each of our Senators and to our Representative.

Presented to the annual town meeting, March 7, 1959.

RAYMOND D. JORDAN,
Town Clerk.

RESOLUTION OF CITY COUNCIL OF REVERE, MASS.

Mr. SALTONSTALL. Mr. President, on behalf of myself and my colleague, the junior Senator from Massachusetts [Mr. KENNEDY], I present, for appropriate reference, a resolution adopted by the City Council of the City of Revere, Mass., protesting against the ban on the importation of foreign oil. I ask unanimous consent that the resolution may be printed in the RECORD.

There being no objection, the resolution was referred to the Committee on Finance, and ordered to be printed in the RECORD, as follows:

Resolved, That this city council go on record as being opposed to the ban on the importing of oil to this country.

Should this ban stay in effect, this city council can foresee an increase in the price of oil which will tend to add to the inflationary period that we are now experiencing.

Further, that copies of the resolution be forwarded to Congressman Thomas J. Lane, Senator Leverett Saltonstall, Senator John F. Kennedy, Senator Harold W. Canavan, Representative Harry Della Russo, and Representative William Hill.

In city council March 23, 1959; ordered adopted.

Attest:

JOSEPH F. MCCHRISTAL,
City Clerk.

RESOLUTION OF MINNESOTA LEGISLATURE

Mr. HUMPHREY. Mr. President, I ask unanimous consent that there be printed in the RECORD, and appropriately referred, a resolution adopted by the

Minnesota State Legislature memorializing the President of the United States and the Congress of the United States to take such steps as may be necessary to insure that private aircraft flying into or out of Canada be subject to the same inspection fee regulations of the U.S. Customs and Immigration Services as automobiles.

There being no objection, the resolution was referred to the Committee on Interstate and Foreign Commerce, and, under the rule, ordered to be printed in the RECORD, as follows:

RESOLUTION 2

Resolution memorializing the President of the United States and the Congress of the United States to take such steps as may be necessary to insure that private aircraft flying into or out of Canada be subject to the same inspection fee regulations of the U.S. Customs and Immigration Services as automobiles

Whereas private aircraft in increasingly large numbers are crossing Minnesota's northern border to and from Canada for business and recreational purposes; and

Whereas private aircraft crossing the border on Sundays or legal holidays are required by the U.S. Customs Service and U.S. Immigration Service to pay special overtime rates for crossing inspections, regardless of whether or not the port of entry is open; and

Whereas private automobiles are not required to pay special overtime rates so long as the port is open: Now, therefore, be it

Resolved by the Legislature of the State of Minnesota, That the President of the United States and the Congress of the United States, do all in their power to remove the special charges affecting private aircraft which cross the border, and provide a uniform system, treating aircraft and automobiles on an equal basis; be it further

Resolved, That the secretary of state be instructed to transmit copies of this resolution to the President of the United States and to each Member of Congress from the State of Minnesota.

E. J. CHILGREN,
Speaker of the House of Representatives.
KARL F. ROLVAAG,
President of the Senate.

Passed the house of representatives this 4th day of March 1959.

G. H. LEAHY,
Chief Clerk, House of Representatives.

Passed the senate this 9th day of March 1959.

H. Y. TORREY,
Secretary of the Senate.

Approved March 13, 1959.

ORVILLE L. FREEMAN,
Governor of the State of Minnesota.

Filed March 13, 1959.

JOSEPH L. DONOVAN,
Secretary of the State of Minnesota.

TAX STATUS OF COOPERATIVES—RESOLUTIONS

Mr. HUMPHREY. Mr. President, I present for appropriate reference several letters and resolutions, including a resolution adopted by the Minnesota State Legislature, expressing opposition to the proposals to alter the tax status of cooperatives. I ask unanimous consent that the resolution and letters may be printed in the RECORD.

There being no objection, the resolution and letters were referred to the Committee on Finance, and ordered to be printed in the RECORD, as follows:

RESOLUTION 520

Resolution memorializing the President, the Secretary of the Treasury, and the Congress of the United States to oppose measures altering the tax status of cooperatives

Whereas business enterprises are made up of several types of business organizations, including proprietorships, partnerships, corporations, and cooperatives all of which have contributed greatly to the tempo of economic activity within the State; and

Whereas the largest number of cooperatives is in the State of Minnesota and the people of this State, particularly within the rural areas, have been greatly benefited thereby and have received many services through the various cooperative organizations; and

Whereas the tax position of cooperatives has been thoroughly investigated by the Congress of the United States over a long period of time and these investigations have revealed that under the present laws, the cooperatives have faithfully abided by the principles and regulations under which they have been organized; and

Whereas cooperatives do pay taxes and in many communities of this State are the largest taxpayers; and

Whereas the Secretary of the Treasury has recommended to Congress to require cooperative patronage savings to be paid in cash within 3 years and to draw not less than 4 percent interest, or otherwise to be classified as income to the cooperative and be thereby subjected to corporation income taxes; and

Whereas this alteration of the present tax status would seriously hamper and restrict the services which the cooperatives are performing within the State; and

Whereas the Minnesota Legislature did once before, in 1951, consider and pass a resolution opposing similar unfair and punitive tax proposals against cooperatives: Now, therefore, be it

Resolved by the Legislature of the State of Minnesota, That the Congress of the United States be requested to recognize that indebtedness which is owed by a cooperative or any other taxpayer to its patrons or customers is not income to such taxpayer even though it may be income to its patrons or customers; and be it further

Resolved, That the Congress of the United States be specifically requested to oppose any measures which would prescribe any minimum interest rate or any maximum maturity dates for securities which are issued by cooperatives in payment of patronage savings payable to their patrons; and be it further

Resolved, That the secretary of state of the State of Minnesota be instructed to transmit copies of this resolution to the President of the United States, the Secretary of the Treasury, the President of the Senate, and the Speaker of the House of Representatives of the United States, and to each Member of Congress from the State of Minnesota.

KINGSTON, MINN., *March 23, 1959.*

Senator HUBERT HUMPHREY,
Washington, D.C.

DEAR SENATOR HUMPHREY: At the annual meeting of our association held on February 26, 1959, there was a discussion of the members in attendance about the bill coming up in Congress of the farmers being taxed on equity reserves. A unanimous vote was cast in opposition to this bill, and I am enclosing a copy of resolutions resulting from that meeting.

Yours very truly,

N. O. THOMPSON,
Secretary, Kingston Cooperative Dairy Association.

Whereas the net proceeds from returns after deducting expenses of a cooperative belong to the patrons on a patronage basis; and

Whereas any amounts retained by the cooperative are for operating and fixed capital purposes only, and are not in any sense income to the cooperative; and

Whereas in the form of patrons' refunds such amounts are taxable to the recipient patron: Now, therefore, be it

Resolved, That Congress be urged to continue and if necessary clarify the purpose and intent that earnings or savings through the cooperative are income to its patrons only, and are not income to the cooperative; be it further

Resolved, That the Congress be urged to recognize the fact that capital requirements for cooperatives vary widely depending on the nature of the business in which the cooperative is engaged, value of products handled, and the type of plant and equipment which are necessary to conduct this business. Because of the wide variation in capital requirements, there can be no fixed period for the return of retained capital to patrons; be it further

Resolved, That a copy of this resolution be sent to the Secretary of the Treasury and other interested Government officials.

OKLEE COOPERATIVE OIL ASSOCIATION,
Oklee, Minn., January 27, 1959.

Hon. HUBERT H. HUMPHREY,
U.S. Senator.

DEAR SIR: I have just been going over the new tax proposal submitted by President Eisenhower for the taxing of cooperatives. As I am a manager of a cooperative, I find that this proposal is a good means of getting taxes, but it is even better at getting rid of cooperatives. Primarily because without operating funds we could not survive in such a competitive business as we are in.

Service plays an important part in our business, and service demands that we have the facilities and personnel to do the job. When you cannot afford the facilities, you cannot expand. Only a certain amount of business can be done, the same way with service. This creates a stalemate, with the idea of progressive expansion thrown out the window, and no incentive left to survive, if possible.

As a manager I look at this tax proposal from a business angle. Just what would it do to our business in general. First we would have to go on a strictly cash basis, convert our receivables to cash, cut our inventories to a minimum, streamline our operations all down the line and then hope that our competitors will do the same thing. It all creates a burden that will spell the end of many cooperatives. I believe we cannot operate on 2 years' earnings.

We urgently urge you to vote against this proposal when it comes before the present Congress.

Yours truly,

ELMER V. OLSON,
Manager.

FARMERS' COOPERATIVE CO.,
Cromwell, Minn., January 29, 1959.

Hon. HUBERT H. HUMPHREY,
U.S. Senator,
Senate Office Building, Washington, D.C.

DEAR SIR: The contents of President Eisenhower's cooperative tax proposal has been studied by us. If adopted, as proposed, it would accomplish one sure result; namely, doing away with all cooperatives as ours. Our members own and provide us the needed capital to operate, through share capital. If we were compelled to redeem our member equities, except the last 3 years, it would require us to mortgage everything our members have invested in inventories and other assets to meet this redemption.

We trust you will oppose this and all other legislation proposed, which would endanger the very existence of our cooperatives.

With our best wishes,

WALLACE STRAND,
Secretary.
ELI LEHTI,
President.

RESOLUTIONS OF EAST CENTRAL ELECTRIC ASSOCIATION, BRAHAM, MINN.

Mr. HUMPHREY. Mr. President, I present, for appropriate reference, a resolution adopted by the East Central Electric Association, of Braham, Minn., protesting against any increased interest rate to force rural electric associations into private money markets for their funds. I ask unanimous consent that the resolution may be printed in the RECORD.

There being no objection, the resolution was referred to the Committee on Agriculture and Forestry, and ordered to be printed in the RECORD, as follows:

RESOLUTION 2

Whereas proposal has been made to increase the present 2 percent interest rate to REA associations; and

Whereas the present REA rate has been attacked because it has been subsidized by reason of the fact that it is lower than the present interest rate paid by the Government on money borrowed; and

Whereas it is an established fact that the Government has made a net margin on the money that has been loaned to the REA associations since the beginning of the program in the amount of $49 million on the basis of interest rate that has been in effect throughout the years on the basis of the amount reloaned to REA associations; and

Whereas the rural communities in America had not been able to obtain electric service for years because power companies said it was not profitable to build lines in the rural areas; and

Whereas when Congress set the interest rate at 2 percent, they also made a covenant with the REA associations that for the privilege of borrowing money at 2 percent, it would be necessary for them to extend the lines to the rural areas so that everyone could obtain electric service; and

Whereas because of the continued load growth developing among the members of the REA associations, a continuous heavying up and rehabilitation program is necessary—in most cases requiring more capital in the next 20 years than has been needed in the past 20 years; and

Whereas an increase in interest rate would, in many cases, seriously handicap the ability of many REA associations to provide adequate electric service to its membership: Therefore, be it

Resolved, That the membership of the East Central Electric Association, assembled at its annual meeting this 21st day of March 1959, go on record in opposition to any and all proposals to an increase in interest rate and any proposal to force the rural electric associations to go to the private money markets for their funds.

Mr. HUMPHREY. Mr. President, I also ask unanimous consent to have printed in the RECORD, and appropriately referred, a resolution adopted by the East Central Electric Association, of Braham, Minn., relating to the deduction and distribution of certain expenses by electric cooperatives.

There being no objection, the resolution was referred to the Committee on Finance, and ordered to be printed in the RECORD, as follows:

RESOLUTION 4

Whereas the net proceeds from returns after deducting expenses of a cooperative enterprise belong to the patrons on a patronage basis; and

Whereas any amounts retained by the cooperative are for operating and for fixed capital purposes and are not in any sense income to the cooperative; and

Whereas in the form of patronage refund such amounts are taxable to the patron receiving such refund: Therefore be it

Resolved, That Congress be urged to continue and if necessary clarify the purpose and intent that earnings or savings through the cooperative are income to the patron only and is not income to the cooperative; and be it further

Resolved, That Congress recognizes the fact that capital requirements for cooperatives vary widely depending on the nature of the business in which the cooperative is engaged and the type of plant and equipment which is necessary to conduct its business and because of the wide variation in capital requirements, there can be no fixed period for the return of retained capital to its patrons; and be it further

Resolved, That Congress go on record in opposition to the proposal of the Treasury Department for taxation upon the cooperatives of patronage refunds distributed to patrons.

RESOLUTIONS OF CITY COMMISSIONERS OF FARGO, N. DAK.

Mr. LANGER. Mr. President, I ask unanimous consent to have printed in the RECORD a series of resolutions adopted by the city commissioners of the city of Fargo, N. Dak.

There being no objection, the resolutions were ordered to be printed in the RECORD, as follows:

RESOLUTION 1

Whereas a Federal excise tax of 10 percent upon charges for local and long-distance telephone calls was used as an emergency wartime measure to provide funds to support the war effort and to discourage unnecessary use of telephones during the war period; and

Whereas telephone service is an essential part of our way of life and cannot be considered a luxury item and taxed in the same manner as furs, jewelry, liquor and other such commodities; and

Whereas other household necessities such as electricity, gas and water are not taxed in such manner; and

Whereas the placement of high taxes upon such a necessity of life as telephone service imposes an extra financial burden upon those who are the least able to pay it: Now, therefore, be it

Resolved, That this convention go on record as being opposed to this tax; and be it further

Resolved, That we ask our congressional delegation in Washington, D.C., to use their utmost effort in having this measure repealed; and be it further

Resolved, That copies of this resolution be sent to our congressional delegation in Washington, D.C.

RESOLUTION 2

Whereas the present administration has recommended to Congress that a new look be given to taxing cooperatives; and

Whereas an income tax on telephone cooperatives would force them to rates which would make telephone service prohibitive to the rural citizens of this country: Therefore, be it

Resolved, That this convention express its opposition to this tax; and be it further

Resolved, That copies of this resolution be forwarded to our congressional delegation in Washington, D.C.

RESOLUTION 3

Whereas the present administration proposes to Congress to have the REA interest rates increased; and

Whereas it also proposes to Congress to increase the cost of financing still further by adding administrative costs to the regular interest rates; and

Whereas the rural electrification and rural telephone programs have successfully operated these past years at the normal 2 percent interest rate and have shown a profit to the U.S. Treasury; and

Whereas the present loans were made to rural areas with low density and low operating revenue; and

Whereas approximately 50 percent of the rural population does not have adequate telephone service; and

Whereas good telephone service to all areas of the United States is vital to the defense of our Nation; Now, therefore, be it

Resolved, That the Congress of the United States oppose any increase in REA interest rates and that the 2-percent interest rate which we have had from the origin be maintained and preserved.

RESOLUTION 4

Whereas the rural telephone cooperative program is dedicated to complete area coverage in giving modern telephone service; and

Whereas there are areas where rural people are asking for area coverage from various utilities who are unable to give them service: Therefore be it

Resolved, That we advocate that steps be taken to have these situations reviewed and means be found that area coverage be provided, and that the Public Service Commission be requested to give assistance in this matter.

RESOLUTION 5

Whereas private utilities are spending large sums of money to inform the public of the amount of tax money spent by Congress for public power and communications; and

Whereas they make no mention of the fact that it is a loan which is repaid with interest: Therefore, be it

Resolved, That we in the telephone cooperatives do a better job of getting our story before the public by letting them know that we serve only the areas where private companies were not willing to serve. That we do pay taxes, that we are not granted the money, but obtain loans, paying interest, and that the services performed are made available at cost.

We recommend that the State organization provide us with necessary facts and that the directors, managers, and employees use every opportunity to present these facts to service clubs, woman's clubs, political gatherings, and wherever the opportunity arises.

RESOLUTION 6

Whereas there is a need for a uniform agreement among the various utilities for joint use contracts; and

Whereas there has been a committee appointed to work out a joint agreement program; and

Whereas this committee has proposed certain contracts in conjunction with REA help; Therefore, we

Resolve, That this convention adopt the proposals recommended by this committee and approve the revised October 30, 1958, joint use agreement as drafted by REA.

Whereas H.R. 5944 has been introduced in the House of Representatives by the Honorable BRENT SPENCE, chairman of the House Committee on Banking and Currency, to provide loan funds to local governments at an interest rate of 2¾ percent for the construction of water and sewage facilities, hospital, and nursing homes; and

Whereas H.R. 5944 is designed to provide a vital public service desperately needed in many American communities: Now, therefore, be it

Resolved, That the Board of City Commissioners of the City of Fargo does hereby endorse H.R. 5944, and respectfully urges the Congress of the United States to enact H.R. 5944 into law forthwith; and be it further

Resolved, That copies of this resolution be furnished members of the North Dakota congressional delegation, the Honorable BRENT SPENCE, of Kentucky, chairman of the House Committee on Banking and Currency, and the U.S. Conference of Mayors.

HENCHEL LASHBOWITZ,
President, Board of City Commissioners, Fargo, N. Dak.

FARM PROGRAM RECOMMENDED BY FARMERS' UNION OF NORTH DAKOTA

Mr. LANGER. Mr. President, I ask unanimous consent to have printed in the body of the RECORD a farm program which has been recommended by the Farmers' Union of the State of North Dakota. It asks for a fair, equitable farm program, and outlines it, paragraph by paragraph, in resolutions which it has sent to me.

Mr. President there is perhaps no group of men who know more about this subject than the officials of the Farmers' Union of North Dakota. I particularly call the attention of the Senate to the fact that its officials are not asking for a farm bill for wheat only; instead, they particularly ask that all the grains be covered by one bill.

Again I call attention, as I have time after time heretofore, to the fact that although the voters of the country, and particularly those through the Midwest, in November expressed their dissatisfaction with the farm legislation then in existence, the Democratic Party, which has overwhelming majorities in both the Senate and the House of Representatives, has let November, December, January, February, and March pass by, but not even a subcommittee has reported a farm bill to the full Committee on Agriculture and Forestry.

Therefore, Mr. President, I ask unanimous consent that the resolutions adopted by the Farmers' Union of North Dakota be printed in the RECORD and appropriately referred.

There being no objection, the resolution was referred to the Committee on Agriculture and Forestry and ordered to be printed in the RECORD, as follows:

The consistent policy of reducing farm commodity price supports during the past 6 years has resulted in—

1. A cumulative net income loss to farmers of more than $20 billion as compared to 1952 net farm income; and

2. Has caused a forced draft production effort by farmers in an understandable attempt to make ends meet.

This forced draft production has in turn created the largest carryover of wheat and feed grains in our Nation's history.

The large carryover of cheap feed is already notably increasing livestock production and adversely affecting livestock prices.

We note with appreciation the work of the feed grains subcommittee of the House Agriculture Committee, and their recommendation for mandatory support prices for the secondary feed grains at not less than the feed value equivalent price of corn. We urge early and favorable action by Congress on this legislation. We appreciate also the good work of the Wheat Subcommittee of the House Agriculture Committee; and while we recognize great merit in certain of the wheat only bills under consideration by the subcommittee, we respectfully suggest that the so-called wheat problem is not an isolated problem in agriculture but is interrelated with other commodities and is, in fact, symptomatic of inherent weaknesses in the present farm program and of maladministration by the executive branch;

We, therefore, strongly recommend that programs for various specific commodities, including wheat, be considered within the framework of overall farm income improvement legislation which should, as a minimum, establish effective bargaining power for farmers in respect to all farm commodities;

And further, that any legislation regarding wheat should consider these facts:

1. It must be designed on the basis that wheat is not a feed grain and should not at any time be moved into feed grain markets at feed grain prices.

2. Farm quotas must be based on bushels marketed, not on acreage planted or harvested.

3. Quotas should include all commercial uses of wheat—food, feed, seed, industrial uses and export. Thus, there can be no sale of wheat for any purpose outside of established quotas, no loopholes for dumping, illegal transfer or black marketing of any kind. In other words, there must be no way that nonquota wheat can be legally transferred for any purpose.

4. Family-type agriculture and the Nation must be protected through a limitation on total benefits which can accrue to any one operator or any one farm.

5. It must return full parity to the farmer on his total allotted marketing quota of wheat which he can sell each year for any purpose.

6. Marketing quotas must be projected on a basis that will maintain an adequate reserve over and above a set-aside of at least 600 million bushels for national security. Any excess produced over and above his marketing quota each year should be stored by the farmer himself.

7. Program must provide for officially notifying the farmer, at least 6 months before planting time, what his marketing quota and his compliance benefits will be.

8. Program should provide for a separate marketing quota for each class of wheat.

9. Democratically elected county and State farmer committees must have a much larger delegation of administrative authority.

10. It must provide a fair allocation of Government costs to proper departments of government.

11. It must provide a parity formula that will not be subject to progressive reduction through the operation of the program itself, but will have a definite formula that will relate farm income goals to all factors of costs incident to efficient farm operations.

Our aim is full income parity for family-farm operators and their families. We know that the assistance of Federal laws and programs is required. We realize that a careful balance must be achieved between self-financed price raising methods and Government payments which are direct costs to the Treasury.

Farm prices and income continue to decline and while we recognize that effective farm legislation may be vetoed, yet it is the responsibility of the Congress to legislate, and we strongly urge early action by this Congress on comprehensible farm income improvement legislation.

EGG PRICES—LETTER

Mr. LANGER. Mr. President, time and time again I have called the attention of the Senate to the low price of eggs. At the present time in North Dakota the producers and farmers are receiving 18 cents a dozen for first-grade, No. 1 eggs. With the 50-cent dollar, that is about 9 cents a dozen. I present a letter which I ask to have printed in the body of the RECORD and referred to the appropriate committee.

There being no objection, the letter was referred to the Committee on Agriculture and Forestry, and ordered to be printed in the RECORD, as follows:

KINDRED, N. DAK., *April 1, 1959.*

Senator WM. LANGER,
Washington, D.C.

I am writing you concerning the egg prices here in North Dakota. Now this morning market for fresh eggs was 18 cents per dozen; top price. Now, where is the profit for the farmer in that low price? We had been getting 27 cents this winter here per dozen. Do you know it costs the farmer 14 cents per dozen to produce a dozen eggs, not counting the labor? These egg prices are ridiculous for the farmer.

Now the people living in Fargo, N. Dak., have to pay 39 cents and more for a dozen eggs. That is what us farmers should have for them. How can the farmer live on these low prices for produce?

Then, chickens are 8 cents a pound, liveweight. Was wondering if you and Senator YOUNG could get together on this. See if you could make prices better for the farmer here, as this is getting worse all along now.

Thanking you, we are

Mr. and Mrs. JOHN BRAOTEN.

REPORTS OF COMMITTEES

The following reports of committees were submitted:

By Mr. RUSSELL, from the Committee on Armed Services, without amendment:

H.R. 3293. An act to authorize the construction of modern naval vessels (Rept. No. 158).

By Mr. JACKSON, from the Committee on Armed Services, without amendment:

S. 587. A bill to provide for the advancement of Capt. Edward J. Steichen, U.S. Naval Reserve (retired), to the grade of rear admiral on the Naval Reserve retired list (Rept. No. 157).

By Mr. JACKSON, from the Committee on Interior and Insular Affairs, without amendment:

S. 994. A bill to authorize the Secretary of the Interior to construct, operate, and maintain the Spokane Valley project, Washington and Idaho, under Federal reclamation laws (Rept. No. 156).

By Mr. BYRD, from the Committee on Finance, with amendments:

H.R. 213. An act to provide additional time within which certain State agreements under section 218 of the Social Security Act may be modified to secure coverage for nonprofessional school district employees (Rept. No. 159).

REPORT ENTITLED "INTERNATIONAL MEDICAL RESEARCH—A COMPILATION OF BACKGROUND MATERIALS" (S. REPT. NO. 160)

Mr. HUMPHREY. Mr. President, from the Committee on Government Operations, pursuant to Senate Resolution 347, 85th Congress, and Senate Resolution 42, 86th Congress, I submit a report entitled "International Medical Research—A Compilation of Background Materials," as prepared by the Subcommittee on Reorganization and International Organizations. I ask unanimous consent that the report may be printed, with illustrations.

The VICE PRESIDENT. Is there objection? The Chair hears none, and it is so ordered.

REPORT ENTITLED "THE STATUS OF WORLD HEALTH—IN OUTLINE TEXT AND CHART" (S. REPT. NO. 161)

Mr. HUMPHREY. Mr. President, from the Committee on Government Operations, pursuant to Senate Resolution 347, 85th Congress, and Senate Resolution 42, 86th Congress, I submit a report entitled "The Status of World Health—In Outline Text and Chart," as prepared by the Subcommittee on Reorganization and International Organizations. I ask that the report may be printed, with illustrations.

The VICE PRESIDENT. Is there objection? The Chair hears none, and it is so ordered.

EXECUTIVE REPORTS OF COMMITTEES

As in executive session,

The following favorable reports of nominations were submitted:

By Mr. BYRD of Virginia, from the Committee on Finance:

Orley McGlothlin, of Colorado, to be collector of customs, with headquarters at Denver, Colo.; and

Harry D. Youse, of North Webster, Ind., to be collector of customs for customs collection district No. 40, with headquarters at Indianapolis, Ind.

By Mr. SALTONSTALL, from the Committee on Armed Services:

Cecil P. Milne, of Wisconsin, to be an Assistant Secretary of the Navy; and

Philip B. Taylor, of New Jersey, to be Assistant Secretary of the Air Force, vice Dudley C. Sharp.

REPORTS OF COMMITTEE ON ARMED SERVICES

Mrs. SMITH. Mr. President, as in executive session, from the Committee on Armed Services I report favorably the nomination of Rear Adm. Ralph K. James, United States Navy, to be Chief of the Bureau of Ships in the Department of the Navy for a term of 4 years, and the nominations of two major generals and eight brigadier generals in the Reserve of the Air Force for service as members of the Air National Guard of the United States. I ask that these nominations be placed on the Executive Calendar.

The VICE PRESIDENT. The nominations will be placed on the Executive Calendar, as requested by the Senator from Maine.

The nominations ordered to be placed on the calendar are as follows:

Rear Adm. Ralph K. James, United States Navy, to be Chief of the Bureau of Ships in the Department of the Navy; and

Brig. Gen. Lewis A. Curtis, and sundry other officers, for appointment as Reserve commissioned officers in the United States Air Force.

Mrs. SMITH. Mr. President, also from the Committee on Armed Services, I report approximately 1,900 nominations for appointment and promotion in the Army, Navy, Marine Corps, and Air Force in grades not above major or lieutenant commander. Since these names have already appeared in the CONGRESSIONAL RECORD, to save the expense of printing on the Executive Calendar, I ask unanimous consent that they be ordered to lie on the Vice President's desk for the information of any Senator.

The VICE PRESIDENT. Without objection, it is so ordered.

The nominations ordered to lie on the desk are as follows:

Loring B. Bean, and sundry other officers, for promotion in the Regular Army of the United States;

William E. Fletcher, and sundry other officers, for promotion in the Regular Air Force; and

Peter D. Abbott, and sundry other members of the Naval Reserve Officers Training Corps, for appointment as Ensigns in the Navy.

BILLS AND JOINT RESOLUTIONS INTRODUCED

Bills and joint resolutions were introduced, read the first time, and, by unanimous consent, the second time, and referred as follows:

By Mr. CASE of South Dakota:

S. 1632. A bill authorizing the modification of the existing project for Kahului Harbor, Island of Maui, Hawaii; to the Committee on Public Works.

By Mr. JAVITS:

S. 1633. A bill for the relief of Sime Martinovic; to the Committee on the Judiciary.

By Mr. SALTONSTALL:

S. 1634. A bill to amend the Tariff Act of 1930 to place ground, powdered, or granulated seaweeds on the free list; to the Committee on Finance.

By Mr. HENNINGS:

S. 1635. A bill to provide more varied representation of the country's economic interests on the Board of Governors of the Federal Reserve System; to the Committee on Banking and Currency.

S. 1636. A bill to establish a Missouri Basin Commission to provide coherent and unified direction for the development of the Missouri Basin's natural resources, to give responsible direction to the resource development activities of the Federal Government in the Missouri Basin, and for coordinating those activities with resource development activities of the States; to the Committee on Public Works.

(See the remarks of Mr. HENNINGS when he introduced the above bills, which appear under separate headings.)

By Mr. KEATING:

S. 1637. A bill to amend title 18, United States Code, chapter 79, to add a new section, 1623, to extend the law relating to perjury to the willful giving of contradictory statements under oath; to the Committee on the Judiciary.

(See the remarks of Mr. KEATING when he introduced the above bill, which appear under a separate heading.)

By Mr. CLARK:

S. 1638. A bill to provide for an effective system of personnel administration for the executive branch of the Government; to the Committee on Post Office and Civil Service.

(See the remarks of Mr. CLARK when he introduced the above bill, which appear under a separate heading.)

By Mr. BEALL:

S. 1639. A bill to amend the District of Columbia Hospital Center Act in order to extend the time during which appropriations may be made for the purposes of such act; to the Committee on the District of Columbia.

By Mr. WILLIAMS of Delaware:

S. 1640. A bill to strengthen the law with respect to bribery and graft; to the Committee on the Judiciary.

S. 1641. A bill to amend section 284 of title 18 of the United States Code so as further to prohibit former officers and employees of the United States from acting as counsel, attorney, or agent in matters connected with their former office or employment; to the Committee on Post Office and Civil Service.

By Mr. EASTLAND:

S. 1642. A bill to amend section 3238 of title 18, United States Code;

S. 1643. A bill to amend section 2412(b), title 28, United States Code, with respect to the taxation of costs;

S. 1644. A bill to amend section 3731 of title 18 of the United States Code relating to appeals by the United States;

S. 1645. A bill to amend section 4161 of title 18, United States Code, relating to computation of good time allowances for prisoners;

S. 1646. A bill to repeal title 18, United States Code, section 791, so as to extend the application of chapter 37 of title 18, relating to espionage and censorship;

S. 1647. A bill to amend section 4083, title 18, United States Code, relating to penitentiary imprisonment;

S. 1648. A bill to provide for the relocation of the National Training School for Boys, and for other purposes;

S. 1649. A bill to amend section 152, title 18, United States Code, with respect to the concealment of assets in contemplation of bankruptcy; and

S. 1650. A bill to extend the period for filing claims under the War Claims Act of 1948; to the Committee on the Judiciary.

By Mr. EASTLAND (for himself and Mr. STENNIS):

S. 1651. A bill for the relief of Archie L. Dickson, Jr.; to the Committee on the Judiciary.

By Mr. GORE:

S. 1652. A bill to amend the Atomic Energy Act of 1954, as amended; to the Joint Committee on Atomic Energy.

By Mr. McCARTHY:

S. 1653. A bill to continue until the close of June 30, 1960, the suspension of duties on metal scraps, and for other purposes; to the Committee on Finance.

By Mr. McCARTHY (for himself and Mr. HUMPHREY):

S. 1654. A bill to provide for the construction, alteration, and acquisition of public buildings of the Federal Government, and for other purposes; to the Committee on Public Works.

By Mr. KEFAUVER:

S. 1655. A bill to amend the Pay Readjustment Act of 1942, as amended; to the Committee on Armed Services.

By Mr. KEATING (for himself and Mr. JAVITS):

S.J. Res. 88. Joint resolution designating the second Sunday in April of each year as "Puerto Rican Day in the United States of America"; to the Committee on the Judiciary.

(See the remarks of Mr. KEATING when he introduced the above joint resolution, which appear under a separate heading.)

By Mr. HILL:

S.J. Res. 89. Joint resolution requesting the President to proclaim the month of August 15, 1959, to September 15, 1959, inclusive, as National Allergy Month; to the Committee on the Judiciary.

(See the remarks of Mr. HILL when he introduced the above joint resolution, which appear under a separate heading.)

WILLIAM E. STONE—REFERENCE OF BILL TO COURT OF CLAIMS

Mr. EASTLAND submitted the following resolution (S. Res. 98); which was referred to the Committee on the Judiciary:

Resolved, That the bill (S. 1284) entitled "A bill for the relief of William E. Stone," now pending in the Senate, together with all the accompanying papers, is hereby referred to the Court of Claims; and the court shall proceed with the same in accordance with the provisions of sections 1492 and 2509 of title 28 of the United States Code and report to the Senate, at the earliest practicable date, giving such findings of fact and conclusions thereon as shall be sufficient to inform the Congress of the nature and character of the demand as a claim, legal or equitable, against the United States and the amount, if any, legally or equitably due from the United States to the claimant.

PUBLICATION OF SALARIES PAID TO SENATE STAFF AND COMMITTEE EMPLOYEES

Mr. MORSE submitted a resolution (S. Res. 99) dealing with the publication of salaries paid to Senate staff and committee employees, which was referred to the Committee on Rules and Administration.

(See the above resolution printed in full when submitted by Mr. MORSE, which appears under a separate heading.)

DISPLAY OF SENATE DOCUMENTS AND RECORDS—ADDITIONAL TIME TO SUBMIT REPORT

Mr. BENNETT submitted the following resolution (S. Res. 100); which was referred to the Committee on Rules and Administration:

Resolved, That S. Res. 318, 85th Congress (as amended by S. Res. 72, 86th Congress), establishing a special committee of the Senate to study and report with respect to preserving memorabilia of the Senate, is further amended by striking out "April 2" in section 4 and inserting in lieu thereof "June 30."

REPRESENTATION OF ECONOMIC INTERESTS ON BOARD OF GOVERNORS OF FEDERAL RESERVE SYSTEM

Mr. HENNINGS. Mr. President, our Federal Reserve System has the responsibility of managing the entire monetary and credit policy of this Nation. It has been given the power, independent of any other instrumentality of the Federal Government, to use its own best judgment as to monetary management. The question has been raised as to whether this judgment soundly reflects the thinking of all of this country's varied economic interests. In other words, the claim is made that the Board of Governors is "stacked" in favor of commercial and banking interests. If this is true; it is wrong. I, therefore, propose an amendment to the Federal Reserve Act which would provide that the President give further regard to diversifying the representation of interests on the Federal Reserve Board of Governors and to assure that those economic groups which now have no voice in the formation of our economic policy be heard through representation on the Board in the future.

When Congress enacted the Federal Reserve Act in 1913, it sought a fair representation on the Board of the different commercial, industrial and geographical divisions of the country. In 1922, Congress amended that act to broaden representation to the financial, agricultural, industrial and commercial interests and the geographical divisions of the country. I believe it is time that Congress again seek broader representation for all the economic interests of this country—financial, agricultural, industrial, commercial, labor, small business, and consumer.

I, therefore, introduce, for appropriate reference, a bill which I believe will accomplish this result.

The VICE PRESIDENT. The bill will be received and appropriately referred.

The bill (S. 1635) to provide more varied representation of the country's economic interests on the Board of Governors of the Federal Reserve System, introduced by Mr. HENNINGS, was received, read twice by its title, and referred to the Committee on Banking and Currency.

MISSOURI BASIN COMMISSION

Mr. HENNINGS. Mr. President, I introduce, for appropriate reference, a bill to establish a Missouri Basin Commission to provide coherent and unified direction for the development of the Missouri Basin's natural resources, to give responsible direction to the resource development activities of the Federal Government in the Missouri Basin, and for coordinating those activities with resource development activities of the States.

Mr. President, since 1954 I have three times introduced a bill for this purpose. The bill I am introducing today represents a departure from the form in which I have offered this measure previously. I propose now that the management of the basin development program be vested solely in a Missouri Basin Commission. Up to now I had proposed that this management be shared by a Federal commission and an interstate compact board. My reasons for offering my bill in this revised from are set forth in the attached memorandum. I ask unanimous consent that this memorandum be printed at the conclusion of my remarks.

The VICE PRESIDENT. Without objection, it is so ordered.

(See exhibit 1.)

Mr. HENNINGS. Mr. President, too much time, money, effort, and resources have already been wasted in the Missouri Basin. We cannot afford any further delay. I urge the appropriate committee to hold prompt hearings and the Senate to take early action on this measure.

The VICE PRESIDENT. The bill will be received and appropriately referred.

The bill (S. 9636) to establish a Missouri Basin Commission to provide coherent and unified direction for the development of the Missouri Basin's natural resources, to give responsible direction to the resource development activities of the Federal Government in the Missouri Basin, and for coordinating those activities with resource development activities of the States, introduced by Mr. HENNINGS, was received, read twice by its title, and referred to the Committee on Public Works.

EXHIBIT 1

MEMORANDUM BY SENATOR HENNINGS

In setting forth my reasons for offering my bill in this revised form, I must review something of the history of this measure and of the findings of the Missouri Basin Survey Commission which was set up by President Truman in 1952 to give the country advice as to the best way to proceed to achieve an orderly, businesslike development of the resources of the Missouri Basin.

In the months between May and July of 1951, a single flood in the Missouri Basin caused $725 million in damages. This is to say nothing of the untold human misery, for there is no way to measure this. Following this disastrous flood, I introduced a resolution in the Senate in August of 1951, proposing the establishment of a Commission to study the water problems of the Missouri Valley from the point of view of total needs of the area instead of a piecemeal approach.

On January 3, 1952, President Truman by Executive order established the Missouri Basin Survey Commission, which consisted of 11 members. The Honorable James E. Lawrence, editor of the Lincoln, Nebr., Star, was appointed chairman of the Commission, and I was appointed vice chairman. Other members included two U.S. Senators, three Congressmen, and four public members.

In appointing this Commission, the President issued a statement which said in part: "The 1951 floods have emphasized * * * the need for an up-to-date survey of the situation in the basin and of the present plans for the development of its land and water resources. There has not been a thorough reconsideration of the plans * * * since the Congress authorized the so-called Pick-Sloan plan in 1944." Mr. Truman pointed out that the occurrence of devastating floods in Kansas and Missouri in 1951 was a sufficient answer to those critics who favored the status quo as adequate.

Our Commission held 17 public hearings in the basin and heard more than 400 witnesses. In compliance with the instruction covered in Executive Order No. 10318, on January 12, 1953, we presented our report and recommendations to the President.

Our Missouri Basin Survey Commission found that there were major deficiencies in the existing Federal organization for resource development. The Commission was unanimous in agreeing upon the need for a central

organization to direct and coordinate the development of land and water resources in the Missouri Basin.

The majority of our Commission—eight members including myself—proposed a Missouri Basin Commission as a Federal instrumentality. Three Commissioners dissented from this majority view. They favored instead an organization created by an interstate compact to which the United States and the Missouri Basin States which ratified the compact, would be parties.

My original intention in introducing S. 3325 in the 83d Congress, S. 2728 in the 84th Congress, and S. 1107 in the 85th Congress was to reconcile the conflicting views of the majority and minority of our 11 Commissioners by providing for the establishment of both a Missouri Basin Commission and a compact board to coordinate and unify the development of the basin. I had hoped that this would represent a workable compromise.

All of the problems which existed in the basin when our Commission made its survey, still exist today. Under the Pick-Sloan plan, the administration of the basin program is divided chiefly between the Corps of Engineers and the Bureau of Reclamation. In addition, at last half a dozen other Federal agencies, many agencies of the States, and even lesser units of government, participate in the program. Oftentimes, their proposed projects have been at cross-purposes.

Since 1951, when heavy floods in the Missouri Basin gave rise to the Missouri Basin Survey Commission study, there has been additional flood damage in the basin in excess of $1.2 billion. Today, a serious conflict exists between upstream and downstream interests in the basin, a conflict which could threaten the entire development program. I have come to the conclusion that this and other conflicts can most effectively be resolved through establishment of a single, central agency which has the administrative responsibility and accountability for the overall plan and operation of the basin program. Because I am convinced that a duality of administration would not serve this purpose, I have eliminated the provision for a compact board from my Missouri Basin bill.

In eliminating the provision for the compact board, I would like to point out that my bill provides for as much State and local cooperation and assistance as can be achieved on a workable basis. My bill sets up a Governors' Advisory Committee to consult with the Commission regarding resource development policy and to develop related State programs. It provides that each appointee to the Commission shall be a legal resident of one of the Missouri Basin States, and that the permanent office of the Commission shall be located within the Missouri Basin and not in Washington, thereby insuring accessibility to the people of the valley. My bill directs the Missouri Basin Commission to utilize to the fullest possible extent the advice, assistance, and cooperation of the people of the region and to seek State and local participation at all times. It also directs the Commission to utilize the advice, assistance, and cooperation of the existing operating agencies of the Federal Government.

I stress this latter point in order to make plain that this bill does not create a Missouri Valley Authority. The members of the Missouri Basin Survey Commission rejected the authority alternative. The authority plan would replace agencies active in the field of resource development in the basin with one all-inclusive planning, constructing, and operating agency like the TVA. The Commissioners realized that many large projects had already been constructed in the Missouri Basin and many are still being constructed. These projects were being built by a number of the authorized Federal agencies. The Commissioners concluded that it would not be practical or necessary to disturb this construction program. Instead, we sought to find a middle ground in recommending a central basin agency which would direct and coordinate the special skills and competence of the existing Federal agencies in a coherent, unified program of resource development. I believe that this is the most practical solution, and I have therefore adopted this plan in my bill.

AMENDMENT OF TITLE 18, UNITED STATES CODE, RELATING TO PERJURY

Mr. KEATING. Mr. President, I introduce for appropriate reference a bill to extend the law of perjury to cover the willful giving of contradictory statements under oath.

The problem to which this bill is addressed has plagued us for a long time, but it has been dramatized recently by "turnabout" witnesses testifying before congressional committees. Under the present perjury statute and court cases, a person who makes contradictory statements under oath cannot be prosecuted unless the indictment charges and the prosecution proves which one of the two statements is false. Moreover, under the rules of proof imposed by the courts, the falsity of one of the statements must be established by the testimony of two independent witnesses or by the testimony of one witness and corroborating circumstances. This is ridiculous in the case of people like Harvey Matusow, who openly contradicted himself under oath.

My bill is based upon the New York Penal Law, which has worked well in my own State. It has the full endorsement and support of the American Bar Association which has offered one suggestion of obvious merit—that the language ought to be broad enough to make certain that perjury committed outside of courts of law in proceedings such as congressional hearings will also be covered. It also contains a safeguard by being limited to a 5-year period so that the offense could not be extended retroactively beyond the usual period of limitations for similar offenses.

I might add that the bill has the approval of the Department of Justice.

Mr. President, I ask unanimous consent that the text of the bill be printed in the RECORD, and that the bill be allowed to remain on the desk until April 16, so that other Senators may have an opportunity to join in cosponsoring it.

The VICE PRESIDENT. The bill will be received and appropriately referred; and, without objection, the bill will be printed in the RECORD, and will lie on the desk, as requested by the Senator from New York.

The bill (S. 1637) to amend title 18, United States Code, chapter 79, to add a new section, 1623, to extend the law relating to perjury to the willful giving of contradictory statements under oath, introduced by Mr. KEATING, was received, read twice by its title, referred to the Committee on the Judiciary, and ordered to be printed in the RECORD, as follows:

Be it enacted by the Senate and House of Representatives of the United States in Congress assembled, That title 18, United States Code, chapter 79, is amended by adding immediately after section 1622 the following:

"§ 1623. Contradictory statements.

"Whoever, having made a willful statement on a material matter either in proceedings before any committee of the Congress of the United States or a grand jury or during the trial of any case, within five years thereafter makes oath or affirmation to a willful contradictory statement, is guilty of perjury, and shall be punished as provided in section 1621. Such perjury may be established by proof of the willful giving or making of such contradictory statements without alleging or proving which one thereof is false."

SEC. 2. The analysis of chapter 79 of title 18, United States Code, immediately preceding section 1621 of such title, is amended by adding the following new item: "1623. Contradictory statements.".

MORE EFFECTIVE SYSTEM OF PERSONNEL ADMINISTRATION FOR EXECUTIVE BRANCH OF GOVERNMENT

Mr. CLARK. Mr. President, I introduce for appropriate reference a bill to provide for a more effective system of personnel administration for the executive branch of the Government.

The structure of civil service administration is today virtually unchanged from that established by the original Civil Service Act, the Pendleton Act, in 1883.

During the three-quarters of a century which have passed since then, the responsibilities and scope of Government have increased immeasurably. Great advances have likewise been made in what is known about the processes of good personnel administration. My bill is designed to reorganize the structure of civil service administration set up in the horse-and-buggy age to adopt it to the unprecedented needs an demands of Government in the space age.

There is general agreement, I believe, that the Federal Government is not now succeeding in recruiting and retaining its fair share of the ablest people who come along in each high school and college graduating class. We all know that inducements are greater in private industry. We all know of instance after instance of fine, competent people leaving Government service for the greater rewards and satisfactions in other fields.

Probably in no other country in the world does the National Government fare so badly in competition for the ablest of the Nation's personnel. Certainly the Communist nations, and particularly the Soviet Union, are able to make sure that Government service has first call upon the ablest of the nation's manpower. What the Communists are able to accomplish by direct assignment we must accomplish through inducement. The means of inducement must be wise personnel policies—covering recruitment, assignment, training, promotion, compensation—and skillful administration of those policies.

The reorganization proposed in this bill, as a means to facilitate the necessary improvements, is not a new proposal. It has been presented repeatedly, particularly in recent years. Most recently, it was recommended in a report prepared for the Senate Committee on Post Office and Civil Service by a special consultant, Mr. James R. Watson. Based on those recommendations, I introduced in January 1958 what I called a first

draft bill to serve as the basis of hearings.

The hearings were held last June by a special subcommittee of which I had the honor to serve as chairman. Following the hearings, the subcommittee submitted a report generally endorsing the bill but urging that a revised bill be prepared taking into account many valuable suggestions made by witnesses who testified both for and against the bill.

That revision has now been completed. We have had technical assistance from experts of the executive branch, who were brought together by the very able executive director of the committee, Mr. H. W. Brawley, and his assistant staff director, J. Don Kerlin. The administration last year endorsed the objectives of the bill. It is my hope that this year the administration will be able to take a position on the specific provisions of the measure.

Mr. President, in order to provide Senators with a summary of the provisions of the bill and of the reasoning behind it, I ask unanimous consent to have printed at this point in the RECORD five sections from the subcommittee report on S. 3888, the bill in the 85th Congress which was the predecessor of the bill I have introduced today.

There being no objection, the sections were ordered to be printed in the RECORD, as follows:

SUMMARY OF THE BILL

The bill would establish an Office of Personnel Management in the Executive Office of the President and transfer to it those functions of the Civil Service Commission which comprise the positive leadership responsibilities in the field of personnel administration now assigned to the Commission but more properly the function of the Chief Executive. The Civil Service Commission would retain those functions associated with its "watchdog" role as protector of the merit system.

Title I embodies a declaration of policy that personnel administration, subject to law, is an essential part of the executive responsibility vested by the Constitution in the President; and that in order to provide assistance to the President in the discharge of his responsibility an Office of Personnel Management should be established. The Civil Service Commission, as an independent agency, should be assigned the functions of protecting the merit system against political and personal favoritism and other abuses, and of establishing an adequate appeals system for employees or applicants who are aggrieved.

Title II establishes a career service encompassing positions now included in the competitive civil service. The President shall promulgate rules for the administration of the career service, subject to existing law and a number of specified requirements and limitations. He shall consult with and request the recommendations of the Civil Service Commission before promulgating rules.

Title III establishes an Office of Personnel Management in the Executive Office of the President, fixes the duties and powers of the Director, and specifies the qualifications and salary of the Director and Deputy Director. It also establishes a President's Personnel Advisory Committee of five members, three appointed from outside the Federal Government, and two from among persons holding positions of responsibility in the executive branch.

Title IV continues the Civil Service Commission, with the members to serve at the pleasure of the President, prescribes the qualifications and salaries of members, and specifies the Commission's powers and duties.

Title V authorizes the transfer of powers, duties, functions, records, property, personnel, and funds in accordance with the reassignment of responsibility. The Pendleton Act of 1883 is repealed.

BASIC QUESTIONS INVOLVED IN THE BILL

Whether the reorganization proposed in S. 3888 is desirable depends on the answers to four fundamental questions:

1. Is personnel management an essential part of the President's general responsibility under the Constitution for the execution of the laws?

2. If so, can the President's responsibility be more effectively discharged through a single official responsible to him than through a semi-independent Commission?

3. Is it more likely that the departments and agencies of the Government will do a better job of personnel management, resulting in the recruitment and retention of superior men and women in Government service, if leadership in personnel management comes from the President through his Executive Office rather than from and through a semi-independent Commission?

4. Can the merit system be protected if responsibility for the positive leadership aspects of personnel administration is transferred from the Civil Service Commission to the President?

The subcommittee believes that the answer to all four of these questions is affirmative.

WEAKNESSES OF THE PRESENT ORGANIZATION

The subcommittee begins from the premise that the United States dare not gamble its future upon a second-rate civil service. Quite apart from its role in competition with the Soviet Union on which our survival may depend, the activities of the Federal Government impinge increasingly upon the life and fortune of every citizen. Stakes of infinite value rest upon the quality of the men and women in Federal service, upon their skill and devotion, and upon the excellence of their organization, direction, and leadership. We can afford nothing less than the best.

The United States must be able to attract into and hold in its governmental career service the very best of the talent that the Nation has to offer.

Yet the evidence is strong that the Federal career service does not compete on equal terms with private employers and the professions in recruiting and retaining the ablest among our people. The Government does not attract even its pro rata share of the most capable young men and women entering upon careers—and it subsequently loses far too large a proportion of the able men and women it does succeed in recruiting. Every reader of this report knows of persons of highest ability, whose services the Government could ill afford to lose, who have left Government service for positions in private life far less significant in the struggle against communism. It must be remembered that the Communist states, which can assign persons to careers by dictate, tolerate no such loss of talent in their governmental service.

All of the weaknesses in the governmental service cannot be cured by changes in personnel policies, of course. Yet the practices of Government agencies regarding development of career incentives, advancement, assignment, training, compensation, fringe benefits, handling of grievances, and other aspects of personnel administration unquestionably influence the ability of the Government to recruit and retain the highest quality personnel. There is much evidence that Government personnel policies suffer from rigidity and that progress in personnel management has lagged behind the needs of modern government.

What is required is the continuing and imaginative analysis of shortcomings in the Government service, the development of sound corrective measures, their effective presentation to the Congress and the public, and the promulgation and enforcement of those measures throughout the widespread governmental structure.

What must be designed is a structure of leadership capable of that undertaking.

THE RESPONSIBILITY OF THE PRESIDENT

As a matter both of constitutional responsibility and of organizational logic, the structure of personnel leadership must be headed by the President. He is the head of the executive branch responsible for the faithful execution of the laws. He is the source of direction for the subordinate departments and agencies, and they are responsible to him. Direction, instruction, and inspiration on personnel management must come down through the Presidential chain of command.

The subcommittee was impressed during the hearings with the near unanimity with which former Government executives and industrial leaders who appeared stressed the theme of executive responsibility. These witnesses regarded personnel management as among the most important aspects of an executive's job. They considered it anomalous that whereas an industrial manager, or military commander, or subordinate Federal executive normally assigns personnel administration to a key member of his immediate staff, the President is required to rely upon a semi-independent body separated by structure and tradition from the Chief Executive.

This report has used the term "semi-independent" because the degree of independence of the Civil Service Commission from the President is not in fact clear, nor is it constant.

The Chairman of the Civil Service Commission testified that the Commission has always been in law and in practice an agent of the President. He said no change in structure is necessary in order to bring personnel management under the control of the President. Moreover, several witnesses suggested that relationships have been considerably closer since responsibility for the administration of the Commission's activities was transferred from the Commission as a whole to the Chairman.

Yet there is much evidence to suggest that the independent commission structure has hindered, and continues to hinder, the development of the Commission as a fully satisfactory agent of the Presidency for positive personnel leadership, responsible to him.

These are some of the indications:

1. A special assistant to the President has been appointed to advise on matters of personnel management. While this office was held by the Chairman of the Civil Service Commission during the tenure of Mr. Philip Young, it is now held by a separate officer. The mere existence of this office suggests some inadequacy in the Commission as the President's personnel agency. The Bureau of the Budget also performs a role in personnel policy development and administration, which the spokesman for that agency said would not be necessary under the proposed plan of organization.

2. The provision in the original Pendleton Act whereby Civil Service Commissioners served at the pleasure of the President, has now been revised to provide that Commissioners shall serve for 6-year overlapping terms. This provision tends to reinforce the independence of the Commissioners and separate them from the President.

3. Civil Service Commissioners, and others interested in protection of the merit system, have often and properly stressed the necessity for maintaining the independence of the Commission in its "watchdog" activities, since in these activities it serves as a check

upon the President and the agencies of the executive branch.

4. Opponents of S. 3888 generally based their objections to the bill on the ground that the Commission must maintain its independence in order that the merit system can be fully safeguarded.

On balance, this much seems clear, at least: the question as to the Commission's independence cannot be answered both ways. If, on the one hand, it is contended that the Commission as now organized is in fact an agent of the President under his full control, it cannot be contended, on the other hand, that the Commission structure must be preserved in order to maintain the independence of the Commission from the President.

It seems clear, moreover, that the confusion arises from the merger in the Commission of two distinct sets of functions. One set, those comprising the "positive leadership" role, requires that the Commission be related as closely as possible to Presidential responsibility. The other set of functions, those relating to the "watchdog" role, requires that the Commission be separated as far as possible from Presidential influence and control. Of necessity, the Commission sometimes looks in one direction, sometimes in another. The result is an ambiguous position, where the Commission is neither close enough to the President to be fully satisfactory for purposes of Presidential leadership nor independent enough to be fully satisfactory for purposes of policing personnel practices.

S. 3888 resolves this dilemma by separating the "positive leadership" from the "watchdog" functions. The separation permits each to be cast in an organization structure best suited to its particular purpose. The result is an Office of Personnel Management responsible to the President and a Civil Service Commission insulated from him.

The reorganization should also serve an incidental though important purpose. The subcommittee heard convincing argument that persons appointed to multiheaded bodies have not, over the years, been selected with the same careful attention to qualifications that Presidents had applied in filling positions of major responsibility reporting directly to the Chief Executive. An analysis of the qualifications of Civil Service Commissioners in recent decades shows a surprisingly low proportion who brought to their jobs high prestige and impressive records of experience in public or industrial management. There is strong reason to believe that a Director of Personnel in the Executive Office of the President would not be selected carelessly, and S. 3888 prescribes qualifications for the Director to make this doubly sure.

PROTECTION OF THE MERIT SYSTEM

The subcommittee has considered carefully the charges made by employee groups and others during the hearings that S. 3888 would open up the Federal service to patronage raids, and to autocratic one-man control, and thus weaken the merit system. If this were the probable result, no member of the subcommittee would be in support of the measure. But after analyzing the bill and the testimony, we are compelled to conclude that these objections are not well taken. We are of the belief that the bill takes positive steps forward in recognizing employee rights and providing machinery for their protection.

Not only the leadership but the "watchdog" functions have suffered from being merged in the same agency. The policeman has been policing himself. The reorganization would remove this anomaly and permit the policing organization to concentrate upon that job.

The Commission's responsibilities and power relating to protection of the merit system would be more clearly defined.

The functions of the Civil Service Commission would be:

1. To administer the Hatch Act, including the adoption of rules, regulations, and procedures necessary to carry out that act, and the enforcement of its provisions in connection with Federal and State employees subject to it.

2. To hear appeals, with power to reverse agency decisions, and generally improve appeals systems, including:

(*a*) Political and other discrimination appeals.

(*b*) Position classification appeals.

(*c*) Postal field service appeals, veterans' appeals, reduction-in-force appeals, and others.

3. To recommend to the President rules and regulations regarding appeals and political discrimination.

4. To review and make recommendations to the President on all aspects of Federal personnel management and make such views public.

5. To conduct investigations on appeal or on its own motion concerning any phase of Federal personnel management, departmental actions, or operations of the Office of Personnel Management and report to the President, to Congress, and to the public.

Among the important functions of the Commission which would, in the subcommittee's view, be better performed is that of handling grievances. A weakness of the Federal personnel program has been the absence of uniform, effective grievance procedures. S. 3888 directs the Commission to develop and put into effect such a system, as an aspect of its independent policing function and as a primary means of detecting and correcting violations of the merit principle.

The VICE PRESIDENT. The bill will be received and appropriately referred.

The bill (S. 1638) to provide for an effective system of personnel administration for the executive branch of the Government, introduced by Mr. CLARK, was received, read twice by its title, and referred to the Committee on Post Office and Civil Service.

DESIGNATION OF SECOND SUNDAY IN APRIL OF EACH YEAR AS PUERTO RICAN DAY

Mr. KEATING. Mr. President, on behalf of myself and my colleague, the distinguished senior Senator from New York [Mr. JAVITS] I introduce, for appropriate reference, a joint resolution designating the second Sunday in April as Puerto Rican Day in the United States. Proclamation of this occasion by the President would do much to focus national attention on the many contributions of the Puerto Rican people to the progress of our Nation, and would provide fitting recognition of the integral role Puerto Rico plays in our national life.

The mainland's close ties with the island are many and varied. They run the gamut from religious dedication to belief in democracy, to stern opposition to communism, to deep-seated desire for progress.

The people of the State of New York feel a special kinship with the people of Puerto Rico because of the great numbers from the island who have come to live among us. In spite of barriers of prejudice and discrimination, they have made their way slowly but surely. More and more, through their own abilities and determination, and through the aid of legislative enactments insuring equality, Puerto Ricans are contributing to the greatness of the Empire State and our Nation.

However, much remains to be done if Puerto Ricans are to receive their just due. We must press forward on all fronts to remove the barriers of discrimination and unfounded distrust which often bar their way to progress. Celebration of Puerto Rican Day would add great impetus to their movement and would provide a splendid opportunity to spotlight those areas and those situations where Puerto Ricans are not being accorded equal treatment.

As these people have come to master our language, as their capabilities have become recognized, and as their innate talents have come to be appreciated, their contributions in our country have increased in numerous fields of endeavor. We can surely look for even greater results in the future, but every effort must be made to speed that progress.

Next Sunday the second annual Puerto Rican parade will be held in New York City. Last year some 50,000 Puerto Ricans marched and an estimated 200,000 witnessed the spectacle. This year, the grand marshal will again be Oscar Gonzalez-Suarez, a highly respected lawyer and civil leader, and I understand Gov. Nelson A. Rockefeller, a long-time champion of Puerto Rican causes, has accepted an invitation to occupy a place on the reviewing stand.

It is my hope that the joint resolution I am introducing today will gain the approval of Congress and the President, so that future Puerto Rican days may be celebrated in all sections of the Nation where fine citizens from that island reside.

I ask unanimous consent that the joint resolution be printed in the RECORD.

The VICE PRESIDENT. The joint resolution will be received and appropriately referred; and, without objection, the joint resolution will be printed in the RECORD.

The joint resolution (S.J. Res. 88) designating the second Sunday in April of each year as "Puerto Rican Day in the United States of America," introduced by Mr. KEATING (for himself and Mr. JAVITS), was received, read twice by its title, referred to the Committee on the Judiciary, and ordered to be printed in the RECORD, as follows:

Resolved by the Senate and House of Representatives of the United States of America in Congress assembled, That the second Sunday in April of each year is hereby designated as "Puerto Rican Day in the United States of America," and the President of the United States is authorized and requested to issue annually a proclamation calling upon the people of the United States to observe this day with appropriate ceremonies.

NATIONAL ALLERGY MONTH

Mr. HILL. Mr. President, upon the health of our people and their consequent strength, self-reliance, and happiness depends the security of this great Nation. The vitality and stamina we

must have for survival in this period of world crisis are largely a matter of health. Because I believe this, it is always encouraging to note the increased emphasis that is today being placed on some of the so-called killer diseases such as cancer and coronary diseases.

While we are making great strides in research, prevention, treatment, and public education concerning these killers, relatively few of us, outside the ranks of the actual sufferers, are aware of the extent to which the allergic diseases continue to sap the strength of this Nation. This may be largely because these diseases are seldom dramatic in nature and are not looked upon as "killers."

Nevertheless, Mr. President, hay fever afflicts an estimated 8 million Americans annually. This is, in reality, a serious disease. So is asthma. Yet these are only two of the better known allergies—only two of many—and they cause more than 25 million lost man-hours a year.

Allergic diseases are estimated conservatively as causing discomfort, disability, impairment, and absenteeism among more than 1 out of every 10 men, women, and children in the United States today.

The allergies may not be killers, but they are accessories before the fact in thousands of cases. They are insidious conspirators with weaknesses that impair performance and productivity, kill prematurely, and contribute to other deaths by vicious alliance with heart and lung diseases.

They are leeches that suck the vitality from this Nation at a time when we have need for every ounce of our collective strength.

With the rapid and constant introduction of new chemicals in industry, the incidence of contact and other allergies is increasing. Estimates are that at least 20 percent of modern occupational conditions are allergic.

We know a lot more about the allergies than we used to know. In many cases we can treat them successfully. In some cases we can prevent them. And there are those who are contributing much to alleviate suffering caused by allergic diseases.

I refer to the dedicated group of doctors and laymen who brought into being the Allergy Foundation of America, and who, through the foundation, are doing a remarkable job of stimulating interest in the allergic diseases and in raising funds, promoting research, and educating the public in this field.

But still we have in the United States today less than 1 trained allergist for every 90,000 persons. Nearly 14 percent of our children are subject to some form of allergy that they may outgrow or that may result in permanent or recurring weaknesses in adulthood. Yet there is practically no money being spent today to study the effects of allergies in children.

The Allergy Foundation of America first sponsored National Allergy Month 2 years ago in a campaign to give as wide dissemination as possible to the problem of allergic diseases. This educational program is one of the instruments the foundation hopes to use to accelerate efforts in the field of allergy.

The foundation also works in support of programs now under way at the National Institute of Allergy and Infectious Diseases at the National Institutes of Health. It does this by offering opportunities for specialized training for medical students, graduate physicians, and research scientists in the form of scholarships, fellowships, and grants.

The Allergy Foundation of America for the third straight year plans to sponsor National Allergy Month this year from August 15 to September 15.

Mr. President, it is important that the Congress do all it can to lend approval, encouragement, and assistance to so worthwhile an undertaking.

With this in mind and with hope that the Congress will approve, I introduce for appropriate reference a joint resolution requesting the President to proclaim August 15, 1959, to September 15, 1959, as National Allergy Month. I ask unanimous consent that the joint resolution be printed at this point in the RECORD.

The VICE PRESIDENT. The joint resolution will be received and appropriately referred; and, without objection, the joint resolution will be printed in the RECORD.

The joint resolution (S.J. Res. 89) requesting the President to proclaim the month of August 15, 1959, to September 15, 1959, inclusive, as National Allergy Month, introduced by Mr. HILL, was received, read twice by its title, referred to the Committee on the Judiciary, and ordered to be printed in the RECORD, as follows:

Whereas there is presently need for nationwide action for the prevention, treatment and cure of the allergic diseases; and

Whereas the Allergy Foundation of America is working diligently in the fight against the allergic diseases; and

Whereas public understanding and support is desperately needed in order to provide adequate treatment for allergy sufferers, adequate research in the field of prevention, treatment, and cure of the allergic diseases, and to promote adequate public and professional allergy education: Now, therefore, be it

Resolved by the Senate and House of Representatives of the United States of America in Congress assembled, That the President of the United States is authorized and requested to issue a proclamation designating the month beginning August 15, 1959, and ending September 15, 1959, as National Allergy Month, and urging the people throughout the Nation to cooperate in the fight for the prevention, treatment, and cure of allergic illness, and inviting the communities of the United States to observe such month with appropriate ceremonies and activities.

DISCLOSURE OF SENATE STAFF AND COMMITTEE EMPLOYEES' SALARIES

Mr. MORSE. Mr. President, I submit, for appropriate reference, a resolution dealing with the publication of the salaries paid to Senate staff and committee employees and ask that it be printed in the RECORD.

The VICE PRESIDENT. The resolution will be received, appropriately referred, and printed in the RECORD.

The resolution (S. Res. 99) was referred to the Committee on Rules and Administration, as follows:

Resolved, That (a) the Secretary of the Senate is directed to include in his annual report to the Senate the amounts paid by him during the fiscal year covered by the report to each person employed in the office of each Senator, to each person employed in the office of the Vice President, and to each person employed by each committee of the Senate or subcommittee thereof, by reason of such employment.

(b) The Secretary of the Senate is directed to furnish, under such reasonable rules and regulations as he may prescribe, such information concerning current disbursements of public funds as may be requested of him by any person.

(c) Subsection (b) of this resolution shall take effect thirty days after the date of its adoption.

Mr. MORSE. Mr. President, on Tuesday I told the Senate that I would resubmit my 1952 measure requiring publication of the salaries of Senate staff members, with certain additional provisions. On Wednesday, the Senator from Ohio [Mr. LAUSCHE] also alluded to the need for public disclosure of the business of the Senate. I wish to endorse what the Senator from Ohio said about the desirability of making public this information.

Of course, there were objections made to our proposal. The principal one was that it would disrupt our offices. But as the Senator from New York [Mr. JAVITS] pointed out, information about salaries paid in the House of Representatives is available upon request, and no appreciable disruption of House offices has occurred that I know of.

Moreover, the rate of pay of committee staff employees is already public information. It is published twice a year in the CONGRESSIONAL RECORD; and employees working under the various resolutions of the Senate for special investigations or special subcommittees are listed by name and rate of pay in the annual report of the Secretary of the Senate covering the preceding fiscal year. Does any Senator know of any breakdown in committee work, resulting from publication of the salaries of these employees?

A few years ago, Members of this body were much concerned about publicizing the names of persons who are on public welfare rolls. The Federal contribution to their subsistence is only part of what they receive, but when some States began disclosing their relief rolls, their Federal contribution for public assistance was withheld.

In 1951, when an appropriate measure was pending in the Senate, the Senator from Illinois [Mr. DIRKSEN], who is now the minority leader, offered an amendment requiring that no Federal contribution be withheld by reason of publication of relief rolls by the States.

On July 19, 1951, the Senator made an impassioned plea for his amendment. It was necessary to protect the taxpayer, he said. To be exact, he said:

Every time someone gets on the rolls undeservedly (meaning the relief rolls) I think it is an affront to the persons who deserve to be there, and who are in need of assistance from the Federal and State treasuries.

* * * How are we to approach it in a practicable manner, unless we make the rolls accessible to the man who foots the bill, the taxpayer, in order that the weapon of shame may be employed against people whose fathers, mothers, and other relatives should not be on the rolls?

By what double standard does the Senator from Illinois measure this issue? I, for one, shall not be in the position of saying that it is important for the taxpayer to know who is getting his money through relief payments, but that when taxpayers' money is used to pay Senate staff salaries, the same taxpayers should not know about that.

The Senator from Indiana [Mr. CAPEHART] also spoke for and voted in favor of that 1951 amendment, which became law.

Finally, to the Senators who fear some disruption in their offices from making salaries public, I say that if Senators think there is not already a lot of knowledge and discussion of office payrolls arounds the Halls of Congress, they are laboring under a complete illusion. There is inevitably a certain comparing of notes by employees of different offices; some staff members have worked in two or more Senate offices. It may well be that the effect upon our staffs of publication of salaries would be more salutary than harmful, since it would put an end to speculation.

Since House staff salaries, Senate committee staff salaries, and the salaries of the grades of Government employees are public knowledge, I see nothing so special about Senators' offices that justifies keeping a veil of secrecy over the salaries we pay.

It should be the policy of the Senate, and of the entire Congress, to have its financial officers make that information public.

Nor should it be left up to the discretion of individual Senators, any more than revelation of our sources of income should be discretionary with each member.

Wherever taxpayers' money is being spent, the taxpayers have a right to know by whom, and for what. The only exception to that right that occurs to me is where national security might be involved.

But there is no national security involved in the operation of the Senate, and it is the purpose of my resolution to make available to the public at all times information about disbursements of public money in the operation of this body.

Therefore, my resolution directs the Secretary of the Senate to include in his annual report on disbursements during the preceding fiscal year, the persons employed by the Vice President, by each Senator, and each committee, together with the salary paid such person for that fiscal year.

My resolution further provides that the Secretary of the Senate shall furnish, under such rules as he deems advisable, information on any current disbursement of public money for operation of the Senate that may be requested of him.

The House of Representatives follows the practice of making public this material upon request; the Senate follows the practice of making it public, except for Senate staff salaries, in an annual report that covers the previous fiscal year. The difficulty with the Senate method is that the information is 6 months old at best, and at worst, it is a year and a half old when called for.

The press should be able to get current information about Senate expenses by asking for it from a designated official of the Senate, and that is what my resolution provides.

It is my understanding that the practice on the other side of the Capitol is to send to the Library of Congress for photostating the record which has been requested, and the photostat is then made available to the person who submitted the request.

What is so unreasonable about adopting the same procedure in the Senate? It is in keeping with a fundamental principle of representative government, namely, that in a democracy there is no substitute for full disclosure of the public's business.

It is true that I voted against the Dirksen amendment in 1951. I did so because I did not think it necessary to parade before the public the hardships and economic sufferings of recipients of relief. It seemed to me that if the rolls were accessible—which they were to Government officials charged with the responsibility of administering and exercising jurisdiction over the relief program—such disclosure was sufficient protection for the public interest.

However, my two public disclosure bills in respect to disclosure of the sources and amounts of income of Federal officials in the legislative and executive branches of the Government, and disclosure of the payrolls and office expenditures for Senatorial offices, relate definitely to the rights of the voters to have such information in order to help them evaluate the official records of their public servants.

Mr. President, I hope that at a very early date hearings will be held on this resolution, and also upon my income disclosure bill, which I introduced earlier this week, because I am satisfied that recent disclosures in regard to some of the employment practices of Members of Congress are reflecting adversely upon the Congress. I believe that the public attitude is reflected rather well in such editorials as we have been receiving from across the country. For example, there is an editorial in this morning's Washington Post entitled "Public's Business, Too." I ask unanimous consent to have the editorial printed in the RECORD at this point, at the close of my remarks.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

PUBLIC'S BUSINESS, TOO

The Senate's business is the public's business, as Senator FRANK J. LAUSCHE, Democrat of Ohio, has noted, and there is no reason why Senate payrolls should not be as public as are those of Members of the House. The argument advanced by Senate Republican Leader EVERETT M. DIRKSEN and some other Senators that the publication of the salaries of employees would cause dissension among staff members is a lame excuse indeed for keeping the records secret.

Since 1932 every employee in the House has been able to find out what his colleagues earn; yet the morale of staffs of the House Members does not seem to be different from that of Senate employees. Until 1948 Senate payrolls were public and even today the salaries of employees of Senate committee staffs are published regularly in the CONGRESSIONAL RECORD.

"From the standpoint of the public mind," Senator LAUSCHE said, "we should occupy a position in which we are beyond suspicion. We do not occupy such a position; and we fail to occupy it because of the refusal to let the public know what properly is its business." However much Senators may consider themselves to be members of a private club, only the public can grant entry to this club and once a man becomes a member his dues are paid with tax funds. The Senate should never be permitted to become a citadel of secrecy.

CHANGES OF REFERENCE

Mr. DIRKSEN. Mr. President, as a part of the civil rights package of bills, the bill (S. 958) to assist in meeting the costs of special professional services needed in carrying out public school desegregation programs, and for other purposes, and the bill (S. 959) to amend Public Laws 815 and 874, 81st Congress, to provide for the education of children of members of the Armed Forces in communities in which the public schools are closed, were referred to the Committee on Labor and Public Welfare. I have conferred with the chairman of that committee, the chairman of the Judiciary Committee, and the majority leader. It is agreeable that a rereference be made of these bills to the Committee on the Judiciary, so that all bills referring to this subject shall be considered by one subcommittee.

I therefore ask unanimous consent that the Committee on Labor and Public Welfare be discharged from the further consideration of Senate bills 958 and 959, and that they be referred to the Committee on the Judiciary.

The PRESIDING OFFICER (Mr. BARTLETT in the chair). Without objection, it is so ordered.

Mr. RUSSELL. Mr. President, I ask unanimous consent that the Committee on Armed Services be discharged from the further consideration of the bill (S. 827) to amend the Helium Act of September 1, 1937, as amended, and that the bill be referred to the Committee on Interior and Insular Affairs.

The chairman of the Committee on Interior and Insular Affairs has requested this referral. Earlier in the day I presented the question to the Committee on Armed Services, and the committee unanimously agreed to the request.

The PRESIDING OFFICER. Is there objection to the request of the Senator from Georgia? The Chair hears none, and it is so ordered.

PROMOTION OF PUBLIC CONFIDENCE IN THE INTEGRITY OF CONGRESS AND THE EXECUTIVE BRANCH—ADDITIONAL COSPONSOR OF BILL

Mr. CLARK. Mr. President, I ask unanimous consent that my name may be added as a cosponsor of the bill

(S. 1332) to promote public confidence in the integrity of Congress and the executive branch, introduced by the Senator from New Jersey [Mr. CASE], on March 9, 1959.

The PRESIDING OFFICER. Without objection, it is so ordered.

AMENDMENT OF SECTION 1 OF ACT OF JUNE 14, 1926, AS AMENDED—ADDITIONAL COSPONSOR OF BILL

Mr. BENNETT. Mr. President, I ask unanimous consent that the Junior Senator from Idaho [Mr. CHURCH], be listed as a cosponsor of S. 1436 which would remove the 640-acre limitation on State's acquisitions of Federal lands for State park purposes, and that any subsequent printing of the bill show his name as a sponsor.

The PRESIDING OFFICER. Without objection, it is so ordered.

ADDITIONAL COSPONSORS OF CERTAIN BILLS

Mr. ALLOTT. Mr. President, due to a clerical oversight several of my colleagues' names do not now appear as cosponsors of S. 1537, to establish a national minerals policy. As the bill now reads, Senators BARTLETT and GRUENING's names are listed. This should be corrected to read: Senators BARTLETT, BENNETT, CHAVEZ, GRUENING, MANSFIELD, and MURRAY, and I ask unanimous consent that at the next printing of this bill, this correction be made.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. ALLOTT. Mr. President, due to a clerical oversight several of my colleagues' names do not now appear as cosponsors of S. 1538, to authorize a 1-year program of production payments to the lead and zinc industries. As the bill now reads, Senators BARTLETT, CHURCH, and GRUENING's names are listed. This should be corrected to read: Senators BARTLETT, BENNETT, CHAVEZ, CHURCH, MANSFIELD, and MURRAY, and I ask unanimous consent that at the next printing of this bill, this correction be made.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. ALLOTT. Mr. President, due to a clerical oversight the names of Senators CHAVEZ, MANSFIELD, and MURRAY were not listed as cosponsors of S. 1539, to create a limited free market for gold. I ask unanimous consent that at the next printing of this bill, the names of my three distinguished colleagues be added to this bill.

The PRESIDING OFFICER. Without objection, it is so ordered.

ADDITIONAL FEDERAL RESERVE DISTRICT—ADDITIONAL COSPONSOR OF BILL

Under authority of the order of the Senate of April 7, 1959, the name of Mr. ALLOTT was added as an additional cosponsor of the bill (S. 1607) to amend the Federal Reserve Act to provide for an additional Federal Reserve district, introduced by Mr. CARROLL, on April 7, 1959.

COMMISSION ON UNEMPLOYMENT PROBLEMS — ADDITIONAL COSPONSOR OF BILL

Mr. JOHNSON of Texas. Mr. President, I ask unanimous consent that the name of the Senator from Pennsylvania [Mr. CLARK] may be added as a cosponsor of the bill (S. 1631) to provide for the establishment of a Commission on Unemployment Problems, introduced by me on April 8, 1959.

The PRESIDING OFFICER. Without objection, it is so ordered.

EFFORTS BY COMMUNIST CONSPIRACY TO DISCREDIT THE FEDERAL BUREAU OF INVESTIGATION—(S. DOC. NO. 23)

Mr. HRUSKA. Mr. President, one of the objectives of the Communist conspiracy in this country has been and is to bring about the discrediting of the Federal Bureau of Investigation and its Director, Mr. J. Edgar Hoover.

Currently, we are witnessing an attack on the FBI and on Mr. Hoover which appears to spring from diverse sources.

The story of this attack has been carefully documented by a Pulitzer prize journalist, Mr. Edward J. Mowery, in a series of articles which appeared in the Newark Star Ledger. Mr. Mowery has traversed the principal charges brought against the Bureau and its Director as part of this campaign, and has set down the facts with respect to these charges.

This is a matter which I am sure is of interest to every Member of this body. I therefore ask unanimous consent that the text of this series of articles by Mr. Mowery may be printed as a Senate document.

The PRESIDING OFFICER. Is there objection to the request of the Senator from Nebraska? The Chair hears none, and it is so ordered.

ADDRESSES, EDITORIALS, ARTICLES, ETC., PRINTED IN THE RECORD

On request, and by unanimous consent, addresses, editorials, articles, etc., were ordered to be printed in the RECORD, as follows:

By Mr. GOLDWATER:

Lincoln Day address delivered by him at Phoenix, Ariz.

Address delivered by him before the Edison Electric Institute, at New Orleans, La., on April 6, 1959.

By Mr. HUMPHREY:

Washington report by Representative GEORGE MCGOVERN, of South Dakota, dated February 21, 1959.

NOTICE OF HEARING ON CERTAIN NOMINATIONS BY COMMITTEE ON THE JUDICIARY

Mr. EASTLAND. Mr. President, on behalf of the Committee on the Judiciary, I desire to give notice that a public hearing has been scheduled for Tuesday, April 21, 1959, at 10 a.m., in room 424, Senate Office Building, upon the nominations of Latham Castle, of Illinois, to be U.S. circuit judge for the Seventh Circuit, vice Philip J. Finnegan, deceased, and Edwin A. Robson, of Illinois, to be U.S. district judge for the northern district of Illinois.

At the indicated time and place all persons interested in the above nominations may make such representations as may be pertinent. The subcommittee consists of the Senator from South Carolina [Mr. JOHNSTON], the Senator from Nebraska [Mr. HRUSKA], and myself, as chairman.

NOTICE OF HEARING—AMENDMENT TO CONSTITUTION CONCERNING PUBLIC SCHOOL ADMINISTRATION

Mr. KEFAUVER. Mr. President, I wish to announce that the Subcommittee on Constitutional Amendments, of which I have the honor to be chairman, will begin hearings on Senate Joint Resolution 32 at 10 a.m. on May 12. This resolution, which was introduced by the junior Senator from Georgia [Mr. TALMADGE], for himself and eight other Senators, proposes an amendment to the Constitution with respect to public school administration. As the text of the proposed amendment is short, I ask unanimous consent that its text be printed at this point in my remarks.

There being no objection, the joint resolution was ordered to be printed in the RECORD, as follows:

Resolved by the Senate and House of Representatives of the United States of America in Congress assembled (two-thirds of each House concurring therein), That the following article is proposed as an amendment to the Constitution of the United States, which shall be valid to all intents and purposes as a part of the Constitution when ratified by the legislatures of three-fourths of the several States:

"ARTICLE —

"Administrative control of any public school, public educational institution, or public educational system operated by any State or by any political or other subdivision thereof, shall be vested exclusively in such State and subdivision and nothing contained in this Constitution shall be construed to deny to the residents thereof the right to determine for themselves the manner in which any such school, institution, or system is administered by such State and subdivision."

Mr. KEFAUVER. Mr. President, the hearings will be held in room 457, Old Senate Office Building. Persons who wish to give public testimony should inform the subcommittee's counsel, Mr. Bernard Fensterwald, Jr., whose address is U.S. Senate Post Office, U.S. Senate, Washington 25, D.C.

SEVENTEENTH ANNIVERSARY OF BATAAN DAY

Mr. BRIDGES. Mr. President, yesterday was the 17th anniversary of Bataan Day, an event which long will be remembered in the annals of heroism.

Seventeen years ago, on April 9, 1942, a gallant but battered army of Americans and Filipinos surrendered to the forces of a militaristic and totalitarian power.

But today we do not observe Bataan Day merely for commemoration's sake. We observe Bataan Day so as to give

testimony to the bonds of a great friendship which were forged on that dark day in world history. Americans had fought side by side, shoulder to shoulder, with their friends in the Philippines. They fought against the greatest of odds until surrender was inevitable.

But even as the fall of Bataan was perhaps our most stinging military setback of World War II, Bataan became a word of honor and courage throughout the world.

Bataan was a military defeat, but it was also a victory—a victory of the spirit which moves men of different races, colors, and creeds to unite in the common cause of peace and freedom.

Today, 17 years later, Americans and Filipinos remain side by side, shoulder to shoulder. We remain united—firmly united—against another force of aggression—Communist aggression.

Historians record Bataan Day as a defeat for the Americans and their faithful friends, Filipinos. But time has recorded Bataan Day as a day of victory in the struggle for lasting world peace.

Mr. MANSFIELD. Mr. President, I am happy to join my distinguished colleague, the senior Senator from New Hampshire [Mr. BRIDGES], in calling the attention of the Senate today to the fact that on yesterday, 17 years ago, a few thousand exhausted men surrendered to overwhelming force on Bataan, in the Philippines. They were a pitiful group, Filipinos and Americans alike. They were sick, hungry, and weakened by the fatigue of months of combat. And the worst was still ahead—the agonizing death marches and the long bitter years of prison camps.

Why, we may well ask ourselves, ought we to recall, 17 years after, that moment of misery and of defeat? It is worth recalling because out of it, out of the common suffering, the common humiliation of Filipino and American, was born a new understanding, a new respect, a new unity of the heart between the people of the Philippines and the people of the United States. After Bataan, there was no more the relationship of the tutor and the tutored, no more the relationship of the dependor and the dependent, no more the sovereign and the subject.

From the ashes of Bataan, there emerged a new warmth, a new equality, a new and common dedication to the ideals of human worth and freedom. What was wrought then is fixed in the hearts of Filipinos and Americans who grasped the larger meaning of the death and pain of Bataan, 17 years ago. Through them the common tragedy is fused for all time into the spirit of both lands.

To be sure, some may never have felt the larger meaning of Bataan. Some may have sensed it for a moment, and then it passed. Some may not recognize any longer even the name Bataan. Because that is the case, many of the ancient mistakes between the two nations are being repeated. Many of the old hostilities are reasserting themselves. The tragedy of a Bataan is too soon forgotten. The nobility which it engendered at the moment of its happening is not easily transferred into the continuing relationships between two countries in less demanding times.

That is why, on an anniversary of this kind, it is well to recall that other time, 17 years ago. It is well to remember how the demands of that hour—upon Filipino and American alike—obliterated all that was petty or trivial, patronizing or arrogant, between us; how there existed between us bonds made only of mutual courage, mutual respect, and mutual dedication. It is well to recall how the sense of unity of heart and purpose fashioned for both countries a common greatness out of death and defeat. It is well to recall this larger meaning of Bataan. It is needed in the Philippines and in the United States to stop the drift towards indifference, towards estrangement.

Mr. President, a few weeks ago in New York the distinguished Ambassador from the Philippines to this country, a former colleague of ours in the House of Representatives, Gen. Carlos P. Romulo, had the following to say:

> Friendship is a thing of the spirit and loyalty so it cannot be bought with dollars or with rubles. Peoples who are used to have little of consumer and capital goods but who have depended only on their spirituality for their happiness in the past may more easily be attracted by that leadership now which can offer them a friendship that is steadfast and abiding, a friendship that will be loyal to them no matter what the shifts and changes may be in the world's balance of power.

Mr. President, today, in honoring the heroes of Bataan, I wish to call the attention of the Senate to the fact that friendship between the people of the Philippines and the American people will stand for many, many centuries to come.

Mr. KEATING. Mr. President, I desire to join with the distinguished Senators from New Hampshire and Montana who have spoken today regarding the 17th anniversary of the fall of Bataan, on April 9, 1942.

We all remember the peninsula in the Philippines where Gen. Douglas MacArthur defended the American flag against terrible odds and offered a resistance to the enemy that has gone down in history as a saga of courage and heroism. For four long months, a handful of 6,000 American soldiers fighting side by side with 75,000 Filipino troops repulsed wave after wave of onrushing Japanese divisions which outnumbered them 10 to 1. Starving, afflicted with malaria and dysentery, hopelessly outgunned and outplaned, the American and Filipino soldiers stood everything that the enemy sent against them and fought with a valor and an endurance that amazed an admiring world.

The delaying action that held in the Philippines an important sector of the Japanese army, navy, and air force prevented them from continuing in their onward march to Australia. The resistance that was offered in Bataan, therefore, rendered an incalculable service to the allied cause. Such a heroic resistance was made possible not only because of the superb generalship of Douglas MacArthur and the gallant officers who served under him, such as Gen. Jonathan Wainwright and others, not only because of the valor of the American and Filipino soldiers, but also—and this I want to underscore—because of the loyalty of the Filipino people to the United States.

As we commemorate the 17th anniversary of Bataan, we take pride in recalling Filipino loyalty and in greeting our Filipino allies who in our hour of need stood steadfastly by us without counting the cost. While the Filipino soldiers were fighting the enemy and the Filipino guerrillas were harassing the occupation forces, the civilian population risked torture, imprisonment, and execution by hiding, feeding, and protecting the American civilians who were caught by the war in the Philippines. Many from my home State of New York still talk with emotion of the help afforded them by the Filipinos when to help them as American prisoners of war was to risk execution by the enemy.

In his book, "I Saw the Fall of the Philippines," published after the fall of Bataan, Gen. Carlos P. Romulo, who served as General MacArthur's aide-de-camp during the war, and whose war record was recently described and praised by Gen. Richard Sutherland, MacArthur's chief of staff, in a nationwide telecast, brought home to the American people the vital role played by the Philippine Army in Bataan and Corregidor, as well as the sacrifices undergone for the United States by his noble and heroic people. To read that book is to respect and admire a nation which stood by us unhesitatingly and unswervingly in our darkest hour in the Pacific.

It is, therefore, fitting that yesterday the New York Times in an editorial not only paid tribute to Filipino loyalty, but called our attention to certain unsolved Philippine claims. I ask unanimous consent that the editorial be included at this point in my remarks.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

ON BATAAN DAY

This is the 17th anniversary of the fall of Bataan, and Americans and Filipinos celebrate it as a commemoration of their shared sacrifice in defense of freedom. Solemn ceremonies are being held in Manila and there will be many private observances in this country.

It is certainly not inappropriate, therefore, to pause briefly to reexamine the state of our relations with our former ward and present ally. There have been numerous reports of a rising feeling of anti-Americanism in the Philippines in recent months. We believe that most of these are exaggerated and should be discounted. There is, however, justified impatience in Manila over the failure of the United States to carry out some of its obligations. This could readily be magnified into a presumptive hostility.

Obviously, the way to meet this is to meet the obligations. Some of the Philippine claims against this country are certainly subject to examination and negotiation. There are others concerning whose validity there cannot be the shadow of a doubt. These should be paid at once.

The first of them goes back to 1934, when the devaluation of the U.S. dollar resulted in the depreciation of the Philippine gold reserve in the United States by $23,862,750.78. On June 19, 1934, the U.S. Congress passed a law authorizing a credit to the Philippines

of this amount. No appropriation has yet been made to meet this obligation.

The second goes back to 1946, when Congress authorized the payment of up to 75 percent of Philippine war damage claims approved by the War Damage Commission. Money appropriated was sufficient, however, to pay only 52½ percent of such approved claims. The remainder is $130 million, and a bill has not been introduced in the House to appropriate this sum. It should be approved without delay.

We cannot afford to have our precious association with the Philippines sullied by any suspicion of bad faith. Here are two specific cases in which justice should be done at once.

Mr. KEATING. Mr. President, in a television appearance in New York yesterday with Fannie Hurst, General Romulo, the Philippine Ambassador to the United States, mentioned these claims and aptly said:

To recall Bataan is to recall Filipino loyalty, loyalty of the veterans who fought in the foxholes, loyalty of the guerrillas who fought in the hills, loyalty of the civilian population whose properties were destroyed and who resisted the enemy. Among them there were no neutralists. They cast their all for freedom and the democratic way of life. Let us remember them today and in the days ahead and make them feel that our expressions of gratitude are not mere lip protestations but earnestly and sincerely meant. Only thus can Bataan remain a symbol of loyalty, of shared loyalty between two nations that are pledged to defend and uphold the highest values of democracy and freedom.

Mr. DIRKSEN. Mr. President, in the early months of Japan's war with the United States, Bataan Peninsula was the scene of bitter fighting between the invading Japanese and American-Filipino forces under General of the Army Douglas MacArthur and later under Maj. Gen. Jonathan M. Wainwright.

On April 9, 1942—17 years ago today—Bataan's defenders were forced to surrender to the Japanese, while the remainder of the forces retreated to Corregidor, an island 2½ miles off the south tip of the peninsula.

It was not until February 1945, that Bataan was retaken by American forces under General MacArthur.

Mr. President, I draw attention to this anniversary of the fall of Bataan for two reasons:

The first is that it is altogether right to remember with honor the brave Americans and Filipinos who fought against overwhelming odds to defend their outpost of freedom—an outpost virtually unknown to most Americans until their heroic action made the name "Bataan" ring across the Nation.

The second reason why I draw attention to the fall of Bataan is this: To me, and I think to many other Americans, the very name "Bataan" is a symbol.

It is a symbol of how the mighty can fall unless they maintain eternal vigilance and adequate preparedness.

It is no less a symbol, Mr. President, that freedom's flame is inextinguishable, and will ultimately spread throughout the world.

It is good to look upon such symbols as a reminder to ourselves and to others.

THE NATION'S FINANCIAL DILEMMA

Mr. BRIDGES. Mr. President, I ask unanimous consent to have printed in the RECORD at this point an article by Mr. David Lawrence which appeared in the Washington Star on March 31.

In the article Mr. Lawrence clearly poses the alternatives which we and our Nation face. The one alternative is that of continued inflationary policies leading, first, to selective controls and, ultimately, to "a chaotic breakdown in our economy." The other alternative involves administering the Federal finances in a responsible manner.

Mr. Lawrence reports on the studies of Aubrey G. Lanston, the distinguished financier.

I call the attention of all my colleagues to this penetrating and timely report.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Washington Star, Mar. 31, 1959]

THE NATION'S FINANCIAL DILEMMA—THE DRIVE IN CONGRESS TO SPEND MORE IS EXPECTED TO TAKE ON NEW SPEED

(By David Lawrence)

There seems to be joy in some quarters that the budget is going to be unbalanced. Judging by some of the comments from Democrats on Capitol Hill, this proves that President Eisenhower was all wrong and that, since the budget is going to be unbalanced by more than a billion dollars, it might as well be unbalanced by three or four or five billion.

When Congress comes back from its recess, the drive to spend more, and hence make the deficit bigger, will take on momentum. It seems to be taken for granted that only the prestige of the President—not the pocketbook of the American people—is going to be hurt by the failure to reduce the deficits.

It's hard for the average man to realize just what is involved in budget balancing and in the increases in Treasury deficits. At the National Press Club luncheon the other day for Raymond J. Saulnier, Chairman of the President's Council of Economic Advisers, this question was asked with reference to the drop in the purchasing power of the dollar from 100 cents in 1939 to 48 cents today:

"If I have only a 48-cent 'buck' in my pocket, haven't I got 48 cents more than I had in the depression?"

Dr. Saulnier replied that nobody now is much concerned with 1939 except historically, and then added pointedly:

"I'd like to protect your 48 cents, you see, from now on."

This is a simple statement of a dilemma that confronts the American people. Do they want to see the dollar decline still further in purchasing power so that the 48 cents they have today would before long be cut down to 24 cents?

The drama of money—the threat of printing-press currency—is not yet a subject of popular discussion. But among those whose business it is to deal in Government securities—a man, for instance, like Aubrey G. Lanston, of the New York firm which bears his name—the topic is very live. Mr. Lanston, speaking a few days ago before the Cleveland Society of Security Analysts, said:

"I think it will become plain that the people of this country will have to make a choice, sometime over the near future, either by positive action or through default. They can force Congress to administer Federal finances in a responsible way—something we have urged other so-called less advanced countries to do—or we will end up, first, with selective controls of a mushrooming character and, ultimately, with a chaotic breakdown in our economy. * * *

"The financial irresponsibility on the part of the Government has created a series of deficits that have been financed by commercial banks. No matter what you have read to the contrary, that is the fact.

"Further, it seems inevitable that the commercial banks will be obliged to absorb whatever deficits develop from here on. It also seems likely that the increase in the Government security holdings of commercial banks will enlarge by somewhat more than the amount of future deficits, because the banks will be the only major buyers left. Therefore, the banks also will have to absorb whatever Government securities are sold by others.

"This kind of frenzied public finances poses a serious threat. * * *

"We should recognize now that the number of spending measures that have been or will be passed between now and the close of the 86th Congress calls for increased Government spending for fiscal 1961 and for later years, too. The prospect of another deficit—for fiscal 1961—coming on top of a deficit for fiscal 1960, and all those that have preceded these, could produce some substantial, unstabilizing, psychological repercussions. The nonchalant, fiddling attitude of Congress—as a whole—toward a balanced budget for 1960 may be building a base for explosive developments later on."

These are significant words from one of those persons who normally speak in the most restrained phrases about Government finances. Mr. Lanston's concluding advice to the public might well be pondered by those Members of Congress and others who have been ridiculing the idea of a balanced budget. He said:

"Here is the way I look at the picture. I can see no point in investing in the lowest yielding credit of all—U.S. Treasury securities—at long-term in a background wherein the purchasing power of the dollar has been depreciating and seems likely to continue to depreciate. * * * Therefore, the best buys in Government securities are those that are short in term."

But what is this going to do to the Treasury, which has to sell for cash somewhere between $11 billion and $12 billion in Government securities during the present calendar year, to say nothing of refinancing the many billions of other previously issued securities which come due in the next 18 months? When will the Congress realize that the Treasury Department's task is of transcendent importance to the American people and the future of the whole economy?

THE CAPITALISM SYSTEM APPEARS IN NO DANGER

Mr. BRIDGES. Mr. President, the Twentieth Century Fund has just published a study, "The Economy, Liberty, and the State," representing the culmination of a 3-year investigation by the eminent economist, Calvin B. Hoover. Dr. Hoover is on the faculty of Duke University. He was formerly a member of the President's Council of Economic Advisers.

Dr. Hoover's work confirms our knowledge that capitalism is still today a dynamic, vital system. Capitalism is still growing; socialism and communism are in retreat. We must never lose sight of the rising military threat posed by international communism; but we have cause for confidence that, economically, capitalism will outperform communism.

Dr. Hoover concluded:

Among the leading economic systems of the world, modern capitalism, as it exists in the Western nations, is strong, productive, popular, and in almost no danger of being supplanted or overthrown by collectivism.

I ask unanimous consent to have printed in the RECORD an article by Roscoe Drummond which comments on Dr. Hoover's study. The title of Mr. Drummond's article, which appeared in the Washington Post of March 30, 1959, is "State of Capitalism: System Appears in No Danger."

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Washington Post, Mar. 30, 1959]

STATE OF CAPITALISM: SYSTEM APPEARS IN NO DANGER

(By Roscoe Drummond)

A well-known American businessman, defending capitalism on a kind of panel performance, was asked by a member of the audience what he considered its basic right.

His instant answer: "The right to go broke."

What he was saying was that everybody is better off when, in order to survive, business has to make its way in the marketplace of consumer opinion.

But capitalism, now engaged in a life-and-death struggle with communism, also has to make its way in the marketplace of voter opinion. How is it doing there: To survive it must convince the voters as well as please the consumers. Is capitalism gaining political support—or losing it?"

The answer which comes from one of the country's eminent economists, Calvin B. Hoover, of Duke University, who has just completed a 3-year study for the Twentieth Century Fund on "The Economy, Liberty, and the State," is reassuring.

From his research and first-hand observation—twice during his surveys he visited the Soviet Union, the satellite countries, and Western Europe—Hoover concludes that:

"Among the leading economic systems of the world, modern capitalism, as it exists in the Western nations, is strong, productive, popular, and in almost no danger of being supplanted or overthrown by collectivism."

As far as he can see ahead, at least for the next two or three decades, the modern type of capitalistic economic system will not be supplanted in any important country of the West, at least not by the conscious will of the majority.

I have not yet read Hoover's full report—only the Twentieth Century Fund's advance account of it—but I am sure he has had no trouble assembling impressive evidence to support his finding.

The visible fact is that as an economic system both communism and socialism are in retreat.

This doesn't mean that the Soviet Union is in retreat or is not a powerful military state capable of using its massive controls to perform great economic feats. But it does mean that the Kremlin has been able to do this not by applying Communist principles but by departing from them. Both Tito in Yugoslavia and Gomulka in Poland have had to abandon much of communism in practice in order to rescue their countries from economic deterioration.

Bear in mind that after World War II Socialist governments and Socialist economics were in command of nearly every European government including Britain, France, and Italy, and the Socialist Parties, crying for more and more nationalization of industry, were ascendant and often kept in power by alliances with the Communists.

What is now most significant and what gives Hoover's thesis its strongest support is that the whole political and economic picture in Western Europe is radically changed. The Communists do not form the basis of any government in free Europe. The Socialist Parties are either in decline or have openly abandoned, because they found it didn't work, the nationalization of industry as an objective.

The greatest force behind the resurgence of modern capitalism as the best way to produce the greatest good for the greatest majority is the visible fruit of modern capitalism in Western Germany—the nation's resplendent recovery through the rejection of Socialist controls and Socialist regimentation and by using the incentives of a competitive free economy. (No wonder the Soviets want to blanket out West Berlin.)

Capitalism, of course, faces dangers. There is the danger of being suffocated by its own welfare state. There is the danger of failing to help underdeveloped countries so that their own plight causes millions of people to accept mass tyranny—or have it forced upon them—as the only alternative to mass poverty.

As Hoover sees it, a competitive economy is an essential part of the shield of individual liberty.

TRIBUTE TO WALTER S. ROBERTSON

Mr. BRIDGES. Mr. President, David Lawrence recently wrote an article entitled "Robertson, American Patriot," relative to Walter S. Robertson, who recently resigned his post as Assistance Secretary of State for Asian Affairs.

I agree that Walter Robertson is a great American patriot and has made an outstanding contribution to our foreign policy. I ask unanimous consent to have the article printed in the body of the CONGRESSIONAL RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

ROBERTSON, AMERICAN PATRIOT

(By David Lawrence)

WASHINGTON.—Sometimes it takes the news of an illness or a departure from public office to bring about a true evaluation of the services of a man to his country. The announced resignation of Walter S. Robertson from his post as Assistant Secretary of State for Asian Affairs focuses attention on the valiant and successful fight of a sick man to keep America from blundering into recognition of the Red China regime.

Mr. Robertson, who leaves the Department of State in a few weeks, says frankly he never would give up his work if he did not feel assured that the United States will not yield to the tyrants in Peiping. Few people outside the Government are aware of the indefatigable battle Mr. Robertson has waged against all manner of intrigue that has been going on inside and outside the Government to win for Red China a place in the United Nations and diplomatic recognition by the U.S. Government.

Mr. Robertson served under the Truman administration, but has played an even bigger role under the Eisenhower administration in steering foreign policy as it relates to Asia. It was most unfortunate to read the other day a comment by former President Truman accusing the Eisenhower administration of surrendering because an armistice was signed in Korea. All one has to do is to read the book by Adm. C. Turner Joy, who presided for the United States at the Panmunjom negotiations, to find out that, before the Eisenhower administration came into power, the American representatives had been instructed to accept the principal portions of the final agreement. They did so, and only a dispute about exchange of prisoners remained when Mr. Eisenhower became President in 1953. So the real question was whether to repudiate or to honor the agreement made by the Truman administration, President Eisenhower chose to honor the signature of the United States on the sections already agreed upon by the previous administration.

As a matter of fact, it is only in what happened prior to 1950, when State Department officials were being accused by congressional committees of catering to Communists in the Far East, that there is any basis for controversy. In a speech delivered 3 weeks ago at Ottawa, Mr. Robertson said:

"Since 1950, the difference in basic China policy between former President Truman and President Eisenhower is the difference between tweedle-dum and tweedle-dee.

"In early 1950, following the Communist take-over of the mainland in December 1949, at about the time of British recognition, President Truman vetoed the recommendation made to him that we recognize Red China. The Republican attack on the Democrats in the 1952 election campaign was not on basic China policy as it then was, but rather on what was alleged to have been the vacillations and blunders which had helped create the Frankenstein monster of Red China and enhance its menace to the free world.

"In 1956, an election year, a Democratic-sponsored resolution, reaffirming support of the Republic of China and opposing the seating of Red China in the United Nations, passed the House by a vote of 391 to 0 and by 86 to 0 in the Senate. Not a single Congressman or Senator of either party was willing to vote against this resolution. This is a phenomenon unprecedented in American political history. When the parties later assembled for their national conventions, they adopted almost identical planks in support of this policy. In the recent Taiwan (Formosa) crisis, Mr. Truman was among the first to come out in strong support of President Eisenhower's position. To repeat, the differences of opinion about China policy do not represent differences between political parties, but rather differences between individuals, irrespective of party lines."

Mr. Robertson has made numerous speeches about the whole China problem in the last few years, and has been perhaps the country's most outstanding champion of the American policy in the Far East.

He says opposition to the Red China regime is not based on "disapproval of an ideology or an economic system, much as we abhor both." He asserts that American policy is based "on the collective security of the free world." He sees any possible acceptance of Red China's regime as meaning the liquidation of American alliances in the Philippines and Southeast Asia, danger to the Korea Republic, and the collapse of our military allies in the Western Pacific who possess considerable manpower which if not available would have to be substituted for by millions of American soldiers.

Mr. Robertson points out that very few countries have recognized Red China since the Communist aggression in Korea in June 1950. He adds:

"Instead of being isolated, we stand with the overwhelming majority of the countries of the free world in this position. It is essential that this majority continue to stand together."

Walter Robertson's espousal of the cause of a free China will long be remembered. And it is a safe bet that he will continue to

give whatever energy he has left to the cause for which he has struggled this last decade, despite frequent intervals of ill health. He is truly one of the great public servants of our times.

FRANK LLOYD WRIGHT

Mr. PROXMIRE. Mr. President, a truly great American passed away Thursday morning. His loss was felt across the Nation. Monuments to his genius, vision, and courage literally circle the globe. In this sense he will never die.

Frank Lloyd Wright was born June 8, 1869. He died April 9, 1959. A seeker after truth, a creator of beauty, a gladiator for principle, he left his mark, beyond all others, in his chosen field of architecture. He was born, lived, studied, taught, and worked in Wisconsin; but we dare not claim him for ourselves alone. He belongs to the Nation and the world, to his contemporaries and to generations yet unborn.

Frank Lloyd Wright was born in Richland Center, Wis. He died in Phoenix, Ariz. In the nearly 90 years that passed between these two events he wrought a profound change in the course and development of the art of architecture.

He brought to his art the revolutionary concept that the design and construction of a building should provide the greatest possible usefulness to those who dwell within it. Above all, he stressed the principle that the innate beauty and distinctiveness of the site of a building should be extended and emphasized in the building which grew out of the site.

He received his formal education at the University of Wisconsin, where he completed a 4-year course in civil engineering at the age of 19.

Frank Lloyd Wright was a man of strong convictions, articulate pronouncements, and tremendous imagination. A few years ago, he summed up the guiding principle of his life in these words:

> Early in life I had to choose between honest arrogance and hypocritical humility. I chose honest arrogance and have seen no occasion to change.

Frank Lloyd Wright's unique and wonderful contributions to the American scene reach back to a time before the turn of the century. His fame and impact continued to grow over the years.

His original creations are all but numberless; his effect, immeasurable. He was given the highest honors fellow architects could bestow in this Nation and a half a dozen other lands, including England, Italy, and Japan.

This active man found time to write nine books during the course of his life and, until his final illness struck him down last Saturday, he was as active as he had always been; and his spirit was that of youth.

I join with my State and Nation in a final salute to this great American.

Mr. JAVITS. Mr. President, will the Senator from Wisconsin allow some of us to join with him in the memorial to Frank Lloyd Wright?

Mr. PROXMIRE. I yield for that purpose.

Mr. JAVITS. I shall be very brief. I merely desire to join in the sentiments expressed by the distinguished Senator from Wisconsin about this great American, who was responsible for literally a revolution in an art which has been one of the glories of mankind for centuries. I think all of us can well pause a moment to pay tribute to a great American and a creative genius.

Mr. WILEY. Mr. President, will the Senator yield?

Mr. PROXMIRE. I yield to my colleague from Wisconsin.

Mr. WILEY. I was personally acquainted with Frank Lloyd Wright. A few days ago I received a letter asking me to attend a birthday celebration which was to be held a few weeks ahead.

I agree that in his passing America is saddened by the loss of one of her most illustrious sons.

This great architect was a friend of mine. I am proud of our association, and have profited from having known him.

He was called a nonconformist. If being a stanch individualist is nonconformity, then he was a nonconformist.

He was called a radical. If believing in new creation is radical, then he was that.

He was called an influence on society. If being an inspiration to others is influential, then he was that.

A designer of more than 700 buildings, Mr. Wright left his special and unique mark on landscapes around the world. He was the recipient of awards and honors from virtually all leading Western nations. By combining imaginative, modern building methods with the traditional beauty of nature, he achieved fame as an artist of the first magnitude and a leading contributor to American culture.

Frank Lloyd Wright once said that a house is a part of its environment, and graces its environment, rather than disgraces it. Mr. President, I suggest that the same sentiment can be applied to this famous native of Wisconsin; he also lent grace and beauty to his surroundings.

He has now passed to his eternal reward. But while Frank Lloyd Wright is gone from our sight, his genius remains as a lasting inspiration for those who follow. He will not be forgotten.

ONE HUNDREDTH ANNIVERSARY OF WAUKESHA FREEMAN

Mr. PROXMIRE. Mr. President, a century ago in the city of Waukesha, Wis., there was born a newspaper which was conceived in the spirit of freedom and the cause of abolition. The cause is long since won; but the spirit has never burned brighter in the pages of this newspaper.

The name of this newspaper, the Waukesha Freeman, is peculiarly fitting. Over the years it has made a solid contribution to the cause of freedom and the traditions of American journalism.

Most illustrative of the Freeman spirit in modern times has been this newspaper's constant devotion to the elimination of secrecy in government through public access to government records and meetings.

In this all-important struggle against secrecy, the Waukesha Freeman has been a leader and moving force among the newspapers of Wisconsin, striking one blow after another for good government, without regard to partisan implications.

Here, too, is a newspaper of integrity, constantly striving for objectivity in its news columns and responsibility in its editorials.

I salute this newspaper and its publisher, Mrs. J. H. Youmans. May the Waukesha Freeman give another 100 years of responsible, dedicated service to its community, State, and Nation.

Mr. President——

The PRESIDING OFFICER. The Senator from Wisconsin.

THE SOVIET ECONOMIC CHALLENGE—ADDRESS BY FORMER SENATOR WILLIAM BENTON, OF CONNECTICUT

Mr. PROXMIRE. Mr. President, William Benton, a distinguished former Member of this body, delivered a remarkably perceptive and timely address Wednesday night on "The Soviet Economic Challenge." Former Senator Benton addressed the Economic Club of Chicago. What this outstanding American said is so pertinent to the economic, the foreign aid, and the military legislation we will consider at this session that I ask unanimous consent to have the speech printed in the RECORD at this point. I enthusiastically urge my colleagues to read it.

There being no objection, the speech was ordered to be printed in the RECORD, as follows:

THE SOVIET ECONOMIC CHALLENGE

(Address by Hon. William Benton, annual meeting, Economic Club of Chicago, Chicago, April 8, 1959)

I congratulate the Economic Club of Chicago and its president, Jim Downs, on this series of talks. Your club has been focusing on the gravest economic problem of our time—indeed of any modern time. You can hope that out of this series you may have a better chance to understand the problem and to do something about it.

I have not read the papers of my three predecessors on your speaking program. I didn't want to find out that they'd stolen my stuff and I didn't want to be accused of stealing theirs. But I know something of their views—for example, of my friend Philip Reed's comforting prediction that it will take the U.S.S.R. a century to catch up with the United States in production of electric power.

Thus I suspect that I shall be more of a Cassandra than they. Tonight I cannot be the optimist I've often been in my activities in Chicago, which began when I first came here to work in 1928 as assistant general manager of Lord & Thomas. Chicago generates optimism. It seems safe and it has been sure. It is the world's greatest business city. It is world capital and symbol of economic productivity. For 100 years it has specialized in putting its broad shoulders behind what can't be done—and then doing it.

In this city where my business interests again center and where my oldest son has settled for his business life—I am not happy tonight as prophet of danger and potential disaster.

As I try to peer into the future, I shall begin with an aphorism: the risk of underestimating the opposition is much graver than the risk of overestimating it. This is more than merely a good general rule for

business executives when they appraise their competition. It is far more important when we Americans now seek to appraise the U.S.S.R. It is far more applicable when the opposition is armed with hydrogen bombs. Here we face no mere matter of the P and L statement, but a matter of life and death.

We should have learned this rule in 1949, when the Soviets exploded their first atomic bomb years before we thought they could. We should have relearned it in 1953, when they exploded a hydrogen bomb—and again years ahead. We did begin to learn it in 1957 when the first sputnik went into orbit.

This rule of power politics—the rule that a country should not underestimate its opposition—will be superficially examined by me tonight in the field of trade and economic rivalry—in other words, in terms of the Soviet economic challenge.

Way back in 1955 Nikita Khrushchev told a group of U.S. Congressmen: "We value trade least for economic reasons and most for political reasons." This statement mirrors orthodox Communist theory.

In 1957 Khrushchev put this even more sharply. In an oft quoted statement, he said "We declare war on you * * * in the peaceful field of trade. We declare war. We will win over the United States. The threat to the United States is not the ICBM but in the field of peaceful production. We are relentless in this and it will prove the superiority of our system."

Khruschev finds many who believe him. A few months back, our Government discovered to its chagrin that President Kubitschek of Brazil was circulating a memorandum estimating that the Soviet Union, in the not too distant future, will be our superior in industrial production. By 1980, when many Chicagoans in this room may hope still to be alive, Dr. Kubitschek's document estimated Soviet gross national production at the rate of $1,561 billion annually, and that of the United States at only $858 billion or about half.

Yes, the U.S.S.R. means to cross swords with us in the battle of production and trade. She throws down her gauntlet to us as the leading economic power in the world. She feels sure she has the weapons for a successful challenge and many foreign observers agree.

To help us decide whether we must now roll up our sleeves and tighten our belts, let us examine some of the elements of Soviet economic strength. I shall give you four.

The Soviet rulers claim that by 1965 the economic defeat of capitalism will have been accomplished, though the United States is expected to continue to struggle against the inevitable and will not yield production leadership to the U.S.S.R. until 1970. By then, the worldwide moral and political defeat of the United States and of its private enterprise economy will be obvious even to the United States.

Now we used to scoff at Soviet claims—but again and again the so-called visions of Stalin have turned into realities; and today we scoff only at our own peril.

Last November Khrushchev said to Walter Lippmann: "We will cause you, the Americans, more trouble each year. At present the United States is the richest and most productive country in the world. But it is living in the last years of its greatness. Shortly the U.S.S.R. will surpass the United States in productivity per capita. When that is achieved, the people (of the poor countries) will be convinced in their stomachs. That is your danger, not our H-bombs."

Late last year the official magazine of the Soviet Foreign Trade Ministry gloated that Soviet foreign trade had helped curb the profits of what is called the supermonopolies. And a Soviet economist has recently declared that by 1965 the U.S.S.R. will be calling the tune on world prices.

Here is what Khrushchev told the Soviet Communist Party's 21st congress this past January:

"Think of this comrades. Although the socialist countries occupy only a fourth of the earth's territory, although the majority of these countries were backward in the recent past, the time is not distant when they will produce more than half of the world's industrial output. The countries of the socialist camp have all the prerequisites for winning the championship in world production. We want the competition to take place not in an arms race, not in the manufacture of atom and hydrogen bombs and rockets, but in the realm of industrial production—meat, butter, milk, clothing, footwear and other consumer goods. Let the peoples see which regime better meets their requirements and let them pay their due to each regime according to its deserts."

Such trumpetings, as propaganda in today's world, are proving increasingly effective among the peoples of the so-called uncommitted countries whose populations total 1 billion human beings—well over a third of the human race. This is because of the comparisons that Soviet propaganda can now make between the rates of growth of our economy and theirs. Since 1957 our own economy can almost be said to have been in retreat—while the economy of the Communist world—Russia and China in particular—is surging forward with giant steps.

The U.S.S.R. claims an economic growth this year of 10 percent. Here is the first of the four potent weapons in the Soviet economic and propaganda arsenal.

Let's take steel production. The Soviet goal for 1965, for the U.S.S.R., alone, is 100 million tons and the Chinese goal seems to be expanding monthly. Last year, for the first time, the Communist bloc, including the U.S.S.R., its East European satellites and China, produced more steel than did the United States. Half our capacity—an amount equal to the U.S.S.R. production—was idle. Let me put this another way. The American steel furnaces that were cold last year could have produced as much steel as all the furnaces in the Soviet Union.

Allen Dulles, Director of the Central Intelligence Agency, reminded the U.S. chamber last April that "a recession is an expensive luxury." "Its effects are not confined to our own shores," Mr. Dulles continued. Then he warned, "Soviet propagandists have had a field day in recent months, pounding away at American free enterprise." This warning is minimized by many American economists who stress our historic rate of a 3 percent average annual economic growth. They do not throw into the balance the harmful impact of the Soviet propaganda dramatizing our setbacks and our millions of unemployed.

Radio Moscow tells the peoples of Asia and Africa and Latin America, "It took the West a hundred years to build its production system; follow ours and you can do it in twenty."

Perhaps I should interpolate here that the world unhappily is not filled with people who share your views and mine that, even if the Soviet Union were to learn to outproduce us 100 to 1, we would still most fervently prefer a system designed to serve the freedom, the dignity and the development of the individual. We would still prefer our system to any system aimed at the glorification of the party or the state.

Let me now turn to another example of the Soviet challenge— their trade offensive. This is their economic weapon No. 2.

The U.S.S.R. needs surpluses and raw materials which we often reject, let us say the cotton of Egypt or the rice of Thailand and Burma. When it doesn't need the rice, it can still acquire it and resell it at cut prices. The non-Communist rice-exporting countries call this dumping.

(In a dispatch from Chicago dated March 28, the New York Times quoted Mr. Charles B. Shuman, president of the American Farm Bureau Federation, as having "evidence that the Soviet Union was using cut price wheat—including some that had originated on U.S. farms—as an economic warfare weapon." The Times said that Mr. Shuman "expressed the fear that the Soviet Union would replace the United States in the Western European market.")

The Russians can flood the market with their surplus tin. In Bolivia, where tin is the vital life stream, there are riots. Against the Russians? No. Against us. It is true that the most recent riot was touched off by a statement in Time magazine. But the underlying cause was the depressed market for tin.

Soviet petroleum finds its way to Argentina and Uruguay. This tends to dry up the markets for Venezuelan oil. So does President Eisenhower's executive order establishing a quota on oil imports into the United States. This order pleased our oil producers in Oklahoma and Texas but it cut our purchases of Venezuelan oil by $250,000 a day. Vice President NIXON heard about oil when he visited Caracas—and with insults and brickbats. Will there be unemployment in other oil producing countries? The Russians won't hear much about it. But we will.

Soviet automobiles are appearing on the German market. They are selling at low prices and they aren't being advertised. The Soviets haven't yet learned the power of commercial advertising to help sell their goods in export markets. They are beginning to use advertising domestically to dispose of surpluses or to stimulate savings, as I reported in Sales Management on my return from U.S.S.R. 3 years ago. And I now predict that the U.S.S.R. will shortly begin to learn how to use export advertising. This will add measurably to the formidability of Soviet competition in export markets.

There are persistent Soviet bids for more trade with Britain. Three years ago Khrushchev, visiting England, spoke contemptuously of current Soviet-British trade as the exchange of Russian crabs for British herrings. He offered to buy almost $3 billion of British goods if the embargo on strategic exports were removed. And now Mikoyan roams the world markets, beating the drums for Soviet products, ready to buy or sell from either pocket, ready to undercut other countries' prices, and holding out the hope of Soviet loans at 2 percent for 40 years.

This last point dramatizes still another element of the Soviet economic offensive. This is their economic weapon No. 3. It is no less than the coming challenge to the dollar by the ruble.

LaSalle Street, please take note.

The London economist recently reported that the head of a large Zurich bank had wagered the Chairman of our Federal Reserve Board a case of champagne that the United States will devalue the dollar within 3 years. And the house of Montagu, the big London bullion house, in the Bullion Review for 1958, tells us a few facts about Soviet gold production. It was about 17 million ounces both in 1957 and in 1958. That's about $600 million a year—on the same order as South African output. Soviet gold reserves are estimated up to $10 billion. Montagu makes some comments, too, on the possible devaluation of the dollar: "One cannot exclude the possibility that a further decline in dollar holdings (and they mean dollar holdings by foreign countries) caused by the American Government's difficulties in handling its financial problems might well force the hands of the American authorities."

There is no Marxist nonsense in Soviet banking operations. Russian bankers operate today much as they did under the czars. They don't believe in capitalism, but they believe in capital and they handle it along capitalistic lines. Our bankers will

tell you that Soviet gold is a pleasure—and a profit—to handle. It is always perfectly assayed. And it is beautifully packaged, so that the banks always make just a little bit more when they handle Moscow gold than with any other country's gold.

Soviet gold now trickles into the West at the rate of about 7 million ounces a year. This is roughly a quarter billion dollars. It isn't enough to disturb the delicate balance of the gold market.

But what did Mr. Mikoyan urge last summer in an article in the Soviet magazine International Affairs? He proposed nothing less than that the United States raise the price of gold. This of course devaluates the dollar. He contended that the price of gold is artificially established by the United States at a low rate which we impose on countries from which we buy gold—as a form of tribute collected by us.

In the Soviet foreign trade journal, Vseshnyaya Torgovlya, Mr. Mikoyan stated that in the not too distant future the ruble, export of which has been forbidden for 30 years, will be made fully convertible on international exchanges.

Both of these magazine articles by Mikoyan sustain reports that the Russians plan a revolution in international finance. In the Soviet view, the ruble is to displace the dollar as the dominant medium of international exchange even in the non-Communist world.

Such a belief would have seemed foolish—or merely a nightmare—a few years ago. And today? I'm not a financial expert—but I wonder. Soviet industrial diamonds and gem diamonds soon will be competing with those of South Africa. The international ruble will have gold and a growing flood of commodities as its backing. And in a death grapple between the ruble and the dollar, what will be the fate of the relatively free system of finance that has so long dominated the international world of money?

Fourth and finally, we of the United States are now dangerously facing a Soviet challenge in the field of foreign aid. During the next decade, this may turn out to be the most important of all the Soviet economic weapons. Recently Under Secretary of State Dillon reported that Soviet commitments to underdeveloped and uncommitted nations for the year 1958 amounted to $1 billion. Mr. Dillon said this represented "a dramatic acceleration of the tempo of the drive."

By comparison with our own, the Soviet program of aid to underdeveloped countries has been small—with a total commitment of only 2½ billions since the war, mostly in long-term low-interest credits. Some experts believe the program will continue to be relatively modest. But others estimate that within 10 years the Soviet economy will be able to provide a surplus of 10 billions annually for export—if its leaders elect to do so. If the tempo continues to accelerate, they may readily so elect.

The Russians are playing for big stakes and they know what the stakes are. They expect and they get political value for their money even when the money's small. Their anti-Western line is quite clear. They tell the underdeveloped countries to expropriate Western property and to reject Western aid. They promise help without the enslaving conditions we impose. That we do not enslave is of no importance, so long as the Soviets are able to sell the idea that we intend to.

In India recently, there was a dramatic demonstration of the effectiveness of the Soviet aid and propaganda program. Two steel mills of 1-million-ton capacity were opened on 2 successive days. The first had been built by a group of West German and Indian industrialists. Its opening passed relatively unnoticed. The second was built and financed by the Soviet Union. It opened amidst a fanfare of publicity, a flood of propaganda that made it appear to India and surely much of the underdeveloped world that the Soviet Union was India's principal benefactor in her struggle toward self-sufficiency.

Yes, perhaps the gravest threat to the Western World in the emerging Soviet economic challenge is the accelerating program of Soviet economic aid, and the skill with which it's handled.

Now I've mentioned four forms of Soviet economic challenge. As a Cassandra, I could go on. But I am not here to argue that the Russians are 10 feet tall. I'm merely arguing that when we Americans are in a life and death struggle we shall be well advised if we do not underestimate our competition. I'm trying to dissolve any illusion that the United States is necessarily the big man and that the U.S.S.R. is the little man and that a good big man always beats a good little man.

Manifestly there are deep-seated flaws inherent in the Soviet system. Further, there are cancerous economic flaws wholly apart from the purges, the tyranny and the political doubledealing.

One is the unsolved problem of succession in a dictatorship—how, without terror and bloodshed, to transfer power from one regime to the next. Stalin was in his forties when he became absolute ruler, but Khrushchev is already 65. This is Sears, Roebuck's newly advanced retiring age (it was 60 in 1942 when General Wood turned over the Britannica to the University of Chicago, and advised me to keep it at 60).

Now I don't know the condition of Khrushchev's liver; he looks healthy enough in his pictures. And it takes a man in good health to stand up against HUBERT HUMPHREY for 8½ hours. But I would wager that the jockeying is on among those who want to sit where he sits. He may be temporarily succeeded, as was Stalin and before him Lenin, by an oligarchy of unquiet men scheming among themselves for the ultimate power. Such a struggle might lead to another round of liberalization within the U.S.S.R. This would be all to the good. Or it might deflect Communist energies away from an international offensive. Such a respite might of course be only temporary.

There are factors and trends that could work in our favor. For 40 years the people of the U.S.S.R. have been hearing about the better life that is in store for them. It is true that most Soviet citizens are today better off materially than their fathers were before the revolution. But all things are relative, and twice one egg per week is still only two eggs. Their lot has been alleviated—but only to a degree that may whet their appetites for more. We can wait with some hope for that mellowing process predicted by George Kennan.

The astute politician Khrushchev today seldom makes a major speech without pointing to Soviet accomplishments in increasing the output of food and to a future with good housing, and enough meat, milk, and clothing for all. Perhaps he feels that the Soviet people may never again be as supine as they were in the years when Stalin was operating on Lenin's dictum that it was necessary to sacrifice two entire generations in order to achieve the revolution.

Illiteracy in the U.S.S.R. has been largely wiped out for those under 45. In my book of last year, "This Is the Challenge," I again reported how the booming Soviet educational system—or rather its training system—is turning out tremendous crops of competent professional men and women, administrators and technicians—and thus creating a new version of a middle class. Allen Dulles has expressed the cautious hope that education may prove the Achilles heel of the Soviet system. The Kremlin may indeed find it an increasingly harder problem to manipuate the people of the U.S.S.R.

Alexis de Toqueville in his book, "The Old Regime," said: "The evils which are endured with patience so long as they are inevitable seem intolerable as soon as a hope can be entertained of escaping them." The Russian people found the evils of the Czars intolerable and ultimately escaped them; and no man can say for sure that this may not happen again even though there seems small hope at present for any significant or imminent change in the regime or its policies.

There is a major factor which should not be minimized. If I were purely a Cassandra, I would overlook it. This factor is China. In a few years your banquet speakers will perhaps be focusing on a new problem which they will tell you is the gravest in all our history. They may tell you that in 1959 we Americans were fighting the wrong cold war—and they may be right. Peking claims that China's production of steel and grain doubled in 1958. Twice one egg is still only two eggs, but it's a much bigger omelet when stirred by 600 million people. To the Soviet Union or to the rest of us it is clear that Mao Tse-tung, Chou En-lai and company are reorganizing China to achieve the last ounce of productivity.

There is a wisecrack current in Moscow. Khrushchev's 7-year plan, they say, is not aimed at catching up with the United States, but at keeping ahead of China. The United Nations forecasts a Chinese population of 1.6 billion by the year 2000. The Soviet population is now 207 million, less than a third of China's, and growing much more slowly. The prospect of an explosive over-populated China immediately south of Russia's rich and underpopulated Siberia must be cause for concern in Moscow. Former Premier Paul Reynaud at a conference I attended in Bern last summer asserted that China's abandonment of birth control is one of the most significant political developments since the war. The Soviets understand such developments.

But I fear any effort to find a silver lining in China's growing strength makes tonight's cloud the more ominous.

Is a powerful China, seemingly more Communist than the Kremlin, likely to weaken the worldwide economic challenge of communism? We may indeed some day find ourselves allied with the U.S.S.R. against Communist China, but is this a comforting thought for the members of the Economic Club of Chicago to take home to their wives and daughters tonight?

I hope that I may by now have persuaded many of you that the arguments are powerful that America's present necessity is to gear up for the coming economic competition.

Now do I have any suggestions as to how best to gear ourselves up?

Yes, I have a few, though I have advanced some of them so often that they may seem tarnished if not shopworn to some of you. However, this does not prove they are not good. A secondhand set of Encyclopedia Britannica is still better than the Book of Knowledge. (I say this as a bow to the many executives of Britannica and Britannica Films in the audience tonight.)

Of course, the first and most essential task of the United States is to continue to maintain and further to build up our defense establishments; this is a subject for another speech, though not by me. Perhaps I should remind you, however, that many who have studied the subject feel that our defense budgets should be stepped up at a rate of at least $3 billion a year. A great political scientist, who spends his life studying world trends, told me last month that he thought the odds on a nuclear war had shifted in the last 5 years from 1 in 100 to 1 in 10. He advises me to purchase three hideaways (he prefers to call them lodges), at 10 or

12,000 feet altitude, one in South America, the second in Southeast Asia, and the third in Africa. "Keep one member of your family out of the United States at all times," he warns.

If he is right, $3 billion a year is far too little. We must weigh his arguments. Our understanding of reality is essential to our survival in freedom.

Our second objective for our economy, as I see it, is to produce at full capacity, or close to full capacity. We must pursue policies which insure an expanding economy. What we should produce, and how our total production should be divided among goods and services, is another question. We have largely solved the technical problem of production; what we have not solved is the problem of maintaining an economy at full momentum and of channeling its production into those goods and services most vitally in the national interest.

For the last several years, our growth rate has been considerably less than our traditional 3 percent. Almost 2 years ago, in the third quarter of 1957, our gross national product reached its peak—we were then producing at the annual rate of $451.1 billion. The recession came along and gross national product sagged. A low annual rate of $429.2 billion came in the first quarter of 1958. The average for the year ended up at $437.7 billion. (These figures are all in 1958 prices.) Today it is creeping back up—but with 5 million or 6 million unemployed. It is at least $20 billion behind what we might reasonably expect with high employment.

Now it takes no financial or mathematical genius to discover that if the current or recent rates of our own economy and the Soviets are maintained—that they will shortly surpass us in gross national product—and with a minimum of fintailed Cadillacs or plastic covers for the hats that cover the heads that cover our brains.

Can we Americans afford to settle for a growth rate of less than the 5 percent set as a goal in the 1958 report of the Rockefeller Brothers Fund? This is no quota set by an optimistic sales manager. It is a rate of growth calculated by a panel of carefully chosen experts to accommodate sharply increased defense expenditures deemed essential; to cover increased and essential domestic expenditures in such fields as education; and to provide for a 2.8 percent per annum growth of private per capita consumption. Thus it seems to promise that we can have our cake and eat it, too. If we get the breaks, perhaps we can and perhaps such an example on our part will help lead the world to peace. At any rate, we should seek to develop national policies directed toward such a goal. This requires skilled and courageous political leadership applied to national tax policies, budget, and monetary policies.

One distinguished economist estimates we must double our current or historical rates of savings and investments to achieve the Rockefeller goal. We must work more, but if we do it will be easier to save more.

The recently inaugurated study by the Joint Economic Committee of Congress was projected on the motion of the committee chairman, Chicago's own distinguished economist, Senator PAUL DOUGLAS. This is planned as a 10-month $200,000 study of economic growth, employment, and inflation. Few congressional probes could be more timely and important. The first four preliminary witnesses who were heard late last month—Dean Neil Jacoby, who was active here at the University of Chicago for many years, Prof. Sumner Slichter, of Harvard; Leon Keyserling and Marriner Eccles—indicate the high level of economic competence being enlisted.

A third front on which we must fight is that of economic aid. Here again I turn to a recent but neglected report of the Rockefeller Brothers Fund. This one is titled "Foreign Economic Policy in the 20th Century." It says, "The selective economic program of the Soviet Union is politically effective primarily to the extent that weak countries must face the strong Soviet economy alone. If these countries are part of larger groupings they will be able to resist pressure more easily and negotiate on a more nearly equal basis.

"The Soviet effort is impressive primarily because the free world has failed to develop a workable structure within which the industrialized and newly developing regions can cooperate in fulfilling the aspirations of their peoples."

The report continues, "The free world can withstand the impact of the Soviet geopolitical trade offensive, if it organizes itself to do so. The more highly industrialized nations of the world are linked to the less developed nations by a two-way trade of goods that totals more than $35 billion annually or almost 30 times the amount of trade between the less-developed countries and the Communist bloc.

"By building appropriate international institutions on the solid basis of existing mutual interest, the free world can perpetuate an advantage that lies overwhelmingly on its side."

I endorse the conclusions of this report. I believe the American people are again prepared to take what Clarence Randall, of Chicago, has called "the bold and costly measures to avert disaster in this contest."

Annual increases in productivity can of course make it far easier for us to increase our foreign aid programs, and to put them on a long-term basis, not an uncertain annual basis, bolstered along the lines of Senator MONRONEY's Development Loan Fund.

Further, we should develop new ways to stimulate private investment abroad, particularly in underdeveloped countries. I am tempted by Clarence Randall's proposal that the tax exemptions we now give to profits from investments in Latin America should be extended to the entire world. In his provocative article in the current Atlantic Monthly, he urges, "genuine partnerships and immediate and generous sharing with local capital of both the risks and the opportunities."

I am not now prepared to join those who are suggesting that America must create a Government monopoly of foreign trade in order to meet the Soviet challenge. This can come; I am told it is being discussed in the State Department and papers are being prepared on it—as indeed they should be. But I am hopeful that we can avoid violating our antitrust laws in ways that are repugnant to many of us in the business community and to a great majority of our voters.

We are quick to accuse the Soviets of politically motivated foreign trade. Yet many of their policies, like ours, may seem rational from the standpoint of their domestic economy. Our trade, too, is governed by political considerations—domestic ones affecting farm policies, for example—or our oil quotas to which I've just referred—or our tariffs, as the Illinois and Connecticut Manufacturers Associations can tell you.

The United States should do all it reasonably can to reduce tariffs and trade barriers and thus stimulate world trade generally. In his testimony before Senator DOUGLAS' committee, Professor Slichter suggested that tariff reduction would hold down U.S. prices, and thus counteract inflation.

And should we exclude the Soviets from our trade? Might not trade with them help encourage the trends we desire? In his new book, Adlai Stevenson asks these questions: "So why not trade with them? Why not help them improve their living standards? Why not encourage the growth of material abundance and thereby make it harder to preserve the secrecy, ignorance, and tight controls of the Soviet system? Why not help the Soviet leaders subvert their own system of fear with the confidence bred of plenty?"

Finally, in my list of quick suggestions, I remind you that I have been identified, over the years, first in the Department of State and later in the Senate, with proposals for strengthening America's programs of international information and cultural exchange. These can have profound impact on the economic struggle. They should be greatly enlarged.

We must not neglect the export of people and ideas as well as goods. Clarence Randall complains that our representatives can't speak "the language of the people with whom we must deal each day." I have previously proposed the creation of centers for the training of technical assistance experts—"West Points of Point 4," I called them, and I repeat the suggestion here. The graduates of such centers would serve overseas for a few years as the graduates of our service academies serve in the armed services. They would receive a most marvelous training for the business world we like to envisage for the future.

A few fissures have opened in the Iron Curtain. More can be developed with a little leadership and money, as I pointed out last year in testimony to the Foreign Relations Committee of the Senate. One of our most hopeful lines of action is to make the Soviet people aware of how wide the discrepancy is between their own standard of living and that of the West. The Soviet press so fears this issue that it failed to print Prime Minister Macmillan's broadcast in Moscow about how well the British people live and how much higher British per capita production is than the U.S.S.R.'s. I suggest that we set up this issue as a precondition of the summit meeting sought so eagerly by Khrushchev. Let him agree to carry its proceedings in the Soviet press and on its radio and TV. Challenge him to expose his people to the great international debates of the times at the summit meeting. If he wants the summit, let his people listen to what goes on there.

I shall pass over tonight, as a subject for another speech, and this one I would like to make, the ignorance of our own people and the importance of informing them. On March 18, James Reston reported dismay in Washington because in a spot check the New York Times discovered that 39 percent of those questioned did not know that Berlin is an enclave in Communist East Germany. Such ignorance is a commentary on the American press, radio, and TV—as much as on the American people. Our press and radio may be free, but they are far from adequate.

Now you may say, as I conclude, that measures I have ticked off quickly will cost a lot of money. I reply that the money is tiny compared to our national income, and our Defense Department costs. In view of our great danger and our urgent need, I, for one, am prepared to face up to higher taxes. We are confronted with a new emergency no less real than war, and potentially equally menacing because if we do not meet it, war may not be far behind.

Governor Stevenson is perhaps well enough established in this economic citadel, for me to quote him tonight. In grave and solemn words he reported on his last year's trip to the U.S.S.R. He wrote, "my conclusion is that our Russian competitors are much tougher than most of us have yet realized—and that this time we might get licked, unless we are willing to change our habits, our political behavior and our complacent outlook on the world."

Can we rediscover in time the values which made our Western revolutions infinitely greater than Lenin's? Can we check and reverse our national slide toward complacency? By dedication and hard work, can

we demonstrate anew what we mean by the good life and the good society? These are the questions before the American people today.

How we respond to them, my friends of the Economic Club, is the key to the future. It is the challenge of our time.

THE EFFECTS OF INFLATION

Mr. WILEY. Mr. President, I was talking to a very distinguished gentleman the other day and I wish to give the Senate the benefit of some of his ideas.

The party which will come out against inflation, and not merely talk but do something about it, will win the election next year.

Mr. President, I have spoken on that subject on the floor of the Senate a number of times. I brought into focus what inflation has done to the investors of America—investors in Government bonds and in life insurance.

I have also commented on the effects of inflation on the savings of the old folk, including retired schoolteachers and others who are living on pensions. Yet, Mr. President, we go right on spending without raising taxes to pay for the spending.

I should like to have a test vote in the Senate—a vote which will really test the convictions of Senators on the subject of more spending and the failure to increase taxes.

The President's suggestions of increasing by 1½ cents the tax on Federal fuel oil, cutting the depletion allowance for oil and gas companies from 27.5 to 15 percent, and reinstating the excess profits tax of 1950, are not receiving consideration. Have we not the intestinal fortitude, if we are convinced that this is necessary, to take the needed action?

Recently, in the New York Herald Tribune, under date of April 8, 1959, a thought-provoking article of Roscoe Drummond was published. He mentions the bill of which I am a cosponsor, with the Senator from Oregon [Mr. NEUBERGER], which would give the President standby power to hold wages and prices within bounds.

Mr. President, if we do not do this and if we keep on appropriating more money, the effect upon the 40 million bondholders and 120 million insurance policyholders will be reflected in November 1960.

I ask unanimous consent that the article written by Mr. Drummond be printed in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

BUDGET BALANCING, INFLATION CONTROL FOUND MOSTLY TALK

(By Roscoe Drummond)

WASHINGTON.—I wonder if the time hasn't come to begin facing the facts on the budget.

The administration says it wants to balance the budget by cutting spending but it is not proposing to cut enough to do it. Most Democrats say they want to balance the budget but are proposing more spending without more taxes.

The end result is lip-service to a balanced budget and no action equal to balancing the budget.

The Republican leaders contend it is vital to balance the budget in order to control inflation.

The Democratic leaders say it is desirable to balance the budget to control inflation.

Neither are doing anything effective about it.

Both sides alluringly hint at the prospect of lowering taxes in another year. This is made up of equal parts of wishful thinking and reckless talk. The fact is that appropriations authorized in the past, including this year, will raise Federal spending at least $2 billion above the minimum budget for 1959–60 and who knows what is going to happen over Berlin and other exposed fronts in the cold war?

If we are going to have a balanced budget for the next fiscal year, both parties will have to struggle harder against the current. The administration would have to cut deeper into the appropriations it is asking really to stand for a balanced budget. The Democrats would have to pass higher taxes to make up for the higher spending they are approving.

Right now I can spot only one earnest, plain-speaking lonely Member of the U.S. Senate who is proposing spending measures equal to his convictions and increased taxes equal to his proposals. He is Senator RICHARD L. NEUBERGER, Democrat, of Oregon, who has recently advocated:

1. The two revenue increases sought by President Eisenhower and supported by practically nobody in either party; namely, to put 1½ cents more per gallon on the Federal fuel tax to pay for the vast highway program and to bring postal rates more in line with increased costs. Revenues yield about $1 billion.

2. Two revenue bills of his own initiative, one to cut the depletion allowances for oil and gas companies from 27.5 percent to 15 percent, and the other to reinstate the excess profits tax of 1950. Estimated revenue yield about $1,900 million.

I am not arguing that everything Mr. NEUBERGER wants to spend is vital or that his tax proposals are automatically the best way to raise the revenue. But I would like to say that the consistent, coherent, candid stand he is taking is as rare and as welcome as a two-minute speech in the Senate.

His criticism of both parties is arresting. It is his conviction:

That the Republicans shrink from facing up to the social needs of a greatly expanding population for fear it will require higher taxes to meet those needs.

That the Democrats shrink from facing up to the necessity of increased taxation even when they vote for greatly increased expenditures.

He holds that the Republicans are blind to what needs to be done and that the Democrats are blind to the consequences of doing it. His appeal is for more consistency, more candor. He believes the voters would reward both.

To control inflation Senator NEUBERGER holds that a balanced budget is not enough. He points out that it wasn't enough in the years 1947 and 1948 during which the 2-year budget surplus was $9 billion and the cost of living increase was 22 percent.

Along with Senator ALEXANDER WILEY, Republican, of Wisconsin, cosponsor, Senator NEUBERGER is asking Congress to give the President standby powers to control wages and prices. His argument is that since labor doesn't want wage control and management doesn't want price control, the best way for the President to get labor and management to hold both wages and prices within bounds is to let these unhappy alternatives be a little more visible.

PAYMENTS IN LIEU OF TAXES TO COMMUNITIES WITHIN WHICH FEDERAL PROPERTY IS LOCATED

Mr. WILEY. Mr. President, as we know, the Government Operations Committee has just concluded hearings on S. 910, the measure to authorize payment to local communities in lieu of taxes on federally owned property.

As a cosponsor of this bill, I am naturally delighted that action is moving forward on this proposal.

I realize that this measure will require the appropriation of Federal money, and I am also well aware, of course, that the Government already has a substantial demand for outlays, and that it will be extremely difficult to keep the budget in balance.

The question arises, however, whether this justifies the existence of the inequitable situation in which local communities—also having difficulty meeting expenses—have their sources of revenue curtailed because of the existence of nontaxpaying Federal property within the area. We recognize, of course, that in many instances this property requires water, sewage, and other public services at cost to the local taxpayers.

In view of these factors, I respectfully urge further actions by our colleagues on the Government Operations Committee to bring this proposed legislation before the Senate at the earliest possible time.

This morning I received a letter from Mr. John E. Kalupa, comptroller of the city of Milwaukee, stressing the need for approval of this proposed legislation to provide such payments in lieu of taxes.

I request unanimous consent to have the letter printed at this point in the RECORD.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

CITY OF MILWAUKEE.

Hon. ALEXANDER WILEY,
U.S. Senate, Senate Office Building,
Washington, D.C.

DEAR SENATOR WILEY: I understand that the Senate Committee on Government Operations has concluded its hearings on bill S. 910, which authorizes the payment to local governments of sums in lieu of taxes for special assessments on certain Federal property. I appreciate your cosponsoring this legislation, and I hope you will continue to support it when it comes before the Senate for action because although it is a compromise measure, it represents a step in the right direction.

Under the provisions of this act, the Federal Government will pay special assessments for certain public improvements provided such assessments are uniformly assessed against other property owners. It will also provide for the establishment of a review board and an advisory committee, which should make possible the eventual development of an equitable program of payments in lieu of taxes by the Federal Government. I understand that the bill will also provide for assistance in hardship cases where communities have seen a substantial part of their taxable valuation removed from the tax rolls through action of the Federal Government.

The approval that you have indicated for this measure by adding your name as one of the cosponsors is appreciated, and I hope

that you will find it possible to continue your support on the Senate floor.

Very truly yours,

JOHN E. KALUPA,
City Comptroller.

TRIBUTE TO CHARLES E. ALDEN

Mr. WILEY. Mr. President, the recent death of Mr. Charles Alden—for 59 years a loyal, devoted worker on Capitol Hill—was a cause of deep regret to the many persons, including myself, who knew him well. The Book of Life will honorably record, I believe, not only the deeds of men who attain high places, but also those who, while carrying out their perhaps somewhat more modest, but neverthless significant, roles in the world, are, too, "helpers of their fellow men."

Today, I consider it a privilege to pay tribute to one such man: Mr. Charles E. Alden.

During a constructive lifetime of 87 years, Charlie served his country and his fellow men faithfully and well. For a period of 59 years, he held a variety of responsible posts on Capitol Hill, including work for Members of Congress, congressional committees, as the custodian of the Senate Office Building, and other positions.

In all of these, Charlie's performance was marked by real capability and by devotion and faithfulness to duty. Particularly, he exercised a pattern of on-the-job regularity which, in itself, was an outstanding example, as well as a punctuality by which his coworkers could daily "set their watches."

In addition, Charlie brought to his work—and to his associates—the admirable attributes of a cooperative, smiling, sincere, dedicated spirit, blended with human warmth and high integrity.

Although a man of many talents, Charlie symbolized the dedicated worker—of whom our country, fortunately, has many—who patiently, anonymously, and devotedly performs his duties.

Because of individuals like Charlie, who deserve the commendation, "Well done, good and faithful servant," our country is a better, richer place in which to live.

To supplement these humble words with highlights of his life's work, I ask unanimous consent to have articles from the Washington Evening Star and the Washington Post and Times Herald be printed in the RECORD following my remarks.

There being no objection, the articles were ordered to be printed in the RECORD, as follows:

[From the Washington Star]

CHARLES EDWIN ALDEN, 87, MUSIC LOVER, CONGRESS AID

Charles Edwin Alden, a music lover whose last 59 years were spent ministering to the needs of Congressmen, died yesterday in his home of a heart ailment. He was 87 years old.

Mr. Alden, who lived at 1629 Columbia Road NW., was assistant superintendent of the Senate Office Building until disabled by a stroke about a year ago.

Born in Columbus, Ind., in 1872, the son of a Civil War veteran, he came to Washington at the age of 9 when his father was named by President Garfield to a job in the Pension Office.

He first began working in the House in 1897 and served as secretary to several Republican Representatives. In 1929 he was appointed custodian of the Senate Office Building, but when the Democrats won control in 1932 he became assistant custodian.

Mr. Alden helped organize the District Credit Union League in 1934 and was its third president, as well as an official of the Senate Employees Federal Credit Union.

In taking care of Congressmen's office needs, he won many friends from among the lawmakers. At election time many asked him to notarize their absentee ballots.

Completing 50 years' service on Capitol Hill in 1950, he was lauded in the CONGRESSIONAL RECORD and sent a congratulatory letter by President Truman.

Aside from Government, Mr. Alden's main interest was music. In 1905 he organized a string quartet which met regularly in his home until World War II.

Over the years he collected a large, and in some ways unique collection of chamber music which he donated to the Library of Congress Music Division.

In addition he helped form an orchestra group of music enthusiasts from many walks of life.

He leaves a sister-in-law, Alice V. Tenly, of the home address.

[From the Washington Post and Times Herald]

CHARLES ALDEN, HILL CUSTODIAN

Charles Edwin Alden, for 59 years a familiar figure on Capitol Hill, where he had looked after the Senators' office needs since 1929, died of a heart ailment yesterday at his home, 1629 Columbia Road NW. He was 87.

Well known for his daily rounds "you could set your watch by," Mr. Alden became custodian of the Senate Office Building in 1929. When the Democrats reshuffled the Hill in 1933, he was named deputy custodian and held the post until a stroke disabled him a year ago.

He came to Washington from Indiana as a boy in 1881, and over a 29-year span was secretary to a number of Republican Congressmen.

Devoted to music, he organized a string quartet in 1905 and, later, an orchestra group which drew amateur musicians from all parts of the District to his living room for rehearsals. The group met regularly until the Second World War and collected enough sheet music to make a sizable contribution to the Library of Congress.

Mr. Alden found the rewards of his work in the friendship of Senators and their aids. At election time many of them were regular visitors to his office, where he notarized their absentee ballots. When he passed the 50-year mark on the Hill, in 1950, President Truman and scores of lawmakers paid tribute to him. His friends recall that he never took vacations and rarely spent a day of his sick leave.

A sister-in-law, Alice V. Tenly, of the home address, survives.

THE U.S. INFORMATION AGENCY

Mr. SALTONSTALL. Mr. President, for a long time I have been interested in the important work of the U.S. Information Agency, which has the enormous and critical assignment of communicating American principles, policies and way of life to the peoples of the world, to the end that their understanding may be increased.

This is a highly important task, Mr. President, in the world of today—a world of rapid communication and transportation, of tremendous technological advances, of great industrialization, of space exploration, an "international world" in the fullest sense. Yet it is still a world of inequities in living standards, of political and ideological conflicts, and it is subject potentially to nuclear devastation.

The USIA is dedicated to overcoming critically influential psychological barriers which frustrate human progress and the chances for peace. It strives to demonstrate to the various peoples of the world—including those within the Soviet orbit—both the truth and the ultimate practicality of the American democratic system.

This need and this task, Mr. President, are intimately related to our national security. The connection is sometimes a little difficult to see; it is simultaneously both sophisticated and obscure, especially to a nation which has, relatively speaking, only recently assumed the role of full participation and responsibility in international affairs, and has only recently come to a larger awareness of the vital interdependence of this "One World" which Wendell Willkie identified. The phrase "persuade or perish" is not, ultimately, an exaggeration.

A mission such as that of USIA, although its real urgency is peculiarly of our time, was not overlooked by our Founding Fathers. The Declaration of Independence includes the words "let facts be submitted to a candid world," and, in the preamble, emphasis is given to the need for a "decent respect for the opinions of mankind." The significance of the forces of public opinion were recognized and anticipated back in 1776. We must heed this wisdom.

The international information program of the U.S. Government, Mr. President, has had a complex and rather difficult history. For a time it existed within the Department of State. It has had persistent personnel problems; it has frequently been the victim of strong criticism. Some of the criticism, no doubt, has been warranted. Much of it, however, has been based on ignorance of purpose and problems, or at best a superficial understanding—or misunderstanding—of what it was all about. For a time it was easy and natural for us to be somewhat inattentive to this mission, for it has no real constituency, at least not within the United States, nor does it have the tradition, prestige, and clarity of purpose of the mission of the Department of State.

In August of 1953 this program was lodged in a separate agency within the executive branch. Since then, the quality of its operations has steadily improved. It has come into its own. We can all appreciate this progress. The men and women of the U.S. Information Agency are the pioneers on the frontiers in the struggle for men's minds.

Mr. President, the U.S. Advisory Commission on Information, created on January 27, 1948, by the U.S. Information

and Educational Exchange Act of the 80th Congress, has just submitted its 14th report to Congress, which covers the work of the Commission for the calendar year 1958. This is a most worthy document, which I commend to my Senate colleagues for their careful study.

Mr. JOHNSON of Texas. Mr. President, will the Senator yield?

Mr. SALTONSTALL. I yield to the majority leader.

Mr. JOHNSON of Texas. Mr. President, I appreciate the Senator's reference to this study by the very fine and able Commission. I always receive helpful suggestions from them, as I believe every other member of the committee does. I am grateful that the Senator is bringing the attention of the Senate to the matter.

Mr. SALTONSTALL. I appreciate the remarks of the majority leader, with which I agree.

Mr. President, the report contains interesting data concerning the separate visits of two members of the Commission, Dr. Mark A. May and Mr. Philip D. Reed, to the Soviet Union. Also, various members of the Commission visited U.S. Information Service posts in Europe and Mexico. I wish to commend the Commission for these tours, and express the hope that in the forthcoming year they may be able not only to study USIA operations in the western areas, but also on the spot in some of the so-called underdeveloped areas of the non-Western World, where there is such ferment and such great need for increased understanding of the United States.

An appendix of the Advisory Commission's report includes appraisals of current problems and 1958 achievements in USIA's performance, and recommendations of the Broadcast Advisory Committee and the Advisory Committee on Cultural Information. A report to the Commission from the Agency on its actions taken in connection with recommendations made in the January 1958 Advisory Commission's 13th report to Congress is also included.

This 14th report to Congress is largely devoted to reviewing and redefining the objectives and the proper functions of the U.S. Information Agency. This is a good focus for the report to take. The Commission outlines the misunderstandings which have risen about the "job which the USIA is expected to do," and points out the realities of the functions, limitations, objectives and built-in problems of the USIA. Illusions about the task which confronts this program are debunked; the Commission emphasizes strongly that people should be encouraged to understand how unreal their expectations are, and to replace the unrealistic with practical, attainable goals for USIA.

The greatest limitation listed by the Commission is that of time. The Agency it is claimed, is expected to do too much too soon. The long-term programs dedicated to firm accomplishments are heavily emphasized over immediate, short-term programs and objectives, although the latter, of course, do play a valuable part. Again I commend the Commission, Mr. President, for its clear analysis of the real personality of a program which addresses itself to the extremely delicate, deep-rooted and complex problems of the United States and the free world in the field of international psychology and public opinion.

Last month the USIA itself published its 11th semiannual review of operations. I also wish to invite the attention of my colleagues to this document. It reports, among other things, on four developments which are opening ways for getting more information about America to people in the Soviet orbit. These are improved Voice of America radio signals to Eastern Europe, wider readership in the U.S.S.R. of USIA's Russian-language magazine America Illustrated, this summer's American National Exhibition in Moscow, and the agreement for the showing of U.S. motion pictures in the Soviet Union. These are noteworthy accomplishments.

The Agency also reports that a new information center in Marrakesh, Morocco, attracted 13,000 visitors in its first month of operation; that 130,000 persons overseas studied the English language in 165 USIA-sponsored cultural centers and language institutions; that in November the Agency set up a separate television service; and that all USIA staffs overseas gave special attention during the last 6 months of 1958 to the Berlin question, Middle East problems, trouble in the Taiwan Straits, and difficulties in Latin America. These facts seem to indicate a commendable vitality and responsiveness in the Agency's operation in both long-term planning and the day-to-day developments of international affairs.

Mr. President, appropriations hearings for the USIA's fiscal year 1960 budget began yesterday before the appropriate House Appropriations subcommittee. The Agency is asking for total appropriations of $106 million for salaries and expenses. This represents a 4-percent increase over last year, a part of which would be utilized for new and expanded operations in Africa and Latin America. Also, the distinguished chairman of the Senate Foreign Relations Committee has introduced a bill, S. 1008, which, if enacted, will "promote the foreign policy of the United States by strengthening and improving the foreign service personnel system of the U.S. Information Agency through establishment of a Public Affairs Officer Corps." This personnel legislation is similar to that which has been requested by the Agency in recent sessions of Congress. It would provide a career service, with proper limitations, for the Agency, which the Advisory Commission and the Department of State both solidly support.

I urge, Mr. President, that Congress give the most careful consideration to both the USIA's 1960 appropriation and to the Public Affairs Officer Corps bill.

There was published in the April 1 edition of the Washington Post and Times Herald an article by Marquis Childs entitled "A Little Magazine With Big Audience." This article begins as follows:

Despite all the restrictions imposed on a propaganda organization in a democratic society, the evidence increases that the U.S. Information Agency and the Voice of America are doing an effective job in many areas.

It goes on to discuss the increased efficacy of America Illustrated in the Soviet Union.

Mr. President, I ask unanimous consent that this article, together with the conclusion of the Advisory Commission's 14th Report, Director George V. Allen's covering letter for the USIA's 11th Review of Operations, an editorial entitled "Selling Ideas," which was published in yesterday's Baltimore Sun, and an interesting article entitled "The USIA Program," which was published in the April 1, 1959, issue of Near East Report, be printed in the RECORD.

There being no objection, the article, conclusion, letter, editorial and analysis were ordered to be printed in the RECORD, as follows:

[From the Washington Post and Times Herald, Apr. 1, 1959]

A LITTLE MAGAZINE WITH BIG AUDIENCE

(By Marquis Childs)

Despite all the restrictions imposed on a propaganda organization in a democratic society, the evidence increases that the U.S. Information Agency and the Voice of America are doing an effective job in many areas.

This is overlooked in the current mood which tends to be one of defeatism, decrying the successes of the West and overrating everything the Russians do. The popularity of "The Ugly American," a crude black and white caricature that makes most Americans working abroad look like pygmies competing with Russians who are 10 feet tall, is a good illustration.

One of the most effective things USIA does is the magazine America, published in Russian and sold in the Soviet Union to Soviet citizens. While only 50,000 copies of America can be distributed under a mutual agreement that gives the Soviets the right to sell 50,000 copies of their magazine U.S.S.R. in English in this country, the influence of America is much greater than this would indicate.

It is snatched off the newsstands the moment it appears. Copies are said to pass from hand to hand often selling, at 10 times the original price, until they are worn out.

Recently the effectiveness of America was demonstrated in a striking way. An issue devoted in part to the 150th anniversary of Abraham Lincoln's birth and the progress of the Negro was attacked in a full-page article in the Soviet youth newspaper Komsomolets. This was the first time America had come under attack in the Communist press.

What drew Komsomolets' fire was a factual illustrated presentation of the great gains made by the Negro in recent years in almost every field. The report might startle Americans who tend to take news of the tragic tension over integration in the South as the whole story of the Negro in America.

The figures showed that there are today 206,000 Negroes in colleges and professional schools, with Negro college enrollment increasing at six times the rate of white enrollment. A special survey of Negroes in Government jobs showed that 23.4 percent of the Federal jobs in five of the most important cities in the country were held by Negroes in 1957. For Washington the figure was 24.4 percent, which compared with 3 percent in 1938. Negroes held 16 percent of the supervisory, administrative, or professional Government jobs in the Capital.

All this is directly contrary to Soviet propaganda on the plight of the Negro, who is invariably represented as little better than a slave. That is why Komsomolets re-

sponded with the attack carried under a headline: "Only for Whites—What the Magazine 'America' Was Silent About." Subheads included: "Ghetto," "Lynch Court and Ku Klux Klan," "Laws of the Racists." Among the illustrations were a Ku Klux Klansman with a hangman's noose, a Negro being beaten by the police, identified as having taken place at a Paul Robeson concert, and lynched Negroes hanging from a tree.

Thus with the old ammunition Komsomolets, with a circulation at least 10 times that of America, sought to overcome the facts of present-day Negro life. It is the factual presentation in America, done with a skill and an attractiveness equal to our own picture magazine, that appeals to the great unsatisfied curiosity of the Russian people about the United States.

The most effective work of the USIA and the Voice of America—constantly jammed at vast expense by the Soviets—is on the factual level. Free of the strident propaganda tone, it helps to build up a relationship of confidence with those who want to know the truth, and their number inside Russia may be much greater than we suspect.

The contacts that have been opened up in the past year by the cultural exchange agreement contribute to that end. Americans have certain misconceptions about Soviet Russia, and the learning process may be mutual. This is a slow business when measured against the long record of hatred and suspicion. But it should not be discounted when Congress comes to appropriate the comparatively modest amount that keeps USIA and the Voice going.

CONCLUSION OF ADVISORY COMMISSION

To summarize: The Commission believes that a major cause of criticism surrounding the U.S. Information Agency and the overseas information program is that too much is expected of it too soon.

A review of the proper functions of the Agency indicates that reasonable objectives can be established for operations in four major areas:

1. As a counselor on international public opinion.

2. As an expositor on U.S. foreign policy.

3. As a specialized and noncompetitive overseas information service.

4. As a portrayer of the United States to peoples abroad.

In all of these areas, the Commission agrees that there are short term needs, which USIA should be prepared to meet. But, it wishes to reemphasize that the major objectives are long term in nature. Once this concept is clearly understood and accepted, then—and only then—can the efforts of USIA be properly evaluated.

The Agency's efforts—its ability to progress toward its assigned goals—depend greatly on its position in our government and its relationships with the Congress.

Therefore, the Commission wishes to restate those principles for the U.S. Information Agency which it set forth in its 13th report to Congress. The Commissioners believe that adherence to these principles will enable the Agency to fulfill its functions with maximum economy, efficiency, and effectiveness. These principles are:

1. That USIA should be considered an essential long term Agency of the Government. That its budget, its plans and programs, although necessarily responsive to sudden emergencies, should be based essentially on this long-term view.

2. That USIA should continue to be an independent arm of the Government. That it should be nonpartisan in nature, responsive to policies established by Congress and appreciative of its responsibilities to keep the Congress informed.

3. And finally, that to establish this character for USIA, to make possible long-term planning, and to provide the manpower with the high competence and talents required to carry out sound programs, the personnel of USIA should be assured of career status and adequate representational funds. The Agency will continue to find difficulty in attracting and holding the quality of men it needs, so long as career stability is not provided by law and so long as adequate monetary allowances for representation are not provided by annual appropriations.

The Commission in this report to the Congress has presented its independent outside view of the role of USIA in furthering our national interest. It has attempted to specify realistic objectives, and to give consideration to the limitations within which the Agency must operate.

This report has taken a critical look at the broader areas and principles of Agency operation. A detailed appraisal of some of the Agency's specific problems and achievements will be found in appendixes 1 and 2. Also included, in appendix 3, is a report of the Agency's actions on the recommendations in the Commission's 13th report.

Respectfully submitted.

MARK A. MAY,
Chairman.
ERWIN D. CANHAM.
SIGURD S. LARMON.
PHILIP D. REED.
LEWIS W. DOUGLAS.

U.S. INFORMATION AGENCY,
Washington.

REVIEW OF OPERATIONS, JULY 1–DECEMBER 31, 1958

During the 6 months covered by this report, our information staffs overseas were called on to give special attention to the Berlin question, Middle East problems, trouble in the Taiwan Straits, and unrest in Latin America.

Our information efforts were designed to assure the peoples of other countries not only that the United States is determined and able to assist the free world to resist armed aggression but, also, that we are ready to seize any reasonable opportunity to to negotiate a peaceful settlement of outstanding disputes.

During the past 6 months we sought particularly for opportunities to reach peoples behind the Iron Curtain. The magazine America, which we sell in the Soviet Union, continued to grow in popularity. Our "Voice of America" radio programs were rescheduled to obtain maximum effectiveness in jammed areas. The Soviet Government continued to compliment the programs by trying to jam them more heavily than ever, but there is reason to believe that the Soviet authorities are finding it awkward to explain their refusal to allow the Russian people to hear news of the outside world. This was particularly true during August, when we broadcast the special sessions of the U.N. live, from the floor, and the Soviets jammed the entire proceedings, including the speeches of their own Foreign Minister, Andrei Gromyko.

We are proceeding on the assumption that the Russian people, like all other human beings, want to think for themselves and that, whenever possible, they will insist on it.

USIA continued its strenuous effort to increase international understanding between Americans and the peoples of other countries, including those under Communist rule.

Yours sincerely,

GEORGE V. ALLEN,
Director.

[From the Baltimore Sun, Apr. 9, 1959]

SELLING IDEAS

Wise words on the mission of the U.S. Information Agency have come from the Advisory Commission on Information, words which both the public and the Agency itself should heed. First, the advisers warn against the idea that the Agency can win the cold war and the battle for men's minds, and do it in short order. A Government information agency only acquires influence, inside its own country or abroad, when the worth of its output has been tested over a long period and found to be sound. It has to build up the sort of reputation that the overseas services of the British Broadcasting Corp. built up during World War II, and which has carried over into peacetime, for giving the truth. Working as this country is against the tightly controlled propaganda machine of communism, we have this one priceless commodity to offer, and should make the most of it.

The USIA should remember the same thing when it is tempted or pressured into being propagandistic rather than informational. The Agency is under pressure from Congress and many taxpayers to display instant results, and is apt to be criticized when it puts out news or views about this country which give any picture but one of glossy perfection. People in other countries, however, know as well as we that nothing is perfect, and they respect a frank admission of occasional imperfection. When the USIA and its critics are equally aware of this fact there will be a lot less fuzzy thinking about the Agency's job.

[From the Near East Report, Apr. 1, 1959]

THE USIA PROGRAM

In the fierce battle to win friends in the Arab countries, the United States is lagging far behind. Lacking the resources required by the needs of this critical area, the U.S. Information Agency seeks to compensate by hard work and enthusiasm. It reaches effectively the relatively small educated groups—the leaders and those who may succeed them—in Egypt, Iraq, Syria, Lebanon, and Jordan; but the larger populations, who cannot read or write, know America only as it is derided by the hostile voices of Cairo, Baghdad, and Moscow radios.

MAJOR OBJECTIVES

The USIA works with limited funds under difficult conditions in borderline areas where the host governments are usually suspicious of American intentions or altogether hostile. Its operations in the Near East and south Asia area cover 14 countries ranging from India and Ceylon to Greece. The USIA expenditures in 1958 for this area were slightly more than $8 million out of a total authorization of $97,803,390 for all areas. Its foreign operations arm, the U.S. Information Service, is staffed by 222 Americans and 1,500 local employees. Only a handful are assigned to the posts in the Arab countries.

With these resources, USIS tries to achieve four major objectives. First, by projecting American culture and life, institutions as well as the principles underlying our policies, it seeks to provide a picture which contributes to American prestige and places it in an accurate perspective. Second, it has the task of building confidence in the integrity and good will of the American people. Third, the Agency reports the facts about world events which bear on American foreign policy. Finally, it has the task of unmasking Communist propaganda and correcting misconceptions about the United States.

At the core of the operations are the information posts, reading rooms, and libraries. Public affairs officers contact the local press, provide feature materials, answer questions and operate lending libraries. The greatest demand is for technical books, but books are available on all aspects of American life and culture. A regional production center in Beirut prints periodicals, pamphlets, and translates adapations for local consumption. The Center also publishes the News Review,

a magazine which goes to about 50,000 readers and usually contains a special supplement featuring new developments in science. In Cairo, USIS publishes Al Sadaka, an Arab weekly which is distributed in all Arab-speaking lands. Besides these printed materials, a small number of films are available either for direct showing or on loan to local organizations which request them. Exhibits help round out a picture of life in the United States.

EMPHASIS ON READING

The USIS maintains posts—sometimes with libraries—in Beirut, Cairo, Alexandria, Port Said, Amman, Jerusalem, Damascus, and Jidda, the capital of Saudi Arabia, where a USIS public affairs officed is attached to the Embassy. In Iraq, USIS has two buildings in Baghdad and an office in Kirkuk. Before the July 14 Iraqi coup they employed a staff of 14. Today four remain, and the buildings, which contain a library, are padlocked and patrolled by Iraqui guards. Negotiations to admit Americans have proved fruitless.

One of the successful programs of the USIS in this area is in Israel. A large library as well as bookmobile service in Tel Aviv serve thousands of readers. There is a smaller library in Jerusalem, and a reading room in Haifa. USIS cooperates with the Information Media Guarantee plan to make American books available for sale in Israeli currency, resulting in a dramatic rise in the sale of American books.

In a country like Israel where the literacy rate is about 95 percent, the USIA's program on books and printed materials is effective. But in a country like Egypt where illiteracy is about 80 percent, only a relatively small number are reached. The largest Cairo newspapers, for example, Al Ahram and Al Akhbar—both of which are circulated throughout the Arab-speaking world—reach no more than 100,000 readers each, according to estimates by their publishers. (And that estimate is probably high since there are no verified circualtion figures.) In other Arab countries, newspaper circulations range from 2,000 to 7,000 including the French language papers published in Lebanon. Thus, it is the college student and the professional groups who are reached by the USIS.

BROADCAST RANGE

Radio, of course, is the most effective way to bring America's message to the millions of illiterate Arab-speaking peoples. The number of receivers for medium wave broadcasts in the region is estimated at 10 million, and since each has the potential of attracting several listeners, practically all the Arabs can be reached. Cairo with at least five medium wave transmitters, some capable of putting out 300 kilowatts of power, in addition to about 12 shortwave transmitters, blankets the area with a barrage of broadcasts around the clock. Moscow devotes several transmitters to Arabic broadcasts on medium and short waves. Baghdad radio likewise commands a large audience. Israel has managed out of her meager resources to devote one 100 kilowatt medium wave transmitter exclusively to broadcasts in Arabic. Even impoverished Jordan recently announced that it would soon be broadcasting from a new 100-kilowatt transmitter. There are transmitters in Lebanon and Saudi Arabia.

The Voice of America, however, has only one medium wave station in operation in the area with a power of 150 kilowatts. The station is located aboard a ship in the harbor of Rhodes, where it has been anchored since 1953. It broadcasts approximately 6 hours a day, 2 in the morning and 4 in the late afternoon and early evening. It employs the Arabic language exclusively although there is a great demand in the area for lessons in the English language, and popular English classes are conducted by the USIS.

The Courier, as the station is known, also broadcasts for longer periods on two 35-kilowatt shortwave stations, and these do include some English programs. USIA estimates that the present nighttime medium wave signal of the Courier can be heard only by 2 million receivers. Because of certain atmospheric conditions, the medium wave Voice of America is rarely heard in Lebanon and Israel. During daylight hours, its range is cut by about one-fourth.

The Courier rebroadcasts programs that originate in the Washington studios of the USIA and also plays back recorded programs taken off the air or pre-recorded in other Voice of America program centers. Local broadcasters can be persuaded on occasion to use platters with American programs.

PROJECT DELTA

The limitations of the radio broadcasting coverage are fully recognized, but efforts to remedy the situation have fallen short of the Agency's objectives. George V. Allen, Director of the USIA and a former Assistant Secretary of State for Near Eastern and South Asian Affairs, said:

"In the light of the importance to the United States of the Near and Middle East, and with Radio Cairo (among other competition) recently dominating the dial with more than 300,000 watts of power, it is essential that we achieve greater coverage. This can be provided only by a more powerful, landbased installation. Hence 'Project Delta.' When completed, 'Delta' will provide a 500,000 watt medium wave transmitter which will have the capability of reaching 2½ to 3 times the audience now reached by the Courier. Additionally, both the quality and the reliability of service will be much improved."

Plans to spend $6,150,000 for two land-based transmitters were suspended recently because no country in the area was ready to make the land available for this installation although a suitable location had been decided upon and negotiated for. Congress has authorized more than $4 million for the project over the last 2 years.

Libraries, books and periodicals thus constitute the mainstay of USIA operations in the Near East. A much greater effort must be made, however, in all the media presently used by the USIA if a correct and lasting impression of America is to be made on the peoples of the Near East.

KHRUSHCHEV AND GOLF

Mr. CASE of South Dakota. Mr. President, occasionally the light touch helps in international affairs, as well as in some other circumstances. I was struck by a very interesting article published in the Washington Post and Times-Herald of Thursday, April 9, 1959, which I read this morning, entitled "Khrushchev and Golf." Mr. George Dixon wrote:

We may have a chance to close the missile gap with Russia after all. Doctors have told Premier Nikita S. Khrushchev he ought to go away somewhere and play golf.

The possibility that the Soviet Union may have to start competing with us under an even handicap looms at a time when our lives can stand a little brightening. We won't have to brood so much about Russia being on the course because its head man is off it.

The Kremlin physicians told Mr. K. they were worried about his blood pressure. This hardly makes the medicos unique. A lot of others have been worried about it, too. The main difference is that Khrushchev might not take as much satisfaction out of worrying his doctors.

The medical men went into consultation over the Communist dictator and recommended that he go on holiday and play golf like another head of state, whose name eludes me, but who plays golf in April, May, June, July, and "Augusta."

If Khrushchev takes his doctors' advice it will not only get him out of the Kremlin, where he seems to concoct most of his mischief, but out of Russia. There are no golf courses in the Soviet Union—which seems paradoxical in a country that is so constantly teed off.

It might well be the solution of many of the free world's problems if Khrushchev would only heed his doctors. If he became a golf addict, he would naturally insist on playing through. He might play right through the May 27 Berlin deadline.

Who knows—he might wind up in a bunker in Scotland, utterly oblivious as to whether the Western powers have disengaged themselves from West Berlin or not.

I suggest, Mr. President, that possibly the light touch once in a while will help us all with regard to some of these problems.

Mr. President, I desire now to address myself to another subject.

The PRESIDING OFFICER. The Senator from South Dakota.

SCIENCE ATTACKS CATTLE PESTS

Mr. CASE of South Dakota. Mr. President, I should like to invite the attention of the Senate to a highly successful Florida experiment which may provide the key for controlling at least two of our worst cattle pests in this country—the screw-worm and the heelfly.

I note reports on screw-worm control in Florida cattle. I have asked the Department of Agriculture scientists to step up their efforts to apply similar tactics to heelflies which plague western cattle.

The procedure is to produce flies artificially, then sterilize them with gamma rays. Sterilized males are released to mate with fertile females, who then lay only infertile eggs for the remainder of their brief lives.

This procedure has proved amazingly successful in ridding Florida cattle of the screw-worm plague. It appears that it can be adapted to combating the heelfly.

Heelflies lay eggs on the legs of cattle. From the eggs emerge tiny larvae which penetrate the skin of the host animals, move through body tissues and emerge on cattle's backs as the familiar cattle grub. Heelflies develop again from grubs which have dropped to the ground.

Heelflies and cattle grubs cause cattle losses in several ways. Animals attempting to escape them can be injured in wild flight or at least run off weight. Often cattle seek protection in shade or water and fail to graze for hours at a time.

Milk production of dairy cattle is lowered when heelflies are active. Meat of grub-infested cattle must be trimmed excessively and lowered in grade. Grub holes ruin hides and bring about a discount in price.

Losses due to cattle grubs and heelflies have been estimated at $100 million to $300 million a year in this country.

As one who raises a few cattle, I know that control of heelflies and elimination

of their grubs would be a big boon to the cattle industry in South Dakota and in the Nation.

I earnestly hope that the Department of Agriculture will expedite its research in this field, and bring about the savings which a solution of the problem will insure.

AMERICAN PEOPLE WILLING TO SACRIFICE TO FULFILL U.S. OBLIGATIONS

Mr. NEUBERGER. Mr. President, I have just returned from spending 10 days among my constituents in Oregon. During this time I spoke before nine different and varied audiences, including groups composed of State legislators, timber operators, ministers, service club members, businessmen, and others. I answered many questions—and asked some of my own—at all these meetings.

During each address which I delivered in Oregon I commented on the fact that a tax increase was necessary even to balance the President's inadequate and wobbly budget. I pointed out that we face stern problems in the years ahead which will place a heavy demand on future generations.

On the basis of my experience in Oregon, I believe that the American public has a better understanding of the sacrifices required for the defense of freedom than many of its leaders, and is willing to pay more taxes to finance Government programs which are essential to fulfill the international and domestic responsibilities of the United States.

I emphasize that no one I spoke with wants more taxes. This would be a natural phenomenon, discovery of which would rank with location of a river which flows uphill or development of a form of toothpaste which can be squeezed back into the tube. But in conversations with people in my State, I gained the impression that the average citizen is willing to provide government with more funds to help insure our security and supply necessary services.

I believe that many Americans presently hold beliefs similar to those of the people in Oregon with whom I talked. The people know that there are grave doubts over the quality and quantity of our weapons when compared with those of the Russians. I am confident that they, unlike the administration, realize that we cannot put off such urgent matters as conserving forests, controlling floods, advancing education, and encouraging medical research.

Mr. President, many persons with whom I spoke pointed out that future generations may face even sterner problems than do we today, when Russia has emerged more fully from peasantry and the industrial revolution has spread across China with its 600 million population. China today is still a peasant and backward nation. But what threat will be posed to our free way of life when China, possibly still under Communist tyranny, achieves the same degree of technological advancement that Russia has currently attained? What problems will face Americans of that period?

That is why, I believe, many people seem willing that we should carry our own kitbags, rather than leave them stacked on the trail for our descendants to carry to the still higher pinnacles which they must surmount if liberty is to endure.

THE NEED FOR HEALTH AND OTHER USE OF AMERICAN COUNTERPART CURRENCIES IN POLAND

Mr. HUMPHREY. Mr. President, my colleagues will recall that one of my deep interests down through the years has been in the constructive use of counterpart currencies.

These, of course, are the funds credited to the account of the United States by virtue of American sale, under Public Law 480 of farm products abroad, as well as by virtue of other American assistance.

Recently, I have been looking into the situation as regards counterpart currency in one particular country. I refer to the land which was the first to fight for freedom in World War II, the first to be taken unfortunately, by the aggressor and then to be invaded by still a second aggressor; the land which is still to regain its freedom and sovereignty. I refer to Poland, of course.

The counterpart situation in Poland is that on February 28, 1959, there was a balance to the U.S. account of 3 billion zlotys—the Polish currency.

The zloty, it will be remembered, may be figured in value for the tourist at 24 to the dollar; for U.S. Embassy staff at 55 to the dollar.

ORIGIN OF COUNTERPART SUMS

It will be recalled that in 1957, we had made available $55 million in Public Law 480 products and $30 million in Export-Import Bank aid. In 1958, we had sold $73 million worth of Public Law 480 agricultural products.

And, of course, we are all aware of negotiations for additional American Public Law 480 sales and Export-Import Bank credit.

The big question is, however, assuming a new satisfactory Public Law 480 agreement is worked out—as I earnestly hope it will be—What is going to happen to the counterpart credit which will be further generated?

Let it be noted that the 1957 and 1958 economic agreements contain provisions obligating the Polish Government to repurchase for dollars, after 5 years, any zlotys which the United States does not use.

But we do want to use it in Poland. And at present we can only use it for maintenance of Embassy activities.

BAN OF AID UNDER BATTLE ACT

The basic fact to be remembered is, of course, that at present, under the Battle Act, U.S. assistance, as such, is prohibited to Poland. The reason is that Poland exports materials to the U.S.S.R. which brings her within the proscription set by the Battle Act.

But the circumstances of Poland's involuntary position vis-a-vis the U.S.S.R. are known to all thinking Americans.

We realize that the heart of Poland and the overwhelming majority of the Polish people are dedicated to freedom. No country desires its independence more. Few, if any, people are more devout in their religious faith. Few have a stancher record throughout history of fighting for the cause of liberty.

GIVE CHIEF EXECUTIVE DISCRETIONARY POWER

Under these circumstances, it is my earnest hope that, before too long, in this 86th Congress we will have enacted an amendment enabling the President notwithstanding the Battle Act, to exercise his discretionary powers to extend assistance, as such, and without fixed ceilings to those Eastern European countries which are not free.

This provision should not, of course, extend to the satellites of Red China, North Korea, nor North Vietnam, nor should it extend to the U.S.S.R. itself, or to Peking.

But it should certainly extend to a friendly country such as Poland and, yes, to Czechoslovakia, for example, as well, if the President finds it within our national interest to do so.

POLAND'S VAST HEALTH NEEDS

I raise this subject today particularly from the standpoint of one who is interested in advancing the health of the Polish people. As my colleagues here are aware, it is my privilege to serve as chairman of an international health study. In that capacity I have received a great many facts regarding Poland's enormous medical needs.

I would like to see part of our counterpart credit of zlotys used for medical assistance purposes.

Yet right now, not a nickel of it can be used for any Polish assistance purposes—medical or otherwise. That is why we must amend the law and enable the Chief Executive to use counterpart currencies in this way.

Recently, I requested of the State Department a comprehensive report with regard to United States medical relationships in Poland in the postwar era. I have now received a part of that report. I believe that it will be of interest to my colleagues. I ask unanimous consent that its text be printed in the body of the RECORD.

There being no objection, the report was ordered to be printed in the RECORD, as follows:

DEPARTMENT OF STATE,
Washington, March 18, 1959.

The Honorable HUBERT H. HUMPHREY,
Chairman, Subcommittee on Reorganization and International Organizations, Committee on Government Operations, U.S. Senate.

DEAR SENATOR HUMPHREY: I have received your letter of February 27, requesting information concerning U.S. medical assistance to Poland since the end of the war.

Pursuant to the recommendation of a member of your subcommittee's staff, I am furnishing in this letter information concerning current and recent assistance. The Department is investigating the question of medical assistance furnished in the immediate postwar years, and will communicate with you subsequently to furnish any available information on this subject.

The paragraphs below are intended to answer, in order, the specific questions raised in your letter.

1. Summary of 1957 and 1958 economic agreements: Agreements were signed with

Poland in June and August 1957, providing for credits and sales in the total amount of $95 million. This sum consisted of a $30 million line of credit, to be administered by the Export-Import Bank of Washington, and $65 million in sales of agricultural commodities for local currency pursuant to title I of the Agricultural Trade Development and Assistance Act (Public Law 480). The 1957 agreements specified that Poland would be enabled to purchase the following: 500,000 tons of wheat, about 50,000 tons of cotton, 60,000 tons of soybeans, 17,500 tons of fats and oils, and $4 million worth of mining machinery.

On February 15, 1958, a further agreement was signed, providing for credits and sales totaling $98 million, consisting of $73 million in title I, Public Law 480 sales for local currency, and a $25 million line of credit to be administered by the Export-Import Bank. Poland was to use the sum made available under Public Law 480 to purchase approximately 400,000 tons of wheat, 235,000 tons of feed grains, and 21,700 tons of cotton, as well as fats and oils and 15,000 tons of dried milk. The $25 million line of credit was to be used for the purchase of a wide range of machinery, equipment, and tools, principally for consumer industries, as well as $1 million worth of medical equipment, hides, synthetic fibers, plastics, and citrus fruit.

The bulk of the shipments envisaged in the 1957 and 1958 agreements have been made, with changes occurring in certain categories as a result of reprograming since the agreements were signed.

Details concerning the 1957 and 1958 agreements are contained in the enclosed press releases. For your information, I am also enclosing press releases concerning further economic discussions recently commenced.

Local currency receipts and expenditures: As of December 31, 1958, a total of 1,500,849,643 zlotys had been received from sales of agricultural commodities under the 1957 agreements. Expenditures were as follows: 11,520,000 zlotys for the payment of U.S. obligations under subsection (f), section 104, Public Law 480, and 8,739,552 zlotys to help develop new markets for U.S. agricultural commodities under subsection (a), section 104, Public Law 480. As of the same date, a total of 1,437,414,341 zlotys had been received under the February 15, 1958, agreement, with no expenditures. The balance remaining as of December 31, 1958, thus totaled 2,918,004,432 zlotys. By February 28, 1959, the balance had increased to 3,007,326,932 zlotys.

The 1957 and 1958 economic agreements contain provisions obligating the Polish Government to repurchase for dollars after 5 years any zlotys which the United States does not use.

Credits for medical equipment: As mentioned above, the February 15, 1958, agreement included provision for the purchase by Poland of $1 million worth of medical equipment on credit terms. As of February 16, 1959, purchases totaling $970,589 had been programed under this category, with about half of the equipment already shipped (the Polish newspaper Trybuna Ludu, January 16, 1959, reported the arrival of the first shipment). The equipment programed includes a wide variety of laboratory, surgical, and diagnostic equipment. Some of the programed items are as follows: calorimeters, spectrographs, fluorometers, fluorescent meters, densitometers, X-ray equipment, including deep therapy equipment, and emergency equipment, including resuscitators.

Credits for fruit juices: Fruit jucies are another item in the general category of health and medical assistance for which Export-Import Bank credits were provided in the 1958 agreement. Juices totaling $201,092 in value have been shipped, slightly more than the quantity envisaged in the agreement. Shipments consisted of 28,560 cases of canned orange juice, 440 15-gallon kegs and 2,572 cases (cans) of lemon juice concentrate, 1,000 cases of pure lemon juice, 16,000 cases of canned grapefruit juice, and 12,000 cases of canned pineapple juice. With the exception of small quantities intended for use in the manufacture of soft drinks, the juices were to be made available for retail purchase by Polish consumers.

It should be noted that the 15,000 tons of dried milk and certain other foodstuffs programed under the economic agreements are also of importance from the health standpoint, contributing to an improvement in Polish diets. Finally, as noted below, a portion of the credits established under the economic agreements were utilized during 1958 for the shipment of $1,200,000 worth of polio vaccine for the Polish Government's inoculation program.

2. United States voluntary agency programs in Poland: Private American agencies operating in Poland have also rendered substantial assistance to Poland in the field of health. Voluntary agencies registered with the U.S. Advisory Committee on Voluntary Foreign Aid shipped materials in this category, totaling $321,957 in value, between July 1, 1957, and June 30, 1958 (with the U.S. Government contributing by defraying a portion of the ocean freight charges).

Since reestablishing operations in Poland in August 1957, CARE has obtained and shipped terramycin and tetracin valued at $41,472, as well as equipment for the manufacture of prostheses for the disabled and surgical equipment, electrocardiograph machines, hypodermic needles, medical books, and other supplies for Polish hospitals, universities, and clinics. CARE's bulk shipments of U.S. agricultural commodities, under its supplementary feeding program, contribute to the improvement of deficient diets. As noted below, CARE, in cooperation with the American Committee for Polish Medical Aid, shipped and arranged the distribution of donated polio vaccines for the inoculation of Polish children, as well as other medicines.

The American Committee for Polish Medical Aid (ACPMA) has obtained gifts from American pharmaceutical and other firms of nearly $2 million worth of medicines. From this supply, during August 1958 CARE, in cooperation with ACPMA shipped $396,000 worth of polio vaccine together with syringes and needles valued at $12,100. This quantity of vaccine was enough to provide nearly half a million Polish children with their first two injections (the Polish Government added $1,200,000 worth of vaccine purchased with United States credits, enough to provide two inoculations for an additional 2½ million children). Up to the present, CARE has shipped other medicines provided by ACPMA valued at approximately $300,000. CARE is continuing to program and ship the balance of the $2 million ACPMA donation on a quarterly basis. CARE administers the distribution of the vaccine and other medical aid donated by ACPMA to hospitals and clinics with the advice of the appropriate Polish authorities.

Among other U.S. voluntary agencies which have furnished medical assistance to Poland during the past 2 years are the American Jewish Joint Distribution Committee (antibiotics and other medicines), the American National Red Cross (polio vaccines and other medicines), American Relief for Poland (medicines and hospital equipment, including an X-ray machine), Catholic Relief Services—National Catholic Welfare Conference (miscellaneous medicines), and Church World Service (miscellaneous medicines).

3. Medical exchanges: Since its Polish program began in 1957, the Rockefeller Foundation has brought 28 Polish doctors to the United States for 1-year fellowships in various fields of clinical medicine. An additional 8 Poles have visited the United States on 3-month Rockefeller travel grants in the same general field. The Rockefeller Foundation has provided grants for basic research in medicine for 37 Polish scientists. The foundation is also donating equipment for medical laboratories in Poland.

The World Health Organization brought eight Polish medical scientists to the United States for study during 1957 and 1958.

Other private institutions and individuals have sponsored programs of study for smaller numbers of Polish doctors and medical research specialists. Finally, numerous Polish scientists have visited this country for shorter periods of time in connection with medical congresses, seminars, etc.

4. Flood relief assistance: The floods in April 1958 along the Bug, Narew, and Vistula Rivers were described by the chairman of the Polish antiflood committee as the worst in 100 years. In response to an inquiry by our Ambassador in Warsaw, the Polish Foreign Office indicated that flood relief assistance from the American Red Cross through the Polish Red Cross would be welcomed. Early in May, an aircraft of the U.S. Air Force landed at Warsaw with flood relief supplies donated by the American Red Cross, consisting of 1,250 9 cubic centimeter vials of Salk vaccine, 45,000 tablets, 750 10 cubic centimeter vials, and 500 20 cubic centimeter vials of cortisone, and 2,850 10 cubic centimeter vials of gamma globulin, as well as 5,000 Red Cross junior gift boxes and 30 Red Cross school chests for Polish children. The medicines were purchased with $10,000 supplied by the American Red Cross and an equal sum furnished by the U.S. Government. An additional $4,000 was furnished by the Government to cover costs of shipment.

During the following July, the League of Red Cross Societies received an urgent request from the Polish Red Cross for relief aid in connection with floods in Krakow Voivodship. Answering the league's appeal, the American Red Cross furnished $5,000 for the purchase of Salk vaccine as well as $5,000 for the purchase of clothing. Among other U.S. voluntary agencies which offered medical supplies in connection with the July floods were the American Committee for Polish Medical Aid (through CARE), and Church World Service.

5. Informational media guarantee program: One other type of American medical assistance to Poland deserves mention. The informational media guarantee program administered by the U.S. Information Agency commenced operations in Poland early in 1958, enabling Poland to purchase certain U.S. publications for Polish currency. Under this program periodicals, reference publications, and textbooks in the medical field totaling between $100,000 and $150,000 in value are being exported to Poland annually

Little information is available concerning cooperation between Poland and the Soviet Union in the medical field. Exchanges between the two countries are apparently arranged directly by the institutions concerned. Generally, such exchanges are undertaken at the higher levels in the medical profession. Until recently at least, it was also the practice to send some Polish medical students to the U.S.S.R. for the completion of their last year or two of study before graduation. Medical literature from the U.S.S.R. has been made available to Poland, and imports by Poland of Soviet pharmaceuticals and surgical instruments have been reported.

If I can be of further assistance, please do not hesitate to call on me.

Sincerely yours,

WILLIAM B. MACOMBER, Jr.,
Assistant Secretary.

OREGON DUNES SEASHORE RECREATION AREA

Mr. NEUBERGER. Mr. President, the proposal of the National Park Service to give national recognition to the scenic grandeur of the Oregon seacoast by establishing the Oregon Dunes seashore recreation area has aroused interest and enthusiasm throughout my home State. It is my opinion that creation of this national seashore will result in advertising which will bring countless thousands of tourists to the most beautiful seacoast in America, that of Oregon.

The bill introduced by myself and the senior Senator from Oregon [Mr. MORSE], S. 1526, would establish the procedures through which the park could be created. Such legislation is needed to preserve the Oregon Dunes area and the Oregon Sea Lion Caves. It will prevent repetition of the situation which has occured on the Atlantic coast, where the recreational value of seashore areas has been exploited and permanently impaired. Although the majority of opinion in Oregon apparently favors creation of the Oregon Dunes park development, some opposition has developed over the area encompassed by the proposal. It should be made quite clear that boundaries for the seashore area will only be fixed after complete and thorough surveys and study. Hearings on S. 1526 will provide an opportunity for full public discussion of what areas should be included and excluded. Every great national park has encountered some local opposition when it was first proposed, but later its benefits have proved of infinite value.

The proposal for the Oregon Dunes national seashore area has received extensive editorial support in Oregon newspapers. I ask consent to include in the body of the RECORD with my remarks a group of editorials and news stories from representative newspapers about the national seashore development.

These editorials stress the great desirability of saving for the future a unique scenic resource. I also desire to include a fine article from the Eugene Register-Guard by a reporter for that paper, Mr. Don Tacheron, who has coverad exhaustively the proposal for a national seashore on the marvelous Oregon seacoast.

There being no objection, the articles and editorials were ordered to be printed in the RECORD, as follows:

[From the Oregon Journal, Apr. 6, 1959]

GAINS FOR OREGON IN DUNES PLAN

Senator RICHARD L. NEUBERGER'S proposal for the establishment of a national seashore embracing 24 miles of the Oregon dunes area south of Florence and taking in the sea lion rookery to the north has received mixed reaction in Oregon, ranging from opposition to coolness to endorsement.

Strongest opposition centers in Florence, where some businessmen fear such a recreational area would conflict with business or industrial development.

It is quite possible that some of the opposition stems from a misunderstanding of what the proposal is and what it will do. Senator NEUBERGER'S introduction of the bill coincided with the Park Service's publication of a seashore survey in which the Park Service suggested the saving of this area as a national seashore. It had not reached the point of making a positive proposal of its own. The Senator may have jumped the gun a little, but he did confer with the Park Service people in drafting the bill, and there is no doubt the Park Service will back his measure.

Understandably, lots of people want more information. Interested persons from all parts of the coast, and elsewhere in Oregon, will be filled in at a meeting in Reedsport on Sunday, April 12, sponsored by the Florence Chamber of Commerce and Port Umpqua Chamber of Commerce. Park Service representatives may be able to dispel some doubts.

Meanwhile, if local and State pride causes us to balk a little at giving up something to a Federal agency, it is well to consider two things: 1. If an area is judged sufficiently outstanding to be of national interest, then the people of the Nation have some rights too. 2. What we will give up will be less than what we get.

Coast residents, as well as other Oregon people, want to develop tourism. It is our third largest industry and has the potential of adding a great deal more to our economy than it does now. The history of areas preserved and administered by the National Park Service is that they are heavily visited. This is due in part to the promotional opportunities given by Park Service designation which can be matched in no other way. Senator NEUBERGER is confident that the dunes area as a national seashore would increase by several times the number of visitors, not only to that area but to all of the Oregon coast.

It is fine for people to want to know more about this proposal. But we hope such an opportunity will not be destroyed by a kind of negativism which does not weigh all the facts.

[From the Portland (Oreg.) Sunday Oregonian, Apr. 5, 1959]

OREGON EXAMPLE

The National Park Service's recently released report, "Pacific Coast Recreation Area Survey," provides a comprehensive inventory of the seashore resources of Oregon, Washington, and California. It was compiled from material gained by observers who covered each of the 1,700 miles of tidal shoreland from Mexico north to Cape Flattery and east to Tongue Point in the Strait of Juan de Fuca—both by air and by ground.

As in its 1956 report on the Atlantic coast, "Our Vanishing Shoreline," the National Park Service emphasizes the extent of the private encroachments on the general public interest along the seashore.

"Of all the wilderness environments which man has identified," the report reads, "the true value of the seashore is perhaps the least understood. It is undoubtedly in a large measure due to this lack of full appreciation that the natural seashore is already rapidly vanishing. * * * Vast tidal areas are being reclaimed, for example, as garbage dumps, airports, freeways, and for other private and commercial developments. State-owned tidelands have also been sold to private individuals. In addition to the loss of these valuable areas for public recreation the practice has, in some instances, brought on a serious problem in restricting public access to the shoreline."

Reproduced in the report as a deplorable example is a beach-front sign reading: "This is a private beach for use of property owners only."

Given this emphasis, it appears strange that nowhere in the report could we find mention of Oregon's unique law reserving the tidelands as a public highway and thus preventing the erection of such signs as the one cited above.

The report recommends prompt public action, at Federal, State, or local levels, to reserve certain specified shorelands for public recreation.

Recommended for national development are Cape Flattery in Washington and the Sea Lion Caves and Oregon dunes area in Oregon, as well as three areas in California. This was the inspiration for Senator RICHARD E. NEUBERGER'S bill seeking national park status for the cited Oregon area.

In addition, the report listed the following areas as "having a high degree of statewide significance and importance": Washington—Grenville Bay and Cape Disappointment; Oregon—Clatsop Plains, Tillamook, Sandspit, Netarts Spit, Sand Lake area, Nestucca Spit, Siletz Spit, Coos Bay Standspit, Langlois Beach, Hubbard Mount-Otter Point area, and Crooks Point.

The report said Point Brown and Leadbetter Point in Washington would qualify as outstanding State parks, and designated the following areas as "having either State, county, or local significance": Washington—Crescent-Agate Beaches, Juan de Fuca Strait, Hoko Beach, and Cape Shoalwater; Oregon—Manzanita Beach, Whale Cove, Beaver Creek Beach, Coquille Beach, Sisters Rocks area, and Myers Creek Beach.

The Pacific coast report, as did that on the Atlantic seaboard, sounds an alarm. Perhaps this explains the lack of attention to such positive and desirable measures as Oregon's designation of the beaches as highways. It seems to us that the National Park Service might well have included among its recommendations the suggestion that California and Washington take a leaf from Oregon history. No other measure anywhere in the country has been so successful in preserving the ocean front for the use of all.

[From the Eugene (Oreg.) Register-Guard, Mar. 25, 1959]

PARK VIEWS

Public reaction to a proposal for a seashore recreation area along parts of the Oregon coast was about as this newspaper predicted—immediate enthusiasm tempered by caution after a few minutes of thought about it. The nature of the outright opposition, however, is most interesting. It conforms to a pattern that has been pretty constant since the earliest proposals for the establishment of public recreational preserves.

These things always look better to somebody else than they look to persons who live right next to them. We're all for the Everglades up here in Oregon, but down in Florida, where the Everglades are local scenery, the local citizens had some objections. They didn't want the swamps taken off the tax rolls. A handier example is the Olympic National Park, great stuff to most of America, but a pain in the neck to lumbermen who live near those acres and acres of board-feet that "ought to be logged." We saw the same thing in the Eugene area when commercial interests pressed for a reduction of the Three Sisters Wilderness Area.

While the National Park Service may be expected to listen to local opinions, even to respect them, that agency is concerned primarily with national needs. That is proper. Thus, we have a park like Glacier that is preserved for people living in Eugene, not just for people who live in western Montana.

Another twist: One Florence businessman who takes a dim view of the park idea thinks the money could be spent better on the port. But those who live in other parts of the country would probably approve spending money on the park, but not on the port. Similarly, here in Oregon we can approve money spent on the Everglades, regarding other spending in that area "pork barrel."

The lessons of history, however, would indicate that the long-range view of the park people is sounder than the short-range view of those who would like to make immediate money out of subdividing potential park areas. One of the greatest political battles in California occurred when park interests wanted to take Yosemite off the tax rolls. The intervening 80 years, of course, have proved that Yosemite is much more valuable as it is than it could ever have been as a grazing ground for sheep and a source of timber.

[From the Astorian Budget, Astoria, Oreg., March 1959]

DESIRABLE COAST PROJECT

Senator RICHARD NEUBERGER's proposal for a 33,000-acre national recreational area including the dune lands in Lane and Douglas Counties seems a good one.

The more public recreational areas and parks that can be provided along the Oregon coast, the better. The coast has the potential to be one of the Nation's greatest playgrounds, and it is important to reserve as much area as possible for public use while property remains available.

The Lane-Douglas County duneland has no value other than for public recreation. But for that purpose it is excellent, and it should be reserved permanently for a playground.

[From the Medford (Oreg.) Mail-Tribune, Mar. 27, 1959]

OREGON'S SEASHORE

The Eugene Register-Guard, which serves much of the area proposed for the new National Park Service seashore area, reports that reaction there to the proposal has been mixed.

Approval of the idea appears to be in a sort of inverse ratio to the distance from the site, the Guard indicates. Those closest to it see the difficulties most clearly; those at a slightly greater distance, can see both sides, and those at some distance away see mostly the advantages.

In Florence, the Lane County town nearest to the great and beautiful expanse of beaches, sanddunes, and freshwater lakes which comprise much of the proposed national seashore, some residents are fearful of such things as property being removed from the tax rolls, and other hindrances to the local economy.

The Guard also pointed out that there was opposition to the establishment of Yosemite National Park, on much the same grounds, but that Yosemite now is inestimably more valuable as a national park than it ever could have been as a grazing area or source of timber.

The area in question is largely undeveloped at the moment. And about its only real use is for recreational purposes.

How much better that it be protected and preserved, in its own natural beauty (together with appropriate but unobtrusive facilities for visitors) than that it go the way it has already started, with haphazard and often objectional resorts, hotdog stands, and cocktail lounges.

Based on our friendly contacts with the National Park Service, as represented by Crater Lake, we know it can do an outstanding job and preserve for our children the area which has given others so much solid enjoyment in the past.

[From the Salem (Oreg.) Statesman, Mar. 22, 1959]

SEASHORE PARKS FOR OREGON

Two national seashore parks are under consideration, and they show quite a contrast. One is along the eastern shore of Cape Cod, a windswept semibarren area which will cost the Government $16 million because the Interior Department didn't have the foresight to buy it years ago. The other is along Oregon's coast south of Florence. It includes the beautiful inland lakes, the picturesque sand dunes and great stands of evergreens. It is bigger than the Cape Cod area, but would cost only a fraction of the price—between $2 million and $3 million.

Senator NEUBERGER is promoting the Oregon project, which would encompass 33,000 acres and 23 miles of seashore. Also included in NEUBERGER's plan is the Sea Lion Caves north of Florence. This page has advocated a seacoast national park in Oregon before and welcomes the opportunity to renew its approval. The additional publicity which goes with a national park should improve tourist business along the entire Oregon coast. NEUBERGER is reviving a project he fostered many years ago.

The cost of the project could be reduced considerably if the Sea Lion Caves were excluded. This area is not contiguous with the rest of the Seashore Park, and it is presently available to the public for a moderate fee under private enterprise. The caves are well advertised and tourist facilities well maintained.

Let's not look at this national seashore project as the solution to a problem, however. It is 150 to 200 miles from the big center of Oregon's population—too far away for a day-long trip or even a short weekend. The need for a seashore merely points up the even greater need for more ocean parks within easy range of Salem and Portland.

Within the past 2 or 3 years, the State developed a park at Fogarty Creek about 2 miles north of Depoe Bay. Almost from the minute it opened, it has been overcrowded.

The largest undeveloped stretch of beach in our section is Siletz Spit, a stretch of sand and grass south of Taft bounded by the ocean on one side and the Siletz Bay on the other, offering boating, fishing, and ocean-front activities all in one spot.

The State sought that area at one time for park purposes, but a sand and gravel firm bought rights on the spit while negotiations lagged. This should not deter the State, however. The same conditions prevailed at Fogarty Creek before it became a park.

Cape Cod illustrates the danger of allowing acquisition of recreational areas to drift until land prices climb. The only way we can prevent our present beach park facilities from becoming Coney Island-crowded is to support both State and National acquisition of beach park land.

[From the Coos Bay (Oreg.) World, March 1959]

SEASHORE PARK GREAT IDEA BUT WATER USE NEEDS THOUGHT

U.S. Senator DICK NEUBERGER's proposal for a national park in the sand dunes areas of Douglas and Lane Counties, and at the fabulous Sea Lion Caves of Lane County, is great—with the single exception of doubts about future industrial use of the dunes' potential water reservoirs.

Existence of a national park would do much to promote further tourist travel along the coast highway. Acquiring the touring dollar, no one needs to be told, is becoming one of Oregon's major industries. This is particularly true along our coast. It is an exceptionally clean dollar, too, being founded on fun, enjoyment, and recreation.

One must hope, however, that Senator NEUBERGER and other backers of the park idea will lend a serious ear to those who are lukewarm about a national park because of possible hinderance of industrial development.

One hopes that park legislation, if such comes to pass, will take into account the possibility of developing water resources for industry. Industry, is, after all, another crying need for this whole State, and especially for this section of the State.

An example of what we mean is found in the sand dunes area across Coos Bay from North Bend. This is not part of the area which Mr. NEUBERGER proposes for the park but it is in many ways similar scenically and geologically to the Douglas and Lane stretches of beach and dunes which would be in the park.

Pacific Power & Light Co. has spent over 2 years developing deep wells in the dunes, proving out the possibility of an industrial water supply suitable for use in making pulp. Pacific Power & Light Co. hasn't said anything officially yet about its findings, but if it is supposed to be secret, it is a very poorly kept secret that there is bountiful water for one or more large pulp mills here on the bay, and having proved existence of water, the power company is now in the process of selling a pulp mill here to three separate corporations, one of which will buy the idea in a short time.

To the north, the people have noticed this development.

Many businessmen and industrialists realize water found in the Coos County dunes may also be present in dunes near them. The water-starved Oregon coast may have a partial answer here to its industrial water problem.

The proposed park has quite naturally thrown some fear into industry on this score. It is a fear which park proponents can overcome by protecting the dunes as a source of water, whether they are included in a national park or not.

We recommend this for study to Mr. NEUBERGER and other park proponents, who, with the exception of the water problem, have proposed a noble idea.

[From the Albany (Oreg.) Democrat Herald, March 1959]

TWO FEARS BASELESS

Some residents of the Florence area are reported up in arms over Senator RICHARD NEUBERGER's congressional legislation setting aside a portion of the Oregon coast adjacent to Florence as a national park. They fear usurpation of control by the Government and loss of taxable property.

From what we have seen of the disputed tract we cannot imagine it producing much revenue, particularly the sand dunes which the proposed park would encompass. Furthermore we think the idea of creating parks in Oregon is a good one. The Government became guilty of near-criminal negligence in abandoning the Fort Stevens Reservation at the mouth of the Columbia River. It was already Government owned and not on Clatsop County tax rolls. It was surrounded by an aura of romance which could have been perpetuated had its batteries been left intact. Now it is under private ownership interested only in rentals.

The State has retrieved the southern portion of the reservation but none of it should have been allowed to deterioriate, as the remaining north portion is doing now.

If parks attract tourists more parks will lure more tourists, and that is what Oregon needs.

[From the Portland (Oreg.) Daily Journal, Mar. 23, 1959]

RECOGNITION OF COASTAL VALUES

The long-awaited report of the National Park Service on its "Pacific Coast Recreation Area Survey" is a valuable contribution to future planning by agencies at all levels interested in preserving coastal recreation values.

The report is a sequel to its 1955 study "Our Vanishing Shoreline," which revealed the tragically small bits of seashore left open to the public on the Atlantic and gulf coasts.

The Pacific survey was made with recognition that an altogether different situation exists. Instead of having to hunt for undeveloped areas, survey teams were faced instead with the problem of selecting areas of real significance from among a rather large number of possible choices.

They inspected by both air and ground more than 1,700 miles of general tidal shoreline from Mexico to Cape Flattery and east to Tongue Point in the strait of Juan de Fuca. The study was privately financed, so cost the taxpayers nothing.

The Park Service's recommendations are of a very general nature. In most instances, the finding has merely said that a certain area possesses values which ought to be preserved for the public, without specifying which agency ought to preserve them.

On the Oregon coast, it has selected 17 such areas, a number of which the Oregon State Park Service is either seeking to acquire or is considering for future acquisition.

Of special interest is its reference to the Sea Lion caves-Oregon dunes area as a suggested national seashore recreation area. "The area is adjudged to be of national importance," says the report, "not only for the manifold opportunities for seashore recreation but also for the inspirational worth of the resources to the American citizen. The many superlative values found here are of such high importance as to warrant permanent preservation for the Nation as a whole."

The Park Service has not yet made a formal recommendation on this suggestion, but Senator NEUBERGER has announced that he is preparing legislation to create a national seashore recreation area to be administered by the National Park Service, and conversations with Park Service experts lead him to believe the Service will support such a proposal.

The Sea Lion caves, 12 miles north of Florence, are now in private ownership. SJR31 at Salem directs the State highway commission to consider the acquisition and development of the sea lion rookery as a State park.

The area of the caves is not contiguous to the strip of the dunes under consideration. That section extends 23 miles south of Florence, but if the two were federally acquired, they would be administered as one area.

Within the boundaries of the dunes eyed by the Park Service is Honeyman State park on beautiful Woahink and Cleawox Lakes. Honeyman is considered by many to be the gem of the State's fine park system, and it would be understandable if the State park department resisted its loss. The department has not been approached on the matter, but one spokesman said he believed that if Federal development of the area of the dunes were proved to be in the public interest, he doubted the State would oppose the transfer of Honeyman to the National Park Service.

Some persons on the coast have wondered whether a national seashore designation would interfere with the proposal to tap the dunes for fresh water. Experiments by Pacific Power & Light Co. have proved sufficient water is there to support sizable industrial installations. But all the dunes in which P.P. & L. is interested are farther to the south. And if it should prove feasible some day to tap those in the Florence area for industrial water supply, it is believed a national seashore designation would not prevent it.

Such national recognition would be a great asset not only to the Oregon coast but to all of Oregon, we believe. It would bring some Federal investment, of course but even more important would be the advertising and promotional value. Oregon folk have long believed their coastline the finest in the Nation. The National Park Service could help us prove it.

Meanwhile, we hope other agencies at all levels of government interested in coastal recreation will make use of the valuable information in the report in the formulation of their own plans.

[From the Lewistown (Idaho) Tribune, March 1959]

NEUBERGER'S IDEA PRAISED

Many of the people of our own area, having thrilled to the beauty of the Oregon coast, will applaud a bill introduced by Senator RICHARD NEUBERGER, Democrat, of Oregon, establishing a national seashore recreational area embracing the Oregon Dunes and the Sea Lion Caves. The area involved, including some 33,000 acres, would be administered by the U.S. Park Service.

The Neuberger bill would effect no great change in that area but would, instead, preserve its rugged beauties and inspiring vistas for the pleasure and spiritual nourishment of the people. It would prevent the seacoast there from disappearing piece by piece into private hands or being commercially exploited in any way detrimental to its value as a place of beauty and recreation.

The Nation has lately come to realize that some of its most magnificent scenery and public playgrounds could be lost unless something is done. Senator PAUL DOUGLAS, Democrat, of Illinois, and some others are trying desperately to save what little remains of the famous and zoologically invaluable sand dunes area near Chicago, and efforts are being made to put the remaining undeveloped portion of the Great Beach of Cape Cod safely in the hands of the Federal Government while some unexploited portion of it still remains.

The struggle to preserve nature is a familiar one in the East, but out here in the Pacific Northwest, we have had so big a share of untouched land and fabulous scenery that we haven't much concerned ourselves with saving any of it. That attitude is changing, fortunately, and Senator NEUBERGER'S bill is one indication of the change.

[From the Eugene (Oreg.) Register-Guard, Mar. 25, 1959]

U.S. PARK SERVICE DIRECTOR IMPRESSED WITH COAST AREA

(By A. Robert Smith)

WASHINGTON.—Legislation to authorize creation of a new national park to embrace a stretch of the scenic Oregon coast will probably get the blessings of the National Park Service.

This was the indication from Conrad Wirth, Director of the Park Service, who has personally visited the Oregon seacoast and is impressed with its beauty.

"We think highly of it," Wirth said, referring to the stretch outlined in a proposal by Senator RICHARD L. NEUBERGER. It would extend along the coast about 23 miles from Sea Lion Caves north of Florence to the mouth of the Umpqua River near Reedsport.

In order to qualify for designation as a national park, an area must be regarded as "nationally outstanding from a scenic standpoint," Wirth explained. "It has to be more than just a good local recreational area."

PARK SERVICE SURVEYS

For the past year the Park Service has been surveying the whole Pacific coast to evaluate its scenic value. The conclusion drawn, Wirth said, was that this section of the Oregon coast merited national attention.

Previously, the Park Service surveyed the Atlantic and gulf coasts for the same purpose, and it is currently surveying the coastal areas of the Great Lakes.

A conclusion of the Atlantic coast surveys was that Cape Cod in Massachusetts should be designated as a national recreation area, Wirth said.

Cape Hatteras, N.C., has been designed a national recreation area. It was not made into a national park because about 2,000 acres of the 28,000-acre area has long been used by duckhunters. To gain approval of setting the area aside, the Park Service had to make some concessions to the hunters to allow them to continue. But since hunting is not allowed in national parks, Wirth said they decided to call it a recreation area and not create a precedent concerning hunting. The rest of Cape Hatteras is treated just as if it were a national park.

CAPE COD RECOMMENDED

While the Park Service has recommended Cape Cod, the administration has not committed itself to the idea as yet, Wirth said.

This might hold true with Neuberger's proposal for the Oregon seacoast. The Senator said the estimated cost of acquiring privately held land to be included in his proposal would be up to $3 million. There would also be costs to the Federal Government for constructing tourist facilities which are normally provided by the Park Service.

Whether the Eisenhower administration, particularly the Budget Bureau, will go for this at this time is unknown. Nevertheless, NEUBERGER expressed confidence he could get congressional authorization for the park.

The last time a national park was added to the system was in December 1956, when Virgin Islands National Park was dedicated. Last one on the mainland was Everglades Park in Florida, 1949.

There are 25 national parks. NEUBERGER said he thinks one factor favoring approval of the seacoast is that compared to neighboring California and Washington State Oregon doesn't now have its share of national parks. Crater Lake, the only one, was created in 1902.

CALIFORNIA'S PARKS

California has Yosemite, 1890; Lassen Volcanic, 1916; and Sequoia, 1890. Washington State has Mt. Rainier, 1899; and Olympic, 1938.

In addition to the Sea Lion Caves and Oregon Dunes area, the Park Service survey of the Pacific Coast resulted in recommendations that four other areas be given national status: Cape Flattery on the northwest coast of Washington; Point Reyes Peninsula on the north central California coast; and two islands off the southern California coast, San Miguel and Santa Cruz.

Two other areas were recommended as worthy of State park consideration: Point Brown and Leadbetter Point, both off the coast of Washington State.

[From the Eugene (Oreg.) Register-Guard, Mar. 29, 1959]

U.S. PARK IS POSSIBLE BY 1962 IF BILL BECOMES LAW THIS YEAR

(By Don Tacheron)

Creation of an Oregon Dunes National Seashore is possible within 2 or 3 years, if a bill now before Congress is signed into law this year.

This is the opinion of Conrad L. Wirth, Director of the U.S. National Park Service, who told the Register-Guard Friday the area involved qualifies technically as a national seashore area.

Senator RICHARD L. NEUBERGER, in a bill introduced Wednesday in the Senate, has asked Congress to set aside up to 35,000 acres along the Oregon coast for national park development.

In a telephone interview from Washington, D.C., Wirth indicated that the relatively large amount of publicly owned land in the proposed park would probably expedite its establishment.

The park bill would authorize the Secretary of the Interior to establish boundaries and to declare establishment of a national

seashore when land has been procured by the United States in sufficient quantity to afford an administerable unit.

IN OTHER CASES

National park developments have gotten underway elsewhere, Wirth said, where between 50 and 60 percent of the total land area involved has been acquired.

Much of the land within the Park Service's suggested reserve boundaries is publicly owned. This is especially true where the Oregon dune area, a strip of land between the mouths of the Siuslaw and Umpqua rivers, is concerned.

For instance, in the dune area inside Lane County, most of the land is owned by three Federal agencies.

"This land could be acquired without expenditure * * *. We don't anticipate any trouble in acquiring ownership of this land," Wirth said.

The Park Service Director said he was not prepared to say definitely whether such an acquisition would be an "administerable unit."

ACCESSIBILITY TO USE

"A lot would depend on the terrain and other factors such as accessibility to public use," he said.

"Depending on these factors, we probably could create the national seashore—we could start our long range development program—within 2 or 3 years after the bill becomes law," Wirth said.

Meanwhile, Senator NEUBERGER told the Register-Guard Thursday he anticipates no difficulty getting congressional action on the park bill this spring. "It has a pretty good chance for passage," he said.

The bill itself sets a 35,000-acre maximum for park reservation but does not establish specific boundaries.

Park Service suggested reserve boundaries include three segments. These are the Oregon dunes area west of highway 101, between the mouths of the Siuslaw and Umpqua Rivers; an area around Woahink, Cleawox, and Siltcoos Lakes, south of Florence; and an isolated unit taking in Sea Lion Caves, located about 8 miles north of the main body of the park.

The Oregon Legislature is currently considering legislation that would bring the caves within the State park system.

NEUBERGER said that if local sentiment favors making the caves a State park he would have no objection.

As described by Wirth, procedure for creation of the Oregon Dunes National Seashore would be as follows:

"First step after enactment of the legislation would be the setting up of exact boundaries. These would be established after hearings conducted by the Park Service and after on-the-ground surveys.

"Then the Park Service could begin negotiating for transfer of publicly owned land to Department of the Interior ownership. If enough land were obtained, the Park Service could then recommend creation of the national seashore.

"Privately owned land within the seashore area boundaries could be purchased as funds are made available."

"In our long-range development program," Wirth said, "we would try to restore the area and to maintain it in as natural a condition as possible.

"Restoration to natural condition would not happen overnight, however," he declared.

Residents in the area would be offered lifetime leases if their property is purchased for the park, he said.

"But we hope eventually to eliminate all housing in the area," Wirth stated, indicating that private homes would eventually be removed.

PROBLEM OF BUSINESSES

Wirth also indicated that some existing businesses might be removed entirely.

"We would hope that the bulk of overnight facilities would be outside the area. We are not in the resort business," the National Park Director said.

Precisely what formula would determine types of businesses, that might operate inside the park apparently has not yet been determined.

"Some adjustments will undoubtedly be necessary to make the area usable to the public," Wirth explained. "The precise need for service businesses will be determined by Park Service surveys later."

Other points made by Wirth were:

"Planting the dunes as an erosion control measure would probably be stepped up.

"Camping facilities, trails and ocean beach access routes would be built.

"Headquarters buildings would be constructed, and a resident staff would maintain the area."

OIL IMPORTS

Mr. HENNINGS. Mr. President, I should like to call to the attention of the Senate two newspaper editorials which appeared in Missouri newspapers shortly after the President's Executive order establishing mandatory quotas on oil imports. One of these editorials is from the Kansas City Star and is titled "Oil for the Lamps of the Politicians." Another is from the St. Louis Post-Dispatch and is titled "Cutting Oil Imports."

Mr. President, I feel that this oil situation and its effect both at home and abroad should be closely watched by the Congress. I ask unanimous consent that both of these thoughtful and informative editorials be published in the CONGRESSIONAL RECORD.

There being no objection, the editorials were ordered to be printed in the RECORD, as follows:

[From the Kansas City (Mo.) Star, March 12, 1959]

OIL FOR THE LAMPS OF THE POLITICIANS

From no commodity does the black smog of politics arise quite so thickly as from oil. All the backing and filling on import regulations illustrates the problem. Now the Government has imposed restrictions to replace the voluntary quotas that failed. This, we are told, will not result in a price increase. If it does, inflation will be given another push.

We are not impressed by claims that this is a patriotic defense issue. Oddly, both sides—those who want restrictions and those who do not—have been waving the flag madly. Small producers say that unchecked imports remove the assurance of an adequate market and discourage exploration. If a world emergency were to cut off imports, America would simply not have enough oil, they say. Importers take the opposite approach and claim that the faster we use up domestic oil, the less we will have for a war emergency.

Frankly, we're a little cynical about all the claims. Both sides quite understandably are also concerned with profits. Cheaper foreign oil outrages the domestic producers. Oil importers anticipate a reduction in their profits when imports are curtailed.

The important issue here would seem to be the effect on the domestic price and our posture as a trader before the world. Of course no one can yell about higher prices until they happen. But there may be cause for concern over the effect that restrictions will have on our relationship with the rest of the world. And particularly with our oil-producing friends, Canada and Venezuela.

Strong opposition to reciprocal trade has come from business fears of foreign competition. Last year, when the Trade Act was renewed, Congress threw in a sop to the oil and coal industries that had opposed the renewal. It was under that provision that the President was given authority to impose import quotas in a case where an industry vital to national security seemed to be injured.

Actually, the restrictions announced this week are not severe. The quota of crude and unfinished oil for areas east of the Rockies will be 750,000 barrels a day. Under the voluntary system, it was 850,000 barrels. In July 1957, prior to the voluntary program, the total was 846,000 barrels a day. The United States will still buy a lot of oil abroad. We have not chopped off our foreign friends.

But certainly the Government must think of other nations that depend largely on oil and that we are, presumably, helping to develop a balanced economy. Reciprocal trade rests on a delicate fulcrum. The goodwill and prosperity of trade are also a part of our national well-being, as is oil.

Of course, the hard facts of practical politics are tremendously involved in oil. It is no coincidence, we suppose, that the two top men in Congress are from the big oil-producing State of Texas. We can imagine the pressures brought to bear. We can only hope that the oil policy, despite politics, will protect the consumer and not destroy the immense gains the Nation has made as a fair and square trader with the world.

[From the St. Louis (Mo.) Post-Dispatch, Mar. 15, 1959]

CUTTING OIL IMPORTS

The importation of oil, crude and refined, has been put under an involved quota system by President Eisenhower. This replaces voluntary limitations which, in the opinion of the administration, were not sufficiently effective. Even the administrator of the program, Capt. Matthew Carson Jr. of the Navy, would not say to what extent it will reduce imports, but the cut is generally estimated at about 20 percent.

The President acted under a 1954 amendment to the Reciprocal Trade Agreements Act after receiving a report from the Office of Civil and Defense Mobilization that oil imports were a threat to national security because they hindered the search for new sources of domestic oil which would be needed in time of war. It can be argued just as cogently that national security would be served if we used more foreign oil while saving more of our own for an emergency in which foreign oil no longer would be available.

Almost inevitably, the quotas are expected to bring increases in the price of oil. While this and the effect on national security remain uncertain, there is no uncertainty about how some of our allies feel about the quotas. Canada made representations last October and again in January. Another protest is expected as soon as the regulations have been studied in Ottawa. Other oil exporting countries—especially those of the Middle East which the State Department is courting—will be no happier.

PLAY BALL

Mr. KEATING. Mr. President, through the strange machinations of fate and the concatenation of events, this body was not in session yesterday when the major league baseball season opened. However, 1 day after that momentous event, when appropriate ceremonies, the Vice President's strong right arm, and the cry of "Play ball," launched America's national pastime on another thrilling season, I am proud to call this

body's attention to it. Not that any Member need be reminded that the pennant chase is on again, for the play ball sentiment was apparent on every side in the Nation's Capital yesterday.

Those two words, "play ball," carry much significance for Americans. They stimulate images in the minds of all red-blooded citizens, of stirring drama on the diamond, of the determined youngster diligently practicing in the farmyard, or of enthusiastic games of stick ball on hot city streets. For baseball, more than any other single sport, symbolizes America and things American.

Baseball symbolizes our democratic way of doing things. Men of every race, creed, color and national origin make up the rosters of our professional and amateur teams. It makes no difference what a man's father does or where he came from or where he worships. What counts is: Can he hit the ball? Does he have a good curve ball? Can he cover the ground in the field?

Baseball is the great common denominator where each man stands on his own two feet and sinks or swims by virtue of his own ability. Nothing else counts.

It is a very wonderful thing that the lessons baseball teaches are today being learned in every corner of the globe. The phenomenal spread of the game, speeded by the presence of American servicemen all over the world, has resulted in tremendous popularity for our national pastime in almost every country on earth.

Travelers returning to the United States often remark on the pickup games of youngsters one encounters almost everywhere, as well as the excellence of the game as it is played today in Japan and the countries south of the border. I have often witnessed manifestations of great enthusiasm for baseball among the peoples of other countries. Only a short time ago baseball representatives from Italy were here to confer and stir up interest in advancing the game in that country.

As an avid baseball fan, as well as follower of other sports, it has been my happy task in Congress to be vitally concerned with certain legislation involving the future of our professional team sports. As a Member of the other body, I sponsored legislation which I feel must eventually be enacted if we are to save professional baseball, basketball, football and hockey from extinction.

As a Member of this body, I am again sponsoring, with distinguished Senators, a measure which will do much to place professional team sports in their proper place under our antitrust laws. This proposed legislation would recognize that baseball and other sports are businesses, but would emphasize the fact that they are unique businesses, which must be covered by special laws.

I am extremely hopeful this Congress will come to grips with the problem of the relation of our team sports to the antitrust laws. To tarry longer is to court disaster for the players, owners, and most particularly, the fans involved. Because if Congress fails to act, our sports face the awful prospect of becoming so mired in the costly intricacies of litigation, that their very existence will be threatened.

I shall continue to press for action on proposed legislation to protect the games and the fans who derive such enjoyment from them. Incidentally, it is my fervent hope that passage of such a bill will help New York City gain at least one more major league team.

But since the major league baseball season is now opening, I want particularly to pay tribute to three aspects of human activity which seldom come in for their proper share of applause. I refer to recreation, fantasy, and relaxation. For these are the hallmarks of our national pastime.

An examination of our Nation's history will reveal that the quest for recreation and relaxation has played a vital part in the development of our democratic way of life, without in any way proving detrimental to our progress. It can be argued that the desire for increased recreational facilities in the areas of hunting and fishing helped prod the westward advance of the American frontier.

For that matter, all cultural pursuit can legitimately be placed in the vague category of the impractical, for what literary, dramatic or musical endeavors can be said to promote a nation's material progress? Yet without culture a nation sinks into intellectual barbarism. And athletic recreation, while to all appearances equally as impractical as song or verse, has the same essential qualities. It is as much the lifeblood of civilization as labor manpower, machinery, and agricultural facilities.

In speaking of athletic recreation I refer not only to the athlete, himself, but to his audience, as well. Audience participation provides a fantasy—the act of living through an experience without actually doing anything—and this is also a healthy phenomenon and a vital phase of civilized life, for it supplies a necessary sense of drama without requiring dramatic action and thereby takes the place of violence. It is widely believed that organized athletics, more than any other institution, is the greatest enemy of juvenile crime in this country today, as well as a builder of leadership qualities and a promoter of the American traditions of team spirit and fair play. And if this be so, as I think it is, we owe the institution a great deal more respect than it generally receives.

All nations have their national sports, some more dramatic and some more militant than others. In Spain and Mexico it is bullfighting; in England it is rugby; in Japan jiu-jitsu. And, significantly, the United States, with a traditional background of democratic, peaceful and dynamic leadership in world affairs, has developed the least sanguinary, yet most dramatic national sport ever invented: the game of baseball.

Originally regarded as a pastime of the well-to-do gentleman amateur when first it was conceived in the 1830's, baseball's popularity soon spread, and by 1870 it was firmly established as a truly national tradition. The wide appeal of the game quickly led to the formation of teams in every section of the Nation and soon its audience-attendance figures were eclipsing those of all other spectator sports. More recently our national game has acquired an international standing, with numerous leagues developing in Canada, Italy, Mexico, the Caribbean Islands, and Latin America, and penetrating all the way to the Orient through its acceptance and appreciation by the people of Japan.

In view of the worldwide attention paid to baseball, and in view of New York's major role in the game's development, my State has set aside the period from April 4 through April 10 as Baseball Week. It is entirely fitting that it should do so, for New York's position in the history of baseball is one of paramount importance. The game's inventor, Abner Doubleday, was a New Yorker by birth and it was on a field at Cooperstown, N.Y., that he laid out the first baseball diamond. The first baseball team of consequence was the Knickerbocker Club of New York and the codification of baseball rules, which the Knickerbockers adopted in 1845, embodied all the major features of the game as it exists today.

Since the beginning of organized baseball play, New York teams have been constant contenders for top honors, and their success in both the American and National Leagues often brought them together at the end of the year in World Series competition; so often, in fact, that the term "subway series" became a commonplace.

In 1939 the high potentates of the baseball world established the Baseball Hall of Fame at Cooperstown, N.Y., and began the custom of honoring the great men to baseball history through their selection of the hall of fame honor roll. Since that time the names of New York players and team officials have dominated this selective process. Such New York Yankees as Babe Ruth, Joe DiMaggio, Lou Gehrig, Bill Dickey, Herb Pennock, Ed Barrow, and Joe McCarthy; such New York Giants as Carl Hubbell, Mel Ott, Bill Terry, John McGraw, and Christy Mathewson, and such Brooklyn Dodgers as Wilbert Robinson, Zack Wheat, and the unforgetable Dazzy Vance—all have beeen classed among baseball's immortals.

No other section of the country has been fortunate enough to be represented by such athletic skill. And although not yet included among the great at Cooperstown, there are numerous other New York and Brooklyn heroes of the past, with their own set of avid admirers who assure us, with some justification, that their idols are destined to be accorded that honor eventually. These include the Yankee pitchers Lefty Gomez and Red Ruffing, the Giant and Yankee sluggers Johnn Mize, and such Dodgers as Babe Herman, Jackie Robinson, and Roy Campanella. Only time will tell if these prophesies are to be borne out. But to New York baseball fans the thrilling heroics of such men are so clearly imbedded in memory that their ultimate recognition by the baseball authorities is a foregone conclusion.

In other parts of the country I have discovered, during my travels, a certain

amount of animosity, jealousy, or resentment—call it what you will—directed by many non-New Yorkers toward the repeated triumphs of New York baseball teams. This is especially the case in regard to the Yankees, as the result of their seemingly permanent domination of the sport.

The American people are basically rooters for the underdog, and the Yankees have been on top for so long as to become the antithesis of this. But it was not always that way. In my youth the Philadelphia Athletics were the dominant team, sweeping their opponents, including the Yankees, aside year after year with monumental disdain. In fact, it was not until 1920 that the Yankees attracted substantial public notice. That was the year that Babe Ruth hit 54 home runs and although it was not enough to win a pennant for the team, it was enough to draw immense crowds, which were to grow in size and enthusiasm as the years passed. With such heartwarming popular support, combined with the magnificence of Ruth's powerful bat, and the guiding genius of the team's owner, Col. Jacob Ruppert, and general manager, Edward Barrow, the Yankees became unstoppable. Sweeping to seven pennant victories on the power of Ruth's abilities, their team quality improved to the point where Ruth's presence was no longer necessary. When he left in 1935 the void was filled by others, notably Lou Gehrig, Bill Dickey, and a stripling by the name of DiMaggio, and ever since that time the Yankee policy has been the same: replacing retired greatness with youthful greatness, a policy that defies the odds and preserves Yankee supremacy.

Yet the American love for the underdog always prevented the Yankees from capturing complete control of popular sympathy, even in New York. For years, until recent unfortunate circumstances altered the situation, New York City was a three-team town, and the other two organizations, the Giants and Dodgers, held the support of a devoted band of followers. This was so even during the dark years when either or both teams were floundering in the second division. But of course enthusiasm was highest when the teams were winning, and that was the case on many occasions.

Greatness came to the New York Giants on the day John McGraw took over as field manager in 1902, for despite the fact that the team finished last that year, it showed the first signs of developing a fighting spirit. And soon that spirit was paying off in victories. By 1903 the Giants were good enough to nail down second place, the next year they won the National League pennant, and when the World Series was inaugurated in 1905, the Giants were the first victors. This was the beginning of a new era, during which McGraw's Giant teams flattened the opposition with the air, manner, and success of a family of runaway bulldozers. Even the Yankees were no match for them in two World Series encounters, and Giant fans began to regard the universe as their oyster.

When the McGraw era passed, Giant triumphs became fewer and further between, but the Giant partisans remained loyal, pulling for their heroes in hopes of their return to greatness. The supremely successful culmination of this effort was of course the never-to-be-forgotten Giant triumph in the pennant race of 1953, when they overcame a 12-game lead to overtake the Dodgers on the last day of the season and win the pennant on the last play of a playoff game.

But the providing of thrills was never an exclusive prerogative of the Giants, so far as New York fans are concerned. Only last year the Yankees electrified the sports world through a similar display in the World Series, and back in 1934 it was the Dodgers who overcame the Giants in a dramatic last-minute pennant rush. In fact, if dramatics were the sole objective in baseball, the legendary Brooklyn Dodgers would stand as the superchampions of all time, for never was there a team more prone to frantic, zany, and colorful play. For years they stumbled and bumbled through season after season, acquiring an occasional star player such as Dazzy Vance, Zack Wheat, or Babe Herman, and once in a while emerging from the second division, most often under leadership of Field Manager Wilbert Robinson. However, in general it was not their victories but their contagious enthusiasm and team spirit that won the Dodgers their renown.

But all this was changed near the close of the 1930's when the Dodgers lost the air of a traveling circus and began to resemble something more in the way of a permanent pennant contender. Then, with the advent of Jackie Robinson, Roy Campanella, Duke Snyder, and Gil Hodges during the 1940's the Dodgers became the scourge of the National League.

With such recollection to dwell upon, the people of New York can perhaps be forgiven an excessive amount of pride in their State's record in baseball history. And it is worth remembering that this pride is not something limited to a mere athletic achievement, for unquestionably baseball is more than that. The scene that takes place daily in baseball parks during the summer months embodies much that is typically American: The solemn silence during the playing of the Star-Spangled Banner; the joyous whooping when the home team appears on the field; the eternal munching of the noble hot dog and peanut; indignant protests over an unpopular decision by an umpire; cries of encouragement to the same umpire when he rules against the visiting team on a similar play; the tense drama of a 3-and-2 count, bases-loaded situation; applause for the opposing pitcher when he comes to bat in the late innings after pitching a good game—all these are typical of the warmblooded, democratic, generous, enthusiastic American nature.

The decision of the Governor of the State of New York to set aside this week in honor of baseball is as much a mark of respect to all these American qualities as it is to the game of baseball, itself. So long as the game survives, we can rest assured that a great many other American traditions are also surviving, because baseball is based on them. I join the people of New York in paying respect to this noblest of games. Long may it flourish and prosper.

Mr. President, I ask unanimous consent that the proclamation issued by Gov. Nelson A. Rockefeller concerning Baseball Week be printed at this point in the RECORD.

There being no objection, the proclamation was ordered to be printed in the RECORD, as follows:

STATE OF NEW YORK,
EXECUTIVE CHAMBER,
Albany.

The National Association of Professional Baseball Leagues has asked me to issue a proclamation in favor of baseball. I am happy to comply.

There is no new argument in favor of playing ball. Baseball is its own argument. What should concern us is to see to it that every boy who wants to play shall have the facilities.

To some extent, these facilities are provided by such groups as the Little Leaguers, the "Babe" Ruth Leaguers, and the American Legion. In high schools and colleges we have the spectacle of a few at play while the majority are spectators.

The State of New York, in its parks and recreation areas, provides excellent grounds for baseball. I sincerely hope full use will be made of these facilities.

It is fitting that official recognition be given to the opening of America's baseball season.

Now, therefore, I, Nelson A. Rockefeller, Governor of the State of New York, do hereby proclaim April 4–10 as Baseball Week in New York State, and I urge the expansion of activities to provide playing facilities for young people.

Given under my hand and the Privy Seal of the State at the capitol in the city of Albany this 18th day of March in the year of our Lord Nineteen hundred and fifty-nine.

NELSON A. ROCKEFELLER.

By the Governor:

WILLIAM J. RONAN,
Secretary to the Governor.

NATIONAL BOYS' CLUB WEEK

Mr. KEATING. Mr. President, April 6 to 12 is being celebrated all across the land as Boy's Club Week. In appropriate ceremonies, the magnificent work of this organization is being reviewed and applauded and its leaders are receiving the praise they so richly deserve.

Close to 75,000 citizens are today donating their skills and time to this movement. The past year marked the greatest period of growth in the history of Boys' Clubs of America. Thirty-nine new clubs were added, bringing the total to 522 clubs with a membership of more than 500,000 boys.

I am proud to report that New York State today has 67 boys' clubs, and as Gov. Nelson A. Rockefeller noted in his proclamation of Boys' Club Week in the State, "It would be well if there were more."

For as much as any other single force, outside the home and our churches and synagogues and schools, boys' clubs are contributing to the building of stronger, wiser, and more useful young men who will be our Nation's leaders tomorrow. The programs of this organization are designed for guidance and training as well as recreation. Every boy is given a chance to develop mentally, physically, spiritually, and vocationally. And be-

cause dues seldom top 25 cents, any boy can afford membership.

Because boys' clubs are open to all who wish to join, regardless of race, creed, color, or national origin, they teach democracy in action. All in all, the Boys' Clubs of America represent the finest of our traditions and heritage. They are contributing tremendously and positively to combating juvenile delinquency by promoting juvenile decency.

Behind the boys' club movement has been a group of dedicated, public-spirited volunteers who have selflessly devoted their time and energy to its success. Prominent among these is ex-President Herbert Hoover, board chairman for 25 years; Albert L. Cole, president of the boys' clubs; and John M. Gleason, the national director.

On the clubs' stanchest supporters has been J. Edgar Hoover, the legendary director of the Federal Bureau of Investigation, who recognizes clearly the organization's tremendous role in preventing juvenile delinquency and making better citizens. Recently Mr. Hoover wrote as follows about the movement:

> Years ago every child was familiar with a simple but lovely poem of praise to God for the miracles of every day—the sunset, the meadows, the color of a bird's wing, ripe fruit in the garden.
>
> Today, unhappily, that poem is not so widely known, and even more unhappily, the children who live in the cement, brick and steel canyons of the cities are unfamiliar with "all things bright and beautiful"—those miracles of nature which the poet sings.
>
> Since the civilization we are building eliminates nature's great classroom for many of our children, we are duty bound to provide the best substitutes of which we are capable. That is the task to which the many Boys' Clubs of America are devoted.
>
> While a tiled swimming pool cannot supplant the "ole swimmin' hole" in its natural setting, or any game match the thrill which a battle with a fighting trout provides, these substitutes may yield the sole bright spots in lives that are drab and bleak. Indeed, in many instances, "all things bright and beautiful," all stability, and all constructive activity in the life of the streetchild is supplied by the boys' club to which he belongs.
>
> For these reasons alone—apart from the fact that in areas where a boys' club program exists, delinquency diminishes—the Boys' Clubs of America deserve the unqualified support of every citizen.

It was my privilege to welcome to Washington this week John Drupa, of Binghamton, N.Y., who has been named 1959's Boy of the Year by the Boys' Clubs of America. John, who is 16 years old, climaxed a modern Horatio Alger saga by being chosen for this honor from among over a half million members. He was selected in the 13th annual search for the boy who best fulfills the qualifications of "outstanding service to home, church, school, community and boys' club."

This fine young man was a very small child when his mother escaped from Latvia with another brother and sister. His older brother and father stayed behind to defend their homeland against the Communist invaders. Both John's father and brother were taken prisoner by the Soviets and sent to Siberia. Mrs. Drupa and her three small children moved from one country to another in Europe, until they were admitted to the United States in 1951. Recently, John's father and brother were released from the Siberian prison camp, but are unable to join their family in the United States.

When John arrived in America, at the age of 7, he could not speak the language and as a result he had to be placed with a class of a lower age group in school. He had difficulty making friends because of the language barrier, until he became a member of the Binghamton Boys' Club. There he made friends easily, and today is one of the club's most popular members.

John has been able to catch up in school and for the past 5 years has been an honor student, is now treasurer of his homeroom and a member of the school traffic staff. His principal says proudly, "John helps his fellow students by devoting his own time to teaching them efficient methods of preparing for exams and to giving advice and assistance in homework."

Junior Citizen Drupa has been active in all forms of community service in which his boys' club engages, including making speeches for United Fund campaigns, and has won a variety of awards. In 1956, he was co-winner of a trip to Washington in connection with the American Heritage-Boys' Clubs of America national get-out-the-vote contest. He was one of two boys' clubs members who obtained the greatest number of pledges to vote. In speeches during the vote campaign, he stressed that—

> The right to vote is the most important right in democracy. It is the right which will keep a free people always free. By voting we who came as refugees are repaying to America a small amount of what this country has given us. Voting is the voice of the people. Take it away and men will not dare to speak about things such as liberty, justice, and freedom.

John received the Binghamton Good Citizenship Award for directing the Mayor's Youth Council community projects, including the safety program, "Hitch horsesense to horsepower." The mayor has publicly expressed his appreciation of this work:

> John's handling of this project has resulted in a material decrease in speeding and reckless driving in our area.

John was mayor-for-a-day in 1958.

The Boy of the Year is a junior leader in his boys' club, a Boy Scout patrol leader, and chairman of the board of the Junior Sertoma Club. Under John's leadership, the group has raised $1,000 for Boys' Club Day Camp through the sale of Christmas trees which the boys plant every year.

John has also received honors in sports, including a special Boys' Club Athletic Achievement Award and first place in the Activities Day contest in which he succeeded in doing 604 sit-ups. His hobbies are skiing, skindiving, swimming, electronics, chess, and coin collecting.

Mr. President, I am pleased to call to the attention of this body the magnificent achievements of this outstanding young constituent of mine. He exemplifies in wholesale quantities the tremendous work the Boys' Clubs of America are doing.

I salute the Boys' Clubs of America during this national observance of their week, and commend them in the strongest terms possible for their efforts to protect our most precious natural resource—our youth. Long may the boys' clubs flourish and prosper to carry out their wonderful missions.

NEED FOR FEDERAL ASSISTANCE FOR CLASSROOM CONSTRUCTION AND TEACHER SALARY INCREASES—ARTICLE BY SENATOR MURRAY

Mr. NEUBERGER. Mr. President, in the current battle of the budget, opponents of Federal aid to schools are attempting to insure that effective assistance to the States in constructing classrooms and raising teachers' salaries is an early casualty. Such efforts can only be classed as detrimental to the Nation. Provision of funds for creation of an elaborate and sophisticated weapons system, acceleration of plant capacity through deliberate subsidization, establishment of a huge space program is a sterile service if we fail to approve measures necessary to expand our supply of trained minds.

Today we are short some 140,000 classrooms. Over 200,000 teachers are paid less than $3,500 a year; in many communities, the average salary for school teachers is far less than for bartenders or signpainters. Thousands of local school districts have reached the end of their taxing resources as they attempt to solve financial problems created by population growth and rising costs. Only the Federal Government has both the ability and the wealth to correct this situation. The Congress has a responsibility to insure that this power is effectively utilized to aid the States in meeting this educational crisis.

The benefits to be realized through increased allocation of national resources to education were cogently described by Dr. Walter W. Heller, chairman of the department of economics at the University of Minnesota, in testimony before the Senate Subcommittee on Education on February 5. Dr. Heller listed four major values which accrue from investment in education:

First. Increased capacity to enjoy the fruits of our labors, to open the way to individual self-fulfillment and an improved quality of life.

Second. Creation, through human knowledge and understanding, of the informed and responsible citizenry which is the keystone of a free democratic society.

Third. Development of the human resources which lie at the base of an expanding economy and material abundance.

Fourth. Creation of the skills, technological competence, and comprehension which are the ultimate source of military security and world leadership in an age of missiles, satellites, and cold war.

When the Soviet Union sent its first sputnik aloft in the fall of 1957, our complacency concerning American scientific superiority was shattered. It was stated that we must spend vast sums on our schools to improve the quality and quantity of American education. However, it has become apparent that many who advanced this thesis earlier, have now decided that they would rather make speeches about reduction of Federal expenditures than work for implementation of a program which will aid in making available adequate academic and vocational training for American children.

One man whose faith and spirit have never waned in the long fight for Federal aid to schools is the beloved senior Senator from Montana [Mr. MURRAY], the principal author of the Murray-Metcalf bill, S. 2, of which I am proud to be a cosponsor.

The Murray-Metcalf bill would authorize appropriation, in the fiscal year beginning July 1, 1959, of $25 for each school-age child in every State, increasing to $50 the second year, $75 the third year, and $100 in the fourth and each succeeding year.

State education agencies would be entirely free to distribute the Federal funds among construction and salaries in any way they say fit. The bill provides that States and localities maintain their support of school finance. For this purpose an effort index is established, and States which fall below the national average will have their allocations reduced.

Approximate sums which would be available to Oregon by year are: 1959 and 1960, $11,250,000; 1960 and 1961, $23,200,000; 1961 and 1962, $35,550,000; 1961 and 1962, $48,600,000.

Nationwide, the authorization would amount to $1.1 billion the first year, $2.2 billion the second year, $3.4 billion the third year, and $4.7 billion the fourth year.

In the issue of the Progressive magazine for April 1959, Senator MURRAY has written a fine article entitled "Crisis in the Classrooms," which sets forth the justification for his bill.

I know that many of my colleagues will want to read Senator MURRAY's article in the Progressive. I also am certain that it will be of paramount interest to those leaders in the Oregon Education Association who have been fighting for Federal aid to schools and I ask unanimous consent, Mr. President, that the article by the Senator from Montana be printed in the body of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

CRISIS IN THE CLASSROOMS

(By Senator JAMES E. MURRAY, of Montana)

Millions of American children go to school in overcrowded, inadequate, or unsafe schools. Almost 250,000 classroom teachers receive less than $3,500 a year. The Federal Government is better able to make the necessary investment in education than are many State and local governments.

There, simply stated, is the crisis in the classrooms that should, and I believe will, be met by the 86th Congress.

With continued and even greater local and State effort in education, supplemented by Federal financial assistance, we can whittle down the continuing shortage of more than 140,000 classrooms over a period of a few years. We can attract to the teaching profession the 135,000 needed new teachers. We can keep in the teaching profession the hundreds of thousands of good teachers who have not as yet gone into more remunerative fields. We can give these teachers an opportunity to increase their skill by further study—as soon as they get a decent enough paycheck so they don't have to hold down a second job to enjoy a living wage.

The American people can achieve these goals without sacrificing local control of education. I expect the U.S. Chamber of Commerce again this year to make its usual unfounded argument that Federal support for education means Federal control, but most members of Congress know that the facts prove otherwise. In fact, by providing Federal grants to the States, which could use the money for either classroom construction or teacher salaries, we can increase local control of education. Certainly in the present situation the local school district which is bonded to capacity, conducting classes in split shifts or in makeshift quarters, using any teacher it can obtain for a pittance regardless of qualifications, does not have control of education. Education is out of control in such a district, and unfortunately there are a number of such communities in the United States today.

I believe in good education for its own values to the American people. However, for those who wish to make comparisons, let me quote what U.S. Commissioner of Education Lawrence Derthick reported after inspecting the Soviet educational system last year:

"What we have seen has amazed us in one outstanding particular; we were simply not prepared for the degree to which the U.S.S.R. as a nation, is committed to education as a means of national advancement. Everywhere we went we saw indication after indication of what we could only conclude amounted to a total commitment to education. Our major reaction, therefore, is one of astonishment * * * at the extent to which this seems to have been accomplished * * *.

"We saw no evidence of any teacher shortage. Teacher workloads and other working conditions are advantageous. Teacher prestige is high. Salaries are at the levels of those of doctors and engineers. * * * Only the best are chosen to teach—one out of six who apply."

Any discussion of how the Federal Government can best help the States solve the Nation's education problems must include a careful examination of the comparative abilities of Federal, State and local governments to finance education.

Between 1948 and 1957, State and local governments had increased their revenues by 119 percent, but their bonded indebtedness increased by 182 percent. During the same period, Federal revenues rose 81 percent, but Federal indebtedness increased by only 7.2 percent.

As a percentage of national income, our national debt dropped from 113 percent, in 1948, to 74 percent in 1957. Thus, in terms of our national income, our national debt has been cut by almost 40 percentage points during the past decade.

Assuming that school financing must be done on borrowed money, let us compare the cost of borrowing money by Federal, State, and local governments. Since 1957, yields on high-grade municipal bonds, which include school bonds, have been consistently higher than those on Federal bonds. As of November 1958, high-grade municipal bonds sold at 3.84 percent, while long-term Federal bonds sold at 3.7 percent interest—despite the fact that interest on Federal bonds is taxable and the interest on State and local bonds is tax exempt.

If a taxpayer happens to live in a school district that has already strained itself to provide school buildings for a growing number of children, and as a result has a low rating for bonding purposes, he may have to pay interest rates that are 20 percent or more higher than those required if his Federal Government had borrowed money to build the same school buildings. If a taxpayer happens to live in a school district that has reached its bonding capacity, but where there is still an urgent need for additional classrooms, the taxpayer is unable to provide for educating children in his community.

On January 9, I introduced an education bill, S. 2, which was cosponsored by 30 other Senators. My colleague from the First District in Montana, Representative LEE METCALF, introduced companion legislation, H.R. 22, in the House. Hearings on these and other bills dealing with grants to the States for elementary and secondary schools began in February.

The legislation which Representative METCALF and I propose would authorize appropriation, in the fiscal year beginning July 1, of $25 for each school-age child—between the ages of 5 to 17 inclusive; $50 per child the second year; $75 the third year; and $100 the fourth and each succeeding year. This authorization amounts to $1.1 billion the first year, $2.2 billion the second year, $3.4 billion the third year, and $4.7 billion the fourth year.

That's a lot of money. It will take a lot of money to get our educational system into the second half of the 20th century. The main argument I anticipate, one on which I am prepared to do battle is, Can the Federal Government afford this substantial investment in education?

One of the acts I was most closely associated with during my quarter of a century in the Senate was the Employment Act of 1946. Were the present administration so bold as to follow its mandate, and base the economy of this great country upon our potential rather than some imaginary, sacrosanct budget estimate, there would be no question in anyone's mind about our ability to take on an additional expense for so vital a national purpose as education. However, even now reasonable men who compare finances of Federal, State, and local governments will agree that Uncle Sam is in better financial shape than many State and local governments.

Some persons hold that State and local spending for schools is inherently good, and that Federal spending for schools is inherently bad. This fallacy is cultivated by the self-interest groups that have as their primary goal the reduction of taxes, regardless of what may happen to our school system. Some of the same persons regard a balanced Federal budget as a sacred thing, but look the other way when it is pointed out that some State and local governments are in much worse shape financially.

In January the U.S. Office of Education estimated the classroom shortage at 140,500, only 1,800 less than the preceding year. At such a slow rate of construction the classroom shortage will extend well into the next century. The Office of Education estimates the average cost of classroom construction at $40,000 each. Thus, it would take more than $5.6 billion just to take care of the construction backlog at today's prices, which can be expected to increase.

There are about 1.3 million classroom teachers in our public schools. Their average salary this year is $4,775. The secretary of Health, Education, and Welfare has frequently stated that in his opinion teacher salaries should be doubled. Their total now amounts to about $6.2 billion.

Thus it is readily seen that if the Murray-Metcalf bill passed as introduced and if Congress voted the authorized appropriation for the next 4 years, the total appropriation of $11.4 billion would be $400 million less than the estimated total needed to take care of the present backlog of construction at today's prices, and double the salaries of the present, inadequate number of teachers.

Under the Murray-Metcalf proposal each State could use the money for either construction or teacher salaries, or both. The State would not have to submit for approval any State plan. The State would advise the Federal Government annually how much money it is putting into salaries, how much into construction, and that construction is proceeding in accordance with Davis-Bacon prevailing wage provisions of law.

I am somewhat reluctant to discuss the administration's school aid proposal, because each hearing before the Senate or House subcommittee develops new understandings of its built-in provisions for interminable delay, excessive bureaucracy, and failure to achieve intended purpose. Here is a brief outline of the plan, in the words of the Secretary of Health, Education, and Welfare when he appeared before my subcommittee:

"1. The Federal Government would undertake to assist in construction programs totaling $3 billion over a period of 5 years, at the rate of $600 million a year. Assuming that States and local governments take full advantage of the plan, it would result in the construction of about 75,000 classrooms which, in all probability, would not otherwise be constructed.

"2. The $600 million a year would be distributed among the States on the basis of public school enrollment, income per school-age child, and the effort exerted by each State for public elementary and secondary education in relation to national average expenditures for such education.

"3. Each State would be invited to submit to the Federal Government its own plan for identifying needy school districts and for determining what would constitute a reasonable tax effort on the part of these districts.

"Upon receiving such a plan, the Federal Government would declare the State eligible for participation in the program. The Federal Government would not substitute its own judgment for the State's judgment as to the best way of determining need and establishing a measure of reasonable tax effort. Nor would the Federal Government participate in any way in the administration of these State plans.

"4. Next, a needy school district that was making a reasonable tax effort for school construction but that could not finance a bond issue for a new building, would apply through the State for Federal-State assistance in meeting its debt service charges; namely, the payment of principal and interest.

"5. The Federal Government would pay half of the debt service charges on the total cost of the new building, after having been assured that the State would either make available half of the cost of the building, or would advance half of the debt service charges.

"6. If the reasonable tax effort on the part of the local school district should produce excess revenues in any 1 year, these excess revenues would be applied to the debt service charges for that year.

"7. Once the bonds had been retired, the local school district would be required to maintain its reasonable tax effort for an additional 10 years and to apply any excess revenues as partial repayment of the advances made by the Federal and State Governments."

When the administration bill was first proposed I characterized it as the bankers' and bureaucrats' bonanza act of 1959. I believe now that I should have changed that around a bit, to bureaucrats' and bankers' bonanza act of 1959. The bill is so complicated that it will be years before bankers have an opportunity to benefit from its provisions.

For example, 18 States have no provision for State aid for school construction. Thus, although they could accept grants under the Murray-Metcalf bill, they would have to pass legislation and in some cases amend their constitutions to establish State programs for school construction and thereby become eligible to receive matching funds under the administration proposal.

Because the States do not have a school construction program does not mean that they are not making a significant contribution to the school program. In some, like my own State of Montana, aid is given to maintenance and operation rather than to building, and amounts to a large portion of the total education budget. The provision of operation and maintenance funds, of course, releases local money to be spent on construction. The implication that requiring these States to enact State school construction programs would constitute an increase in effort is, therefore, not necessarily valid.

Furthermore, on the basis of our present analysis, it appears that more than half the districts in seven States could not participate in the complicated administration program because these districts have reached their legal indebtedness or taxing limits under existing State laws. A substantial portion of the districts in another 17 States, and at least some districts in an additional 7 States could not participate.

I think the most damning fact about the administration school plan is that it was rigged, admittedly, so as not to add anything to the budget during the remaining 2 years of the Eisenhower administration. It is deferred deficit financing, designed to put the cost for a totally inadequate program on the next administration and most assuredly not designed to help in a material sense in meeting the pressing needs for more classrooms and teachers.

In his state-of-the-Union message this year the President recommended that education should be studied by some committee, like the Committee on Recent Social Trends which was appointed in 1931 by President Hoover. This committee would come up with some national goals.

I took the trouble to find out what that Commission, established 28 years ago, had recommended. I found that it termed as "indispensable" to progress a "willingness and determination to undertake important integral changes in the reorganization of social life, including the economic and the political orders, rather than the pursuance of a policy of drift."

It is time to halt that drift, and I believe we can start right now. I don't see the need for yet another commission which could merely conclude that we're still adrift. The national goal should be the provision of safe, suitable, and adequate education for every American child.

No one need fail to support Federal aid for education because he believes the concept is new. To cite but one precedent, the Northwest Ordinance of 1785 was enacted under the Articles of Confederation 3 years before our Federal Constitution was ratified. In this ordinance, our Founding Fathers set aside the 16th section of land in every township in the new Territories for the maintenance of public schools. The proceeds from the 16th section were the original nest egg that established the public schools in Montana and in many other States.

For the first few decades in the history of Montana these funds provided a substantial percentage of the monetary support for public schools. Even today the proceeds from school lands amount to more than 10 percent of the total operating expenditures for public schools in Montana. The same is true for many other States.

Federal financial support for education is not new. Indeed, it is older than our Republic. The legislation I have proposed would not launch the Nation on a new and adventuresome program; it would merely build intelligently on the foundation laid down long ago by our Founding Fathers.

MEASURES IN CONGRESS TO RELIEVE UNEMPLOYMENT NOW

Mr. JAVITS. Mr. President, we have all been gratified by the data released last Wednesday by the Department of Commerce, showing that unemployment decreased by 387,000 during the month of March and that 1,106,000 more people now hold jobs than did in February. Yet, although these figures may give us grounds for some satisfaction, they do not remove the reasons for concern: The situation represented by the 4,362,000 unemployed—and their 6 million dependents—is still the most serious since before World War II, except for the worst months of the recession in 1958. And 1,500,000 of the unemployed have been out of work for 15 weeks or longer, an indication that many are not sharing in the general upturn of our economy which has brought the GNP to an all time high of $465 billion during the first quarter of 1959.

New York State is having special problems in this regard. While the nationwide rate of insured unemployment dropped from 5.7 to 5 percent between February 21 and March 21, New York State's rate decreased from 6.2 to only 5.8 percent. In January New York State had 6 major and 14 minor areas of substantial labor surplus. By March another minor area had been added—Plattsburgh—to bring the total to 21 major and minor areas of substantial labor surplus. The Buffalo area, for example, is facing a most serious problem, with unemployment exceeding 12 to 13 percent.

Thus, a disturbingly large segment of our population is not partaking of the prosperity of the Nation. It is our duty to help them obtain their rightful share. It is also a practical necessity, if the health of our economy is not to be sapped and we are not to lose the productive power of millions of Americans.

Last Wednesday, many of us, including myself, joined the majority leader in his bill to establish a commission on unemployment problems. This is a most worthwhile proposal. Even with the speediest consideration, however, it will probably take more than the allotted 60 days for this group's findings and recommendations to be implemented.

But measures are now pending in Congress which can themselves cut unemployment by anywhere from 20 percent or more and ease the plight of the unemployed. It is the responsibility of the Democratic majority in this Congress to act upon the measures now before us. This responsibility should be discharged promptly and effectively. I commend the Senate for having acted on three of these measures and urge the Democratic

majority in the other body to similarly proceed forthwith. These measures include:

First. The housing bill, now in committee in the other body. A high rate of private residential construction has been to a great extent responsible for our economic recovery. We must not permit a letdown in this key sector of our economy. Rather, we must provide for its further expansion. The more than 12 million families—3 million of them in the middle-income bracket—living in substandard housing require it. And the unemployed, 800,000 to a million of whom it is estimated by the building trades and by the Department of Commerce would be directly and indirectly reemployed in the course of only a 25-percent increase in residential construction, require it.

Second. An adequate depressed-areas bill, stripped of its raiding provisions, so that sections of this country which require an economic boost will be able to obtain new industries without depriving the original hosts.

Third. The Federal aid-to-airports bill has passed both Houses and is now awaiting adjustment between them. This bill has the capability of reemploying many thousands of unemployed.

Fourth. A bill setting Federal minimum standards for unemployment compensation. Hearings are now being held on that subject before the House Ways and Means Committee. Positive action will soon be required in the Senate so that an adequate program may be set in motion before the inadequate extension of the present program runs out on June 30. The present extension helps mainly those who are chronically unemployed. These are the very people who primarily need the aid of a positive program in depressed areas, airport construction, and the housing field. Those who are intermittently sharing in prosperity and are periodically unemployed are the ones who can be helped most by more standardized unemployment compensation designed to tide them over until they enter the main stream of recovery. The Senate failed to improve the stopgap measure by insisting on the McCarthy-Javits amendment; but whatever may be the arguments on that point, it is a fact that a decided majority of the Senate wants to do more.

It is by acting upon these programs which are now before us that the majority can expeditiously make a direct contribution to the relief of our distressed citizens who are unemployed through no fault of their own.

To have a majority is to have a responsibility. I sincerely hope that the majority in the other body, as in this body, will discharge this responsibility to the people generally, and especially to the unemployed.

DEFINITION OF "DEPENDENT CHILD" UNDER SOCIAL SECURITY ACT

Mr. CLARK. Mr. President, I call to the attention of the Senate a letter to the New York Times, published on April 1, written by Wilbur J. Cohen, often called the father of social security.

On March 16, I introduced S. 1403, which would add to the definition of "dependent child" under the Social Security Act—a needy child under 18 deprived of parental support "by the reason of death, continued absence from the home, or physical or mental incapacity of a parent"—the word "unemployment."

As the law now stands, it actually offers an inducement for desertion, since the family whose father has deserted is eligible for aid, while the family whose father's unemployment benefits have expired is not.

Every week more and more unemployed workers are exhausting their unemployment benefits. Now is the time for us to take action to rectify what is undoubtedly an unintentional—but serious—flaw in the Social Security Act.

Mr. President, I ask unanimous consent that the letter to which I have referred may be printed at this point in the RECORD.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

TO IMPROVE WELFARE LAWS: PRESENT FEDERAL PROVISIONS HELD INADEQUATE TO RECESSION NEEDS

(The writer of the following letter, professor of public welfare at the University of Michigan, served as director of research and statistics of the Social Security Administration and is currently a member of the Advisory Council on Public Assistance established by Congress.)

To the EDITOR OF THE NEW YORK TIMES:

The article by Edwin L. Dale, Jr., in your March 27 issue reports official Government figures show that 1,362,000 needy persons in 466,000 families in January were being supported by general relief from State and local welfare agencies. Mr. Dale also states that there has been a steady increase during the recession in the number of cases receiving aid to dependent children. In some instances the father may have had to desert his family to enable them to become eligible for relief.

What a tragedy it is that over 2 million children are in needy families receiving welfare payments today. And there are nearly 5 million more people who have to depend upon welfare—a total of 7 million people. In many localities thousands of persons in bona fide need are denied help because of financial limitations and restrictive requirements.

This distressing situation highlights the fact that our existing social insurance programs are not fulfilling their original objective of being an effective first line of defense in meeting need and preventing hardship and humiliation. Our unemployment insurance system is particularly in need of improvement in benefits and the elimination of the interstate competition which penalizes progressive State action.

PERMANENT REFORMS

The House Committee on Ways and Means in Congress begins consideration on April 7 of basic changes which are long overdue in the program. The temporary legislation of 1958 and 1959 indicates the need for permanent reforms in the basic Federal unemployment insurance law.

The general relief programs in the Nation are in even worse shape. There is no Federal support for these programs at all. They are a hodegpodge of inadequacies.

Mr. Dale correctly points out that in some communities general relief is not available to a family with a member who can be considered to be employable. In 16 States all general relief must be borne by the local taxpayer without any State or Federal help. There are many needy persons who are now being denied relief because of lack of funds in localities.

UNEMPLOYMENT POLICY

The Federal Government takes some responsibility for unemployment insurance; for a basic floor of protection in social security; for some aid to the States for the needy blind, aged, dependent children, and the disabled. But it prohibits use of Federal funds to a needy family when the father is unemployed unless he deserts his family. This is unsound public policy. The Congress should certainly remedy this by giving equal protection to the unemployed father who sticks with his family.

The experience with the recession indicates that the built-in stabilizers of unemployment insurance, social security, and public welfare were not—and still are not—satisfactory to meet the present recession or another similar one in the future. A free enterprise economy must make more effective provision than we now have for meeting the personal hazards which occur in our economy.

While the lessons of the recession are still fresh in our memory, we should make the necessary changes in our Federal laws.

WILBUR J. COHEN.

ANN ARBOR, MICH., *March 28, 1959.*

IRAQ: CROSSROADS OF THE MIDDLE EAST

Mr. CLARK. Mr. President, the Washington Post and Times Herald today published an article entitled "Iraq a Top Topic of Concern Here," written by Chalmers M. Roberts, a staff reporter. I ask unanimous consent that the article may be printed at this point in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

IRAQ A TOP TOPIC OF CONCERN HERE

(By Chalmers M. Roberts)

Washington is full of concern over the future of Iraq. But the administration has little information and its policy is to stand still and hope.

A number of recent events have added to the alarm here that communism is taking over and that Iraq may end up as a People's Republic.

Most alarming was the Wednesday statement by the Iraqi Army's Chief of Staff that arms are being passed out to the Popular Resistance Forces, something that the Communists have been loudly demanding. This is arming the mob and setting up what is likely to be a Communist-controlled force as a counter to the non-Communist regular armed forces.

Puzzling is the shipment of several hundred Kurds on a Russian ship from the Soviet Union to Iraq. These people reportedly have been living in the Soviet Union since the failure of a Soviet-backed, or Soviet-inspired, 1946 effort to set up an "independent" Kurdistan in an area centered in northmost Iran and adjacent to Russia which includes parts of Iraq, Iran, and Turkey.

SCARCELY HUMANITARIAN

Iran and Turkey separate Iraq from the Soviet Union, in which there also is a Kurdish group. Many believe the Soviet idea of a Kurdish state is designed to bridge that geographic gap. But Moscow has been silent on the Kurdistan idea almost since the day Premier Abdel Karim Kassem came to power

in Iraq. And the Kurds have the reputation of being pro-Kassem.

Still, it is a reasonable surmise that Moscow is not sending the Kurds back to Iraq just out of humanitarian sentiments.

Another issue is oil. Much of Iraq's revenue comes from royalties from the Iraq Petroleum Co., largely owned by British and American concerns. Kassem reportedly is negotiating a more favorable break in the royalties.

Some observers see this move by Kassem as an effort to prevent the Communists from making an issue of oil or trying to force nationalization of the foreign concession. Kassem also may be trying to outdo Gamel Abdel Nasser who would like to help such oil-rich neighbors as Saudi Arabia increase their percentages from foreign firms.

Another move being carefully watched is a Baghdad demand—at least a newspaper demand, and all papers are censored—to go to the United Nations Security Council with what Baghdad's Al Akhbar last week termed Iraq's case of "aggression" by Nasser's United Arab Republic. This is a charge that Nasser engineered the recent unsuccessful Mosul area revolt against Kassem.

EXCUSE FOR RED AID

Some observers feel that if this were done, Iraq could claim indirect aggression by Nasser as an excuse for asking military aid from the Soviet Union. The precedent, so this thesis goes, would be the Eisenhower doctrine. Such a move, on such a precedent, would, it is argued, make it impossible for the West to counter such a move.

In all this confusion, official Washington tends to take comfort in the idea that from the Kremlin's own self-interest it would be foolish to take over Iraq. To do so overtly could risk a war with the West; to do so by an internal coup would antagonize the rest of the Arab world, even as Nasser is now antagonized.

This may be comforting, but is it realistic? It is true that Moscow has no noncontiguous satellites except Albania (and once there was Yugoslavia as that bridge). But it also is true that Iraq would be a great prize and that the age-old Russian, not just Communist, dream has been of expansion to the warm water, Persian Gulf on which Iraq faces. That much was part of Stalin's piece for a deal with Hitler.

Moscow knows, too, that the situation in neighboring Iran is shaky and that Pakistan further east has such internal troubles that it is hardly secure in the Western camp despite alliances. After all, Communist dogma says communism is the way of the future and is the Kremlin to pass up an opportunity if it arises—or can be created?

Mr. CLARK. Mr. President, I should like to make a pertinent inquiry: Does our State Department feel that in Iraq there are only two choices: first, that Iraq should be merged into the United Arab Republic; second, that Iraq should become a Communist satellite?

To me, it seems clear that there is a third alternative. Iraq can be kept independent of Nasser and Khrushchev. I think it would be most helpful if the State Department would enlighten the American public as to what is being done to achieve that end.

Mr. President——

The PRESIDING OFFICER. The Senator from Pennsylvania.

HOW TO BALANCE THE BUDGET

Mr. CLARK. Mr. President, a few days ago the distinguished senior Senator from Connecticut [Mr. BUSH] had occasion to place in the RECORD, with complimentary remarks, some articles which were published in the Wall Street Journal. I have advised the senior Senator from Connecticut that I would comment on his remarks today, in order to give him an opportunity to be present, if he saw fit to do so. Among the comments in the insertions from the Wall Street Journal was the statement:

What Ike needs to balance the budget are higher taxes on motor fuels and higher postal rates, which were requested in the budget message.

In my judgment, what Ike needs to balance the budget are not higher taxes on motor fuels and higher postal rates, although I would be inclined to support them if such proposals were to come before this body. Both these proposed measures are regressive and bear most heavily on those least able to pay. What, in my judgement, Ike needs most to balance the budget is a closing of the inequitable tax loopholes. This would provide the funds with which to balance the budget and pay a substantial amount toward the reduction of the national debt. I have heretofore adverted to this subject.

Mr. President, I ask unanimous consent that there be printed in the RECORD at this point in my remarks a program for closing 11 separate loopholes, which would make it possible to balance the budget at $81 billion-plus and still leave a substantial surplus to be applied on the national debt.

There being no objection, the program was ordered to be printed in the RECORD, as follows:

Here is a program for raising the additional revenue needed to balance the budget at around $81 billion.

1. Increase the staff of the Internal Revenue Service charged with enforcing tax laws and direct them to concentrate on the larger returns.

In its early years, the Eisenhower administration reduced the personnel of the enforcement section of the Internal Revenue Service by 3,000 employees and the results have been costly to the Treasury. During the first 6 years of this administration, an average of 25 million more income tax returns were filed annually than during the last 6 years of the Truman administration. This larger number of returns averaged $27 billion more per year than in the previous period. Nevertheless, the average annual amount of tax deficiencies assessed has been $320 million less during the 6 Eisenhower years than durthe 6 Truman years.

Better administration alone might well raise more money than closing any single loophole. In fact, a special audit of 36,000 representative business and professional returns, recently published by the Internal Revenue Service, indicates that if auditing could have been extended to 6,700,000 such returns for the same year, the taxable income of the taxpayers involved would have been increased by 20 percent and yielded $2.7 billion additional public revenue. This is a matter which might well be investigated by the Senate Finance Committee. If even half this amount could be obtained, the increased revenues would be $1.3 billion.

2. Require withholding and reporting of income taxes on dividend and interest payments at source, as in the case of wage payments—$600 to $800 million.

3. Tighten the rules regarding deduction of business expenses. Expenditures by businessmen for which they receive a large element of personal return should not be recognized as deductions from taxable income. Such abuses appear to be prevalent in claimed deductions for expenses of wives on so-called business trips, transportation to conventions held abroad, company cars, yachts, airplanes, lodges, lavish entertainment at night clubs and theaters, and many related items. The cost of gifts exchanged between businessmen should not be deductible. Consideration should be given to limiting deductions for advertising expenses not related to the sale of products—$1 billion.

4. Limit the transferability of operating loss carryovers in purchases of corporations with heavy losses. Tax windfalls should not be given to those persons who make a profession out of "milking" losing businesses—$100 million.

5. Limit the amount and type of foreign tax credits permitted. At present, many large domestic corporations with sizable income from foreign sources escape all or part of U.S. income taxes by this device—$200 million.

6. Repeal the special tax credit and exclusion for dividend income established in the 1954 Tax Code. As a result of this advantage given to unearned income, a wage earner netting $5,000 must pay $60 more in taxes than a person living on unearned income of the same amount—$400 million.

7. Reduce the depletion allowance on oil and gas income from 27½ percent to 15 percent and limit the total of such allowances to the adjusted basis of the property—$400 to $600 million.

8. Revise the rules regarding capital gains and losses to eliminate capital gains treatment of net gains from sale or exchange of depreciable property used in trade or business and peripheral items—$800 million.

9. Treat the termination of an interest in a life estate as a taxable transfer—$500 million.

10. Combine estate and gift taxes in an integrated transfer tax structure—$500 million.

11. Reduce the tax advantage given to upper income married couples and heads of households by the income-splitting provisions of the Internal Revenue Code—$1 billion.

The suggested changes in the tax laws and in their administration would increase the public revenues by an estimated $7 billion per year, or almost twice the amount necessary to cover the increased expenditures suggested earlier. They would impose no unfair burdens; on the contrary, they would equalize tax burdens which are now inequitably disturbed. While mildly progressive, rather than regressive in nature, they would not deter initiative which would otherwise be devoted to expanding the economy. In a word, they would redress injustices while at the same time yielding needed Federal revenue.

Mr. CLARK. Mr. President, in the course of dealing with this subject, I ask unanimous consent to have printed in the RECORD at this point an article entitled "Tax Chiselers: Their Numbers Grow as Federal Levies Remain High, Other Rates Rise." The article was published in the Wall Street Journal of April 9.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

TAX CHISELERS: THEIR NUMBERS GROW AS FEDERAL LEVIES REMAIN HIGH, OTHER RATES RISE—AS FILING DAY NEARS, TWO OF FIVE ADMIT THEY HIDE INCOME, BOOST DEDUCTIONS—IRS TRIES A COUNTERATTACK

Growing numbers of Americans, angered by high Federal income tax rates and rising State and local levies, are turning into tax cheats.

With the Federal tax deadline just a week away, Wall Street Journal reporters interviewed tax lawyers, accountants, and a lot of ordinary taxpayers in 15 major cities around the United States. The findings indicate not only that the number of tax chiselers is growing but also that evaders make up a sizable proportion of the population—considerably bigger than the 1-percent estimate offered by the Internal Revenue Service.

Among the ordinary taxpayers, two of each five, after first carefully getting assurance of anonymity, admitted they cheat on their taxes. They were not people who merely sought to take advantage of every legal loophole in the tax laws, or who gave themselves the benefit of the doubt when it came to figuring how many deductions they could take. They were people who knew what they owed Uncle Sam, and then shortchanged him. And while the survey made no pretense at being scientific, it did offer some idea as to the way many a citizen has come to regard his tax obligations.

In Boston, a 30-year-old electrician says, with a grin, "I dodge my taxes whenever I can. It's kind of like a sport to see if you can't make a buck here and there."

In Detroit, a young businessman, who says he "plays the stock market," comments that he isn't "finicky" about complying with the "fine points" of the tax laws—he skips reporting his capital gains, for example, and ignores "some other formalities."

A well-dressed middle-aged man, waiting for a bus in Philadelphia's terminal, snaps, Sure I cheat. It's not my obligation to pay every nickel.

And in San Francisco, a burly bartender sunning himself in verdant Union Square asks, what am I going to do? Lots of times I'll put something on the cuff for a customer when I know I'll never get it back. So maybe I claim a $20 donation to the Community Chest when I only gave $5. And tips in my joint—if I get $5 a week I'm lucky. I don't list a dime that isn't part of my salary, and nobody's questioned me yet.

NO WORSE?

Officially, the Internal Revenue Service says tax evasion is not increasing. The Service estimates that only 1 percent of the 60 million people who file Federal income tax returns deliberately make out false reports. Asked recently what he thought was the present extent of tax evasion, Commissioner Dana Latham replied, "We do not believe it is any worse today than it has been in the last 10 years."

But privately other IRS officials concede evasion is a growing problem. They note that in the last few years it has become more profitable to avoid paying Uncle Sam his due. When the tax rates were low, there wasn't much to be gained, comments one aide. But there's no doubt that the higher tax rates have made it a more attractive risk to some people.

Many non-Government tax experts also think evasion is growing. M. L. Rachlin, a New York City certified public accountant, and a specialist in tax matters, says there has been a marked increase in tax evasion recently. Adds a Portland, Oreg., attorney: I'm handling nearly twice as many tax suit cases now as compared to 5 years ago. Observes a Jacksonville tax lawyer: There's been a definite lowering of moral standards as far as paying taxes goes.

Although IRS figures indicate that there was a decline in the number of tax evasion cases last year, Commissioner Latham says the statistics don't give the true picture. In calendar 1958, 1,635 cases were recommended to the Justice Department by the IRS for prosecution, down from 2,062 a year earlier. Of the 1,635 cases, 974 individuals were convicted, a drop from 1,276 in 1957. Back taxes and penalities recommended amounted to $146 million down from $167 million in 1957.

PICKING OUT IMPORTANT CASES

But Mr. Latham explains that the statistical decline came about because the Service now is putting emphasis on picking out important cases from the standpoint of revenue involved and deterrent effect on other potential cases. One aid sums up the program this way: If the word gets around that we're looking at a particular group of returns—and believe me, it gets around—then that helps scare off any others who had an idea they might do some evading. Says another revenue agent: When a prominent doctor is prosecuted on charges of tax evasion, it's amazing how his colleagues show terrific rises in income the following year.

Tax evasion schemes take a variety of forms. One of the simplest merely involves boosting by a few dollars the amounts claimed as deductions for charitable contributions, State and local taxes, medical payments, or other outlays. More venturesome taxpayers may claim fictitious dependents; a Philadelphian once listed Poncho and Sanchez, two Mexican burros, as members of his family. Still other schemes are far more elaborate; some individuals, for example, may claim business losses from nonexistent companies.

"There seems to be no end to the ways taxpayers seek to defraud," says H. Allen Long, Chicago district director of the IRS. B. Frank White, IRS district commissioner in Dallas adds: "I'm sure a lot of people stay up nights thinking up new ways to beat their taxes."

Although IRS officials won't say what particular category of the taxpaying public causes them the most trouble, one official notes that "anywhere you have anyone handling a largely cash business, where he doesn't have to make a detailed accounting to anyone else, the temptation for tax evasion is greater." And he adds: "That way, it's just between him and the Government, without a lot of other people looking over his shoulder." Mr. Long of the Chicago IRS office observes that "the most frequent instances of fraud appear in the case of owners of moderately sized businesses and in the case of professional people."

Taking payments in cash and then not reporting them, and deducting personal expenses as business costs, seem to be the specialties of some professional men and the small businessman, tax experts say. Washington IRS officials cite the case of the doctor who didn't think he should be taxed on the night calls he had to make. He was sentenced to 8 months in prison for understating his income over a 4-year period by $80,000. A Boston undertaker understated the number of funerals his establishment handled, claiming an annual profit of only $5,000 to $6,000. But by culling newspaper files the IRS found he had about twice as many funerals as he said, with an annual profit closer to $20,000 a year.

A taxpayer doesn't have to get paid in cash to cheat, notes New York's Mr. Rachlin. When paid by check he simply steps into the nearest check-cashing agency or corner luncheonette and converts the check into cash, then records just the portion of the payment on which he feels like paying taxes. And only this portion, instead of the full amount of the check, will appear on his own bank records. The check-cashing technique has reached such proportions in New York, Mr. Rachlin says, that IRS agents now regularly call on places that make a specialty of cashing checks for a fee and note the frequent users of the service Then they examine those individuals' returns to see if the payments have been reported.

Banks are used less frequently, says Mr. Rachlin, because these institutions get suspicious if an individual regularly requests cash rather than depositing his checks.

A BIG DEDUCTION

T. G. Williams, Portland, Oreg., accountant, reports a variation of this practice. "An account of mine tried to claim a big deduction for medical expenses," he relates. "He had for proof of the expense a stack of canceled checks from a drug store. I found he was cashing personal checks at the drug store, then claiming a medical expense deduction for drugs."

Another evasion stratagem is the country club membership. It works this way: A foursome bets on a golf game and at the final hole the losers fork over, say, $20 to the winner. The latter says, "Fellows, we'll just drink this up." The party has $20 of drinks, but instead of paying cash for the refreshments, the winner keeps the money and signs a check. When it comes time to figure his income tax, he has the club bill, which he claims as a business entertainment deduction; meanwhile, he's had the benefit of $20 of unreported income.

"This is small if only done once," says a Jacksonville tax lawyer, "but it mounts up over the period of a year." The same system is used at luncheon clubs by "check grabbers," who sign the check, then collect cash from each diner in the party.

Harry Graham Balter, Los Angeles tax attorney who is author of Fraud Under Federal Tax Law, a legal tome he calls a "practitioner's book," cites a growing "off-the-main-course pattern of evasion—credit cards."

RUNNING HOG WILD

"Taxpayers are running hog wild with credit cards," claims Mr. Balter, "figuring they don't have to differentiate between legitimate business expenses that they charge and personal expenses. Credit cards "invite tax frauds by making it easy to do it, and they're going to make a crook out of every taxpayer." Mr. Balter predicts that "failure to segregate credit card charges that are deductible from those that aren't" will be "the next big area of tax evasion prosecution by Government men."

Although individuals' tax cheating is a constant problem, IRS officials say an even greater source of trouble is the shady tax adviser. Tax officials figure the "aider and abetter," as they refer to the unscrupulous tax expert, causes more work because he knows how to hide evasion and, although he does it in relatively small amounts, he does it for hundreds of people.

Washington officials cite this example: A disbarred attorney set himself up as a tax consultant and quickly established a reputation as a man who could assure a big tax refund. Obviously, officials note, it wasn't likely that all of his clients were blameless because the distortions of income and expense data submitted to him should have been clear in many cases. In fact, he was tripped up when one client got a refund so large that it surprised him. Suspecting an error, he turned the check over to the consultant to adjust with the IRS—but the consultant appropriated the check. The taxpayer brought suit for embezzlement, and the IRS moved in on the consultant. It had to ferret out hundreds of tax returns, and in nearly every case found sizable amounts in additional taxes due the Government. The additional taxes and penalties ran to more than $1 million.

INCOME TAX BUYERS

Certain tax advisers in the Southwest are doing a growing business as the result of a practice of which IRS personnel take a dim view. Called "income tax buyers," by their customers, these operators fill out the tax forms, then write the client a check on the spot for his refund—less a fee, usually 10 percent of the refund. The tax adviser gets a power of attorney so the refund check can

be mailed directly to him, allowing him to cash it and pocket the profit.

"It's bad," comments IRS District Commissioner White, "because sometimes the guy who is running this sort of schemes gets a little illegal in his enthusiasm for customers." The bigger the refund the client gets, of course, the bigger the fee for the tax consultant.

Why do people cheat on their taxes?

Most of the people who admit they don't pay all the taxes they owe try to wrap their actions in a cloak of moral righteousness, claiming they are opposed to Government spending programs, disgusted at corruption and waste in Government, or simply object to taxes "on principle." Only a handful say the reason they don't pay is that when it comes time to file their returns they just don't have the money.

An attractive blonde secretary, sunning herself at Manhatten Beach, Calif., admits she didn't report income from a 2-week job she held "because it would have put me in a higher income bracket," and adds casually, "I've never paid State taxes, because I object to them." Snaps a Boston securities salesman: "I think you should beat the Government out of every nickel you can. I'm convinced one-fourth of all tax money is swindled, wasted, or unnecessary." And he adds, "Of course, if I was convinced the money would be used well, I'd pay every cent, but I don't believe in the way the Government is being run."

"The Government doesn't seem to worry about spending my money recklessly, so why should I have a bad conscience about adding a few rounds of drinks to my expense account that didn't have anything to do with business," asks a Portland, Oreg., insurance executive.

Taxpayers also express indignation over the "favored" treatment the Government allegedly gives some big tax evaders. Says a Detroit attorney: "The practice of settlements with 'big names' in a criminal investigation is wholly unwarranted. The fact that he can't earn enough money to pay the Government what he owes it does not justify a compromise agreement—he ought to be thrown in jail." Adds a night club waiter, standing in line at the St. Louis Internal Revenue Service office to get some tax advice: "Sure I hold out on reporting some of my tips. But look at all the big shots gypping the Government. When they pay up what they owe, I will."

A number of people complain that the tax forms and tax law themselves are to blame for some of the cheating that takes place. "I can be evading paying a lot of my taxes and not even know it," complains a confused Portland receptionist. "The forms are so confusing and complicated that I usually end up putting down what looks good and what adds up, whether it is correct or not." And the St. Louis banker says he meets "thousands of people who can't understand the tax forms. They'd rather take a chance on not getting caught than to fill out one of those forms."

Some individuals in the middle and upper income brackets cheerfully admit they play a little game with the tax collector. They know that their tax returns are likely to be checked, and that the tax collector well may question some of the deductions they have claimed. So they purposely overstate their deductions. If Revenue Service calls them in for an interview, they figure they'll be able to compromise, settling on a figure that will be close to the correct total.

HIGHER TAXES, MORE EVASION

Many of the tax experts think that as tax rates climb, so does the number of tax evaders, and that the best way to reduce the number of evaders would be to slash taxes. New York accountant Rachlin comments: "It's much the same story now as it was during the war. When rates are high, the temptation is great to shortchange Uncle Sam. Taxpayers in the 50 percent bracket or higher start getting a feeling of anger that their silent partner is pulling down more than they are and they start looking for ways to lighten the load. First they take the legal steps of tax avoidance. But many find this doesn't give them enough relief. From there, depending on the character and moral fiber of the individual, it's usually a short leap to outright evasion."

"Higher taxes and the inflated dollar are two of the main reasons for more people attempting to evade paying all of their taxes," says Mr. Williams, the Portland accountant who is professor of accounting at Lewis and Clark College there. "Let the Government cut taxes 50 percent and see what will happen to efforts to evade taxes," suggests a Boston tax lawyer.

Aside from cutting taxes, a number of tax experts recommend that the Government reinstate its "voluntary disclosure policy," which was in effect from 1934 through 1952. Under this policy tax cheats could make a full disclosure of their fraud, pay all back taxes, together with interest and penalties, without prosecution. The Treasury dropped the policy as a result of pressure from law enforcement officials who argued that it prevented them from jailing racketeers who couldn't be nailed otherwise.

Says Mr. Balter, of Los Angeles: "A reinstatement of the voluntary disclosure policy would triple the amount of money the Government recovers from tax evaders."

MORE PUBLICITY

Private tax men also say they believe that increased publicity of indictments and convictions of tax evaders would have a salutary effect on the number of evaders.

Internal Revenue Service officials won't say specifically what their plans are for auditing 1958 income tax returns, but claim that one-sixth of the expected 60 million individual returns will be closely examined, and in some brackets and some categories nine-tenths of the returns will get a full check.

Commissioner Latham recently told Congress, "We propose, within the limits of our budget, to step up the number of returns that are audited each year. The public should realize that we have no set pattern on the returns we do audit. We are seeking better techniques to audit the returns which would yield the most revenue. We have a trial-and-error method and change each year. But we want to make in a reasonable cycle a complete audit of everybody's return who would appear to even possibly have any substantial revenue so that no taxpayer can ever feel he is secure from an audit."

Here is a general picture of the way the audit machinery works:

Returns selected for investigation may be identified by type of return, type of business, or occupation, or by size of income. Certain types of returns get special attention; these may be personal or business returns reporting adjusted gross income above certain designated levels. Further selection may be made on the basis of such factors as substantial income reported from sources not subject to withholding, or businesses which deal largely in cash, or returns presenting unusual dependency exemption claims or very large deductions. In addition, the audit staff may branch out from this in a varying pattern, giving special attention to doctors this year, and to lawyers next year.

But in general, a tax sleuth says, "We go where the money is." Even though a taxpayer might have elaborate means for hiding evasion, "money leaves tracks," adds another.

Another source of information: The Internal Revenue Service, although it doesn't advertise it, has a fund for tipsters. If a person tips off the Service to an evader, he can collect, upon application, up to 10 percent of the additional tax money collected by the Government. (The tipster's windfall is taxable, incidentally.) The Service's appropriation for this fund for the fiscal year ending June 30 is $600,000, up from $493,000 last fiscal year. But the Internal Revenue Service doesn't boast about the fund; it doesn't want to appear to be courting stoolpigeons.

Mr. CLARK. Mr. President, in connection with this matter, the Senate will shortly have an opportunity to reach these tax chiselers, because there will come before this body the appropriation bill for the Treasury Department; and I think it of the greatest importance that in considering that bill, we make sure that there is provided an adequate sum for the enforcement of the internal revenue laws, to the end that corporate and individual income tax returns may be adequately audited and that each taxpayer may be required to pay his fair share of the national tax burden.

Mr. President, I ask unanimous consent to have printed in the RECORD at this point a letter sent today to the junior Senator from Virginia [Mr. ROBERTSON], the chairman of the Treasury-Post Office Subcommittee of the Appropriations Committee. The letter is signed by 12 Senators, and invites the attention of the subcommittee to this subject.

This is the first step in closing these loopholes. If they are closed, I believe the Treasury will net—and this is estimated conservatively—an additional $1 billion of revenue.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

Hon. A. WILLIS ROBERTSON,
Chairman, Subcommittee on Treasury-Post Office Departments of the Senate Committee on Appropriations, Senate Office Building, Washington, D.C.

DEAR MR. CHAIRMAN: The action of the House of Representatives in cutting $2.5 million from the $365 million appropriations requested by the administration for the Internal Revenue Service during fiscal 1960, and indeed the adequacy of the request itself, appear to be open to serious question.

The effect of the House-approved cut would be virtually to eliminate the modest expansion of the Internal Revenue Service tax enforcement program which had been planned. The Service would be unable to hire any of the 100 new revenue agents whose employment has been recommended, only 35 of the 204 new office auditors, 35 of the 50 new office collectors, and 26 of the 35 new auditors' clerks. In addition, 13 percent less temporary help than asked for would be obtainable.

Commissioner Latham has estimated that even during the first year in which a new revenue enforcement official is on the job he can be expected to collect $9 of otherwise uncollected revenue for every $1 spent to employ him, and that after that the ratio is estimated to be about 13 to 1. (Hearings, House Subcommittee on Treasury-Post Office Departments, 1959, p. 456.) Other Treasury officials have estimated that the ratio is as high as 20 to 1. (Hearings, p. 30). The grave loss of potential public revenues in fiscal 1960 which would result from approval of the $2.5 million cut can be readily appreciated.

More serious questions can be raised about the adequacy of the President's initial request for the Internal Revenue Service.

The Eisenhower administration has reduced the number of enforcement personnel in the Internal Revenue Service by an annual

average of 3,000 employees from the number similarly employed in the last year of the Truman administration. In fact, in 1958, there were 3,852 fewer persons so employed than in 1952. The attached statistics show how costly this "economy" has been to the Treasury.

During the first 6 years of this administration, an average of 25 million more tax returns were filed with Internal Revenue Service than during the last 6 years of the prior administration, and internal revenue collections averaged 27 billion more than in the previous period. Nevertheless, the average annual amount of tax deficiencies assessed has been $320 million less during the 6 Eisenhower years than during the 6 Truman years.

The urgent need for additional revenues in fiscal 1960, if the budget is to be balanced at any level and further deficit spending avoided, is becoming increasingly apparent. There may well be disagreement among us as to the source of new taxes which may have to be levied or the need for closing specific tax loopholes. There is no disagreement among us that as many taxpayers as possible, individual, and corporate, who are not paying required taxes at present or paying them in insufficient amounts, should be forced to carry their fair share of our total tax burden.

We respectfully urge that the $2.5 million which was cut from the Internal Revenue Service appropriation for fiscal 1960 by the House of Representatives be restored and that consideration be given to providing a substantial increase in funds for the enforcement section of the Service in addition to the sums recommended for this purpose by the administration.

Sincerely,

JOSEPH S. CLARK, WILLIAM PROXMIRE, WAYNE MORSE, STUART SYMINGTON, EUGENE MCCARTHY, FRANK CHURCH, PAT MCNAMARA, HARRISON A. WILLIAMS, JR., STEPHEN M. YOUNG, E. L. BARTLETT, RALPH YARBOROUGH, AND JOHN A. CARROLL.

Mr. CLARK. Mr. President, in the same series of articles placed in the RECORD by the distinguished senior Senator from Connecticut [Mr. BUSH] to which I referred a few moments ago, was a Wall Street Journal article by Yale Brozen, professor of economics at the University of Chicago. My good friend, the Senator from Connecticut [Mr. BUSH], spoke with admiration of the article, which was entitled "Inflation's Real Roots—How Federal Deficits Cause Dollar's Decline, Price Rises."

Professor Brozen's thesis is that increases in the money supply, largely brought about by Federal deficits, constitute the primary cause of post-World War II inflation. Mr. President, that is a discredited economic theory which is reminiscent of the ice age. Professor Brozen is one of the few remaining economists of standing who cling to this ancient folklore.

The Wall Street Journal is a great newspaper; but its editorial page suffers from shocking economic and political lag. It really ought to shed its preoccupation with ancient folklore, and move into the modern world.

Mr. President, at this time I ask unanimous consent to have printed in the RECORD excerpts from the book entitled "Can Inflation Be Controlled?" written by Harold G. Moulton, a highly respected conservative economist, and president emeritus of the Brookings Institute. These excerpts summarize Dr. Moulton's refutation of the quantity theory of money on which Dr. Brozen relies.

There being no objection, the excerpts were ordered to be printed in the RECORD, as follows:

CAN INFLATION BE CONTROLLED?

(By Harold Glenn Moulton)

The analysis in foregoing chapters has shown that the traditional assumption that the supply of money and the supply of goods are independent of one another is invalid. Rather both originate in, grow out of, productive operations in a pecuniary economy. The money income generated in the process of production—and accruing to individuals in the form of wages, interest, rents, and profits—is the money supply available for expenditure by the people. The magnitude of this supply of spendable money is governed by rates of remuneration for services rendered and, as we have seen, these normally depend upon quite other factors than the supply of gold or bank reserves or fiscal and monetary policies. Treasury and Federal Reserve policies have always been ineffective precisely because they cannot directly reach the factors responsible for the flow of money income. They may indirectly affect the situation but only by positive restrictions of credit which impede productive operations (p. 174).

* * * * *

In concluding this appraisal we would emphasize that the quantity theory of money, whether expressed in the form of mathematical symbols or in words, throws no light on the process by which prices move from lower to higher levels, or vice versa. It cannot indicate whether the increase in currency is a casual or merely a permissive factor. It merely registers a result (p. 218).

* * * * *

The shift from money supply, as governed by gold stock, subsidiary forms of money, credit currency, and their rates of turnover to the money income currently received by individuals for services rendered is a crucial change. Under the income conception the magnitude of the flow of money income may vary widely from the stock of gold and other forms of money, and may vary independently. The failure of many writers on money and prices to grasp this vital difference between the income theory and traditional monetary theories has been a persistent source of confusion (pp. 227–228).

Mr. CLARK. Mr. President, Professor Brozen is near enough to the water's edge when he talks about inflation; but when he moves into political fields about which he knows very little, I suggest that he is over his head, in very deep water. He undertakes to criticize programs which the Senate has already approved, and others which I am confident it will approve, in order to shore up our domestic economy. He suggests that the people would not vote for these measures—which he calls, in effect, fraudulent—if they had an opportunity to do so.

Mr. President, perhaps Dr. Brozen is a learned economist; but I suspect that the Members of the Senate know a little more about politics than does he, and so do the Members of the House of Representatives.

On March 23, a distinguished Member of the other body, the Honorable FRANCES P. BOLTON, had printed in the CONGRESSIONAL RECORD a public opinion poll which was taken of 17,000 families in the 22d Congressional District of Ohio. I ask unanimous consent that the poll be printed at this point in the RECORD, to indicate the extent to which Mr. Brozen was off base in connection with his article published in the Wall Street Journal.

There being no objection, the poll was ordered to be printed in the RECORD, as follows:

	Percent		
	Yes	No	No opinion
1. Do you favor a relaxation of the trade barriers imposed by the United States against Soviet Union?	25.5	63.5	11.0
2. Would you favor diplomatic recognition by the United States of Communist China?	22.8	68.1	9.1
3. Do you favor continuation of our mutual security (foreign aid) program at approximately the same cost as the past several years?	43.0	45.7	11.3
4. Do you favor gifts of surplus farm commodities to underdeveloped countries?	76.9	17.4	5.7
5. Would you favor price, wage, and rent controls if our economy is faced with a period of accelerated inflation?	70.3	24.5	5.2
6. Do you favor Federal programs, such as the proposed community services legislation to provide long-term, low-interest-rate, Federal loans for local public works projects?	59.0	29.4	11.3
7. Do you favor legislation to provide lower downpayments, and smaller monthly payments through larger and longer mortgages on FHA insured homes?	59.3	31.7	9.0
8. Would you favor larger Federal participation in local slum clearance and urban renewal projects?	51.6	41.0	7.4
9. Do you favor Federal aid to needy States for school construction?	61.4	33.2	5.4
10. Do you favor Federal aid to needy States for increased teacher pay?	49.4	43.4	7.2
11. Do you believe Federal aid to education will result in Federal control of education?	41.0	46.9	12.1
12. Do you favor continued Federal aid to local airports?	30.7	55.1	14.2
13. At present a person drawing social security benefits is prohibited from earning in excess of $1,200 yearly. Do you believe this limitation should be removed?	72.9	22.9	4.2
14. Do you favor a Federal program to provide hospital and surgical care for social security beneficiaries by increasing the wage base for social security taxes to $6,000?	48.5	38.9	12.6
15. Would you favor extension of coverage, and an increase in the $1 per hour minimum wage law?	62.3	27.1	10.6
16. Would you favor legislation during the present session of the Congress to grant statehood to Hawaii?	82.9	7.5	9.6

ACHIEVEMENTS IN VESSEL SANITATION

Mr. BEALL. Mr. President, it is a matter of exceptional interest when a worldwide industrial organization displays such excellence of performance as to warrant awards by the U.S. Government. Such a development has just taken place, and has resulted in awards to the Esso Standard Oil Co., which has been cited by the Public Health Service for most satisfactory results in vessel sanitation.

John D. Rogers, general manager of the marine department, and Sydney Wire, general manager of the inland waterways department, of Esso, received the awards from Malcolm C. Hope, chief of the general engineering program, of the Division of Sanitary Engineering Services of our Government. These officials of one of the world's most important organizations are upholding in a most impressive manner the traditions of public service. Mr. Rogers, in addition to his other important connections, is a member of the board of directors of the American Merchant Marine Institute.

These special citations, so noteworthy for the company's achievements, were awarded because each of the 27 tankers of the marine department and each of the 12 tankers of the inland waterways department achieved a rating of 95 or better on an official Public Health Service inspection which involved 166 separate items of sanitary construction and maintenance.

Particularly noteworthy is this recognition of most satisfactory service to the general public, because the Esso marine department is receiving the award for the third time, and for the second consecutive year. The previous citations to the marine department were awarded in September 1955, and in June 1958.

Tankers of the marine department call at all Atlantic and gulf coast ports in the United States, while the tankers of the Esso inland waterways department call at the Atlantic coast ports, as well as at river ports along the Mississippi and Ohio Rivers.

Mr. Rogers, Mr. Wire, their fellow officials, and all employees under them justly deserve the commendation they received, and are entitled to the approval of the grateful public.

DEMAND FOR DISCONTINUANCE OF FEDERAL GRADING OF LAMB

Mr. MOSS. Mr. President, I have been informed that the Agricultural Marketing Service has called a conference in Washington, on April 17, at the Department of Agriculture, to discuss demands of lamb producers that Federal grading of lamb be discontinued. It is the contention of many of the sheepgrowers of my State and many of those of the Nation that Federal grading practices have not been sufficiently improved to keep up with marketing practices, and are resulting in unreasonable profits for the middleman, at the expense of the producer.

It is the belief of producers in my State that, by arbitrary grade standards of the Government grading service, they are actually prevented from producing the type of lamb which would appeal most to the housewife consumer.

After considerable discussion of this subject at the last convention of the National Wool Growers Association, that oldest sheepgrower organization in the Nation voted to seek the immediate discontinuance of Federal grading of lamb.

I am pleased that the officials at the Department of Agriculture have agreed to meet with the producers on this problem, and to hear their complaints. I certainly hope they will bring about the necessary corrective steps, or, if the producers' feeling is justified, that the officials will discontinue this grading system, which the producers believe is damaging them in the marketplace.

To better explain the position of the growers, Mr. President, I ask unanimous consent to have printed in the RECORD at this point excerpts from the address of retiring President Don Clyde, of Utah, to the last National Wool Growers Convention at Portland, Oreg., and the resolution on this lamb-grading subject which was adopted at that meeting.

There being no objection, the excerpts from the address and the resolution were ordered to be printed in the RECORD, as follows:

EXCERPTS FROM THE ANNUAL ADDRESS OF THE PRESIDENT, DON CLYDE, OF HEBER CITY, UTAH, AT THE 94TH ANNUAL CONVENTION OF THE NATIONAL WOOL GROWERS ASSOCIATION AT PORTLAND, OREG., DELIVERED ON JANUARY 27, 1959

Lamb prices advanced moderately in 1958 over the previous year. The Department of Agriculture showed a 7 percent increase. Although lambs did not reach the attractive levels enjoyed by other red meats, less erratic price fluctuations were noticeable after the low spot in April was passed.

Strong feeder competition, adequate feed supplies and the demand for white-faced ewe lambs added strength and stability to the fall market. November saw a definite weakening in the dressed trade which was soon reflected in live prices by a loss of $2.50 per hundredweight. December saw the market skid to $17 at midmonth. Since then some of that $6 loss has been regained, but lamb feeders are now selling lambs readily for 20 cents that cost them 23 to 24 cents at their yard.

What caused such a sudden and devastating market debacle? All of us can point to some contributing causes. Heavy lambs, larger supplies, poorer quality, holiday season, lower pelt values: All of these factors accelerated the price drop. But it is my sincere opinion that the greatest factor responsible for this severe market break was Government grading of lamb. (Now that I have got my feet wet, I had just as well plunge in.) I feel certain that the greatest obstacle in the marketing of lamb at a reasonable profit is Federal grading. Therefore, the elimination of grading becomes the No. 1 problem for the lamb producing industry.

I realize the above statements constitute a serious indictment against the grading service. I also am aware that a series of accusations does not make a case. But let me point out some conditions we are subjected to: Many thousands of those lambs which broke the last November and December market would have been sold to the packer last fall if the buyer had not been afraid they would not grade. These lambs instead of going into consumption, went back to the feeder, who fed them expensive feed longer than he should, hoping again to please the grader. But what did he end up with? A costly, heavy lamb, overfat, wastey, unwanted by the packer, shunned by the retailer, and unattractive to the housewife.

What are we raising and fattening lambs for? The consumer? That was yesteryear's objective. Today it is the Government grader who sits in the judgment seat and, with his magical stamp, rolls a lamb for a profit or a loss.

The lamb buyer no longer buys your lambs based on their market value, for he must reduce his bid 1½ to 2 cents below their real value to make himself safe with this Government employee. The packer no longer is a salesman selling lambs on the rail according to their quality, but he is forced to submit a secret bid based on a grader's judgment. The retailer no longer stocks lamb selected for consumer preference but he buys overly fat, undesirable lambs to save advertising expenses and to keep faith with the banner nailed to the wall of his establishment, "We sell only U.S. choice graded lambs."

Many years ago in the wall which enclosed the city of Jerusalem, was a small narrow gate called the eye of the needle. Few people were able to squeeze through and gain entrance. Our lamb marketing has become like that gate; we have narrowed and restricted it with the regulations and requirements of Government grading until it is nothing short of a miracle to run the present gamut of selling lambs from producer to consumer and reap a fair profit for the grower.

I hope this convention will pass a strong resolution demanding the grading of lamb be immediately discontinued. Trifling and inadequate changes in grading regulations have failed to bring us any real help in the past. Future changes will bring but temporary relief. I am sure some people will label my stand as radical. I assure you I have not forgotten the aphorism, "Fools rush in where angels fear to tread." But for years we have been hoping to solve this problem by appeasement. I think we should stop pussyfooting around it and really go to work to rectify it. Consumers will no longer buy inedible fat. They want meat for their consumer dollar. Any system which attempts to force undesirable products on the buying public is obsolete and is obstructing the sale of our lamb at a fair and equitable profit.

I realize we must do more than pass resolutions. We must continue to push this matter on all fronts and great effort must be made to convert the retailers to cease their dependence on this grading practice in purchasing their lamb carcasses.

The value of our lambs constitutes roughly 70 percent of the income of the average grower. With approximately 201 million lambs marketed in the United States annually 1-cent-a-pound increase on the price of lambs could easily mean $15 million.

Let's institute a well-organized, intelligent and aggressive effort to improve our marketing procedure. We have nothing to gain by procrastination.

RESOLUTION ADOPTED AT THE 94TH ANNUAL CONVENTION OF THE NATIONAL WOOL GROWERS ASSOCIATION IN PORTLAND, OREG., ON JANUARY 29, 1959

LAMB GRADING

Experience has clearly demonstrated that Federal lamb grading has proven detrimental to efficient merchandising of lamb. It leads to production of overweight, overfat, wastey lambs, unacceptable to the consumer and uneconomical to the grower and feeder. It has placed the packers and processors in a position where they must buy to meet grading specifications rather than for consumer demand and preference.

The National Wool Growers Association at this, its 94th annual convention, held at Portland, Oreg., January 25 to 29, 1959, respectfully urges Hon. Ezra Taft Benson, Secretary of Agriculture of the United States, to terminate immediately Federal grading of lamb.

WATER STORAGE AND PROPOSED NATIONAL PARK ON EAST BANK OF THE POTOMAC RIVER

Mr. MOSS. Mr. President, on the subject of the proposed creation of a national park on the east bank of the Potomac River and reservation of the right to protect water storage in that area, Representative DIXON, of Utah, has explained why we in the West are concerned with this problem and are wary of creating a national park with reservations. In that connection, I ask unanimous consent to have printed in the RECORD a letter to the editor of the Washington Star by Representative HENRY A. DIXON and an editorial published in the Star, the better to explain to the public the feelings we have on this subject.

There being no objection, the letter and the editorial were ordered to be printed in the RECORD, as follows:

[From the Washington Evening Star, Apr. 8, 1959]

UNSAFE SAFEGUARD

District Engineer George B. Summer was attributed by a Star news account (Mar. 24) with testifying before a House hearing that the Engineer Corps would be satisfied with the proposed C & O Canal Park legislation only if the water storage safeguard is included.

I have a pertinent question: What kind of "safeguard" can be included in this legislation that will adequately protect the opportunity for Metropolitan Washington to develop water resources in the Potomac in the future if the need is adequately demonstrated?

If no one in this area can provide an answer, I can from bitter, recent personal experience. The answer is: None. Once a national park is created along the east shore of the Potomac, where the historic C & O Canal runs, regardless of any safeguards written into the bill, the people of Metropolitan Washington and western Maryland can virtually say goodby to their interests in the water resources of that river, whether the storage need is for domestic water, irrigation water, water pollution control, hydroelectric power development, or fish and wildlife propagation. Creation of a national park will effectively subjugate these multiple-purpose uses of the area's major river to the single purpose of scenery preservation along one bank.

This observation is based on painful actual experience.

Shortly after the tremendous water development planning for the upper Colorado got under way back in the early 1930's, a 200,000-acre expansion was proposed for Dinosaur Monument, including river gorges of the Green and Yampa tributaries. At that time, the area was adequately reserved for water resource development by withdrawals of the river gorges under the Federal Waterpower Act of 1920.

The Park Service sought to rescind these power site withdrawals for the expansion of Dinosaur Monument, but the FPC refused two formal requests, in the mid-1930's, contending that the area was essential for water storage under any major comprehensive water resource development.

A safeguard proviso, unique in legislation and Executive orders pertaining to national parks and monuments, was written into the Executive order expanding Dinosaur Monument. As a result of this action and verbal assurances, the people in the Upper Colorado River Basin felt that steps had been taken to permit parallel development of water and scenic resources on the Green River.

However, when the upper Colorado investigation was completed and the development plan was issued recommending the Echo Park Dam site as the second largest and most efficient water storage vessel of the system, conservation groups throughout the country objected to the proposal and overruled, by lobbying pressure and propaganda, our explicit safeguard.

A very comparable situation exists here on the Potomac to the situation faced on the upper Colorado River back in the 1930's. Water resources development experts have testified that water storage on the main stem of the Potomac will be vitally necessary in future years and have recommended that there be no permanent change in the status of shorelands above Great Falls without a written safeguard for future water development in the legislation. We in the West have found that such a safeguard is worthless if the area is included in the national park system. Extremists will mount a crusade that a unit of the system is being "invaded" by construction of a storage dam. Based on past experience, they will totally disregard the safeguards now so piously talked about.

Metropolitan area residents will be wise to go slow on making any major permanent change in land status on the Potomac unless and until water resource development storage needs on the main stem are found to be unnecessary. Meanwhile, the lands could be effectively preserved, for future reservoir and national park needs, which should both be ultimately incorporated in multipurpose planning, by reservation now at a less sanctified status—possible as a national recreation area, a status which does not bar multiplepurpose use of the resource.

H. A. DIXON,
Member of Congress.

[From the Washington Evening Star, Apr. 8, 1959]

PRIORITY FOR WATER

Representative DIXON of Utah, in a letter on this page today, has issued a timely warning against any legislative action that would make it difficult at some future time to insure an adequate water supply for Washington and its suburbs. He believes—and we agree with him—that if Congress should designate all of the land in the River Bend area of the Chesapeake & Ohio Canal as a national park it would seriously complicate the task of building vital water-supply storage facilities there. The Army Engineers long have contended that River Bend, above Great Falls on the Potomac River, is the best available site for a dam and reservoir to safeguard the Metropolitan Area from the threat of grave water shortages.

Park proponents have resisted efforts of the Army Engineers to include in pending canal-park legislation a clause recognizing the possibility that future storage of water in the area, by dam construction, may be essential. Representative DIXON points out that even when such a supposed safeguard was written into upper Colorado water legislation it proved to be ineffective. Congress, with the Colorado River lesson in mind, should make certain that Washington's future water supply is adequately assured, even at the cost of attractive park land.

FOURTEENTH REPORT OF U.S. ADVISORY COMMISSION ON INFORMATION

Mr. MUNDT. Mr. President, Congress requires that a number of reports be filed with it in connection with various Government activities. Frankly, I do not always have time to read each report carefully, and I am sure that is true of many other Members. However, when there comes to Congress a report that is particularly excellent, I think all of us should take a moment or two to give it careful attention.

That is why I rise today to call to the attention of the Members of the Senate the 14th Report of the U.S. Advisory Commission on Information. The reports of this Commission are always worth reading, but I think the report this year should be rated as outstanding.

As one of the coauthors with former Senator Alexander Smith, of New Jersey, of the basic legislation creating this Commission, I have always followed its annual reports with very careful attention and with very great benefit to myself. That is not to say I have always agreed with everything which the Commission has recommended, but I certainly agree its recommendations merit our serious consideration as they come to us from time to time.

I urge each Senator to spend some time looking through the report. There is a wealth of information in it. This Commission is fortunate to have as members the following outstanding citizens: Mark A. May, Chairman; Erwin D. Canham; Sigurd S. Larmon; Philip D. Reed; and Lewis W. Douglas.

I wish it might be possible to reprint in the pages of the CONGRESSIONAL RECORD the entire document so that people throughout the United States could have access to it. However, I do want to include, as a part of my remarks, three portions of the report which I feel to be especially worthy of special attention.

First, I should like to include the conclusions drawn by the Commission on the study of our Information Agency and its functions. Anyone reading these conclusions will have a much better picture of what the USIA is intended to do, what it is doing, and what it should do.

I ask unanimous consent that the conclusions appear as a part of the RECORD at this point.

There being no objection, the conclusions were ordered to be printed in the RECORD, as follows:

CONCLUSION

To summarize: The Commission believes that a major cause of criticism surrounding the U.S. Information Agency and the oversea information program is that too much is expected of it too soon.

A review of the proper functions of the Agency indicates that reasonable objectives can be established for operations in four major areas:

1. As a counselor on international public opinion.

2. As an expositor of U.S. foreign policy.

3. As a specialized and noncompetitive oversea information service.

4. As a portrayer of the United States to peoples abroad.

In all of these areas, the Commission agrees that there are short term needs, which USIA should be prepared to meet. But, it wishes to reemphasize that the major objectives are long term in nature. Once this concept is clearly understood and accepted, then—and only then—can the efforts of USIA be properly evaluated.

The Agency's efforts—its ability to progress toward its assigned goals—depend greatly on its position in our Government and its relationships with the Congress.

Therefore, the Commission wishes to restate those principles for the U.S. Information Agency which it set forth in its 13th report to Congress. The Commissioners believe that adherence to these principles will enable the Agency to fulfill its functions with maximum economy, efficiency, and effectiveness. These principles are:

1. That USIA should be considered an essential long-term agency of the Government. That its budget, its plans and programs, although necessarily responsive to sudden emergencies, should be based essentially on this long-term view.

2. That USIA should continue to be an independent arm of the Government. That it should be nonpartisan in nature, responsive to policies established by Congress, and appreciative of its responsibilities to keep the Congress informed.

3. And finally, that to establish this character for USIA, to make possible long-term planning, and to provide the manpower with the high competence and talents required to carry out sound programs, the personnel of USIA should be assured of career status and adequate representational funds. The Agency will continue to find difficulty in attracting and holding the quality of men it needs, so long as career stability is not provided by law and so long as adequate monetary allowances for representation are not provided by annual appropriations.

The Commission in this report to the Congress has presented its independent outside view of the role of USIA in furthering our national interest. It has attempted to specify realistic objectives, and to give consideration to the limitations within which the Agency must operate.

This report has taken a critical look at the broader areas and principles of Agency operation. A detailed appraisal of some of the Agency's specific problems and achievements will be found in appendixes 1 and 2. Also included, in appendix 3, is a report of the Agency's actions on the recommendations in the Commission's 13th report.

Respectfully submitted.

Mr. MUNDT. Mr. President, I was highly elated to note that the U.S. Advisory Commission on Information has again very enthusiastically stressed the need for use of television in our oversea information activities. Some time ago I delivered a full length speech suggesting that the vision of America, as well as the voice of America, could be put to use. This recommendation, together with several forward looking ideas, spells out new activities and new areas of operation for USIA in the future. The head of our oversea information service, the USIA, is George Allen. I am sure that I do not have to labor the point by saying that he is able, alert, and active. George Allen is doing a wonderful job. I fully expect to see many of the recommendations of the Advisory Commission carried out in 1959 and 1960. I ask permission to include this list of recommendations as a part of my remarks.

There being no objection, the recommendations were ordered to be printed in the RECORD, as follows:

APPENDIX 6

RECOMMENDATIONS OF THE BROADCAST ADVISORY COMMITTEE

TELEVISION

Ten years ago television was of minor importance in the United States. Today Americans spend more hours with television than with any other communications medium.

The same situation has come about in Great Britain and is not far off in Mexico, Japan, Italy, and West Germany. Parenthetically we might note that there is viewing behind the Iron Curtain of programs emanating from Austria and West Germany.

In general the Agency has attempted to take some advantage of television in the areas where it has been well developed. However, in countries where television is in its early stages, it badly needs to establish and protect a franchise in these communications channels.

The question has been raised whether in doing so it would be competing with private industry. The fact is that there is no danger whatever of undesirable competition with private industry until the medium becomes well developed. As the medium develops the Agency will, of course, take every precaution to avoid duplicating services available through private channels.

However, the Agency should not lose sight of the fact that its output is in competition with propaganda films or material offered by other countries, including both our allies and our adversaries.

The Broadcast Advisory Committee has long advocated that the Agency develop long-range plans to seize and hold the initiative in television.

Under its new leadership, the Agency can now attack the difficulties which have brought about the weaknesses cited by the U.S. Advisory Commission on Information in its 13th report, dated January 1958.

We believe that such action should include:

(1) Evaluation of the importance of television in the Agency's overall activities in order to provide an independent determination of policy.

(2) Sustained support of the television activity in such tempo and to such extent as the above evaluation may justify in the Agency Director's opinion. Such sustained support should allow for long-range planned growth instead of a feast or famine existence.

The Committee approves the decision of Director Allen to separate radio and television into two distinct services.

The Committee believes the present organizational structure for television is an interim plan, and that this structure must remain fluid during the formative stages of the new television service.

The Committee has a strong point of view about future television budgets. The present budget for fiscal year 1959 is $660,000. There was some indication that the proposed budget for fiscal year 1960 might be of the same order.

We recommend consideration of the budget in these general terms: Approximately $1½ million for acquisitions. The Committee points out that acquisitions should include past as well as current timeless program milestones that have made television great, and that may be deemed appropriate as a minimum for foreign use.

The Committee recommends the consideration of $500,000 for original program material to be devised in this country, and it recommends a half million dollars for local program production in foreign countries.

It recommends approximately $250,000 for personnel to implement this plan.

It seems to the Committee that to approach this with less financial scope would negate the agreed-on principle of recognizing television as a separate service with a substantial present as well as a substantial future.

The Committee regrets that circumstances beyond the control of the present USIA administration caused a delay in the development of television within the Agency's structure. It points up the need for a whole new reevaluation of television as an instrument of the Agency. In our opinion USIA is not in television now.

Radio: East-West exchange

According to the agreement, with respect to broadcasting, the United States and U.S.S.R. will arrange for an exchange of broadcasts on certain specified subjects such as science, technology, sports and also for regular exchanges of programs including recorded music of all types and recorded literary and musical material and from time to time an exchange of broadcasts devoted to discussions of such international political problems as may be agreed upon.

The Committee believes it is safe to assume that practically all broadcast exchanges, live or specially recorded for a particular broadcast, will be arranged privately as a matter of individual program planning and promotion.

The Committee has considered but found unsuitable various available alternatives, such as the use of Voice of America facilities and personnel or those of an independent private agency such as the Advertising Council. The Committee therefore recommends that a special Broadcast Exchanges Committee be created, members of which would be appointed by appropriate authority on a high level separate and distinct from the Broadcast Advisory Committee of the Agency.

The Broadcast Exchanges Committee should include representatives of the networks, nonnetwork broadcasters, affiliates, educational broadcasters, advertising agencies and sponsors, union and industry associations, such as the Association of National Advertisers, the American Association of Advertising Agencies, and the National Association of Broadcasters.

APPENDIX 7

RECOMMENDATIONS OF THE ADVISORY COMMITTEE ON CULTURAL INFORMATION

AMERICAN NATIONAL EXHIBITION IN MOSCOW

The Committee recommended that:

1. The concept and execution of the exhibition at Sokolniki Park be of uncompromising quality. This means architectural plans should be improved; the art exhibit should show a cross section of American art emphasizing the freedom of the American artist to paint whatever he pleases; and there should be included both abstract and representational art.

2. The plan of the exhibit be around one central theme, so that all subjects are integrated within this theme and do not appear merely as individual displays of our diversified activities. This theme could be "The Freedom of the American People."

3. A comprehensive catalog be printed to become a permanent record of the exhibition. This is of particular value in view of the fact that the duration of the exhibit is very short.

4. A presentation program of books and slides on America be carried out to capitalize on the stimulus which this exhibition will generate.

5. A lecture program on American art be conducted during the exhibit. It is important to support art exhibitions with lectures.

6. The budget be increased, especially in view of the shortness of time for planning and executing the exhibition, which will inevitably raise the cost beyond normal.

7. The Committee recommends that it be given the opportunity to participate in an

advisory capacity in the planning of the Moscow exhibition and suggests that the three members of the arts subcommittee be notified of meetings so that it can be arranged for a member of this Committee to attend.

EXHIBITS PROGRAM

The committee recommended that:

1. Acknowledgment be given to the facts that exhibits has grown in scope and importance, that it encompasses and coordinates all visual media, that greater recognition be given in the Agency to exhibits, which constitutes a medium of communication parallel to the services of the Agency.

2. A prefield training course in exhibit techniques be established for field officers; that the Agency send to the field regular packets of current information on cultural developments in the United States and thereby keep the cultural affairs officers up to date on these developments and that periodic field seminars be organized for cultural affairs officers.

3. Several modern recent histories of American art with proper reproductions should receive top priority for translation and the titles for translation should be recommended by the fine arts section of the Exhibits Division of the Information Center Service.

RESOLUTION

The Committee passed a resolution wholeheartedly endorsing the proposal currently under consideration in the Department of State for the establishment of an office for the care and preservation of the works of art which are at present owned by the Department of State or may be acquired in the future. It was recommended that the Director transmit the resolution to the appropriate officials in the Department of State.

BOOKS PROGRAM

The Committee, by motion, unanimously concured in the Agency's decision to use "The Ugly American" in the informational media guarantee program.

The Committee recommended that:

1. The Office of Research and Analysis (IRI) widen the scope of the regular survey questionnaire on the use of Information Center Service (ICS) materials in the field, to include questions to determine where books of a simple pamphlet nature are needed, what subjects, reading levels, and languages are most suitable in the various priority countries.

2. The survey be expanded to cover wider sources of information including U.S. Information Agency field reports, commercial publishers here and abroad, and UNSECO reports.

3. Pilot books be prepared for a pilot study in Pakistan.

The Committee suggests that cultural affairs officers and Information Center librarians in various parts of the world further the two-way exchanges of publications by:

1. Asisting in making exchange arrangements with colleges and universities in the United States and reporting on important new publications.

2. Advising foreign dealers, especially the Farmington plan dealers working with the Association of Research Libraries, of the kind of books American libraries are interested in.

3. Making sure that U.S. institutions and universities do not miss important books published in the host country.

FLORENCE CONVENTION

The Department of State has concluded that action on the Florence Convention must be postponed for at least 1 year following ratification of the Universal Copyright Convention by the United Kingdom. The United Kingdom approved the International Copyright Convention in September 1957. In view of the above, the Committee reaffirms their former endorsement of the Florence Convention and recommendation that the U.S. Information Agency take steps to urge its ratification by formally requesting the Department of State to reconsider this agreement with a view toward submitting it to the President for submission to the U.S. Senate for ratification.

LIBRARY PROGRAM

The Committee recommended that:

1. As rapidly as budget provisions will permit, an American librarian be placed in charge of every large USIA library overseas.

2. The position of librarian not be combined with that of cultural affairs officer or any other officer, but be considered a full-time assignment, except in branch libraries which have small collections.

3. The position description for USIA library personnel be revised to stress the broad aspects of the services expected of them and to deemphasize the narrowly technical phases.

4. The position classification scheme for USIA personnel be revised to encourage career librarians to remain in the system, with opportunity for promotion to supervisory and other higher level posts rather than as at present, requiring them to leave the library profession in order to become eligible for the more advanced grades.

* * * In further reference to the need for trained librarians, the Committee would like to point out that during the next 2 years it will be highly desirable to provide trained American librarians in such places as the following to which the Agency does not today assign such a position:

1. A second librarian in Paris, Germany, Italy, and Japan.

2. A roving librarian in Scandinavia and the Benelux countries.

3. A librarian in Vienna, Spain, Brazil, Uruguay, Colombia, Australia, Hong Kong, Israel, Istanbul, Nigeria, The Sudan and Union of South Africa.

It is the recommendation of the Committee that a vigorous recruitment program be undertaken at once to secure trained American librarians competent to fill these positions.

MUSIC PROGRAM

The Committee recommended that:

1. A greater and more continuous effort be made by the Agency to elicit and utilize the reports and findings of musical specialists in all areas as a basis for (a) controlling the effectiveness of present activities, (b) obtaining data for the development of new ideas or the more effective achievement of basic objectives, and (c) providing a groundwork of systematic analysis and planning for the functional use of music in the overseas information and cultural programs.

2. More attention be given to the problems and opportunities of musical interchange with countries and peoples outside of Western Europe, particularly Africa, the Middle East, and the Far East.

3. Particular and concentrated attention be given to the analysis of Soviet attitudes and policies with regard to music, as well as of all phases of musical activity in the Soviet Union and its satellites.

4. Musical scores, as well as books on music, be regularly and increasingly included under the book presentation program of the Information Center Service and that musical scores be included in overseas information libraries. Musicians read scores as others read books, hence the same principle of distribution should apply to both scores and books.

ENGLISH TEACHING PROGRAM

The Committee felt that * * * in broad outline the English teaching program seems soundly conceived and that in its specific areas it is being carried out as expeditiously as funds and manpower will permit, though often enough this is somewhat short of the ideal.

1. It was reassuring to learn of the existence of an interagency agreement establishing complementary spheres of operation for USIA, the International Educational Exchange Service, and the International Cooperation Administration with respect to their English-teaching activities. Praiseworthy as this is, however, there still seems to be insufficient communication among the various agencies. Unfortunately no single individual has a complete picture of the English teaching program of all these agencies in the various areas of the world, and consequently, it is impossible to secure the support and manpower and to achieve the operational coordination which would make for heightened effectiveness.

It is strongly recommended that (1) steps be taken either by this Agency or one of the cooperating agencies, or that foundation aid be secured to make an initial survey of the English teaching activities of these three agencies and any others that are carrying on a large-scale program, and (2) that some means of regular exchange of information be developed.

2. Recruitment of teaching personnel is a major problem for all three agencies, particularly if some training in linguistics and the ability to apply it sensibly in the classroom is considered a desideratum. At present only two or three universities in the United States are prepared to give such training, and in none of them are there adequate facilities for observation and directed teaching. If one or more of the binational centers could, through an arrangement with a university, develop short-term teaching internships as the final stage of an MA in teaching English as a second language, the caliber of persons in the field would be definitely improved.

It is recommended that the possibility of developing such a program be explored.

3. A prime necessity in building up a corps of trained teachers of English as a second language is that the position should offer opportunity not only for a permanent career but for advancement as well. At present a teacher in a binational center may look forward to becoming director of courses, but if he is to advance beyond that position, he will no longer be connected with the English teaching activities except in an incidental manner. Recently the post of English teaching officer has been created. This was excellently conceived, for it would constitute a third stage in a teaching career—a step more advanced than that of director of courses. Last year nine such positions were provided for in the budget, but unfortunately seven of them were lost because they could not be filled. In many ways this was a serious setback to the program.

It is recommended that these positions be reestablished and that an active recruiting effort be made to fill them.

4. It is also painfully evident that the Washington office is short-handed. The people in it are able, but they have too much to do. Additional personnel would make possible a greater amount of guidance to grantees in the way of manuals, digests, bibliographies, etc., and also permit some of the staff to give attention to what now looms as a most important problem: the dissemination of cultural understanding through the English lessons and teaching materials. This is seldom achieved successfully and systematically in foreign-language classes in this country, and to assure a degree of success in our foreign teaching operations will require a good deal of design and experimentation.

It is recommended that the Washington staff of the English teaching branch be increased by at least two persons.

5. Among the most important activities of the binational centers, and one in which there is excellent cooperation with IES, are the teachers' seminars. Improving the ef-

fectiveness of one teacher in the school system of a foreign country means increased mastery of English for hundreds of pupils over a period of just a few years. A possible suggestion for a seminar in the European area would be to hold it in England, staffed chiefly by American but also some English personnel. It would have the dual advantage of affording an English-speaking environment and demonstrating the unity rather than the diversity of the English language and the culture of the English-speaking people.

It is recommended that exploratory discussions relative to the feasibility of such a project be undertaken.

6. Although many more text materials are now available than there were 5 years ago, they are by no means all of the first quality. Materials printed in the United States are almost always too expensive to permit wide use in foreign countries. On the other hand, it is often difficult to prepare and publish satisfactory materials in the field.

Certain types of texts can be worked out more satisfactorily in the United States, either by the Agency or through one of the publishing houses. It is obvious that only through subsidized publication can textbooks be printed in this country and sold abroad at something less than a prohibitive price. Such arrangements are admittedly difficult, but on the other hand subvention is probably preferable to having text materials prepared on contract, as past experience has demonstrated.

It is recommended that the Agency survey the field to determine which texts are most urgently needed, then decide which of these might most advantageously be written and published in the United States, and finally explore the possibility of getting such materials prepared through a subvention.

OVERALL CULTURAL PROGRAM

The Committee, by motion, unanimously endorsed the implementation of the cultural program as presented; and endorsed the idea that more should be done to send outstanding Americans overseas together with their products, e.g., the artist be sent with an exhibit of his paintings; and that more distinguished American lecturers should be sent overseas for short periods of time.

The Committee notes that the operation of USIA programs is dependent on expert knowledge about the culture of the United States and of other countries of the world possessed by highly trained scholars in the humanities and social sciences. The Agency is dependent upon a small store of experts in these fields for the development and the competence of the officers it must recruit for the conduct of its programs. Since the Department of State is dependent upon similar resources, the Committee recommends that USIA and the Department of State appoint a joint Advisory Committee to report on the status of human resources in the humanities and social sciences in the United States and to submit recommendations for the consideration of the Director of the Agency and the Secretary of State.

The Committee is of the opinion that certain Agency programs require a known continuity for a period of at least 5 years in order to assure completion of the particular programs. The Committee urges the Agency to further this view and take steps to advise the Congress, and the President that it would be desirable to have the Agency's budgetary plans for certain programs considered on a 5-year basis.

Mr. MUNDT. Mr. President, the report of the U.S. Advisory Commission, which Senators have just received, is made richer this year by the addition of two special reports made by Commission members who have traveled in Russia.

I wish to include, as a part of my remarks, the report of Philip D. Reed, who traveled in Russia with a group of industrialists. This report gives considerable information which is valuable both to Government officials and to private citizens of this country.

The second special report is made by Mark A. May, who went to Russia in November of 1958. His report covers a different phase of Russian life, and his views, coupled with those of Mr. Reed, make a full and valuable picture of life in Soviet Russia.

Members of Congress, especially, are grateful to Mr. Reed and Mr. May for the contributions they have made. I know that everyone who reads the reports which I include in my remarks will find them of special value.

There being no objection, the reports were ordered to be printed in the RECORD, as follows:

NOTES ON MY TRIP TO THE U.S.S.R. AS A MEMBER OF THE U.S. ELECTRIC POWER GROUP, AUGUST 14–30, 1958

(By Philip D. Reed)

The visitation of the Electric Power Group to the U.S.S.R. was made pursuant to the Cultural and Technical Exchange Agreement entered into in 1957 between the United States and the U.S.S.R. Governments. The group consisted of the following in addition to myself:

Walker L. Cisler, president, the Detroit Edison Co. (group leader).

Harvey E. Bumgardner, the Detroit Edison Co. (chairman, Edison Electric Institute Committee on Technical Exchange for Overseas Visitors).

James F. Davenport, executive vice president, Southern California Edison Co.

Don S. Kennedy, president, Oklahoma Gas & Electric Co.

Elmer L. Lindseth, president, Cleveland Electric Illuminating Co.

Gwilym A. Price, chairman of the board, Westinghous Electric Corp.

R. G. Rincliffe, president, Philadelphia Electric Co.

Joseph L. Singleton, executive vice president, Allis-Chalmers Manufacturing Co.

Edwin Vennard, vice president and managing director, Edison Electric Institute.

We paid our own expenses but were received, chaperoned, assisted, and frequently entertained by the senior personnel of the Ministry of Electric Power Stations, including the head of the Ministry, Mr. A. S. Pavlenko.

PURPOSE OF THE TRIP

The purpose of the visitation was to learn all we could about the electric power systems of Russia and the manufacturing enterprises which build their power generating and transmitting equipment. Our group was made up principally of men concerned with management, but many technical questions were asked and answered. Russia will send a return group to this country some time next year.

PLACES VISITED

Our itinerary was limited to European Russia, although we asked to see both the Ural and Siberian systems. The reasons given for not including these areas in our itinerary was lack of time and, as to Siberia, that power development in that region has not proceeded far enough to be of real interest. As it was, we traveled more than 5,000 miles by automobile, railroad, and chartered airplane.

Without going into details, our itinerary included:

(1) Visits to thermal power stations in Moscow, Cherepetz (225 kilometers from Moscow), and Lugansk, which is in the Ukraine about 1,000 kilometers from Moscow.

(2) Visits to hydro power stations at Kieubyshev, on the Volga River, 1,100 kilometers from Moscow; Stalingrad, also on the Volga River, this station being under construction; and Dneiperstroy.

(3) Visit to the 5,000 kilowatt atomic power station at Obnisk, approximately 100 kilometers from Moscow. The first station to produce commercial power. Its reactor is a conventional one but using graphite as the moderator, enriched uranium as the fuel, and pressurized water as the coolant.

(4) Visits to manufacturing plants at Leningrad, where turbines and generators for both steam and hydrostations are built; and at Zaporozhye, in the Ukraine, where large transformers are made.

(5) Visits to substations and switching centers as follows:

Noginsk substation, 60 kilometers from Moscow, which is receiving 400-kilovolt power from the Kieubyshev hydrostation This voltage is shortly to be increased to 500 kilovolts.

Stalino switching center, approximately 1,000 kilometers from Moscow, which controls the Stalino region and is tied into but is not the principal center of the Don Basin power system.

Experimental substation and development laboratory in Moscow, receiving 200-kilovolt direct current power from a generating plant 110 kilometers distant. This power is converted to alternating current and fed into the Moscow grid.

(6) Visits to the following research and development institutes:

At Obnisk, a fast neutron, plutonium-fueled breeder reactor. Experimental work to date has been on small units. A 50,000-kilowatt experimental breeder power reactor is reported as next step.

Moscow. The All Union Thermal Research Institute, whose main purpose is to increase the efficiency and reliability of existing thermal powerplants.

Dubna, approximately 130 kilometers from Moscow. The International Institute of Nuclear Research. We saw here what was described as a synchro cyclotron, which has been in place and used for experimental work for a number of years; also what was described as a synchro positron, which is similar to the one completed not long ago at the Radiation Laboratory of the University of California at Berkeley. The Russian equipment is, however, larger and develops 10 billion electron volts as compared with the 6-plus billion electron volts generated by the Berkeley equipment.

(7) Other technical meetings engaged in by the group included:

A discussion with the State Planning Commission presided over by Mr. Ozerov, head of the Electricity Department of the Commission.

Two meetings, one at the beginning and one at the end of our visit, with Mr. Pavlenko, of the Ministry of Power Stations, which has ultimate responsibility for the supply of electric energy (and in many communities, hot water) to the nation.

(8) Other activities included:

Visits to the Kremlin, the famous Moscow subway, the well-known GUM department store, the Opera (at Stalingrad), a puppet show (Moscow), a circus (Stalino), and the birth-and-burial place of the famous Russian author Leo Tolstoy. We also attended a reception at the U.S. Embassy, and I had luncheon alone with American Ambassador Llewellyn Thompson.

We also visited the permanent Agricultural and Industrial Exhibition in Moscow, which is an exceedingly impressive display constituting more than 80 large buildings.

Finally, Minister Pavlenko gave a luncheon for our group the day after our arrival and a gala dinner the night before our departure.

Our time was short, 17 days including the days of our arrival and departure. The Russians were most cooperative about staying on the job. We worked right through both weekends and accomplished about all that was possible in the limited time. The trip had originally been scheduled to last four weeks, but difficulties at the State Department—Foreign Office level—held up first our departure and later our entrance visas.

QUESTIONS ANSWERED

So much for a very quick outline of the places we visited and the kind of establishments we saw. In each case there was ample opportunity to visit with and question the director, chief engineer, and staff members of the organization visited. They seemed pleased to receive us and answer questions fully and without hesitation. Translation, of course, made communication difficult and slow at times, but we were satisfied that the operating people were under no restraint in responding to our questions.

RUSSIAN CAPACITY AND COMPETENCE IN ELECTRIC POWER PRODUCTION

Now let me make a few overall observations about the U.S.S.R.'s position in electric energy production. Needless to say, they consider it basic to the strength and future growth of their economy.

The total installed capacity in the U.S.S.R. today is approximately 48 million kilowatts, of which 80 percent is thermal and 20 percent hydro. Their program calls for the installation of 62 million additional kilowatts by the end of 1965, which would bring their total capacity to 110 million kilowatts. It seems doubtful that they will reach this goal, but it would not be unreasonable to expect that they may have 100 million kilowatts of generating capacity by that time. To do this, new or enlarged manufacturing facilities for some or all equipment items will undoubedly be required. Emphasis will be on thermal rather than hydro power, as indicated by Mr. Khrushchev in his recent address dedicating the Kieubyshev hydro station.

The Russians are competent in the electric power field. The men we met at the top and at the supporting levels in the power stations, the manufacturing plants, and the various research and development institutes clearly knew what they were about and gave every evidence of being on top of their jobs. Their housekeeping may not be as good as ours; they may not build their equipment to quite as tight specifications or achieve quite as high efficiency, but, by and large, they invest their money in results rather than appearance, in make-do rather than perfection. Their talk, I suspect, is a bit on the grandiose side. Big numbers are important to them, and they were at pains to tell us of the much larger units, of the higher temperatures, pressures, and voltages that are in the offing for equipment to be produced in the next 1, 2, or 3 years.

SIX-HUNDRED-MILE-PER-HOUR COMMERCIAL JETS

But though they undoubtedly exaggerate, the Russians are not to be unduly discounted. One needs only to see their Sputniks I, II, and III (as we did at the industrial exhibition in Moscow), their TU 104 sweptwing two-jet-engine commercial transport (which I flew from Moscow to Amsterdam at an average speed of more than 600 miles per hour), or their 10-billion electron-volt synchro positron (which we saw at their Institute of Nuclear Research), to realize that they have great scientific, technical, and manufacturing competence.

With them, as with all of us, it is a question of relative values, of where and for what their efforts and resources shall be directed.

RUSSIAN GAINS PERCENTAGEWISE, NOT IN TOTAL CAPACITY

As I have said, their total electric power resources are less than 50 million kilowatts today. This compares with 150 million kilowatts for the United States. I know of no better measure of the economic potential of a country, either for war or peace, than its capacity to produce electric energy. The United States will install within the next 3 years 53 million kilowatts of new capacity, which is now firmly ordered from the manufacturers. This is more than Russia's total capacity today. How much more we in the United States will install by 1965 we do not know, but it is fair to assume that the long-time historical trend of doubling our capacity every 8 to 10 years will be maintained. Thus if the Russians double their capacity by 1965 (7½ years), they will be gaining on us slightly percentagewise but falling substantially behind in absolute amount.

MOST OF RUSSIA'S ELECTRIC ENERGY GOES TO HEAVY INDUSTRY AND MILITARY PRODUCTION

But this is not the whole story. The Russians are unquestionably utilizing a far higher fraction of their electric-energy supply for heavy industry and military production than we are. Adequate figures are not available, but we were informed that only 16 percent of Russia's power output goes to domestic consumers and agriculture combined. Here in the United States the figure for domestic consumption alone is about one-third of our total production. And the Russian Government is in a position for years to come to hold down the consumer goods percentage of its total output and concentrate more heavily than we do on the development of basic industries, housing, military production, and products to be used for external economic infiltration.

But, taking all of these points into account, I do not see any possibility of Russia overtaking the United States in aggregate economic power within the next century. Unless we literally fall apart, our lead is so massive that to match our overall capacity to produce just does not appear realistic. This is not, however, to say that Russia does not represent a most dangerous threat to our security and way of life. She does not have to match our total power potential in order to conquer us either by force or by indirect aggression. As I said before, by concentrating her efforts and productive capacity on any given area, military or otherwise, Russia could achieve clear superiority in that chosen sector unless we were quick to adjust our own pattern of power utilization in order to equalize or to counter in some other way that threatened superiority. We must be at pains, therefore, to keep as well informed as possible on Russia's plans and activities.

NOT SOCIALISM, BUT STATE CAPITALISM

May I turn for a moment to the Russian economic system. It is in my judgment a perfect example of state capitalism. There is no suggestion of socialism in the classic sense of "From each according to his ability, to each according to his need." This is a tough capitalistic state in which the Government is the sole share owner of all enterprise. The Government is the sole source of investment capital. It determines how the country's resources are to be invested and what and how much is to be produced. As the sole employer it fixes all salaries and wages. As the sole producer it determines the prices at which all goods and services shall be sold. And it decides what fraction of the total production in a given period shall be in the form of consumer goods and services and what fraction shall be in the form of public works, housing, powerplants, industrial works, military weapons and supplies, or anything else.

DRIVE FOR BETTER HOUSING

For example, the Russians are now staging a tremendous drive to provide more and better housing. Millions of people, in Moscow and other cities we visited, are shockingly housed and the government decided a couple of years ago that the time had come to do something about it. As a result, I am told, more new housing has been built in the past year than in the preceding 40 years. All of it is large rather ugly apartment buildings, four to six stories high, made essentially of brick-faced prefabricated concrete slabs, which are lifted into place by huge cranes that are so numerous in Moscow, Stalingrad and other cities that one can scarcely look in any direction without seeing 8 to 12 of them on different building sites. Indeed, these cranes have come to dominate the skyline save for occasional tall buildings such as Moscow University. As living quarters these apartments would not be acceptable here. There is only one bathroom and one kitchen for each two apartments and these rather important facilities must therefore be shared by the occupants of two apartments. How the Government has been able to provide the perfectly huge amount of construction material required for these jobs, all at the same time, is a mystery to me. But there it unquestionably is, and some program must have had to give way in order to make it possible. But with complete control of the economy, the Russian Government can mount these massive efforts in a particular sector of the economy; at what cost to the overall operation I do not know.

SURPRISING PRICES

As I said a moment ago, pricing of all goods and services is, of course, done by the government. It is arbitrary in the sense that competition is non-existent and prices are set and adjusted to reflect the government's desire at any given time to encourage or discourage the movement of particular products. This results in some surprising prices to say the least. For example, taking 10 rubles to the dollar as the rate of exchange (and it is much more realistic than the official 4 rubles to the dollar), here are a few of the prices prevailing in Moscow this summer:

My single room, with bath, at one of Russia's newest and best hotels, The Ukraine, was $3 per day.

A 17-inch television set cost $150, and I am told there are more than 2 million of them in the Moscow region.

Best opera seats, $1.50.

Four cents per kilowatt-hour is the domestic price of electric energy. (U.S. average is considerably less than 3 cents.)

A very ordinary ready-made woolen business suit cost $100.

A pair of leather shoes cost $20.

One chocolate bar which would be priced in the U.S. at 15 cents or 20 cents, cost $1.80.

A haircut cost 19 cents.

Caviar, which was $4.50 per pound until June 1, was raised to $9 per pound on that date.

A 40-watt lamp (clear bulb) cost 12½ cents. A 75-watt lamp (frosted bulb) cost 35 cents.

A double-barreled shotgun of local manufacture was priced at $180.

Apartment rentals are obviously subsidized. Nikolai Galochkin, chief of one of the important departments of the Ministry of Power Stations, pays $20 per month for his apartment including electricity and hot water. There are six in his family.

From the rather fragmentary information we obtained it is difficult to estimate the average income of the Russian industrial worker. At a guess, however, I would say it did not exceed one-third the dollar value of the average income of American industrial workers, and it is probably less.

With so large a fraction of Russian payroll going to workers who are engaged in military or industrial production, or in public works, the comparatively limited supply of consumer goods can be made to go around only by pricing it at levels high enough to absorb this excess purchasing power. The price level could, of course, be substantially lowered were a large fraction of Russia's productive effort devoted to consumer goods and services.

BUREAUCRATIC MONSTROSITY

The administrative task of running the Government is, of course, so collossal as almost to defy imagination.

For many years it was handled by a large number of semi-independent ministries, each assigned a specified function (such as housing, agriculture, military supplies, power stations, heavy machinery, consumer goods, education, finance, etc.), which were responsible for their assigned field nationwide, and decisions on most matters were made in Moscow.

DECENTRALIZATION IN RUSSIA

Recently an attempt has been made to decentralize this huge bureaucratic monstrosity. The country has been divided into 105 regions, each of which has a ruling body or economic council made up of officials in the region. The number of central ministries has been drastically cut and the regional councils are presumably made up of men who represent (though perhaps not officially) the remaining functional ministries in Moscow. The idea is that the great bulk of the questions and problems arising in the field will be dealt with by the appropriate regional council and that only the broad national questions will be referred to Moscow for determination. In addition to the reduced number of central ministries, into which the functions of the dissolved ministries have been consolidated, a state planning commission has been created which has the status of a separate ministry but is presided over by one of Mr. Khrushchev's two first deputies (the deputy for planning) and therefore has great prestige. Many of the former ministers of now discontinued ministries are now in this state planning commission. It, like the other ministries, reports to the Council of Ministers over which Mr. Khrushchev presides and, in fact, it acts as the staff of organization for the Council of Ministers.

Budgets for all ministries and for all 105 regions for the ensuing year are made up in the third quarter of the preceding year. This is going on now for 1959. The requests of all regions (supported, by function, by the remaining central ministries) are studied, coordinated, cut back and finally put together in the form of a recommendation by the state planning commission (like the U.S. Bureau of the Budget) and submitted to the Council of Ministers for consideration.

Whether this new setup will work better than the old one remains to be seen. We in the United States think the difficulties of administering our own Federal Government are very great, but they are as child's play compared to the unbelievable complexities that confront the Russian top command. At very best, any administrative machinery the Russians can devise must necessarily be slow, ponderous, and inefficient.

RUSSIANS UNDERSTAND ROLE OF INCENTIVES

One point, however, must not be ignored. The Soviet Government understands very well the importance of incentives, both economic and personal prestige. It provides them at all levels. Individual pay bonuses are awarded on a monthly basis for individual performance against a preset target. There are also bonuses for suggestions just as we have them here. In addition there are group and project bonuses for accomplishment of well-defined objectives embracing time, quantity, and quality. Pictures of the best workers are prominently displayed at the plant entrance and elsewhere, and are subject to monthly change. At one of the powerplants we visited, a banner was hung on the control platform of the turbine-generator set whose operators had made the best record. Free, 28-day vacations at resorts on the Black Sea and elsewhere are awarded to outstanding workers and their families. Group and project bonuses are also used to provide better employee recreation and club facilities.

As I have said, the Russian Government is acutely conscious of the importance of worker incentives and has developed them far beyond anything I have seen in this country. These incentives, together with rallies and pep meetings, have accustomed the people to hard work and pride in their accomplishments. On the whole, they appeared to be effective.

Because most overall plant or project bonuses are based on the profitability of the enterprise, managers and workers alike of these state-owned enterprises are very profit conscious. Indeed, most of the Government's income is in the form of profits on these enterprises. Direct taxation is a small fraction, personal income tax being graduated to a maximum of 13 percent.

NO ENTREPRENEURS

Thus Russia's system of state capitalism provides keen competition between individual workers and groups of workers for better pay, promotion and prestige through superior performance. Russia's system differs from our own form of capitalism in one fundamental respect. What is completely lacking in the Russian system is entrepreneurial incentive and opportunity. There being but one entrepreneur, the state, the urge and opportunity for the individual to venture, to invest, to create new enterprises, is entirely lacking. This means, of course, that entrepreneurial competition is also nonexistent.

On the rock of this basic deficiency, I predict, the Russian drive for economic preeminence will ultimately founder. The dynamic, kaleidoscopic quality of our kind of capitalism—free competitive enterprise—in which literally millions of management teams are everlastingly searching and researching for knowledge and ideas that will permit them to enter the marketplace with new products, improved old products, and better values, just cannot be matched in the long run by a system which delegates exclusive responsibility and authority for creative, progressive thinking to one management team for each product line. In any event, this is my firm conviction. Only time will tell whether it is right or wrong.

A ROUGH, STRONG PEOPLE

Now let me say a word about the Russian country and the people. Russia is, of course, enormous. Even European Russia, as compared with other European countries is a tremendous expanse of territory which gives the sense of pioneering and of potential growth comparable to America at the turn of the century.

The Russians are a rough, strong people, ambitious, hard working, ruthless, and independent. They haven't the slightest interest in the niceties of living. They don't press their trousers or care whether they match their coat. They rarely shine their shoes, and oftener than not don't wear a necktie. I didn't see a single smartly dressed man or woman the entire time I was in Russia. This has little or nothing to do with their economic status. It is simply that they attach no importance to it.

This same disregard for the niceties shows up in other ways. They'll put up a beautiful hotel building 30 stories high, and exceedingly impressive on the outside. And then they'll run it like a third-class boarding house, with small and inadequate towels, no soap, no stoppers in the washbasin or tub; and with the maid forgetting to make up the room a couple of times a week, the service in the dining room impossibly slow, and the elevator service unreliable to say the least. Outside the hotel they had beautifully laid out flower gardens with the flowers in magnificent bloom, but the lawn surrounding these beds was uncut and the grass had grown 10 inches high.

Met halfway, the people are friendly and warm. They laugh easily and have a sense of humor much like our own. Until so met, they are deadpan.

Perhaps it was the language barrier, or possibly the paradox of their apparently frank and friendly behavior on the one hand and their government's longstanding truculent and thoroughly unreliable conduct toward the free world on the other, but one had difficulty accepting the Russians at anything like face value and not being perhaps overcynical and suspicious.

NO DEEP OR GROWING UNREST

Russia's population is slightly more than 200 million. Of this number 97 percent, or all but approximately 6 million, are not members of or identified with the Communist Party. In my judgment, these 197 million non-Communist Party Russians are loyal, home-loving people, who don't like some things about their government (just as we don't about ours) but who are both conscious and proud of the progress that has been made both in the international position of their country and in their own individual economic status. I completely failed to detect, and am satisfied there is no deep or growing unrest or resentment against their government or its leaders.

These people deeply desire peace and are satisfied that no one would benefit from a war between Russia and America. I got this from people of all ages, at all levels, and in all parts of the country we visited. It was the one subject that never failed to come up sooner or later.

If left to themselves these people would, in my opinion, devote much more of their resources to more and better roads, schools, housing, recreational facilities and, of course, to more consumer goods.

In my judgment, world domination and worldwide communism with Moscow the headquarters is not important to this 97 percent, but I also believe they would follow their leaders (as the Germans followed Hitler) because they would be deluded into believing such domination possible and would have no other alternative.

They are a people with a mission in the sense that America was 60 years or more ago. They are conscious of the fact that there is much to be done at home in the development of their rich natural resources, and of their own clear incentives to work hard and well.

THE COMMUNIST PARTY

The Communist Party and its 6 million members is, of course, the source of the aggressive, expansionist world-domination movement. Party membership enhances the individual's opportunity for promotion and improved economic status. It requires, however, considerable time attending meetings, rallies, etc., exhorting others, and keeping up to date on party thinking and the party line. The membership although the party's aims are not centered around improving the lot of the common man, is deliberately spread through all levels of Russian society, many workers being included, and it is not an elite in the intellectual or economic sense. The ultimate goal of worldwide communism, with Moscow the fountainhead, is constantly borne in on all members, as is the incompatibility of communism and capitalism. It is hard to escape

the conclusion that their bitter hatred of capitalism is really grounded on fear. They are, perhaps subconsciously, afraid that the capitalistic system will prove stronger, more creative than their own, and it must therefore be destroyed.

POSSIBILITIES FOR PEACEFUL COEXISTENCE

I see no present prospect of working out an acceptable modus vivendi which will permit us to get along peacefully with the Communist world. Only if and when millions of thinking Russians become convinced (1) that Russia cannot conquer the world or any significant part of it by force or by indirect aggression, and (2) that the free world is prepared to live and let live, is there any hope of reducing our defense expenditures for arms and research through a controlled and inspected international demobilization program.

NEED FOR CROSS-VISITATION BETWEEN UNITED STATES AND RUSSIA

No one knows when, if ever, this time will come. But I am sure it will be hastened by encouraging the greatest possible cross-visitation between the people of Russia and the people of the free world. This is only now just beginning with the United States under the exchange arrangement worked out last year with the Russian Government. American Ambassador Thompson told me that 5,000 Americans would visit Russia in 1958, a tremendous increase over any previous year. This is all to the good, but I hope it can be greatly enlarged and that we will do all we can to encourage and facilitate, both through government and private agencies, maximum visitation of our country by the Russians. It makes no difference whether or not they are party members. If, through visitation and the multiplication resulting from the impact of their observations on their countrymen, a large enough number of people can be persuaded that Russia's dream of world domination is a dangerous myth and that her legitimate objectives of self-development and growth are not threatened by capitalistic countries, public opinion will sooner or later influence the Russian Government to take a course consistent with that view.

COMMENTS OF RUSSIAN OFFICIALS

At a luncheon in Stalino attended by part of our electric power group, and by perhaps 20 Russians, including Mr. Galochkin of the Ministry of Power Stations and Mr. Pubguyla, Regional Director of the Don Basin power system, I made the following statement:

"Electricity is all important to any country. It is the foundation stone of economic development, and we are proud and grateful to be members of the electrical industry of our country. However, electricity can, like all great forces, be used either for good or for evil, for peaceful purposes or for war. We have met and talked with many of your people on this trip, young, middle-aged, and old, and they have emphasized again and again their deep desire for peace. Believe me, we, too, in America want peace earnestly, deeply. But you will agree that we seem to be making very little progress in that direction. At the political level, your government and ours seem unable to reach agreement. Perhaps the answer lies in many of your people and ours, nonpolitical people, getting to know each other better. If it were possible to have, not just dozens, but tens of thousands of your people and ours exchange visits and see and hear for themselves, great good might come from it. I drink, therefore, to greater visitation between our countries and to greater understanding."

Mr. Pubguyla responded to my toast by saying that he was in complete accord with what I had said; that the electrical industry was all-important to progress, and that he and his associates were most eager to see that it was used to create and strengthen rather than to destroy; that the people of his country deeply desired peace. And then he closed by saying:

"The governments of both our countries are sensitive to the views of the people. I drink to greater visitation and exchange of views between us at the nonpolitical level."

In Leningrad, the chief engineer of the great turbine works we visited said, in effect, at a similar luncheon:

"Electricity is the foundation of any country's strength and prosperity. But it must be used intelligently. If, instead of devoting so much of our energy to sputniks and intercontinental ballistic missiles, we gave a larger part to the economic well-being of our country, we would all be better off."

Again and again as we passed from town to town, people gathered wherever we stopped. They would crowd around to stare at us, smile and be photographed, sometimes giving us garden flowers. But always there would be expressed the hope and wish for peace. It was far too universal and spontaneous to be staged.

To be sure, the top political people also kept talking about warm friendship and this being just the beginning of much closer understanding, and their desire for peace. Some of it was hard to take, particularly at the ministerial level. But I repeat, the people of Russia do not want war and, if given the right to decide, would not risk war to enlarge the Soviet's sphere of influence.

RUSSIAN ATTITUDE ON DEFENSE PRODUCTION

Nikolai Galochkin, Director of the Department of Foreign Relations of the Ministry of Power Stations, and by far the most sophisticated of the officials we spent most of our time with, raised the question with me of America's intentions. He said he believed The majority of Americans were against war. I told him every American was against war, and that the occasional general who recommended action before we were attacked did so wholly because he was sure a Russian attack sooner or later was inevitable.

Galochkin then said that American business must want to continue war production because of the high profits. I, of course, replied that no American businessman today believes that war or war preparation benefits or is in the interest of business. I also told him that profit on Government business is only a fraction of what we receive on ordinary commercial business; also that, although 20 percent of General Electric's business is defense production, 50 percent of our best scientific and technical people are required to produce it; that we could much more profitably use this talent on peacetime production.

Mr. Galochkin's final point was that America keeps building her military power in order to force Russia to do likewise and thus divert much of her resouces away from economic development. This, of course, I said was completely untrue. I reminded him of our offer to give economic assistance to Russia at the time of the Marshall plan, and said we are quite prepared to see Russia develop her country as fast and as much as she will. Our sole and only reason for continued defense production is because we believe that if we are not strong Russia will strike.

A QUESTION FOR KHRUSHCHEV?

I asked him why his government refuses to agree to mutual atomic weapon disarmament under a United Nations inspection and control system that assures the agreement is being kept by all parties. He said, with a smile, that he had not been consulted on that matter but that he would report what I had said to Mr. Khrushchev.

REPORT TO THE COMMISSION ON MY TRIP TO THE U.S.S.R.

(By Mark A. May)

Our party was in the U.S.S.R. during the month of November 1958. It included three psychologists and two Russian specialists who speak the language and who had been there previously for considerable periods of time.

The trip was sponsored by the Institute for International Social Research at Princeton, N.J. The purpose was to get more first-hand knowledge of Soviet psychology, to become acquainted with leading psychologists, visit their laboratories, and learn more about the role of psychology in education and industry.

Like all other visitors to the Soviet Union we accumulated many impressions of the people, their standards of living, their educational system, and their attitude toward Americans. This is a report on general impressions. Our report on Soviet psychology is being published in the American Psychologist.

We spent nearly 2 weeks in Moscow; 5 days in Leningrad; 1 day in Kiev; 4 days in Tbilisi; and back to Moscow for 3½ days. We met most of the leading psychologists, visited their laboratories, and were invited to the homes of two for dinner. We were invited to lecture to the psychologists and their students both in Moscow and Leningrad.

In addition to our visits to psychological laboratories we visited a school, two pioneer palaces, one psychiatric hospital, and an institute for child development and research. We also did a little of what tourists usually do, museums, the theater, churches, and shopping.

We were not an official exchange delegation. We went as tourists. An English speaking intourist guide was assigned to us. Usually our visits to laboratories ended around midafternoon, at which time we were free to do whatever we wanted to do. This was also true on holidays. During this free time we saw some foreign correspondents, and were invited to the U.S. Embassy on two occasions. We had an hour or more on each occasion with Ambassador Thompson, Richard Davis, and others, of the Embassy. The two Russian speaking members of our group had several conversations with Russians. We also saw and talked with some of the American exchange students both in Moscow and Leningrad.

Our impressions, like those of all visitors to the U.S.S.R. are based on a limited number of observations. Psychologists, of all people, should avoid generalizing from insufficient data. Generalizations about the Soviet Union are apt to be misleading partly because it is composed of so many different cultures, and of people speaking many different languages. What is true of the Russians proper may not, in some respects, be true of the Ukranians, or the Georgians, Uzbeks, and others. Furthermore in the cities, the population is composed of government officials and employees, scientists, artists, top writers, dramatists, engineers, technicians, journalists, teachers, skilled and unskiled laborers, clerks, waiters, cab drivers, janitors, etc. Unless a representative cross section of this hierarchy is interviewed, and after some acquaintance, impressions cannot be generalized. Moreover, many Soviets have learned stock answers to questions by foreigners, especially Americans. One must be sure that he is not getting an echo of the official answers rather than the honest opinion of the interviewer.

An observer of American Indians was once said to have reported that "all Indians walk in single file, at least the one I saw did." It is easy for a visitor to the U.S.S.R. to slip into a generalization such as "all churches are crowded on Sundays," forgetting to add, "at least the one I saw was."

Now for some observations of general interest.

1. THE AMERICAN EXHIBIT IN MOSCOW DURING THE SUMMER OF 1959

Although this exhibit was not officially announced until the middle of November, yet individuals whom we asked about it before this time had heard that it was coming. The occasions for informal questions about what they would like to see were conversations with taxicab drivers, in-tourist guides, persons met casually in restaurants, and young people who approached us on the streets to ask for exchanges of coins, pencils, and other trinkets. Small boys asked for chewing gum which is not sold in the Soviet Union.

Most of the individuals whom we asked about the exhibit showed a friendly attitude but were curious about why their opinions were sought. Some were very cautious and noncommittal.

The results were about as would be expected. A taxicab driver said he would like to see American cars, especially Lincolns. A student of engineering said he wanted to see American scientific textbooks. A well educated factory worker was interested in seeing American films. A band leader wanted to know more about American jazz. A young woman wanted to see recent American literature, and American art. Boys on the streets told us they would like to see more examples of American technology. Some of the individuals replied: "How people live; show us everything."

Our conclusion from this is that the exhibit should be constructed for the segments of the population that we wish to interest. If it is an exhibit for all Russians, it should be composed of a little bit of everything about America. Gadgets and hardware should not bulk so large as to exclude materials on education, government, and other misunderstood aspects of American life. Whatever may be decided as to its contents, some arrangements should be made to poll the visitors concerning their impressions.

2. "AMERIKA," DO THEY READ IT, AND WHAT ARE THEIR OPINIONS OF IT?

We gleaned a few scraps of information confirming the belief that this magazine is widely read, well liked, and that the demand for it exceeds the present available supply. For example, the woman who had charge of the newsstand in one of our hotels told us that her allotment was always sold out immediately. One evening in Leningrad we saw a young Russian and his wife at a table near ours in the dining room reading a copy. We asked him where we could get one. He said that he bought his on the black market because the newsstands reserve their copies for the big shots.

These incidents further confirm observations by other Americans on the popularity of Amerika. It is hoped that the agreement with Soviet officials for mutual exchange of magazines can be revised to permit a substantial increase in the number of copies distributed.

We obtained a list of the most widely circulated translations of American books. At the top of the list are Jack London's stories, next are the works by Mark Twain. One of the eight Soviet exchange students at the University of California announced that he expects to do research on the life of Jack London.

3. CULTURAL EXCHANGES AND TOURISM

The psychologists with whom we talked were of the unanimous opinion that these exchanges are of supreme importance for the promotion of mutual understandings and world peace. They feel very keenly that, thus far, psychology has been neglected in respect to the exchange of persons, and of publications. We talked with them at length about how these exchanges could be increased. They presented us with a large number of their recent books and articles, and requested that we send them more of ours. One result of our visit was to clear up some misconceptions of each others' psychology.

During the year 1958 an estimated 5,000 Americans visited the U.S.S.R. It is expected that there will be many more in 1959 partly because of the American Exhibit in Moscow. We found people in the U.S.S.R. friendly, hospitable, glad to see and talk with Americans, but cautious in the avoidance of political topics. Many evidences of friendliness were observed not only on the part of psychologists, who overwhelmed us with hospitality. but also in our occasional contacts with others.

In the dining rooms of in-tourist hotels we were easily identified by the American flag on our table. Occasionally a Soviet citizen would come up, shake hands, and sit down for a chat. He would ask how we liked Russia, what part of the United States we were from and what was the purpose of our visit? One man said we were the first Americans he had ever seen. He had heard we are a friendly and approachable people. In another dining room members of our party were invited to join a group of Soviet citizens at their table. One man told us how much he admired our technical achievements.

The orchestras in the dining rooms of hotels played mostly American jazz. We felt it our patriotic duty to applaud each number. Warm smiles were received in return from the members of the orchestras. Occasionally the leader would come to our table during an intermission to ask questions about America, particularly jazz music.

There were many other expressions of interest in America and of friendliness toward Americans. Many persons with whom we talked expressed a keen desire to visit the United States of America. Another evidence of the keen interest of students is in learning English. In schools where English is taught, it is chosen by more students than any other foreign language.

Here we encounter an interesting paradox. How can these people feel so friendly toward Americans, and express such a strong desire to know us better, and at the same time believe the propaganda that they are fed, almost daily, that we are their potential enemy, plotting to destroy them with nuclear weapons? Other American visitors to the U.S.S.R. have also been struck by this baffling paradox.

It may be explained, in part, by the fact that the Soviet citizens have been told over and over that they must "reach and exceed the U.S.A." in industrial and agricultural production and in the arts and sciences. Since the technical achievements of the U.S.A. have been held up as a model, it is not surprising that the admiration for these achievements should spread to a curiosity about, and even an admiration for, the people who produced them. Having been told so many times that their production and standard of living should be equal to that of Americans, and better—it is natural that they would aspire to be like the American people, or better.

A second reason why the Soviet people want to know the American people better is that they have been told by fellow citizens who have visited the U.S.A. that Americans are good people from whom Soviets have much to learn, and that American people desire peace as sincerely as they do.

There can be no doubt about the fact that the Soviet people have a genuine fear of another devastating war. Many of them have vivid memories of what happened to their country in World War II. In Leningrad we talked to people who had managed to live through the seige of that city by the Germans during which time one-third of the population was either killed or starved to death. One Sunday we visited an ancient monastery at Zagorsk near Moscow. In the courtyard we met a peasant woman who said, "Daily we pray and cry for peace."

Their memories of their war experiences, plus their knowledge of the destruction power of modern nuclear weapons, make it very difficult for them to believe that any intelligent and good people could possibly be as warmongering as their propagandists have accused Americans. Only once did we hear it said that the Soviets want to know Americans better because we are their potential enemy.

The attitude of the Soviet people toward the U.S. Government as they understand it, may be quite different from their friendly attitude toward American people. Without knowing us better it is natural that they would assume that the difference which exists between the Government and the people in U.S.S.R. also exists in the United States of America.

4. BROADCASTING

The VOA newscasts in the Soviet language are systematically jammed in the cities. The English language newscasts are not regularly jammed. They are, however, jammed selectively as illustrated by a newscast that we heard in Moscow. When the name of Pasternak was mentioned, the jamming began but stopped after a minute or two. VOA broadcasts of music are not jammed even when a part of a Soviet language program. Orchestra leaders and musicians told us they listen to these broadcasts of music and record some of them on tape for their own use.

We met a few people who said that they listen to VOA English broadcasts. Others said they did not listen but said it in such a way, and with facial expressions, that led us to believe they do listen. When asked what they thought of the programs one man said that the news content is interesting, but he often felt offended by such expresions as "puppet governments," "satellites," and sarcasm such as "worker's paradise." The cultural features of the English broadcasts seem to be least objectionable—and for some listeners the most popular. It would appear, therefore, that broadcasts which satisfy curiosities about America, and are similar in temper and tone to articles in Amerika, are most apt to attract listeners.

The attitude of Soviets toward the VOA and other newscasts from capitalist countries may be influenced somewhat by the fact that they have learned to make a sizable propaganda discount of all newscasts and newspapers, including their own, that use excessive language of derogation or praise. The less that news from the outside sounds like propaganda—even if it comes from sources that are believed to have propagandistic motives—the more apt they are to listen to it.

5. IMPRESSIONS OF GENERAL CONDITIONS

The members of our group who had been to Russia before—one as late as the summer of 1956—were impressed by the increase in consumer goods available and judging by the crowds of buyers in the stores—at prices many people can afford to pay. We were struck by the large number of big apartment houses being constructed in Moscow and in other cities. We were told that since the war housing has been a major need which has been given a higher priority on the list of new developments. Food seems to be more plentiful as indicated by the fact that we did not see long queues of people outside food shops which in the past were quite common. An article which Soviet people seem to want most is the automobile.

Although the standard of living, measured by such items as housing, cars, variety of foods and clothing, household appliances, etc., is obviously lower than in the

United States, yet we sensed a feeling on the part of most everyone we met that things are much better than in the past and will get better in the future. These improvements are attributed in large part to a benevolent attitude of the Government toward the people. This feeling is reinforced by the fact that the Government provides free, or almost free, education, medical care, old-age security, paid vacations, and full employment.

Another change appeared to have occurred since the death of Stalin that has affected popular support for the regime. The people seem to be more relaxed both in appearance and conversation. They behave as though they are less fearful of police surveillance or of making a mistake in word or deed. This relaxation of police controls would seem to indicate that the regime has greater confidence in the loyalty of the people.

One striking bit of evidence of this loyalty is the pride which the Soviets manifest in their accomplishments. The Moscovites took great pride in showing us their artistic subway, their skyscraper university, sports stadium, and agriculture fair buildings and grounds. In the Leningrad airport is a big map of the routes of Aeroflot over which is printed in large letters: "We fly higher than all, faster than all, farther than all." They are also proud of their scientific achievements in all fields. The psychologists took a great deal of their time out from their work to show us their laboratories and explain to us their research. We were struck by the number of times they referred to having developed something new. Some things, but not all, are indeed new.

These accomplishments in which they take great pride are attributed to the growth of the nation under socialism (which is another word for communism). A young engineer made the following remark to one of our Russian-speaking colleagues:

"Under capitalism, Russia was weak, was under the influence of other nations, was economically poor, a third or fourth rate power. Under socialism, Russia has become a great power and the great majority of the people here attribute their own greater well-being and, above all, the increased prestige of Russia in the world to socialism. Only a few unimportant people oppose socialism and they do so for special selfish reasons that are not shared by the overwhelming majority in the country."

When asked what price has been exacted from Soviet citizens in loss of freedom, hardships, sufferings, terror and bloodshed, the reply was that all of this takes second place to the achievement itself.

When we asked about freedom we were told that there are two kinds of freedom—national and individual. National freedom comes first. So long as the struggle for national freedom continues, each individual must accept his place as a cog in a vast machine which is grinding toward the achievement of an overall plan for the good of all. Individual freedom, they say, is always within limits set by society. The only difference between nations is in the width of these limits. Although the limits in the Soviet Union are admittedly narrower than they are in countries of Western Europe and the United States of America yet the citizen who understands and accepts them tends to have a feeling that he has more individual freedom than he really has.

This is illustrated by the limits to the field of psychology. Certain areas of Western psychology are excluded. Among them are intelligence and aptitude testing, projective tests of personality, psychoanalytic theory and practice, attitude questionnaires, public opinion polls, group dynamics and Watsonian behaviorism, and Gestalt psychology. The inadmissibility of psychological tests is defended on scientific grounds, the others are excluded mainly on ideological grounds of keeping Soviet psychology pure from taints of bourgeois capitalism.

After the foregoing exclusions have been made there remain areas of psychology from which Soviet psychologists may freely choose problems for research.

The lines between freedom and restraint in the Soviet Union are not always sharply drawn. While we were there theses on the new reforms in education were published. We were told that these reforms would not be officially decreed until the entire matter had been openly discussed. The discussions that we heard about were on the methods to be used for achieving the purposes proclaimed in the theses. The objectives of the reforms were evidently accepted without question.

The fact that even limited discussions of matters of public interest are permitted indicates that political leaders are less fearful than formerly of public opinion. The time has come, as Adlai Stevenson pointed out in one of his newspaper articles, when "the Soviet Union is a stable power system and not on the brink of internal collapse." This stability is still due, in part, to police control, but also to greater satisfactions with and pride in the achievements of the Communist system.

Although popular support for the regime may be far from 100 percent, yet it has reached a level where the leaders feel that they can now safely "open the windows toward West" at least a little bit. It would be a mistake to assume that all suspicion and distrust of westerners have disappeared. In-tourist guides, no doubt, are required to report with whom American visitors talked and what they said. We noticed that, except for a few short trips in an automobile, two or more of their number were present during our conversations with psychologists and educationists.

We left the Soviet Union with the distinct impression that the Russian people, whom we met, want to be friendly with the American people. They want to know us better and have us know and appreciate them better. Whatever the motivation back of this may be, the fact remains that they are ready and willing to talk to us, especially about scientific and cultural matters.

The capacity for communication is man's greatest gift. It is the foundation of society, science, culture, education, and civilization. Much human suffering has resulted from failures in communication. So let us communicate with the Soviets, at all levels of society. While diplomats and government officials are engaged in high-level talks and in exchanging written communications, and while each government is talking, or trying to talk to the people of the other country by radio and press, let more scholars and scientists talk to each other on a person-to-person basis. The potentialities for good far outweigh any harm that could result to either side.

The current exchanges of official delegations, tourists, students, and other persons; the exchange of exhibits, of scientific and cultural books and magazines; open a road, that may be the best road, to the goal which men everywhere are seeking, a rapprochement between the East and the West with a relaxation of the arms race between the U.S.S.R. and the North Atlantic Alliance.

Mr. HUMPHREY. Mr. President, will the Senator yield?

Mr. MUNDT. I yield.

Mr. HUMPHREY. I am pleased to hear the Senator from South Dakota make reference to the splendid work of the USIA and the very fine reports, which have been evident in the press, of what I think is a steady improvement of the U.S. Information Agency, under the direction of Mr. Allen.

I was privileged to receive a copy of the report of Mr. May, to which the Senator has referred, which was made on his return from the Soviet Union. I wish to associate myself with the remarks of the Senator from South Dakota. I think it is a fine report, and one which merits the consideration of our colleagues.

Mr. MUNDT. I thank the Senator from Minnesota for his contribution. I hope other Senators will find time to read at least the extracted parts of the report. Each Senator has the full report of the Commission on his desk. I hope that some Senators will devote themselves to a reading of the report during the weekend.

THE AREA REDEVELOPMENT BILL

Mr. RANDOLPH. Mr. President, in the week which preceded the Easter recess, this body passed Senate bill 722, the area redevelopment bill, a hopeful measure, and one meaningful to the depressed sections of our country.

It was observed by the editorial writer of the St. Louis Post-Dispatch that the most remarkable thing about the vote in the Senate in favor of the bill to provide Federal assistance for economically depressed areas, with chronic unemployment, was its closeness—49 yeas to 46 nays.

I listened a few minutes ago with interest to the comments of the able senior Senator from New York [Mr. JAVITS]. He called attention, properly, to the gravity of the unemployment problems of the State of New York and of the Nation as a whole. He has indicated the seriousness of the situation. I only wish that on March 23 he might have been numbered with those of us who voted for the area redevelopment bill, rather than among those who voted against that meritorious legislation.

Mr. JAVITS. Mr. President, will the Senator yield?

Mr. RANDOLPH. I yield.

Mr. JAVITS. I understand very well the Senator's point, and the point should be raised. I am delighted it has been raised. I should like to reply, because I think it would be only fair to do so.

I was one of the sponsors of the depressed areas bill. I was one who cast one of the necessary votes to get the bill out of committee and to the Senate floor. But I voted against the administration's package, which I thought was not adequate. I voted for the Scott proposal, which I thought was fair, and which provided $200 million, as against $390 million.

When it came to the final vote on the bill, I had a problem with respect to the interests of my own State, a problem which was inherent in the bill, and which constituted such a serious defect as to justify my voting against the bill. I refer to the part of the bill which required raiding with respect to my State of New York, which is the greatest industrial State, because the bill provided $390 million to be used for the purchase of equipment and machinery, as well as

buildings, land, retraining, and compensation for persons who had to be trained—which is the classic pattern for redevelopment and relief of depressed areas.

I had to come to a judgment as to whether this deficiency was so serious as the bill affected my State as to outweigh the advantages sought to be conferred by the whole bill. I came to the conclusion, in all good conscience, that I had to vote against the bill, in an effort to have it returned to the committee and have the deficiency corrected.

I am glad the Senator has raised this point, because I expect the provision relating to raiding will be revised in the House of Representatives. I hope then I shall be able to support the depressed areas bill.

I point out again that I was instrumental in bringing the bill to the floor, because I feel so strongly that such a bill ought to be passed. But I was not sent to the Senate by the people of my State to vote blindly for a bill merely because it had a good label, but which was contrary to the economic interests of my State and of my country.

I thank the Senator for allowing me to make this statement.

Mr. RANDOLPH. The able Senator expresses himself with clarity and with firmness, as he always does not only in the Senate Committee on Labor and Public Welfare, but whenever he speaks in this body.

I only hope that the overriding issue presented, the advancement of necessary loans to areas of chronic unemployment, will, in the further consideration of this type of legislation, be very close to his heart. We in the State of West Virginia, as well as the people of other States, recognize that, very frankly, time is running out on us in this matter. In West Virginia there continues the closing of some mines, rather than the reemployment of more men, the result of the opening of new mines. So this condition presses heavily upon our economy, as it may press heavily tomorrow on the economies of New York State, of Michigan, of Illinois, of Kentucky, of Ohio, or of any other State in the Union.

Mr. President, substantially the same bill passed Congress last year, by a much wider margin than we had this year. That vote in the Senate was 46 to 36.

The editorial writer in the St. Louis Post-Dispatch, to whom I have referred, continued:

> How then was it that the 1959 bill had the 49 to 46 close call in a Senate reflecting the Democratic landslide for Congress last fall?

His reply to that question, in the same editorial, was:

> The answer is in the voting on the Republican side.

He cited the four members of the minority party who supported the measure and then noted the "seven Republicans who voted for the counterpart bill last year but voted against the 1959 version."

Then he concluded:

> The explanation for this reversal by these seven Republican Senators must be pressure from the White House in some form or other. Apparently the administration hoped to defeat the bill in Congress and therefore spare the President a second veto. The tactic almost worked, but not quite. We hope the House of Representatives will recall the margin by which it passed the bill last year. The relief of those who live in the depressed areas deserves more than narrow, grudging support.

That concludes the editorial observations of the person who wrote them in the St. Louis Post-Dispatch.

Mr. JAVITS. Mr. President, will the Senator yield?

The PRESIDING OFFICER (Mr. BARTLETT in the chair). Does the Senator from West Virginia yield?

Mr. RANDOLPH. I yield.

Mr. JAVITS. I think this is also very useful. No White House pressure was brought on me. As a matter of fact, I voted against the administration proposal because I was convinced it was grossly inadequate. I am completely free to vote for the bill and to vote to override a veto, if the bill is put in any kind of shape which is remotely acceptable to an industrial State such as my State, and I am confident it will be.

Mr. RANDOLPH. I thank the Senator.

Mr. President, I should like to invite attention also to comments by editors of newspapers in communities which are not considered to be depressed areas—editors who recognize, however, the seriousness of the problem which must be partially solved through such measures as those proposed in S. 722.

Mr. President, I ask unanimous consent that editorials published by the Alexandria (Va.) Gazette, March 14, 1959, the Miami (Fla.) News, April 1, 1959, and the Spirit of Jefferson-Farmers Advocate, Charles Town, W. Va., April 2, 1959, be printed in the RECORD at this point.

There being no objection, the editorials were ordered to be printed in the RECORD, as follows:

[From the Alexandria (Va.) Gazette, Mar. 14, 1959]

WEST VIRGINIA STORY

West Virginia, the country's largest producer of soft coal, is in the throes of serious economic distress. The reasons for this underscore an old problem for which better solutions must be found.

About 15 percent of West Virginia's labor force is unemployed. This has brought conditions like those of the great depression of the thirties, while recovery is proceeding in most other parts of the country. What accounts for the difference?

There is a high degree of specialization in West Virginia. Coal mining is the backbone of the economy; it has been the principal source of employment. But in recent years the mines have become increasingly mechanized. This mechanization has grown to such an extent that almost 98 percent of all the coal mined in West Virgini is mined mechanically. Hence, massive unemployment.

This problem of the displacement of the worker by the machine is as old as the industrial revolution. It has been a specter for labor from the beginning of that mighty change in the civilized world. Solutions thus far devised have not been entirely satisfactory. The transition period from loss of a job to relocation in a new one can still bring anxiety and deprivation.

The overall gain from mechanization is unquestioned. Machines have lifted us from a grubbing, pastoral existence to a life whose material advantages exceed the dreams of the past. In the long run, all of us benefit. But society must find improved ways of bridging the gap to new jobs when mechanization throws men out of work. That is clearly illustrated by what is happening in West Virginia.

[From the Miami (Fla.) News, Apr. 1, 1959]

JOBLESS CURE IS VITAL

One of the ugly facts of life today in these United States is chronic unemployment. The Senate has passed the Douglas-Cooper bill for assistance to depressed areas, but by so slight a margin that passage over an almost certain presidential veto would be impossible.

Yet certainly we must do something to provide for jobless workers in 24 States listed by the Labor Department as having a substantial labor surplus. These are workers who have lost employment due to declining industries, such as coal mining, or through automation of factories.

This problem is a challenge to our industrial civilization. We have pretty nearly recovered from the recession which began in 1957, yet in March of this year there were 1,500,000 fewer non-farm jobs than there were in March 1957. This, despite a steadily growing labor force.

Some instances of machines replacing men were ably recounted in this newspaper Sunday by Associated Press Writer Roger Greene. In a Chicago plant two men assemble 1,000 radios a day using automation. It formerly took 200 men to do the job. In some food canning plants the entire operation is automatic. A skeleton staff operates a huge oil refinery from an instrument panel.

Since our economy can't be wholly well as long as there are these areas of chronic unemployment, Federal assistance is essential. Workers must be retrained; new industries must be encouraged.

The Senate bill, which now goes to the House where it will doubtlessly be heavily pruned, provides $389,500,000 for aid to depressed areas. President Eisenhower asked but a modest $53 million for the same purpose. He vetoed an aid bill last year.

We do not know how much Federal money is needed to do the job, but we do believe it should be enough.

[From the Spirit of Jefferson Farmer's Advocate, Apr. 2, 1959]

AID TO DEPRESSED AREAS

President Eisenhower is reportedly displeased with the action of the U.S. Senate in passing a measure that will provide $389 million in loans and grants by the Federal Government to depressed areas of the Nation. It has been said that unless the House of Representatives scales the figure downward a Presidential veto is a virtual certainty.

Senator RANDOLPH and Senator BYRD have both played leading roles in this legislation and they are to be commended for recognizing something that has seemingly escaped the view of the Republican administration and to no small extent the greater portion of the American press: The fact that in many areas of the country, particularly in West Virginia and Pennsylvania, there is widespread unemployment with its attendant misery and suffering. We are appalled at the thought that President Eisenhower is indifferent to this situation and believes that remedial legislation is unwarranted and unwanted. Some few months ago Mr. Meade Alcorn, the chairman of the Republican National Committee, opined that if the future of the Republican Party was to be assured the impression that the Republicans were only for the "big boys" would have to be erased. Mr. Alcorn's words will have a hollow

sound if Mr. Eisenhower persists in his intention to veto legislation of this sort.

The people in the depressed areas are not asking for a dole. Victims of economic circumstances beyond their control, they are but asking for loans to help them get back on their feet. It is a pity that we can see our way clear, under Presidential urging, to grant millions in gifts to foreign nations and cannot see our way clear to make loans to our own citizens.

SUPREME COURT SEGREGATION CASES—A LEGAL ERROR

Mr. TALMADGE. Mr. President, on April 3, 1959, the Milwaukee Junior Bar Association Foundation sponsored a significant debate on the subject, "Supreme Court Segregation Cases: A Legal Error?" The affirmative position was stated by the Honorable Charles J. Bloch, of Macon, Ga., one of this Nation's foremost legal minds and most respected authorities on constitutional law.

Mr. Bloch's presentation is a masterpiece of logic and is irrefutably documented. It should be convincing to all who will read it with an open mind, and, in order that it may be given the widest possible circulation, I ask unanimous consent, Mr. President, that the text of it be printed in the body of the RECORD.

There being no objection, the presentation was ordered to be printed in the RECORD, as follows:

SUPREME COURT SEGREGATION CASES—A LEGAL ERROR

I am not here to discuss with you the social problems of segregation versus integration. I would not have accepted an invitation so to do. For you could no more understand those problems than I could understand the problems of the brewing industry or the dairying industry.

I notice that the press release regarding this discussion says that I will present the viewpoint of the South that the Supreme Court has exceeded its authority in the school segregation cases, and that my view will be that of a practicing southern attorney.

I shall have to assume that you have read the school segregation cases, both the original opinion of May 17, 1954, and that of 1955.

I shall ask you to examine these cases not as northerners or southerners, easterners, or westerners, integrationists or segregationists, Democrats or Republicans, but as American lawyers trained in American law.

I do not contend that the Supreme Court has not the right to review, overrule, and reverse prior decisions of the Court.

I do contend that when the Supreme Court reviews, overrules, and reverses prior decisions, that its action should have a sound legal basis. I do say that that statement is even the stronger in a situation in which hundreds of millions of dollars have been expended on the faith of the prior decisions. I do say that these decisions constitute a grievous legal error.

The 14th amendment was declared adopted in 1868. It provides in part: "* * * nor shall any State deprive any person of life, liberty, or property without due process of law, nor deny to any person within its jurisdiction the equal protection of the laws."

The legal question before the Court in the school segregation cases was: Do the statutes of Kansas, South Carolina, Virginia, and Delaware permitting or requiring the segregation of Negroes and whites in public schools deny the Negroes that equal protection of the laws guaranteed by the 14th amendment? Succinctly stated: "In the field of public education is the separate but equal doctrine constitutionally valid?"

The Court alluded to the fact that argument of the cases was heard in the 1952 term, and reargument was heard at the 1953 term on certain questions propounded by the Court. (345 U.S. 972, 73 S. Ct. 1118, 97 L. Ed. 1388.)

One of those questions was: "What evidence is there that the Congress which submitted and the State legislatures and conventions which ratified the 14th amendment contemplated or did not contemplate, understood or did not understand, that it would abolish segregation in public schools?"

In its May 17, 1954 opinion (p. 489) the Court said: "Reargument was largely devoted to the circumstances surrounding the adoption of the 14th amendment in 1868. It covered exhaustively consideration of the amendment in Congress, ratification by the States, then existing practices in racial segregation, and the views of proponents and opponents of the amendment. This discussion and our own investigation convince us that, although these sources cast some light, it is not enough to resolve the problem with which we are faced. * * * An additional reason for the inconclusive nature of the amendment's history, with respect to segregated schools, is the status of public education at that time. In the South, the movement toward free common schools, supported by general taxation had not yet taken hold."

Thus at the very threshold of its opinion, the Court erred grievously.

There was the most conclusive evidence that many of the Northern and Western States which ratified the amendment understood that it would not abolish segregation in the public schools. There was such evidence strong as Holy Writ.

Perhaps the strongest piece of that evidence was this:

Massachusetts ratified the amendment March 20, 1867. One of her Senators was Charles Sumner. He had been counsel for the Negro Roberts in the case of *Roberts* v. *City of Boston* (59 Mass. 198, 5 Cush. 198). He had been born and reared in Massachusetts. He knew its law. He knew that the highest court of his State had in 1849 decided that though a Negro was entitled to equal rights with whites under the Constitution and laws of Massachusetts, that did not entitle the Negro to attend the same schools as whites. He knew that that phrase "equal protection of the laws" in the 14th amendment would doubtless be construed as Chief Justice Shaw and his court had construed the phrase "equal rights, constitutional and political, civil and social" under the laws of Massachusetts. Yet that arch radical, Charles Sumner, was satisfied with the phrase "equal protection of the laws" in the amendment.

That he knew the amendment would not require the States to integrate their public schools, is conclusively demonstrated by Sumner's conduct in the Senate. The Senate had on June 8, 1866 voted to propose the amendment. Even before it was declared ratified, Sumner in March of 1867, introduced in the Senate an amendment to a pending bill proposing to readmit a certain State: "That the constitution (of that State) shall require the legislature to establish and sustain a system of public schools open to all, without distinction of race or color."[1]

The amendment failed. He tried it again. His amendment was ruled out of order.

Ohio ratified the amendment January 11, 1867. Her legislature of 1868 passed a resolution seeking to withdraw her consent.

Just 3 years after the ratification, the Supreme Court of Ohio in *Garnes* v. *McCann, et al.*,[2] speaking through Justice Luther Day, followed the Roberts case. Ohio's Supreme Court conclusively demonstrated what Ohio had understood when she ratified the amendment. It unanimously held that the 14th amendment did not prevent Ohio establishing separate schools for children of different races.

This case was instituted practically contemporaneously with the adoption of the amendment. All of those who had driven the amendment through the Congress, authors and sponsors, were living. The phrase "equal protection of the laws" had no ambiguity for such as Senator Wade of Ohio, striving though he was to supplant Andrew Johnson as President of the United States. He and his colleagues had at the same session of Congress enacted legislation providing for and regulating separate schools in the District of Columbia.

Justice Day, the father of Justice William R. Day, wrote in the Ohio case: "Any classification which preserves substantially equal school advantages is not prohibited by either the State or Federal Constitutions, nor would it contravene the provisions of either."

Three years later—1874—the Supreme Courts of Indiana and California followed the Ohio case. In *Ward* v. *Flood*,[3] California held that the segregation statute of California did not violate the equal protection clause. In *Cory* v. *Carter*,[4] the Indiana court held that the classification of scholars on the basis of race or color, and their education in separate schools involved questions of domestic policy with legislative direction and control, and was not prohibited by the 14th amendment.

Nevada ratified the amendment in 1867. Both of her Senators, Nye and Stewart, voted in favor of its adoption. In 1872, Nevada's highest court held that there was nothing in the 14th amendment to prevent school trustees sending "all blacks to one school and all whites to another."[5]

Perhaps the most striking example of the correctness of the contemporaneous, constitutional construction is that of Judge William B. Woods.

Woods was a native of Ohio, a general in the Union Army. After the war he settled in the South. He was appointed by President Grant as circuit judge of the fifth circuit embracing among others, the State of Louisiana. Just 10 years after the adoption of the 14th amendment, he decided the case of *Bertonneau* v. *New Orleans School Directors*.[6] Following the Ohio case, he held: "Any classification which preserves substantially equal school advantages does not impair any rights and is not prohibited by the Constitution of the United States. Equality of rights does not necessarily imply identity of rights."

Two years later, Judge Woods was appointed Justice of the Supreme Court of the United States by President Hayes. Hayes, too, had been a Union general. He had served in Congress from 1864 to 1867. He had been Governor of Ohio in 1867, 1869, and 1871. Certainly he knew of Judge Woods' views in the Bertonneau case. He knew they did not contravene the purpose of the amendment.

In 1883, the New York Court of last resort[7] held that all that was required by the 14th amendment was "the privilege of obtaining an education under the same advantages and with equal facilities as those enjoyed by any other individual."

Ohio, California, Nevada, Indiana, New York, all furnish proof as strong as Holy Writ of what typical Eastern, Northern, and Western States "had in mind" with respect

[7] *King* v. *Gallagher*.

to segregation in public schools. At the time of the New York decision, the Supreme Court of the United States was composed of Chief Justice Waite of Ohio, Miller of Iowa, Field of California, Bradley of New Jersey, Harlan of Kentucky, Woods of Georgia, Mathews of Ohio, Gray of Massachusetts, and Blatchford of New York. No effort was made to have this comprehensive New York case reviewed by the Supreme Court. Nor had there been any effort to have any of the earlier, contemporaneous cases reviewed by the Supreme Court.

The Supreme Court (p. 489) in the segregation cases spoke of "the inconclusive nature of the amendment's history with respect to segregated schools." It ignored—or overlooked—the most conclusive evidence possible—decisions of courts of last resort of those typical anti-slavery and anti-Southern States.

Not only did it ignore that conclusive evidence but it erred factually when it said that "in the South, the movement toward free common schools, supported by general taxation, had not yet taken hold." It ignored the examples to the contrary stated by the late John W. Davis, Esq., in his argument before the Court,[8] of the 30 States which ratified the amendment, 23 either had or immediately installed separate schools for white and colored children under their public school systems.

"Were they violating the amendment which they had solemnly accepted? Were they conceiving of it in any other sense than that it did not touch their power over their public schools?"

So queried Mr. Davis in his argument to the Court on December 10, 1952.

His questions remain unanswered.

The Court closed its eyes to the evidence before it, and passed on to the next phase of its opinion.

It said: "The doctrine of 'separate but equal' did not make its appearance in this Court until 1896 in the case of *Plessy* v. *Ferguson,* supra, involving not education but transportation. American courts have since labored with the doctrine for over half a century. In this Court, there have been six cases involving the separate but equal doctrine in the field of public education." The Court then cites as the six: *Cumming* v. *Board of Education of Richmond County, Georgia;*[9] *Gong Lum* v. *Rice;*[10] *State of Missouri ex rel. Gaines* v. *Canada;*[11] *Sipuel* v. *Board of Regents of Oklahoma;*[12] *Sweatt* v. *Painter,* 339 U.S. 629; *McLaurin* v. *Board of Regents of Oklahoma.*[13]

The use of the sentence: "American courts have since labored with the doctrine for over half a century." would tend to cause a casual reader to think that there had been some opinions in the field of education since 1896 which were contrary to the doctrine of *Plessy* v. *Ferguson.* The contrary is true. Even before *Plessy* v. *Ferguson,* the Supreme Court of Missouri had followed New York, California, Ohio, and Indiana in holding that Missouri's laws providing for separate schools for colored children are not forbidden by or in conflict with the 14th amendment.[14]

After *Plessy* v. *Ferguson,* New York reaffirmed the doctrine in 1900,[15] saying that the question was not an open one in that court. The year before, the Supreme Court had in the Cummings case said: "* * * the education of the people in schools maintained by State taxation is a matter belonging to the respective States, and any interference on the part of Federal authority with the management of such schools cannot be justified, except in the case of a clear and unmistakable disregard of rights secured by the law of the land."

Arizona was admitted to the Union on February 14, 1912. On July 15, 1912, her supreme court held that her statutes of 1909 providing for the segregation of Negro children from white children in the public schools was constitutional, not being a denial of the equal protection of the law.[16]

The court called attention to the fact that *Plessy* v. *Ferguson* involved not education but transportation, but failed to notice that in the Gong Lum case Chief Justice Taft, speaking for a unanimous court, had said: "In *Plessy* v. *Ferguson* * * * in upholding the validity under the 14th amendment of a statute of Louisiana requiring the separation of the white and colored races in railway coaches, a more difficult question than this, this Court, speaking of race separation, said: 'The most common instance of this is connected with the establishment of separate schools for white and colored children, which has been held to be a valid exercise of the legislative power even by courts of States where the political rights of the colored race have been longest and most earnestly enforced.' "

As a lawyer, speaking to lawyers, I say to you that a court in 1954 seeking for the law, and attempting to declare the law, could most properly have said: "The doctrine of 'separate but equal' did not make its appearance in this Court until 1896, in the case of *Plessy* v. *Ferguson,* supra, involving, not education but transportation, a more difficult question than this. While *Plessy* v. *Ferguson* did not involve education, it was based on an unbroken line of cases in State courts of the highest dignity holding that separation of the races in the public schools was permissible despite the 14th amendment. In the half century which has elapsed since *Plessy* v. *Ferguson* the doctrine has been applied to public schools with unanimity by State courts and has been recognized by this Court in *Cummings* v. *Board of Education.*"

That would have been a declaration of the "law of the land."

And then, instead of saying that in *"Gong Lum* v. *Rice* (275 U.S. 78), the validity of the doctrine itself was not challenged," it would have been far more accurate for the Court to have said:

In *Gong Lum* v. *Rice,* 275 U.S. 78, the question was "whether a Chinese citizen of the United States is denied equal protection of the laws when he is classed among the colored races and furnished facilities for education equal to that offered to all, whether white, brown, yellow or black. Were this a new question, it would call for very full argument and consideration; but we think that it is the same question which has been many times decided to be within the constitutional power of the State legislature to settle, without intervention of the Federal courts under the Federal Constitution."

That is what Chief Justice Taft, speaking for himself and Associate Justices Oliver Wendell Holmes, Van Devanter, McReynolds, Brandeis, Sutherland, Butler, Sanford, and Stone had said on November 21, 1927.[17]

And on the same day and in the same case he made a statement for himself and his associates which should have established the doctrine as the law of the land for all time so far as the courts of the land were concerned.

Said he in concluding his opinion: "Most of the cases cited arose, it is true, over the establishment of separate schools as between white pupils and black pupils; but we cannot think that the question is any different, or that any different result can be reached, assuming the cases above cited to be rightly decided, where the issue is as between white pupils and the pupils of the yellow race. The decision is within the discretion of the State in regulating its public schools, and does not conflict with the 14th amendment."

The Attorney General of the United States has said that the decision of the Supreme Court in the segregation cases was foreshadowed by its decision in the law and graduate school cases which are the last four of those listed above. Justice Davis of Illinois supreme court fell into the same error in a recent article in the American Bar Association Journal.

Realizing that in those four cases the "separate but equal doctrine" had been recognized as valid, the court did not attempt to plant its decision upon an extension of those cases from the law and graduate school level to the common school level.

The court distinctly stated: "In none of these cases was it necessary to reexamine the doctrine to grant relief to the Negro plaintiff." And then the court I think used language which graphically demonstrates the gross legal error in the decisions.

The court had (p. 492) stated that the question whether *Plessy* v. *Ferguson* "should be held inapplicable to public education is directly presented."

How did the Court approach a decision of that legal question? The legal method would have been to have said that the question of whether the "separate but equal doctrine" should be held applicable to public education had been answered in the affirmative in an unbroken line of decisions of American courts beginning with *Roberts* v. *Boston* in 1849, continuing through *Gong Lum* v. *Rice* in 1927, and culminating with the law and graduate school cases decided between 1938 and 1950.

The Court did not approach the problem by that legal method of deciding cases.

The Court's approach was—and I quote it—"We must look instead to the effect of segregation itself on public education." The Court decided the cases on the basis of what, in its opinion, were the effects of segregation on public education. In so doing the Court ignored literally scores of decisions holding that the 14th amendment was not intended to permit the Court to embody the economic or moral beliefs of the Judges sitting at a given time in the prohibitions of the amendment. The Court overlooked the salient fact that the effect of segregation on public education is a matter for determination by the legislative branches of the Government—not the judiciary.

The first opinion written by Oliver Wendell Holmes, as an Associate Justice of the Supreme Court of the United States, was in *Otis* v. *Parker,* 187 U.S. 606.

Said he:

"While the courts must exercise a judgment of their own it by no means is true that every law is void which may seem to the judges who pass upon it excessive, unsuited to the ostensible end, or based upon conceptions of morality with which they disagree. Considerable latitude must be allowed for differences of view as well as for possible peculiar conditions which this Court can know but imperfectly if at all. Otherwise a constitution, instead of embodying only relatively fundamental rules of right, as generally understood by all English-speaking communities, would become the partisan of a peculiar set of ethical or economical opinions, which by no means are held semper, ubique et ob omnibus." (Always, everywhere, and by all.)

Twenty-eight years later, that old Union soldier, that great jurist about to step down

from the bench, wrote these principles of law: [18]

"I have not yet adequately expressed the more than anxiety that I feel at the ever increasing scope given to the 14th amendment in cutting down what I believe to be the constitutional rights of the States. As the decisions now stand I see hardly any limit but the sky to the invalidating of those rights if they happen to strike a majority of this Court as for any reason undesirable. I cannot believe that the amendment was intended to give us carte blanche to embody our economic or moral beliefs in its prohibitions."

Justice Harlan, the elder, speaking for the Court in *Jacobson* v. *Massachusetts*,[19] had drawn the line of demarcation between the duties of the legislature and those of the courts. Involved was the validity of a compulsory vaccination law enacted by the Commonwealth of Massachusetts.

In passing on the constitutionality of that law did the Court say: "We must look to the effect of vaccination itself on the people of the State"? Of course it did not. On the contrary it said: "No court * * * is justified in disregarding the action of the legislature simply because in its or their opinion that particular method was—perhaps or possibly—not the best either for children or adults." [20]

The old master, Holmes, had laid down the law positively in *Laurel Hill Cemetery* v. *City and County of San Francisco*.[21]

There involved was an ordinance forbidding the burial of the dead within the city and county limits. The Court was asked to take judicial notice that a cemetery adjacent to residences is in no way harmful, and to recognize the opinions of scientific men [22] to that effect.

Thus thundered the old judge answering that—

"If every member of this Bench clearly agreed that burying grounds were centers of safety and thought the Board of Supervisors and the Supreme Court of California wholly wrong, it would not dispose of this case. There are other things to be considered—opinion still may be divided, and if on the hypothesis that the danger is real, the ordinance would be valid, we should not overthrow it merely because of our adherence to the other belief. * * * Tradition and the habits of the community count for more than logic." [23]

The legal principle which the Court on May 17, 1954, violated had never been better expressed than it was by Justice Frankfurter on June 14, 1943.[24]

Why he departed in 1954 from the law as it was in 1943, and has been ever since, is one of the mysteries of the segregation cases.

He had said: "One who belongs to the most vilified and persecuted minority in history is not likely to be insensible to the freedoms guaranteed by our Constitution. Were my purely personal attitude relevant I should wholeheartedly associate myself with the general libertarian views in the Court's opinion, representing as they do the thought and action of a lifetime. But as judges we are neither Jew nor Gentile, neither Catholic nor agnostic. We owe equal attachment to the Constitution and are equally bound by our judicial obligations whether we derive our citizenship from the earliest or the latest immigrants to these shores. As a member of this Court I am not justified in writing my private notions of policy into the Constitution, no matter how deeply I may cherish them or how mischievous I may deem their disregard. * * * It can never be emphasized too much that one's own opinion about the wisdom or evil of a law should be excluded altogether when one is doing one's duty on the Bench. The only opinion of our own even looking in that direction that is material is our opinion whether legislators could in reason have enacted such a law."

That same Justice speaking for the Court in 1948 [25] had said: "The Constitution does not require legislatures to reflect sociological insight, or shifting social standards, any more than it requires them to keep abreast of the latest scientific standards."

Justices Reed, Frankfurter, Jackson, and Burton concurred in that statement. Yet 6 years later they and Justice Frankfurter joined in "looking to the effect of segregation itself on public education."

They compounded their error in the very next sentences of the opinion: "In approaching this problem, we cannot turn the clock back to 1868 when the amendment was adopted, or even to 1896 when *Plessy* v. *Ferguson* was written. We must consider public education in the light of its full development and its present place in American life throughout the Nation."

In those sentences the Court overlooked the fact that the problem before it was not a sociological problem—that was the problem for the legislatures to solve. The legal problem was whether despite the equal protection clause of the 14th amendment to the Constitution, a State might segregate the races in the public schools.

In approaching that problem, established law required the Court to turn the clock back to 1868. Instead of saying "we cannot turn the clock back to 1868 when the amendment was adopted," the Court, applying the law, should have said: "Contemporary interpretation of the Constitution is of the most forcible nature and entitled to great weight, and the practice and acquiescence under it for a period of years afford an irresistible answer to objection and fix the construction." [26]

That was the law of the land as it had been repeatedly declared prior to May 17, 1954.

The law of the land was the very antithesis of the "can't turn the clock back" doctrine of the modern school.

In saying we can't turn the clock back to 1868 in construing the meaning and intent of an amendment then adopted, the Court overlooked myriads of cases of which *South Carolina* v. *United States*,[27] written by Justice Brewer is typical.

He for himself, Chief Justice Fuller, Justices Harlan, Brown, Holmes, and Day wrote this landmark of American law as it had existed prior to May 17, 1954: "The Constitution is a written instrument. As such its meaning does not alter. That which it meant when adopted it means now. Being a grant of powers to a government its language is general, and as changes come in social and political life it embraces in its grasp all new conditions which are within the scope of the powers in terms conferred. In other words, while the powers granted do not change, they apply from generation to generation to all things to which they are in their nature applicable. This in no manner abridges the fact of its changless nature and meaning. Those things which are within its grants of power, as those grants were understood when made, are still within them, and those things not within them remain still excluded."

And, though there are many who believe that the doctrines of the Dred Scott case have been nullified, the Court that day in 1905 reaffirmed this doctrine so forcibly expressed by Chief Justice Taney: "As long as it (the Constitution) continues to exist in its present form, it speaks not only in the same words, but with the same meaning and intent with which it spoke when it came from the hands of its framers, and was voted on and adopted by the people of the United States. Any other rule of construction would abrogate the judicial character of this Court, and make it the mere reflex of the popular opinion or passion of the day."

The phrase "equal protection of the laws" and its effect on the rights of the States to segregate the races in them, had the same meaning and intent as they had when they came from the hands of the framers in 1866, and were ratified by the States in 1868. That intent had been repeatedly and unanimously declared by the courts of the land, Federal and State.

For the Court on May 17, 1954, to have adopted another rule of construction abrogated the judicial character of the Court, and made it the mere reflex of what it thought was the popular opinion or passion of the day.

That the Court abrogated legislative power is graphically shown by the sentences which follow its discussion of the "cannot turn the clock back" doctrine.

Those sentences are: "We come then to the question presented: Does segregation of children in public schools solely on the basis of race, even though the physical facilities and other tangible factors may be equal, deprive the children of the minority group of equal educational opportunities? We believe that it does."

In the first place the question presented, though adroitly, was not correctly stated. Adroitly, there was substituted for the phrase in the constitutional amendment "equal protection of the laws" the phrase "equal educational opportunities."

The real question presented was the legal question so many times answered negatively by the courts. Does the equal-protection clause of the 14th amendment deprive the States of their right to segregate the races in their public schools?

In the second place the belief of the judges sitting on the Court at that time could not be substituted for the judicial constructions of the amendment which constituted the negative answer to the real law questions in the case.

That expression of the belief of the judges as the law of the land becomes even more appalling when we learn (from the decision) the basis of the belief. The basis is expressed in this sentence at page 494 of the opinion: "Whatever may have been the extent of psychological knowledge at the time of *Plessy* v. *Ferguson*, this finding is amply supported by modern authority."

The first time I read that sentence on the afternoon of May 17, 1954, I thought: This finding, this belief that the 14th amendment deprives the States of their rights to regulate their public schools is supported by what modern authority? Have those landmarks of the law—the Massachusetts case of *Roberts* v. *Boston*; the Ohio case of *Garnes* v. *McCann;* the Indiana case of *Cory* v. *Carter;* the California case of *Ward* v. *Flood;* the New York cases of *King* v. *Gallagher*, and *Board of Education* v. *Cisco;* the Federal court cases—Bertonneau and Bunhilin, Chief Justice Taft's opinion for a unanimous Court in *Gong Lum* v. *Rice*, been overruled by some modern authority? I wonder, I said to myself, have I overlooked some authoritative judicial decision reversing and overruling the law of the land as declared for 105 years in those cases?

Then I saw that immediately following the phrase "modern authority" was the little figure [11], and I read the footnote, that famous 11th footnote, and I learned what "modern authority" in judicial decisions is.

[18] *Baldwin* v. *State of Missouri*, 281 U.S. 595.
[19] 197 U.S. 11 (1905).
[20] 197 U.S. 35.
[21] 216 U.S. 358 (1910).
[22] Op. cit., p. 364.
[23] 216 U.S., p. 365–6.
[24] 319 U.S. 1178, 1189.
[25] *Goesaert et al.* v. *Cleary et al.*, 335 U.S. 464, 466.
[26] USCA Constitution, p. 77.
[27] 199 U.S. 437 (1905), 448.

That "modern authority" as expressed in that 11th footnote is:

"K. B. Clark, Effect of Prejudice and Discrimination on Personality Development (Midcentury White House Conference on Children and Youth, 1950), Witmer and Kotinsky, Personality in the Making (1952), c. VI; Deutschler and Chein, the Psychological Effects of Enforced Segregation; a Survey of Social Science Opinion, 26 J. Psychol. 259 (1948); Chein, What Are the Psychological Effects of Segregation Under Conditions of Equal Facilities? 3 Int. J. Opinion and Attitude Res. 229 (1949); Brameld, Educational Costs, in Discrimination and National Welfare (MacIver, ed. 1949), 44–48; Frazier, The Negro in the United States (1949), 674–681. And see generally Myrdal, An American Dilemma (1944)."

And I thought: Modern psychology has replaced constitutional law; Chief Justice Taft has been supplanted as authority by K. B. Clark; Witmer and Kotinsky are the modern substitutes for Harlan and Brewer; Deutschler and Chein are to be preferred as constitutional authorities to Justices Woods, and Miller, and Brown; those famous State Supreme Court Judges Shaw, Ruger, Day, Alton Parker, who established the doctrine of separate but equal as constitutional in the field of public education, all must now bow to Brameld, MacIver, Frazier and Myrdal, whose opinions were accepted by the Justices and transformed into "the law of the land."

In so wiping out century-old precedents, the Court ignored the legal doctrine of "stare decisis."

"Especially in cases of doubt, the solemn, deliberate, well considered, and long-settled decisions of the judiciary, and the quiet assent of the people to an unbroken and unvarying practice, ought to conclude the action of courts in favor of a principle so established, even when the individual opinions of the judges would be different were the question res integra."

That is the doctrine of "stare decisis" long established in American jurisprudence. Under that doctrine, *Plessy* v. *Ferguson*, *Gong Lum* v. *Rice*, and the cases upon which they were based had become a part of our constitutional fabric. It would have been bad enough for the Court to have brought forward the solemn, deliberate, well considered and long-settled decisions of the courts, and to have adjudicated that they were erroneous. To have substituted for those decisions, the opinions of Myrdal, Frazier, Brameld, Kotinsky, Clark, Witmer, Deutschler, and Chein marks a development in American constitutional law which all American lawyers may well ponder.

Fortunately for all of us—of the North, South, East, or West—that decision of May 17, 1954, may have been only a temporary departure from the channels of American constitutional law.

A very recent decision of the Supreme Court of the United States[28] written by Mr. Justice Stewart with whom Justices Frankfurter, Clark, Whitaker and Harlan concurred, gives some hope that the American doctrines of constitutional law may be restored as declarations of "the law of the land."

Said those Justices: "The statute which confers immunity upon a witness testifying in a grand jury investigation under part I was enacted in 1893. For more than half a century it has been settled that this statute confers immunity from prosecution coextensive with the constitutional privilege against self-incrimination, and that the witness may not therefore lawfully refuse to testify. *Brown* v. *Walker*, 1896, 161 U.S. 591. The context in which the doctrine originated and the history of its reaffirmance through the years have been so recently reexamined by this court in *Ullman* v. *United States*, 350 U.S. 422, as to make it a needless exercise to retrace that ground here. Suffice it to repeat that *Brown* v. *Walker* has become 'part of our constitutional fabric' 350 U.S. at page 438. It is thus clearly too late in the day to question the constitutional sufficiency of the immunity provided under part I of the act."

If "ancient law" had prevailed as it should have on May 17, 1954, instead of modern psychology, the segregation cases might well and legally have been disposed of in a paraphrase of that quotation. The opinion in such a disposition could well have read:

"The amendment which is deemed to destroy the States' rights to separate the races in their public schools was ratified in 1868. For more than half a century it had been settled that this amendment did not prevent a State from segregating children of the different races in their schools. The context in which the doctrine of 'separate but equal' originated and the history of its reaffirmance through the years was reexamined by this Court in *Gong Lum* v. *Rice*, almost 30 years ago, and almost 50 years after the establishment of the doctrine. It is a needless exercise to retrace that ground here. Suffice it to say that *Gong Lum* v. *Rice* and its precursor, *Plessy v. Ferguson*, have become part of our constitutional fabric. It is thus clearly too late in the day to question the constitutionality of the separate but equal doctrine as applied to public education."

To quote Justice Frankfurter in *Lambert* v. *People of the State of California*, 355 U.S. 225, 232 (Dec. 16, 1957): "We feel confident that the present decision(s) will turn out to be an isolated deviation from the strong current of precedents—a derelict on the waters of the law."

And with them will disappear from the body of American constitutional law, the supplemental opinion of May 31, 1955.[29]

With only the four cases from Kansas, Delaware, Virginia, and South Carolina before the Court, the Chief Justice wrote:

"These cases were decided on May 17, 1954. The opinions of that date, declaring the fundamental principle that racial discrimination in public education is unconstitutional, are incorporated herein by reference. All provisions of Federal, State, or local law requiring or permitting such discrimination must yield to this principle."

Not yet, I hope, has the time come in America when the rights, privileges, and immunities of citizens in 45 States in 1959 or any year thereafter can be thus decided and swept away in cases involving 4 States to which they were not a party.

That language is not justified by any principle of constitutional law. The judicial power of the United States is vested in the Supreme Court and such inferior courts as the Congress may ordain and establish. That power extends only to cases in which parties are properly before the Court.

When and if a case from Georgia, or any other of the 44 States of the Union besides Virginia, South Carolina, Kansas, and Delaware reaches the Supreme Court the opinions of the Court in the segregation cases of 1954 may be precedents to be considered by the Court. They are not the law of the land. We have a right to our day in court if there is persistence that these cases are the law of the land. When and if that day comes we shall assert that for the legal reasons I have stated to you the segregation cases of 1954 and 1955 constitute a legal error.

[29] *Brown* v. *Topeka, etc.*, 349 U.S. 294.

EDUCATIONAL AND OTHER READJUSTMENT BENEFITS FOR POST-KOREAN VETERANS

Mr. YARBOROUGH. Mr. President, the March issue of the National AMVET magazine contains a forceful and thought-provoking editorial on the necessity for prompt action by the Congress to provide educational and other readjustment benefits for post-Korean veterans. As Senators know, legislation on this subject is now under study by the Veterans Affairs Subcommittee of the Senate Committee on Labor and Public Welfare.

The AMVET editorial, entitled "Not If, But When?", states that "The question no longer is whether there should be a so-called peacetime GI bill but rather when will it become law?" The editorial then gives some very cogent reasons for enacting such a bill, some of which I shall now quote—

> There certainly can be no question as to the wisdom of such a new law. History has already proven that the public funds expended for the rehabilitation of citizen-soldiers upon return to civilian life have been returned manyfold. No wiser investment has ever been made in the future of any nation.
>
> * * * * *
>
> As far as we are concerned, the last tour of true peacetime service in the U.S. Armed Forces ended on September 1, 1939, when Hitler unleashed his black legions against the Poles.
>
> * * * * *
>
> And when a man is chosen by the members of his community to put on a uniform and train to defend himself and them, we become slightly bewildered by the term "peacetime service."

The editorial states further that the debate on this question "was clearly decided more than a year ago," and concludes by requesting action on the pending legislation "not next month nor in the next session of Congress—but now." With respect to this note of urgency, Mr. President, I will say that I, too, subscribe fully and unconditionally to the view that the question of providing readjustment benefits for our post-Korean veterans should be decided affirmatively and quickly. As I stated when the Senate took action to extend the compulsory draft law for another 4 years, there is an urgent need to restore to our young citizen soldiers at least a portion of the opportunities lost by compulsory military service, particularly in the cases of lost educational opportunities. In regard to educational opportunities, I point out that some of the witnesses who have appeared before the Veterans Affairs Subcommittee testified that they know of cases where, unless readjustment benefits are provided this year, young men who are married and have families will lose forever their opportunities to attend college. Prompt action by the Congress can, of course, prevent further loss of educational opportunities by these young men; and I assure AMVETS, and all others seeking to help our post-Korean veterans, that I am doing my utmost to bring about such action.

As I have indicated, hearings on the readjustment bills have already begun.

As soon as the interested agencies, organizations, and individuals can be heard by the subcommittee, the hearings will be terminated and the bills considered in executive session. The full Labor Committee will, I am sure, take final action on the bills as soon as possible—and I hope sufficiently soon to permit eligible veterans to resume their educational careers during the next school semester beginning in September of this year.

Mr. President, I request unanimous consent to have printed in the RECORD at this point the thoughtfully presented editorial in the National AMVET magazine of March 1959 entitled "Not If, But When?"

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

NOT IF, BUT WHEN?

The question no longer is whether there should be a so-called peacetime GI bill, but rather when will it become law?

Since January 31, 1955, men entering the Armed Forces under the compulsion of the draft have been doing so without becoming eligible for educational and other benefits once they have completed service.

Prior to this cutoff date more than 4 years ago, persons serving in the Armed Forces were either eligible for benefits under the World War II or the later Korean GI bill.

The debate over whether those entering the Armed Forces in the past 4 years should receive some manner of readjustment benefits upon reentering civilian life was clearly decided more than a year ago.

It was decided by the keymen involved in bringing about the proposed law. Army Times, in a poll of the 12 Labor and Public Welfare Committee members, showed that 7 Senators, the necessary majority, were willing to commit themselves as favoring a return of benefits in some form, primarily education privileges.

Again, this same subcommittee has been conducting hearings on the same subject.

Gentlemen of the committee, we have but one question to ask. Why?

There certainly can be no question as to the wisdom of such a new law. History has already proven that the public funds expended for the rehabilitation of citizen-soldiers upon their return to civilian life have been returned manyfold. No wiser investment has ever been made in the future of any nation.

Perhaps there still remain some doubts as to whether peacetime veterans deserve any thanks in the form of such benefits from the Nation.

As far as we are concerned, the last tour of true peacetime service in the U.S. Armed Forces ended on September 1, 1939, when Hitler unleashed his black legions against the Poles.

When a soldier, sailor, marine, or airman has to roll up his gear and be ready to fight in any corner of the world in a matter of a few minutes or a few hours, we hardly classify this as peacetime service.

And when a man is chosen by the members of his community to put on a uniform and train to defend himself and them, we become slightly bewildered by the term "peacetime service."

AMVETS has supported a benefits bill for veterans of this so-called peacetime service and will continue to support it until it becomes law. We urgently request action on the legislation not next month nor in the next session of Congress—but now.

Mr. RANDOLPH. Mr. President, will the Senator yield?

Mr. YARBOROUGH. I yield.

Mr. RANDOLPH. Last evening at Berkeley Springs, W. Va., we were privileged to have the presence of the able Senator from Texas at a very important public meeting. The address which he made on that occasion dealt to some degree with the vital subject matter which he has effectively presented here today.

I believe it is good for those citizens who live in States adjacent to or near the Nation's capital to have the benefit of the thinking of Senators from other areas of the country. The people of Berkeley Springs were thus able to profit from the detailed knowledge of the esteemed Senator from Texas on this most important piece of legislation.

Last night, as I have said, we were most fortunate to have the able Senator from Texas among us. We thank him for his visit to our State.

Mr. YARBOROUGH. I thank the distinguished Senator from West Virginia for his kind and exceedingly generous remarks, particularly in view of the fact that he is one of the great orators of the Senate and the Nation. It was my privilege to attend the meeting as the guest of the Senator and of the Young Democratic Clubs of Morgan County, at the historic spot, Berkeley Springs, formerly the city of Bath, which had been surveyed by George Washington. I may add that the beneficial effects of the Berkeley Springs waters have been experienced by many Americans, including President Franklin D. Roosevelt.

At that historic city it was my great privilege to address the meeting under the favorable auspices of and following the introduction by the distinguished and generous Senator from West Virginia.

Mr. RANDOLPH. I thank the Senator from Texas.

Mr. YARBOROUGH. I express my appreciation to him for the very hospitable welcome extended to me.

CALL OF THE CALENDAR

Mr. MANSFIELD. Mr. President, has morning business been concluded?

The PRESIDING OFFICER. Is there further morning business? If not, morning business is concluded.

Mr. MANSFIELD. Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

The Chief Clerk proceeded to call the roll.

Mr. MANSFIELD. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

Under the order previously entered, the Senate will proceed to the consideration of measures on the calendar to which there is no objection. The clerk will call the first bill in order on the calendar.

BILLS PASSED OVER

The bill (S. 12) to expedite the utilization of television transmission facilities in our public schools and colleges, and in adult training programs was announced as first in order.

The PRESIDING OFFICER. Is there objection to the consideration of the bill?

Mr. ENGLE. I ask that the bill go over.

The PRESIDING OFFICER. The bill will be passed over.

The bill (S. 611) for the relief of Harry H. Nakamura was announced as next in order.

The PRESIDING OFFICER. Is there objection to the present consideration of the bill?

Mr. ENGLE. Over.

The PRESIDING OFFICER. The bill will be passed over.

The bill (S. 1075) to provide for the reimbursement of Meadow School District No. 29, Upham, N. Dak., for loss of revenue resulting from the acquisition of certain lands within such school district by the Department of the Interior was announced as next in order.

The PRESIDING OFFICER. Is there objection to the present consideration of the bill?

Mr. ENGLE. Over.

The PRESIDING OFFICER. The bill will be passed over.

LEVYING AND COLLECTING OF TAXES AND ASSESSMENTS

The bill (S. 643) to amend the act entitled "an act relating to the levying and collecting of taxes and assessments, and for other purposes," approved June 25, 1938, was announced as next in order.

The PRESIDING OFFICER. Is there objection to the present consideration of the bill?

There being no objection, the Senate proceeded to consider the bill.

Mr. MORSE. Mr. President, I ask unanimous consent that there be printed in the RECORD at this point an explanation of the bill.

There being no objection, the explanation was ordered to be printed in the RECORD, as follows:

The purpose of this bill is to amend the act of June 25, 1938, relating to the levying and collecting of taxes and assessments, so as to enable the notice of special assessments for public improvements to be served either by registered mail, certified mail, or by personal service and will, therefore, give the government of the District of Columbia an alternative method of service not present in existing law. Present law requires that notice of the levying of such assessments shall be served personally upon the record owner of the property, and there are annually approximately 800 notices of special assessments that require personal service in the field. This entails the use of at least two employees working during regular hours, evenings, Saturdays, and on an overtime basis.

The Commissioners are of the opinion that the proposed bill would produce a substantial saving in the cost of administration in the levying of special assessments for public improvements, inasmuch as the cost of service by registered or certified mail would represent a substantial saving over the cost of personal service.

An identical bill (S. 3510) passed the Senate in the 85th Congress on August 11, 1958.

The PRESIDING OFFICER. The question is on the engrossment and third reading of the bill.

The bill was ordered to be engrossed for a third reading, was read the third time, and passed as follows:

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That the first paragraph of subsection (a) of section 3 of the Act entitled "An Act relating to the levying and collecting of taxes and assessments, and for other purposes", approved June 25, 1938 (52 Stat. 1199; sec. 47–1103, D.C. Code, 1951 edition), is amended to read as follows:

"SEC. 3. (a)(1) When any special assessment for a public improvement, with the exception of assessments levied in condemnation proceedings, is levied by the District of Columbia upon any lot or parcel of land, notice of the levying of such assessment shall be served upon the record owner thereof in the manner herein provided, and if there be more than one record owner of such lot or parcel of land notice served on one of the owners shall be sufficient. Such notice shall be deemed to have been served when served by any of the following methods: (a) when forwarded to the last known address of the owner as recorded in the real estate assessment records of the District of Columbia by registered or certified mail, with return receipt, and such receipt shall constitute prima facie evidence of service upon such owner if such receipt is signed either by the owner or by a person of suitable age and discretion located at such address: *Provided,* That valid service upon the owner shall be deemed effected under this clause (a) if such notice shall be refused by the owner and not delivered for that reason; or (b) when delivered to the person to be notified; or (c) when left at the usual residence or place of business of the person to be notified with a person of suitable age and discretion then resident or employed therein; or (d) if no such residence or place of business can be found in the District of Columbia by diligent search, then if left with any person of suitable age and discretion employed at the office of any agent of the person to be notified, which agent has any authority or duty with reference to the land or tenement to which said notice relates; or (e) if any such notice forwarded by registered or certified mail be returned for reasons other than refusal, or if personal service of such notice cannot be effected, then if published on three consecutive days in a daily newspaper published in the District of Columbia; or (f) if by reason of an outstanding unrecorded transfer of title the name of the owner cannot, by diligent search, be ascertained, then if served on the owner of record in a manner hereinbefore provided. Any notice to a corporation shall, for the purposes of this Act, be deemed to have been served on such corporation if served on the president, secretary, treasurer, general manager, or any principal officer of such corporation in a manner hereinbefore provided for the services of notices on natural persons holding property in their own right; and notices to a foreign corporation shall, for the purposes of this Act, be deemed to have been served if served personally on any agent of such corporation, or if left with any person of suitable age and discretion residing at the usual residence or employed at the usual place of business of such agent in the District of Columbia. The cost of publication, if any, shall be paid out of the general revenues of the District. The notice herein provided for shall be in lieu of any and all other notice now required by law.

"(2) In case such notice is served by any method other than personal service, a copy of such notice shall also be sent to the owner by ordinary mail."

SEC. 2. The amendments made by the first section of this Act shall apply to all special assessments for public improvements (other than assessments in condemnation proceedings) notice of which has not been served prior to the approval of this Act.

SEC. 3. The second paragraph of subsection (a) of section 3 of the Act entitled "An Act relating to the levying and collecting of taxes and assessments, and for other purposes", approved June 25, 1938 (sec. 47–1103, D.C. Code, 1951 edition), is hereby repealed.

CREATION OF BOARD FOR CONDEMNATION OF INSANITARY BUILDINGS IN THE DISTRICT OF COLUMBIA

The bill (S. 745) to amend the act entitled "An act to create a Board for the Condemnation of Insanitary Buildings in the District of Columbia, and for other purposes," approved May 1, 1906, as amended, was announced as next in order.

The PRESIDING OFFICER. Is there objection to the present consideration of the bill?

There being no objection, the Senate proceeded to consider the bill.

Mr. MORSE. Mr. President, I ask unanimous consent that there be printed in the RECORD at this point an explanation of the bill.

There being no objection, the explanation was ordered to be printed in the RECORD, as follows:

The purpose of this bill is to amend the Act of May 1, 1906, as amended, so as to correct what has proved to be certain administrative deficiencies in the act. This proposal would bring the provisions of the act relating to assessment and collection of taxes into conformity with the provisions for assessment and collection of taxes applicable to special assessments levied for public improvements under the act of July 25, 1935.

Existing law provides for the repair or the demolition by the District of Columbia of buildings condemned under such law, in the event the owner fails to comply with orders of the Board for the Condemnation of Insanitary Buildings to repair or demolish such buildings. Present law further provides that the costs incurred by the District government in repairing or demolishing any such buildings be assessed as a tax against the property and collected in the same manner as general taxes are collected, the tax assessment being enforced by the sale of the property at an annual tax sale. However, there is no provision for a specific time when the assessment shall be paid, nor does it provide for interest on delinquent payments. Enactment of this bill would correct this administrative deficiency, along with the deficiency in existing law in the specified number of methods of giving notice to the owner of the property affected of the proposed action to be taken by the Board. A substantially similar bill (S. 1269) was passed by the Senate in the 85th Congress on May 22, 1957, the difference being the addition of certified mail as a method of effecting service of notice.

The PRESIDING OFFICER. The question is on the engrossment and third reading of the bill.

The bill was ordered to be engrossed for a third reading, was read the third time, and passed, as follows:

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That subsection (d) of section 2 of the Act entitled "An Act to create a Board for the Condemnation of Insanitary Buildings in the District of Columbia, and for other purposes", approved May 1, 1906 (34 Stat. 157; title 5, ch. 6, D.C. Code, 1951 edition), as amended, is amended by striking "same manner as general taxes are collected in the District of Columbia", and inserting in lieu thereof "manner provided in section 7 of this Act".

SEC. 2. (a) Section 7 of said Act, as amended, is amended (1) by striking "in the same manner as general taxes are collected in the District of Columbia", and inserting in lieu thereof "as provided in this section"; and (2) by inserting immediately before the period at the end of said section the following: ": *Provided further,* That the taxes authorized to be levied and collected under this Act may be paid without interest within sixty days from the date such tax was levied. Interest of one-half of 1 per centum for each month or part thereof shall be charged on all unpaid amounts from the expiration of sixty days from the date such tax was levied. Any such tax may be paid in three equal installments with interest thereon. If any such tax or part thereof shall remain unpaid after the expiration of two years from the date such tax was levied, the property against which said tax was levied may be sold for such tax or unpaid portion thereof with interest and penalties thereon at the next ensuing annual tax sale in the same manner and under the same conditions as property sold for delinquent general real estate taxes, if said tax with interest and penalties thereon shall not have been paid in full prior to said sale".

(b) Any tax levied pursuant to such Act approved May 1, 1906, as amended by the Act approved August 28, 1954, which was levied after the effective date of such Act of August 28, 1954, and prior to the effective date of this section, shall, for the purpose of computing interest thereon, be deemed to have been levied as of the effective date of this section.

SEC. 3. Section 10 of such Act, as amended, is amended to read as follows:

"SEC. 10. (a) Any notice required by this Act to be served shall be deemed to have been served when served by any of the following methods: (a) when forwarded to the last known address of the owner as recorded in the real estate assessment records of the District of Columbia by registered or certified mail, with return receipt, and such receipt shall constitute prima facie evidence of service upon such owner if such receipt is signed either by the owner or by a person of suitable age and discretion located at such address: *Provided,* That valid service upon the owner shall be deemed effected if such notice shall be refused by the owner and not delivered for that reason; or (b) when delivered to the person to be notified; or (c) when left at the usual residence or place of business of the person to be notified with a person of suitable age and discretion then resident or employed therein; or (d) if no such residence or place of business can be found in the District of Columbia by reasonable search, then if left with any person of suitable age and discretion employed at the office of any agent of the person to be notified, which agent has any authority or duty with reference to the land or tenement to which said notice relates; or (e) if any such notice forwarded by registered or certified mail be returned for reasons other than refusal, or if personal service of any such notice, as hereinbefore provided, cannot be effected, then if published on three consecutive days in a daily newspaper published in the District of Columbia; or (f) if by reason of an outstanding unrecorded transfer of title the name of the owner in fact cannot be ascertained beyond a reasonable doubt, then if served on the owner of record in a manner hereinbefore provided. Any notice to a corporation shall, for the purposes of this Act,

be deemed to have been served on such corporation if served on the president, secretary, treasurer, general manager, or any principal officer of such corporation in the manner hereinbefore provided for the service of notices on natural persons holding property in their own right; and notices to a foreign corporation shall, for the purposes of this Act, be deemed to have been served if served personally on any agent of such corporation, or if left with any person of suitable age and discretion residing at the usual residence or employed at the usual place of business of such agent in the District of Columbia."

(b) In case such notice is served by any method other than personal service, notice shall also be sent to the owner by ordinary mail.

REMOVAL OF DANGEROUS AND UNSAFE BUILDINGS IN THE DISTRICT OF COLUMBIA

The Senate proceeded to consider the bill (S. 645) to amend the act entitled "An act to authorize the Commissioners of the District of Columbia to remove dangerous or unsafe buildings, and parts thereof, and for other purposes," approved March 1, 1899, as amended, which had been reported from the Committee on the District of Columbia, with an amendment on page 3, line 5, after the word "carelessness", to strike out "and" and insert "or", so as to make the bill read:

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That the Act entitled "An Act to authorized the Commissioners of the District of Columbia to remove dangerous or unsafe buildings and parts thereof, and for other purposes," approved March 1, 1899 (30 Stat. 923, as amended; title 5, ch. 5, D.C. Code, 1951 edititon), is amended by striking the term "inspector of buildings" wherever such term appears therein and inserting in lieu thereof "Commissioners." The first sentence of the first section of such Act, as amended, is amended by striking "his opinion" and inserting in lieu thereof "their opinion" and by striking "he shall" and inserting in lieu thereof "they shall."

SEC. 2. The first section of such Act, as amended (sec. 5–501, D. C. Code, 1951 edition), is amended by adding at the end thereof the following:

"The term 'Commissioners' means the Commissioners of the District of Columbia sitting as a board or the agent or agents designated by them to perform any function vested in said Commissioners by this Act."

SEC. 3. Section 3 of such Act, as amended (sec. 5–503, D.C. Code, 1951 edition), is amended by striking the third sentence therefrom.

SEC. 4. The second sentence of section 4 of such Act, as amended (sec. 5–504, D.C. Code, 1951 edition), is amended by striking "bear interest at the rate of 10 per centum per annum until paid, and be carried on the regular tax rolls of the District of Columbia and shall be collected in the manner provided for the collection of general taxes" and inserting in lieu thereof "be collected in the manner provided in section 6 of this Act."

SEC. 5. Such Act, as amended, is amended by inserting the following sections immediately after section 4, reading as follows:

"SEC. 5. The Commissioners shall determine the cost and expense of any work performed by them under the authority of the first four sections of this Act, including the cost of making good damage to adjoining premises (except such as may have resulted from carelessness or willful recklessness in the demolition or removal of any structure) less the amount, if any, received from the sale of old material, and shall assess such cost and expense upon the lot or ground whereon such structure, excavation, or nuisance stands, stood, was dug, was located, or existed, and this amount shall be collected in the manner provided in section 6 of this Act. Any person, corporation, partnership, syndicate, or company subject to the provisions of the first three sections of this Act who shall neglect or refuse to perform any act required by such sections shall be punished by a fine not exceeding $50 for each and every day said person, corporation, partnership, syndicate, or company fails to perform any act required by such sections.

"SEC. 6. Any tax authorized to be levied and collected under this Act may be paid without interest within sixty days from the date such tax was levied. Interest of one-half of 1 per centum for each month or part thereof shall be charged on all unpaid amounts from the expiration of sixty days from the date such tax was levied. Any such tax may be paid in three equal installments with interest thereon. If any such tax or part thereof shall remain unpaid after the expiration of two years from the date such tax was levied, the property against which said tax was levied may be sold for such tax or unpaid portion thereof with interest and penalties thereon at the next ensuing annual tax sale in the same manner and under the same conditions as property sold for delinquent general real estate taxes, if said tax with interest and penalties thereon shall not have been paid in full prior to said sale."

SEC. 6. Section 5 of such Act, as amended (sec. 5–505, D.C. Code, 1951 edition), is renumbered "SEC. 7" and is amended to read as follows:

"SEC. 7. (a) Any notice required by this Act to be served shall be deemed to have been served when served by any of the following methods: (1) when forwarded to the last known address of the owner as recorded in the real estate assessment records of the District of Columbia, by registered or certified mail, with return receipt, and such receipt shall constitute prima facie evidence of service upon such owner if such receipt is signed either by the owner or by a person of suitable age and discretion located at such address: *Provided,* That valid service upon the owner shall be deemed effected if such notice shall be refused by the owner and not delivered for that reason; or (2) when delivered to the person to be notified; or (3) when left at the usual residence or place of business of the person to be notified with a person of suitable age and discretion then resident or employed therein; or (4) if no such residence or place of business can be found in the District of Columbia by reasonable search, then if left with any person of suitable age and discretion employed at the office of any agent of the person to be notified, which agent has any authority or duty with reference to the land or tenement to which said notice relates; or (5) if any such notice forwarded by registered or certified mail be returned for reasons other than refusal, or if personal service of any such notice, as hereinbefore provided, cannot be effected, then if published on three consecutive days in a daily newspaper published in the District of Columbia; or (6) if by reason of an outstanding unrecorded transfer of title the name of the owner in fact cannot be ascertained beyond a reasonable doubt, then if served on the owner of record in a manner hereinbefore provided. Any notice to a corporation shall, for the purposes of this Act, be deemed to have been served on such corporation if served on the president, secretary, treasurer, general manager, or any principal officer of such corporation in the manner hereinbefore provided for the service of notices on natural persons holding property in their own right; and notices to a foreign corporation shall, for the purposes of this Act, be deemed to have been served if served personally on any agent of such corporation, or if left with any person of suitable age and discretion residing at the usual residence or employed at the usual place of business of such agent in the District of Columbia.

"(b) In case such notice is served by any method other than personal service, a copy of such notice shall also be sent to the owner by ordinary mail."

SEC. 7. Such Act, as amended, is amended by inserting a new section immediately after section 7, as renumbered by this amendatory Act, reading as follows:

"SEC. 8. Whenever the Commissioners find that any building or part of a building, staging, or other structure, or anything attached to or connected with any building or other structure or excavation shall cause a building to be unsafe for human occupancy, they shall give notice of such fact to the owner or other person having an interest in such building, and to the occupant or occupants thereof. If within five days after such notice has been served upon such owner or other interested person, such building or part thereof has not been made safe for human occupancy, the Commissioners may order the use of such building or part thereof discontinued until it has been made safe: *Provided,* That if in the opinion of the Commissioners the unsafe condition of the building or part thereof is such as to be imminently dangerous to the life or limb of any occupant, the Commissioners may order the immediate discontinuance of the use of such building or part thereof. Any person occupying or permitting the occupancy of, such building or part thereof in violation of such order of the Commissioners shall be fined not more than $300 or imprisoned for not more than thirty days."

SEC. 8. Section 6 of such Act, as amended, is renumbered "SEC. 9."

The PRESIDING OFFICER. The question is on agreeing to the committee amendment.

The amendment was agreed to.

Mr. MORSE. Mr. President, I ask unanimous consent that there be printed in the RECORD at this point an explanation of the bill.

There being no objection, the explanation was ordered to be printed in the RECORD, as follows:

The purpose of this bill is to amend the act to authorize the Commissioners of the District of Columbia to remove dangerous or unsafe buildings and parts thereof so as to accomplish the following:

1. Provide the Commissioners of the District of Columbia with authority to require that unsafe structures be vacated under penalty of $300 fine or imprisonment of not to exceed 30 days after 5 days' notice to repair or take corrective action has been given, or immediately if the danger is imminent;

2. Establish time limits and change the present method for the assessment and collection of costs to the District for repairs made by the District upon unsafe structures, including changes in the grace period, during which interest does not run, from 90 days to 60 days, and change the rate of interest from 10 percent per annum to one-half of 1 percent per month;

3. Permit administrative changes in the methods of serving notice upon the owners of property to simplify and standardize such procedures; and

4. Change functional titles of officials in the act to conform with the provisions of Reorganization Plan No. 5 of 1952.

A substantially similar bill (S. 3059) passed the Senate in the 85th Congress on

March 17, 1958. This legislation was requested by the Board of Commissioners and the committee was informed that enactment thereof would incur no additional cost to the District.

The PRESIDING OFFICER. The question is on the engrossment and third reading of the bill.

The bill was ordered to be engrossed for a third reading, was read the third time, and passed.

SCHOOL CENSUS IN THE DISTRICT OF COLUMBIA

The Senate proceeded to consider the bill (S. 644) to amend the act entitled "An act to provide for compulsory school attendance for the taking of a school census in the District of Columbia, and for other purposes," approved February 4, 1925, which had been reported from the Committee on the District of Columbia, with amendments, on page 1, line 3, after the word "That", to strike out "the first sentence of"; in line 8 after the word "amended", to insert "(1)"; on page 2, line 2, after the word "as", to strike out "frequently"," and insert "frequently" "; and in line 5, after the word "frequently", to strike out "thereafter"." and insert "thereafter"; and (2) by inserting immediately after "the school attended by him," the following: "whether such school is public or private,"."; so as to make the bill read:

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That section 1 of article II of the Act entitled "An Act to provide for compulsory school attendance, for the taking of a school census in the District of Columbia, and for other purposes", approved February 4, 1925 (43 Stat. 807; sec. 31–208, D.C. Code, 1951 edition), is amended (1) by striking therefrom "all children between the ages of three and eighteen years permanently or temporarily residing in the District of Columbia, and annually thereafter or as frequently" and inserting in lieu thereof "all children under the age of eighteen years permanently or temporarily residing in the District of Columbia and as frequently thereafter"; and (2) by inserting immediately after "the school attended by him," the following: "whether such school is public or private,".

Mr. MORSE. Mr. President, I ask unanimous consent to have printed at this point in the RECORD, a statement in explanation of the bill.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

The purpose of the bill is to amend the act of February 4, 1925, so as to (1) provide that all children below the age of 18 years be listed in the taking of the school census, instead of the present requirement that only those between the ages of 3 years and 18 years be listed; (2) provide that in addition to the name of the school attended by the child as required by the census, there be a designation as to whether such school is public or private, and (3) provide that the census be made as frequently as the Superintendent of Schools and the Board of Education find it necessary and desirable to do so, instead of annually, as now required.

The Commissioners of the District of Columbia favor enactment of the bill and informed the committee that enactment of this measure could result in financial savings to the District, and that in any event, would involve no additional expense.

A similar bill, S. 1842, passed the Senate during the 85th Congress on May 22, 1957.

The PRESIDING OFFICER. The question is on agreeing to the amendment reported by the committee.

The amendments were agreed to.

The bill was ordered to be engrossed for a third reading, read the third time, and passed.

RENTAL OF COTTON ACREAGE ALLOTMENT

The bill (S. 1455) to authorize the rental of cotton acreage allotment was announced as next in order.

Mr. MORTON. Over, by request.

Mr. JOHNSON of Texas. Mr. President, I wish to inform the Senate that it is planned to call up S. 1455, Calendar No. 104, at the earliest possible date. I shall try to be more specific later in the week.

I should like to suggest also that Calendar No. 105, S. 1456, go over. I inform the Senate that it is planned to call up that bill by motion later today.

Mr. JOHNSTON of South Carolina. Mr. President, I should like to have the attention of the majority leader concerning S. 1455. If anything is to be done in that field, it must be done this week, because, as the Senator from Texas knows, cotton will be planted very soon. In order to give farmers the opportunity to transfer their rights, action will have to be taken on the bill quickly. It is a very small item. It affects only small acreage, under 10 acres.

Mr. JOHNSON of Texas. It is planned to call the bill up by motion.

Mr. JOHNSTON of South Carolina. I understand. I hope it will be called up as soon as possible, because something must be done in this field if the plight of farmers planting less than 10 acres is to be relieved. If the Senate wants to block it, it can do so.

Mr. JOHNSON of Texas. The bill will be called up by motion as soon as possible.

The PRESIDING OFFICER. The bill will be passed over.

ADDITIONAL JUDGES FOR JUVENILE COURT OF THE DISTRICT OF COLUMBIA—BILL PASSED OVER

The bill (S. 1456) to provide for the appointment of two additional judges for the Juvenile Court of the District of Columbia was announced as next in order.

Mr. ENGLE. Over.

The PRESIDING OFFICER. The bill will be passed over.

ELSIE F. WILKINSON

The resolution (S. Res. 93) to pay a gratuity to Elsie F. Wilkinson was considered and agreed to, as follows:

Resolved, That the Secretary of the Senate hereby is authorized and directed to pay, from the contingent fund of the Senate, to Elsie F. Wilkinson, widow of James M. Wilkinson, an employee of the Senate at the time of his death, a sum equal to seven months' compensation at the rate he was receiving by law at the time of his death, said sum to be considered inclusive of funeral expenses and all other allowances.

PRINTING OF ADDITIONAL COPIES OF HOUSE DOCUMENT 234, 84TH CONGRESS

The concurrent resolution (H. Con. Res. 64) authorizing the printing of additional copies of House Document 234, 84th Congress, entitled "The Prayer Room in the U.S. Capitol," was considered and agreed to.

PRINTING OF ADDITIONAL COPIES OF "TITLE 38, UNITED STATES CODE, VETERANS' BENEFITS"

The concurrent resolution (H. Con. Res. 75) authorizing the printing of additional copies of committee print entitled "Title 38, United States Code, Veterans' Benefits," was considered and agreed to.

INCORPORATION OF THE LADIES OF THE GRAND ARMY OF THE REPUBLIC

The Senate proceeded to consider the bill (S. 949) for the incorporation of the Ladies of the Grand Army of the Republic, which had been reported from the Committee on the Judiciary, with an amendment, on page 10, after line 10, to strike out:

SEC. 16. The corporation and its subordinate divisions shall have the sole and exclusive right to use the name, "Ladies of the Grand Army of the Republic," and no other organization shall use the name "Grand Army of the Republic". The corporation shall have the exclusive and sole right to use, or to allow or refuse the use of, such emblems, seals, and badges as have heretofore been used by the Ladies of the Grand Army of the Republic.

And, in lieu thereof, to insert:

SEC. 16. The corporation and its subordinate divisions shall have the sole and exclusive right to use the name, "Ladies of the Grand Army of the Republic". The corporation shall have the exclusive and sole right to use, or to allow or refuse the use of, such emblems, seals, and badges as have heretofore been used by the Ladies of the Grand Army of the Republic.

So as to make the bill read:

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That the following-named persons, to wit: Gussie Laile Morin, Seattle, Washington; Margaret Hopkins Worrell, Ironton, Ohio; Twannette Paull, Kansas City, Missouri; Nellie D. Howe, Grand Rapids, Michigan; Sarah J. Ehrmann, Orange City, Florida; Mabel S. Taylor, Providence, Rhode Island; Edwina P. Trigg, Kansas City, Missouri; Cora M. Rowling, Indianapolis, Indiana; Irene Mangle, Woodruff, Wisconsin; Catherine G. Schroeder, Los Angeles, California; Mabel Y. Coffey, Colorado Springs, Colorado;

Helen M. Lehman, Jersey City, New Jersey; Margaret Grandle, Pittsburg, Kansas; Frances M. Kuhns, Greensburg, Pennsylvania; Gladys W. Newton, Charleston, West Virginia; Olive Vanwagenen, Washington, District of Columbia; Luella Orr, Tulsa, Oklahoma; Edna S. Lindsey, Portland, Oregon; Rosalie E. Leonard, Boise, Idaho; Lura B. Frye, Peoria, Illinois; Theo McCallum,

Neenah, Wisconsin; Eloise E. Whitmer, Washington, District of Columbia; Harriet E. Hughes, New York City, New York; Margaret G. Urban, Oakmont, Pennsylvania;

Bertha Hunt, Des Moines, Iowa; Marie E. Godda, Omaha, Nebraska; Anna Hausman, Washington, District of Columbia; Frances C. Linnell, Plymouth, Massachusetts; Alma M. Blitz, Minneapolis, Minnesota; Lila Lovett, Portland, Maine; Eveh M. Ervin, Keene, New Hampshire; Mildred Puckett, Louisville, Kentucky; Ada Anderson, Wilmington, Delaware; and all past national presidents, and their successors, are hereby created and declared to be a body corporate of the District of Columbia, where its legal domicile shall be by the name of the Ladies of the Grand Army of the Republic (hereinafter referred to as the corporation), and by such name, shall be known and have perpetual succession and the powers, limitations, and restrictions herein contained.

COMPLETION OF ORGANIZATION

SEC. 2. A majority of the persons named in the first section of this Act, acting in person or by written proxy, are authorized to complete the organization of the corporation by the selection of officers and employees, the adoption of a constitution and bylaws not inconsistent with this Act, and the doing of such other acts as may be necessary for such purpose.

PURPOSES OF CORPORATION

SEC. 3. The purposes of the corporation shall be: To perpetuate the memory of the Grand Army of the Republic and of the men who saved the Union in 1861 to 1865; to assist in every practicable way in the preservation and making available for research of documents and records pertaining to the Grand Army of the Republic and its members; to cooperate in doing honor to all those who have patriotically served our country in any way; to teach patriotism and the duties of citizenship, the true history of our country, and the love and honor of our flag; to oppose every tendency or movement that would weaken loyalty to, or make for the destruction or impairment of, our constitutional Union; and to inculcate and broadly sustain the American principles of representative government of equal rights, and of impartial justice for all.

CORPORATE POWERS

SEC. 4. The corporation shall have power—

(1) to have succession by its corporate name;

(2) to sue and be sued, complain and defend in any court of competent jurisdiction;

(3) to adopt, use, and alter a corporate seal;

(4) to choose such officers, managers, agents, and employees as the activities of the corporation may require;

(5) to adopt, amend, and alter a constitution and bylaws; not inconsistent with the laws of the United States or of any State in which the corporation is to operate, for the management of its property and the regulation of its affairs;

(6) to contract and be contracted with;

(7) to take by lease, gift, purchase, grant, devise, or bequest from any public body or agency or any private corporation, association, partnership, firm, or individual and to hold absolutely or in trust for any of the purposes of the corporation any property, real, personal, or mixed, necessary or convenient for attaining the objects and carrying into effect the purposes of the corporation, subject, however, to applicable provisions of law of any State (A) governing the amount or kind of property which may be held by, or (B) otherwise limiting or controlling the ownership of property by, a corporation operating in such State;

(8) to transfer, convey, lease, sublease, encumber and otherwise alienate real, personal, or mixed property;

(9) to borrow money for the purposes of the corporation, issue bonds therefor, and secure the same by mortgage, deed of trust, pledge or otherwise, subject in every case to all applicable provisions of Federal and State laws; and

(10) to do any and all acts and things necessary and proper to carry out the objects and purposes of the corporation.

MEMBERSHIP; VOTING RIGHTS

SEC. 5. (a) Eligibility for membership in the corporation and the rights, privileges, and designation of classes of membership shall, except as provided in this Act, be determined as the constitution and bylaws of the corporation may provide. Eligibility for membership in the corporation shall be limited to female blood relatives of persons who served between April 12, 1861, and April 9, 1865, as soldiers, or sailors of the United States Army, Navy, Marine Corps, or Revenue-Cutter Service, and of such State regiments as were called into active service and were subject to orders of United States general officers between the dates above mentioned and were honorably discharged therefrom at the close of such service or who died in such service.

(b) Each member of the corporation shall have the right to one vote in each matter submitted to a vote at all meetings of the members of the corporation.

GOVERNING BODY

SEC. 6. The supreme governing authority of the corporation shall be the national convention thereof, composed of such officers and elected representatives from the several States and other local subdivisions of the corporate organization as shall be provided by the constitution and bylaws: *Provided*, That the form of the government of the corporation shall always be representative of the membership at large and shall not permit the concentration of control thereof in the hands of a limited number of members or in a self-perpetuating group not so representative. The meetings of the national convention may be held in any State or Territory or in the District of Columbia.

OFFICERS OF CORPORATION

SEC. 7. The officers of the corporation shall be selected in such manner and for such terms and with such duties and titles as may be prescribed in the constitution and bylaws of the corporation.

PRINCIPAL OFFICE; SCOPE OF ACTIVITIES; DISTRICT OF COLUMBIA AGENT

SEC. 8. (a) The principal office of the corporation shall be located in Washington, District of Columbia, or in such other place as may later be determined by the corporation, but the activities of the corporation shall not be confined to that place and may be conducted throughout the various States, Territories, and possessions of the United States.

(b) The corporation shall have in the District of Columbia at all times a designated agent authorized to accept service of process for the corporation; and notice to or service upon such agent, or mailed to the business address of such agent, shall be deemed notice to or service upon the corporation.

USE OF INCOME; LOANS TO OFFICERS, DIRECTORS, OR EMPLOYEES

SEC. 9. (a) No part of the income or assets of the corporation shall inure to any of its members or officers as such, or be distributable to any of them during the life of the corporation or upon its dissolution or final liquidation. Nothing in this subsection, however, shall be construed to prevent the payment of compensation to officers of the corporation or reimbursement for actual necessary expenses in amounts approved by the council of administration of the corporation.

(b) The corporation shall not make loans to its officers or employees. Any member of the council of administration who votes for or assents to the making of a loan or advance to an officer or employee of the corporation, and any officer who participates in the making of such loan or advance, shall be jointly and severally liable to the corporation for the amount of such loan until the repayment thereof.

NONPOLITICAL NATURE OF CORPORATION

SEC. 10. The corporation and its officers and agents as such shall not contribute to any political party or candidate for public office.

LIABILITIES FOR ACTS OF OFFICERS AND AGENTS

SEC. 11. The corporation shall be liable for the acts of its officers and agents when acting within the scope of their authority.

PROHIBITION AGAINST ISSUANCE OF STOCK OR PAYMENT OF DIVIDENDS

SEC. 12. The corporation shall have no power to issue any shares of stock or to declare or pay any dividends.

BOOKS AND RECORDS; INSPECTION

SEC. 13. The corporation shall keep correct and complete books and records of account and shall keep minutes of the proceedings of its national conventions and council of administration. All books and records of the corporation may be inspected by any member, or his agent or attorney, for any proper purposes, at any reasonable time.

AUDIT OF FINANCIAL TRANSACTIONS

SEC. 14. (a) The financial transactions of the corporation shall be audited annually by an independent certified public accountant in accordance with the principles and procedures applicable to commercial corporate transactions. The audit shall be conducted at the place or places where the accounts of the corporation are normally kept. All books, accounts, financial records, reports, files, and all other papers, things, or property belonging to or in use by the corporation and necessary to facilitate the audit shall be made available to the person or persons conducting the audit; and full facilities for verifying transactions and the balances or securities held by depositories, fiscal agents, and custodians shall be afforded to such person or persons.

(b) A report of such audit shall be made by the corporation to the Congress and not later than March 1 of each year. The report shall set forth the scope of the audit and shall include a verification by the person or persons conducting the audit of statements of (1) assets and liabilities, (2) capital and surplus or deficit, (3) surplus or deficit analysis, (4) income and expense, and (5) sources and application of funds. Such report shall not be printed as a public document.

REPORT TO CONGRESS

SEC. 15. On or before March 1 of each year the corporation shall report to the Congress on its activities during the preceding fiscal year. Such report may consist of a report on the proceedings of the national convention covering such fiscal year. Such report shall not be printed as a public document.

USE OF NAME

SEC. 16. The corporation and its subordinate divisions shall have the sole and exclusive right to use the name, "Ladies of the Grand Army of the Republic". The corporation shall have the exclusive and sole right to use, or to allow or refuse the use of, such emblems, seals, and badges as have heretofore been used by the Ladies of the Grand Army of the Republic.

USE OF ASSETS ON DISSOLUTION OR LIQUIDATION

SEC. 17. Upon dissolution or final liquidation of the corporation, after discharge or satisfaction of all outstanding obligations and liabilities, the remaining assets, if any, of the corporation shall be distributed in

accordance with the determination of the council of administration and in compliance with the constitution and bylaws of the corporation and all Federal and State laws applicable thereto.

RESERVATION OF RIGHT TO AMEND OR REPEAL CHARTER

SEC. 18. The right to alter, amend, or repeal this Act is expressly reserved.

The amendment was agreed to.

The bill was ordered to be engrossed for a third reading, read the third time, and passed.

ATHENA NICHOLAS EUTERIADOU

The bill (S. 264) for the relief of Athena Nicholas Euteriadou was considered, ordered to be engrossed for a third reading, read the third time, and passed, as follows:

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That, for the purposes of the Immigration and Nationality Act, Athena Nicholas Euteriadou shall be held and considered to have been lawfully admitted to the United States for permanent residence as of the date of the enactment of this Act, upon payment of the required visa fee. Upon the granting of permanent residence to such alien as provided for in this Act, the Secretary of State shall instruct the proper quota-control officer to deduct one number from the appropriate quota for the first year that such quota is available.

MOHAMMED ALI HALIM

The bill (S. 451) for the relief of Mohammed Ali Halim was considered, ordered to be engrossed for a third reading, read the third time, and passed, as follows:

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That, for the purposes of the Immigration and Nationality Act, Mohammed Ali Halim shall be held and considered to have been lawfully admitted to the United States for permanent residence as of the date of the enactment of this Act, upon payment of the required visa fee. Upon the granting of permanent residence to such alien as provided for in this Act, the Secretary of State shall instruct the proper quota-control officer to deduct one number from the appropriate quota for the first year that such quota is available.

CHIYOKO KOREMATSU AND AIKO KOREMATSU

The Senate proceeded to consider the bill (S. 201) for the relief of Chiyoko Korematsu and Aiko Korematsu, which had been reported from the Committee on the Judiciary, with an amendment, on page 1, at the beginning of line 5, to strike out "fiance" and insert "fiancée", so as to make the bill read:

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That, in the administration of the Immigration and Nationality Act, Chiyoko Korematsu and Aiko Korematsu, the fiancée and minor child of Thomas Mulvihill, a citizen of the United States, shall be eligible for visas as nonimmigrant temporary visitors for a period of three months: *Provided,* That the administrative authorities find that the said Chiyoko Korematsu is coming to the United States with a bona fide intention of being married to the said Thomas Mulvihill and that they are found to be otherwise admissible under the immigration laws. In the event the marriage between the above-named persons does not occur within three months after the entry of the said Chiyoko Korematsu and Aiko Korematsu, they shall be required to depart from the United States and upon failure to do so shall be deported in accordance with the provisions of sections 242 and 243 of the Immigration and Nationality Act. In the event that the marriage between the above-named persons shall occur within three months after the entry of the said Chiyoko Korematsu and Aiko Korematsu, the Attorney General is authorized and directed to record the lawful admission for permanent residence of the said Chiyoko Korematsu and Aiko Korematsu as of the date of the payment by them of the required visa fees.

The amendment was agreed to.

The bill was ordered to be engrossed for a third reading, read the third time, and passed.

AURELIA MARIJA MEDVESEK-POZAR

The Senate proceeded to consider the bill (S. 211) for the relief of Aurelia Marija Medvesek-Pozar, which had been reported from the Committee on the Judiciary, with an amendment, in line 7, after the words "United States", to insert a colon and "*Provided,* That the natural parent of Aurelia Marija Medvesek-Pozar shall not, by virtue of such parentage, be accorded any right, privilege, or status under the Immigration and Nationality Act", so as to make the bill read:

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That, for the purposes of sections 101(a) (27) (A) and 205 of the Immigration and Nationality Act, the minor child, Aurelia Marija Madvesek-Pozar, shall be held and considered to be the natural-born alien child of Matilda Pozar, a citizen of the United States: *Provided,* That the natural parent of Aurelia Marija Medvesek-Pozar shall not, by virtue of such parentage, be accorded any right, privilege, or status under the Immigration and Nationality Act.

The amendment was agreed to.

The bill was ordered to be engrossed for a third reading, read the third time, and passed.

COLLINGWOOD BRUCE BROWN, JR.

The Senate proceeded to consider the bill (S. 313) for the relief of Collingwood Bruce Brown, Jr., which had been reported from the Committee on the Judiciary, with an amendment, on page 1, line 8, after the word "Provided", to insert "That a suitable and proper bond or undertaking, approved by the Attorney General, be deposited as prescribed by section 213 of the said act: And provided further,", so as to make the bill read:

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That notwithstanding the provisions of paragraph (4) of section 212(a) of the Immigration and Nationality Act, Collingwood Bruce Brown, Junior, may be issued a visa and be admitted to the United States for permanent residence if he is found to be otherwise admissible under the provisions of such Act: *Provided,* That a suitable and proper bond or undertaking, approved by the Attorney General, be deposited as prescribed by section 213 of the said Act: *And provided further,* That this Act shall apply only to grounds for exclusion under such paragraph known to the Secretary of State or the Attorney General prior to the date of the enactment of this Act.

The amendment was agreed to.

The bill was ordered to be engrossed for a third reading, read the third time, and passed.

CLARITA MARTINEZ

The Senate proceeded to consider the bill (S. 449) for the relief of Clarita Martinez, which had been reported from the Committee on the Judiciary, with an amendment, at the beginning of line 6, to strike out "alien minor child of Modesto Martinez, a citizen of the" and insert "alien minor child of Mr. and Mrs. Modesto Martinez, citizens of the," so as to make the bill read:

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That, for the purposes of sections 101(a) (27) (A) and 205 of the Immigration and Nationality Act, Clarita Martinez shall be held and considered to be the natural-born alien minor child of Mr. and Mrs. Modesto Martinez, citizens of the United States.

The amendment was agreed to.

The bill was ordered to be engrossed for a third reading, read the third time, and passed.

ANDROULA NEOFITOS STEPHANON

The Senate proceeded to consider the bill (S. 461) for the relief of Androula Neofitos Stephanon, which had been reported from the Committee on the Judiciary, with an amendment, in line 8, after the word "fee", to insert a colon and "*Provided,* That the natural parents of Androula Neofitos Stephanon (Androula Kyriacou Stephanou) shall not, by virtue of such parentage, be accorded any right, privilege, or status under the Immigration and Nationality Act."; so as to make the bill read:

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That, for the purposes of the Immigration and Nationality Act, Androula Neofitos Stephanon (Androula Kyriacou Stephanou) shall be held and considered to have been lawfully admitted to the United States for permanent residence as of the date of the enactment of this Act upon payment of the required visa fee: *Provided,* That the natural parents of Androula Neofitos Stephanon (Androula Kyriacou Stephanou) shall not, by virtue of such parentage, be accorded any right, privilege, or status under the Immigration and Nationality Act.

The amendment was agreed to.

The bill was ordered to be engrossed for a third reading, read the third time, and passed.

GRACE C. REAM

The Senate proceeded to consider the bill (S. 634) for the relief of Grace C. Ream, which had been reported from

the Committee on the Judiciary, with an amendment on page 1, line 9, after "March 21,", to strike out "1956" and insert "1957"; so as to make the bill read:

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That Grace C. Ream of Washington, District of Columbia, an employee of the Department of the Air Force, is hereby relieved of all liability for repayment to the United States of the sum of $651.96, representing overpayment of salary paid to her as the result of an administrative error which occurred when her salary was adjusted retroactively, on March 21, 1957, on the basis of her previous employment in the legislative branch of the Government.

SEC. 2. The Secretary of the Treasury is authorized and directed to pay, out of any money in the Treasury not otherwise appropriated, to the said Grace C. Ream, the sum of any amounts received or withheld from her on account of the overpayment referred to in the first section of this Act.

The amendment was agreed to.

The bill was ordered to be engrossed for a third reading, read the third time, and passed.

ARIE ABRAMOVICH

The Senate proceeded to consider the bill (S. 701) for the relief of Arie Abramovich, which had been reported from the Committee on the Judiciary with an amendment on page 1, line 11, after the word "available", to insert a colon and "*Provided,* That nothing in this Act shall be construed to waive the provisions of section 315 of the Immigration and Nationality Act."; so as to make the bill read:

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That, for the purposes of the Immigration and Nationality Act, Arie Abramovich shall be held and considered to have been lawfully admitted to the United States for permanent residence as of the date of the enactment of this Act, upon payment of the required visa fee. Upon the granting of permanent residence to such alien as provided for in this Act, the Secretary of State shall instruct the proper quota-control officer to deduct one number from the appropriate quota for the first year that such quota is available: *Provided,* That nothing in this Act shall be construed to waive the provisions of section 315 of the Immigration and Nationality Act.

The amendment was agreed to.

The bill was ordered to be engrossed for a third reading, read the third time, and passed.

HARVEY HIROAKI HORIUCHI

The Senate proceeded to consider the bill (S. 1143) for the relief of Harvey Hiroaki Horiuchi, which had been reported from the Committee on the Judiciary, with amendments, in line 6, after the word "August", to insert "18", and, in line 7, after the word "fee", to insert "and head tax", so as to make the bill read:

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That, for the purposes of the Immigration and Nationality Act, Harvey Hiroaki Horiuchi shall be held and considered to have been lawfully admitted to the United States for permanent residence as of August 18, 1951, upon payment of the required visa fee and head tax. Upon the granting of permanent residence to such alien as provided for in this Act, the Secretary of State shall instruct the proper quota-control officer to deduct one number from the appropriate quota for the first year that such quota is available.

The amendments were agreed to.

The bill was ordered to be engrossed for a third reading, read the third time, and passed.

ELIZABETH LUCIE LEON

The bill (H.R. 2589) for the relief of Elizabeth Lucie Leon (also known as Lucie Noel) was announced as next in order.

The PRESIDING OFFICER. Is there objection to the present consideration of the bill?

There being no objection, the Senate proceeded to consider the bill.

Mr. HART. Mr. President, I offer an amendment which I ask to have stated.

The PRESIDING OFFICER. The amendment will be stated for the information of the Senate.

The LEGISLATIVE CLERK. On line 8, after "naturalization," it is proposed to insert "and to be naturalized".

The PRESIDING OFFICER. Without objection, the amendment is agreed to.

The amendment was ordered to be engrossed, and the bill read a third time.

The bill was read the third time, and passed.

COMMEMORATION OF THE 100TH ANNIVERSARY OF THE CIVIL WAR

The joint resolution (S.J. Res. 61) to amend Public Law 305 of the 85th Congress relative to the establishment of a commission to commemorate the 100th anniversary of the Civil War, to authorize the manufacture and sale of a Civil War Centennial Medal was considered, ordered to be engrossed for a third reading, read the third time, and passed, as follows:

Resolved by the Senate and House of Representatives of the United States of America in Congress assembled, That section 5 of the Act of September 7, 1957 (71 Stat. 627; 36 U.S.C. 745), is hereby amended by adding at the end thereof the following new subsection:

"(d) The Secretary of the Treasury is authorized and directed to prepare designs, models, and dies for a commemorative medal with suitable emblems, devices, and inscriptions to be determined by the Commission, with the approval of the Secretary of the Treasury, and to strike and furnish to the Commission medals in such numbers, not less than one thousand at one time, as the Commission may request during the calendar years 1961 through 1965. Such designs, models, dies, and medals shall be furnished to the Commission at not less than the estimated cost of manufacture including labor, materials, use of machinery, and overhead expenses, and may be sold by the Commission at cost or at a premium. Such medals shall be considered to be national medals within the meaning of section 3551 of the Revised Statutes (31 U.S.C. 368). The cost of the designs, models, dies, and medals shall be payable from, and the proceeds of the sales of the medals shall be reimbursed to, the appropriation then current for the expenses of the Commission, and the proceeds shall be available for the purposes of this Act."

AMENDMENT OF FEDERAL PROPERTY AND ADMINISTRATIVE SERVICES ACT OF 1949

The bill (S. 900) to amend section 204 (a) of the Federal Property and Administrative Services Act of 1949 to extend the authority of the Administrator of General Services to pay direct expenses in connection with the utilization of excess real property and related personalty, and for other purposes was announced as next in order.

The PRESIDING OFFICER. Is there objection to the present consideration of the bill?

There being no objection, the Senate proceeded to consider the bill.

Mr. MORSE. Mr. President, may we have an explanation of the bill.

Mr. ENGLE. S. 900 would amend section 204(b) of the Federal Property and Administrative Services Act of 1949 (63 Stat. 388), as amended (40 U.S.C. 485), by substituting the words "utilization of excess property and the disposal" for the word "dispositions."

This amendment would make it possible for the Administrator of General Services to pay direct expenses in connection with the utilization of excess real property. These expenses include appraisals and other costs incurred from the time the property is reported excess to the needs of Government, until such time as the General Services Administration lists the property as surplus for purposes of disposal.

Mr. MORSE. Does the bill in any way enlarge the authority of the Administrator of General Services to dispose of surplus property, or does it in any way grant him any authority to dispose of any interest in surplus property without compensation?

Mr. ENGLE. It does not.

The PRESIDING OFFICER. The question is on the engrossment and third reading of the bill.

The bill was ordered to be engrossed for a third reading, read the third time, and passed, as follows:

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That the second sentence of subsection (b) of section 204 of the Federal Property and Administrative Services Act of 1949 (63 Stat. 388, as amended; 40 U.S.C. 485(b)) is hereby further amended to read as follows: "Not more than an amount to be determined quarterly by the Director of the Bureau of the Budget may be obligated from such fund by the Administrator to pay the direct expenses incurred for the utilization of excess property and the disposal of surplus property under this Act for fees of appraisers, auctioneers, and realty brokers, and for advertising and surveying."

CONTRACTS AUTHORIZATION FOR CLEANING AND CUSTODIAL SERVICES

The bill (S. 901) to amend the Federal Property and Administrative Services Act of 1949, to authorize the Administrator of General Services to make contracts for cleaning and custodial services, was considered, ordered to be

engrossed for a third reading, read the third time, and passed, as follows:

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That section 210(a) of the Federal Property and Administrative Services Act of 1949, as amended (40 U.S.C. 490(a)), is further amended by the addition of paragraph (14), to read as follows:

"(14) to contract for cleaning, maintenance, elevator operation, and similar custodial services for periods not exceeding five years."

RECEIPT AND DISBURSEMENT OF FUNDS BY THE DISBURSING OFFICER FOR THE GOVERNMENT PRINTING OFFICE

The bill (S. 902) to provide for the receipt and disbursement of funds, and for continuation of accounts when there is a vacancy in the office of the disbursing officer for the Government Printing Office, and for other purpose was considered, ordered to be engrossed for a third reading, read the third time, and passed, as follows:

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That (a) the disbursing clerk of the Government Printing Office is hereby designated as the disbursing officer for the Government Printing Office.

(b) In the case of the death, resignation, or separation from office of such disbursing officer, his accounts may be continued, and payments and collections may be made in his name, by the deputy disbursing officer or officers designated by the Public Printer, for a period of time not to extend beyond the last day of the second month following the month in which such death, resignation, or separation occurred. Such accounts and payments shall be allowed, audited, and settled, and checks signed in the name of the former disbursing officer for the Government Printing Office by any such deputy disbursing officer shall be honored, in the same manner as if the former disbursing officer for the Government Printing Office had continued in office.

(c) No former disbursing officer for the Government Printing Office, his estate, or the surety on his official bond, shall be subject to any legal liability or penalty for the official accounts or defaults of any deputy disbursing officer acting in the name or in the place of such former disbursing officer. Each such deputy disbursing officer shall be responsible for accounts entrusted to him pursuant to subsection (b), and such deputy disbursing officer and the sureties upon his bond shall be liable for any default occurring during his service as such pursuant to such subsection.

SCHOOLS OF THE DEPARTMENT OF DEFENSE AT OVERSEA AREAS

The Senate proceeded to consider the bill (S. 96) to govern the salaries and personal practices applicable to teachers, certain school officers, and other employees of the dependent schools of the Department of Defense at oversea areas, and for other purposes, which had been reported from the Committee on Post Office and Civil Service, with an amendment, on page 13, line 4, after "(5 U.S.C. 2091–2103)", to insert "or to the Civil Service Retirement Act (5 U.S.C. 2251–2267)", so as to make the bill read:

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled,

SHORT TITLE

SECTION 1. This Act may be cited as the "Defense Department Overseas Teachers Pay and Personnel Practices Act".

DEFINITIONS

SEC. 2. For the purposes of this Act, the term—

(1) "teaching position" means those duties and responsibilities which—

(A) are performed on a school-year basis principally in a school operated by the Department of Defense in an overseas area for dependents of members of the Armed Forces and dependents of civilian employees of the Department of Defense, and

(B) involve—

(i) classroom or other instruction or the supervision or direction of classroom or other instruction; or

(ii) any activity (other than teaching) which requires academic credits in educational theory and practice equal to the academic credits in educational theory and practice required for a bachelor's degree in education from an accredited institution of higher education; or

(iii) any activity in or related to the field of education notwithstanding that academic credits in educational theory and practice are not a formal requirement for the conduct of such activity.

(2) "teacher" means an individual—

(A) who is a citizen of the United States,

(B) who is a civilian, and

(C) whose services are required on a school-year basis in a teaching position.

(3) "overseas area" means any area situated outside the United States.

(4) "United States", when used in a geographical sense, means the several States of the United States of America, the District of Columbia, Hawaii, the Commonwealth of Puerto Rico, the Canal Zone, and the possessions of the United States (excluding the Trust Territory of the Pacific Islands and Midway Islands).

EXEMPTION OF TEACHERS AND TEACHING POSITIONS FROM CLASSIFICATION ACT OF 1949

SEC. 3. Section 202 of the Classification Act of 1949, as amended (5 U.S.C. 1082), is amended by adding at the end thereof the following paragraph:

"(32) 'teachers' and 'teaching positions' as defined in the Defense Department Overseas Teachers Pay and Personnel Practices Act."

REGULATIONS OF SECRETARY OF DEFENSE

SEC. 4. (a) Not later than the ninetieth day following the date of enactment of this Act, the Secretary of Defense shall prescribe and issue regulations to carry out the purposes of this Act. Such regulations shall govern—

(1) the establishment of teaching positions;

(2) the fixing of the rates of basic compensation for teaching positions in relation to the rates of basic compensation for similar positions in the United States;

(3) the entitlement of teachers to compensation;

(4) the payment of compensation to teachers;

(5) the appointment of teachers;

(6) the conditions of employment of teachers;

(7) the length of the school year or school years applicable to teaching positions;

(8) the leave system for teachers;

(9) quarters, allowances, and additional compensation for teachers; and

(10) such other matters as may be relevant and appropriate to the purposes of this Act.

(b) The regulations prescribed and issued by the Secretary of Defense under subsection (a) of this section shall become effective on such date as the Secretary of Defense shall prescribe but not later than the ninetieth day following the date of issuance of such regulations.

ADMINISTRATION

SEC. 5. (a) The secretary of each military department in the Department of Defense shall conduct the employment and salary practices applicable to teachers and teaching positions in his military department in accordance with this Act, other applicable law, and the regulations prescribed and issued by the Secretary of Defense under section 4 of this Act.

(b) Subject to section 203 of the Classification Act of 1949 (5 U.S.C. 1083), the Secretary of each military department—

(1) shall determine the applicability of paragraph (32) of section 202 of such Act, as added by section 3 of this Act, to positions and individuals in his military department, and

(2) shall establish the appropriate annual salary rate in accordance with this Act for each such position and individual to which such paragraph (32) is determined to be applicable.

(c) The Secretary of each military department shall fix the rates of basic compensation of teachers and teaching positions in his military department in relation to the rates of basic compensation for similar positions in the United States but no such rate of basic compensation so fixed shall exceed the highest rate of basic compensation for similar positions of a comparable level of duties and responsibilities under the municipal government of the District of Columbia.

(d) The Secretary of each military department may prescribe and issue such regulations as he deems appropriate to carry out his functions under this Act.

LEAVE

SEC. 6. (a) Subject to the regulations prescribed and issued by the Secretary of Defense under section 4 of this Act, each teacher (other than an individual employed as a substitute teacher) shall be entitled to cumulative leave, with pay, which shall accrue at the rate of one day for each calendar month, or part thereof, of a school year, except that—

(1) if the school year includes more than eight months any such teacher who shall have served for the entire school year shall be entitled to ten days of cumulative leave with pay, and

(2) not more than seventy-five days of leave may accumulate to the credit of a teacher at any one time under this subsection.

(b) Saturdays, Sundays, regularly scheduled holidays, and other administratively authorized nonwork days shall not be considered to be days of leave for the purposes of subsection (a) of this section.

(c) Subject to the regulations prescribed and issued by the Secretary of Defense, leave earned by any teacher under subsection (a) of this section may be used by such teacher—

(1) for maternity purposes,

(2) in the event of the illness of such teacher,

(3) in the event of illness, contagious disease, or death in the immediate family of such teacher, and

(4) in the event of any personal emergency.

If appropriate advance notice is given of the intended absence of a teacher, not to exceed three days of such leave may be

granted for any purpose in each school year to such teacher.

(d) Any individual—

(1) who is holding a position which is determined to be a teaching position, or

(2) who is an employee of the Federal Government or the municipal government of the District of Columbia who is transferred, promoted, or reappointed, without break in service, from a position under a different leave system to a teaching position,

shall be credited, for the purposes of the leave system provided by this section, with the annual and sick leave to his credit immediately prior to the effective date of such determination, transfer, promotion, or reappointment. Sick leave so credited shall be included in the leave provided for in subsection (a) of this section. Annual leave so credited shall not be included in the leave provided for in such subsection but shall be used under regulations which shall be prescribed by the Secretary of the military department concerned.

(e) In any case in which the amount of sick leave, which is to the credit of any individual under a different leave system immediately prior to the date on which he becomes subject as a teacher to the leave system provided by this section and which is included in the leave provided for in subsection (a) of this section, is in excess of the maximum amount of accumulated leave allowable under subparagraph (2) of such subsection, such excess shall remain to the credit of such teacher until used, but the use during any leave year of an amount in excess of the aggregate amount which shall have accrued during such year shall reduce automatically the maximum allowable amount of accumulated leave at the beginning of the next leave year until such amount no longer exceeds the maximum amount allowable under subparagraph (2) of subsection (a) of this section.

(f) Any annual leave remaining, upon his separation from the service, to the credit of an individual within the purview of this section shall be liquidated in accordance with the Act of December 21, 1944 (5 U.S.C. 61b and the following), except that leave earned or included under subsection (a) of this section shall not be liquidated.

(g) In the case of any teacher who is transferred, promoted, or reappointed, without break in service, to a position under a different leave system, the annual leave, and any other leave earned or credited under this section, which is to his credit immediately prior to such transfer, promotion, or reappointment, shall be transferred to his credit in the employing agency on an adjusted basis in accordance with regulations which shall be prescribed by the United States Civil Service Commission.

QUARTERS, QUARTERS ALLOWANCES, AND STORAGE

SEC. 7. (a) Under regulations which shall be prescribed by or under authority of the President, each teacher (other than a teacher employed in a substitute capacity) shall be entitled, in addition to basic compensation, to quarters, quarters allowance, and storage as provided by this section.

(b) Each teacher (other than a teacher employed in a substitute capacity) shall be entitled, for each school year for which he performs services as a teacher, to quarters or a quarters allowance equal to those authorized by the Act of June 26, 1930 (5 U.S.C. 118a).

(c) Each teacher (other than a teacher employed in a substitute capacity) who is performing services as a teacher at the close of a school year and agrees in writing to serve as a teacher for the next school year may be authorized, for the recess period immediately preceding such next school year—

(1) quarters or a quarters allowance equal to those authorized by the Act of June 26, 1930 (5 U.S.C. 118a), or

(2) in lieu of such quarters or quarters allowance, storage (including packing, drayage, unpacking, and transportation to and from storage) of his household effects and personal possessions.

(d) If a teacher does not report for service at the beginning of the next school year, he shall be obligated to the United States in an amount equal to any quarters allowance which he may have received under subsection (c) of this section or in an amount equal to the reasonable value of any quarters or storage which he may have received under such subsection, or both, as the case may be.

(e) Quarters, quarters allowance, and storage provided under this section shall be in lieu of any quarters, quarters allowance, and storage to which he otherwise might be entitled by reason of employment in another position during any recess period between two school years.

COST-OF-LIVING ALLOWANCES AND POST DIFFERENTIAL

SEC. 8. (a) Under regulations which shall be prescribed by or under authority of the President, each teacher (other than a teacher employed in a substitute capacity) shall be entitled, in addition to basic compensation, to—

(1) cost-of-living allowances equal to those authorized by section 901(2) of the Foreign Service Act of 1946 ((22 U.S.C. 1131(2)), and

(2) additional compensation equal to that authorized under section 207 of the Independent Offices Appropriation Act, 1949 (5 U.S.C. 118h).

(b) The cost-of-living allowances and additional compensation provided under subsection (a) of this section for any teacher shall be based on the teaching position in which he rendered services on a school-year basis, except that, if such teacher is employed in another position during any recess period between two school years, such allowances and compensation for such recess period shall be based on the position in which he is employed during such recess period.

DETERMINATIONS OF PER ANNUM SALARY RATES OF TEACHING POSITIONS FOR PURPOSES OF CLASSIFICATION ACT OF 1949

SEC. 9. For the purposes of the application of section 802(a) of the Classification Act of 1949 (5 U.S.C. 1132(a)) to any individual holding a teaching position who comes within the purview of any provision of such section 802(a), the rates of pay established for such position shall be deemed to have been increased by 20 per centum to determine the per annum salary rate of such position.

APPLICABILITY OF CERTAIN EXISTING LAW

SEC. 10. (a) The Annual and Sick Leave Act of 1951, as amended (5 U.S.C. 2061 and the following), and the Federal Employees Pay Act of 1945, as amended (5 U.S.C. 901 and the following), shall not apply to teachers and teaching positions.

(b) In the case of any teacher who—

(1) is performing services as a teacher at the close of a school year,

(2) agrees in writing to serve as a teacher for the next school year, and

(3) is employed in another position in the recess period immediately preceding such next school year, or, during such recess period, receives quarters, allowances, or additional compensation referred to in sections 7 and 8 of this Act, or both, as the case may be,

section 2 of the Act of July 31, 1894 (5 U.S.C. 62), relative to the holding of more than one office, section 6 of the Act of May 10, 1916 (5 U.S.C. 58 and 59), relative to double salaries, and any other law relating to the receipt of more than one salary or the holding of more than one office shall not apply to such teacher by reason of any such employment during a recess period or any such receipt of quarters, allowances, or additional compensation, or both, as the case may be.

(c) Notwithstanding any provision of law, employment of a teacher in the recess period between two school years in a position other than the teaching position in which he rendered service in the school year immediately preceding such recess period shall not be subject to the Federal Employees' Group Life Insurance Act of 1954 (5 U.S.C. 2091–2103) or to the Civil Service Retirement Act (5 U.S.C. 2251–2267).

SAVINGS PROVISION

SEC. 11. The enactment of this Act shall not affect—

(1) any teaching position existing immediately prior to the effective date of the regulations prescribed and issued by the Secretary of Defense under section 4 of this Act,

(2) the compensation attached to such teaching position, or

(3) any incumbent thereof, his appointment thereto, or his right to receive the compensation attached thereto,

until appropriate action is taken under section 5 of this Act.

EFFECTIVE DATES

SEC. 12. (a) This section and sections 1, 2, 4, and 11 shall become effective on the date of enactment of this Act.

(b) Sections 3, 5, 6, 7, 8, 9, and 10 shall become effective on the effective date of the regulations prescribed and issued by the Secretary of Defense under section 4 of this Act.

Mr. JOHNSTON of South Carolina. Mr. President, I ask unanimous consent to have printed at this point in the RECORD a statement in explanation of the bill.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

OVERSEAS TEACHERS PAY AND PERSONNEL PRACTICES ACT, S. 96

The purpose of this legislation is to provide a system of personnel administration for schoolteachers and certain school officers and other employees of schools operated by the Department of Defense in foreign areas similar to the system found in the majority of the public schools in the United States and the District of Columbia.

This proposed legislation recognizes and corrects deficiencies in the existing system which the Department of Defense has identified and which long have been apparent. Most of the problems that exist currently stem from the fact that teachers are employed under civil service laws designed for full-time employment rather than being geared to an academic year which runs only 9 or 10 months.

Among the major problems which result are the following:

First, there is no authority under which teachers can be paid during vacation periods.

Second, unless annual leave is available and is used for the purpose, teachers are not paid for school recess periods, such as at Thanksgiving, Christmas, and Easter.

Third, oversea differentials and allowances are discontinued during such recess periods, if the teachers are placed in a leave-without-pay status, and

Fourth, there is no authority to relate the pay of teachers to their academic backgrounds and qualifications as generally done in the United States.

The bill overcomes these problems in a fair and equitable manner. It does so without measurable cost to the Government and

should result in material improvement in morale and efficiency.

I would like to recall that public hearings were held July 14, 1958, on S. 3460, a bill identical in purpose but somewhat different in verbage. Favorable testimony was received from the Department of Defense, Civil Service Commission, and the Overseas Teachers Association. There was no adverse testimony from any source.

Subsequently, the bill was reported to the Senate and passed August 5, 1958. However, no action was taken in the House.

Following adjournment, it was my privilege to visit a large number of our schools overseas. This gave me an opportunity to learn at firsthand the need for this proposed legislation. I hope the bill will be passed by the Senate and receive early attention in the House so that necessary adjustments can be made before the start of the next academic school year in September.

The PRESIDING OFFICER. The question is on agreeing to the amendment of the committee.

The amendment was agreed to.

The bill was ordered to be engrossed for a third reading, read the third time, and passed.

RESTORATION OF ANNUITY RIGHTS—BILL PASSED OVER

The bill (S. 91) to amend the act of September 1, 1954, in order to limit to cases involving the national security, the prohibition on payment of annuities and retired pay to officers and employees of the United States, to clarify the operations of such act, and for other purposes, was announced as next in order.

Mr. MORTON. I ask that the bill go over, as not being calendar business. From the standpoint of the minority, there is no objection to the bill, and there is no reason why it should not be scheduled for action today or at any other date the majority leader may decide upon.

The PRESIDING OFFICER. The bill will be passed over.

DISCONTINUANCE OF CERTAIN REPORTS REQUIRED BY LAW

The Senate proceeded to consider the bill (S. 899) to provide for the discontinuance of certain reports now required by law, which had been reported from the Committee on Government Operations, with amendments, on page 8, after line 4, to strike out:

31. The annual report to Congress of the activities of, expenditures by and donations to the lignite research laboratory in North Dakota (62 Stat. 85; 30 U.S.C. 403).

At the beginning of line 8, to strike out "32" and insert "31"; at the beginning of line 12, to strike out "33" and insert "32"; at the beginning of line 19, to strike out "34" and insert "33"; at the beginning of line 24, to strike out "35" and insert "34"; on page 9, at the beginning of line 3, to strike out "36" and insert "35"; at the beginning of line 7, to strike out "37" and insert "36"; at the beginning of line 14, to strike out "38" and insert "37"; at the beginning of line 17, to strike out "39" and insert "38"; at the beginning of line 23, to strike out "40" and insert "39"; on page 10, at the beginning of line 7, to strike out "41" and insert "40"; at the beginning of line 13, to strike out "42" and insert "41"; at the beginning of line 18, to strike out "43" and insert "42"; at the beginning of line 23, to strike out "44" and insert "43"; on page 11, at the beginning of line 5, to strike out "45" and insert "44"; and, at the beginning of line 12, to strike out "46" and insert "45"; so as to make the bill read:

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That the following reports or statements now required by law are hereby discontinued, and all Acts or parts of Acts herein cited as requiring the submission of such reports or statements are hereby repealed to the extent of such requirement:

REPORTS UNDER EACH EXECUTIVE DEPARTMENT AND INDEPENDENT ESTABLISHMENT

1. The annual report to the Post Office and Civil Service Committees and the Appropriations Committees of the Senate and House of Representatives of the action taken in reviewing certain positions, together with information comparing the total number of employees on the payroll on June 30 and their average grade and salary with similar information for the previous June 30 (65 Stat. 757; 5 U.S.C. 43, note).

REPORTS UNDER DEPARTMENT OF THE TREASURY, HOUSING AND HOME FINANCE AGENCY, GENERAL SERVICES ADMINISTRATION, AND SMALL BUSINESS ADMINISTRATION

2. The quarterly reports to Congress of progress in liquidating the assets and winding up the affairs of the Reconstruction Finance Corporation as required by section 106(b) of the Reconstruction Finance Corporation Liquidation Act (67 Stat. 231; 15 U.S.C. 609, note) and by Reorganization Plan Numbered 1 of 1957.

REPORT UNDER THE DEPARTMENT OF STATE

3. The annual statement of expenditures from the contingent fund, including contingent expenses of foreign intercourse and of all the missions abroad (R.S. 209; 5 U.S.C. 164).

REPORTS UNDER THE DEPARTMENT OF TREASURY

4. The annual report to Congress of expenditures from the earnings of the Pershing Hall Memorial Fund (49 Stat. 426; 36 U.S.C. 492).

5. The inclusion in the annual report of amount expended under the Mustering-Out Payment Act of 1944 (58 Stat. 10; 38 U.S.C. 691g).

6. The semiannual report to the Congress of claims paid which became due as the result of the correction of military records of the Coast Guard (10 U.S.C. 1552(f)).

7. The annual report to the Congress of the number by rank and age group of officers of the Coast Guard above the rank of lieutenant commander who are entitled to flight pay and the average monthly flight pay for the preceding six month period (60 Stat. 20; 37 U.S.C. 118a–1).

8. The report to Congress within twenty days after receipt of a payment exceeding $3,000 due the United States in settlement of a claim for damage to property in the Coast Guard service caused by a vessel or floating object or in settlement of a claim for damage cognizable in admiralty in a district court of the United States (14 U.S.C. 647(b)).

9. Inclusion in the annual report of the Secretary of the Treasury of the amounts expended under authority of the Armed Forces Leave Act of 1946 as required by section 8 of that Act (60 Stat. 967; 37 U.S.C. 37).

REPORTS UNDER THE DEPARTMENT OF DEFENSE

10. The semiannual report to Congress by the Secretary of Defense of claims paid which became due as the result of the correction of military records (10 U.S.C. 1552(f)).

11. The semiannual report to the Committees on Armed Services of the Senate and House of Representatives of the regulations governing the length of tours of duty outside the United States by members of the Army and Air Force (10 U.S.C. 714).

12. The report of proposed participation by personnel of the Armed Forces in international amateur sports competition (69 Stat. 11; 22 U.S.C. 1982(b)).

13. The report to Congress of all projects for the establishment or development of military, naval, or air-force installations and facilities by the construction, installation, or equipment of temporary or permanent public works which have been authorized by the Congress and for which adequate funds have not been appropriated (64 Stat. 245).

14. The annual report to Congress by the Secretary of the Air Force of amounts paid or received in settlement of admiralty claims for damage, towage, and salvage and the report to the Committees on Armed Services of the Senate and House of Representatives within twenty days after paying a claim in an amount over $3,000 or after receiving payment of a claim (10 U.S.C. 9805).

15. The annual report to Congress by the Secretary of the Army of amounts paid or received in settlement of admiralty claims for damage, towage, and salvage and the report to the Committees on Armed Services of the Senate and House of Representatives within twenty days after paying a claim in an amount over $3,000 or after receiving payment of a claim (10 U.S.C. 4805).

16. The semiannual report to Congress by the Secretary of each military department of the research and development contracts made during the reporting period including specific information on each contract costing more than $50,000 (10 U.S.C. 2357).

17. The semiannual report to the Armed Services Committees of the Senate and House of Representatives by the Secretary of each military department of the exercise of authority to expend out of appropriations available for military construction amounts for public works projects not otherwise authorized by law and not exceeding $200,000 per project (70 Stat. 1016; 5 U.S.C. 171z–4).

18. The semiannual report to the Armed Services Committees of the Senate and House of Representatives by the Secretary of each military department of options procured on real estate during the reporting period (68 Stat. 560).

19. Inclusion in the annual report to Congress by each military department of the amounts expended under authority of the Armed Forces Leave Act of 1946 as required by section 8 of that Act (60 Stat. 967; 37 U.S.C. 37).

20. Inclusion in the annual report by each military department of the amounts expended under the Mustering-Out Payment Act of 1944 (58 Stat. 10; 38 U.S.C. 691g).

21. The annual report to Congress by the Secretary of the Navy of amounts paid or received in settlement of admiralty claims for damage, towage and salvage and the report to the Committees on Armed Services of the Senate and the House of Representatives within 20 days after paying a claim in an amount over $3,000 or after receiving payment of a claim (10 U.S.C. 7624).

22. The annual report to Congress by the Secretary of the Navy of all vessels used for experimental purposes which have been stricken from the Naval Vessel Register (10 U.S.C. 7306(b)).

23. The annual report to Congress by the Secretary of the Navy of the appropriations

for the Navy Department showing the amount appropriated, amount spent, the amount remaining unspent and estimate of probable demands (10 U.S.C. 7217).

24. The report to Congress by the Secretary of the Navy not less frequently than once every six months of all land acquired for the construction of ships or the production of ordnance material for ships to be constructed (56 Stat. 53).

25. The report every six months by the Secretary of the Army of the amount of dairy products acquired from the Commodity Credit Corporation and used to provide additional butter and cheese and other dairy products as a part of the ration of the Army, Navy, or Air Force and in hospitals under the jurisdiction of the Department of Defense (68 Stat. 900; 7 U.S.C. 1446a(b)).

REPORTS UNDER THE POST OFFICE DEPARTMENT

26. The inclusion in the annual report of operations of the postal savings system of the names of post offices receiving deposits, the number of depositors in each and the amount on deposit (36 Stat. 814; 39 U.S.C. 751).

27. The annual report by the Postmaster General of the number of articles bearing penalty indicia procured or accounted for through him by each executive department and agency, by each independent establishment and by each organization and person authorized by law to use the penalty privilege (62 Stat. 1048; 39 U.S.C. 321j).

REPORTS UNDER THE DEPARTMENT OF THE INTERIOR

28. The report to Congress of the action of the Secretary of the Interior to reserve lands within any Indian reservation valuable for power or reservoir sites or irrigation projects (36 Stat. 858; 43 U.S.C. 148).

29. The report to Congress of all withdrawals of public lands of the United States from settlement, location, sale, or entry (36 Stat. 848; 43 U.S.C. 143).

30. The annual report to Congress of any contract or contracts made under the provisions of the Act of June 4, 1936, and moneys expended thereunder (49 Stat. 1458; 25 U.S.C. 455).

31. The report to Congress of investigations made to determine the effects of domestic sewage, mine, petroleum, and industrial wastes, erosion silt, and other polluting substances on wildlife (60 Stat. 1080; 16 U.S.C. 665).

32. The annual report to the Appropriations Committees of the Senate and House of Representatives justifying and showing all investments and expenditures made or proposed out of the Colorado River dam fund for the joint use of the project and of other Federal activities at or near Boulder City (62 Stat. 1130; 63 Stat. 784; 43 U.S.C. 618p).

REPORTS UNDER THE DEPARTMENT OF COMMERCE

33. The annual report to Congress covering the progress made in classfying the highways into groups composed of roads of similar service importance (54 Stat. 871; 23 U.S.C. 20a).

REPORTS UNDER THE DEPARTMENT OF AGRICULTURE

34. The annual report to Congress of activities relating to the Puerto Rico hurricane relief loans (45 Stat. 1067; 70 Stat. 525).

35. The monthly report to Congress with respect to the activities carried on under the authority for cooperation with Mexico in control and eradication of foot-and-mouth disease and rinderpest (61 Stat. 8; 21 U.S.C. 114d).

36. Inclusion, in the annual report of the Secretary on the operations of the Commodity Credit Corporation to dispose of all stock of agricultural commodities held by it, of a detailed program for the expansion of markets for surplus agricultural commodities held by it, of a detailed program for the expansion of markets for surplus agricultural commodities through marketing and utilization research and improvement of marketing facilities (70 Stat. 198; 7 U.S.C. 1851(b)).

37. The report of the estimates of national farm housing needs and of progress made toward meeting such needs (63 Stat. 435; 42 U.S.C. 1476(b)).

38. The annual report to Congress of the receipts, expenditures, and results of the cooperative agricultural extension work in all States receiving such benefits and as to whether the appropriation of any State has been withheld and if so the reasons therefor (38 Stat. 374; 67 Stat. 85; 7 U.S.C. 347).

39. The annual report to Congress of the receipts and expenditures and work of the agricultural experiment stations in all States and whether any portion of the appropriation available for allotment to any State has been withheld and if so the reasons therefor (69 Stat. 673; 7 U.S.C. 361g).

REPORT UNDER THE SMITHSONIAN INSTITUTION

40. The annual communication to Congress of the report of the National Yeomen F or of such portions of such report as the Secretary of the Smithsonian Institution may deem of national interest and importance (49 Stat. 1506; 36 U.S.C. 139b).

REPORT UNDER THE VETERANS' ADMINISTRATION

41. The monthly report of the amount of dairy products used in Veterans' Administration hospitals which was acquired from the Commodity Credit Corporation (68 Stat. 900; 7 U.S.C. 1446a(a)).

REPORT UNDER THE GENERAL SERVICES ADMINISTRATION

42. The annual report to Congress of activities under the Abaca Production Act of 1950 (64 Stat. 437; 50 U.S.C. 546).

REPORT UNDER THE FEDERAL COMMUNICATIONS COMMISSION

43. Inclusion in the annual report of information regarding each new employee, including biographical data and experience, Commission positions held and compensation paid, together with the names of employees leaving the employ of the Commission (66 Stat. 712; 47 U.S.C. 154(k)).

REPORT UNDER THE NATIONAL ADVISORY COMMITTEE FOR AERONAUTICS

44. Inclusion in the annual report to Congress on civilian positions established for professional and scientific services of a description of the qualifications of each incumbent together with a statement of functions performed by him (63 Stat. 411; 50 U.S.C. 159).

REPORTS AS TO RESTORATION OF UNOBLIGATED BALANCES OF APPROPRIATIONS

45. Reports transmitted to the President of the Senate and the Speaker of the House of Representatives as to the amount of each appropriation balance which is restored to an appropriation account upon a determination by the head of the agency concerned of necessity therefor under section 1(a)(2) of the Act of July 25, 1956 (70 Stat. 648; 31 U.S.C. 701).

The amendments were agreed to.

The bill was ordered to be engrossed for a third reading, read the third time, and passed.

ADDITION OF CERTAIN PUBLIC LANDS TO THE SUMMIT LAKE INDIAN RESERVATION, NEV.

The bill (S. 1217) to add certain public domain lands in Nevada to the Summit Lake Indian Reservation was considered, ordered to be engrossed for a third reading, read the third time, and passed, as follows:

Be it enacted, etc., That the southeast quarter northeast quarter, northeast quarter southeast quarter section 20, township 42 north, range 26 east, Mount Diablo meridian, Nevada, situated within the exterior boundaries of the Summit Lake Indian Reservation, Humboldt County, Nevada, containing 80 acres, are hereby withdrawn from the public domain, subject to any valid existing rights heretofore initiated under the public land laws, and added to and made a part of the Summit Lake Indian Reservation.

USE OF REVOLVING LOAN FUND TO ASSIST KLAMATH INDIANS

The bill (S. 1242) to authorize the use of the revolving fund for Indians to assist Klamath Indians during the period for terminating Federal supervision was considered, ordered to be engrossed for a third reading, read the third time, and passed, as follows:

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That the Secretary of the Interior is authorized to make loans, without interest, from the revolving fund authorized by the Acts of June 18, 1934 (48 Stat. 986; 25 U.S.C. 470), and June 26, 1936 (49 Stat. 1968; 25 U.S.C. 506), as amended and supplemented, to members of the Klamath Tribe of Indians who elected to withdraw from the tribe pursuant to the Act of August 13, 1954 (68 Stat. 718; 25 U.S.C. 564), as amended, regardless of the degree of Indian blood of the borrower, and to collect such loans by setoff against funds payable to the borrower pursuant to said Act of August 13, 1954, as amended. The Secretary is also authorized to refinance from such revolving fund any loan made by a lending agency to a withdrawing Klamath Indian that is secured by encumbrance of his beneficial interest in tribal property with the approval of the Secretary as required by section 4 of said 1954 Act, and to include therein a nonreimbursable grant equal to the interest charges incurred by the borrower prior to such refinancing. In the event adequate funds are not available from the revolving fund to refinance a loan by such lending agancy, the Secretary is authorized to pay from the revolving fund, without reimbursement, the interest charged on such loan.

DONATION OF CERTAIN FEDERAL PROPERTY TO THE PUEBLO OF ISLETA, N. MEX.

The bill (S. 1271) to donate to the pueblo of Isleta certain Federal property in the State of New Mexico was announced as next in order.

Mr. MORSE. Mr. President, I ask unanimous consent to have printed at this point in the RECORD a statement showing that this bill is consistent with the Morse formula.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

STATEMENT BY SENATOR MORSE

S. 1271 authorizes that all of the rights, title, and interest of the United States in 1.34 acres of land within the Isleta Indian Pueblo, together with improvements, be conveyed without consideration to the Isleta Indian Pueblo.

The land was acquired by the Government by eminent domain for school use. The pueblo children now attend public schools

and the property has been declared surplus by the Bureau of Indian Affairs. The Isleta Indians propose to use the buildings for a community meeting place.

The land in question and the buildings thereon can be used to best advantage only by the Indians. The principal value of the property is its use for purposes of a meeting house in which the Indians can conduct tribal business and engage in recreational activities.

These Indians are wards of the Federal Government; the property lies wholly within the confines of the pueblo; there is an obvious Federal interest to be served by the proposed conveyance. For these reasons the legislation authorizing the transfer in this case is not in conflict with the Morse amendment.

The PRESIDING OFFICER. Is there objection to the present consideration of the bill?

There being no objection, the bill (S. 1271) was considered, ordered to be engrossed for a third reading, read the third time, and passed, as follows:

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That all of the right, title, and interest of the United States in the land described below, together with the buildings and improvements thereon, is hereby declared to be held in trust for the pueblo of Isleta, New Mexico: A tract of land within section 31, township 8 north, range 3 east, New Mexico principal meridian, more particularly described as follows: Beginning at a point which bears north 17 degrees 20 minutes east, 171 feet from the point where the northeast corner of the Antonio Gutierrez and Joaquin Sedillo grant and the northwest corner of the Lo de Padilla grant touch the Government corner on the south line of the Isleta Pueblo grant; thence west 180 feet; thence north 325 feet; thence east 180 feet; thence south 325 feet to the point of beginning, containing 1 34/100 acres, more or less, and located within the exterior boundaries of the pueblo of Isleta in the State of New Mexico.

CONVEYANCE OF CERTAIN PROPERTY TO THE PUEBLO OF SANTO DOMINGO, N. MEX.

The bill (S. 418) directing the Secretary of the Interior to convey certain property in the State of New Mexico to the pueblo of Santo Domingo was announced as next in order.

Mr. ANDERSON. Mr. President, on April 8, 1959, the House passed, and sent to the Senate, House bill 2493, which contains language identical to that of Senate bill 418, except that the wording of the title of the Senate bill is slightly different from that of the bill which has been passed by the House.

Therefore, I move that the Senate proceed to the consideration of House bill 2493.

The motion was agreed to and the Senate proceeded to consider the bill (H.R. 2493) declaring certain property in the State of New Mexico to be held in trust for the pueblo of Santo Domingo, which was read the first time by its title and the second time at length, as follows:

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That all of the right, title, and interest of the United States in the land described below, together with the buildings and improvements thereon, are hereby declared to be held in trust for the pueblo of Santo Domingo, New Mexico, subject to the right of the United States to occupy and use for so long as they are needed for providing health services a parcel of approximately 0.10 acre of land and the buildings and improvements thereon that are now occupied and used by the Public Health Service, and the Public Health Service, upon termination of its use of such 0.10 acre parcel, may remove the temporary building occupied by it without obligation to restore the site to its former condition: Commencing at a point 342 feet from the southeast corner of the church in the Santo Domingo Pueblo, on a line running north 52 degrees 45 minutes west, thence running 443 feet south 63 degrees east, thence north 400 feet 47 degrees 49 minutes east, thence north 470 feet 52 degrees 45 minutes west, thence south 474 feet 42 degrees west to the point of beginning containing, 4.45 acres, more or less.

Mr. MORSE. Mr. President, I ask unanimous consent to have printed in the RECORD a memorandum showing that the bill is consistent with the Morse formula.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

STATEMENT BY SENATOR MORSE

S. 418 is similar to legislation passed by the Senate last year authorizing the conveyance of approximately 4.45 acres of land, together with improvements to the Pueblo of Santo Domingo all rights, title, and interest of the United States. A portion of the property would be reserved, under the terms of the bill, for the use of the Public Health Service as long as it is needed for providing health services.

The land was originally owned by the pueblo and was acquired by the United States through condemnation proceedings for use as a day school site in 1911. The pueblo wishes to acquire the property for use as a community center. The property is surplus to the needs of the Department of Interior and is not needed by any other Government agency except for the small parcel occupied by the Public Health Service. The pueblo has agreed to assume full responsibility for the maintenance of the property conveyed, which would relieve the Government of that expense.

The Indians are wards of the Federal Government and the United States has an important interest in their welfare.

The land and buildings to be conveyed are located entirely within the pueblo and can be used to best advantage only by the Indians.

Because of the benefits received by the United States through the promotion of the interests of the Indians, the proposed conveyance is not in violation of the Morse Formula.

The PRESIDING OFFICER. If there be no amendment to be proposed, the question is on the third reading of the bill.

The bill (H.R. 2493) was ordered to a third reading, read the third time, and passed.

The PRESIDING OFFICER. Without objection, Senate bill 418 is indefinitely postponed.

REGULATION OF HANDLING STUDENT FUNDS IN INDIAN SCHOOLS

The Senate proceeded to consider the bill (H.R. 3648) to regulate the handling of student funds in Indian schools operated by the Bureau of Indians Affairs, and for other purposes, which had been reported from the Committee on Interior and Insular Affairs with amendments, in line 7, after the word "Affairs", to insert "in accordance with the purposes of such deposits", and, in line 8, after the word "deposits", to insert "and disbursements".

The amendments were agreed to.

The amendments were ordered to be engrossed, and the bill to be read a third time.

The bill was read the third time and passed.

AUTHORIZATION OF APPROPRIATION FOR III PAN AMERICAN GAMES

The bill (H.R. 2575) to authorize the appropriation of $500,000 to be spent for the purpose of the III Pan American games to be held in Chicago, Ill., was announced as next in order.

The PRESIDING OFFICER. Is there objection to the present consideration of the bill?

Mr. HART. By request, I ask that the bill go over.

The PRESIDING OFFICER. Objection being heard, the bill will be passed over.

Mr. DOUGLAS. Mr. President, will the Senator from Michigan expand on the objection to the bill?

Mr. HART. We were asked to object when the bill was reached on the calendar call. Whether the desire is for further information or because of a feeling that there is objection to the substance of the proposals contained in the bill, I have no knowledge.

Mr. DOUGLAS. Mr. President, this measure is important. The Pan American games are scheduled for the final week of August and the first 2 days of September. The authorization of this appropriation will be necessary in order to be able to obtain the attendance of athletes from the Latin American countries. It is the intent that from $200,000 to $300,000 of the appropriation shall be used to reimburse the Armed Forces for transporting the athletes from the Latin American republics to Chicago.

The Latin American countries will pay $3 a day for the maintenance of the athletes while in Chicago; but the city of Chicago wishes to add $5 a day to that sum, in order to meet the minimum cost of maintenance.

These amounts are to be expended on voucher, so that only the amounts actually expended will be disbursed. No money will go to the city of Chicago.

Although there may be some question whether the Olympic games promote international friendship, it seems to me there should be no question but that the Pan American games do promote friendship.

So I hope the objection, which may come from the distinguished senior Senator from Ohio [Mr. LAUSCHE], will not be permanent.

For the sake of the RECORD, and for the information of Senators, I may say that this measure is not comparable to the proposal of 2 years ago that the city of

Cleveland be appropriated the sum of $5 million for the Pan American games. The Senator from Ohio very properly objected to that. I think the sum was excessive, and a part of it was to have been used to construct a new stadium in the city of Cleveland.

The city of Chicago will, however, furnish all the facilities for the games and is raising a large sum of money in addition for them. It is merely asking some financial assistance in bringing the athletes to Chicago and in having them maintained while they are there.

Time is of the essence in connection with this whole matter. If we delay much longer, and if objections continue to be raised to this authorization, it will be impossible to bring the athletes from Latin America, and in all probability the Latin American games will fall through.

I wanted to make this statement in order to have the RECORD show with a greater degree of clarity than it now does what is involved in this matter.

I thank the Senator from Michigan for the courtesy with which he has handled this matter.

Mr. HART. Mr. President, I scarcely need assure the Senator from Illinois that his views and suggestions, particularly that a time factor is involved, will be brought to the attention of the policy committee.

Mr. MORSE. Mr. President, I wish to make a brief statement on this matter, in support of the position taken by the Senator from Illinois [Mr. DOUGLAS].

I heard the two Senators from Illinois [Mr. DOUGLAS and Mr. DIRKSEN] present their case on the bill before the Foreign Relations Committee, of which I am a member. I also heard the distinguished Senator from Ohio [Mr. LAUSCHE] speak in the committee in opposition to the bill.

So far as I know, the only vote in the committee against the bill was that of the Senator from Ohio.

I think the bill is a very meritorious one; and I should like to join the Senator from Illinois in urging on the leadership that the bill be scheduled for consideration at as early a date as possible, by bringing it up by motion, for two reasons: Not only is time of the essence, as the Senator from Illinois pointed out; but let me say, as chairman of the Latin American Subcommittee of the Senate Committee on Foreign Relations, that all of us are aware how easy it is, apparently, in Latin America for some actions taken in the United States either to be misunderstood or to be misrepresented. Feelings there are sensitive. I believe it will be difficult to explain to Latin America why there is further delay in making final arrangements in regard to the Pan American games. I believe it to be in the interest of good relations with Latin America that we decide this matter one way or the other at a very early date.

Therefore, I strongly recommend that the leadership schedule the bill, by motion, for early consideration and action.

Mr. ALLOTT. Mr. President, will the Senator from Illinois yield to me?

Mr. DOUGLAS. I yield.

Mr. ALLOTT. Mr. President, let me inquire whether I correctly understood the Senator from Illinois to say that a part of the personnel involved would be transported from Latin America by military planes.

Mr. DOUGLAS. Yes; and reimbursement would be made by the Government. This is not a matter of trying to use the planes surreptitiously.

Mr. ALLOTT. I wish to be sure, because last week the Senator was very vociferous in speaking on this subject on the floor. I wish to be sure that he considers it would be proper for the military to transport these persons, and to have the Congress appropriate funds to reimburse the military.

Mr. DOUGLAS. With regard to Congress making that decision, I think it proper for Congress to act in that way.

I was objecting last week to the unauthorized action, on very dubious legislative grounds, whereby the Air Force flew approximately 1,400 civilians to a display of airpower in Florida, and incurred total expenses probably in excess of half a million dollars. The two matters are quite different.

Mr. ALLOTT. I am very happy the Senator from Illinois has set forth the ground rules, because I agree, in part, with what he said in regard to military transportation.

I should like to say that I cannot think of anything which will help promote general good relations with Latin America more than will the taking of action to provide for these games. So I hope the Senate will act on this bill with all expediency. I was merely twitting my friend from Illinois a little bit for his statement of last week.

Mr. DOUGLAS. I recognize the insertion of the needle. If my good friend from Colorado, however, wishes to introduce a joint resolution authorizing the Air Force to take thousands of civilians to air shows at the expense of the Federal Treasury, I shall be glad to give such a measure very careful consideration.

Mr. ALLOTT. Why does not the Senator from Illinois introduce such a resolution himself? He has the same right as I have to introduce proposed legislation on the floor of the Senate.

Mr. DOUGLAS. I happen to believe that what I referred to would not be a useful expenditure of Federal funds.

Mr. ALLOTT. Does the Senator want it to appear that I believe it would be?

Mr. DOUGLAS. No.

Mr. ANDERSON. Mr. President, will the Senator from Illinois yield?

Mr. DOUGLAS. I yield.

Mr. ANDERSON. I express my thanks to the Senator from Oregon. I hope he will speak to the leadership, so that this measure will be brought up promptly before the Senate. I think there are two fields whereby we can promote our international relationships. One is the field of singing and the other is the field of sports. Music is a universal language. So is sports competition. This bill will enable us to improve our relations in areas where improvement is needed and where our relationships are being watched very carefully.

Mr. DOUGLAS. I have some doubt as to whether games participated in by the big powers promote international relationships. They frequently arouse excessive competition and hostility. I am referring to the International Olympic games. So far as the Pan American games are concerned, they are in a different category. They will involve smaller powers and stimulate an interest in sports and create friendships.

Mr. DIRKSEN. Mr. President, will the Senator yield?

Mr. DOUGLAS. I yield.

Mr. DIRKSEN. When this measure was before the Foreign Relations Committee both the senior Senator from Illinois and I appeared. I was chaffed a little for having taken unto myself the role of a sort of watchdog of the budget, while in this instance I was casting myself in the role of spender. My answer was short. First, I cleared the matter with the Department, and found it had the Department's approval. Second, I cleared it with the Director of the Budget, to make sure it had Budget approval. It had such approval.

The distinguished Senator from Ohio [Mr. LAUSCHE] at that time raised the question of the possibility of what might happen to unexpended funds. As a result, a provision was written into the bill that the unexpended funds should be returned to the Treasury. I thought every objection in the committee was satisfied.

If there is objection on the part of a Senator who is not in the Chamber, while the members of the Calendar Committee must respect the objection, I earnestly share the hope that the bill may be brought before the Senate by motion before the day is over.

SAN LUIS UNIT, CENTRAL VALLEY PROJECT, CALIFORNIA

The bill (S. 44) to authorize the Secretary of the Interior to construct the San Luis unit of the Central Valley project, California, to enter into an agreement with the State of California with respect to the construction and operation of such unit, and for other purposes, was announced as next in order.

Mr. MORTON. Let the bill go over.

The PRESIDING OFFICER. Objection is heard. The bill will be passed over.

Mr. ANDERSON. Mr. President, I realize that Calendar No. 141, S. 44, and Calendar No. 142, S. 72, relating to the Navajo Indian irrigation project and the initial stage of the San Juan-Chama project, are not measures which should be considered on a call of the calendar; but I express the hope that the leadership will bring them up quickly. The senior Senator from California [Mr. KUCHEL] has been most vigorous in respect to Senate bill 44, as has the junior Senator from California [Mr. ENGLE]. Nothing would please me better than to see the bill passed, but it shoud not be passed on a call of the consent calendar. I quite agree that Calendar Nos. 131 and 142 should go over, but I hope these bills may be called up at an early date, after notice to the Senate.

Mr. MORSE. Mr. President, speaking to these two bills, and calling the attention of the Senator from California to these remarks, I express the hope that the bills will be taken up by motion. I

hope, however, we shall be given a few days notice, for the very selfish reason that I am in the midst of trying to complete a study of all the implications of these bills, following which I hope to consult the two Senators from California, because it might be possible to reach a complete mutual understanding with regard to S. 44. But at least I should like to have the favor extended to me, and to some other Members of the Senate who are interested in it, of being given a little time to complete our study. Frankly, we have two authorities in this field in California working with us. We have been corresponding with them about it. We are interested merely in getting all the facts. Perhaps we can come to a mutual understanding. I think that in 10 days we will be ready to have action taken on the bill.

Mr. KUCHEL. Mr. President, will the Senator yield?

Mr. MORSE. Yes. I have concluded.

Mr. KUCHEL. I see my able colleague from California [Mr. ENGLE] is present. Let me say, without having consulted him, that I am sure he and I both would not want even to attempt to have the bill scheduled for consideration if our colleague from Oregon or any other Senator wanted time to study it. But I should like to say for the record, that this bill is almost word for word the same bill which passed the Senate a year ago, as the Senator from Oregon may recall, and on which we had a rather detailed colloquy. It is a bill which has been reported unanimously by the Senate Committee on Interior and Insular Affairs, as my colleague from New Mexico [Mr. ANDERSON] has suggested. I sincerely hope it may be given prompt consideration by the Senate, so that the House of Representatives may then proceed to dispose of it one way or the other.

On that basis, if my able colleague, the now acting majority leader [Mr. ENGLE], would indicate agreement, I shall have no objection to having the bill go over until sometime next week.

Mr. ENGLE. Mr. President, the bill has gone over. I understand the distinguished Senator from Oregon requested 10 days. Is that correct?

Mr. MORSE. I think we need about 10 days.

Mr. ENGLE. We hope it will not take too long, but, insofar as consulting with the Senator is concerned, a satisfactory day will be arrived at after consultation with the Senator from New Mexico and the majority leader.

COMMISSION ON UNEMPLOYMENT PROBLEMS

Mr. JOHNSON of Texas. Mr. President, there is at the desk and also before the Committee on Labor and Public Welfare a bill relating to the establishment of a Commission on Unemployment Problems. The Senator from Alabama [Mr. HILL], the chairman of the Committee on Labor and Public Welfare, and the Senator from Arizona [Mr. GOLDWATER], the ranking minority member, are present.

Mr. President, I ask unanimous consent that the Committee on Labor and Public Welfare be discharged from the further consideration of S. 1631, and that the Senate proceed to its consideration.

I have a brief statement I desire to make in this regard.

The PRESIDING OFFICER (Mr. HARTKE in the chair). The bill will be stated by title for the information of the Senate.

The CHIEF CLERK. A bill (S. 1631) to provide for the establishment of a Commission on Unemployment Problems.

The PRESIDING OFFICER. Is there objection to the request of the Senator from Texas? The Chair hears none; and the Committee on Labor and Public Welfare is discharged from the further consideration of the bill. Is there objection to its present consideration of the bill?

There being no objection, the Senate proceeded to consider the bill.

Mr. JOHNSON of Texas. Mr. President, I am asking that this bill be brought up today because there is a time factor of great urgency.

This bill seeks to bring before the Congress and the public at the earliest possible moment the facts of unemployment. And since we must act upon those facts, there should be as little delay as possible in bringing them forth.

We all know the statistics. They have been published in the newspapers and have dominated many of the headlines of the past week.

But statistics in this instance do not convey a true picture. They merely provide material for academic arguments on economic forces. And people who are out of work do not want academic arguments—they want jobs.

This bill has registered broad and bipartisan support in this Senate. The people who are out of work are both Democrats and Republicans. I believe Members of both parties in this chamber want to act.

In that spirit, the Commission that would be created by this resolution would be drawn both from industry and labor.

The bill would direct the Commission members to go to the centers of abnormal unemployment. They would be asked to weigh and feel the conditions that pervade those areas.

And then they would be asked to come back here in 60 days with recommendations for action.

Personally, I do not regard this Commission as merely another "study group." I look upon it as a prelude to action. It is a necessary prelude because of the peculiar nature of the unemployment problem which confronts our country.

To the great majority of Americans, these are good times. Unemployment is concentrated in certain areas. It does not run through every region of the land.

But to 4½ million of our fellow countrymen, it is a deep, personal tragedy. It means living below levels of decency and self-respect; facing every morning families which cannot be supported adequately; finding self-confidence slipping away.

These people do not take comfort from statistics which show that a small number of their companions in misery have finally found jobs. Statistics have never yet been able to feed a family and put clothes on their backs.

Men and women who are out of work cannot wait. This resolution is not a 60-day moratorium on legislative action. It is an effort to bring the facts to public attention and to find out what further steps we can take.

Mr. President, so long as there is one American able and willing to work but unable to find a job, that is one too many It is a matter of the deepest public concern.

If we act now, I have hopes that all the necessary legislative action can be completed early. And I think we must do everything we can to clear the decks.

I hope this bill can be adopted as evidence of our united determination that 4½-million Americans will not become 4½-million forgotten men and women.

Mr. President, I have discussed this matter with the minority leader, who is a sponsor, with a majority of the Members of the Committee on Labor and Public Welfare, and with the distinguished chairman of that committee. I am informed that if the Senate can take action today perhaps action can be obtained in the other body at an early date.

Mr. DIRKSEN rose.

Mr. JOHNSON of Texas. I yield to the Senator from Illinois.

Mr. DIRKSEN. Mr. President, first because of the number of sponsors, and, second, because in the eyes of the public this measure is very important, I have no objection to the immediate consideration of the bill. I know, of course, that by so doing we shall bypass the committee. Under the circumstances, since the proposal is for a fact-finding body, and in view of the fact that in my discussions with the majority leader he was agreeable to some amendatory language in the bill, I have no objection to the immediate consideration of the bill.

Mr. WILEY. Mr. President, will the Senator yield?

Mr. JOHNSON of Texas. I yield.

Mr. WILEY. As I heard the statement, I understand what is proposed is virtually that the Commission shall go to the centers of unemployment to hold what we might call a clinic to ascertain some of the answers to the problem. Is there also imposed upon the Commission a duty of making recommendations, in case vast sums of money are necessary, to increase taxes in certain directions?

Mr. JOHNSON of Texas. No. The bill does not anticipate what the recommendations will be. If the recommendations contemplate vastly increased sums of money, we would naturally face that problem when the recommendations are submitted.

The bill provides:

> The Commission shall make a full and complete investigation and study of unemployment conditions in the United States, giving particular consideration to areas of critical unemployment, for the purpose of determining what can be done to alleviate such conditions.

Specifically I should say this refers to areas such as West Virginia, Kentucky, Pennsylvania, and perhaps Detroit and

some other areas I have not named. But those mentioned are some of the most critical unemployment areas.

This study would be for the purpose of determining what can or should be done to alleviate unemployment conditions. I do not seek to anticipate the findings. Instead of having a dozen groups holding hearings, I should like to have one expert group, made up of members appointed by the legislative and executive branches of the Government.

The Commission is called upon to submit, within 60 days after the date of its appointment, findings and recommendations to the President, and the President in turn will transmit those recommendations to the Congress.

Mr. WILEY. They would not be precluded from making recommendations?

Mr. JOHNSON of Texas. Not at all.

Mr. WILEY. With respect to ascertaining additional sources of revenue to take care of these situations.

Mr. JOHNSON of Texas. No.

The PRESIDING OFFICER. The bill is open to amendment.

Mr. JOHNSON of Texas. Mr. President, I offer an amendment to strike out section 2(a) and to substitute the provision which I ask to have stated.

The PRESIDING OFFICER. This amendment will be stated for the information of the Senate.

The CHIEF CLERK. It is proposed to strike out section 2(a) and to insert in lieu thereof the following.

SEC. 2. (a) The Commission shall be composed of eleven members as follows:

(1) Three appointed by the Speaker of the House of Representatives;

(2) Three appointed by the President of the Senate; and

(3) Five appointed by the President of the United States, not more than two of whom shall be appointed from either agriculture, labor or industry and not more than three of whom shall come from either political party.

The PRESIDING OFFICER. The question is on agreeing to the amendment offered by the Senator from Texas.

The amendment was agreed to.

The PRESIDING OFFICER. The bill is open to further amendment. If there be no further amendment to be proposed, the question is on the engrossment and third reading of the bill.

The bill was ordered to be engrossed for a third reading and to be read the third time.

The bill was read the third time.

The PRESIDING OFFICER. The bill having been read the third time, the question is, Shall it pass?

The bill (S. 1631) was passed, as follows:

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled,

ESTABLISHMENT OF THE COMMISSION

SECTION 1. There is hereby established a commission to be known as the Commission on Unemployment Problems (hereinafter referred to as the "Commission").

MEMBERSHIP OF THE COMMISSION

SEC. 2. (a) The Commission shall be composed of eleven members as follows:

(1) Three appointed by the Speaker of the House of Representatives;

(2) Three appointed by the President of the Senate; and

(3) Five appointed by the President of the United States, not more than two of whom shall be appointed from either agriculture, labor, or industry and not more than three of whom shall come from either political party.

(b) The members of the Commission shall select a Chairman and a Vice Chairman.

(c) Any vacancy in the Commission shall not affect its powers, but shall be filled in the same manner in which the original appointment was made.

(d) Six members of the Commission shall constitute a quorum, but a lesser number may conduct hearings.

(e) Service of an individual as a member of the Commission or employment of an individual by the Commission as an attorney or expert in any business or professional field, on a part-time or full-time basis, with or without compensation, shall not be considered as service or employment bringing such individual within the provisions of sections 281, 283, 284, 434, or 1914 of title 18 of the United States Code, or section 190 of the Revised Statutes (5 U.S.C. sec. 99).

DUTIES OF THE COMMISSION

SEC. 3. (a) The Commission shall make a full and complete investigation and study of unemployment conditions in the United States, giving particular consideration to areas of critical unemployment for the purpose of determining what can be done to alleviate such conditions.

(b) The Commission shall submit, within sixty days after the date on which all appointments to the Commission as provided for in this Act have been made, its findings and recommendations to the President for transmittal to the Congress.

(c) The Commission shall cease to exist thirty days after submission to the President of its report and recommendations.

POWERS OF THE COMMISSION

SEC. 4. (a) The Commission or, on the authorization of the Commission, any subcommittee thereof, may, for the purpose of carrying out the provisions of this Act, hold such hearings and sit and act at such times and places, administer such oaths, and require, by subpena or otherwise, the attendance and testimony of such witnesses, and the production of such books, records, correspondence, memoranda, papers, and documents as the Commission or such subcommittee may deem advisable. Subpenas may be issued under the signature of the Chairman of the Commission, or any duly designated member, and may be served by any person designated by such Chairman or member. The provisions of sections 102 to 104, inclusive, of the Revised Statutes (2 U.S.C., secs. 192–194), shall apply in the case of any failure of any witness to comply with any subpena or to testify when summoned under authority of this section.

(b) The Commission is authorized to secure from any department, agency, or independent instrumentality of the executive branch of the Government any information it deems necessary to carry out its functions under this Act; and each such department, agency, and instrumentality is authorized and directed to furnish such information to the Commission, upon request made by the Chairman, or the Vice Chairman when acting as Chairman.

APPROPRIATIONS, EXPENSES, AND PERSONNEL

SEC. 5. (a) There are hereby authorized to be appropriated such amounts as may be necessary to carry out the provisions of this Act.

(b) Each member of the Commission shall receive $50 per diem when engaged in the performance of duties vested in the Commission, except that no compensation shall be paid by the United States, by reason of service as a member, to any member who is receiving other compensation from the Federal Government, or to any member who is receiving compensation from any State or local government.

(c) Each member of the Commission shall be reimbursed for travel, subsistence, and other necessary expenses incurred by him in the performance of duties vested in the Commission.

(d) The Commission may appoint and fix the compensation of such employees as it deems advisable without regard to the provisions of the civil service laws and the Classification Act of 1949, as amended.

(e) The Commission may procure, by contract or otherwise, the services of public or private organizations or institutions.

Mr. JOHNSON of Texas. Mr. President, I move to reconsider the vote by which the bill was passed.

Mr. HILL. Mr. President, I move to lay that motion on the table.

The PRESIDING OFFICER. The question is on agreeing to the motion of the Senator from Alabama [Mr. HILL] to lay on the table the motion of the Senator from Texas [Mr. JOHNSON] to reconsider.

The motion to reconsider was laid on the table.

Mr. JOHNSON of Texas subsequently said: Mr. President, I ask unanimous consent that S. 1631 as passed be printed.

The PRESIDING OFFICER. Without objection, it is so ordered.

ADDITIONAL JUDGES FOR JUVENILE COURT OF THE DISTRICT OF COLUMBIA

Mr. JOHNSON of Texas. Mr. President, I ask unanimous consent that the Senate proceed to the consideration of Calendar No. 105, Senate bill 1456.

The PRESIDING OFFICER. The bill will be stated by title for the information of the Senate.

The CHIEF CLERK. A bill (S. 1456) to provide for the appointment of two additional judges for the Juvenile Court of the District of Columbia.

The PRESIDING OFFICER. Is there objection to the request of the Senator from Texas.

There being no objection, the Senate proceeded to consider the bill.

Mr. JOHNSON of Texas. I thank my friend, the Senator from Arizona [Mr. GOLDWATER] for his courtesy.

THE PROBLEM OF UNEMPLOYMENT

Mr. GOLDWATER. Mr. President, during the past several months the subject of unemployment has been brought to the attention of Congress very forcefully. I think I can safely say that no Member of this body, no Member of the other House, and no American citizen, is pleased that there is unemployment to any extent, whether it be a fraction of 1 percent, 5 percent, or 10 percent. There are, however, two schools of thought, as to how to approach the unemployment problem. It is to this I wish to direct my remarks this afternoon.

During the present week there has been a so-called march on Washington by unemployed persons from various sections of the country in an attempt to bring the unemployed situation to the

attention of Congress, although I believe all Members of Congress were aware of the situation before the move on Washington was undertaken.

Mr. President, to me this shows very clearly that Federal spending defeats its own ends. I should like briefly to develop that subject.

In 1944 the then President of the United States suggested to Congress what he called an "economic bill of rights." I should like to read the 8 points:

1. The right to a useful and remunerative job in the industries or shops or mines of the nation.
2. The right to earn enough to provide adequate food and clothing and recreation.
3. The right of every farmer to raise and sell his products at a return which will give him and his family a decent living.
4. The right of every businessman, large and small, to trade in an atmosphere of freedom from unfair competition and domination by monopolies at home or abroad.
5. The right of every family to a decent home.
6. The right to adequate medical care and the opportunity to achieve and enjoy good health.
7. The right to adequate protection from the economic fears of old age, sickness, accident, and unemployment.
8. The right to a good education.

The then President announced his economic bill of rights back in 1944. That was about 15 years ago. It was implemented, to some extent, by the Full Employment Act of 1946.

In the 15 years since the first proclamation of the Government's interest in a bill of rights, we have spent untold billions of dollars in this field, in an effort to put the Federal Government in the business of providing such rights.

I do not believe there is an American living who would disagree with any of the eight points I have enumerated, which the then President Roosevelt raised as being a part of the economic bill of rights. I do not think any American can disagree with any point.

But trouble and disagreement begin at the point at which the Federal Government sets itself up to provide these economic rights for the people. It is in this field that we find the current split between the two parties, and between liberals and conservatives, as to the best way to avoid unemployment, the best way to insure full employment, and a growing economy.

Let us take a look at what has happened to the economic bill of rights. To provide the machinery by which these rights are guaranteed by the Government requires a larger government. Bit by bit, slowly but surely, we have added to the Federal bureaucracy in the past 15 years to such a point that Federal spending in this field is now defeating its own end.

As we centralize our Government more and more in order to take care of real or fancied needs, we require higher and higher budgets, because we cannot operate an expanding Government on small budgets. They must be higher. Our budgets have been out of balance, with the exception of a few years, since 1932. We can discount the war years, because I do not think anyone can dispute the fact that in war we must spend whatever may be necessary for victory.

But, to my mind there is no reason for the continuation of high, out-of-balance budgets during peace times and times of plenty. However, high budgets are needed to operate a centralized government or a large bureaucratic government; and if we have high budgets, it follows that we must have high taxes. Some persons suggest that taxes should be higher in order to protect the integrity of the dollar, and in order that we may be able to balance the budget.

As we engage in deficit spending, caused by spending money which we do not have, added to high taxes, I personally feel that we are producing one of the greatest incitements to inflation.

Mr. O'MAHONEY. Mr. President, will the Senator yield for a question?

Mr. GOLDWATER. I am happy to yield to my distinguished friend from Wyoming.

Mr. O'MAHONEY. Am I to understand from what the Senator is now saying that it is his contention that the budgets have been put out of balance, and deficits have been created, by appropriations which have been made by Congress, with or without the recommendation of the Bureau of the Budget, for the so-called economic rights which were listed in the categories quoted by the Senator?

Mr. GOLDWATER. If the Senator will bear with me, I think he will get the answer to his question. I shall try to give it to him as quickly as I can, even before I reach it in my notes.

I do not contend that spending for these items alone has created an unbalanced budget. I contend that the centralization of government in Washington, the moving of the prerogatives of government from the States to Washington, and taking on the operation of the economic bill of rights in varying degrees, have added to the cost of operating the Government. My contention is, as the Senator will see, that high taxes and inflation are in themselves destructive of the very bill of rights which the President proclaimed in 1944.

Mr. O'MAHONEY. Upon the basis of the present budget, which was submitted by the President in January of this year, I point out to the Senator from Arizona that at least $60 billion of the total proposed expenditure of about $72 billion is related to war and preparation for war, and interest upon the national debt.

The President's estimate for expenditures by the Federal Government for national defense—I am now speaking from memory—amounts to approximately $42 billion. The amount of the President's estimate for expenditure for interest on the national debt exceeds $8 billion. That makes a total of $50 billion.

If we add to that amount the expenditure for veterans' benefits and necessary payments which were authorized by the Congress unanimously years ago, we have another $5 billion; and so it goes. The budget expenditure, in the abnormal times in which we live, is not for the economic objectives of the Full Employment Act, nor for the economic objectives of the economic bill of rights, which the Senator from Arizona has quoted from a former President.

Mr. GOLDWATER. If the Senator will be kind enough to listen to my arguments, I think he will find that I am not attributing the unbalanced budget to this factor alone. However, I do not, as some of my colleagues seem to do, accept the argument that this budget, or any budget, cannot be balanced. I am not attributing our woes to this budget. What I am trying to make plain to my colleagues is that we are destroying the right of Americans to the economic bill of rights by continually saying, in effect, that we cannot balance the budget, that we cannot attack deficit spending, and that we cannot reduce taxes.

I agree with everything the Senator has said in relation to the budget. The military budget represents a large portion of our expenditures. There is a set figure of approximately $8 billion for interest. There is a set amount for veterans' benefits. But I remind the Senator that we are constantly voting more and more Federal aid for various projects. We are not saying to ourselves, "We cannot afford this. Let us wait until we can afford it, or let us allow the States to do it when they can." In most cases they can.

The substance of my argument is that we are denying people employment. We are denying these economic rights by reason of the continuation of the philosophy that the Government can spend the country into good times, and prevent a depression. That is the meat of my argument.

Mr. O'MAHONEY. Let me say to the Senator from Arizona that I have great admiration for his ability, having served with him on the Committee on Interior and Insular Affairs for several years.

I know the sincerity with which he pursues his argument and I shall remain in the Chamber and listen to the development of his argument without further interruption, except to say—and this may be explanatory of the situation, which both he and I know to exist—that there is an expansion of the Federal Government. I say to the Senator from Arizona and to my other colleagues in the Senate, that we cannot meet the challenge of these times, which is the defense of free government against political and economic totalitarianism, by attempting to turn the legislative authority back to the States. We are expanding the Government of the United States for one reason, and for one reason only, namely, that big business and the concentration of economic power has proceeded to such degree that great concentrated economic power dominates the economic scene in the United States, and only the Federal Government can legislate in the field of interstate and foreign commerce, and create bureaus which expand the Government no matter what administration may be in power.

We began with the creation of the Interstate Commerce Commission, when Congress and the executive were divided, as they are divided now, between the parties. The creation of the Interstate

Commerce Commission, to regulate railroad transportation, was practically a unanimous decree of Congress and the President. Year after year we have created new bureaus when transportation and communication became more national in scope and beyond the ability of the jurisdiction of the States to regulate.

I thank the Senator from Arizona for permitting the interruption.

Mr. GOLDWATER. I thank the Senator from Wyoming, for whom I have great respect. I hope I will be able in my argument to point out that today this is one of the fundamental areas of difference between the liberals and the conservatives. The conservatives believe that the intent of the Constitution is as valid today as it was when it was written, and that the rights of the States should not be tampered with.

I agree with the Senator from Wyoming that under the Constitution the rights he has mentioned certainly come under the control of Congress, and that the Federal Government is charged with them under the interstate commerce clause of the Constitution. I am not arguing against that point. Neither am I arguing against the defense budget, for I believe we are getting more and more from it every day because of wiser management.

Neither do I charge that the present situation is the fault of the Democrat Party or the Republican Party. I think that perhaps it is the fault of the people more than anyone else or of any group, because the people are the Government, and if the people want the things for which appropriations are made, then they will have them, and that situation will be reflected in the attitude of Congress.

I was referring to inflation, which I think is one of the major and most serious problems we must solve. I do not agree with those who say they do not know what causes inflation. In my opinion the fiscal situation of the Nation is today one of the great additives to inflation. It is caused by the fact that high taxes absorb much of the money which could be spent for the purchase of capital goods. The average small businessman cannot get into the money market, and the rates in the money market are high.

I shall not go through the various rights in their entirety, but I should like to point out what I believe the fiscal situation is doing to us. Let me cite the fact that we are going through one of the greatest periods of demand for automobiles in our history. Yet there is serious unemployment in the State of Michigan, where automobiles are manufactured. I am not laying any blame at anyone's door so far as the situation in Michigan is concerned. I believe we all understand what goes on there.

The fact is that because of high taxes the small businessman is not able to expand without joining someone else and in that way becoming big himself.

We are denying jobs to people when we say to employers, "You have to pay so much out of your gross income to the Federal Government." In that way we deny them the right to do something to prevent unemployment in many areas of the country.

The next right is the right to earn enough to provide adequate food and clothing and recreation. We all know that salaries in this country are higher than they have ever been. We also know that the relationship between the cost of living and salaries is much tighter than it has ever been heretofore. People are making twice as much money as they made 10 or 12 years ago; yet they are not living so well because of the increase in the cost of living. The cost of living is rising. This takes place under the concept that one man should have his salary increased, regardless of his ability or initiative or drive, to the same extent the salary is increased of another man who possesses these qualities. We find a union leader, for example, getting management to agree to raise wages without any increase in productivity.

The Senator from Wyoming has had much experience in this field. He knows that this is one of the problems.

I now refer to the right of the farmer to raise and sell his products at a return which will give him and his family a decent living. That is an area where we can start to make some cuts in appropriations. Here again, of course, we must not make any cuts with a meat ax. It is an area where the use of a scalpel is required, as in business. In business savings are made by turning off lights, picking up string, and turning off faucets.

Let us consider the case of the cotton farmer, for example. We have practically lost our foreign cotton market, because we cannot compete with the price of cotton grown in Mexico and in other Latin American countries. The cotton farmer cannot raise any money on the open market.

I have already discussed the difficulty of the small businessman who tries to expand in order to meet the competition of the great monopolies, and the difficulty he has in trying to obtain money. When he finds it difficult to compete with the medium- or larger-sized firm, he joins with others, probably with one of his neighbors.

I think of the small communities in my State of Arizona, where two drug stores in a town can merge in order to live and to grow. They become a monopoly in that town and are just as dangerous to the traditional concept of our business relations as are the giant combines of Detroit, Mich., and Wilmington, Del.

My argument is that we are denying to businessmen the right to trade in an atmosphere of freedom, an atmosphere free of monopolies, because monopolies are being created all over the country.

It will be only a matter of time until medium-sized businesses will not be able to compete. Then it will be only a matter of time until large businesses will not be able to compete in the money markets.

Consider the right to adequate protection from old-age fears of accidents, sickness, and unemployment. If there is another area in which inflation does more damage, I do not know what it can be.

I shall never forget that when I first went to work the Literary Digest, which was then an important publication in the United States, published an advertisement on the back page which read "Retire at $125 a Month." I went to work and paid for such an annuity. Today $125 a month does not get a person having a family far in retirement.

Every time we undertake to spend money for purposes not needed; every time we act to increase the deficit; every time we do something to unbalance the budget, we are harming the very people about whom we should be the most concerned—the retired people, those who have worked all their lives with retirement in sight, or with a retirement plan in effect. We affect every such individual and the company with which he worked, or the Government, which provided for his retirement benefits.

Such persons are not able to live on the amount on which they had planned to retire. So we are denying to the American people the right to adequate protection from the economic fears of old age, sickness, and unemployment.

I mention these few results which our actions in the Nation's Capitol have on the economic bill of rights, to show, if I can, that Federal spending is defeating its own end; that the problem of unemployment will not be solved by Federal action alone; and that a growing, expanding economy will not be provided through the action of the Federal Government alone.

I should like to read what was said by Mr. Walter Reuther in Life magazine this week. The title of the article is "Prescriptions for Curing the U.S. Economy."

This is the answer by Mr. Reuther:

A program to get America back to work requires a drastic overhauling of Federal activities. As new Federal programs create full employment and more rapid economic growth—and as some tax loopholes are closed up—the added tax revenue will easily cover the outlay.

The U.S. Government should take measures to raise consumer buying power. The President and Congress should declare that wage and salary increases, combined with a reasonably stable price level, are essential. The U.S. minimum wage should be raised from the present $1 to $1.25 an hour. The minimum wage should be extended to millions of workers in trades and services. The unemployment insurance system should increase the duration and amount of benefit payments. Social security should provide bigger benefits and medical care with easier eligibility for them. There should be a progressive reduction of the workweek. These things would put more money into the hands of more people.

The Government should also create new jobs. Defense and other Government contracts should immediately be funneled into distressed areas. Distressed areas should get loans and grants to bring in new industries, retain workers, and help workers move where jobs are. More jobs should be created by national programs to help build houses, roads, and all kinds of community facilities for education, health, recreation, civil defense, etc.

Overall, the Government should show its support for rapid economic growth by halting the tight money policy which is restrictive.

I have read Mr. Reuther's statement because it represents one side of the argument. I shall in a few moments read the answer from another gentleman, one who represents my views more completely. But in Mr. Reuther's statement we see the school of thought which holds that the Federal Government should do all the work. Yet the Federal Government has been doing it for 15 years, and we find a denial of the rights to which I have alluded; we find areas in the country where people cannot get employment; we find areas where actually depression exists in the midst of plenty. In most of those cases, though not all of them, it will be found that the troubles are political, not economic. It is quite interesting to note that among the areas of the country where people are unemployed are the so-called heavy industry areas; in other words, sections of the United States which make machinery which business would be buying if business had the money with which to buy. We find affected such cities as Muskegon, Grand Rapids, Detroit, Erie, Cleveland, Wilkes-Barre, Scranton, Utica, Rome, Troy, Schenectady, Albany, Johnstown, and Pittsburgh. Those are the cities where the tools are made which make free enterprise function.

At a time in our country's history when we are having the highest personal income and the highest gross national product—even though I do not put much faith in that statistic—we find that those areas which should be booming to the greatest extent are having the hardest time.

But when one goes out beyond the Mississippi River, in the Far West, the Rocky Mountain West, or the Middle West, he finds very little unemployment. Unemployment is concentrated in the East, where business should be booming. Something is the matter, something is wrong, when a city such as Erie is having trouble; when places like Altoona and Pittsburgh are not able to sell their products. The heavy industry areas have been hit the hardest.

I suggest that if during the past 15 years, or the years since the war—let us leave out the time of the Korean war—if the Government had been working on its budgets, if we had been watching carefully our expenditures of money at the Federal level, there would be a lower tax rate today than we now have.

The blame for the troubles in industry and the economy should fall more on the shoulders of the Federal Government than on any other level of government.

What will the result of all this be if it is carried to its ultimate? If every time there is a little economic upheaval or a slight downturn in the economy of the country, there are marches on Washinton and businessmen descending on Washington to ask for help for their particular businesses, the end result will be that the Federal Government will simply have to enter the field more and more. Small business will disappear; medium-size business will disappear. If these things happen even the corporate giants of the Nation some day will go the way of other giants in former years.

I do not like to use the word, but it has been used before: What is now happening could end in socialism in the United States. I posed this hypothetical question the other day to a group of Air Force personnel with whom I was discussing economics: What will happen if Russia continues to take our capitalistic system, and if we continue to take Russia's socialistic system? Capitalism is not compatible with communism; socialism is not compatible with our concepts of free enterprise. The question arises: Would it not be possible for the United States to become a second- or third-rate power, and Russia the top economic power, without a shot ever being fired or a bomb ever being dropped?

I am more fearful of that happening in the United States than I am of any aggression on the part of Russia or by any of her allies, or, yes, from the philosophy of communism itself.

A few days ago there was published in the Washington Post a statement which I should like to read, because I think it applies to the present situation. In my opinion it describes quite well the situation we are in as we rather blithely continue to appropriate more money than we have and spend more money than we have, thus decreasing the value of the dollar, without too much concern being expressed by the rank and file of America.

Edith Hamilton, one of the greatest classical scholars on ancient Greece, speaking about the collapse of democracy in Greece, said:

> I think it was mostly because Greece no longer cared to fight for anything. In the end the Greeks wanted security more than they wanted freedom. They wanted not to give to the state but to receive from the state. They just wanted to be comfortable.

Mr. President, I mention that as a preface to this question: Where are we going? Are we going to wind up a soft people, without the courage to say "No" to Government handouts? Are we as a people not going to realize that government cannot be beneficent without being the master, that government gives only what it previously has taken away?

Mr. President, I do not wish to be critical without offering some suggestions. But, first, I should like to read the article which was published in Life magazine next to the article by Mr. Walter Reuther. The article I am about to read was written by Mr. Charles Sligh, who, as all of us know, has for years been connected with manufacturing. His article reads as follows:

> Abnormally high unemployment during a time when overall business activity is surging to new levels is largely due to the fact that wage rates in many industries have been outracing improvements in productive efficiency. Therefore it has been impossible in recent years to translate advancing technology into lower prices and wider markets.
>
> To try to keep more people at work producing any product than is necessary to satisfy the public demand for it, as is implied in a cut in the workweek, would be self defeating. Prices would have to be raised still higher to pay these unneeded people and the market would shrink still further.
>
> Conceivably many of those laid off during the recent recession may never be called back to their old jobs. The realistic solution is to encourage new products and new business activity, and to help the unemployed shift from lines of work in which their services are no longer required to other, and perhaps better jobs where they are needed.
>
> It is no answer to create jobs through lavish Government spending, or expand relief programs for the unemployed. These may alleviate temporary hardship, but they will not solve the problem. Instead they serve to discourage the unemployed from accepting jobs at what the free market is able to offer.
>
> If organized labor would help lower some of the present obstacles to business expansion, such as excessive tax rates and wages higher than the free market is able to pay, there would be a rapid increase of job opportunities.

That is the opinion of Mr. Charles Sligh, who, as I have said, represents a conservative point of view. His point of view is in direct opposition to the thoughts of Mr. Walter Reuther, who reflects what is termed a liberal approach.

Mr. President, in summing up this matter I wish to say that I believe there are some things we can do that will release the economic giant that is now bound by the fetters of the Federal Government. My suggestions are as follows:

First. Balance the budget, and make that imperative year after year after year. I think the President is eminently correct in calling for holding the line on his $77 billion budget. By the way, that budget is, to my mind, $1 billion or so too high. There is no need for this country to be spent into bankruptcy during peacetimes and times of plenty by a Congress which will not recognize the economic facts of life.

How is this to be done? My attention has been called today to the fact that a large percentage of the budget is tied up in defense expenditures and a large percentage of the budget is tied up in uncuttable items, such as interest. On the other hand, we have items such as Federal-aid projects. The Senate has recently voted a large increase in Federal aid to airports. Bills for Federal-aid projects are introduced on this floor almost every week, and they call for the expenditure of billions of dollars. In fact, if my memory serves me correctly, the total amount of spending called for by such bills which have been introduced so far this session is nearly $200 billion. I believe the Federal Government can live without such things. I do not think we should be seeking new ways to spend the people's money. Instead, we should say, "Let us have no new Federal-aid projects; and let us take a long, hard look at the ones we already have and which are operating outside the definite powers granted to this body by the Constitution."

Second. I would urge upon organized labor and management the need now for restraint in the wage and price fields. I have already alluded to unearned wage increases and unearned price increases. Mr. President, we cannot continue to have spiraling wages which are not earned and spiraling prices which are

not justified without doing irretrievable harm to the entire economy. Much of the trouble we are in today is the result of constant wage and price increases which are not earned.

Lest anyone mistake my philosophy, let me say that I care not how much a man earns; if he earns $100 an hour, he should be paid $100 an hour. But to pay $10 an hour to a man who does only $6 worth of work an hour means the eventual suicide of the entire capitalistic system.

Third. I favor changing—and changing quickly—our farm policy, and stopping the payment of billions of dollars a year to support agriculture. I would take a hard look at the crops we now support. I like peanuts, for instance; but I fail to understand why we should support peanuts. As for tobacco, although I do not happen to smoke, yet I have nothing against tobacco. On the other hand, I know no reason why the Federal Government should support tobacco. I would change the existing formula to a realistic one; and I would say to the farmer, "We are not going to put you out of business, and we will return to you the losses you sustain from acts of God, such as hailstorms, tornadoes, and so forth. But we are not going to guarantee you a profit."

Fourth. I would take steps by law to maintain the integrity of the dollar. I am not sure about all the ways that should be done. I think one of them would be to amend the 1946 act, to require the Congress in peacetime to balance the budget, and to attack the deficit, and to keep the value of the dollar from declining in the way it has declined.

Fifth. I would get the Government out of every business it is in when it is in competition with the free-enterprise system.

In other words, Mr. President, the sum of my conservative attitude toward our economy is as follows: Let our economy operate. In the fields in which control is needed, we have the laws to provide control. But let us not hamper small business, medium-size business, or big business, where hampering is not required. Let us let the industrial giants we have created in this country continue to grow without any governmental interference other than that which is needed.

Mr. President, if that is done, I feel certain that unemployment can be kept at a constant low in this country; and I believe that the economy will grow, and will provide new jobs, and our great technological ability will be allowed to develop to an even greater extent than it has in the past; and the end result will be a greater America and a better world.

Mr. President, I ask unanimous consent to have printed in the RECORD at this point, in connection with my remarks, an editorial entitled "A 10-Cent Dollar?" which was published in the Arizona Republic of February 4, 1959. I wish to have the editorial printed at this point in the RECORD, so my colleagues may follow the reasoning of the editorial, in attempting to reach some conclusions as to the validity or nonvalidity of my remarks.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

A 10-CENT DOLLAR?

If you think taxes and inflation are no concern of yours, consider this quotation from the January Reader's Digest: "The person who earned $5,000 in 1946 would have to earn $7,343 today—nearly 50 percent more—simply to be as well off as he was before."

Has your income gone up 50 percent since 1946? If it hasn't, you are paying the price of high taxes and continued inflation.

It isn't only the retired man, the annuity owner, or the widow on a fixed income who suffers from inflation. Every worker whose pay hasn't gone up 50 percent since 1946 is worse off today than he was then. And, according to Roswell Magill in the Reader's Digest article, "If fumbling governmental fiscal policy should encourage the deterioration to continue, in 25 or 30 years our present 48-cent dollar might be worth only a dime."

The most pressing current assault on the integrity of the dollar is being made in Congress. President Eisenhower's huge $77 billion budget is considered inadequate by many Democrats, and already efforts are under way to boost the totals for foreign aid, school funds, and farm programs. If the line is not held, there will certainly be an unbalanced budget next year, adding to the $12 billion deficit expected this year. And the result will be more fuel for the inflationary fires.

Mr. Magill estimates that every $1 billion reduction in the President's budget could represent a tax saving of $20 for the average family. A cut of $7 billion—which would still leave the huge total of $70 billion—could mean a tax reduction of $140 next year for the average family.

If each family in this country had $140 more money to spend next year, the resulting boost to business would undoubtedly increase the Government's take in taxes. Even more important, however, such a reduction in taxes would strengthen the dollar and stop the melting away of the value of Government bonds, insurance policies, pensions, and savings accounts.

Some of the big spenders in Washington say that it is impossible to cut Federal spending. They say we live in a cold war era, and that our defenses must be maintained. This is true, of course. But the fact of the matter is that defense spending has not been increasing as rapidly as other parts of the budget. In the last 5 years nondefense spending has risen by $12.5 billion, jumping from $20 billion to more than $32 billion. The combined Federal farm programs alone have risen from $3.7 billion to $6.5 billion in this period. Even if the $46 billion going to defense could not be cut—and we are sure it could be trimmed without serious damage—there is plenty of fat that could be taken out of the nondefense budget.

The dollar doesn't have to sink to 10 cents in value. But it will, if the people of this country don't demand an end to the fantastically big spending programs that Congress passes almost automatically year after year. This is the year to hold the line. Business is good, and Government income will be up. A budgetary surplus is possible if expenses are cut, and tax reductions would almost automatically result from a surplus in the budget. Congress will take the needed action, if it is convinced that the voters mean business.

ADDITIONAL JUDGES FOR JUVENILE COURT OF THE DISTRICT OF COLUMBIA

The Senate resumed the consideration of the bill (S. 1456) to provide for the appointment of two additional judges for the juvenile court of the District of Columbia.

Mr. HARTKE. Mr. President, the purpose of this bill is to amend the Juvenile Court Act of the District of Columbia, approved June 1, 1938, as amended, so as to provide for the appointment of two additional judges for the juvenile court of the District of Columbia. At the present time the juvenile court has one judge, and this bill provides that the court shall consist of three judges, appointed by the President by and with the advice and consent of the Senate. Each judge appointed after the date of the enactment of this proposal shall serve for a term of 10 years, or until his successor is appointed and qualified. The qualifications for appointment, as set forth in the bill, are as follows:

First. That he shall have been a member of the bar of the District of Columbia for a period of 5 years preceding his appointment.

Second. During a period of 10 years immediately preceding appointment he shall have been a resident of the District of Columbia or of the metropolitan area of the District for at least 5 years, of which not less than 3 years shall immediately precede appointment. "Metropolitan area" means Montgomery and Prince Georges Counties in Maryland, and Arlington and Fairfax Counties and the cities of Alexandria and Falls Church in Virginia.

Third. He shall have a broad knowledge of social problems and procedures and an understanding of child psychology.

The present judge of the court shall continue in office and shall be deemed to be occupying one of the three positions of judge provided by this proposed legislation. The President shall designate one of the judges to be the chief judge of the juvenile court, whose salary shall be equal to the salary of the chief judge of the municipal court—$18,000 per annum—the salary of the associate judges shall be equal to the salary of an associate judge of the municipal court—$17,500 per annum.

In cases of sickness, absence, disability, or death of any judge of the juvenile court, the chief judge or acting chief judge of the U.S. District Court for the District of Columbia shall designate one of the judges of the municipal court to discharge the duties of such judge of the juvenile court until such disability shall be removed or the vacancy filled. Likewise, during the temporary absence or disability of the chief judge of the juvenile court, an associate judge of such court shall be designated to serve as chief judge of such court by the chief judge, or acting chief judge, of the U.S. District Court for the District of Columbia.

The juvenile court jurisdiction includes all children under the age of 18 years who are charged with violations of law, who are beyond parental control, who are truant from home or school, who are engaged in conduct endangering their own health, morals, or safety, or the health, morals, or safety of others, or who are without adequate parental care. The court also has original and exclusive jurisdiction in cases involving

the paternity of children born out of wedlock, adults charged with violation of the child labor and compulsory education laws, and with contributing to the delinquency of minors. It also has concurrent jurisdiction with the U.S. District Court for the District of Columbia in criminal cases involving nonsupport of wife or children. A great many of the cases are of the felony type, involving offenses which, if committed by an adult, would be within the exclusive jurisdiction of the U.S. District Court for the District of Columbia. Cases of this kind before the juvenile court are now running about 2,000 a year.

S. 1456 is a clean bill, introduced and reported by direction of the full Committee on the District of Columbia as a compromise between S. 465, introduced by the Senator from Pennsylvania [Mr. CLARK] and S. 522, introduced by the Senator from Delaware [Mr. FREAR]. The differences in these two bills have to do, for the most part, with the qualifications of the persons eligible for appointment. In an attempt to reconcile the differences between S. 465 and S. 522, the full committee deliberated at length as to the period of time the appointee shall be a member of the Bar Association of the District of Columbia; the personal qualifications; the residence requirements; and the question of designation of a substitute judge. The ultimate result was the reporting of S. 1456, containing the provisions agreed upon by the full committee.

The estimated annual cost of this proposed legislation would be approximately $91,367.

I ask unanimous consent to have the table on page 4 of the report, relating to the annual cost, printed in the RECORD at this point.

There being no objection, the table was ordered to be printed in the RECORD, as follows:

The estimated annual cost of this legislation would be approximately $91,367, made up as follows:

Recurring expenses	2d judge	3d judge
Personnel service:		
1 judge	$18,000	$17,500
1 GS-7 courtroom clerk	4,980	4,980
1 GS-7 secretary to judge	4,980	4,980
1 GS-6 administrative aid (secretary)	4,490	0
1 GS-5 summons clerk	4,040	4,040
2 GS-4 baliffs, at $3,755	7,510	3,755
1 GS-4 docket clerk	3,755	3,755
Total, personal services	47,755	39,010
Other contractual services	173	103
Grants, subsidies, and contributions	2,928	1,398
Total, recurring expenses	50,856	40,511

Mr. FREAR. Mr. President, I desire to make only a very brief statement. At the outset I pay tribute to, even though I may disagree with, the chairman of the full committee, the chairman of the subcommittee, and the members thereof, because I think they have been very energetic in attempting to accomplish an objective the benefit of which perhaps the District of Columbia should have enjoyed some time ago, namely an additional judge.

I desire to speak briefly on the pending bill, S. 1456, which relates to the appointment of two additional judges to the bench of the Juvenile Court of the District of Columbia, and which sets forth certain qualifications for these appointments.

Mr. President, at the outset I wish to state that I am not opposed to the appointment of one additional judge for this court. In fact, during the present session, I introduced S. 522, which, in addition to providing another judge, proposed to establish a criterion which I firmly believed necessary in order to provide this court with a duly competent juvenile court judge, one well versed in child psychology and sociology.

We are being asked today to consider and enact into law S. 1456, which would amend the present District Code and provide for the appointment of two additional judges for the Juvenile Court for the District of Columbia.

The enactment of this bill would again place the Senate in a position of having to give "advice and consent" to these two appointees, and subsequently an added burden would be placed upon the taxpayers of the District.

If the financial situation of the District is as poor as portrayed by the District Commissioners, I am firmly of the opinion that we should add only one judge at this time; and if the two judges cannot accomplish the work of the court, we could at any later date provide for an additional judge.

In considering this bill and in view of the present situation confronting the Juvenile Court of the District of Columbia, I trust we, as Members of the Senate, will give recognition to the real concern of the community, and not enact legislation merely for the sake of providing two additional judges to this court. Such action, in my humble opinion, would again be adding insult to injury to a community already suffering from the ineptitude of one presently serving in that capacity.

As many Senators may recall, my opposition in the past with regard to the District juvenile court was principally directed to the judgeship qualifications, and perhaps even more to the appointment of the incumbent judge, not because of any personal feeling against Judge Ketcham, but because I sincerely believed that he did not possess the requisite judicial temperament or the personal attributes necessary properly to administer justice in the marital and social problems so prevalent in the District of Columbia.

It is well known that unless the judges of our juvenile courts are well rounded in experience and temperament and equipped with a practical and working knowledge of psychiatry—mental disorders—psychology—actions of the mind—and other social sciences, they cannot properly cope with the volume and complexity of these situations.

Anything I may say in further presenting my views toward S. 1456 will have no bearing or relation to the incumbent judge. However, I reserve the right to place into the RECORD certain information concerning his stewardship as judge of this District juvenile court, whereby it can be shown an appointee for such a position must have the necessary qualifications to be a successful judge.

Therefore, I do at this time question the wisdom of appointing two additional judges to the bench of this court under present requirements of law as they relate to qualifications and experience.

I have never denied the need for an additional judge, nor do I at this time oppose the appointment of one additional judge who would more adequately meet the necessary requirements for a juvenile court judgeship as stated on page 83 of the "Standards for Specialized Courts," dealing with children, issued by the Children's Bureau of the U.S. Department of Health, Education, and Welfare.

Although I have previously placed these stated qualifications in the RECORD, I again ask unanimous consent that they be printed in the RECORD at this point.

There being no objection, the qualifications were ordered to be printed in the RECORD, as follows:

THE JUDGE

Selection of a competent judge who can give leadership to the court specializing in children's cases is of the greatest importance, particularly in view of the wide discretion conferred on him by law.

In selecting the judge of the specialized court, certain personal attributes must be considered as well as training and experience. In order to be fully qualified for this work the judge should have been admitted to the bar in the State where he is to serve and have had some experience in the practice of law.

Also, he should be: (1) Deeply concerned about the rights of people; (2) keenly interested in the problems of children and families; (3) sufficiently aware of the findings and processes of modern psychology, psychiatry, and social work, that he can give due weight to the findings of these sciences and professions; (4) able to evaluate evidence and situations objectively, uninfluenced by his own personal concepts of child care; (5) eager to learn; (6) a good administrator, able to delegate administrative responsibility; (7) able to conduct hearings in a kindly manner and to talk to children and adults sympathetically and on their level of understanding without loss of the essential dignity of the court.

Mr. FREAR. Mr. President, on August 21, 1957, during the 1st session of the 85th Congress, the Senate Committee on the District of Columbia, when reporting H.R. 7785, a bill which, if enacted would have provided an additoinal judge to this court, on page 3 of its report No. 1074, recognized the fact that a judge to be appointed under the provisions of that bill should possess the maximum degree of qualifications when it said:

The Committee in favorably reporting this bill feels strongly that the appointing authority, in selecting a juvenile court judge should be governed by a strict interpretation of the qualification standards set forth in the bill, to the end that the nominee shall fully meet all of the requirements.

The committee makes this statement because of its deep concern for the welfare of the children coming within the jurisdiction of this court, and feels that comprehensive knowledge of the social problems, as well as a thorough understanding of child and adolescent psychology are most important attributes in this position.

As I have previously stated, the position of junvenile court judge is one of

the most important in any community, and certainly that is true in the District of Columbia. The selection of any person under the criteria set forth in S. 1456 leaves much to be desired.

On at least three occasions I attempted to bring to the attention of the Senate the seriousness of the problem which presently confronts the juvenile court of the District of Columia.

Any person appointed judge of the juvenile court should possess the highest degree of qualifications and experience in the work which would necessarily devolve upon him.

No court, especially one which deals with the juvenile population should be a place for "on the job training."

It was and still is my opinion that the selection of any person as judge of the juvenile court with a lesser degree of qualifications and experience than set forth in my bill, S. 522, would inevitably result in the slowing down of court procedures and, also, the effective operation of the court for at least a year—and perhaps much longer.

I regret, Mr. President, that this is what we have experienced during the past 2 years. Today we are being called upon to bail out this court through the appointment of two additional judges.

Perhaps I would be more inclined to sympathize with the position in which the present judge now finds himself, had he, upon taking over his position as judge of this court, spent long hours in an attempt to keep abreast of the case workload, rather than curtailing his time on the bench, together with greatly decreasing the number of cases he scheduled each day and, thereby, creating a backlog which is said to exist.

Prior to 4 weeks ago, we were told by the press and other means of communication that the incumbent judge was physically unable to cope with the number of cases scheduled before the court and that a very definite backlog was increasing from day to day. Almost immediately after the hearing before the Subcommittee on Judiciary of the Senate Committee of the District of Columbia, and recommendations were received for the appointment of two additional judges, as provided in S. 1456, we were amazed to learn that the incumbent judge, for some reason, rescheduled his court agenda and, with great pride, reported having reduced his accumulated backlog by more than 50 percent. Taking this report on its face value, Mr. President, I see no need of providing for the appointment of two additional judges when the incumbent judge has clearly shown that he can cope with the situation if he so desires.

Mr. President, I ask unanimous consent to have printed in the RECORD at this point an article written by Martha Strayer entitled "Support Cases Are Caught Up," published in the Washington Daily News of February 12, 1959.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

SUPPORT CASES ARE CAUGHT UP

(By Martha Strayer)

District juvenile court has caught up with its backlog of support cases against deserting fathers and has greatly reduced the waiting period for hearing juvenile cases, which also were seriously backlogged.

Assistant Corporation Counsel Una Rita Morris said that 218 nonsupport cases have been brought before Juvenile Court Judge Orman W. Ketcham or his subsitute, Municipal Court Judge Austin L. Fickling, since December 4, when Judge Ketcham agreed to hear five nonsupport cases a week. For 2 months before that he banned them from his court to shorten its workload.

RETRIBUTION

He did this as part of a general plan for workload reduction, when Congress failed to pass a second judge bill.

Mrs. Morris said Judge Ketcham agreed to step up the number of nonsupport hearings and devote Thursdays to nonsupport and illegitimacy cases.

The load of new juvenile complaints coming before the court has been reduced through informal hearings by Court Social Work Director John Larkin, who disposes of minor charges with court hearings.

Children in these cases agree to report informally to court probation officers.

THE BREAKDOWN

Assistant Corporation Counsel Albert S. Povich broke down the record on the 218 cases heard since December 4:

Forty-four fathers have been ordered to pay a total of $440 a week for support of their children, in weekly amounts ranging from $10 to $30.

Eight fathers who pleaded guilty have been sent to jail for 6, 9, or 12 months.

Nine have bailed themselves out by paying $500 fines to be turned over to their wives.

A large proportion of fathers in backlogged cases failed to show up and when the families were on relief, the Welfare Department has tried to find the fathers while cases were continued.

Twenty-eight cases have been nolle prossed (which means they can be revived), and nine dismissed.

Mr. FREAR. Mr. President, the cost of the two additional judges and court personnel will bear heavily upon the District, and unless the two judges provided for under this bill show greater efficiency in collecting money under support orders, this additional cost will reflect itself in added financial burdens on the Welfare Department of the District and ultimately on the taxpayers of the District of Columbia.

In addition to the qualifications I have already mentioned, the residency requirement prescribed by Congress in 1949 appears no longer to be considered a factor in the selection of a juvenile court judge for the District.

I firmly believe that residence in the District at the time of appointment still is a statutory requirement, and a desirable qualification.

In considering the pending legislation, I had hoped that the Senate Committee on the District of Columbia, through its Subcommittee on Judiciary, would have afforded the opportunity to have certain individuals and representatives of various groups present their views about the operation of the court itself under the incumbent judge.

In conclusion, I wish to thank those who have expressed an interest in the District Juvenile Court, as well as those who have brought their individual problems to me, feeling they were not receiving the proper judicial consideration to which they were entitled under juvenile court procedure.

I do not at this time desire to delay further action on this matter. However, the people being served in the community by this court are assured of my continued interest and that I will attempt in every manner possible to improve the operations of the court.

Mr. BEALL. Mr. President, the Senate will today act on S. 1456, a bill to provide two additional judges for the Juvenile Court of the District of Columbia. It would then increase the number of juvenile court judges in the District of Columbia to a total of three.

A bill providing one additional judge for this court passed both Houses during the 85th Congress, but was not enacted into law because of a deadlock of the conferees in the latter days of the session. Since that time a comprehensive picture of the problems of the juvenile court has been obtained, which clearly indicates the need for two additional judges for this court.

One of the difficulties in reaching any agreement on this subject has been the diverse opinions of the members of the committee concerning the qualifications of the judges for this court. The bill we are considering today is clearly a compromise. My own personal views may be somewhat sacrificed, but I am willing to make the sacrifice in order to obtain a desirable end. This is a good bill. There is an imperative need for it. Some youngsters today are in trouble. They need leadership, guidance, and understanding. A juvenile court judge is the first person who can undertake necessary action in order to rehabilitate wayward young people.

There is a glaring need for additional judges on this bench, as the hearings clearly point out. In order to facilitate provision for this need, and because I feel that wayward young people today will benefit greatly by passage of this bill, I am strongly supporting the bill and urge every other Senator to support it.

I wish to take a moment more of the valuable time of this body to praise the junior Senator from Indiana [Mr. HARTKE], who, as chairman of the Judiciary Subcommittee of the Senate Committee on the District of Columbia, has worked hard and diligently to bring forth a bill which would be acceptable to all persons and, at the same time, would be a good bill in principle. I sincerely congratulate him and the other members of the subcommittee for once again recognizing the problem in the juvenile court and meeting it with the proper remedy.

Mr. BIBLE. Mr. President, I am delighted to see that this very important bill is before the Senate for what I hope will be its passage. As Senators are very well aware, a juvenile court bill was passed last year. A bill was likewise passed by the House of Representatives and went to conference, but unfortunately it died in the closing days of the session.

I think there has been a clearly demonstrated need for additional juvenile court judges in the District of Columbia.

I commend the chairman of the Judiciary Subcommittee, a new Member in

this body, for his diligence and his devotion to duty, in having hearings on this very important measure set early in February, a short time after the Senate convened.

We have before us today the composite view of the members of the District of Columbia Committee as to the type of legislation which should be enacted.

I also wish to commend my very delightful and close friend the Senator from Delaware [Mr. FREAR] for his most fair attitude throughout the entire consideration of this problem. I realize some of the questions the Senator has had in mind relating to the appointment of the juvenile court judges, and certainly in fairness it should be said that at no time has the Senator from Delaware attempted in any way to slow up the processes by which the bill could be brought to a final vote in the Senate. I commend the Senator for that.

I also wish to add a word of commendation for the author of the bill, the senior Senator from Pennsylvania [Mr. CLARK], who has just entered the Chamber. He guided the bill almost to full statutory status a year ago, and devoted a great deal of time to the important work handled by juvenile court judges. The Senator from Pennsylvania was very helpful. He knew, from his past experience as mayor of Philadelphia, the need of vigorously and adequately meeting this problem.

I also wish to pay high praise to my close friend and distinguished colleague, the junior Senator from Maryland [Mr. BEALL], for his efforts this year and in the 85th Congress, in helping to guide a juvenile court bill through the legislative processes.

I am delighted that the bill is now about ready for final passage.

Mr. FREAR. Mr. President, will the Senator yield?

Mr. BIBLE. I am very happy to yield to my friend, the Senator from Delaware.

Mr. FREAR. The Senator from Nevada, chairman of our committee, paid a high compliment to the junior Senator from Delaware.

The cooperation extended on the part of the junior Senator from Delaware was only a reflection of the great interest and ability of the chairman of the full committee and the chairman of the subcommittee. It was certainly a happy privilege for me to work with them. Even though I was not in complete agreement as to the substance of the bill, there was certainly nothing lacking in the way of cooperation.

Mr. BIBLE. I thank the Senator.

Mr. CLARK. Mr. President, first I thank my friend from Nevada for his kind words. My participation in the bill this year has been largely nominal. Not only my good friend from Nevada, who has taken such a keen interest in his work as chairman of the Committee on the District of Columbia, but the ranking minority member, the Senator from Maryland [Mr. BEALL], who has worked so hard on this bill, and the stalwart new member of the committee, the chairman of the Subcommittee on Judiciary [Mr. HARTKE], are worthy of praise for the efforts they have put forth.

It is a happy thing for me, as a former mayor who has had some familiarity with the work of juvenile courts in one of our great cities, to see the District of Columbia emerging from the Middle Ages, in terms of dealing with its juvenile problems, and joining the ranks of other enlightened cities by giving adequate judicial attention to problems which are so critical in American urban life.

We all know the menace of juvenile delinquency. We all know the need for repairing broken homes, and for steering children along the paths of righteousness when they get into trouble.

This cannot be done without an adequate number of judges to handle the caseload. I pay tribute to Judge Ketcham, with respect to whose appointment I was not very enthusiastic a year or two ago. But he took off his coat and went to work, and has devoted a year or two of dedicated service to this cause. But he needed help. I am glad to see that he is about to get it.

I hope that the skillful diplomacy of the chairman of the committee, which has been exercised in so many ways since he undertook the arduous, and in many ways thankless, task of chairman of the Committee on the District of Columbia, will be most effective when the bill reaches the other body. I have real hope that under his skillful guidance, and with the cooperation of members of the House committee, the bill will become law at the earliest possible moment, so that no longer will justice be delayed, which is, in fact, justice denied to the young people of the District of Columbia.

The PRESIDING OFFICER. The bill is before the Senate and is open to amendment. If there be no amendment to be proposed, the question is on the engrossment and third reading of the bill.

The bill was ordered to be engrossed for a third reading, read the third time, and passed, as follows:

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That section 19 of the Juvenile Court Act of the District of Columbia, approved June 1, 1938, as amended (D.C. Code, sec. 11-920), is amended to read as follows:

"APPOINTMENT, QUALIFICATIONS, OATH, AND SALARY OF JUDGE

"SEC. 19. (a) The juvenile court of the District of Columbia shall consist of three judges learned in the law and appointed by the President, by and with the advice and consent of the Senate. Each judge appointed after the date of the enactment of this subsection shall serve for a term of ten years or until his successor is appointed and qualified.

"(b) To be eligible for appointment as judge of the juvenile court a person must (1) have been a member of the bar of the District of Columbia for a period of five years preceding his appointment, (2) during a period of ten years immediately preceding his appointment, have been a resident of the District of Columbia or of the metropolitan area of the District for at least five years, of which not less than three years shall immediately precede his appointment, and (3) have a broad knowledge of social problems and procedures and an understanding of child psychology. For the purpose of this subsection the term 'metropolitan area of the District' means Montgomery and Prince Georges Counties in Maryland and Arlington and Fairfax Counties and the cities of Alexandria and Falls Church in Virginia. Each judge shall, before entering upon the duties of his office, take the oath prescribed for judges of the courts of the United States.

"(c) The President shall designate one of the judges to be the chief judge of the juvenile court. The chief judge shall be responsible for the administration of the court. During the temporary absence or disability of the chief judge the associate judge of the juvenile court designated by the chief julge or acting chief judge of the United States District Court for the District of Columbia shall be responsible for the administration of the court. The salary of the chief judge shall be equal to the salary of the chief judge of the municipal court for the District of Columbia and the salary of each associate judge shall be equal to the salary of an associate judge of the municipal court for the District of Columbia."

SEC. 2. The judge of the juvenile court of the District of Columbia who, on the date of the enactment of this Act, is occupying the position of judge created by the Juvenile Court Act of the District of Columbia, approved June 1, 1938, shall continue in office and shall be deemed to be occupying one of the three positions of judge provided for by section 19 of such Act, as amended by the first section of this Act, until the term for which he was appointed shall expire and his successor is duly appointed and qualified. Such judge shall be entitled to compensation in accordance with the provisions of section 19 of the Juvenile Court Act of the District of Columbia as amended by the first section of this Act.

SEC. 3.(a) Section 20 of the Juvenile Court Act of the District of Columbia is amended by striking out "death of the" and inserting in lieu thereof "death of any".

(b) Sections 3 and 27 of such Act are amended by striking the word "judge" wherever it appears therein and inserting in lieu thereof the word "judges".

(c) Sections 22 and 24 of such Act are amended by inserting the word "chief" immediately before the word "judge" wherever the same appears therein.

(d) Sections 5, 13, 26, and 36 of such Act are amended by striking out "the judge" wherever it appears in such sections and inserting in lieu thereof "a judge".

(e) Section 23 of such Act is amended (1) by striking from the second sentence "the judge" and inserting in lieu thereof "a judge"; and (2) by striking out "the judge as he may direct and keep full records of its work", and inserting in lieu thereof "the court as it may direct and such department shall keep full records of its work".

(f) Subsection (b) of section 28 of such Act is amended by striking out "The judge may also provide by rule or", and inserting in lieu thereof "The court may also provide by rule or a judge may provide by".

(g) Section 42 of such Act is amended by striking out "judge and other".

SEC. 4. Section 21 of the Juvenile Court Act of the District of Columbia is amended by striking the word "judge" and inserting in lieu thereof the word "court".

SEC. 5. The Juvenile Court Act of the District of Columbia is amended by adding at the end thereof the following new section:

"SEC. 45. The chief judge or the acting chief judge of the juvenile court shall submit to the Attorney General of the United States and to the Chairman of the Board of Commissioners of the District of Columbia a detailed quarterly report of the work of the court, such report to be made within thirty days of the end of the quarter, and to include the number of juvenile and adult

cases heard, the number of juvenile and adult cases calendered, the number of juvenile and adult complaints filed, the number of juvenile cases closed without court hearing, moneys collected for fines and support of legitimate and illegitimate famly members, and such other information as may reflect the court's operation and volume of work. A copy of such report shall be kept in the office of the clerk of the court and be subject to public inspection during the regular hours that the court shall be open for business."

SEC. 6. Wherever in any laws of the United States reference is made to the judge of the juvenile court of the District of Columbia such reference shall be construed to mean any judge of such court.

AUTHORIZATION OF APPROPRIATION FOR III PAN AMERICAN GAMES

Mr. MANSFIELD. Mr. President, I ask unanimous consent that the Senate proceed to the consideration of Calendar No. 140, House bill 2575, and that it be made the pending business.

The PRESIDING OFFICER. The bill will be stated by title for the information of the Senate.

The LEGISLATIVE CLERK. A bill (H.R. 2575) to authorize the appropriation of $500,000 to be spent for the purpose of the III Pan American games to be held in Chicago, Ill.

The PRESIDING OFFICER. Is there objection to the request of the Senator from Montana?

There being no objection, the Senate proceeded to consider the bill.

Mr. MANSFIELD. Mr. President, the purpose of making this bill the pending business is to have a bill pending before the Senate. No action will be taken upon it today.

NEW PROGRAM FOR THE NATIONAL FORESTS—A MONUMENT TO SECRETARY BENSON

Mr. BENNETT. Mr. President, just prior to adjournment of Congress for the Easter recess, Secretary of Agriculture Ezra Taft Benson submitted a report to the Senate and the House which will undoubtedly be recorded in history as one of the great conservation documents of all time. In preparing a "Program for the National Forests," Secretary Benson and his Forest Service technicians have developed a scientific plan for multiple use of our vital national forests through the year 2000. Such vision and extensive planning is well-nigh unheralded.

The proposed program is not only of immediate importance to the many States where there are national forests, but is of utmost consequence to the entire Nation and particularly to future generations. In few States are our national forests more important than in Utah where they comprise 15 percent of the State's land and where fully 85 percent of our water supply originates. Our national forests are our reservoirs.

Moreover, thousands of recreation seekers visit Utah's national forests each year including picnickers, hunters, fishermen, hikers, lovers of nature, and many others. Our forests are used for grazing, wildlife habitat, timber, and countless other uses. We in Utah, therefore, are delighted with the new program.

A fine Washington, D.C., reporter for the Salt Lake Tribune, Frank Hewlett, who has followed conservation problems for many years, has caught the vision of the Department of Agriculture program. I ask unanimous consent that his article of April 5 be included in the RECORD at this point.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Salt Lake Tribune, Apr. 5, 1959]

FORESTRY PLAN—A MONUMENT

(By Frank Hewlett)

WASHINGTON, April 4.—Scheduled for early congressional consideration is a report entitled "program for the national forests" which shows promise of becoming one of the monumental works of the administration of Agriculture Secretary Ezra Taft Benson.

This ambitious program, which already has the blessing of President Eisenhower, is a special concern to the States of the West, which have 87 percent of the national forest land. Of the 148 national forests, Idaho and Oregon each has 12, Montana 10, Utah and Washington each 7, Wyoming 5, and Nevada 2.

The report visualizes a jump in direct financial revenues of the national forest system to $350 million a year by the turn of the century. This is more than three times the current receipts and spells good news for the counties in which national forests are located, since 25 percent of the revenues are distributed to them in lieu of direct taxes.

The document not only sets up a short-term conservation program for the national forests but also a long series of goals for the year 2000.

Heavy emphasis is placed on need for expanding the recreation facilities of the forests to help take care of the estimated 332 million persons in the United States by the turn of the century.

It also calls for a strong Federal program in the fields of soil and water, forests and minerals and wildlife resources.

Though the forest service would be the first to deny it, the report also can be interpreted as an answer to the controversial wilderness legislation now before the Congress which has stirred up a storm of opposition in the West.

One of the scores of recommendations is the calling of a review of at least 30 of the Nation's remaining 41 primitive areas as to their wilderness characteristics and reclassify them accordingly.

Another significant proposal, is the development of 10,000 new campground and picnic sites within the national forests which would contain 102,000 family units. This is in addition to the now well-along operation outdoors for the reconstruction and rehabilitation of some 4,700 existing campground and picnic sites.

Heavy emphasis is placed by the report on the need for an adequate system of roads and trails, held essential to the proper management of forest lands.

The need for more liberal access roads is stressed, and they are described as investments which will pay their own way over a period of years.

It estimates that 392,600 miles of new roads and 6,000 miles of new trails ultimately will be needed, along with reconstruction of 112,600 miles of roads and 11,300 miles of trails. Another 41,400 miles of existing trails will be replaced by the construction of roads.

For development and management of the 68 million acres of rangeland in the national forest system, there are two major long-range objectives:

1. Proper stocking and improvement of the range resources to achieve desirable watershed conditions and sustained high-level production of forage.

2. Making land suitable for livestock grazing available for use under conditions that promote stability for communities and individuals and encourage full development of range resources with due regard to other resources and uses.

In order to make substantial progress toward the long-range objectives, a short-term program also is proposed which includes stocking adjustments, separation of cattle and sheep grazing on common use areas, construction of 18,000 miles of fences and 9,500 water developments and treating rangeland to control noxious or poisonous plants.

Under the subject of land adjustment and uses, the report states that special attention will be given to completion of the consolidation of national forest ownership in certain key watersheds of Utah's Cache National Forest.

A 15-point program for research is recommended, ranging from pest and fire control to new and improved equipment for logging without damage to watershed values. The report also cites the need for 17 specialized laboratories and related greenhouse and service facilities for basic research on forest insects and diseases, tree genetics, forest soils and hydrology, forest fires, and forest products.

At least some of these recommendations came from the national forests research advisory committee of the Department of Agriculture, which long had been headed by Salt Lake City's Gus P. Backman.

Summing up the anticipated national benefits from the proposed program the report states:

By the year 2000 national forest timber sales should reach 21 billion board-feet of saw timber worth $350 million at 1958 prices.

It is estimated that for every dollar of national forest stumpage sold, the end products will be worth $20 by the time they reach the ultimate consumer.

Some 620,000 people, more than double the present number, will derive their livelihood from the harvesting, processing, hauling, and merchandising of national forest timber and timber products.

An estimated 130 million recreationists will visit the national forests by 1969, and the figure would go as high as 600 million the year 2000. Just 130 million visitors will put into trade channels a total of nearly a billion dollars for sporting equipment, transportation, licenses, lodging, and other items.

Directly responsible for the report was Richard E. McArdle, Chief of the Forest Service. He has had most of his staff working on it for a 2-year period. Pertinent information and key recommendations came from Forest Service representatives in the field.

Secretary Benson, in submitting the report to the Congress, warned that what is done in the next 10 to 15 years "will largely determine whether these vastly important public lands will contribute by the year 2000 their fair share to a greatly expanded national economy."

NEW RECLAMATION COMMISSIONER—A GOOD APPOINTMENT

Mr. BENNETT. Mr. President, after 30 years of service with the Bureau of Reclamation, Commissioner W. A. Dexheimer is leaving the Bureau to be succeeded by Floyd E. Dominy, the present Associate Commissioner. I have pre-

pared a statement regarding this change, and I ask unanimous consent that it be printed in the RECORD, at this point as a part of my remarks.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

STATEMENT BY SENATOR BENNETT

NEW RECLAMATION COMMISSIONER—A GOOD APPOINTMENT

Last week President Eisenhower announced a change in the Commissionership of a Government agency of vital importance to the progress and economic welfare of the West—the Bureau of Reclamation.

Commissioner W. A. Dexheimer, named by President Eisenhower to head the Bureau of Reclamation in 1953, is leaving on May 1 after 30 years of service with the Bureau, and is to be succeeded by Floyd E. Dominy, presently Associate Commissioner.

It is significant that President Eisenhower reached into the career service to elevate these two men to the Commissionership. The retiring Commissioner, Mr. Dexheimer, a native of Colorado, has spent his entire career with the Bureau with the expection of the war years and a short period thereafter. The new appointee, Mr. Dominy, a native of Nebraska, attended the University of Wyoming and entered the career service in that State as a vocational argicultural teacher in Hillsdale High School for a brief time and then became county agricultural agent for Campbell County, Wyo.

They are both from the West, both know our problems, talk our language and, above all, understand the importance of water in our economy. We can consider ourselves fortunate in having the services of these two dedicated servants.

I am particularly aware of Commissioner Dexheimer's administration because it was in 1956, during his tenure in office, that the Colorado River storage project, which is so important to us in the Rocky Mountain States, was authorized. The project has had the enthusiastic support not only of Commissioner Dexheimer, but of President Eisenhower and Secretary of the Interior Fred Seaton, and we owe them a great debt of gratitude.

Commissioner Dexheimer came up to the commissionership through the ranks of the construction engineers. The new Commissioner, Mr. Dominy, followed a different, but no less important route, that of agricultural economics. He got his early experience working with and for the man on the land. He had the importance of proper use of our water resources ground into him during the drought days of the 1930's, when he observed at first hand as county agricultural agent the devastating effect of lack of water on the human and economic utility of that area.

He later was field agent for the western division of the Agricultural Adjustment Administration with extensive responsibility in execution of the agricultural conservation program in the Western States. He was Assistant Director of the Food Supply Division of the Office of the Coordinator of Inter-American Affairs from 1942 to 1944, when he traveled in South and Central America on war food activities.

From 1944 to 1946 he served as lieutenant in the U.S. Naval Military Government, and was staff officer responsible for the development and administration of agricultural programs placed in effect on the Pacific Islands immediately following reoccupation by U.S. forces.

After the war, he came to the Bureau of Reclamation as a land development specialist. Soon he was made Chief of the Allocation Repayment Division. He is aware of the keystone of reimbursability on which the Federal reclamation program is predicated, and is known throughout the West as a hard, two-fisted negotiator, though impartial and fair, who will not let anyone take a free ride on the Government's reclamation investment.

From his background and understanding of the West and his record of outstanding administration in positions of ever-increasing responsibilities which have been placed upon him, and based upon many cordial dealings with him, I would say Secretary Seaton and President Eisenhower have made an excellent choice in the new Commissioner of Reclamation. We are looking forward to working with him in his new capacity as we have worked with him so successfully in the past.

Mr. KUCHEL. Mr. President, will the Senator yield?

Mr. BENNETT. I am happy to yield.

Mr. KUCHEL. The announcement which my able colleague from Utah has just made with respect to the retirement from Government service of the Commissioner of Reclamation prompts me, as a matter of duty, although a very pleasant one—to rise to salute Commissioner Dexheimer for the fine work he has performed on behalf of the Bureau of Reclamation, the Department of the Interior, and the Government of the United States.

As a Californian, let me add that the people of the State of Utah owe as much to the farsightedness of this man as do the people whom I have the honor in part to represent.

Mr. BENNETT. I appreciate the statement of my friend from California. It is my purpose not only to remember the great service Commissioner Dexheimer has recommended, but to express my approval of the man who will take his place, another westerner, a man from Wyoming, who grew up in that section of the country where irrigation is vital to our continued prosperity. I am sure that Mr. Dominy will continue both the policies and the excellence of service which characterized his predecessor, Mr. Dexheimer.

Mr. KUCHEL. Mr. President, I join in the hope of my able colleague from Utah.

Mr. BENNETT. I thank the Senator.

Mr. KUCHEL. Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

The legislative clerk proceeded to call the roll.

Mr. MANSFIELD. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

LATIN AMERICA

Mr. SMATHERS. Mr. President, the focus of interest has swung to Latin America recently in a way that is, strangely, both heartening and ominous.

Let me first hail an historic happening which took place this week—the cheering report that all 20 Latin American Republics have agreed on the charter to set up an area development bank and loan fund.

The billion-dollar institution will be composed of an Inter-American Development Bank and a Fund for Special Operations. The first will have a capital of $850 million; the second will have a capital of $150 million. The United States will provide 40 percent of the total capital.

For 9 years I have urged as strongly as I could, the creation of such an institution so as to make realities out of potentials, so as to create factories from determination and natural resources that lacked capital, and so to bring economic productivity from ideas that lacked financing.

I am gratified that the administration reversed its longtime opposition to a loan institution, composed of and created for the express needs of the peoples of the Western Hemisphere. Support of the United States was imperative for the establishment of this hemisphere bank.

I believe this change in position was brought about when Dr. Milton Eisenhower, the brother of the President, made a tour of Central and South America last year and, after visiting various countries and talking with their representatives, he concluded that the long dormant idea of an Inter-American Bank should be activated and made a reality.

The Bank can bring nothing but important material advances, and promote an immeasurable wealth of friendship and understanding among all the nations of inter-America. It will be a long step toward bringing the term "good neighbors" into vogue again.

There is another important occasion that demands our attention. It is the meeting, now underway, of U.S. Ambassadors from 12 Caribbean countries, and high officials of the State Department, gathered in San Salvador to discuss present and proposed U.S. policies for that area.

The meeting is a vivid reminder that today the Caribbean area is no more nor less than a ticking bomb, which can be exploded violently through clumsiness, lack of foresight, or worst of all, apathy.

I do not ever remember a time when the situation in the Caribbean was more delicate.

John McDermott, a distinguished reporter for the Miami Herald, whose record as a foreign correspondent makes him an eminently qualified observer, warned recently:

> What is happening in Cuba is reminiscent of Guatemala 4 years ago when the Communists were able to push Jacob Arbenz into power.

That is how serious the Caribbean crisis is today.

Recently I was deeply disappointed to read statements attributed to Prime Minister Fidel Castro that, in the event of a war between the United States and Soviet Russia, Cuba would remain neutral.

I do not know whether the Cuban people would share that view. I do not think they would support neutrality as against brutality.

Cubans are well aware of the values of Western Christianity, shared alike by the United States and every Republic of Latin America, and damned by the atheistic Soviets.

They can easily distinguish between the qualities of American democracy and Soviet communism.

There are few in Cuba who would equate the liberty of the United States with Soviet slavery. They have no trouble in identifying the force of Red tyranny which has crushed personal freedom wherever it spread, scorned human dignity, and swept away the rights of religious worship and free expression.

The people of the United States are proud of a heritage they share with Cubans. The blood of their forebears was spilled alongside that of Cuban patriots. We are proud that we helped gain freedom for a brave people.

In the years since Cuba's liberation, a wonderful friendship has flourished between our peoples. It still flourishes.

Our trade with Cuba flourishes, too. We in the United States buy 52 percent of the Cuban sugar crop, a crop which accounts for four out of every five dollars earned by the Cuban economy. In 1956, that total was $1.6 billion.

In 1957 the United States bought 2.6 million tons of sugar from Cuba—about 400 million tons above their quota. Its value was more than $370 million. In 1956, Cuba's total exports amounted to $667 million. The United States bought two-thirds of these exports, valued at $430 million.

United States friendship with Cuba is traditional, genuine, and mutually shared. The United States, I believe, is pro-Cuban. Certainly it has not been, nor would it be now, neutral in its feelings toward Cuba. Neither do I think that if, somehow, Cuba should become involved in a war with the Communists—which all of us pray will never occur—and their right to religious freedom, to personal independence, were at stake, the United States would remain neutral or indifferent to their fate, any more than we were neutral or indifferent in 1898, when we helped Cuba gain its independence. Certainly the people of America understand the difference between communism and democracy. We thoroughly appreciate the blessings which flow to all individuals who are permitted to live under a democracy, and the curse which is upon those who must live under a tyranny.

Mr. President, I ask unanimous consent to have printed at this point in the RECORD the article entitled "Confused Castro Talking Cuba Into Red Orbit—Economy Near Paralysis, But There's Still Hope." The article which was written by John B. McDermott, correspondent for the Miami Herald relates in vivid detail some of the problems with which we will have to deal in the very near future. I feel it should have the attention of all Members of Congress. I also ask to have printed in the RECORD an article entitled "Is Castro Involved in Red Attempt To Pour Ring Around Panama Canal?" written by Drew Pearson, and published in the Washington Post and Times Herald of recent date; and an article entitled "Doubts About Castro Raised on Eve of Trip," published in the Washington Evening Star of April 8, 1959.

There being no objection, the articles were ordered to be printed in the RECORD, as follows:

[From the Chicago Daily News, Mar. 31, 1959]

CONFUSED CASTRO TALKING CUBA INTO RED ORBIT—ECONOMY NEAR PARALYSIS, BUT THERE'S STILL HOPE

(By John B. McDermott)

HAVANA, CUBA.—Memo to Moscow: "Keep your secret agents and your organizers home, Nikita Khrushchev. You don't need them here. Fidel Castro himself is unwittingly talking Cuba into the Communist orbit."

A high Government official, a dedicated follower of Castro, said he estimates more than 1 million people—one-sixth of Cuba's population—are out of jobs today.

No one knows the exact count.

The Government is operating in a state of disorganized confusion.

Although economic paralysis is fast setting in, there is still a hope for recovery.

It hinges on the efforts of two Castro aides, Regino Boti, minister of the national economy board, and Felipe Pazos, head of the national bank. Both are extremely able.

If Castro gives them a chance, they may be able to reverse the trend Castro has initiated.

Castro, as self-appointed prime minister of the revolutionary government, calls the shots and outlines policy as he goes. Frequently policy seems to be made on the spur of the moment, in the middle of one of his hours-long speeches.

If he keeps it up, observers here feel the Russians and their Red party leaders need move hardly a finger toward eventual capture of this sugar republic and a strategic North American beachhead.

Yet the Cuban people are instinctively anti-Communist and procapitalist.

What is happening here is reminiscent of Guatemala 4 years ago when the Communists were able to push Jacobo Arbenz into power. But then it took long months of careful, crafty planning—of infiltration and manipulation.

In Cuba, it is being accomplished by the national hero, a man who is not a Communist but rather is an inept administrator, idealist and demagog.

In fairness to Castro, it must be emphasized that he appears completely sincere. And he has achieved, for the moment at least, honesty in government, a quality hitherto unknown in Cuban politics.

Despite his sincerity, he gives every indication of doing a beautiful job of fouling up this island nation's economy, driving it toward bankruptcy, upsetting traditional social customs and creating an atmosphere of government by confusion.

He may know where he is heading, but that's more than do some of his closest supporters who are government officials.

Several I talked to admitted they are baffled. Others maintain that all is well, that this is simply a transitory period.

"Don't condemn Castro," pleaded youthful-looking J. A. Ossorio, American affairs officer in the prime ministry. "There is absolutely no connection between the Castro government and the Communists.

"Socialists? Yes. But Communist? No. "The Bible says, 'You shall know them by their works.' Give Castro a chance to prove himself."

Another official admitted off the record that Castro talks too much when he should be listening.

"Cuba today is in a state of shocked hero worship," said this official with surprising frankness. "Unfortunately, the strongest believer in Fidel Castro is Castro himself. Soon he must come down from the clouds and face reality."

A prominent Cuban newspaperman, known as a longtime Castro backer, said he is fearful that while the 32-year-old Prime Minister talks himself hoarse on radio and television, leftwing extremists are moving into key advisory positions.

Among these are Alfredo Guevara, who directs classes in Marxism teachings to the army; Baco Alanso, head of the national fine arts commission; Carlos Franqui, former proofreader on the Communist organ Hoy, who now runs Castro's government newspaper Revolution; Antonia Antuna, who directs the national institute of culture under the Education Ministry; Casals Perez, head of rebel radio; and many others.

Castro's brother, Raul, heads the new army and "tolerates" communism. Another military strongman, now ill, is Argentine "Che" Guevara, who claims to be non-Communist although he seems to play ball with the Reds, including the old Arbenz regime in Guatemala.

Two leftist authors, Emil Roig de Leuschenroig and Antonio Munez Jimenez, have been reinstated to places of prominence and their works are being used in the schools and in indoctrinating the military.

Castro has loftey aims. But too many of his plans are unrealistic and dangerous. Right now he appears to be in the position of an amateur tight rope walker on a high wire for the first time without a net.

IS CASTRO INVOLVED IN RED ATTEMPT TO POUR RING AROUND PANAMA CANAL?

(By Drew Pearson)

SAN JUAN, P.R.—The stock technique of the slight-of-hand performer is to get audience attention diverted to one part of the stage while he saws the lady in two in a wooden casket.

That technique was used by the Kremlin during the Berlin airlift and it may be the Kremlin's strategy in Berlin today.

While the United States concentrated all its attention on the Berlin Airlift in 1948–49, the Kremlin was successfully busy on other parts of the world stage.

Today while we again concentrate on Berlin, Iraq, one of the most vital countries in the Near East and one-time ally, is rapidly coming under the Kremlin's wing.

But even more important, the Kremlin appears on the way to establish a beachhead in the Caribbean area around the Panama Canal.

The New York Times, the Columbia Broadcasting System and others who built up Fidel Castro have been quite superficial in their reporting of the factors and influences around Castro.

But the fact is that Fidel is an extraordinary young man with an extraordinary background.

The first record of his operation to appear in American intelligence reports dates back to April 9, 1948, which, incidentally, was just 8 days after the Russians clamped their first blockade on Berlin.

At that time George Marshall, Secretary of State, was in Bogotá, Colombia, attending the historic ninth meeting of the Pan American Union aimed at promoting peace and unity in the Western Hemisphere, when one of the worst civil massacres in recent Latin-American history bloodied the streets of Bogotá.

A carefully laid student plot burst right under the nose of Secretary Marshall, streets were barricaded, 300 people killed.

No. 1 leader of this revolt, it now develops, was Fidel Castro. Records show that on April 3, 5 days before the massacre, Communist-slanted handbills were dropped from the gallery of the Colon Theater in Bogotá as the President of Colombia and other officials attended.

Police at that time arrested two young Cubans—Fidel Castro and Rafael Del Pino. They were released.

After the massacre, police tried to arrest these two again, but they had taken asylum in the Cuban Embassy.

The manager of the Hotel Claridge where they stayed testified that guns and ammunition had arrived at the hotel, and Guillermo Hoenigsberg, who occupied the next room, testified that the had listened to conversation of the two students indicating that they were agents for the "third front of the U.S.S.R. in South America."

NOTE.—Rafael Del Pino, once Castro's close friend, now living in Miami, has given up any left-wing ideas and told the Herald the other day that he would be willing to join or lead a revolt against Castro because of the leftist trend of the revolution.

Between the Bogotá massacre and the beginning of the Castro revolt in Cuba four stanch friends of the United States of America in the Caribbean were systematically assassinated:

President Somoza of Nicaragua, President Remon of Panama, President Castillo Armas of Guatemala, and Colonel Aranda, a pro-United States Guatemalan candidate for president, murdered in Mexico to pave the way for pro-Communist Arbenz Guzman to take over.

Intelligence records show no link between Castro and these assassinations, but it's significant that Rubin Miro, who served 2 years in jail on the charge of killing President Remon of Panama is now in Havana and has been working with Castro for some time. Also, the Caribbean legion, 30 percent Communist, has been fighting for Castro.

Simultaneous with Castro's successes in Cuba, two secret plots have been uncovered in Panama, one of them hatched on American soil inside the Canal Zone. Both occurred following Castro's rise to power in Cuba.

The first came to a head February 18 in Panama City. The second was discovered as the result of a meeting at the home of Carlos Calzadilla, a former student leader, inside the Canal Zone.

There a group of sergeants and one lieutenant planned a revolt inside the Panamanian Army, scheduled March 8. The revolt collapsed after discovery of the meeting.

President Ernesto de la Guardia, scrupulously honest, is a strong believer in democracy. There can be no charge of dictatorship or graft behind any plots against him.

Meanwhile, in Havana, the Communist paper, Hoy, has reopened, and is publishing daily blasts against the United States; another paper for young Cubans, Mella, follows a Communist line, and the old Batista paper, Revolucion, has been taken over by Fidelistas, edited by Castro's close friend, Carlos Franquia, and is following a pro-Communist line.

In Santiago, next to the vital U.S. naval base at Guantanamo, another pro-Communist paper, Sierra Maestra, almost daily attacks the United States and praises Russian policy.

That's only part of the change that has come over the Caribbean since Fidel Castro came into power.

[From the Washington Star, Apr. 8, 1959]

DOUBTS ABOUT CASTRO RAISED ON EVE OF TRIP

Fidel Castro, Cuba's controversial new strong man who has yet to prove himself at home and with American officials, goes upstage on the American foreign policy scene here in the next week.

On Thursday 12 American mission chiefs from Central American Embassies meet with Assistant Secretary of State Roy Rubottom in San Salvador. One of their main concerns will be the changed situation in the Caribbean area since the Castro regime came to power.

Next week Premier Castro comes to Washington to begin a 10-day visit filled with speechmaking and conferences with Government and private leaders. He is to make a major address before the American Society of Newspaper Editors here a week from Friday.

CUBAN UNDER TEST

The 32-year-old Mr. Castro, high American officials here believe, has an extremely severe testing time just ahead of him. They have these doubts about him:

1. He is exposed to a considerable Communist influence, inside his government and out.

2. He is harboring Latin American revolutionaries who are allowed to plot openly against nearby governments which Mr. Castro considers to be run by dictators.

3. He is losing his middle class and professional support.

4. He has a quick, sharp tongue that may meet with some blunt reactions from Congress and other free-speaking commentators on the American scene, with unpredictable results for Cuban-American relations.

TO REPORT ON CUBA

Ambassador Philip Bonsal, new American envoy to Havana, is scheduled to make a special report to Assistant Secretary Rubottom at the San Salvador meeting this weekend.

American officials recognize that Communists get special benefits when a nation is suddenly freed from dictatorial control and restrictions on the rights of political parties and freedom of the press are removed.

The well-organized Reds returning from exile or emerging from underground, rush into key spots in education, labor, the press and student movements.

This pattern has been repeated in Cuba. Besides, two of Fidel Castro's closest associates are widely suspected of Communist connections. His brother, Raul, is reported to have spent some of his formative years behind the Iron Curtain working in Communist youth movements. He frequently has avoided opportunities to prove he is anti-Communist.

GUEVARA BACKED REDS

Ernesto Guevara, another close Castro associate, favors Communist causes and was an admiring backer of the Red regime of Jacobo Arbenz Guzman in Guatemala. Mr. Guevara has said publicly he is not a Communist, but he added that this does not mean he is anti-Communist.

American officials also have what they describe as "rather disturbing evidence" that Communist revolutionaries are active among the Latins in Cuba now openly plotting against the regimes in Haiti, the Dominican Republic, and Nicaragua.

Both the anti-Communist revolutionaries and the Reds are allowed to operate from Cuba. They travel in and out of Cuba, and at least one radio station still is broadcasting threats against Haiti.

The flow of investment capital, especially into housing programs, has begun to slow down in Cuba.

INVESTMENT TIDE SLOWS

The evidence shows that upper and middle class Cubans, on whom Mr. Castro must rely to push through his program of economic reforms, are showing signs of disenchantment.

Mr. Castro has now shifted his appeal from the middle class and professional groups to the lower classes. Whether he can hold the new supporters, and how he hopes to generate investment capital are questions being watched with interest in official Washington.

Premier Castro is to arrive in Washington a week from today. He is to lunch with Acting Secretary of State Christian Herter on Thursday, April 16.

DUE NEXT WEEK

That is the only official appointment he has so far.

President Eisenhower will still be vacationing in the South and is not expected to see the new Cuban leader.

But Mr. Castro's comments in Cuba about seeking economic aid here indicate he will confer with American aid officials.

The initiative is up to Mr. Castro, informants here say, and there is no word from Havana of any official inquiries for appointments. This makes it unlikely the Cuban Premier will be able to arrange any economic aid by the time he leaves the country about April 25.

WANTS SUGAR INCREASE

Mr. Castro has been quoted from Havana as demanding an increase in Cuba's sugar quota. But his comments indicate to some officials here that he does not understand the complicated American system of quotas for buying sugar from domestic and foreign producers.

Several Senators from beet sugar producing States could be expected to speak up to protect their constituents' interests if the Cuban Premier made any demands likely to affect domestic interests.

Mexican, Filipino, Peruvian, and other interests might also be ruffled.

Young Mr. Castro also has indicated he hopes to appeal over the head of the American Government to the people for support of his cause. Besides riling American officialdom, this is not likely to be received well in other circles here, informants believe.

For all these reasons, American officials are expecting a lively time when the bearded Cuban leader flies into Washington next Wednesday.

Assistant Secretary Rubottom and Ambassador Bonsal hope their talks in San Salvador this weekend can help smooth the way.

Mr. SMATHERS. Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

The legislative clerk proceeded to call the roll.

Mr. MANSFIELD. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

CONSTITUTIONAL AMENDMENT CONCERNING PRESIDENTIAL DISABILITY

Mr. KEFAUVER. Mr. President, the former Attorney General of the United States, Mr. Herbert Brownell, wrote a most searching and learned dissertation on the need for a constitutional amendment concerning Presidential disability. The article was published in the December 1958 issue of the Yale Law Journal. Mr. Brownell sets forth with great clarity the pressing need for an amendment such as that provided for in Senate Joint Resolution 40, of which I have the honor to be the chief sponsor.

I ask unanimous consent that Mr. Brownell's article be printed at this point in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

PRESIDENTIAL DISABILITY: THE NEED FOR A CONSTITUTIONAL AMENDMENT

(By Herbert Brownell, Jr.)

The realization has grown among thoughtful people that our very survival in this age may rest on the capacity of the Nation's chief executive to make swift and unquestioned decisions in an emergency. As a result, a major constitutional problem, previously glossed over, has been brought to the fore. The problem is that posed by temporary presidential inability to discharge the powers and duties of the Presidency at a time when emergency action is required. It has been emphasized during the Eisenhower administration by the President's three periods of temporary physical incapacity, even though, fortunately, no crisis required immediate presidential action during those periods. Now that the issue is so forcefully upon us, with our future existence possibly depending on the forethought that we exercise in resolving it, failure to take proper steps to answer promptly the constitutional question would be the height of irresponsibility.

Many people who have considered this problem have assumed that its most important aspect is the factual determination of presidential inability. But, as the history of 170 years—including that of the 6 years years immediately past—shows, no real difficulty attends the determination of when or whether a President is unable to perform the duties of his office. The disability of Garfield in a coma, or of Wilson during at least part of the time after his stroke, was undisputed. No factual doubts about President Eisenhower's physical condition were of significance during any of his three illnesses. The crux of the constitutional problem has been—and will be—to insure that the Vice President can take over with unquestioned authority for a temporary period when the President's inability is not disputed, and that the President can resume office once he has recovered.

THE ORIGIN OF THE PRESIDENTIAL INABILITY CLAUSE OF THE CONSTITUTION

Students of the Constitution have differed for many years over the meaning of paragraph 6 of section 1, article II, of the Constitution. This paragraph, which deals with Presidential inability, reads, in part: "In case of the removal of the President from office, or of his death, resignation, or inability to discharge the powers and duties of the said office, the same shall devolve on the Vice President." Although it is this provision which primarily raises the constitutional problem here under consideration, the language quoted does not constitute all of paragraph 6. Immediately following the quoted words and, significantly, separated only by a comma is the following clause: "And the Congress may by law provide for the case of removal, death, resignation, or inability, both of the President and Vice President, declaring what officer shall then act as President, and such officer shall act accordingly until the disability be removed, or a President shall be elected." The clause delineating congressional power has been implemented from time to time through the enactment of statutes setting forth the succession to the office of President in the event of the removal, death, resignation, or inability of both the President and Vice President. Some independent problems of constitutional interpretation have been raised by this clause, but these problems are extraneous to this article.

An initial examination of the first clause poses several questions. The clause outlines four situations in which the Vice President may be required to act in some capacity. Three of the situations, namely, removal from office, death, or resignation, apparently contemplate the permanent exclusion of the President for the balance of his term. But was it intended that "Inability to discharge the powers and duties of the said Office" should exclude the President thenceforth, in the event of his recovery, from discharging those powers and duties? Another obvious question arises from the language of the clause which provides "the same shall devolve on the Vice President." To what do the words "the same" refer? What is it that devolves on the Vice President? Is it the Office of President, in which case the President might thenceforth be excluded as in the other three instances of permanent exclusion; or do only the powers and duties devolve on the Vice President, in which case his tenure as the Acting Chief Executive may very well be for only a temporary period?

Historical investigation discloses that the two main clauses of paragraph 6 were not originally created by the Constitutional Convention as part of the same paragraph. They were considered separately, approved in substance on different days and, in fact, drafted by different bodies. The first clause was composed by the Committee of Detail and by the Committee of Eleven and reported to the full convention on September 4; the second clause was offered as a motion from the floor on September 7, 1787. Indeed, the two clauses were not worded as they now appear when they were approved as to substance by the full convention and referred to the Committee of Style. The Committee of Style had no power to make any change in meaning or substance, but only to edit the text for stylistic improvement.

The true meaning of the first clause of paragraph 6 becomes apparent when the original articles, as agreed to by the convention in substance, are set in juxtaposition to the articles as they were reported by the Committee of Style, and (with one change) as they now appear in our Constitution.

ARTICLES ORIGINALLY AGREED TO BY THE CONVENTION	AS LATER REPORTED BY COMMITTEE OF STYLE AND FINALLY ADOPTED
Article X, section 2: * * * and in case of his removal as aforesaid, death, absence, resignation, or inability to discharge the powers or duties of his office the Vice President shall exercise those powers and duties until another President be chosen, or until the inability of the President be removed.	Article II, section 1, paragraph 6: In case of the removal of the President from office, or of his death, resignation, or inability to discharge the powers and duties of the said office, the same shall devolve on the Vice President.
Article X, section 1: The legislature may declare by law what officer of the United States shall act as President in case of the death, resignation, or disability of the President and Vice President; and such officer shall act accordingly, until such disability be removed, or a President shall be elected.	and the Congress may by law provide for the case of removal, death, resignation, or inability, both of the President and Vice President, declaring what officer shall then act as President, and such officer shall act accordingly, until the disability be removed, or a President shall be elected.

Three important points appear by visual comparison of the two texts above. First, the articles as initially adopted by the convention used the words "the Vice President shall exercise those powers and duties." One does not exercise an office, but one does exercise powers and duties. Clearly, then, the clause providing that "the same shall devolve on the Vice President" means that the Vice President shall exercise the powers and duties of the office, and not that the Vice President succeeds to the Office itself. In other words, he acts as President, but he remains in the office of Vice President. This interpretation is borne out by the history of the convention, which shows that the vice presidency was originally created to provide for an alternate Chief Executive who might function from time to time should the President be unable to exercise the powers and duties of his office. Only after creating this standby role did the convention consider giving the Vice President something to do while he wanted to act as President. The idea of assigning him the duty of presiding over the Senate was strictly an afterthought.

Secondly, and of considerable significance, the articles as initially agreed to by the convention definitely prescribed the period during which the Vice President was to act as President, that is, "until another President be chosen, or until the inability of the President be removed." This makes crystal clear that the exercise of the powers and duties of the Presidential Office by the Vice President was to be for a temporary period only.

A third point should be observed. Each of the clauses which are now joined originally contained separate but similar language limiting the tenure of whoever was to exercise the power and duties of the Presidential Office. The words of the first clause have already been noted; the second clause provided: "and such officer shall act accordingly, until such disability be removed, or a President shall be elected." When these two clauses were referred to the Committee of Style, the text was revised. The clauses were consolidated in one sentence, separated only by commas, and for terseness one of the phrases limiting the tenure of the person exercising the powers and duties of the Presidential office was eliminated. The phrase at the end of the revised sentence was intended to refer to all of the situations described in that sentence.

Still further proof of the original intention to have the Vice President assume only the duties of the President, not his office, can be inferred from the Convention's reaction to the version of paragraph 6 proposed by the committee of style. The only change made by the Convention in the committee's draft was to strike the concluding words "or the period for chusing another President arrive," and to substitute the phrase as it now appears, "or a President shall be elected." This step was taken at Madison's insistence and in conformity with a motion previously adopted for the specific purpose of allowing the vacancy to be filled by a special presidential election. Of course, the Convention's action does not necessarily amount to a clear-cut decision concerning the status of the Vice President while he should act as President, but it certainly suggests that, in the contemplation of the framers, the only occupant of the Presidential office was to be the elected President himself—that if he left the office, a vacancy would exist requiring the election of a replacement.

One may logically ask why doubt and controversy over the meaning of this clause has arisen in the past, if the framers' intent is so clear and certain. The answer is simply that a great deal more is now known about what went on at the Constitutional Convention of 1787 than was known in the past, even in the years immediately after the Convention. It was conducted in secrecy, and not until Madison's notes were published posthumously in 1840 was a fair picture available, although still not a complete one. Farrand's work, "Records of the Federal Convention of 1787," the definitive source on the subject, did not appear until 1911. Other

important data has come to light subsequently through the research of biographers and historians dealing with persons and actions of the time. Understandably, it has taken years for scholars to bring the information together. Furthermore, confusing precedents have been established by officials who did not have access to this information.

HISTORICAL APPLICATION OF THE CONSTITUTIONAL CLAUSE ON PRESIDENTIAL INABILITY

It was not until 1841 that paragraph 6 of section I, article II, became of practical importance. William Henry Harrison was the first President to die in office, and this event made John Tyler President. Or did it? As a matter of history, the first papers submitted to John Tyler for his signature had, below the space for his signature, the words "Acting President." Tyler was incensed; by a stroke of his pen he eliminated the word "Acting," and signed as President. And so, President he did become. After him, six other Vice Presidents did likewise upon the death of the President in office. Few now quarrel with this constitutional fait accompli, or want it changed. But it was to cause trouble later on when the constitutional question arose not from the death of a President, but from his inability.

Zachary Taylor died and was succeeded as President by Millard Fillmore; Abraham Lincoln died and was succeeded as President by Andrew Johnson; then James Garfield was shot in 1881. He lay in a coma for 80 days, completely unable to perform any of the duties of the Presidency. All were aware of his condition, and few disputed its seriousness. After 60 days, a Cabinet meeting was held in which it was unanimously voted, seven to nothing, that Chester A. Arthur, Vice President, should assume the powers of the presidential office. But was he to become President? Opinion was divided. The Cabinet itself voted 4 to 3, with Attorney General Wayne MacVeagh among the majority, that Arthur would become President and would thereby oust Garfield from office. The three previous occasions on which the Vice President had become President upon the death of the existing Chief Executive were powerfully persuasive precedents because, after all, the language of the Constitution concerning death or inability was exactly the same; indeed, as the preceding analysis shows, the position of the Vice President, whether the President died or was disabled, was actually intended by the framers to be the same.

The Cabinet resolved, nevertheless, that before Arthur should take this momentous step, Garfield should be advised and consulted about the consequences which might attend Arthur's assumption of the powers of the President. Garfield's physician, however, gave his medical opinion that such consultation might very well kill the President. Arthur himself emphatically declined to take any steps whatsoever to assume the powers of the President. He would not be a party to ousting Garfield from office. His reluctance on this score may well have been augmented by the fact that he belonged to the opposite wing of the Republican Party from Garfield's, and that Garfield's assassin, Guiteau, enthusiastically proclaimed both his admiration for Arthur and his loyalty to the political principles of Arthur's stalwart faction of the party.

Garfield lingered for another 20 days, then died; and Arthur thereupon took office as President. But the 80-day interim period had had a harmful effect on the country. Regular Government business could not be conducted, because of the President's lengthy absence, and also because subordinate officials could not be appointed. The Nation's foreign relations, lacking the direction of a Chief Executive, seriously deteriorated. Furthermore, general uncertainty and political antagonisms were engendered by the fact that the dying President belonged to one wing of the party and Arthur to another.

The second case of presidential inability occurred in 1919, less than 40 years after Garfield's death, when Woodrow Wilson suffered a stroke while leading the fight for the adoption of the Covenant of the League of Nations. After unprecedented military and economic exertions in World War I, America had reached a new pinnacle in world leadership; and at that precise moment its leader was stricken. Vice President Marshall was in the wings as an understudy, but there he stayed. A great Senate battle over ratification of the Versailles Treaty and the Covenant of the League of Nations was waged, with Presidential leadership missing. Marshall flatly declined to assume any of the powers of the presidency because of the constitutional uncertainty as to whether Wilson could resume his office when he recovered.

The exact extent of Wilson's inability is not clear, but it is certain that for a period of weeks he was completely unable to perform any of the duties of the office. Precise information about his condition was carefully shielded from public view by his wife, his personal physician, and his personal entourage in the White House. The President's personal advisers obviously feared the very thing that made Vice President Marshall hesitant to act—if the full extent of Wilson's disability should become known, public opinion would demand that Marshall exercise the powers of the Presidency, and Wilson might face a constitutional fight to regain his office, should he recover.

The jealousy with which the Presidential prerogatives were guarded—and perhaps might again be guarded—is epitomized by the actions of Wilson and his personal staff from his collapse on September 25, 1919, until the end of his term on March 4, 1921. Without the direction of the President or Vice President, Secretary of State Lansing called 21 Cabinet meetings. Having heard of these meetings, Wilson accused Lansing of usurping Presidential power and forced him to resign. Upon Lansing's suggestion that the Cabinet request Vice President Marshall to act as President, Joseph P. Tumulty, Wilson's secretary, replied: "You may rest assured that while Woodrow Wilson is lying in the White House on the broad of his back I will not be a party to ousting him." The President himself is reported to have commented in a similar vein, and to have confided to his secretary, after Lansing resigned, "Tumulty, it is never the wrong time to spike disloyalty. When Lansing sought to oust me, I was upon my back. I am on my feet now and I will not have disloyalty about me." Thus, Lansing's endeavors to insure the normal functioning of the executive branch, either by the Vice President acting as President or by the Secretary of State calling Cabinet meetings at which executive business could be transacted, were viewed by the President and his personal staff with antagonism, rather than gratitude.

The pernicious result of the belief that a Vice President actually becomes President for the balance of the Presidential term when called upon to exercise the powers and duties of the Presidency, has been to nullify the intent of the drafters of the Constitution that the Nation have an alternate Chief Executive to provide continuous Executive leadership. It should be apparent that the original constitutional intent and the problem of providing for the exercise of Presidential power in cases of inability would not be met merely by providing a new mechanism to determine the existence of the inability. No such determination was needed in the Garfield and Wilson cases; the inability was patent. The problem was to assure the President, his personal advisers, the Vice President and the public that the President would not be ousted from his office by a Vice Presidential execution of the powers and duties of the Presidency—to make certain that the President could "come back" of his own volition. Until this assurance can be given, a President and his personal entourage may be tempted to conceal or block an attempt to determine the existence of disability. Moreover, if every Presidential retirement from power must be a permanent one, a President's illness—however serious—will have deep political significance activating diverse political currents. But if the reins can be relinquished only temporarily, as the original framers intended, they can be yielded with more grace and, as history shows, an elaborate mechanism to determine when they should be yielded is unnecessary.

PRESIDENT EISENHOWER'S ILLNESS AND HIS PROPOSAL FOR A CONSTITUTIONAL AMENDMENT

Immediately after President Eisenhower's heart attack in September 1955, the President's medical advisers informally and orally gave their opinions as to the President's condition and the probable duration and extent of his physical impairment. A survey was made regarding the magnitude and immediacy of the problems that would require Presidential action then or in the near future. Congress was not in session and no international emergencies impended. Based upon the medical opinions and the survey, the Attorney General orally advised the Cabinet and the Vice President, who regularly sat with the Cabinet, that no present situation required the Vice President to take action under article II, section 1, of the Constitution. This opinion was accepted by all concerned and attention was then given to developing a modus operandi for the functioning of the executive branch during the continuance of the President's illness. This plan included a decision to have Vice President NIXON preside at meetings of the Cabinet and National Security Council during the President's absence.

On October 21, 1955, the Attorney General conferred with the President in his hospital room at Denver to advise him of the legal basis for the foregoing actions, and to reassure him that no written authorizations were required from him at that time to insure that the Government's activities were carried on according to his previously established policies.

In January 1956, upon President Eisenhower's return to Washington, he directed the Department of Justice to institute a full legal study of the problems raised by temporary presidential inability. His purpose was to draft a plan to protect the country fully if a President were to become disabled at a time when immediate executive action was needed. Later, it was decided not to formulate such a plan during the presidential campaign, lest it become entangled in partisan politics. Early in January 1957, the President reviewed several alternative plans and authorized the Attorney General to consult persons outside the Government to obtain their views and criticisms. The opinions of members of the Cabinet were sought at a Cabinet meeting. Finally, a definitive plan which proposed a constitutional amendment was approved by the President. It was to be sent to Congress with a special message from the President urging its adoption. But when the plan, in final form was orally presented at a meeting of the congressional leaders of both parties, the Speaker of the House of Representatives raised the point that if the President should send a special message to Congress urging adoption of the proposed constitutional amendment, the people of the country, in the mistaken belief that some unannounced development in the President's condition had occurred, might become alarmed. Accordingly, the forthcoming special message was canceled, and public

announcement of the plan took the form of testimony by the Attorney General before a subcommittee of the Judiciary Committee of the House of Representatives.

The operative clauses of the proposed constitutional amendment were as follows:

"SECTION 1. In case of the removal of the President from office, or of his death or resignation, the Vice President shall become President for the unexpired portion of the then current term.

"SEC. 2. If the President shall declare in writing that he is unable to discharge the powers and duties of his office, such powers and duties shall be discharged by the Vice President as Acting President.

"SEC. 3. If the President does not so declare, the Vice President, if satisfied of the President's inability, and upon approval in writing of a majority of the heads of executive departments who are members of the President's Cabinet, shall discharge the powers and duties of the office as Acting President.

"SEC. 4. Whenever the President declares in writing that his inability is terminated, the President shall forthwith discharge the powers and duties of his office.

The plan's major purpose was to make abundantly clear that, in the event of a President's inability, the Vice President would serve only as acting President and, then, only during the continuation of the Presidential inability. The President was to have the express power to resume the exercise of his office as soon as he declared that he was again able to act. Also significant, however, were those provisions outlining a method for determining when these shifts in function were to occur. Thus, the plan envisaged that, through voluntarily declaring in writing that he was unable to discharge the powers and duties of his office, the President himself would initiate the Vice President's tenure as acting President for the period of inability. Similarly, whenever the President should declare in writing that his inability was terminated, he would thereupon resume the powers and duties of his office. This provision for voluntary action by the President would, in the light of history, probably cover most cases of Presidential inability. In the less common situation where a President was unable or unwilling to declare his inability, the constitutional amendment proposed a shift in the responsibility for such a determination. The Vice President, if satisfied of the President's inability, and upon the written approval of a majority of the Cabinet, would become acting President for the period of the inability. In this situation also, the President would be entitled at any time to state in writing that his inability was terminated and thereupon to resume the powers and duties of the Presidency.

The proposed constitutional amendment, it should be noted, made no express provision for a case in which the President would endeavor to take up the powers and duties of his office although he was clearly unable to do so. The situation envisages a disagreement between the President and Vice President regarding the President's disability. It was explained, in presenting the proposed constitutional amendment to Congress, that if such an unlikely situation developed, the existing constitutional provisions for impeachment could be relied upon to settle the disagreement.

Noteworthy also is the fact that section 1 of the proposed constitutional amendment expressly confirmed the present generally accepted interpretation of the Constitution—that in case of removal of the President from office or his death or resignation, the Vice President actually becomes President for the unexpired portion of the current term. Thus, the precedent set seven times in cases of death of the President would be expressly adopted in the Constitution itself.

The Eisenhower plan's rejection of a Presidential Inability Commission

President Eisenhower's proposal rejected any idea of establishing some sort of inability commission or ad hoc body to determine the fact of Presidential inability. One of the alternative plans first submitted to the President for his review had provided for such a commission.

Arguments for a group determination of Presidential inability overlook the fact that throughout American history, not merely in the Garfield and Wilson instances, the problem has never been ascertaining Presidential inability; the stalemate in executive activity has proceeded from a Vice President's reluctance to assume his superior's office and a President's (or his personal advisers') reluctance to turn over Presidential duties with no assurance of their return.

Not only would such a factfinding commission have been unnecessary and ineffective in every Presidential inability problem so far encountered, but in the future it could have very serious and unfortunate consequences. Any law requiring complicated procedures, investigations, hearings, findings, and votes, would prevent immediate action in case of emergency. Today's need is for unquestioned continuity of Executive power and leadership. A law establishing a factfinding body of this issue might completely thwart that objective, to the Nation's deadly peril.

Furthermore, it seems unwise to establish elaborate legal machinery to provide for examinations of the President. The question of the physical and mental capacity one needs to serve as President is, of course, far more than a matter of medical findings by a group of learned physicians. Providing for physical and mental examinations would, at the least, be an affront to the President's personal dignity and degrade the Presidential office itself; more dangerously, it would give a hostile group power to harass the President for political purposes.

Aside from these objections to commission-type determination of Presidential inability, grave difficulties would attend arriving at a satisfactory composition for such a group. Many earnest people have suggested that the prestige and impartiality of members of the Supreme Court be enlisted to head or to staff an inability commission, but the letter of Chief Justice Warren of January 1958 would seem to have removed—and wisely so—all possibility of the Justices' participation in such a group. Various officers of legal and medical societies have also been suggested for membership. Since they are not publicly elected officials and have no public responsibility, however, a better plan would be to ask these worthy persons to serve, if at all, in an advisory capacity.

If the power of initial determination is diverted from the executive branch, or even is shared in some fashion with those outside the executive, a way is opened for harassment of a President for political motives. A major shift in the checks and balances among the three divisions of the Federal Government could well result. Therefore, although individual Members of Congress—the Speaker of the House, President pro tempore of the Senate, and the majority and minority leaders in both Houses—have been mentioned as possible commission members to insure participation by elected representatives in any decision on Presidential inability, this suggestion, too, interjects some unwanted features. With the participation of congressional officials, a Presidential inability commission would be bound to assume a political appearance. Individual Members of the Congress, though elected by the people, are elected by the people of a particular small district or State, and are not necessarily representative of the Nation as a whole; only the President and Vice President are elected by the entire populace.

In keeping with the belief that the initial determination of Presidential inability should be kept wholly within the executive branch of the Government, the Eisenhower plan limited the choice of persons or groups to make the decision to the Vice President and the Cabinet. This seems a realistic solution. The Garfield and Wilson precedents indicate strongly that a Vice President, in order to assure wide public support and to eliminate a possible charge of usurpation, would in fact consult with the Cabinet before making the momentous decision involved in a declaration that the President is unable to exercise the powers and duties of the Presidency. The Cabinet members are in a position to know at once whether a President is disabled. Moreover, the public would accept the Cabinet's opinion as reflecting the views of persons close to the President and alert to any unconstitutional attempt to deprive him, even temporarily, of his powers.

Under the proposed amendment, two courses of action would be possible. The Cabinet could notify the Vice President when a majority of its members believes that the President's inability was sufficient to warrant a devolution of presidential power to the Vice President. In the past, the Cabinet has always notified the Vice President when a President has died, and this custom would thus be extended to the case of inability. The Vice President would make the decision to assume Presidential power, but the constitutional validity of the decision would depend upon the approval of that decision by a majority of the Cabinet. Alternatively, the Vice President might take the initiative without the Cabinet's first inviting him to make the decision; in this case, also, written approval by a majority of the Cabinet would be required before the Vice President could undertake the exercise of Presidential power.

Ultimately, the operation of any constitutional arrangement depends on public opinion and upon the public possessing a certain sense of what might be called "constitutional morality." Absent this feeling of responsibility on the part of the citizenry, there can be no guarantee against usurpation. No mechanical or procedural solution will provide a complete answer if one assumes hypothetical cases in which most of the parties are rogues and in which no popular sense of constitutional propriety exists. The combination of the judgment of the Vice President and a majority of the Cabinet members appears to furnish the most feasible formula without upsetting the fundamental checks and balances between the executive, legislative, and judicial branches of the Government.

By way of contrast, the advocates of some specially constituted group to determine Presidential inability face many dilemmas. If the President is so incapacitated that he cannot declare his own inability, no need exists for a factfinding body. Nor is a factfinding body necessary if the President can and does declare his inability to exercise the powers of his office at a given moment. If, however, the President does suffer from an inability which he is unwilling to admit, and the Vice President and most of the Cabinet and other Government officials are aware of this and believe that the President should step aside temporarily, then a genuine dispute exists. But this dispute—and it certainly can become serious—should not be determined by a special commission composed of persons outside the executive. If the controversy is sharp, the inclusion of political appointees or of officials representing relatively small electorates would give any decision a political complexion. Worse, such a commission runs a good chance of coming out with a split decision. What would be the effect, for example, if a commission of seven voted four to three

that the President was fit and able to perform his office? What power could he exert during the rest of his term when, by common knowledge, a change of one vote in the commission proceedings could yet deny him the right to exercise the powers of his office? If, conversely, the vote were four to three that the President was unable to discharge the functions of his office, and the Vice President were installed as acting President, what power could the Vice President exert when everyone would know that one vote the other way would cause his summary removal from the exercise of those powers? If the man acting as President were placed in this awkward, completely untenable and impotent position, the effect on domestic affairs would be bad enough; the effect on the international position of the United States might well be catastrophic.

Thus, in the presentation of President Eisenhower's original proposal for a constitutional amendment in 1957, it was stated that any dispute between the President and the Vice President regarding termination of the President's disability could be resolved by Congress taking impeachment proceedings against whichever official was wrongfully attempting to exercise the powers of the Presidency. In subsequent public discussion of the proposal, however, it was pointed out that impeachment and trial are complicated and lengthy processes, that the Congress is not always in session, and that nothing in the Constitution now empowers the Vice President to call Congress into special session. Furthermore, conviction would remove the President permanently, and the odium attached to impeachment might very well cause many Congressmen to hesitate to take such action—especially against an ill man.

The revision of section 4 of the Eisenhower proposal

In response to criticisms of the impeachment process as a method of resolving a dispute between the President and Vice President, Attorney General Rogers on February 18, 1958, presented to the Subcommittee on Constitutional Amendment of the Senate Judiciary Committee a revised section 4 for the President's proposal, which now reads:

"SECTION 4. Whenever the President declares in writing that his inability has terminated, the President shall forthwith discharge the powers and duties of his office: *Provided, however,* That if the Vice President and a majority of the heads of executive departments who are members of the President's Cabinet shall signify in writing that the President's inability has not terminated, thereupon:

"(a) The Congress shall forthwith consider the issue of the President's inability in accordance with procedures provided for impeachment, and if the Congress is not in session, shall forthwith convene for this purpose;

"(b) If the House of Representatives shall on record vote charge that the President's inability has not terminated, and the Senate so finds by the concurrence of two-thirds of the Members present, the powers and duties of the office of President shall be discharged by the Vice President as Acting President for the remainder of the term, or until Congress by a majority vote of the Members of both Houses determines that the President's inability has terminated."

In substance, the revised section 4 provides that if the President undertakes to resume the exercise of the powers and duties of the Presidency, but has misjudged his condition, the Vice President and a majority of the heads of the executive departments who are members of the Cabinet may signify that the President's inability has not terminated, and Congress must step in to determine the issue. If the Congress is not in session, it would be required to convene immediately for the purpose of considering the President's inability under procedures presently established only for impeachment and trial. A two-thirds vote of the Senate would determine the existence of the President's inability; a majority vote of both Houses would restore the powers of his office to the President.

In submitting the revision to the Judiciary Committee of the Senate, Attorney General Rogers pronounced:

"Let me stress that the very existence of this ultimate power in Congress—which is the only power it needs in relation to this question—would in all probability insure that this extreme situation would never arise. No Vice President would resist a President reasserting his claim to the powers of the office unless the President were in fact unable to perform. No President—in fact unable to perform—would be permitted by his family and close personal counselors to reassert his claim and precipitate an issue likely to be resolved against him by Congress."

Public interest in the question of Presidential disability, reawakened by the revision of section 4 greatly increased when, less than a month later, President Eisenhower announced his understanding with Vice President NIXON, a dramatic presentation of the legal problems involved and the administration's viewpoint.

THE EISENHOWER-NIXON UNDERSTANDING ON PRESIDENTIAL INABILITY

After the President's heart attack in September 1955, informal discussions were had between the President and the Vice President concerning what the Vice President's role should be in the event of a similar unfortunate occurrence, or any other happening which would disable the President temporarily at a time when Presidential action was required. As a result, at the time of President Eisenhower's ileitis operation in 1956, Vice President NIXON stood by fully prepared to initiate, as Acting President, whatever action would be necessary in case of international emergency; for it was realized that the announced intention of the President to undergo a serious operation might entice a hostile foreign power to make some drastic move in the expectation of finding, at the critical moment, confused and uncertain leadership in the United States.

On March 3, 1958, a historic step was taken when the President and Vice President, in consultation with the Attorney General, reduced to memorandum form their understanding of the constitutional role of the Vice President as Acting President. The Eisenhower-Nixon understanding is stated in these terms:

"The President and the Vice President have agreed that the following procedures are in accord with the purposes and provisions of article 2, section 1, of the Constitution, dealing with Presidential inability. They believe that these procedures, which are intended to apply to themselves only, are in no sense outside or contrary to the Constitution but are consistent with its present provisions and implement its clear intent.

"1. In the event of inability the President would—if possible—so inform the Vice President, and the Vice President would serve as Acting President, exercising the powers and duties of the office until the inability had ended.

"2. In the event of an inability which would prevent the President from communicating with the Vice President, the Vice President, after such consultation as seems to him appropriate under the circumstances, would decide upon the devolution of the powers and duties of the office and would serve as Acting President until the inability had ended.

"3. The President, in either event, would determine when the inability had ended and at that time would resume the full exercise of the power and duties of the office."

The understanding represents the Eisenhower administration's interpretation of the Constitution as it now stands. The only addition to present constitutional requirements is that the Vice President take action "after such consultation as seems to him appropriate under the circumstances." Although the Constitution does not require the Vice President to consult anyone, it was felt that as a matter of good judgment, the Vice President would want to consult members of the Cabinet, congressional leaders of both parties, and perhaps other prominent citizens before presuming to exercise the powers and duties of the Presidency. The Eisenhower-Nixon understanding, in effect, gives the Vice President the comfort of being directed to seek opinion from other persons and thus strengthens his position if he should be obliged to take these steps. Appropriately, in view of constitutional silence on the matter, the persons with whom the Vice President is to consult are not mentioned. Presumably, the Vice President's choice would depend on the circumstances of the moment; in a time of international crisis the opportunity for consultation might be very brief. On other occasions, the Vice President might find consultation with a large number of people not only feasible but desirable, for, obviously, the broader the base of opinion, the greater the support would be for his decision.

Consistent with the Constitution as it now stands is the agreement's provision that in cases where the President is unable to notify the Vice President of his disability the Vice President is sole judge of the necessity for his exercising the powers and duties of Chief Executive. This is so because the Constitution does not state who should determine the President's inability in the many circumstances in which, as the founders themselves must have foreseen, it cannot be the President himself. The Cabinet could not have been intended to judge the issue, since this body is not referred to in the Constitution. It is not the Congress, except by the negative sanction of impeachment and conviction for a wrongful attempt to exercise power. Nor is it the Supreme Court, because the question of Presidential inability is hardly one which fits any type of jurisdiction conferred by the Constitution on that tribunal. But the power to determine the inability of the President rests in the Vice President not simply because the Constitution places it nowhere else. By a well-known principle of law, whenever any official by law or person by private contract is designated to perform certain duties on the happening of certain contingencies, unless otherwise specified, that person who bears the responsibility for performing the duties must also determine when the contingency for the exercise of his powers arises. Similarly, under the present Constitution, it is the President who determines when his inability has terminated and he is ready once more to execute his office. The Eisenhower-Nixon understanding, by providing, first, for the Vice President's determination of Presidential inability and, second, for the President's determination of when that inability terminates, thus coincides perfectly with article II, section 1, of the Constitution as originally drafted in 1787 and analyzed in this article.

Although the understanding purports to bind only the present occupants of the presidency and vice presidency, it may well prove powerfully persuasive in the future since, as most constitutional authorities now believe, it presents a very correct interpretation of the Constitution. Still, the Eisenhower-Nixon memorandum, or anything similar to it, can only operate between two persons who are in complete agreement about their

respective positions. The understanding embodies no mechanism, and there is no mechanism in the present Constitution except the complicated process of impeachment, to resolve a dispute between the President and the Vice President as to the President's capacity to perform. By its very nature, this question is something that no agreement between a President and a Vice President alone can resolve. It is something which has not been settled satisfactorily by the present Constitution. Herein is the great virtue of revised section 4 of President Eisenhower's proposed constitutional amendment, under which a dispute between the President and Vice President on the question of inability would immediately be placed in the hands of Congress.

The Eisenhower-Nixon understanding also does not cover the problem of Presidential oath. Speaker of the House RAYBURN has stated that, in his opinion, it would be necessary for the Vice President to take a new oath of office to serve as acting President. Most authorities, however, would say that this step is unnecessary since, when the Vice President originally takes his oath, he swears to perform the duties of the office of Vice President, one of which—and the one first created by the drafters of the Constitution—is to act as an alternate Chief Executive. His other duties are to serve as presiding officer of the Senate and to vote in the Senate in case of a tie. It seems no more necessary for the Vice President to take the Presidential oath when he acts as President than it is for him to recite the senatorial oath when, in casting a decisive vote, he acts as Senator. In both instances, he is performing one of the functions of his own office, that of Vice President, which his original oath covers. Surely, however, these and more vital questions concerning the very exercise of the Presidential power itself should be cleared up before a time of crisis forces us to resolve the issue. It is precisely in times of crisis that unquestionable leadership is mandatory. If any question remains of the Vice President's status as acting President, that issue should be resolved by a clear and definite constitutional amendment.

WHY A CONSTITUTIONAL AMENDMENT IS NECESSARY

In light of what is now known about the origins of the Presidential inability paragraph, the intent of the framers of the Constitution should be clear to most people. But one cannot ignore that a division of opinion exists over the constitutional validity of a temporary devolution of Presidential power; nor can one ignore the precedents established by the Garfield and Wilson cases and the confusing original interpretation in Tyler's succession, followed in six subsequent instances. Opinions and precedents, whether well-founded or not, are operative facts which must be taken into consideration in plotting a course of action.

It is probable, certainly it is possible, that, in any future crisis concerning Presidential inability, the same conflicts in opinion would arise. History and logic demonstrate that if a Vice President is to take the momentous step of assuming the powers of the presidency, even for a specific, temporary period, he must do so by reason of unquestioned authority. Since the problem here concerns constitutional powers, questions raised about constitutional powers and precedents established through the interpretation of constitutional powers, a statute cannot settle the matter. Ordinary legislation would only throw one more doubtful element into the picture, for the statute's validity could not be tested until the occurrence of the Presidential inability, the very time at which uncertainty must be precluded. This defect is especially apparent in nearly all the statutory proposals advanced on the subject of Presidential inability, for they involve a transfer or diminution of the Vice President's constitutional power to determine the existence of Presidential inability and to act in such a contingency. The simple fact is that no mere statute can alter, transfer or diminish vested constitutional power. Thus, no statute which contained the additional measures needed—a designation of persons to share with the Vice President the power to make the initial decision, or a provision for a solution of disputes between the President and Vice President—would alter the existing powers of the President and Vice President. Even a statute which sought to do nothing more than declare the original intent of the framers would have to be construed in the light of previous constitutional interpretations and the precedents based on those interpretations, and would therefore be valueless in resolving doubt and uncertainty.

Despite these difficulties, some authorities have urged that Congress can enact simple legislation under the necessary and proper clause of the Constitution. According to the Supreme Court, however, this clause is not the delegation of a new and independent power, but simply provision for making effective the powers theretofore mentioned. Since the Constitution confers no power upon Congress in connection with Presidential inability so long as the Vice President is in office and able to act, congressional action under the necessary and proper clause would seem restricted to the uncommon situation in which both the President and the Vice President are incapacitated. As one recognized authority on the subject puts it:

"The only power expressly given to Congress to provide for Presidential succession is the power to declare what officer shall act as President when there is neither a functioning President nor a functioning Vice President. This would seem to deny congressional power to deal with inability, because numeration in the Constitution of certain powers denies all others unless incident to an expressed power or necessary to its execution—inclusio unius, exclusio alterius."

The records of the constitutional convention support this conclusion. Reference to the parallel texts of paragraph 6 set forth in the first section of this article will show that the first clause of paragraph 6, which deals with Presidential inability only, never contained a reference to congressional action of any type whatsoever. Moreover, the first clause was originally drafted and adopted completely independently of the second portion of paragraph 6, which permits Congress to act where both the President and Vice President are unable to function. The history of the paragraph and rules of sound construction thus combine in an irrefutable negation of congressional power to legislate where Presidential inability alone is involved.

A common objection to removing current doubts about Presidential inability by constitutional amendment is that the amendment process is dangerously slow. History shows, however, that a constitutional amendment can be speedily effected when the objective to be obtained is a popular one, if, of course, Congress is disposed to act in the first place. The 17th amendment, providing for the election of Senators by popular vote, took 13½ months. The 21st amendment, repealing the 18th (prohibition) amendment, took less than 10 months. Woman's suffrage, the 19th amendment, required only 15 months, and the 20th amendment, limiting Presidents to two terms, was ratified in 11 months. These periods may be compared with the 5 years it took Congress to enact a new statute establishing the sequence of Presidential succession after the Vice President.

THE PROPOSED BIPARTISAN CONSTITUTIONAL AMENDMENTS RELATING TO PRESIDENTIAL INABILITY

On the day following the Eisenhower-Nixon announcement, a bipartisan majority of the members of the Senate Judiciary Committee joined in sponsoring a proposed constitutional amendment on Presidential inability. The text of the proposed amendment reads as follows:

"SECTION 1. In case of the removal of the President from office, or of his death or resignation, the Vice President shall become President for the unexpired portion of the then current term.

"SEC. 2. If the President shall declare in writing that he is unable to discharge the powers and duties of his office, such powers and duties shall be discharged by the Vice President as Acting President.

"SEC. 3. If the President does not so declare, the Vice President, if satisfied that such inability exists, shall, upon the written approval of a majority of the heads of the executive departments in office, assume the discharge of the powers and duties of the office as Acting President.

"SEC. 4. Whenever the President makes public announcement in writing that his inability has terminated, he shall resume the discharge of the powers and duties of his office on the seventh day after making such announcement, or at such earlier time after such announcement as he and the Vice President may determine. But if the Vice President, with the written approval of a majority of the heads of executive departments in office at the time of such announcement, transmits to the Congress his written declaration that in his opinion the President's inability has not terminated, the Congress shall thereupon consider the issue. If the Congress is not then in session, it shall assemble in special session on the call of the Vice President. If the Congress determines by concurrent resolution, adopted with the approval of two-thirds of the Members present in each House, that the inability of the President has not terminated, thereupon, notwithstanding any further announcement by the President, the Vice President shall discharge such powers and duties as Acting President until the occurrence of the earliest of the following events: (1) the Acting President proclaims that the President's inability has ended, (2) the Congress determines by concurrent resolution, adopted with the approval of a majority of the Members present in each House, that the President's inability has ended, or (3) the President's term ends.

SEC. 5. The Congress may by law provide for the case of the removal, death, resignation or inability, both of the President and Vice President, declaring what officer shall then act as President, and such officer shall act accordingly until the disability be removed or a President shall be elected. If at any time there is no Vice President, the powers and duties conferred by this article upon the Vice President shall devolve upon the officer eligible to act as President next in line of succession to the office of President, as provided by law."

The first two sections of this proposal are identical with the constitutional amendment prepared by President Eisenhower. Section 3, which provides for the situation in which the President is unable to declare his inability, is similar to the corresponding Eisenhower proposal. It diminishes the Vice President's sole power to determine Presidential inability, as it exists under the present Constitution, by requiring that he shall have the written approval of a majority of the "heads of the executive departments in office." The phrase "who are members of the President's Cabinet," which appears in the Eisenhower draft, is omitted in the bipartisan bill, presumably because the Cabinet is not presently recognized in the

Constitution. The "heads of the executive departments" referred to in both proposals are determined by Congress in section 1 of title 5 of the United States Code; so the substance of both proposals is probably the same.

Section 4 advances the design of the present Constitution and the Eisenhower-Nixon understanding that the President himself determine when his inability has terminated. As stressed before, all important in persuading a President to step aside is the assurance that he will be allowed to return on his own determination that his inability is ended. The proposed amendment does not provide, however, for his instantaneous resumption of duty. It stipulates that he resumes the duties of his office the seventh day after making such announcement of the termination of inability. This 7-day provision is designed to cover the possible situation in which a President, though in truth unfit to resume his job, is determined to assert his power once again because of some unfortunate mental delusion or sheer perverseness. The 7-day requirement affords a period in which a disabled President might be persuaded by his personal advisers to withdraw his announcement, in which the Vice President can assay the situation and gage general public feeling about the President's capacity, and in which each party can deliberate on the necessity of precipitating the unfortunate situation of an open conflict before Congress.

After the measure was introduced by the sponsoring Senators, Attorney General Rogers pointed out that if the President and Vice President were in complete agreement that the President should resume the powers of his office, there seemed no good reason why he should not do so immediately. As the proposed amendment is drafted, the President could not declare in advance that in 7 days from a certain date he would be able to assume his duties. He must make public announcement in writing that his inability has terminated; and it is certainly wise to require that the President not forecast his eventual recovery, but certify to the public that he has indeed recovered. But if the President were prepared to make a present certification and everyone were in full agreement that he was fully restored to health, the 7-day delay would be unwarranted. Therefore, the Senate subcommittee inserted the words "or at such earlier time after such announcement as he and the Vice President may determine" after the 7-day provision in order to provide for the situation in which no dispute should exist over the President's capacity.

Section 4 also delineates very precisely the procedure for initiation of the Vice President's challenge to the President's capacity if grounds for such challenge exist. To question the President's decision that his inability has terminated, the Vice President must have the written approval of a majority of the heads of executive departments in office at the time of the Presidential announcement. This insures not only that the Vice President will be precluded from contesting unless he has the backing of a majority of the heads of the executive departments, but that, for the purposes of determining Cabinet support, the identities of the executive heads will be fixed as of the time of the President's pronouncement. Hence, a President would be prevented from changing the effect of the Vice President's action by demanding the resignation of all in the Cabinet not siding with the incumbent Chief Executive.

Having secured the necessary endorsement, the Vice President must transmit to Congress his written declaration contesting termination of the President's inability. If Congress were then in session, presumably it would give immediate consideration to this vital matter. If Congress were not in session, absent section 4's special provisions, the Vice President's challenge would be ineffective during a crucial period until the next regular session of Congress, since presently the Vice President has no power to assemble the Congress in special session, and a President would be highly unlikely to do so for the purpose of considering his own inability. The proposed amendment therefore authorizes the Vice President to call a special session of Congress when necessary.

For the Vice President to establish his contention and the President to be temporarily denied the resumption of his duties, the President's inability must be established by the same margin required for impeachment and conviction—two-thirds of the members present in each House. The issue before the Congress will not be that of an alleged high crime or misdemeanor, however, but the issue of the President's inability. If Congress decides that the inability has not terminated, the Vice President is to serve as acting President until the occurrence of one of the three specified events, and is to do so "notwithstanding any further announcement by the President." This phrase was inserted to guarantee that a President could make only one announcement of the termination of his inability; if his judgment is challenged, he must justify his position at that time. Thus, once Congress has determined that the President's inability has in fact not terminated, restoration of the President to office would thenceforth depend not on his own announcement, but on other contingencies.

As stated in the bipartisan proposal, these contingencies are: the Acting President (Vice President) proclaims that the President's inability has ended; or the Congress determines by a concurrent resolution requiring only a simple majority of the Members present in each House that the inability has ended; or the Presidente's term ends. Allowing the Acting President to proclaim that the President's inability has ended is consistent with other provisions of the amendment and with the theory that if the two persons most vitally concerned—the Chief Executive and his alternate—are in accord, no one else either inside or outside the executive branch has an interest in the matter. Although the proposed amendment requires a two-thirds majority to oust the President temporarily, if a simple majority of the Congress feels that the President's inability has terminated, it seems only just and proper that he be restored to the full exercise of his powers.

Section 5 of the bipartisan proposal repeats the present constitutional provision that Congress may by law provide for the case of the removal, death, resignation, or inability, both of the President and Vice President, and may declare what officer shall then act as President until the disability is ended or a President elected. It then adds a separate sentence providing that "if at any time there is no Vice President," the functions envisaged for the Vice President by the proposed new constitutional amendment "shall devolve upon the officer eligible to act as President next in line of succession to the Office of President, as provided by law."

For clarity, this section probably should refer to "no Vice President able to act as President," since the intent is to cover not only a vacancy in the Vice Presidency, but inability as well. Furthermore, except for the Vice President, "the officer [next] eligible to act as President" is not "next in line of succession to the Office of President." He is, under the Constitution and the law of succession, an officer who acts as President, but he never succeeds to the Office. The words "to the Office of President" should be omitted from the proposed amendment.

CONCLUSION

The proposed constitutional amendment sponsored by the bipartisan majority of the Senate Judiciary Committee adopts the basic provisions of the Eisenhower proposal adding a more precise definition of the procedures to be followed in the unlikely event of a dispute between a President and a Vice President over the termination of the President's disability. Both proposals deal with the Presidential inability question by constitutional amendment. Both make abundantly clear that, when the President is disabled, the Vice President takes over the powers and duties of the presidency only as the acting President for the period of disability. Both provide that the President may voluntarily declare his inability and that, if he does not, the initial determination of fact shall be made within the executive branch—that is, by the Vice President on the written approval of a majority of the heads of the executive departments in office. Finally, both the Eisenhower and bipartisan proposals would allow the President to resume the powers and duties of the presidency upon his own declaration that he is again able to handle them. Most important, either proposal would achieve these goals in consonance both with the original intent of the framers of the Constitution and with the balance of powers which is the permanent strength of the Constitution.

Mr. SMATHERS. Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER (Mr. HART in the chair). The clerk will call the roll.

The legislative clerk proceeded to call the roll.

Mr. SMATHERS. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

ORDER FOR ADJOURNMENT TO MONDAY

Mr. SMATHERS. Mr. President, I ask unanimous consent that when the Senate concludes its business today, it adjourn until noon on Monday next.

The PRESIDING OFFICER. Without objection, it is so ordered.

THE PRESIDENT'S RECOMMENDATION OF SENATOR MORTON TO BE CHAIRMAN OF THE REPUBLICAN NATIONAL COMMITTEE

Mr. COOPER. Mr. President, I wish to note for the RECORD the news service report that President Eisenhower today recommended that the Republican National Committee select Senator THRUSTON B. MORTON, of Kentucky, to be the new chairman of the Republican National Committee.

It is only natural that Senator MORTON's fellow Republicans in Kentucky, and, indeed, his fellow Kentuckians of both parties, will be pleased and honored by this statement by the President. I am pleased, as his colleague and as his friend, at this new evidence of Senator MORTON's leadership, and of his standing in our party.

I have known Senator MORTON for many years, not only as a friend of his family, but as a fellow candidate and as a colleague in the Senate of the

United States. I know his background; his family is one of the oldest pioneer families in Kentucky.

Senator MORTON has had a broad and varied experience in life. He is well educated. He entered the service at the beginning of World War II, and rose to command three vessels in the United States Navy. In the course of that service he demonstrated his leadership and his valor.

Before that time, he was in business, as a member of Ballard & Ballard, a grain and milling company in Louisville. He rose to be the president of the company, which was the largest of its type in the South.

In 1946, after his return from the service, he was elected to the House of Representatives from the Third Congressional District of Kentucky. That district comprises Jefferson County; and in Jefferson County is located the city of Louisville, the largest city in Kentucky.

He was elected three times to be a Member of the House of Representatives from that District, and I have no doubt that he would have been elected again and again if he had not chosen in 1952 not to seek reelection.

After the election of President Eisenhower, Senator MORTON was appointed Assistant Secretary of State. He served with distinction in that position. He was an intimate associate and friend of our great Secretary of State, the Honorable John Foster Dulles, and Secretary Dulles has many times spoken of Senator MORTON'S loyalty, his ability, and his great service in that position.

In 1956, after continued association in politics with Senator MORTON, he and I had the pleasure of running together for election to the U.S. Senate. Senator MORTON was elected to the Senate, and we know of his able service since that time in the Senate.

All of us who are members of the Republican Party are conscious of the fine and able work which has been done by the Honorable Meade Alcorn. Senator MORTON, as his successor, will bring to the position a distinguished record of wide and varied experience. He is young, he is able, he is vigorous. I am confident that he will give to the Republican Party large and broad purpose, and great and new vigor.

While I have spoken of Senator MORTON'S selection as national chairman of the Republican Party, I think his selection is also of importance to the country as a whole, because it is important to the country to have two great and strong political parties.

So today I am happy to note his choice by the President. On behalf of my colleagues, on behalf of my fellow Republicans in Kentucky, and on behalf of my fellow Kentuckians generally, I am glad to speak of the distinguished service of Senator MORTON in many capacities in the past, and to express my confidence, and the confidence of all others who know him, that he will serve with distinction, honor, and value to the Republican Party—and, I may say, to the entire Nation in his new post.

Mr. MORTON. Mr. President, will my colleague yield to me?

Mr. COOPER. I yield.

Mr. MORTON. Mr. President, I merely wish to thank my colleague from Kentucky for his very generous words. They are deeply appreciated by me. One of the great privileges of my political life has been that of being able to know, and enjoy the friendship, of my senior colleague from Kentucky.

I merely wish to point out that I have not yet been elected to the position, and I have been in enough close elections in my life to say I do not believe I will make any further comments at this time.

Mr. SMATHERS. Mr. President, I should like to associate myself in some respects with the remarks of the able senior Senator from Kentucky [Mr. COOPER]. I believe, as he does, that our country can be best served when there are two strong, virile, vigorous political parties.

It has been my privilege to serve with the able junior Senator from Kentucky. I do not want to brag about him too heavily at this time, because it might keep him from getting the position to which he has been nominated; but I should like to say it is my belief that it is important that the heads of the political parties be men who have had some experience in the business of getting elected, me who have had some experience in the problems of a campaign.

I think one of the difficulties from which the major political parties have suffered from time to time has been that in positions of leadership there have been men who actually did not know some of the problems faced by those of us who were candidates for office, and who did not thoroughly realize that, in most instances, those who were running for election, particularly to the Senate or the House of Representatives, were involved in issues which were statewide rather than nationwide.

I cannot help but believe the Republican Party will be greatly strengthened by the selection of the junior Senator from Kentucky for the office to which he has been nominated—that is the office of chairman of the National Republican Committee. However, I will say to whoever gets that job, be it the junior Senator from Kentucky or someone else, obviously the future is not very rosy. It appears he will have a considerable task ahead of him. I cannot help but think of the difficulties confronting Cookie Lavagetto, who manages the Washington Senators baseball team. The Washington Senators start out with the future in front of them; but the way statistics look, it appears they will not go very far, even though they are out front at the moment.

But, seriously, it is important that there be in this country two strong parties, in which both the liberal and the conservative viewpoint can be promoted. I can think of no better man to head the Republican Party than the junior Senator from Kentucky.

Mr. MORTON. I may point out that as of today the Washington Senators lead the league.

Mr. SMATHERS. I would like to see their lead last longer, but that is not what usually happens.

Mr. NEUBERGER. Mr. President, will the Senator yield?

Mr. SMATHERS. I yield to the Senator from Oregon.

Mr. NEUBERGER. Mr. President, I cannot say that I am one of those who wish our distinguished colleague from Kentucky political success in his new position. Commenting on what was said by the distinguished Senator from Florida, I am somewhat reminded of a professor who instructed me in political science when I was a student at the University of Oregon. A student went to him one day and asked how he had made out in the final examination. The professor said to him, "Nelson, I am going to put you first of all the flunks." I occasionally think that is perhaps the position of someone who is elected to head the Republican Party, at least in these somewhat tenuous and parlous times for the Republican Party.

However, I wish, in all seriousness, to add that I have had the privilege of serving with the junior Senator from Kentucky on the Committee on Post Office and Civil Service. We have been together on several subcommittees which have had to consider very controversial and delicate legislation. I have always found Senator MORTON to be a person of high ethics and unimpeachable personal character.

One of the things which has most distressed me in recent years has been to speak at high school and college campuses, and to learn how many bright and idealistic young people do not want to make politics a career. When, with Mrs. Neuberger, who was in the State legislature, I asked them why, they said, "Because politics is such a dirty business."

It seems to me that is a distressing situation, because if our country has any hope at all, the hope rests on persuading the most intelligent, the best educated, the most courageous, and the most idealistic young men and women to go into government.

I have this very great faith: that while THRUSTON B. MORTON is national chairman of his party, he will never indulge in character assassination or personal epithets which in the past have sometimes characterized American politics.

While I cannot say I wish the Senator from Kentucky political success in his new position as national chairman, I wish him all personal happiness in his undertaking.

ADJOURNMENT TO MONDAY

Mr. SMATHERS. Mr. President, in accordance with the order previously entered, I move that the Senate now adjourn until next Monday at noon.

The motion was agreed to; and (at 4 o'clock and 16 minutes p.m.) the Senate adjourned, the adjournment being, under the order previously entered, until Monday, April 13, 1959, at 12 o'clock meridian.

HOUSE OF REPRESENTATIVES

FRIDAY, APRIL 10, 1959

The House met at 12 o'clock noon.

Rev. Charles W. Holland, pastor, Fountain Memorial Baptist Church, Washington, D.C., offered the following prayer:

The Psalmist has said, Psalms 103: 12: *As far as the east is from the west, so far hath He removed our transgressions from us.*

Gracious and merciful God our Father, we thank Thee that as we travel west we never come to the east. We are grateful that this distance is infinity. In the same way we appreciate the fact that the distance of our forgiven sins from us and Thee is infinity.

As we ponder what is good for these great United States, help us not to precede the presence of the Holy Spirit. May we not preclude Him from our thinking.

Hear our petitions and accept our thanks. Help us to give the glory to Thee, in the name of Thy son we pray. Amen.

The Journal of the proceedings of Wednesday, April 8, 1959, was read and approved.

MESSAGE FROM THE SENATE

A message from the Senate, by Mr. McGown, one of its clerks, announced that the Senate had passed a bill of the following title, in which the concurrence of the House is requested:

S. 144. An act to modify Reorganization Plan No. II of 1939 and Reorganization Plan No. 2 of 1953.

FIRST WORLD CONGRESS OF FLIGHT AT LAS VEGAS, NEV.

Mr. BARING. Mr. Speaker, I ask unanimous consent to address the House for 1 minute and to revise and extend my remarks.

The SPEAKER. Is there objection to the request of the gentleman from Nevada.

There was no objection.

Mr. BARING. Mr. Speaker, may I call attention to a new and unique activity for aerospace leaders and thoughtful, alert citizens of the free nations of the globe. I refer to the first World Congress of Flight scheduled to be held at Las Vegas, Nev., from April 12 through 19, 1959.

This important event aims to bring together all elements of flight: designers, producers, operators, administrators, and users—united in a common cause, that being the advancement of aeronautics and astronautics—the twin sciences of flight.

News of the forthcoming World Congress of Flight has appeared with greater and greater frequency in the press, and many of you are acquainted with the unusually fine and varied program which is planned for this gigantic event. As a Nevadan—a Representative of the State which has been selected to serve as host for this conference—I have followed the planning since its inception with great care. It is propitious and appropriate for me to call attention to the World Congress of Flight. And since some of you may not have had an opportunity to examine the program with care, I wish to speak of the program generally, and then specifically for a few minutes. The World Congress of Flight has been timed to introduce the first full year of commercial jet transportation on an international scale, to herald a number of advancements in military aircraft and missiles as national deterrents to war, and to draw attention to continuing progress in the exploration of outer space.

Flight, as an advancement still undeveloped and with a tremendous potential in terms of international security and human welfare, will be considered by men of international reputation and competence at the World Congress of Flight. The political and the moral problems which accompany progress of flight are on the agenda for careful scrutiny.

The World Congress of Flight, I am pleased to report, will combine conferences, forums, outdoor displays, indoor exhibits, air and ground demonstrations as well as private meetings—all concerning the latest vehicles of flight and their support equipment. The program is aimed to stimulate greater understanding of man in the medium of technological revolution. Flight, in short, will be presented in its broadest concept as an instrument for the benefit of all mankind. The illustrious civic leader, Edward P. Curtis, winner of the Collier trophy for the most outstanding aviation achievement of the past year, is serving as general chairman for the World Congress of Flight. He has said that the sessions will be dedicated to the belief that a greater world knowledge of aircraft, missiles, and space craft will bring the world closer to permanent peace.

I am proud to report that the facilities to house and hold the conferences and meetings of the thousands of leaders concerned with the design, production, use, and effect of aircraft, missiles, and spacecraft are plentifully available at Las Vegas. The new and spectacular conference center at Las Vegas includes an auditorium, exhibition hall, and a variety of meeting rooms. The stadium area, located one block from the conference center, will be the locale of general aviation, air and ground demonstrations. Nearby McCarran Field is the municipal airport serving Las Vegas, where the latest commercial jet and turboprop planes, as well as new military aircraft, will be on display. As a proud Nevadan, I can only say that the combination of meeting, display, and exhibit facilities, of fine hotels and ideal weather, makes Las Vegas an excellent site for the World Congress of Flight.

The World Congress of Flight will be an international affair, with participants and demonstrations and equipment from over 50 free world nations.

One of the many highlights of the World Congress of Flight is the NATO anniversary banquet at the World Congress of Flight. On this occasion, His Royal Highness the Prince of the Netherlands will be the principal speaker and will commemorate the 10th anniversary of the North Atlantic Treaty Organization. William H. Draper, Jr., chairman of the President's Committee To Study the Military Assistance Program, will serve as toastmaster. Other participants will include Gen. Nathan F. Twining, Chairman of the Joint Chiefs of Staff; Dr. Theodore von Karman, Chairman of NATO's Advisory Group for Aeronautical Research and Development; and Gen. Leon Johnson, Air Deputy to the Supreme Allied Commander, Europe. Honored guests at this affair, which will be the largest private celebration in the United States, will be dignitaries of all the NATO nations.

The first 2 days of the conference are being given over in large measure to a jet age conference. Here such outstanding leaders as the Honorable E. R. Quesada, Administrator of the Federal Aviation Agency; Hon. Walter Binaghi, from Argentina, president of the Council, International Civil Aviation Organization; Dr. Paul Cherington, professor at Harvard University; and Gen. Curtis E. LeMay, Vice Chief of Staff, U.S. Air Force, will discuss such topics as "Jet Age Accomplishments," "Jet Age Requirements," "The Jet Age Comes to Main Street," and "Controlling the Airspace."

There is a wide diversity of meetings at the World Congress of Flight, in addition to major conferences and special meetings of participating organizations, aimed at providing a unique exchange of information on aircraft, missiles, and space subjects. At the conference, for example, a large number of commercial organizations will present technical information and demonstrations on new equipment. One of the symposiums, devoted to the efficient use of airspace, is looked forward to by military and civilian airmen with keen interest. David D. Thomas, Director, Bureau of Air Traffic Management, Federal Aviation Agency, will give the keynote address in the symposium on the efficient use of airspace. He will be followed by such experts as Charles W. Carmody, Chief of the Airspace Utilization Division, Federal Aviation Agency, and Col. L. S. Lightner, Chief of the Flight Division, Director of Operations, Headquarters, USAF. The shrinking airspace over America will be the chief topic at the symposium on the efficient use of airspace. This, 1 of 11 major conferences scheduled during the World Congress of Flight, will entail a hard look at the problem of increasingly crowded airspace of America.

Another topic which will be examined with great care at the World Congress of Flight will be, "What will aircraft traffic control be like in 2000 A.D.?" It is expected that the World Congress of Flight meeting on this subject will forecast future needs. The topic will be discussed by top experts from U.S. Government agencies and industry. Military, air carrier, and representatives from general aviation will learn of the

present planning and program for an aircraft control system which will accommodate the wide range of present day and future aircraft.

As a representative of the people of Nevada, I have a keen and official interest in the wide variety of topics which will be featured at the various aerospace discussions, displays, and demonstrations scheduled for the World Congress of Flight, and I know this interest and concern is shared by my associates and colleagues in the House of Representatives.

For one thing, the World Congress of Flight will bring to bear on the many critical issues arising from aerospace progress the wealth of experience and knowledge of eminent authorities on these subjects throughout the free world.

Additionally, the World Congress of Flight will help generate a wider understanding and a greater support of measures required to insure that we become the beneficiary and not the victims of aerospace progress. My continuing examination of the broad range of topics dealing with economic, educational, and national security aspects of air and space has convinced me the World Congress of Flight presents a noteworthy opportunity to gain important knowledge of these matters. My conclusion is fully supported by the fact that numerous legislative proposals now under consideration have to do with aerospace endeavors. Many of these will have a direct and vital effect on our ability to insure continued national progress and survival.

Men of good will have here a signal opportunity to participate as firsthand participants or as careful observers of the releases and information which will stem from the World Congress of Flight. I am aware that many of you are endeavoring to arrange your schedules so as to be able to attend the World Congress of Flight. I, as a Nevadan, am extremely pleased to assure you that my friends and neighbors in Nevada look forward to greeting you and the vast number of other Americans and international leaders who will soon proceed to Nevada to participate in this noteworthy enterprise which is filled with such promise—the World Congress of Flight.

A HISTORIC CONFERENCE

Mr. SISK. Mr. Speaker, I ask unanimous consent that the gentleman from Louisiana [Mr. BROOKS] may extend his remarks at this point in the RECORD.

The SPEAKER. Is there objection to the request of the gentleman from California?

There was no objection.

Mr. BROOKS of Louisiana. Mr. Speaker, I have followed Congressman BARING's illuminating remarks relating to the World Congress of Flight with the greatest of interest. His cogent summary of the plans for the World Congress of Flight leaves no doubt that this venture merits careful consideration by all thoughtful Americans. May I say the World Congress of Flight is the result of long and careful planning by a large number of dedicated and intelligent men who are making it possible for Americans and representatives of the free world to participate in the first aviation program of its kind ever held in this country. Dozens of illustrious individuals contributed to the planning and organizing by joining hands to fashion what promises to be a brilliant and productive event.

The World Congress of Flight will feature the most complete display of aircraft, missiles, and space craft equipment ever assembled. For those of my colleagues who have not yet seen a program, let me say that it is not merely an international air show; it is not merely a giant industrial showcase; it is not merely a convention; it is not merely a series of meetings, exhibitions, or demonstrations of national wares or strength; it is in fact the most comprehensive aerospace effort of its kind ever undertaken. The roster of scientists, managers, and technicians who will be present is long and runs into hundreds of names. Government and military leaders will be present, as will be men of commerce and industry, teachers, and a host of sensitive, forward-looking Americans and representatives from over 50 free world nations. At the risk of reiterating, may I point out the names of a few of the great leaders who will be present. The list of high level participants includes His Royal Highness, the Prince of the Netherlands; the Honorable Walter Binaghi, of Argentina, president of the Council of the International Civil Aviation Organization; Sir William Hildred, of Great Britain, director general of the International Air Transportation Association; and Dr. Detlev Bronk, of the United States, President of the National Academy of Sciences.

The World Congress of Flight includes 11 major conferences, 3 major aerial demonstrations, as well as the largest static display of flight vehicles and related equipment that has ever been assembled in one area. Problems and progress in all phases of flight are on the agenda. Let me briefly summarize some of the items included on the agenda of the World Congress of Flight.

A jet-age conference has been scheduled where the revolutionary aspects of scheduled commercial jet transportation on an international scale will be considered, as well as the matter of long-range civic planning for airports.

A number of air-ground demonstrations will be of great interest. Here the participants at the World Congress of Flight will see the new family of utility jet aircraft of America's business fleet. They will see demonstrations of landing and takeoff characteristics and noise suppression as well as vertical lift demonstrations, including simulated air rescue operations.

A large number of military air demonstrations have been scheduled for Nellis Air Force Base. There will also be a symposium on the efficient use of airspace at which time a group of experts, users of airspace—military, commercial, general aviation, will address themselves to the problem of shrinking airspace.

A technical symposium on aircraft and space communications is being sponsored by the Electronic Industries Association. One on international research for the Air Force and one on international flight safety hold a great deal of promise.

My colleague from Nevada, Congressman BARING, has covered in detail one of the highlights of the entire conference, which will be the NATO anniversary banquet.

An international test pilot symposium has been planned for the World Congress of Flight, as well as an international conference on aerospace education and a symposium on advanced air traffic control and navigational aid concepts. Two conferences which have evoked a great deal of interest are the missile management conference and the space age conference. The missile and space discussions feature a distinguished list of participants and will serve as a climax to the conference program of the World Congress of Flight. The space age program will conclude with a "Man in Space" forum on Project Mercury of the National Aeronautics and Space Administration, which is designed to send the first American into outer space. Such topics as the mission and operations of Project Mercury and our first space man will be presented by men of the level of Dr. Abe Silverstein, NASA's Director of Space Flight Development; Dr. W. Randolph Lovelace, Chairman of NASA's Advisory Committee on Life Sciences; and Col. John P. Stapp, president of the American Rocket Society.

David R. Hull, president, Electronic Industries Association, will serve as Chairman of the Missile Management Conference at the World Congress of Flight. This will include a final presentation on "Industry in an Accelerating Technology." Such dignitaries as Roy Johnson, Director, Advanced Research Projects Agency, Department of Defense; Dr. James W. McRae, vice president, American Telephone & Telegraph Co.; and Dr. Edward Teller, director, Radiation Laboratory, University of California, will participate.

Time does not permit more than this brief description of some of the major presentations, speeches, and demonstrations at the conference. For those who make use of the opportunity, the World Congress of Flight can be one of the most stimulating, productive, and useful experiences that an intelligent and responsible observer can have. I think it is appropriate for us to congratulate Mr. Edward P. Curtis, General Chairman of the World Congress of Flight, and those of his associates and friends who have worked so diligently to arrange this great event.

I understand a number of my colleagues have concluded, as I have, that this is a well-time opportunity to meet leaders, to exchange ideas, to attend and participate in the meetings and conferences aimed at exploring flight in terms of international security and welfare. The program, gentlemen, which will present flight in its broadest concept as an instrument of mankind, will be theoretical, technical, and practical. I should like to accept the gracious hospitality proferred by my colleague from

the great State of Nevada, and advise him that I look forward to being present and benefiting from this unusual and noteworthy opportunity.

WORLD CONGRESS OF FLIGHT

Mr. SISK. Mr. Speaker, I ask unanimous consent to address the House for 1 minute and to revise and extend my remarks.

The SPEAKER. Is there objection to the request of the gentleman from California?

There was no objection.

Mr. SISK. Mr. Speaker, I, too, wish to commend the World Congress of Flight to the attention of my colleagues in the Congress. My distinguished associates have already discussed a number of aspects of the outstanding program being held at Las Vegas, Nev., from April 12 through 19; however, by your leave, I value this opportunity to refer specifically to some portions of this free world program.

Jet pilots of 10 nations, including 5 of the world's top aerobatic teams will fly in air demonstrations, marking what is being termed Military Day at the World Congress of Flight and being staged at Nellis Air Force Base Gunnery Range. The participants in this unusual international event, first of its kind ever held in the United States, will include jet pilots of the French, Chinese, Belgian, Canadian, Italian, Netherlands, Turkish, Greek, British, and U.S. Air Forces. The European, Canadian, and U.S. pilots will climax the program with a flying salute to NATO in commemoration of the 10th anniversary which is being celebrated at the World Congress of Flight. Members of the Royal Air Force's legendary Dam Busters Squadron will be present.

Educational leaders from eight nations will survey aviation teaching resources at an important World Congress of Flight forum, which can have far-reaching and significant results. Here representatives from the free world plan to engage in the first international inventory and evaluation of the educational resources available for the areospace age—an important task. Dr. Lee DuBridge, president, California Institute of Technology, will discuss resources for the future in air and space. Other distinguished educators who will participate are Dr. Frank E. Sorenson, professor of education, University of Nebraska, and chairman of the Aerospace Education Council, Air Force Association; Dr. Wayne O. Reed, Deputy Commissioner, U.S. Office of Education; and Dr. Byron F. Stetler, superintendent of public instruction in the State of Nevada. Miss Jacqueline Cochran, famed American aviatrix and president of the Federation Aeronautique Internationale, will lead a panel discussion in which the leaders in education from a variety of countries will participate. Another phase of the education aspect of the World Congress of Flight, and an extremely important one, is a session which will feature discussions on "The Aerospace Education Movement." Here the implications for State and local school systems, for State education associations, for teachers colleges and parent-teachers associations will be probed. The conclusions reached here, and the understandings their application will create, will bear fruit in America and in the free world for years to come.

These are but a small sampling of the wide variety of opportunities which will be made available to those who will attend or who will follow closely the work of the World Congress of Flight.

There are a variety of compelling reasons for the Air Force Association and the six other nonprofit organizations cooperating with the Air Force Association to stage the World Congress of Flight in April 1959. The inauguration of the first full year of commercial jet transportation on a global scale was one factor which prompted the World Congress of Flight. The appearance of America's full jet fleet was another. The fact that world trade interest is at a new high is another. A desire to mark Pan American Week, both as a salute to our esteemed neighbors in the south and in terms of aviation progress in the south, was another reason for staging the World Congress of Flight. The 10th Anniversary of the North Atlantic Treaty Organization also falls in April, and was another compelling reason for scheduling the World Congress of Flight during April 1959.

As members of the free world, we must not overlook the threshold of the space age. In the present state of world affairs we cannot overlook the military side of space. Our flight world has spread its wings more than ever in recent years and is at a crossroads of its own within the larger political-economical crossroads with which the entire world is faced. The World Congress of Flight takes place at the crossroads.

The people with whom I have talked about the World Congress of Flight have indicated the high expectations of those who will attend and participate. I am proud that such an impressive endeavor is coming to fruition in America this spring. It behooves all of us as thoughtful advocates of the space age to support the purpose and to lend encouragement to this worthwhile enterprise, the value of which is so great it cannot be readily estimated. Let us applaud those Americans and members of the free world of nations who are joining hands to make this military-commercial-governmental operation the first-rate, top-flight exercise it will be.

GEN. LEW WALLACE

Mr. WAMPLER. Mr. Speaker, I ask unanimous consent to address the House for 1 minute and to revise and extend my remarks and include extraneous matter.

The SPEAKER. Is there objection to the request of the gentleman from Indiana?

There was no objection.

Mr. WAMPLER. Mr. Speaker, this morning, April 10, 1959, the Indiana delegation marked the 132d anniversary of the birth of that great Hoosier soldier, author, lawyer, and diplomat, Gen. Lew Wallace. Lew Wallace, born in Brookville, Ind., on April 10, 1827, lived for many years in Crawfordsville, Ind., where he died on February 15, 1905.

General Wallace, Mr. Speaker, was a man of manifold talents and herculean capacities. Five years after his death a statue, designed to be representative of the State of Indiana and commemorating this great man and his works, was unveiled in the U.S. Capitol's Statuary Hall.

At that time Senator Albert J. Beveridge, of Indiana, said of Wallace:

> Gen. Lew Wallace loved liberty for all men, and he fought for it. He worshipped the Nation because of what the American Nation means; and to save the Nation he gladly offered his life on many a battlefield. He suggested laws for the betterment of human conditions. He wrote noble books, one of which, "Ben Hur," translated into every modern and even into one oriental tongue, has lifted all the civilized world nearer to the Saviour of mankind.

As an intrepid soldier, Gen. Lew Wallace served his country with his sword; as a man of deeply religious thoughts and motivations, he served all men with his pen. We of Indiana, quite properly, are exceedingly proud of Lew Wallace and his memory.

Mr. Speaker, on the date of this 132d anniversary salute to that distinguished Hoosier, I would like to set forth a short history of Lew Wallace's brilliant career:

> Wallace, Lewis (April 10, 1827–February 15, 1905), lawyer, soldier, diplomat, author, commonly known as "Lew" Wallace, was born at Brookville, Ind., the son of David [q.v.] and Esther French (Test) Wallace. His mother, to whom he was deeply attached, died during his boyhood. He early displayed a love of adventure; his father tried to keep him in school, but the boy was irked by ordinary tasks and preferred to draw caricatures or to play truant. As he grew older, however, he carried his books to the woods as often as his gun and rod. When his father was elected Governor of Indiana in 1937, and the family moved to Indianapolis, Lew's zest for reading was stimulated by the advantages of the State library. Before he was 16 he began to support himself by copying records in the county clerk's office. About the same time, Prescott's "Conquest of Mexico" made such a deep impression upon him that he determined to write upon the theme. Thus "The Fair God" of later years had its inception. In 1844–45 he reported the proceedings of the Indiana House of Representatives for the Indianapolis Daily Journal, and soon afterward began the study of law in his father's office. When the Mexican War began, he raised a company of which he became second lieutenant, and which was assigned to the 1st Indiana Infantry. His services in Mexico gave him experience without involving him in the dangers of any serious engagement.
>
> He campaigned against Taylor in 1848, and edited a Free-Soil paper, chiefly because of resentment against Taylor's treatment of the Indiana regiments. Following the campaign he became a Democrat. Admitted to the bar in 1849, he began practice in Indianapolis. Soon he moved to Covington, and in 1850 and 1852 was elected prosecuting attorney. In 1853, he changed his residence to Crawfordsville, and in 1856 was elected to the State senate. There he advocated a reform in divorce laws and, in 1859, proposed the popular election of U.S. Senators. In the summer of 1856, he had organized a military company at Crawfordsville which he drilled so efficiently that most of its members became officers in the Civil War.

After Fort Sumter was fired upon, Gov. O. P. Morton [q.v.] made him adjutant general of the State. Within a week he had 130 companies in camp, 70 more than the State quota, and was made colonel of the 11th Regiment. Soon at the front, he helped to capture Romney, on the South Branch of the Potomac, and to evict the enemy from Harpers Ferry. An excellent disciplinarian and popular with his men, he was promoted rapidly. On September 3, 1861, he was made a brigadier-general and on March 21, 1862, after his service at the capture of Fort Donelson, Tenn., a major-general. Unfortunately, he incurred the ill will of General Halleck, who twice removed him from command; the first time he was restored by President Lincoln, the second time, by General Grant. In November 1862, he was president of the military commission that investigated the operations of the army under Maj.-Gen. D. C. Buell [q.v.]. The following year he saved Cincinnati from capture by Gen. E. Kirby-Smith [q.v.], after which event the President gave him command of the Middle Division and VIII Army Corps, with headquarters at Baltimore. With 5,800 men, part of them inexperienced, he held a force of 28,000 under Gen. Jubal A. Early [q.v.] at the Monocacy, July 9, 1864. Though defeated, he probably saved Washington from capture, and was highly commended by Grant in his Memoirs (post, 306). He served on the court martial which tried the assassins of Lincoln, and was president of the court that tried and convicted Henry Wirz [q.v.], commandant of Andersonville Prison.

At the close of the war he undertook to procure munitions and to raise a corps of veterans for the Mexican liberals, and spent some time in Mexico. Returning to Crawfordsville, he practiced law, and in 1870 was an unsuccessful candidate for Congress on the Republican ticket. In 1878 he was appointed Governor of New Mexico, serving until 1881, when President Garfield appointed him minister to Turkey. There he lived for 4 years, 1881–85, winning the confidence of the Sultan to an unusual degree. In 1890 he declined an offer of the mission to Brazil tendered by President Harrison.

Wallace is best known, however, as a man of letters. In 1873 he published "The Fair God," a story of the conquest of Mexico, which won him wide recognition. The fame thus attained was greatly enhanced by "Ben Hur: A Tale of the Christ" (1880), of which 300,000 copies were sold within 10 years. It was translated into a number of foreign languages, including Arabic and Chinese, and was successfully dramatized. The extraordinary success of this work was largely due to the fact that the greatest figure in history was with the deepest reverence brought into a strong story dramatically told. Among his other publications were "The Life of Benjamin Harrison" (1888), written for campaign purposes; "The Boyhood of Christ" (1888); "The Prince of India" (1893), inspired by his stay in Constantinople; and "The Wooing of Malkatoon" (1898), a poem, with which was included "Commodus," a tragedy, written many years earlier. In 1906 appeared "Lew Wallace, an Autobiography," which Wallace had brought down only to 1864, but which was sketchily completed by his wife and Mary H. Krout.

On May 6, 1852, he married Susan Arnold (Dec. 25, 1830–Oct. 1, 1907), born in Crawfordsville, the daughter of Col. Isaac C. and Maria Aken Elston. Fifty years later he called her "a composite of genius, common sense, and all best womanly qualities" (Autobiography, I, 209). She was a frequent contributor to newspapers and periodicals, and one of her poems, "The Patter of Little Feet," had wide popularity. Other publications by her include "The Storied Sea" (1883); "Ginevra: or The Old Oak Chest" (1887); "The Land of the Pueblos" (1888); and "The Repose in Egypt" (1888).

Wallace's poise and urbanity marked him as a man of the world, yet he was simple in taste and democratic in ideals. For politics he had no aptitude; the law he did not like; the military life challenged his adventurous spirit but could not hold him after his country had no special use for his services; art, music, and literature were his most vital and permanent interests. Many a young person had reason to remember the gracious hospitality of his study, built as a "pleasure house for my soul." Never a church member, he believed in the divinity of Christ. His last years were serene. He lectured frequently and received unstinted praise. He died at Crawfordsville, and 5 years after his death his statue was unveiled in the Capitol at Washington as representative of the State of Indiana.

MARCH UNEMPLOYMENT FIGURES

Mr. O'HARA of Michigan. Mr. Speaker, I ask unanimous consent to address the House for 1 minute and to revise and extend my remarks.

The SPEAKER. Is there objection to the request of the gentleman from Michigan?

There was no objection.

Mr. O'HARA of Michigan. Mr. Speaker, a few days ago the administration announced March unemployment figures. They were accompanied by another statement claiming a rising wave of employment possibilities issued by the optimists in the administration.

The figures, in rough terms, show a decline in unemployment of about 300,000 persons from February to March. There was a change in the seasonal adjusted rate of unemployment from 6.1 percent of the labor force to 5.8 percent. In other words, unemployment was reduced by three-tenths of 1 percent.

Mr. Speaker, this very slight reduction has been hailed as the end of the recession and problems of unemployment. This is not the case. We need timely action and this Congress still has the responsibility for providing it.

The administration's attitude toward the recession and unemployment reminds me of nothing so much as a little poem by Hughes Mearns, which reads:

> As I was going up the stairs
> I met a man who wasn't there.
> He wasn't there again today;
> I wish, I wish he'd stay away.

APRIL 9, BATAAN SURRENDER DAY, BRINGS BACK MEMORIES

Mr. LEVERING. Mr. Speaker, I ask unanimous consent to extend my remarks at this point in the RECORD.

The SPEAKER. Is there objection to the request of the gentleman from Ohio?

There was no objection.

Mr. LEVERING. Mr. Speaker, my colleagues, the distinguished majority leader JOHN MCCORMACK and Mrs. EDITH NOURSE ROGERS, the distinguished Congresswoman from Massachusetts, both drew attention on last Wednesday that on Thursday, April 9, would be Bataan Day—a day that has lived for 17 years in the memory of our people.

Unfortunately, I was called off the floor on other business and did not have an opportunity to speak on this subject at that time. My interest in Bataan Day, Mr. Speaker, is far more than casual. I am proud that I can stand here, 17 years after the event, to tell my colleagues that I was a member of the group who had to see the American flag come down that day, and the flag of our enemy at that time, the Rising Sun of the Imperial Japanese Empire, take its place. I cannot muster the words to describe the feeling that came over me when the Stars and Stripes were hauled down.

I can attest, through my own experience, that our Filipino friends did fight well by our sides. I also can state, through personal experience, that the Americans on Bataan proved again that when freedom is an issue, the American people will never falter, they will never fail. Although we had to swallow our own tears that day, when we knew that further resistance was futile, we never doubted but what our countrymen would come to the rescue. The incredible cruelty of our captors has been exposed many times, so I shall not dwell upon it at this time. However, in spite of the hardships, the starvation diet, the privations, and the years that seemed to be endless, I can personally testify that the Americans and the Filipinos always kept hope. They never gave up—in their minds. I have always said that, on Bataan, in spite of the defeat, there really was a new birth of freedom, in that the message of Bataan spread to all of the allied countries and spurred our brothers on to final victory.

Our distinguished majority leader the gentleman from Massachusetts [Mr. MCCORMACK], in his remarks, said that the story of Bataan "is an epic that will live forever." I believe that he is eminently correct. That is because courage, in and of itself, is a quality which men always must possess, if they are to beat back the assaults of natural enemies, such as the beasts of the field, the ravages of nature, and the onslaughts of disease. In fighting one another, men of all races have shown great courage; it may well be that we can show the greatest courage in learning how to get along with the peoples of other nations, by exercising patience, forebearance, forgiveness, and restraint. In any case, there must be courage, if man is to subsist, and I saw so many instances of courage, in my 3½ years among the prisoners of Bataan, I sometimes wondered just how much men could stand without losing their spirits.

IGNACE JAN PADEREWSKI

Mr. DULSKI. Mr. Speaker, I ask unanimous consent to extend my remarks at this point in the RECORD.

The SPEAKER. Is there objection to the request of the gentleman from New York?

There was no objection.

Mr. DULSKI. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include the following resolution which was unanimously adopted at a special meeting of the Ignace Jan Paderewski Singing Society of Buffalo, N.Y., held at Dom Polski Hall in Buffalo, N.Y., on March 3, 1959:

Whereas today marks the 20th anniversary of the organization of the Ignace Jan

Paderewski Singing Society, founded in Buffalo, N.Y., on March 3, 1939; and

Whereas our renowned patron, Ignace Jan Paderewski, had distinguished himself in the field of statesmanship as well as attaining a preeminence in the world of music; and

Whereas the views of liberty and democracy held by Ignace Jan Paderewski were greatly instrumental in the creation of a free and independent Poland following World War I; and

Whereas Ignace Jan Paderewski devoted his final efforts to the cause of the defense of freedom, and lies buried in Arlington National Cemetery by Presidential decree: Now, therefore, be it

Resolved, That we rededicate ourselves to the cause of liberty and freedom for all, ideals that were espoused by Ignace Jan Paderewski; be it further

Resolved, That we petition our Post Office Department to issue a postage stamp honoring Ignace Jan Paderewski as a true "Champion of Liberty"; be it further

Resolved, That said postage stamp in the "Champion of Liberty" series honoring Ignace Jan Paderewski be issued in 1960, in commemoration of the centennial of his birth; be it further

Resolved, That other organizations and individuals be respectfully urged to petition the Post Office Department to issue a postage stamp honoring Ignace Jan Paderewski in 1960; and be it further

Resolved, That copies of this resolution be sent to the Postmaster General, Hon. Arthur E. Summerfield; to the chairman of the Senate Committee on Post Office and Civil Service, Hon. OLIN D. JOHNSTON; and to the following Members of the House of Representatives Committee on Post Office and Civil Service: Hon. TOM MURRAY (chairman), Hon. THADDEUS J. DULSKI, Hon. JOHN LESINSKI, Jr., and Hon. STANLEY A. PROKOP.

(Resolution committee: Daniel J. Kij, chairman; Walter Z. Kotowski, president; Theodosia Buczkowski; Joseph Stefaniak; Michael C. Slominski; Adeline Wujcikowski, secretary.)

JOHN DRUPA

Mr. ROBISON. Mr. Speaker, I ask unanimous consent to extend my remarks at this point in the RECORD.

The SPEAKER. Is there objection to the request of the gentleman from New York?

There was no objection.

Mr. ROBISON. Mr. Speaker, my guest today, in the Capital, is a young man from Binghamton, N.Y., who has just received the signal honor of being named "Boy of the Year" by the Boys' Clubs of America. That young man is John Drupa, a constituent of mine.

John, now 15 years of age, fled with his mother from Latvia when the Soviets took over the country. His father and brother have until recently, been prisoners of the Russians in Siberia. I hope that somehow, a way can be found to bring them, too, to the United States to be reunited with John and his mother.

Mr. Speaker, if it is true that the greatest asset we have in America is our young people, and I am sure that is true, then surely we can all take reassurance that the next generation of Americans is composed of people like John Drupa, a boy who, from a half million Boys' Club members, was selected by a national committee as the boy who best fulfills the character of "junior citizen who has rendered outstanding service to home, church, school, community, and Boys' Club."

I am inserting in today's RECORD an account of his personal achievements, accomplished in the face of many obstacles. Needless to say, all the people of his city join with me in being proud of and grateful to John for the honor he has brought to us, and for the inspiration that he is.

NATIONAL WELDED PRODUCTS MONTH

Mr. OSMERS. Mr. Speaker, I ask unanimous consent to extend my remarks at this point in the RECORD.

The SPEAKER. Is there objection to the request of the gentleman from New Jersey?

There was no objection.

Mr. OSMERS. Mr. Speaker, because welding plays such an important role in our daily lives, our economy, and our defense, I have introduced House Joint Resolution 179. This resolution authorizes and requests the President to designate the month of April in each year as National Welded Products Month. Such a designation will give recognition to the men and the methods that are so vital to us all. Not only are the household tasks of the American family speeded and lightened, by a myriad of welded products and appliances, but our standard of living is based on the inexpensive and safe land, air, and sea carriers made possible through welding. American industry as it exists today is built upon the use of welded machinery and equipment. The boilers that heat our buildings and the generators that furnish our power are possible only by use of the welding processes.

While many skills are required to make the weapons that defend us on the ground, in the air, and in outer space, the one basic process to all is the welding process.

WELDING IN THE SPACE PROGRAM

The United States today is able to hurl a satellite into the sun's orbit, send a submarine under the North Pole and build planes for fantastic speeds because of rapid strides in the development of an old technique: welding.

The welding process has been reshaping the frontiers of metallurgical knowledge at a rate that was hardly conceivable only a few years ago. New discoveries have made welding a keystone of national defense and industrial production.

Experience in dealing with the highly technical problems associated with missile and space developments has brought about a new concept of industrial approach, thus affording the Government the benefit of outstanding scientific and engineering know-how through many groups of companies forming teams to design, develop and produce the unusual and complex systems necessary to keep our great Nation and allies in the lead of advanced weapons as a deterent to world conflict.

Reliability of missiles and space vehicles is the byword in all research, development and production. It has imposed an unusual burden on our industrial ingenuity and is resulting in establishing the fact that with well thought out and well directed programs, it is possible to achieve with certainty the ultimate in reliability not only for the fabrication of the missile and its components, but the other elements such as launching pads and devices, guidance and telemetering, propellants, liquid and solid fuels with oxidizers.

The entire missile program is dependent on welding. The Redstone, Jupiter, Atlas, and Titan missiles, for example, presented difficult problems that could be solved only by welding.

The construction of tankage and missile frames going into missiles and space vehicles requires the ultimate in reliability of fabrication to insure end products of flawless precision, as do the guidance systems, propulsion and auxiliary power units, warhead and nose cones, and so forth.

Consider the problem of building Titan fuel tanks more than 10 feet in diameter and over 20 feet long, from aluminum sheets only one-tenth of an inch thick. Welding engineers found the answer by building the largest precision tool installation of its kind ever engineered in the United States. The method employed the inert-gas-tungsten arc process. Tank sections were held in precision fixtures, intricate controls handled the loading of the parts, rotating the work, positioning the automatic welding heads and adjusting all the welding variables to achieve this precision and reliability.

To learn the secrets of outer space, earth satellites, fabricated by welding, are circling the globe at a rate of 18,000 miles per hour. The shells of the 20-inch diameter spheres developed under Project Vanguard consist of an upper and lower hemisphere and an inner ring, deep drawn from 0.090 inch thick flat stock, magnesium alloy sheet. The hemispheres were deep drawn and spun to exact contour and dimensions and joined to the inner ring by inert gas tungsten arc welding, the only process which could be used to efficiently join these magnesium satellites.

The light weight, thin wall engine components of a solid fuel missile must withstand temperatures of 5,000 to 8,000 degress Fahrenheit as the fuel burns. Because of increased technical requirements involving metallurgy, design, and fabrication aspects, it becomes essential to exercise fully automatic control over the shaping, forming, welding, heat treating and machining of motor cases and other engine components.

The use of breathing oxygen is well established by current aircraft practice. However, in order to put a man into space consideration had to be given to the special environmental conditions that a space vehicle would encounter, among these were a variety of negative and positive accelerations including a condition where there is a complete lack of an apparent gravitational field. Therefore, it became necessary to design a closed cycle oxygen breathing system that would operate independently of the strength of a gravitational field. Such a system has been engineered and developed for experimental use. Briefly, it was necessary to produce a lightweight, miniature type of hardware

capable of storing that lifegiving element—oxygen—at a pressure in excess of 7,000 pounds per square inch, with suitable regulators to reduce this pressure to that which man is accustomed to breathing. Again and oddly enough, welding played an important part in joining together those components of the system thus providing the required light-weight package to do the job.

WELDING USE IN STEEL AIRCRAFT

We are now in the age of steel aircraft where supersonic speeds producing extreme stresses and temperatures dictate the extensive use of alloy steel and refractory metals. The materials generally employed in contemporary aircraft could not withstand the rigid service temperatures and pressures that ultra speeds produce. Moreover, rivets which reduce a plane's efficiency by 15 percent became obsolete when the sound barrier was broken. Mechanized welding, therefore, is the only practical means of fabricating supersonic aircraft. Such practice also reduces the overall weight—an increasingly important advantage.

A new large bomber is designed to operate at very high speeds and could carry the equivalent weight of 300 passengers in commercial service. Yet its outside skin is only one one-hundredth of an inch thick. Welding makes it possible to stiffen this structure with sturdy ribs brazed to this shell to form panels. Such panels, from 1 to 5 inches thick may be separately fabricated and then assembled by welding. In short, the huge plane becomes a welding job from nose to tail.

Mechanized welding has become necessary, not merely to speed production and lower costs, but to assure uniform quality. For example, the jet engines and gas turbines of today's planes demand virtual perfection. In an engine with a 36-inch diameter, the rotor blades have the almost unbelievably low clearance of two to three one-thousandths of an inch. These blades move at supersonic speeds and at temperatures approaching 2,000° Fahrenheit. A few years ago it would have seemed impossible to satisfy such requirements with machine welding. Now the accomplishment is taken for granted.

WELDING IN NUCLEAR SUBMARINES, CARRIERS, OTHER MILITARY AREAS

The U.S.S. *Nautilus* and other nuclear submarines are testimony to modern welding fabrication methods. Repairs to the nuclear reactors and the replacement of spent nuclear elements are possible only by remotely controlled welding procedures.

The Navy has just announced plans for small atomic submarines—a development of great importance. Many component parts of these boats will be produced by means of special fixturing and automatic welding. Compartments will then be joined together by employing additional modern fixturing and mechanized welding. Enhanced workmanship will effect economies and supersede conventional hand-assembled methods.

The remarkable performance of the inert gas-shielded welding processes for aluminum has encouraged the Navy to put large amounts of that metal into its new warships. Aircraft carriers now use about 4 million pounds of aluminum and destroyers take some 200,000 pounds. Thanks to welding, the Navy has been able to replace the steel superstructures of its destroyers with aluminum, thus lowering the center of gravity and making the ships more seaworthy.

The construction of the U.S.S. *Forrestal* required approximately 2 million pounds of weld metal—enough to fill 20 freight cars. There were 2,400 miles of quarter-inch welding on steel and aluminum for the hull and superstructure.

The distant early warning network is another military field where welding has played a leading role. The aluminum tubular wave guides are fabricated in short lengths at the factory, then assembled in the field by welding. Radar systems are also being fabricated by new welding techniques.

THIRTY-SEVEN WELDING PROCESSES FOR INDUSTRY

Welding has become a universal process in the fabrication of almost everything from dishwashing machines to highway bridges. American industry today is using no less than 37 basic welding processes, many of which involve automatic machinery.

Stainless steel thinner than paper is being fabricated automatically. Electrical parts too small to be seen with the naked eye are being joined into assemblies with the aid of welding and powerful magnifying glasses.

In contrast to delicate missile components, steel structures with thicknesses of 8 to 10 inches are being formed together with welded joints as strong as the original metals.

The speed of modern welding techniques is almost unbelievable. Quarter-inch aluminum is welded at more than 8 feet per minute and the seams of steel tanks are sealed at 50 feet per minute, while small diameter aluminum tubing is welded at the astonishing rate of 800 feet per minute.

Until World War I, welding was done chiefly in the blacksmith shop. Commercial use began with the repair and conversion of warships and merchant vessels. As research uncovered more of the basic principles of welding, scores of applications for welding techniques were found. In World War II the process became vital in military production and in equipment maintenance at the fighting fronts.

Welding today is used in every metal-fabricating industry and on almost every type of metal. In fact, when a new metal is developed, one of the first tests of its commercial value is the question, "How can it be joined by welding?" Titanium and molybdenum are examples.

WELDING, A FOREMOST INDUSTRY

The remarkable growth of the welding industry is shown by sales figures. In 1939 the Nation spent $58 million for welding equipment and supplies. By 1953 the total was $613 million and the estimate for 1958 is over $1 billion.

Today, automatic welding accounts for a substantial part of the welding industry's volume of business. There will, however, always be some operations that can be done more efficiently by hand—or only by hand.

Automobiles would cost considerably more if they were not welded. A passenger car body has approximately 8,000 welds. Through the technique known as multiple spot welding, as many as 100 welds can be made simultaneously in one part, and 300 parts may be welded in 1 hour. Gasoline tanks are seam-welded at the rate of 50 feet a minute.

Automobile engine blocks are cast by the thousands. Defects which once condemned a block to the scrap heap are now removed by welding. Salvaging these expensive castings has become a routine job in the automotive industry.

BUILDERS ACHIEVE ECONOMIES THROUGH WELDING

Major economies in the construction field are achieved through welding. By eliminating the extra steel required for joining beams and girders, welding can reduce the total tonnage as much as 40 percent. One survey of 1,500 structures designed for welded fastening showed that every one saved more than 10 percent of the steel required by other methods.

Studies indicate that if 80 percent of our new structures were joined by welding, at least 250,000 tons of rolled steel could be saved annually. At times when rolled steel is in short supply, this saving would permit the construction of many additional buildings.

Another important advantage of welding, is faster erection. Much of the work can be prefabricated in the shop instead of on the job, thus simplifying and expediting erection procedures.

Almost all highway bridges of girder construction are now totally or partly welded. In fact, when Federal aid is requested for a highway bridge, the Bureau of Public Roads requires that the design meet the standards of the American Welding Society.

COSTS REDUCED THROUGH WELDING

Impressive savings in costs are credited to welding in hundreds of different operations. For example, the air-conditioning system of a New York skyscraper was put together with 4,000 oxyacetylene welds instead of the usual mechanical joints. Aside from the fabricating economy, welding assured lower maintenance costs because of leakproof joints—plus a longer life for the installation.

Chrome tables and chairs are now being assembled by resistance welding, instead of with bolts which require drilled holes, extra labor and extra inventory. A manufacturer of stainless steel dishwashers redesigned his product for fully automatic welding. The result, production time was reduced 60 percent.

Welding permits the use of two or more different metals in a single assembly. This means that the more expensive metals need be used only where they are required. The huge bucket of a power shovel is an illustration. The bucket itself is of high-strength steel, surfaced with a harder material by overlay welding to prolong its life. The teeth, which receive the heaviest wear, are of manganese steel, welded to the lip of the bucket.

Castings are expensive parts in manufacturing processes, as any home mechanic knows. The more complex the casting, the greater is the cost. Welding is saving costs in the casting industry because complex units can often be assembled by welding together two or more simpler castings.

INVENTORY EXPENSE CURTAILED THROUGH WELDING

Many manufacturers are now using welding to minimize their investment in prefabricated components—an investment that is often threatened by the possible need to redesign a product before the inventory is exhausted. By purchasing simple tube, sheet, plate, and bar stock as needed, they are making their own welded components. This do-it-yourself system means that designs can be changed without sacrificing a costly stock of unused components.

In the power field, welding permits higher operating temperatures and pressures. Boilers and supply lines are 100 percent welded—so are tanks for oil and water storage.

Welded pipelines range from 6 inches in diameter to the giants of Hoover Dam—large enough to hold a three-story building. These pipelines carry water, oil, gasoline, and natural gas through rugged and desolate regions where breaks would be costly. Welded pipes are also used to distribute chemicals, sirups, and other fluids within a single plant or local area.

The railroads are reducing car weights by using high-strength steel and substituting welding for rivets. Stainless steel passenger cars are now also being fabricated by welding.

SHIPBUILDERS TURN TO WELDING

Perhaps the most dramatic change effected by the role of welding has taken place in shipbuilding. From a repair function in World War I, welding has advanced to become a primary method of fabrication. It has reduced hull weights 5 to 10 percent and reduced maintenance costs approximately 25 percent.

A shipyard that uses welding extensively is able to convert to other fabrication jobs during slack periods. This means that the yard can keep its skilled employees on the payroll, ready for the next shipbuilding order.

Welding has proved a boon to the design engineer. It has given him freedom to design for function. He is no longer limited by the stereotyped designs established by older fastening methods. Now he can use most any material in any thickness—or most any combination of materials—to serve his purpose.

WELDING PROCESS OF THE FUTURE?

Recently announced has been a welding process of attractive future potential, at least in areas involving applications for special structures and metals of the jet-nuclear-space age. This process is referred to as electron beam welding. A stream of electrons is emitted from a source located in a vacuum chamber above the workpiece. This beam is focused on the area to be welded and the available energy needed for welding the workpiece can be precisely controlled with respect to intensity and location.

TECHNICAL TRAINING IN THE INDUSTRY

The future of welding depends on the directed energy of well-trained engineers. The welding engineer is concerned with materials, design, and fabrication and should be exceptionally well trained in each of these three large categories.

The welding industry, conscious of the crucial need for more trained men, is ever alert in creating more opportunities for thorough instruction.

CONCLUSION

Mr. Speaker, in conclusion may I ask that early and favorable consideration be given to House Joint Resolution 179 by Congress and the President in order to pay deserving recognition to the often overlooked importance of welding and welded products in our modern civilization.

FRANK LLOYD WRIGHT

Mr. O'HARA of Illinois. Mr. Speaker, I ask unanimous consent to extend my remarks at this point in the RECORD.

The SPEAKER. Is there objection to the request of the gentleman from Illinois?

There was no objection.

Mr. O'HARA of Illinois. Mr. Speaker, in rising to note the death of Frank Lloyd Wright, I wish to inform my colleagues that the Robie house, which in the opinion of Siegfried Giedion is perhaps the most far-reaching influence of all Wright's architectural works, is in the Chicago district that I have the honor to represent. My colleagues when they come to Chicago may wish to view this house which will be preserved through the years as a monument to the transcending genius of Frank Lloyd Wright. It is located at the corner of Woodlawn Avenue and 58th Street. It is presently being considered as an official residence for the mayor of Chicago.

The Robie house was erected in 1909. About that time Mr. Wright had designed the Itte houses on Morse Avenue in the Rogers Park district of Chicago. One was a single story home in which the Itte family lived. Adjoining was a 2-story house, on the ground floor of which lived the family of Bruno Steindal, the famous celloist with the Theodore Thomas Orchestra, the upper floor being occupied by my family. So I came very early under the influence of Frank Lloyd Wright's architectural influence. His passing brings a personal grief, and in the Congress and in the country is a keen awareness of our loss.

Frank Lloyd Wright was born on June 8, 1869, one of the three children of William Russell Cary Wright and Anna Lloyd Wright. When Frank was 3 years old his father, a preacher, was called to a pastorate in Weymouth, Mass. Around 1880 the family returned to Wisconsin and the young boy divided his time between working on his uncle's farm and attending secondary school in Madison. Since the University of Wisconsin offered no courses in architecture, he enrolled as a prospective civil engineer in 1884.

In the spring of 1887 Wright left the university and went to Chicago where he obtained a job as a draftsman at $8 a week in the office of J. L. Silsbee. The following year he entered the offices of Dankmar Adler and Louis Sullivan. Inasmuch as Sullivan was interested mainly in commercial buildings, it fell to Wright to design the domestic work which came to the firm. Severing his connection with Sullivan, he began the independent practice of architecture in Chicago in 1893.

In 1900, Wright designed the first of his celebrated "Prairie houses" for which no precedent existed anywhere. Among the outstanding examples of this type house which Wright built in and around Chicago during this decade are the Heurtley and Willitts houses in 1902, the Isabel Roberts house in 1908, and the Gale and Baker houses in 1909. The Itte houses were built about that time. In the opinion of Siegfried Giedion, the Robie House in Chicago—1909—has had "perhaps the most far-reaching influence" of all Wright's works.

Two of the important undertakings of the middle period of his life were the Imperial Hotel in Tokyo—1915 to 1922—and the Millard House in Pasadena—1923. During the latter half of the 1920's his fame was in eclipse and his fortunes were at their lowest ebb. He received few commissions and the depression prevented the execution of several important projects. Some critics regarded his work as concluded.

Since 1940 Wright's projects have been more extensive and varied than at any other period of his career. One of the founders of modern architecture, Wright is regarded by many as the greatest architect of the 20th century. Some of his best known works are the campus of Florida Southern College in Lakewood, the Larkin Co. administration building in Buffalo, the Falling Water House at Bear Run, Pa., the Friedman House near Pleasantville, N.Y., the Johnson Co. building at Racine, Wis., the Price Tower at Bartlesville, Okla., and Guggenheim Museum in New York.

I am sure I speak for all my colleagues in extending deepest sympathy to the widow, the daughters, and the sons of this truly great American and man of genius.

PAY TELEVISION

Mr. HARRIS. Mr. Speaker, I ask unanimous consent to address the House for 1 minute, to revise and extend my remarks, and to include a bill which I am today introducing on the matter of pay television.

The SPEAKER. Is there objection to the request of the gentleman from Arkansas?

There was no objection.

Mr. HARRIS. Mr. Speaker, on March 26, I explained to the House in considerable detail the action which the Committee on Interstate and Foreign Commerce had taken on March 25, 1959, when the committee adopted a resolution with regard to the subscription television test operations contemplated by the Federal Communications Commission's third report, adopted by the

Commission on March 23, 1959. My remarks may be found in the CONGRESSIONAL RECORD for March 26, 1959, on pages 5362–5363.

I have been and am opposed to pay television but I cannot take a position as opposing tests for new uses of communications media in this day and age when new scientific discoveries are made daily affecting the lives of our people.

So, today I am introducing a bill dealing with pay television operations by wire but limited to tests only.

The pay television test operations which the Commission proposes to authorize are tests involving the utilization of radio. The Commission report does not deal with pay television operations by wire.

Now it is technically feasible to broadcast pay television programs by radio and also to transmit such programs by wire, and promoters of pay television have proposed to use both methods.

Pay television operations by radio and pay television operations by wire are closely related since both rely upon home television receiving sets for the reception of pay television programs and since both have to depend upon substantially the same sources for their supply of programs.

The third report adopted by the Federal Communications Commission on March 23, 1959, was issued under the authority granted to the Commission by the Communications Act of 1934. Among other powers granted to the Commission with regard to radio operations, section 303(g) directs the Commission to "study new uses for radio, provide for experimental uses of frequencies, and generally encourage the larger and more effective use of radio in the public interest."

The act does not grant to the Commission comparable authority with regard to wire communications.

Now in laying down in its third report the terms, conditions, and limitations with respect to test pay television operations by radio, the Commission sought to authorize limited test operations subject to proper controls and to prevent runaway test operations which might have brought about the virtual establishment of pay television operations by radio on some extended or permanent basis without the Congress having an opportunity to determine whether the establishment of such service on an extended or permanent basis is in the public interest.

The purpose of the bill is to require the Federal Communications Commission to prescribe, by regulations, such terms, conditions, and limitations with respect to the carrying on of limited tests of pay television operations by wire as the Commission deems necessary in the public interest. The bill requires that the regulations shall include requirements and limitations for the purpose of insuring that such tests will not be of such scope and character as to bring about the virtual establishment of pay television operations by wire on an extended or permanent basis without adequate governmental authority to regulate such operations in the public interest.

Under this bill the regulations so prescribed by the Commission would continue in effect until such time as the Commission shall fix as being necessary or appropriate in the public interest, and prior to such date it would be unlawful for any common carrier engaged in wire communications to engage in any State—whether in interstate or intrastate—in rendering any communications service by wire which would aid in the transmission of any pay television program unless the rendering of such service is in conformity with such regulations as the Commission prescribes. The Commission could bring civil actions in the appropriate district court of the United States to enjoin any violation or expected violation of the provisions of this legislation or the regulations issued by the Commission thereunder.

In other words, it seems to me—and the bill so declares—that because of the close relationship between pay television operations by radio and pay television operations by wire, it is necessary and appropriate that during the period while test pay television operations by radio are being conducted subject to terms, conditions, and limitations prescribed by the Federal Communications Commission, pay television operations by wire should likewise be carried on only in accordance with terms, conditions, and limitations prescribed by the FCC.

Of necessity the regulations prescribed by the Commission must reach pay television operations by wire whether they are conducted in interstate or intrastate commerce because uncontrolled runaway tests of pay television operations by wire conducted in one or several of the large metropolitan areas would seriously affect the limited test operations contemplated by the Commission in its third report with respect to pay television operations by radio.

To sum it all up in one sentence: You cannot have uncontrolled tests of pay television by wire if tests of pay television by radio are subject to strict limitations prescribed by the Federal Communications Commission.

I have introduced this new bill because the adoption by the Federal Communications Commission of its third report on March 23, 1959, and the adoption by the Interstate and Foreign Commerce Committee of its resolution on March 25, 1959, have outdated in some respects House Joint Resolution 130, which I introduced on January 12, 1959.

This new bill would give to the Federal Communications Commission the powers which in my opinion should be exercised by the Commission with regard to pay television tests by wire. As far as time is concerned, I would envisage that the Commission regulations prescribed under this proposed legislation would be substantially coextensive with the time periods contemplated by the Commission for test pay television operations by radio.

Let me emphasize that the introduction of this bill in no way should be construed as proposing to authorize pay television by wire on any extended or permanent basis.

The question of whether such extended or permanent operations should be authorized must be left to a future Congress to determine. After these limited tests have been conducted, and after experience has been gained, a future Congress may be in a better position to determine whether or not such extended or permanent operations are in the public interest and under what terms and conditions such extended or permanent operations should be conducted.

Instead of contemplating pay television by radio or by wire on a permanent or extended basis, my new bill is intended to prevent runaway tests of pay television by wire which might result in the virtual establishment of a new service without the Congress having had an opportunity to consider whether the establishment of such service on a permanent basis is in the public interest.

Mr. Speaker, I ask permission to have printed at this point in the RECORD the text of the bill which I have just introduced.

H.R. 6245

A bill relating to pay television operations by wire

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That the Congress hereby declares that—

(1) it is technically feasible to broadcast pay television programs by radio and also to transmit such programs by wire, and promoters of pay television have proposed to use both methods:

(2) pay television operations by radio and pay television operations by wire are closely interrelated, since both rely upon home television receiving sets for the reception of pay television programs and since both have to depend substantially upon the same sources for their supplies of programs;

(3) while, under authority granted to it by the Communications Act of 1934, the Federal Communications Commission in its third report, adopted on March 23, 1959, has set forth the terms and conditions under which the Commission proposes to authorize limited tests of pay television operations by radio, that Act does not grant to the Commission comparable authority to prescribe terms and conditions governing pay television operations by wire, particularly if such operations are carried on exclusively in intrastate commerce; and

(4) because of the close relationship between pay television operations by radio and pay television operations by wire, whether conducted in interstate or intrastate commerce (and particularly when conducted in one or several of the large metropolitan areas), it is necessary and appropriate that, during the period while test pay television operations by radio are being conducted subject to terms and conditions prescribed by the Federal Communications Commission, pay television operations by wire (whether in interstate or intrastate commerce) shall be carried on only in accordance with terms and conditions prescribed by the Federal Communications Commission as provided in section 2 of this Act.

SEC. 2. As soon as practicable after the enactment of this Act the Federal Communications Commission shall prescribe, by regulations, such terms, conditions, and limitations with respect to the carrying on, for limited periods only, of tests of pay television operations by wire, as the Commission deems necessary in the public interest,

including requirements and limitations for the purpose of insuring that such tests will not be for such scope and character as to bring about the virtual establishment of pay television operations by wire on an extended or permanent basis without adequate governmental authority to regulate such operations in the public interest. The regulations so prescribed by the Commission shall continue in effect until such date as the Commission shall fix as being necessary or appropriate in the public interest, and prior to such date it shall be unlawful for any common carrier engaged in wire communications to engage in any State (whether in interstate or intrastate commerce) in rendering any communications service by wire which would aid in the transmission of any pay television program unless the rendering of such service is in conformity with such regulations as the Commission prescribes in accordance with this section.

SEC. 3. (a) Whenever it shall appear to the Federal Communications Commission that any person has engaged or is about to engage in any acts or practices which constitute or will constitute a violation of section 2, or of any regulation issued thereunder, it may bring a civil action in the appropriate court for an order enjoining such acts or practices, or for an order enforcing compliance with such paragraph or regulation, and upon a showing by the Commission that such person has engaged or is about to engage in any such acts or practices a permanent or temporary injunction, restraining order, or other order shall be granted without bond.

(b) The district courts of the United States and the United States courts of any place subject to the jurisdiction of the United States shall have jurisdiction of civil actions brought under this section. Any such civil action may be brought in any district in which any act, failure to act, or transaction constituting the violation occurred, or in the district in which the defendant resides or transacts business.

SEC. 4. As used in this Act—

(1) the term "State" includes any of the several States of the United States, the District of Columbia, Hawaii, Puerto Rico, the Canal Zone, and any possession of the United States; and

(2) the term "pay television program" means any television program transmitted by wire and intended to be received by home television receiving sets only upon the payment, by the owners or users of such sets, of a charge, fee, or other form of compensation; but such term does not include any television program broadcast by a standard broadcasting station insofar as it is transmitted, by means of a community antenna system, to the subscribers of such system upon payment of a monthly or other periodical charge.

ARE WE FIGHTING OR ARE WE AIDING COMMUNISM?

Mr. HOFFMAN of Michigan. Mr. Speaker, I ask unanimous consent to address the House for 1 minute, and to revise and extend my remarks.

The SPEAKER. Is there objection to the request of the gentleman from Michigan?

There was no objection?

Mr. HOFFMAN of Michigan. Mr. Speaker, information evidently obtained from a press release from Chairman Moss of the Special Subcommittee on Government Information of the House Committee on Government Operations, and printed in an Associated Press news dispatch, reads as follows:

SPACE MONKEYS TAGGED SECRET; MOSS ASKS WHY

The military was reported yesterday to be stamping as "confidential" all information about space monkeys. Representative JOHN E. MOSS, Democrat, California, is asking: "Why?"

As chairman of the House Government Information Subcommittee, Moss wrote Secretary of Defense Neil McElroy:

"The subcommittee will appreciate a specific explanation of how the disclosure of such information could prejudice the 'defense interests of the Nation'."

A Defense Department spokesman declined comment.

People connected with the Moss group suspect that all the hush-hush is to avoid offending those in India who worship monkeys or those at home who complain of inhumane treatment of animals.

According to Moss, Assistant Secretary of Defense Murray Snyder put out a secret order, No. 10501, last June 3, stating that research business on monkeys is for defense information only.

The following December, Moss said, the Dayton Daily News tried unsuccessfully to obtain information about space monkeys under training at Wright Air Development Center.

Shortly after that, Moss said, Roy Johnson, Director of the Advanced Research Projects Agency, admitted that primates were being trained for use in satellite projects.

As a distinguished American, a former Postmaster General, James A. Farley, several times said: "Let us take a look at the record."

Though a member of the subcommittee, the first I knew of this release was when it appeared in the press.

Is the subcommittee chairman, Mr. Moss, attempting to ride two horses, each going in opposite directions?

Informed people all know that we have spent billions upon billions of dollars, fought at least one war, to prevent the spread of communism throughout the world.

Joining with 81 other nations of the United Nations and with the 14 nations of NATO, we have not only surrendered a part of our own sovereignty, shared with others the constitutional right of the Congress to declare war and the Commander in Chief's like right to carry on war, but the Congress has authorized the expenditure of billions upon billions of dollars' worth of materiel, shared our technical and scientific knowledge and the results of costly experiments with our allies.

Now, apparently, Mr. Moss is demanding that, through the release and publication of heretofore unknown technical information, we make available to our enemies, the Communists, the invaluable results which our experts have obtained through scientific research and experiments.

Our colleague from California, the chairman of the subcommittee, if an opinion be permitted, is one of the most able, sincere, patriotic, and determined Members of the House, but, if his demands prevail and his theory of disclosure be adopted, we might just as well install a Communist in every executive department.

Why strengthen our allies through astronomical gifts, then make available to Russia and her Communists information which will place in the enemies' hands the benefit of everything we do to strengthen ourselves—to defeat them.

There would seem to be no sense in trying, with our allies, to build up a worldwide defense to communism, while, at the same time, making available to Communists the secrets which we hope will enable us to make available a striking force, not only equal to, but superior to, that of the Communists.

If war was a game—which it is not—following the policy advocated by the subcommittee chairman, the baseball and football coach would call out over the loudspeaker the details of the play which he intends to use next.

Who are the "people connected with the Moss group" who "suspect that all the hush-hush is to avoid offending those in India who worship monkeys"? And why drag in a religious issue?

The Defense Department, if it is to be forced to make public all the beneficial results of the investigations it undertakes, its experiments, its efforts to provide a more perfect defense, might far better cease its efforts, let the Russians do their own digging.

Note the last paragraph of the above press dispatch. Read it again. What particular crime did Roy Johnson, Director of the Advanced Research Projects Agency, commit by admitting "that primates were being trained for use in satellite projects"? Does our chairman intend to abolish all research where primates are used?

Mr. GROSS. Mr. Speaker, will the gentleman yield?

Mr. HOFFMAN of Michigan. I yield to the gentleman from Iowa.

Mr. GROSS. Does that press statement, "Space Monkeys Tagged Secret," and the statement of the Director of Advanced Research Projects Agency, which admitted that primates were being trained for use in satellite projects, include the men who have just volunteered for the space flight?

Mr. HOFFMAN of Michigan. Certainly not. Without thinking, I assumed that only monkeys were primates. But, later, after consulting Webster, learned that the term included man. Recalling then a recent Supreme Court decision which held that women were not admissible to a certain Texas college, hope that, if Mr. Johnson does repent, he will advise whether the word "primates," as he used it, includes women.

The use of the words "primate" and "monkey" in the same article which commented on one subject was most unfortunate.

Of course, neither our distinguished colleague, the gentleman from California [Mr. Moss], the chairman of the subcommittee, nor Mr. Johnson, Director of the Advanced Research Project, whose ability, sincerity, and patriotism have never been questioned, had the slightest intention of linking the two.

Throughout our history not only monkeys, but dogs, mice, other living organisms have been used in research.

Not only to advance our military strength, but notably to combat disease, improve health, give us greater advantages—the purposes for which experiments have been conducted for the benefit of mankind are unnumbered.

From Cassopolis in Cass County, in my own congressional district—the Fourth, Michigan—on July 26 of last year, Capt. Iven C. Kincheloe, Jr., the head of a family, made the supreme sacrifice while testing for the Defense Department the efficiency of a jetplane. Long had he been engaged in tests similar to those in which the seven courageous, patriotic and self-sacrificing young men recently selected to train for space flight will be expected to participate.

If the details and the results of the experiments which they undergo in their training are to be given to the public, made available to the Communists, then the sacrifices which they, their wives and their children make will have been made in vain.

Boiled down, Chairman Moss' latest position seems to be that all knowledge in the possession of those charged with our national defense be turned over to him and, through him, to the public and the press and, through the public and the press, becomes available to our Communist enemies.

If that be the purpose, certain will be the result with the compliance of his demand. Why not just order our scientists, our defense experts, to report directly to Moscow?

This is an attempt to disassociate myself from the statements carried in the Associated Press dispatch.

In my opinion, the subcommittee is not interested in "all information about space monkeys."

Neither the judgment of our chairman, of our subcommittee, of our committee, nor of the Congress as to the use to be made of monkeys, should be substituted for that of the agency charged with the duty of preparing an adequate national defense.

In my judgment, no useful purpose is served by calling attention to the religious beliefs or practices of a people whose friendship and respect we seek.

Our respected colleague from Florida, Mr. FASCELL, is a member of the Moss subcommittee. He is also a member of the House Committee on Foreign Affairs. To that committee—rather than to the Moss subcommittee—should be submitted the advisability of making any reference to the religious or humanitarian beliefs or practices of the people of India or in other lands.

POSTAGE STAMPS

Mr. McCORMACK. Mr. Speaker, I offer a resolution—House Resolution 233—and ask for its immediate consideration.

The Clerk read the resolution, as follows:

Resolved, That there shall be paid from the contingent fund of the House such amounts as may be necessary for purchase of postage stamps for the first session of the Eighty-sixth Congress as authorized by Public Law 85-778: *Provided,* That any expenditures pursuant to this resolution shall be reimbursed from the amount appropriated by the second supplemental appropriation bill, 1959, when enacted into law: *Provided further,* That nothing herein shall be construed to increase the individual postage stamp allowances above those now authorized by law.

The resolution was agreed to.

A motion to reconsider was laid on the table.

ARMY NEEDS CONSIDERATION FOR MORE MEN, EQUIPMENT

Mr. McCORMACK. Mr. Speaker, I ask unanimous consent that the gentleman from Montana [Mr. ANDERSON] may extend his remarks at this point in the RECORD.

The SPEAKER. Is there objection to the request of the gentleman from Massachusetts?

There was no objection?

Mr. ANDERSON of Montana. Mr. Speaker, the Army needs more men and more equipment if it is to be ready to do the vital jobs required of it in these troubled times. In plain language, the President's budget does not provide enough money for the Army. I hope the Congress will put into the defense appropriations bill as a minimum the additional $132 million required to maintain the Army at 900,000 and an additional $2.8 billion for modern equipment. The American Army should not again be outgunned and underequipped.

A theory has been advanced recently that savings generated by reductions in strength in the Army will provide the funds for necessary modernization in Army equipment.

This theory is unsound in that the total savings from this source are too small to permit an increase of the rate of modernization to desired levels. Nonetheless, application of these savings to modernization would be of some value to the Army.

In practice the application of personnel savings toward modernization has not occurred, for although the Army has been reduced in strength, it has not been allowed to apply the savings toward modern equipment.

If the Army had been held at a strength of 900,000 as suggested by Congress for fiscal year 1959, instead of the 870,000 currently projected, an additional $132 million would have been required. At a minimum, this $132 million should be provided to the Army for improving its rate of modernization. The Army Chief of Staff has testified before the Congress that the Army requires $2.8 billion annually for 5 years in order to achieve its modernization objective. Half of the $2.8 billion, or $1.4 billion, is required to replace equipment which is worn out and obsolete, while another $1.4 billion is needed to provide additional modern equipment to meet the minimum Army needs. The PEMA appropriation is budgeted at $1,373 million for fiscal year 1960; adding $132 million would raise this to about $1.5 billion, an amount which is still far short of the $2.8 billion needed.

It is apparent that the Army's modernization problem cannot be solved simply through application of savings from reductions in strength—even if such savings were so used in their entirety. It could be solved only by allocation to the Army of a greater percentage of the total funds which are available to the entire Military Establishment.

Army strength has been cut from 1,109,000 in June 1955 to 870,000 in June 1959.

During this same period the amount of the Department of Defense total budget, and the share given to the Army, is shown below:

Net expenditures

	1955	1956	1957	1958	1959
Total budget (billions)	$35.5	$35.8	$38.4	$39.1	$40.8
Army budget (billions)	$8.9	$8.7	$9.1	$9.1	$9.2
Percent of Department of Defense budget	25.0	24.6	23.8	23.3	22.6

You will note that the total Department of Defense budget has gone up over the years, but the Army percentage has in fact decreased. This situation must be reversed if Army modernization is to become a reality.

FRANK LLOYD WRIGHT

Mr. McCORMACK. Mr. Speaker, I ask unanimous consent that the gentleman from Wisconsin [Mr. REUSS] may extend his remarks at this point in the RECORD.

The SPEAKER. Is there objection to the request of the gentleman from Massachusetts?

There was no objection?

Mr. REUSS. Mr. Speaker, Wisconsin has lost her most distinguished son with the death of Frank Lloyd Wright.

Like all great prophets, Mr. Wright was sometimes accorded less than his due among his own people. But his soaring spirit and artistic genius always overcame the sneers of men of little vision, and the leaders of five continents applauded his indestructible talent.

Mr. Wright was not only one of the great architects of all time. In thought and in deed, he was independent until the day he died. If Wisconsin has a tradition of independence, philosophical and political, it is in no small measure due to Frank Lloyd Wright.

To have visited with Mr. Wright near Spring Green, on a spring evening when the mayflies were hatching, and the sound of an oboe came softly through the grove at Taliesin, was an unforgettable experience.

Mr. Wright is gone, but his works will be his memorial, as long as the Wisconsin river flows.

While Wisconsin claims Mr. Wright as her son, he was a national and international figure. From the Washington Post of this morning, I offer an editorial and two articles, by Jean White and Frederick Gutheim, all paying deserved tribute to Mr. Wright's genius:

FRANK LLOYD WRIGHT

With the death of Frank Lloyd Wright, the world has lost a promethean among architects who had become as much a prized na-

tional monument as any of the structures he built. He was 89, and his friends expected him to live forever, an irreverent patriarch who preferred "an honest arrogance to a hypocritical humility." Now he is gone, and Washington especially will miss him. We had come to look forward to his frequent visitations and his corrosive comments on the Capital's classic style. But Mr. Wright did not merely express an opinion; he threw off remarks like a porcupine shedding quills. His barbs struck home. One recalls the remark credited to him that television "is chewing gum for the eyes." Surely this was ungrateful from a man who came over television with so unblurred and memorable an image.

The personality is gone; the works remain. His place seems secure in the pantheon of architecture. From the time he left Wisconsin to work with Louis Sullivan in Chicago, his genius was unmistakable. His "prairie houses"—dated only in a chronological sense—brought him fame abroad before World War I. The Japanese prevailed on him to undertake the epochal Imperial Hotel in Tokyo, and this led to the most dramatic moment in a career that was a series of dramas, public and private. In 1923, Japan suffered its worst known earthquake, and the newspapers reported that the hotel had fallen, despite its novel engineering principles. Mr. Wright, characteristically, refused to believe the report. Days later this telegram came from his old friend, Baron Okura: "Imperial stands undamaged. A monument to your genius in Japan. Thousands of homeless provided with uninterrupted service. Congratulations."

To the end, Mr. Wright hewed to a credo of individualism which is all too rare in our organization age. His flowing clothes, his forthright opinions, and his protean style all were distinctively his own. Sometimes this led to extravagances and mere eccentricity (such as his proposed mile-high skyscraper), but more often it roused his lethargic colleagues and countrymen to thought. It is a great pity that no public building designed by Mr. Wright stands in Washington, but his legacy is scattered throughout the land. May something of his audacious spirit endure, along with the stone and steel he used so well.

FRANK WRIGHT'S LEGACY TO MANKIND: 700 BUILDINGS ALL AROUND THE WORLD

(By Jean White)

"If I was to pick the greatest architectural feat that I have accomplished, I would say that it would be my next building."

So spoke Frank Lloyd Wright, the master builder, on a recent birthday at Taliesin, his Welsh-named home near Spring Green, Wis.

In its way, this simple statement—of faith in himself, his work, and the future—distills the long, colorful life of the 89-year-old patriarch of modern architecture, who died yesterday. Early in life, Mr. Wright once said, he chose "honest arrogance to hypocritical humility" and never found any reason to change.

All his life Mr. Wright revolted artistically and personally against conformity and tradition. He often stood alone, damned as an architectural heretic and a rebel against the past. But, a master of the caustic comment as well as building design, he usually gave more than he took in exchanges with critics.

VINDICATED BY AN EARTHQUAKE

As his legacy to architecture, Mr. Wright has left more than 700 buildings scattered around the world.

Among the most famous of his designs was that for the Imperial Hotel in Tokyo. Mr. Wright built the hotel on a floating foundation and immediately became the target for well-barbed comments from other architects. It took an earthquake to prove how right he was. During one of history's worst tremors, in 1923, the Imperial Hotel was the only major building left standing in Tokyo.

Other Wright innovations that revolutionized American architecture are found in his famed prairie houses, hugging close to the plains of the Midwest; Fallingwater, the house at Bear Run, Pa., built over a waterfall, and the circular Johnson Wax Co. office building at Racine, Wis.

Mr. Wright did not live to see the completion of his latest major creation—the startling, vat shaped building that he designed to house the Guggenheim Museum on New York's Fifth Avenue.

FIGURE OF CONTROVERSY

As usual, the Wright design sparked controversy. As a master of the cutting phrase, the crusty old architect himself must have relished some of the epithets—cement hopper, great stone toilet bowl, concrete trash can, corkscrew.

Mr. Wright always had some choice phrases of his own for buildings that he did not like. The peppery architect once dismissed the Jefferson Memorial as a "public comfort station." A frequent visitor in Washington, he found Government buildings "store quarries erected to satisfy a grandomania * * *." Urban apartment developments were "nothing but sanitary slums."

Under all his crustiness, Mr. Wright was a warm genius who inspired great devotion from the young architects who came to be disciples at his school. And less than 2 years ago, on a visit here in Washington, Mr. Wright noted that most of what he said was with "wrinkles in the corners of the eyes."

"But the wrinkles never got into print," the mellowed rebel added.

After more than a half century of controversy, Mr. Wright finally won the acclaim of the American Institute of Architects. In 1949, the AIA presented the architectural maverick with its gold medal—the profession's highest award.

"His place in history is secure," John Noble Richards, AIA president, said here last night in tribute to Mr. Wright's genius. "This century's achievements in architecture would be unthinkable without him. He has been a teacher to us all."

As for Mr. Wright, he once had snapped: "The only thing wrong with architecture is architects."

There was nothing small about Mr. Wright—his plans, his dreams (he had recently drawn up blueprints for a mile-high skyscraper), aspirations—except his neat, erect, sturdy figure. Whitehaired and highbrowed, he was a striking figure with his flowing ties and floppy hats.

He was born June 8, 1869, at Richland Center, Wis., the son of a Welsh music teacher who became a Unitarian minister. His mother, a former schoolteacher, wanted her son to be an architect from the start.

He went off to the University of Wisconsin in 1884 for a course in civil engineering but quit a few months before graduation to work in the office of a Chicago architect. Eight years later Mr. Wright had his own office. He started building his "prairie houses," low bungalows that were the forerunners of today's ranchhouses.

A keystone of his philosophy as an architect was that a building should be "organic" to its surroundings.

"If we build in the desert," Mr. Wright explained, "let the house know the desert, and the desert be proud of the house by making the house an extension of the desert."

Mr. Wright's personal life was marked by controversy as much as his professional career. He married three times. His first marriage, to Catherine Tobin, who died last month, produced six children. When his first wife refused to divorce him, he built the first "Taliesin" in Spring Green for Mamah Borthwick Cheney, whom he had come to love. Their romance ended in tragedy in 1914 when a berserk servant killed Mamah and six others.

In 1923, Mr. Wright married Miriam Noel, a sculptress, after he and his first wife were divorced. She fought him when he sought a divorce to marry Olgivanna Lazovich, a dancer. Finally she freed Mr. Wright in 1927 and he wed Olgivanna, a marriage that lasted until his death.

Beside his wife, Mr. Wright is survived by a sister, Mrs. Maginel Wright Barney, of New York City; four sons, Frank Lloyd, Jr., of Los Angeles, an architect; John, of Del Mar, Calif.; David, of Phoenix, and Robert Llewellyn, of 7927 Deepwell Drive, Bethesda, whose house Wright designed; two daughters, Mrs. Catherine Baxter, of Menlo Park, Calif., and Mrs. Charles Gardner, of Phoenix. Among his nine surviving grandchildren is movie actress Anne Baxter.

CRITIC DESCRIBES WRIGHT'S STYLE AS HIS PASSION FOR ORIGINALITY

(By Frederick Gutheim)

A couple of years ago Henry Klumb, Frank Lloyd Wright's outstanding follower and Puerto Rico's most distinguished architect, sat in his house darkened by a power interruption during a tropical hurricane. The atmosphere was tense. A crackling battery radio was sandwiching news of the approaching storm with other bulletins.

Suddenly came the announcement, "And here is important news from Spring Green, Wis. Frank Lloyd Wright, America's most famous architect—" There was but one expectation. America's most famous architect then 87 years old, had died. But instead, the radio continued: "most famous architect, has proposed a new 510-story skyscraper in Chicago, 1 mile high."

It was Wright at his most characteristic. Audacious, flamboyant, and astonishing most of all to those who knew and loved him best.

As an architect his greatness needs no elaboration. But it was for the passion to build, not merely to design that he will always live in my recollection. And this was his character as a man.

To his closest friends, Wright's prodigiously sustained creative activity has been the most remarkable thing about his crowded eventful and tempestuous life. Had he died at the age of 65—in 1935—although his greatest contributions to architecture had already been made, he would have been a relatively insignificant figure. His most celebrated buildings since—the great Kaufmann house at Bear Run, Pa.; the Johnson Wax executive offices and laboratory; the Guggenheim museum—are all foreshadowed in his earlier designs.

Yet is would be a mistake to see his career as a merely sustained performance. It is not Titian, nor Leonardo, that comes to mind. It is that other great, prophetic contemporary, Pablo Picasso. The parallel is not alone of sustained vitality and creative power, but of successive phases, each significant in themselves, each with their own artistic sources, characteristic style, followers and—as Wright never forgot to point out, contemptuously—their imitators.

Thus the early prairie style, culminating in the Robin house, from which our domestic architecture of today, the rambling ranchhouse, originates; the concrete buildings like Unity Temple, Tokyo's Imperial Hotel or the Los Angeles houses, that pioneered "die neue Sachlichkeit" (the new objectivity) and the style of the Bauhaus; the romantic rationalism of the 1930s, whether in the Usonian houses or the splendidly pinnacled San Marcos Hotel; and the structural expressionism of the period since, with such projects as the Guggenheim

museum or the proposed San Francisco Bay bridge.

Within each of these periods one encounters a profusion of artistic expression that is almost botanical in its richness and variety.

Wright's creativity is his greatness. It is expressed in everything he has built or written, and in his long and memorable life.

The originality was superbly illustrated in his winter way of living in Arizona. The long dusty road to Taliesin West leads over the desert. After leaving the grapefruit groves and winter-holiday tinsel of Scottsdale the lonely approach to the great house itself, through the yucca and the sagebrush, is pregnant with anticipation.

The other-worldly atmosphere is authentic. It is affirmed by the discovery of a man not like other men, standing apart from the abstractions of money and the things money can buy. Instead you found intense reality, a man like some desert chieftain, who measures life and culture in animal skins, precious stones, palaces, poetry or human lives.

This passion for originality was his style. In dress it was symbolized in the characteristic pork-pie hat ("With the cantilever," he used to joke.) Politically he was an anarchist. His diet was an original mixture of Wisconsin farm cooking, vegetarianism, and the grape leaves of Ouspensky and Gourgeiff.

Music filled the Taliesin air. In Wisconsin there were nearly a dozen pianos, and the entourage of 60 or so draftsmen, students, and employees frequently contained professional musicians who literally earned their keep by playing through the off seasons in the concert halls.

But the architecture of Taliesin West was that spatial quintessence of Wright—a great, sprawling complex like the royal palace in Peiping, with courtyards, terraces, breezeways, and walls, all fusing together in a single conception the many separate buildings containing residences, drafting rooms, kitchens, lounges, offices, dining rooms and other places. Built of huge, flat, colored desert stones laid in concrete, with many roofs only of canvas, the shadowed complex had the ageless character of a ruin before it was fairly started. It is his best monument.

This life so carefully contrived, and now ended, was not as self-created as Wright liked you to think. Much of it started with that other great architect, Louis Sullivan, whom alone Wright called master and of whom he once splendidly said, "I was a pencil in his hand." And he said to me still more truly and prophetically of Sullivan, "His ornament became my structure."

Much of it, like his flamboyant rhetoric, was for effect, but it was never false. It was his style. The blaze of publicity that illuminated much of his life, in a kind of caricature, left a canny awareness of what makes news. He never lacked for iconoclasm in word, act or belief. But he had a true sense for the theatrical in phrase, costume, and in timing.

Nothing pleased him more than to tweak the distinguished beard of the American Institute of Architects. "Old men afraid to go out without their rubbers," he called the members of "the American Institute of Appearances." He contrasted with mock ungratefulness their gold medal with the dinner-plate-sized equivalent of the Royal Institute of British Architects. When historic Venice saluted him with Cellini's silver trumpets, he was delighted. He was the first to chuckle when the École des Beaux Arts hung his great exhibition in ultimate recognition.

He lived to relish his own renown.

ADJOURNMENT OVER AND PROGRAM FOR NEXT WEEK

Mr. McCORMACK. Mr. Speaker, I ask unanimous consent that when the House adjourns today it adjourn to meet on Monday next.

The SPEAKER. Is there objection to the request of the gentleman from Massachusetts?

Mr. HALLECK. Mr. Speaker, reserving the right to object, and I shall not object, but I make this reservation in order to inquire of the majority leader as to the program for next week.

Mr. McCORMACK. On Monday there will be three bills from the Committee on the District of Columbia:

H.R. 836, garnishment bill.

H.R. 1844, amending the Life Insurance Act.

H.R. 5534, relating to the George Mason Memorial Bridge.

Tuesday is Pan American Day. The following bills may be brought up if rules are reported but not necessarily in the order listed. Everything is contingent upon rules coming out of the Committee on Rules.

S. 57, extending public housing.

H.R. 1321, Reorganization Plan No. 2 of 1953. That relates to the Rural Electrification Administration.

S. 1096, authorizing appropriations for the National Aeronautics and Space Administration.

H.R. 4601, amending the Federal employees retirement bill.

H.R. 2228, acquiring land, Mount Vernon Memorial Highway.

House Joint Resolution 254, authorizing parliamentary conferences with Canada.

As these bills come up, I will try to announce them to the House as quickly as I can, and the usual reservations are also included.

Mr. HALLECK. Mr. Speaker, further reserving the right to object, I notice the majority leader has not listed any appropriation bills.

Mr. McCORMACK. There will be none available for next week.

Mr. HALLECK. Mr. Speaker, I should like at this time to express the hope that the appropriation bills will be brought along, because otherwise we will find ourselves held up at the time when we hope to adjourn.

Mr. McCORMACK. Mr. Speaker, in that connection may I say that I join the gentleman from Indiana in his observation. Of course, I always cooperate with the Committee on Appropriations. When they have a bill or bills to report out, I give them the right-of-way. I cooperate completely. If any bill were available for next week it would be on the program, but none is available.

Mr. HALLECK. May I ask the majority leader one further question? He referred to the bill just messaged over from the other body, having to do with the reorganization order affecting the REA. Has that proposal been acted upon by the proper House legislative committee?

Mr. McCORMACK. Yes, that was reported out I think before the Easter recess.

May I add that I overlooked listing the bill H.R. 5674 authorizing construction at military installations. If it is possible, I shall bring that bill up specifically on Thursday, if that can be done. I have an agreement with the gentleman from Georgia [Mr. VINSON] that it will not be brought up before Thursday.

Mr. HALLECK. Mr. Speaker, I withdraw my reservation of objection.

The SPEAKER. Is there objection to the request of the gentleman from Massachusetts [Mr. McCORMACK]?

There was no objection.

VOLUNTEER SPACE TRAVELERS

Mrs. ROGERS of Massachusetts. Mr. Speaker, I ask unanimous consent to address the House for 2 minutes and to revise and extend my remarks.

The SPEAKER. Is there objection to the request of the gentlewoman from Massachusetts?

There was no objection?

Mrs. ROGERS of Massachusetts. Mr. Speaker, I think those of us who have read and seen television pictures of the seven military pilots who volunteered for the first U.S. space trip and have been approved, rejoice that we have men in this country with that courage. They have the courage that has made America great all these years. I wish for the pilot selected from these seven astronauts great success in his great adventure. My best wishes go to his family for their cooperation. The following is a description of the seven astronauts and their families and for some of the preliminary tests for the space ship flight:

[From the New York Times, Apr. 10, 1959]

SEVEN NAMED AS PILOTS FOR SPACE FLIGHTS SCHEDULED IN 1961—ONE WILL BE ABOARD NATION'S FIRST MANNED SATELLITE—RIGID TRAINING AHEAD

(By John W. Finney)

WASHINGTON, April 9.—Seven young military test pilots were presented today as the Nation's future pioneers in space.

With a dramatic flourish, the National Aeronautics and Space Administration named the seven men who had been selected, after rigorous and extensive examinations, to undergo training as the first astronauts.

To one of these volunteers, some 2 years from now, will go the risky honor and distinction of being picked to ride the Nation's first manned satellite into space.

On this flight, the Senate Space Subcommittee was told today, the astronaut will circle the earth two or three times in his 1-ton space capsule at an altitude of about 125 miles before returning for a splash landing in the Atlantic Ocean.

ALL ARE IN THEIR THIRTIES

The seven men chosen as astronauts for the project, known as Mercury, are:

Navy Lt. Malcolm S. Carpenter, 33 years old, of Boulder, Colo.

Air Force Capt. Leroy G. Cooper, Jr., 32, of Carbondale, Colo.

Marine Lt. Col. John H. Glenn, Jr., 37, of New Concord, Ohio.

Air Force Capt. Virgil I. Grissom, 33, of Mitchell, Ind.

Navy Lt. Comdr. Walter M. Schirra, Jr., 36, of Hackensack, N.J.

Navy Lt. Comdr. Alan B. Shepard, Jr., 35, of East Derry, N.H.

Air Force Capt. Donald K. Slayton, 35, of Sparta, Wis.

The seven, who will henceforth be known as Mercury astronauts, were presented at a news conference by Dr. T. Keith Glennan, director of the Space Administration.

SPACE PROGRAM OUTLINED

For an hour and a half they faced the ordeal—the worst, one pilot confessed, in

weeks of exhaustive examinations—of being ordered around by photographers and of having their personal lives and beliefs laid bare by reporters.

A few hours before the astronauts made their debut, scientists of the Space Administration were telling the Senate Space Subcommittee how they planned to hurl the young men into space and the new horizons in space travel that they would open.

The first Mercury flights will be short, probably only a few hours, but then they will gradually be extended to last 24 hours, the scientists said. Following the Mercury flights, which were described as the simplest form of orbital flight, will come more advanced manned satellites and space vehicles, they said.

The scientists outlined a program of manned space flight for the future that would include two-man satellites, orbiting for several weeks, permanent laboratories orbiting in space, trips to the moon and back and eventually manned travel to other planets.

LOOK LIKE FOOTBALL STARS

In their debut, the seven astronauts were lined up behind a long table under glaring lights. They looked like a group of square-jawed, trim halfbacks, recruited from an All-America football team.

The collegiate touch was enhanced by the crew haircuts worn by six of the men.

The men, picked for their physical and mental qualifications for standing the rigors of space flight, average 34½ years in age, have an average height of 5 feet 9½ inches (to permit them to fit into the confines of the space capsule) and weigh an average of 164 pounds. All have above-normal intelligence ratings.

The group includes three Navy men, three from the Air Force and one marine. Asked whether this distribution among the services had been deliberate, a Space Administration official said:

"It just happened."

All are married and have children. To a man, they said their wives were enthusiastic about their new assignment.

These strikingly common themes emerged on why the men had volunteered for space flight: the spirit of adventure, a desire to pioneer in a new dimension of flight, a military sense of duty and patriotism.

CONFIDENT THEY'LL RETURN

All said they had long dreamed of flying off into space, even before they ever heard of Project Mercury. And as experienced test pilots, they obviously thought that the public was overestimating the hazards of their forthcoming adventure.

Asked by reporters how many were confident that they would safely return from space, all promptly raised their hands.

As for their sustaining faith, all said they believed in religion and attended Protestant churches—some as regular church members, others occasionally. But in their answers they also made it clear that they had a faith that the technological genius of the scientists and engineers in the project would permit their safe return to earth.

In this connection, Dr. Glennan emphasized that the astronauts would not be hurled into space before there was a good assurance that they could be brought back safely. The Mercury space capsule, he said, "will be as reliable as man can devise" and the first flight will be as safe as the first flight of any experimental airplane.

WE HAVE TO GO SOMEWHERE

From their answers, it was apparent that the men had been drawn to the project more by the spirit of adventure in exploring a new frontier than by the challenge of facing unknown dangers. Frequently they likened their position to that of the Wright brothers at Kity Hawk, N.C., a half-century ago.

Space is "the future not only of this country but of the world," Captain Slayton explained. "We have gone about as far along as we can on this globe, and we have to go somewhere and space is all that is left."

In explaining his motivation, Commander Schirra observed that it was typical of this country to be interested in new things. Aviation, he noted, is now 50 years old and space flight presents an expansion in a new dimension.

"My career has been in serving my country," Captain Grissom explained, "and here is another opportunity to service."

Lieutenant Carpenter said he had volunteered because "here was a chance to serve the country in a noble cause and to pioneer on a grand scale."

WIFE VOLUNTEERED FOR HIM

All the men said their wives, long indoctrinated to the dangers of test flying, were enthusiastic or sympathetic about their volunteering for space travel.

Perhaps the most enthusiastic was the wife of Lieutenant Carpenter. The lieutenant said he was at sea when first notified that he was eligible and my wife called up Washington and volunteered for me.

Colonel Glenn quipped that his wife's first reaction had been that I have been out of this world for a long time and might as well go on out farther. In a more serious vein, the colonel said he thought all wives must have had reservations at first but that they had become enthusiastic with their husbands as more was learned about the project.

Colonel Glenn, the holder of a transcontinental speed record, also expressed the common desire of most pilots to fly just a little bit faster and higher. Often, when he has gone into a climb, he commented, he has longed for just a little more power to keep on going out.

From a list of 100 potential candidates—all military test pilots—the Space Administration selected 32 volunteers to go through the screening examinations that resulted in the selection of the 7-man team.

At the Lovelace Clinic in Albuquerque, N. Mex., the candidates were put through a week-long medical examination—an examination that still caused the seven to shudder in retrospect. Virtually every part of their body was examined. They were even put in a whole-body radiation counter to determine the ratio of fat to muscle in their bodies.

At the Wright Air Development Center in Dayton, Ohio, the men were put through a series of stress tests simulating the conditions that will be encountered in space flight. They were placed on a treadmill that was elevated one degree a minute to test their physical fitness; whirled in human centrifuges; and placed in an isolation chamber for 3 hours. They spent 2 hours in another chamber at 130° F., had their feet plunged into tubs of ice, and were subjected to blasts of high-frequency noise.

PERSONALITIES EXPLORED

In addition, they were subjected to a series of psychological and mental tests, as well as interviews, to determine their personalities and motivations.

Out of these examinations, said Dr. Randolph Lovelace, director of the selection program, came a group of seven highly intelligent, highly motivated men.

For the next 2 years, the men will train for their assignment of traveling through space, as well as assist in the actual engineering development of the Mercury space capsule. The Space Administration had originally planned to pick 12 Mercury astronauts but decided on the smaller number to permit more complete participation by the trainees in the program.

As part of the buildup program, the men will be hurled in a ballistic "lob" some 130 miles down over the Atlantic from Cape Canaveral, Fla., by Army Redstone ballistic missiles.

The astronauts will not get any additional pay. They will continue on the scale of airplane test pilots.

The man who will make the Nation's first orbital flight through space will not be picked until the day of the flight, Dr. Glennan said. Then he will step into a capsule mounted on the nose of an Atlas intercontinental ballistic missile and be blasted into a flight that will circle the earth two or three times and last 180 to 270 minutes.

There will still be ample opportunity, Space Administration officials said, for the six others to make pioneering trips into space. Plans call for a continuing series of Project Mercury flights, gradually building up to a day-long flight through space.

But it was obvious that a certain sense of rivalry and competition could be expected to build up in the next 2 years for the honor of being first into space. This feeling was expressed by Captain Slayton:

"I would give my left arm to be the first man into space."

BIOGRAPHIES OF SEVEN MEN SELECTED AS NATION'S FIRST SPACE PILOTS

WASHINGTON, April 9.—These are the seven Project Mercury astronauts from whom the Nation's first man into space will be chosen:

MALCOLM SCOTT CARPENTER, LIEUTENANT, NAVY

Born May 1, 1925, in Boulder, Colo., now lives at 11911 Timmy Lane, Garden Grove, Calif. His wife is the former Rene Louise Price; their four children are Mark Scott, 9; Robyn Jay, 7; Kristen Elaine, 3, and Candace Noxon, 2. After education through high school in Boulder, he entered Colorado College in 1943 to participate in the V–5 flight training program sponsored by the U.S. Navy. When the V–5 program ended at the close of World War II, he entered the University of Colorado and majored in aeronautical engineering, receiving a degree in 1949.

Following graduation, he joined the Navy and in November 1951, was assigned to Patrol Squadron 6, based at Barbers Point, Hawaii. During the Korean conflict, he was engaged with Patrol Squadron 6 in antisubmarine patrol, shipping surveillance, and aerial mining activities. In 1954 he entered the Navy Test Pilot School at the Naval Air Test Center, Patuxent River, Md. After completion of his training he was assigned to the Electronics Test Division of the Naval Air Test Center. He then attended the Navy's General Line School at Monterey, Calif., and the Naval Air Intelligence School, Washington. In August 1958, he was assigned to the U.S.S. *Hornet*, antisubmarine aircraft carrier, as air intelligence officer. He has accumulated more than 2,800 flying hours, including 300 in jet aircraft.

LEROY GORDON COOPER, JR., CAPTAIN, AIR FORCE

A native of Shawnee, Okla., born March 6, 1927. His wife is the former Trudy Olson of Seattle. They have two daughters, Camala, 10, and Janita, 9. He attended primary and secondary schools in Shawnee and attended the University of Hawaii for 3 years. He received a degree in aeronautical engineering through the Air Force Institute of Technology at Wright-Patterson Air Force Base, Ohio, in August 1956.

Captain Cooper entered the Marine Corps in 1945 after his graduation from high school. While at the University of Hawaii, he received a commission in the Army. He transferred this commission to the Air Force and was recalled by that service for extended active duty in 1949 for flight training.

He was later assigned to the Air Force Experiment Flight Test School at Edwards Air Force Base, Calif., was graduated from this school in April 1957, and was assigned duty in the Performance Engineering Branch of

the Flight Test Division at Edwards. He conducted flight tests on experimental fighter aircraft.

Captain Cooper has 2,300 flying hours, including 1,400 in jets.

JOHN HERSCHEL GLENN, JR., LIEUTENANT COLONEL, MARINES

Considers New Concord, Ohio, his permanent home. Born July 18, 1921, in Cambridge, Ohio. He attended primary and high schools in New Concord and also attended Muskingum College. His wife is the former Anna Margaret Castor. Their children are John David, 13, and Carolyn Ann, 12.

During World War II service, he flew 59 combat missions with a Marine fighter squadron. He later attended Amphibious Warfare School at Quantico, Va. In Korea, he flew 63 missions with Marine Fighter Squadron 311 and 27 while an exchange pilot with the Air Force. After Korea, he attended Test Pilot School at the Naval Air Test Center, Patuxent River, Md. Since November 1956, he has been assigned to the Fighter Design Branch of the Navy Bureau of Aeronautics in Washington.

Colonel Glenn has been awarded the Distinguished Flying Cross on five occasions and he holds the Air Medal with 18 clusters for his service during World War II and Korea. In July 1957, while project officer of the F8U, a jet fighter, he set a transcontinental speed record from Los Angeles to New York, spanning the country in 3 hours 23 minutes. He has more than 5,000 hours of flying time, including 1,500 in jet aircraft. Colonel Glenn has been attending the University of Maryland during his Washington assignment.

VIRGIL IVAN GRISSOM, CAPTAIN, AIR FORCE

From Mitchell, Ind., where he was born April 3, 1926. His wife is the former Betty L. Moore. They have two sons, Scott, 9, and Mark, 5. He attended primary and high schools in Mitchell and was graduated from Purdue University in 1950 with a degree in mechanical engineering.

He entered the Air Force in 1944 as an aviation cadet, and was discharged in November 1945. He returned to aviation cadet training after his graduation from Purdue, receiving his wings in March 1951. He flew 100 combat missions in Korea in F–86's with the 334th Fighter Interceptor Squadron. In August 1955 he went to the Air Force Institute of Technology at Wright-Patterson Air Force Base, Ohio, to study aeronautical engineering.

In October 1956 he attended test pilot school at Edwards Air Force Base, Calif., and returned to Wright-Patterson in May 1957 as a test pilot assigned to the fighter branch. He has flown more than 3,000 hours, over 2,000 in jets. He has been awarded the Distinguished Flying Cross and the Air Medal with cluster.

WALTER MARTY SCHIRRA, JR., LIEUTENANT COMMANDER, NAVY

Originally from Hackensack, N.J., where he was born March 12, 1923. His wife is the former Josephine C. Fraser, of Seattle, and their children are Walter 3d, 8, and Suzanne Karen, 1. He attended primary and secondary schools in New Jersey and was graduated from the U.S. Naval Academy in 1945.

He had service aboard the battle cruiser *Alaska*, the staff of the 7th Fleet, flight training at Pensacola, Fla., in Navy Fighter Squadron 71 and as an exchange pilot with the 154th Air Force Fighter Bomber Squadron in Korea.

He attended naval air safety officer school at the University of Southern California and took test pilot training at the Naval Air Test Center, Patuxent River, Md. His last assignment was at Patuxent in suitability development work on the F4H. He has 3,000 hours of flying time, 1,700 hours in jets. He has been awarded the Distinguished Flying Cross and two Air Medals for his Korean service.

ALAN BARTLETT SHEPARD, JR., LIEUTENANT COMMANDER, NAVY

Born November 18, 1923, in East Derry, N.H. He is married to the former Louise Brewer of Kennett Square, Pa., and they have two daughters, Juliana, 8, and Laura, 12. He was graduated from the U.S. Naval Academy in 1944, and from the Naval War College, Newport, R.I., in 1958.

Commander Shepard saw service on the destroyer Cosgrove in the Pacific during World War II. He then entered flight training at Corpus Christi, Tex., and Pensacola, Fla., and received his wings in March 1947. He spent several tours in the Mediterranean, and later went to Test Pilot School at Patuxent River, Md., where he served two tours in flight test.

During this service, he took part in high-altitude tests to obtain data on light at different altitudes and in a variety of air masses over the North American continent. He also took part in experiments in test and development of the Navy's in-flight refueling system; carrier suitability trials of the F2H3 Banshee, and Navy trials of the first angled aircraft carrier deck. After his graduation from the Naval War College, he joined the staff of the Commander in Chief, Atlantic Fleet, as aircraft readiness officer. He has 3,600 hours of flying time, 1,700 in jets.

DONALD KENT SLAYTON, CAPTAIN, AIR FORCE

His hometown is Sparta, Wis., where he was born March 1, 1924. His wife is the former Marjorie Lunney of Los Angeles, Calif. They have one son, Kent, 2.

He attended primary and high schools in Sparta, graduating from Sparta High School in 1942. He entered the University of Minnesota in January 1947, and was graduated with a degree in aeronautical engineering in August 1949.

He entered the Air Force as an aviation cadet in 1942 and after instruction at Vernon, Tex., and Williams, Ariz., won his wings in April, 1943. He flew 56 combat missions in B–25's in Europe with the 340th Bombardment Group (Medium). He joined the 319th Bombardment Group (Medium) and went to Okinawa in April 1945 where he flew seven combat missions over Japan.

Following his graduation from the University of Minnesota, he was an aeronautical engineer with Boeing Aircraft Co. in Seattle until recalled in early 1951 to active duty with the Air National Guard.

He spent a year and a half at Twelfth Air Force Headquarters as technical inspector and a like period as fighter pilot and maintenance officer with the Thirty-sixth Fighter Day Wing in Bitburg, Germany. He returned to the United States in 1955 and attended the Air Force Flight Test Pilot School at Edwards Air Force Base, Calif. Since January 1956 he has been an experimental test pilot at Edwards, where he has flown all jet fighter-type aircraft built for the Air Force. He has 3,400 flying hours, 2,000 in jets. He holds the Air Medal with cluster.

SPACE FLIERS UNDERWENT RIGID TESTS BEFORE SELECTION—PROGRAM SIMULATED EVERY ORDEAL THEY MAY ENCOUNTER

WASHINGTON, April 9.—The seven Mercury astronauts identified today went through one of the most rigorous selection programs ever devised.

With 25 semifinalists, they had to endure isolation, acceleration, heat, cold, noise, tilting, jolting, vibration—just about every ordeal that they might encounter in even greater extremes when they journey into space.

They spent 7½ days and 3 evenings in assorted torture chambers at the Lovelace Clinic in Albuquerque, N. Mex. The emphasis was on physical fitness.

The 32 men followed this with 6 days and 3 evenings at the Wright Air Development Center Aeromedical Laboratories, Dayton, Ohio, where they were put through "psychological and stress evaluation," the most grueling parts of the tests.

WORST IS TO COME

Even so, the examinations were only a taste of what awaits the seven men in the next 2 years.

They will ride the first manned satellites out of a ballistic missile blasted 125 miles into the sky.

They will orbit the earth, perhaps for hours, at 18,000 miles an hour.

They will plunge back into the atmosphere, withstand tremendous heating and deceleration forces and hope to land gently and safely.

The stress tests at Wright Center included:

Treadmill maximum workload—The subject walked at a constant rate on a moving platform elevated 1 degree each minute. The test continued until the heart reached 180 beats a minute.

Complex behavior simulator—Operation of a panel with 12 signals, each requiring a different response, to measure the ability to react reliably under confusing situations.

Tilt table—The subject lay on a steeply inclined table for 25 minutes to measure the ability of the heart to compensate for unusual body positions.

Partial pressure suit—Each man spent an hour in a partly pressurized suit, in a pressure chamber at a simulated altitude of 65,000 feet, to measure the efficiency of the heart system and breathing at low pressures.

Isolation—Each man was confined in a dark, soundproof room for 3 hours "to determine his ability to adapt to unusual circumstances and to cope with the absence of external stimuli."

Acceleration—The subject rode a centrifuge at high speeds to test his ability to withstand multiple gravity forces.

Heat—Each man spent 2 hours in a chamber with the temperature at 130° F.

Equilibrium and vibration—The subject sat in a chair that rotated simultaneously on two axes. He was required to maintain the chair on an even keel by means of a control stick with and without vibration, normally and while blindfolded.

Noise—Each man was subjected to a variety of sound frequencies to determine his susceptibility to tones of high frequency.

At Lovelace the physical competence of the 32 potential spacemen was measured by an ergometer, a device similar to a bicycle. The subject pedaled increasing amounts of weight while wearing an oxygen mask to determine how much weight each was able to pedal before his heartbeats reached 180 a minute.

Among the psychological tests were those to determine personality and motivation. Each man had to interpret the question, "Who am I?" answering a self-inventory based on 566 items in a questionnaire. There also were tests of intelligence, special aptitudes, mechanical comprehension, space memory, spatial orientation, and other factors.

SCIENTISTS GIVE SPACE TRIP DATA—ASTRONAUT WILL CIRCLE EARTH AND LAND IN ATLANTIC—PARACHUTES SLOW FALL

WASHINGTON, April 9.—The first Mercury astronaut to fly off into space will circle the earth two or three times before returning to a soft and safe landing in the Atlantic Ocean.

According to present plans, this first manned space flight by the United States will take place in 1961. It will be followed by ever longer flights into space until finally U.S. astronauts are traveling to the moon, to other planets, or to permanent observation stations in space.

The plans for Project Mercury and future manned space travel were outlined to a

Senate space subcommittee today by scientists of the National Aeronautics and Space Administration. A few hours later, the Space Administration presented the nation's seven fledgling astronauts—one of whom will make the first space flight in 1961.

As described by the space scientists, here is how the first flight will go:

The astronaut will be strapped in a reclining position in a couch inside a 1-ton space capsule. The mushroom-shaped capsule will have insulated, double-thick walls—so thick that no meteorite can puncture the vessel. The bottom of the capsule will have a blunt, rounded nose to absorb the intense heat upon reentering the earth's atmosphere.

The capsule will be mounted on top of one of the Air Force's Atlas intercontinental ballistic missiles, which will carry the satellite to a height of 50 miles in 2 minutes. Then additional rocket stages will lift the satellite to an altitude of about 125 miles and accelerate it to the orbiting speed of 18,000 miles an hour.

Once detached from the launching rockets, the capsule will be flipped around 180 degrees by small rockets so that what was the bottom of the capsule now becomes the blunt, leading nose. This nose, which serves as the reentry shield, contains a number of small retro-rockets.

TWO PARACHUTES IN CAPSULE

The satellite will be fired from Cape Canaveral, Fla., a little north of due east over the Atlantic and will circle the earth roughly between 35 degrees north and south. While in flight, the astronaut will be expected to perform certain tasks, such as communicating with ground stations by radio, making scientific observations by peering out of a periscope, controlling the attitude of the capsule and navigating it.

If he is not able to perform these functions there is equipment aboard the capsule to keep it pointed in the right direction and to bring it down to earth at the right moment.

On the third 90-minute orbit around the world, the astronaut will pass a little north of Hawaii and then over the United States heading in a southeasterly direction. While over the United States, he will fire the retro-rockets. They will slow the capsule and start it descending toward earth.

The planned landing area will be several hundred miles southeast of Cape Canaveral in the Atlantic. At 60,000 feet, a small so-called drogue parachute will be opened to slow the capsule. At 10,000 feet a large conventional parachute will be released to decelerate the capsule to about 20 miles an hour. Spare emergency parachutes will be carried.

As the capsule hits the water, a large inflatable tube in the nose will be opened to keep the capsule floating until a waiting ship can pick up the astronaut.

Because the Atlas missile cannot be expected to be completely reliable, the capsule will have an escape system—a tower with rockets that will lift the capsule off the launching missile in event of misfire.

During the launching, the satellite will be tracked by radar stations at Cape Canaveral and Bermuda. If it is determined that the satellite is not going into orbit, the retro rocket will be fired and the capsule returned near one of the ships ranged across the Atlantic.

EXTENSIVE TESTS PLANNED

Space administration scientists emphasized that the first space flight would not be attempted until after a series of extensive tests of the capsule and preliminary flights with animals.

Starting in the middle of this year and extending through 1960, 26 test firings are planned for the capsule. The rockets for these experimental tests will be the Little Joe—a cluster of small, solid-fuel rockets—the Army's Redstone short-range missile, the Army's Jupiter intermediate range ballistic missile and the Atlas.

Because of the proved reliability of the Redstone, this missile will be used for the first experimental manned flights of the capsule to determine how the astronaut can be expected to react in space. The Redstone will accelerate the capsule to a speed of about 4,000 miles an hour and hurl the capsule some 130 miles down the Atlantic missile test range. Eight Redstone test firings are planned, starting in 1960.

Brig. Gen. Donald D. Flickinger, an Air Force flight surgeon, assured the Senate subcommittee that on the basis of exhaustive medical experiments already performed, the astronaut would have an adequate margin of safety when hurled into the strange, weightless state of space travel.

On the first flight, the astronaut will only be expected to remain aloft for a little more than 3 hours. But just in case he has to stay up there longer, he will carry emergency provisions—mostly in a semiliquid state—to last 48 hours.

The ultimate objective of the Mercury program, the scientists said, was to keep the capsule aloft for 24 hours—or about 16 orbits around the earth.

After Project Mercury, they said, the objective is to launch a two-man satellite that would remain in space for 2 weeks, followed by a two-man satellite with a lifetime of several weeks.

The succeeding objectives in the manned space flight program were listed as: Establishment of a permanent manned laboratory orbiting in space, manned flight to the moon, manned landing on the moon and return, and then the ultimate objective, interplanetary flight. No time schedules were given.

DISPENSING WITH CALENDAR WEDNESDAY NEXT WEEK

Mr. McCORMACK. Mr. Speaker, I ask unanimous consent that Calendar Wednesday of next beek be dispensed with.

The SPEAKER. Without objection, it is so ordered.

There was no objection.

FROM THE HUSTINGS TO THE HILL: THE PLIGHT OF THE FRESHMAN CONGRESSMAN

The SPEAKER. Under previous order of the House, the gentleman from Oregon [Mr. PORTER] is recognized for 30 minutes.

Mr. PORTER. Mr. Speaker, knocking a Member out of his seat in Congress is one thing, filling it another.

A majority of the voting constituents can decide it is time for a change, at least partly on the basis of what they are told during the campaign, but when the new Member of Congress arrives in Washington, D.C., those fine words are no help.

Shortly after the election a Representative-elect receives a 13-page booklet from the Clerk of the House. It tells him about his pay, staff salaries, office equipment, allowances for travel, stamps, telephone, and telegraph. The Congressional Secretaries Club publishes an "Official Congressional Handbook" with tested suggestions for office procedures, but there is no handbook for a freshman Congressman.

When I arrived on the Hill in December 1956 I asked the Library of Congress to provide me with anything it might have in the way of advice from veteran lawmakers on "how to be a Congressman." The librarians reported they could find nothing of the sort. Finally they sent over Jerry Voorhis' "Confessions of a Congressman"—a worthwhile book for a freshman to read, by the way, but not what I had in mind.

Of course the 81 freshman Congressmen—62 Democrats, 19 Republicans, according to Congressional Quarterly—who came to the 86th Congress on January 7 have had the warm good will of their experienced colleagues, regardless of party affiliation. Advice has been freely given in the cloakrooms, in conversations on the floor and back of the rail, at lunch, at receptions, and dinners. So far as I can discover, however, no one has tried to organize the accumulated wisdom on the most efficient ways to do the job, quite apart from the legislative and policy aims of the various Members.

A FEW POSSIBLE ANSWERS

I am not the man to write this handbook, but as a Congressman just shedding freshman status, I can speak from recent and vivid experience and I can suggest a few possible answers.

Let us start in the office. The freshman finds himself with two rooms, probably in the Old House Office Building, one for himself and the other for as many as eight staff members. "Take care of your mail and it will take care of you," is a bit of advice he has heard many times. He may resolve to read every letter from the district and answer each one personally.

He may also resolve to be faithful in his attendance at sessions of his committee and of the House. He may also decide to accept invitations to affairs downtown in order to meet people from home and get to know important officers and staff members of various organizations.

He has certain legislative goals. He wants to be informed so he is trying to keep up with several newspapers, a news magazine or two, three or four other magazines, not to mention his home district newspapers.

The freshman by now has come to understand that the pace and the pressure are too much even for the kind of man some of his more enthusiastic supporters believe him to be.

SWEEPING THE SEA

You can get up early in the morning, drive down before the rush hour traffic, and have an hour or so before 9 to take care of your correspondence without the interruptions of staff problems, telephone calls, and visitors. You can stay until 6:30 and clean up dictation in relative quiet. You can bring home a stack of material and letters to read. You may still feel as though you are sweeping the sea.

As with any busy executive, the Congressman's problem is time: Time to do the job he promised the folks back home he would do, time to improve his chances for reelection, and time to spend with his family. The first two timetakers may be identical, separate, or conflicting.

The most important man in his congressional life is his secretary or, to use the term the House Members borrow from the Senate, his administrative assistant, or A.A. He should be able to turn the whole office over to him and say, "You're in charge." Pick a good man and let him worry about hiring and firing, workloads, filing, allowances, inquiries.

ANSWER THOSE LETTERS

The A.A.'s main job will be helping his boss to keep up with the mail. For many Congressmen, letters average between 50 and 100 daily, mostly from constituents. They are expressions of opinion or requests for assistance or both. Every letter from home should receive a prompt answer.

The freshman should, in my opinion, handle all his mail personally for at least the first 3 months. After that his staff will know how he wants most replies to be written. About 80 percent of the mail is routine and can be handled that way. Answers often involve consultations with Government agencies and may require many man-hours.

I see every letter from the district and I personally read and sign every reply, but along with most of my colleagues, do use automatic typing for form letters. Many of the letters we receive are really form letters themselves, oftentimes instigated on a grand scale by special interest groups. Most constituents understand the situation and are satisfied if they have registered their opinions or received the assistance they requested.

There is still a lot of mail the staff cannot handle for the Congressman. This is important. He can do a lot of good with his letters. A Member of the U.S. House of Representatives has to weigh his words, especially those he commits to print. He has to have sufficient facts and to have done some thinking in a wide range of areas. All this takes time.

BE AVAILABLE

Other essential office procedures a freshman must develop have to do with the handling of visitors and of telephone calls. A Congressman must be available, especially to his constituents, but also to other people who can tell him what he needs to know. All this takes time, too.

The courtesy found by the freshman on the Hill at once refreshes and surprises him. Back in the hustings, the chances are, he was building up, if not expressing, a good deal of resentment over apparent lapses in good taste by his opponent. Here, however, courtesy is the rule on or off the floor. It is more than a formal recognition of parliamentary dignity. It springs from a mutual recognition of achievement and responsibility. It transcends party or original lines.

THE HEART OF CONGRESS

In my 2¼ years on the Hill I never heard a partisan political argument in the Speaker's Lobby—which is shared by both parties—or in the private congressional dining room. Issues are discussed objectively and with an eye to accommodation. This spirit of judicious compromise is the heart of Congress.

In the hustings the candidate had trouble finding people to help him to research on the campaign issues. On the Hill he is overwhelmed with assistance from all sides, whether for research or bill drafting or other legislative matters. The problem is to find the time to develop the questions to ask and to have time later to read and to reflect on the answers presented to him.

When should a freshman dare to speak up on the floor? He likely has broken his silence by now by requesting unanimous consent to insert material in the CONGRESSIONAL RECORD, but this is a formal matter.

In my view, and there is no tradition to the contrary, he should talk when he has something to say to his colleagues, or to his constituents, or both. This may be later than he anticipated. He quickly comes to realize that his colleagues are more competent and conscientious than he thought they were. I suppose this is because a new Congressman, in his campaign, has dwelt so intensively on the shortcomings of his opponent that he has unconsciously ascribed them to other House Members. Anyway, he soon understands how green he really is and that tends to discourage early, or at least often, assumption of the rostrum.

"Be at the opening of each daily session," is the only advice I ever heard Speaker SAM RAYBURN offer to freshmen publicly in the House. The chaplain's prayer is good for the new Congressman. He has a chance to hear the 1-minute speeches—or to make one—which are often both interesting and informative, and, most important, to hear what the program for the day will be.

Nobody expects you to be in attendance all the time. You do answer the quorum and rollcall bells religiously but sometimes you are resentful at having to lose 20 to 40 minutes walking from your office to the floor to answer your name.

THE EXERCISE IS GOOD

Many quorum and rollcalls are of no significance except as they affect those statistics your next opponent will certainly use against you if he can. You do not fancy trying to explain to the voters that you missed answering your name because you were hard at work in your office and fully aware that the particular quorum or rollcall was not important. So you go, and hope that the exercise is good for you.

The most important floor work of a freshman is, in my opinion, the informal conversations he can engage in there. You can talk as you sit but you should keep your voice down. You can lean against the rail around the rear of the Chamber and smoke while you talk. Or you can retire to your party's cloakroom or the the Speaker's Lobby. You have to get to know your colleagues and talking shop in this manner is of incalculable benefit to the freshman.

NO BETTER WAY TO LEARN PROCEDURE

On many occasions the House proceedings themselves deserve the undivided attention of the freshman. There is no better way to learn procedure. Every now and then, a debate may actually bring out facts and reasoning which will change votes. You can learn a lot by listening to some of the speeches and colloquies.

You have a copy of the CONGRESSIONAL RECORD under your seat. You can keep it open on your lap to read when there are dull intervals. You can skim through what you may have missed in the last few days and also have a look at what the "other body"—as you are supposed to refer to the Senate on the House floor—is doing, along with a perusal of the material being inserted in the RECORD.

You can also bring your mail over to read or to sign as you sit on the floor of the House. The better practice is to do this on the big tables in the Speaker's Lobby.

You can have page boys put through telephone calls to your district or elsewhere. You can talk to newspapermen or your administrative assistant in the Speaker's Lobby. They can't come on the floor—nobody can except sitting Congressmen, Senators, former Congressmen, officials of the House, Governors of States, on occasion the guest minister who gives the day's opening prayer, and (on occasion) small children—your own or somebody else's.

DECISIVE WORK IN COMMITTEE

The decisive work of Congress in the positive sense is done in the committees. You sit on your committee as a judge hearing evidence, cross-examining witnesses and weighing opinions; then you seek to frame a bill based on the facts. Preparation and brains really count here. The recommendations of committees are justifiably given great weight on the floor.

No Member can possibly make himself an expert in all the areas Congress has to cover. You assess and reassess your colleagues and rely on some more than others. At the outset you will feel like a college freshman sitting in consultation with professors. This is an accurate measure of your respective funds of information, but with the help of the staff, lobbyists, and reports of previous years you can progress rapidly.

Most freshman Congressmen arrive in Washington with preconceived notions about lobbyists. They will find that most of their preconceptions are mistaken.

Lobbyists as a rule are hard-working, knowledgeable men who can be extremely valuable to Members of Congress. Few of them spend their time trying to buttonhole you in corridors or dangling subtle or unsubtle bribes for your votes. It does not take the freshman long to determine which lobbyists he needs and which ones he can ignore.

During the first 3 or 4 months of the year a Congressman could freeload at a different bar and dinner table downtown at least 3 or 4 nights each week. The invitations roll in.

A TIME TO LEARN

My advice to freshmen, for what it may be worth, is to accept as many of these invitations as possible during the first session. You will meet many people, including colleagues of yours, under

sociable circumstances. You will inevitably learn much about housing, traffic schools, stores, recreation, and other such subjects of interest to you as a newcomer to Washington. You will become acquainted with many of the great and near-great who circulate in this wondrous community.

My own advice is that you go just in time to get one drink at the reception preceding the dinner, carry it around—it can be ginger ale—as you meet people there, then go in to dinner. Meet and talk to the people at your table and, if it seems natural, the people at the head table. After dessert, or before if it looks too fattening, excuse yourself unobtrusively and get on home in time to read the papers and some of the stuff in your briefcase before bedtime. You miss the speeches and the entertainment, but you can always get a copy of a speech you might want.

KEEP IN TOUCH WITH HOME

It is not only good survival politics but is a Congressman's duty to keep the people back home informed about his opinions and activities. This is done through press releases, regular newsletters, radio programs and telecasts. All these cost the Congressman money, his own money, although the radio and TV time is usually free. He should also prepare a report for his constituents at the end of the session and summarize his achievements.

The freshman should seek out and get to know the newsmen representing his area in Washington. He should be available to them day and night. They represent the same people he represents.

A Congressman to be truly representative has to work constantly at keeping communications open between himself and his constituents. When the Easter and the between-session recesses come along, or oftener if possible, the freshman should go home and make himself accessible. He should talk about what he is doing and what the Congress is doing. More important, he should seek out his constituents in mills, factories, main streets and supermarkets, wherever they are, and listen to them. Nobody else can give him as good a public opinion poll.

Among the invitations coming to the freshman's desk will be proposals for what can be called "junkets." The Army, for example, may ask him to accompany a group of his colleagues to see a demonstration at Fort Bragg, S.C. His committee may have occasion to travel. Private and public groups may invite him, expenses paid, to observe events or participate in ceremonies.

A DISTRICT IS A PART OF THE WHOLE

All these should be weighed individually. My hope is that the freshman will not refuse any of them simply for fear of being criticized for junketing.

A Congressman has to inform himself. This means getting out of the committee hearings and away from his desk from time to time. His first duty is to his district, yes, but he should realize that his district is a part of the United States and that national problems are also part of his responsibilities.

The freshman's wife needs a handbook, too. She will have clubs to join. She will be included in many invitations along with her husband. She should make an effort to visit her husband's office regularly, even do some of the many chores if she has the time.

LUNCH WITH THE MRS.

She should be in the gallery when her husband makes his first speech—probably to 8 or 10 indifferent colleagues after the day's business is over. She should be invited by him to eat lunch with him in the House restaurant at least once a week.

If this sounds elementary, just remember what I said about the pressure and pace of this job. Wives can be most helpful to freshman Congressmen but an effort has to be made to bring them on the scene and keep them there.

Weekends are for the family, plus a pile of reading from the office, church, and of course the Sunday papers and choice TV programs. The freshman's kids will love the House gym—boys and very little girls, that is—especially the trampoline. They will love to scamper up and down the echoing halls in the Old House Office Building and the Capitol. They should be brought to sessions of the House, especially for such events as joint sessions when both Houses, the Supreme Court, the Cabinet, Joint Chiefs of Staff, and the Diplomatic Corps are all assembled in the Hall of the House of Representatives.

Let me touch on three continuing and pressing problems for freshmen which cut across all the areas I have mentioned.

KEEPING INFORMED

First, how does a freshman inform himself and keep accurately informed? I mentioned the newspapers and magazines. He also can obtain reports on particular subjects from the Library of Congress Legislative Reference Service.

Much material, including books, will be sent him in the mail but he will have little time to read this. His congressional district's newspapers will have to be read and clipped for him, except for one or two which he will take home. He will always be behind in his reading.

Second, how does the freshman keep from confusing himself with the great office he holds? The story goes around about the new Senator who was told that during his first 3 months he would wonder how he got there but after that he would only wonder how his colleagues made the grade. Humility and gratitude overwhelm the freshman. Gradually and justifiably he regains confidence. He is treated with unprecedentedly big doses of deference which someday he may deserve personally.

FILLING A NOBLE POSITION

The Hill swarms with men and women who work for Congress, but their attitudes toward Congressmen spring less from thoughts of job security than from their more acute realization that the freshman is in fact filling a noble position and has vast responsibilities—and may very possibly have a great future serving his Nation. His status deserves respect.

The news stories back home are more frequent and far more gratifying than during the campaign. The letters from back home are mostly complimentary. And when he went home for the first time, everybody called him "Congressman" or "Representative," or even "Honorable," even friends from days of childhood. He probably had trouble finding anyone who voted for his opponent.

All this may not result in the rise of any Napoleonic complex you can see, but it may lead to subtle erosions and a feeling of superiority. A freshman can best guard against this by observing long-time Members of the House. They have force and self-respect but no arrogance or bombast, except perhaps as a recognizable feature of a speechmaking stance. A politician has to protest his lack of talents sincerely but at the same time make sure nobody believes him.

The freshman would not have been elected, the chances are, if he had no ability. Couple his ability with experience and ignite both with determination, then you will have an effective Congressman if he does not lose communication with the people he represents. One sure way to lose touch is to believe that the deference shown to you at home, on the Hill and elsewhere belongs to you personally instead of to the office you hold and the responsibilities it represents.

CHOICES HAVE TO BE MADE

Third, how does the freshman do his job, qualify for reelection, and keep his family happy without losing his health? A thousand things are pending, decisions have to be made constantly, any one of which might have disastrous political repercussions. Choices have to be made in arranging your calendar. Votes have to be cast in the House where more often than not the issues are not clear cut.

Compromises sometimes water down bills until you cannot be sure their enactment would not do more harm than good. Your telephone rings day and night. The mail piles up. Constituents wonder why Congress is not working harder. Your office expenses soon exceed your allowances and you find that living in Washington, without luxury or big dinner parties, threatens to exceed your income, especially if you are paying off campaign debts.

My advice to the freshman Congressman is to keep and develop his sense of humor and get regular exercise. Take your job seriously, but not yourself, is one way the first part of this prescription is phrased. The House gymnasium's door in the basement of the New House Office Building is unmarked except for a sign saying "private." The freshman should locate it early in his term and try to get down there two or three times a week at least for paddle ball or some sort of exercise and a steam bath. He will have time to reach the floor for a roll call if the bells ring while he is working out there.

These freshmen are doing all right by themselves, their families, their constituents and their country. I am sure of it. They always have.

Now where do you suppose I could find a handbook for a second-term Congressman?

FEDERAL RESERVE IS ASKING CONGRESS TO APPROVE PRIVATE BANK RAID ON THE FEDERAL TREASURY

The SPEAKER. Under previous order of the House, the gentleman from Texas [Mr. PATMAN] is recognized for 30 minutes.

Mr. PATMAN. Mr. Speaker, the Federal Reserve Board has come up with a plan for transferring over to the private banks up to about $25 billion of Government-owned securities. Furthermore, both the Board and the private bankers are asking Congress to approve this plan by enacting legislation to amend the Federal Reserve Act with respect to the reserves required to be maintained by member banks of the Federal Reserve System against deposits.

Yesterday it was my privilege to testify before a subcommittee of the House Committee on Banking and Currency concerning this legislation. The House version of the legislation is H.R. 5237.

In this legislation Congress is being asked to vote the private banks a subsidy of great magnitude. In view of the tremendous importance of the matter, I would like to extract from and repeat much of my statement to the subcommittee yesterday.

The proposal being considered is in two parts:

First. The proposal is to transfer ownership of up to about $25 billion of Government assets to the private banks.

Second. The proposal is to give the Federal Reserve Board broad new discretionary authorities for redistributing the money-issuing powers among the private banks.

Taking the question of transferring the assets first, I would like to call attention to some facts and estimates which I believe will help in deciding these essential questions:

First. How much will it cost the Federal Treasury?

Second. Are bank profits already adequate?

Third. Would it be better to provide the subsidies by yearly appropriations, subject to the President's budget control, rather than to transfer assets which will provide a continuing subsidy without either budget or congressional control?

Fourth. Will the reduction in bank safety and the higher standards of bank liquidity which are hoped for place an undue burden on trade and commerce?

Fifth. Will the additional monopoly protection that must be provided foster a monopolization of banking?

PRESENT LAW PERMITS THE BANKS TO CREATE MORE MONEY THAN WILL BE NEEDED FOR THE COUNTRY'S ECONOMIC GROWTH

First, however, let me dispose of any doubt that the new authority being requested for reducing required reserves is needed to provide for future growth in the money supply. While it is clear that the proposal for transferring up to $25 billion of assets to the banks necessarily involves reducing the required reserves of the member banks sufficiently to allow them to legally accept these assets, discussions of this legislation have become confused with the question of future growth in the money supply.

For example, the first 35 pages or so of the lengthy report which the Board of Governors has sent to the committee—that is, the Board's staff report on this legislation—"Proposed Legislation for Revision of Reserve Requirements," prepared by the staff of the Board of Governors of the Federal Reserve System, January 29, 1959—discusses the proposal for the general reduction in required reserves and these pages examine a number of propositions which might support the legislation, including the need to provide for future growth. And mostly, I might add, this report is devoted to the Fed's preoccupation with monetary controls to the exclusion of almost everything else. Yet the report does outline the methods for estimating what the needs of monetary growth might be and it supplies the pertinent data, though it stops short of comparing the relevant data. This could leave the impression that the authorities being requested for reducing required reserves might somehow be related to expected needs for growth in the supply of money and credit, along with the expected growth of the economy.

However, particular note should be taken of the staff report's conclusions which are set out on pages 40 and 41 of the report. After discussing the matter at length, the staff report does not conclude that there is any justification for the legislation in the need for permitting a growth in the money supply. One reason, and only one reason, is finally reached in support of the legislation: The reason is that it will assure the private banks more profits and aid them in building up their surplus accounts.

No claim is made that the legislation is needed to provide for an increase in the money supply, because when you consider what is available under the Fed's present legal authorities, it becomes obvious that this purpose could play no part in the legislation.

The staff report makes it clear that the Federal Reserve authorities do not intend to permit the money supply to increase more than 3 percent a year, which is what we already know. The report states that 3 percent is the average yearly increase over the last decade, which is, of course, about the same rate at which the economy has been growing.

Yet the fact is that on the basis of the country's monetary gold stock of $20.6 billion, the Federal Reserve already has authority in existence now to provide an increase in the money supply of $386 billion. The total money supply at the end of December was $138 billion, so at a growth rate of 3 percent a year the present law will take the country's needs for monetary growth well into the next century, and into outer space, too. And this will be true even if, contrary to all expectations, the Treasury is unable to add to its gold stock.

WHY THE FED'S PRESENT AUTHORITY IS NOT BEING USED

Now the essential point to keep in mind in considering the problem before the committee is this: the all-controlling decision to which all other important decisions have to be adjusted is the money supply, give or take possibly 5 percent. This is true in all of these campaigns started by the bankers for redistributing the wealth or grabbing off a bigger piece of a pie that is yet to come. Monetary policy comes first, and all attempts to redistribute the wealth must be made within the framework of a predetermined supply of money.

The Federal Reserve is obviously not going to permit the money supply to expand to the point where there is a serious erosion of the interest-rate structure and perhaps even a monetary inflation of commodity prices. On the other hand, it is not going to squeeze the money supply down to the point where, say, 10 or 15 percent of the labor force is unemployed and there is a serious loss of big business profits, a drying up of demand for bank loans, and so forth. It is going to keep money at what it calls moderately tight, with a fair number of the banks in debt to the Federal Reserve banks and paying a discount rate which tends to maintain a generally high structure of interest rates throughout the financial system.

So, while the Federal Reserve could now give the private banks up to about $35 billion more reserves by buying Government securities in the open market, this would only loosen credit and do nothing toward transferring over to these banks the securities which have been bought and paid for with the public's money.

Furthermore, the Board's regulations have not reduced required reserves of the banks to anything like the minimums permitted by the present law. So if the Board wishes to bow completely to the bankers' objections to the Fed's using any of its own money-creating powers, the Board still has unused authority for reducing required reserves of all classes of banks. In fact, it has authority to make available another $5.4 billion of reserves to the banks in this way. And this $5.4 billion would permit the banks to create new bank money at the rate of $10 for each dollar of reserves. Even if it is assumed that the demand for currency expands in proportion to the expansion of bank deposits, the expansion ratio would be $8.65 to $1. So we see that this unused authority alone will provide for an expansion of the money supply at a compound rate of 3 percent a year over the next 11 years.

And I might add that the money supply at that time would require only $12 billion of gold. So it is also clear that the authority for further reducing required reserves is not being requested by reason of any fear that this country's present gold stock of $20.6 billion will fluctuate by about $1 billion from year to year.

How is it, then, that the bankers and the Federal Reserve authorities are asking that the Fed be authorized to reduce required reserves below the present legal minimums when required reserves can be reduced by another $5.4 billion under present law? How is this so when a reduction of only one-half billion dollars would, as these people well know, permit

a 3-percent expansion of the money supply?

The point is, of course, that the transfer of Government assets which is being proposed will sop up the reduction in required reserves which is also being proposed—one dollar of reserves for each dollar of assets transferred. So, in order to transfer these assets without distorting the money supply, the banks must be given one dollar of new reserves for each dollar's worth of assets that are to be transferred to them from the Federal Reserve's portfolio.

Giving the banks $5.4 billion of reserves would permit transferring to them only $5.4 billion of public assets. Transferring ownership of $25 billion of public assets will require giving the banks $25 billion of reserves. So the mechanics of this proposed transfer are a kind of "wash sale." The private banks will end up owning $25 billion of interest-bearing securities which are now owned by the public, with no change in the supply of bank credit.

The main conclusion reached in the Federal Reserve staff report—at page 40—is that solely from the standpoint of the Fed's being able to maintain monetary controls, "reserve requirements of member banks do not need to be as high as they have been in recent years." And the next sentence is:

> A lower level of requirements would improve the earning position of banks and aid them in building up their capital positions.

But the report also makes it clear that this proposal for aiding the private banks which the committee is being asked to approve will require giving the banks the interest-bearing securities which are now publicly owned, because this is the only way that required reserves can be reduced without inflating the money supply. The report states:

> To the extent necessary to avoid undue credit expansion, reserves released by any reduction in requirements could be absorbed by Federal Reserve sales of securities in the market. This would in effect shift earning assets from Federal Reserve banks to member banks. The present System portfolio is adequate to permit a substantial reduction and still leave enough to provide sufficient earnings to cover necessary expenses, as well as for current purposes of policy.

What then are the questions to be considered?

HOW MUCH WILL IT COST THE TAXPAYERS?

First, let us consider how much this proposal will cost the Federal Treasury.

Interest payments on the Federal Reserve's portfolio of securities provide substantially all of the System's income. These are all U.S. Government securities, most of which were acquired in the World War II period. And I might add that they were bought and paid for the hard way. They were not bought directly from the Treasury. On the contrary, they were bought by the System's Open Market Committee, which means that the Fed first waited until the securities were sold to the banks or to other investors, then it bought them in through the 16 open market dealers who are expected to take another profit, or commission, on these transactions.

This interest income goes first to meet the expenses of the Federal Reserve System, most of which are incurred in providing free services to the private banks, such as clearing checks for them. But the annual income is much greater than the expenses, and the remainder goes back to the Federal Treasury.

In recent years, the Fed has been holding back 10 percent of the unused income, and putting this in its surplus fund, as the present law permits it to do. The act establishing the Federal Deposit Insurance Corporation transferred funds from the Fed's surplus account to provide the initial reserve against FDIC insurance, and the Federal Reserve Act was amended with respect to the return of the Fed's unused income, so as to allow it to build its surplus account back up again. There is no conceivable expense for which this surplus fund might be used, however, so it must eventually come back to the Treasury, too.

To illustrate the income and expenses of the System let us turn to the year 1957, which is the latest year for which a report is available.

In that year the Federal Reserve System received an income of $763.3 million, of which $735.4 million was in interest payments from the Treasury on the Fed's portfolio of Government securities. In other words, only $27.9 million of gross income was earned on all the System's operations, such as in making loans and discounts.

Against this income the System's net expenses amounted to $131.8 million. It had, in addition, $19.3 million of expenses for services performed for other Federal agencies, but these were reimbursed. In other words, the Fed charges other Federal agencies for any and all services it may perform for them; only its services to the private banks are free.

Income less operating expenses gave the System a net income of $631.5 million in 1957, which it disposed of as follows: $7.1 million of net deductions were made for such things as employees' retirement fund; $20.1 million in interest was paid to the private banks on their so-called stock investment in the System; $61.6 million was put into the Fed's surplus fund; and $542.7 million was turned back to the Treasury.

In other words, this $542.7 million which was returned to the Treasury is money which would have had to come out of the taxpayers' pockets if the private banks had then had possession of all the Fed's portfolio of securities which were not needed to produce income which would just cover the Fed's expenses and contributions to its surplus reserve.

At the end of March the securities in the Federal Reserve's portfolio amounted to $25.5 billion. However, we cannot be sure how much of this it is planned to transfer to the private banks. Neither the Federal Reserve authorities nor the spokesmen for the bankers have told us. It is probable that they are not quite sure themselves. At some places the Board's staff report speaks of holding some part of the portfolio back for contingencies. It is probable that every group of people who come forward with a plan to open up the public purse for a general grab believe they are all going to exercise restraint and not grab everything in sight. But good intentions in advance can be quite different from what happens after the grabbing starts.

Evidently it is planned to transfer considerably more than $5.4 billion, because, as has been indicated, that amount could be transferred under existing law. And it is apparent that the Federal Reserve authorities have thought it best to await congressional action on this proposed authority to transfer all of the portfolio before making any serious beginnings in that direction.

Getting down to specifics, the Board's staff report speaks of the possibility of transferring all of the portfolio except that part which is needed for expense income and certain current purposes of policy. As previously quoted, the report states:

> The present System portfolio is adequate to permit a substantial reduction and still leave enough to provide sufficient earnings to cover necessary expenses, as well as for current purposes of policy.

The amount which will be held back is described as follows:

> Any decrease in requirements, however, should leave the Federal Reserve with a portfolio adequate to cover possible future contingencies, such as a large inflow of gold or economies in the use of currency that might add reserves in excess of appropriate needs.

In other words, we are being told that the transfer of securities should leave what I would judge to be about $3 billion or perhaps $4 billion in the Fed's portfolio in addition to what must be left to provide an expense income. As I will indicate, $3 or $4 billion appears to be about the amount that would be needed for transferring to the banks at a later time, should there be a sudden large inflow of gold from foreign countries, or should there be a large reduction in the demand for currency in this country. Either a large inflow of gold from abroad or a large reduction in use of currency would have the same effect in expanding bank reserves. Either event would permit an undesired expansion of credit, unless the Federal Reserve still has securities which it can "sell" in order to wash out the new reserves.

In recent years there have been no pronounced changes in the proportion of money which people in this country have preferred to hold in currency—not since the war years—and no important change seems likely—unless general economic trouble develops and people become skittish about the banks. In that case a lot of people would probably want to keep their money in currency rather than in bank deposits, and that would, of course, cause the opposite kind of trouble. Every dollar of currency taken out of the banks draws down $1 of the bank's reserves. So a very slight run on currency would put the banks in trouble rather quickly, particularly if their required reserves have been reduced to the narrow margin of safety contemplated by this legislation.

As for this country's net imports or net exports of gold, these have rarely exceeded one-half billion dollars in any one year. However, there have been notable exceptions. In 1947, there was a net inflow of $2.3 billion, and last year,

1958, there was a net outgo of $2.3 billion. So let us say that to take care of a possible net inflow of as much as $3 billion, the Fed will want to hold back this amount of securities to sell to the banks to cover that eventuality.

And to have a comfortable income for possible expansion, the Fed will probably feel that it will need $150 million. In 1957, Fed's average interest yield on its portfolio was 3.15 percent. At this rate it would need to keep about $4.8 billion of securities for expense purposes. So, in the absence of any specific statement from the Federal Reserve authorities as to what the plan is, it seems fair to conclude that the Fed will keep about $7.8 billion of its portfolio. In other words, we might conclude that the committee is being asked to approve the transfer of about $20.7 billion of assets to the private banks.

Assuming that the portfolio continues to yield to the Fed 3.15 percent interest, the income on the present portfolio should be $803 million a year. And assuming that the Fed's expenses amount to $150 million a year, this will mean a loss of $653 million a year to the taxpayers. That seems to me a pretty big loss.

ARE BANK PROFITS HIGH ENOUGH?

Now let us examine the one reason which has been given for this legislation.

The only reason that has been given is that it will "improve the earning position of banks and aid them in building up their capital positions." The conclusion that bank profits are not high enough is based on the analysis on pages 38 and 39 of the staff report. Here it is shown that the net profits of commercial banks, after taxes, amounted to 8.1 percent of their net worth in the 1937–40 period; 8.1 percent in the 1946–50 period; 9.2 percent in the 1951–55 period, and 10 percent in the 1956–57 period.

The Board's staff report points out, however, that the profit rates on manufacturing and trade corporations have been even higher. It tends to suggest that the rate of bank profits ought to be about the same, even though it recognizes that commercial and trade corporations "are generally subject to greater risks and severer competition" and that "banks are in some degree protected from competition by public regulation with respect to chartering of new banks and the establishment of branches." Frankly, a net profit of 10 percent on net worth, after taxes, seems on the high side to me for an almost riskless, monopoly-protected business such as commercial banking.

Consider these points:

First, the Government provides all kinds of props for the commercial banks and protects them against all but a token of competition.

The Comptroller of the Currency will not charter any new national bank, until he makes sure that such a bank will not inconvenience any already existing banks.

The Federal Deposit Insurance Corporation will not insure any applicant for a State banking charter, until it makes sure that such a bank will not seriously inconvenience already existing banks. And without FDIC insurance it is useless to try to go into the banking business. This is a free country, of course, in such things as farming, operating a retail store, or a service business. Anybody is free to go into such businesses and take his chances with the rest, but not into banking. The Government will not let you or me into the banking business unless and except that we are lucky enough to find a situation where we will not cause competition with the existing banks.

The Government insures commercial bank depositors against loss and thus channels deposits into the banks. Yet it is the Federal Government which stands behind this insurance, having given the FDIC a cost-free commitment that it may call on the Federal Treasury for $3 billion to cover its insurance.

And finally, the Federal Reserve System operates its so-called monetary policies with its eyes principally on the welfare of the bankers. If the committee needs any proof of this fact, simply take a look at the legislation it is considering. Here we have the Federal Reserve recommending the transfer of many billions of dollars of Government assets over to the private banks for no reason except to increase the banks' profits at the expense of the taxpayers. And the record shows that such overwhelming solicitude for the bankers' profits is not limited merely to putting a question to Congress. Look, for example, at the fact that last year the Federal Reserve Board reduced required reserves of the member banks so as to allow them to acquire $10.4 billion of interest-bearing Federal securities at no cost to the bank whatever.

Yes, commercial banking in this country today is a near-riskless business. Small business firms in the manufacturing trade and service fields are failing at the rate of about 15,000 per year, but a bank failure is something almost unheard of. The FDIC reports only one bank failure in 1957 and only two in 1956.

So, I hope that the committee will look carefully behind the arguments which have been made for increasing bank profits at the expense of the Federal Treasury.

In the first place, the argument which has been made in the staff report seems to me circular and self-defeating. The argument is that if bank profits are increased, the stockholders will save more money and leave it in the surplus accounts of the banks—rather than draw it out and pay taxes on it. This is to build up the capital accounts of the banks.

Well, the same argument can be made for more profits and more income for everybody. If you earn more, you will save more.

But beyond that, the argument is to increase the rate of profits, and the rate is largely determined by the amount of surplus which the stockholders leave in the bank. So, the Fed has set up quite a handicap for itself in seeing any increase in bank profits, because the more that is put into bank surplus, the more the profit rate tends to stay down, even though actual profits are increased.

Actual bank profits have gone up steadily in these last few years. And they have gone up, furthermore, in periods of business recession when the profits of all other businesses went down.

Member bank profits have risen from $756 million in 1951 to what will be more than twice that amount in the present year. Yet these profits are not being shared by more banks. They are being shared by fewer banks.

In the high prosperity year of 1957, when money and bond rates were highest and the big industrial corporations were all going to the banks for expansion capital instead of to the bond market, profits of the member bank, after taxes, were $1.2 billion. Yet in the first half of 1958, during the depth of the business recession, member bank profits jumped to an annual rate of $1.7 billion.

So, in deciding whether or not this legislation is justified to increase bank profits, the committee should also take into account the fact that while bank profits do not increase in boom times as much as profit in some of the competitive segments of the economy, neither are bank profits allowed to go down very much in recession years.

Earnings after taxes of all insured commercial banks and member banks, 1951 to 1958

[In millions]

Year	Insured commercial banks	Member banks
1951	$908	$756
1952	900	830
1953	1,026	866
1954	1,307	1,096
1955	1,156	984
1956	1,217	1,027
1957	1,374	1,169
1958 (1st half, at annual rate)	(1)	1,656

As I have said, considering the nature of the business, a profit rate of 10 percent on net worth seems to me not only adequate but excessive.

WHY NOT APPROPRIATE THE MONEY?

If the Banking Committee does decide that additional subsidies to the private banks are in the public interest, then it would seem more appropriate to me in every respect to provide these subsidies through the usual channels of appropriations. Asking the Congress to appropriate the money would provide a much better basis for considering what banking profits ought to be and how much of a subsidy is to be provided. In the legislation being proposed both of these questions have been left unanswered. The Federal Reserve authorities have not told us what level of profits they think the banks ought to have; nor have they told us how much of a subsidy they actually intend to provide with the authority they are seeking.

More than that, appropriating the money in the usual way and under control of the President's Budget Bureau should afford an opportunity to develop needed information about other aspects of the banks' profit picture which we do not now have. For example, to what extent have the banks been putting excess amounts of income into contingency funds and reserves for loss rather than appropriately counting this income as

profit? To what extent have the banks used the special status they enjoy under the tax laws for building up loss credits against future income taxes? As the Banking Committee knows, when the bond market goes down the banks are permitted under the tax law to sell one Government security for another Government security of substantially the same type and take an ordinary loss for tax purposes. Though, of course, when the bank makes its profit on the transaction it pays only the capital gains tax on the profit.

Furthermore, the chances are that it would cost the Treasury far less if the Congress appropriated the amount actually needed each year, rather than turn over to the banks income-producing assets which the banks will own in perpetuity. Turning over the assets means that the banks will collect the interest from the Treasury in those years when they do not need the income in order to earn the profits which Congress may think are appropriate.

If the members of the Board of Governors are at all consistent, they will give most vigorous support to the proposition that the subsidy under consideration should be appropriated rather than provided by the transfer of assets.

Last year we had up for consideration a bill to encourage the formation of small business investment companies, so as to provide a means whereby small-business concerns might obtain access to long-term capital. Part of that proposal was not to give away about $20 billion of Government-owned assets, but to borrow $120 million from the Federal Reserve surplus fund, to get this program going. At that time we were privileged to have each member of the Board of Governors before the Small Business Committee, and all of them agreed to the need for such a program as was being considered. In truth, they almost had to agree, because the Federal Reserve had made a survey and obtained some facts which were so overwhelmingly in support of the program that it would have been hard not to agree. But at the same time, the Board members all said that the method of financing was wrong. They made the strongest kind of arguments that Congress ought to do this sort of thing through regular appropriations, so that it could keep proper control over what was being done.

So I suggest that the committee ought to consider if it would not be better for Congress to keep control over what is to be done under this legislation.

WILL THE REDUCTION IN BANK SAFETY PLACE AN UNDUE BURDEN ON TRADE AND COMMERCE?

Mr. Speaker, the question here is much like the question of whether to give a warehouse full of whisky to a man who is addicted to overdoses of alcohol. He may want it very much and lobby for it, but giving it to him will make him weaker, not stronger.

These are optimistic times, however, and it has been so long since the last bank panic that most people assume we will never have one again. Loans and investments of the member banks are now 10 times the amount of money the stockholders have in the banks, including surplus and undivided profits. Reserves against net demand deposits have come down from 40 percent in 1940, to 18.8 percent in 1957, and to 17.5 percent in 1958. And none of us familiar with the background of this legislation can doubt that it is intended to bring these reserves down to 10 percent.

Let us consider how small the stockholders' investment in the banks is. All insured commercial banks at the end of 1957 had assets of $221.5 billion. In other words, this was the amount of their loans and investments, plus, of course, cash. The total capital accounts amounted to only $17.1 billion. In other words, 7.1 percent of the assets. "Total capital accounts" includes the paid-in capital, the reserves, the surplus, and the undivided profits. If we take out the undivided profits, which can be drawn out pretty readily, we find that the stockholders' money in the banks amounts to only 6.3 percent of the assets.

And as to the actual paid-in capital—the common stock—the stockholders have put in only $5.1 billion against assets of $221.5 billion. In other words, in actual stock investments in the banks the stockholders have invested only $2.30 for each $100 of the banks' assets.

Insured commercial banks, Dec. 31, 1957

[Dollar amounts in thousands]

	Amount	As percent of total assets
Total assets	$221,534,082	
Total capital accounts	17,085,869	7.7
Total capital accounts excluding undivided profits	13,863,848	6.3
Capital stock, notes and debentures	5,169,729	2.3
Common stock	5,123,987	2.3

Source: Annual report of the Federal Deposit Insurance Company.

Our banking authorities are now so much preoccupied with their new toy of monetary controls that they have forgotten about bank safety. In fact, the Board's staff report discusses the "purposes of reserve requirements" as what it calls a fulcrum for effectuating monetary policies. This report puts it this way:

While effectuation of monetary policy was not fully recognized as the purpose of reserve requirements when the Federal Reserve System was founded, it may now be regarded as the principal purpose. It is the major consideration in determining the level of reserve requirements and may also be considered as a factor in establishing differences in requirements for different types of deposits and classes of banks (p. 2).

And it says:

The convertibility—or liquidity and safety—function has gradually come to be recognized as of minor significance compared with the credit-limitation function of reserve requirements (p. 25).

Much of the notion that bank safety is no longer important seems to be based on the fact that depositors can now no longer draw out gold. And this overlooks the point that people may prefer currency, folding money, to bank deposits, and drawing out the currency has the same effect on bank reserves as drawing out the gold.

If there ever came a time that the public started feeling shaky about the banks and started drawing their deposits out in currency to put away in deposit vaults or to put under the mattress, the banks would be in trouble. When reserve requirements are down to 10 percent, a depositor who has $100 on deposit and demands $100 of currency will draw down the bank's reserves by $100 when the bank actually has only $10 to cover that deposit. The banks could be in trouble quickly.

The FDIC insurance is there, of course, but there is only 82 cents in the FDIC reserve to cover every $100 of deposits. The banks have been unwilling to build up the insurance reserves. While they are adequate to take care of individual bank failures in prosperous times, I wonder what would happen in a severe business recession?

Of course, it is true that the Federal Reserve has the means, theoretically, of taking care of such situations. It could pour the money out. But what the Federal Reserve can do theoretically, and what it will actually do, considering the human factors, may be widely different. When some of the banks get into trouble and are forced to liquidate assets, there will be other powerful members of the financial community who can profit by picking up those assets at bargain prices; and almost all of the bankers will be of two minds about whether it is better for the Federal to pour the money out or to preserve the interest rate structure.

In the recession last year, when the country had 5 million unemployed and 15,000 firms on Dun & Bradstreet's list went bankrupt, the Fed was unwilling to bring about more than only the slightest reductions in private bank lending rates and in bond rates, so why should we expect the performance to be much different if we had 10 million unemployed and 30,000 firms going bankrupt? In other words, I am simply emphasizing that in any of these situations the pressures from the financial community will be mixed.

Yet I, too, am optimistic about the future. I do not wish to predict that there will be any run on the banks. I am, however, deeply concerned about the effects of a low level of required reserves on the ability of the bank to meet the proper financing needs of business and commerce in the local communities. The Board's staff report has, to a limited extent, recognized the seriousness of this problem. It recognizes that there will be a problem in the first place in getting all of the banks to accept a transfer of the Government securities from the Fed's portfolio in exact proportion to the amount of reductions made in their reserve requirements. The report states:

Any substantial release of reserves within a short period of time can have disturbing effects on credit markets and on the economic system generally. Although the amount of any such release can be offset by absorption of the same amount through Federal Reserve sales of securities, the initial uses that might be made of the actual reserves released cannot be controlled. Increased leverage for credit expansion permitted by lower reserve requirements may also present problems of adjustment (p. 41).

In other words, even at the beginning some of the bankers may not cooperate or understand that they are to create the money which their new reserves will permit them to create only to acquire Government securities. Some of the bankers may hold back and use their money-creating powers to make more risky loans or investments.

Furthermore, after the securities are transferred there will be a problem to get the banks to keep them. They can sell them to the insurance companies or to the general public and then use their new reserves to invest in less liquid assets. The only answer which the Board's staff report has for this is that the bank supervisory authorities will have to develop and enforce higher standards of liquidity for the banks. The report states:

> If reserve requirements were lower, the quality of other assets would have relatively greater significance in appraising the soundness of a bank or its ability to meet potential decreases in deposits and reserves. Standards of performance observed by banks or by supervisory authorities would need to take into consideration such a change (p. 27).

So my point is that with the low level of bank reserves and the small amount of stockholders' money in the banks, the bank supervisory authorities have already substantially taken the banks out of the banking business and put them into the business of holding Government securities and other highly liquid assets. Where is the small businessman to go to meet his banking needs? The fact is there has been now, for at least a quarter of a century, a practical necessity for the Federal Government to maintain some kind of supplemental banking facility to meet the business needs of the country. There was the RFC, the Small War Plants Corporation, the Small Defense Plants Administration, and now the Small Business Administration.

The committee has had an opportunity to look into the Small Business Administration's loans, and I believe it knows that this agency is making loans on the basis of normal commercial banking standards. In other words, it is doing a banking business that the local banks ought to do and cannot do, because of their present tendency to avoid extending any commercial credit which involves the slightest degree of risk.

Where then are the farmers, the small-business people, and even the medium-size business firms of this country to find commercial banking facilities if required reserves are reduced to the level contemplated by this legislation?

WILL THE LEGISLATION INCREASE THE TREND TOWARD MONOPOLY IN BANKING?

The result of reducing required reserves to anything like the levels contemplated by this legislation will not be merely higher requirements for liquidity in bank assets, with bank examiners going more closely over the banks' loan portfolios and demanding the removal of ordinary business loans. An allied result will be more protection from competition supplied by the public banking agencies.

Thoughtful students of our way of government have long been making the observation that one of the strongest of the natural laws seems to be that agencies created to regulate an industry in the public interest quickly become regulators for the benefit of the regulated. Every time we create a Federal agency with powers to limit competition in an industry, the result is less and less competition and more and more solicitude for the profits of the vested interests. We are confronted here with the classic case. The bank business grows, but the country has fewer banks. Since 1920 the gross national product of the country has increased from $92 billion to $438 billion, yet the number of banks has gone down from 29,000 to 13,500.

Since 1940 alone the gross national produce has increased more than fourfold. Demand deposits in commercial banks have gone up from $65 billion to $214 billion. But we have 1,000 less banks in the country than in 1940. The number of banks goes down every year. In 1957 there were 13,568; last year there were only 13,502.

In 1920, the Federal Reserve System had 9,600 member banks. By last year these had gone down to 6,300. The number goes down every year.

What happens is that the Federal authorities cannot seem to resist bank mergers, so the banks keep merging. On the other hand, the banking agencies do resist allowing new banks to be created.

And, as banks become fewer, more harmony and more uniformity seem to develop among all segments of the financial community as to policies affecting the public interest.

Many of our smaller towns today have no bank at all. May I suggest that if the committee decides that $20 billion of Government-owned assets should be taken out of the Federal Reserve System and given away, this $20 billion would go a long way toward helping new banks become organized in the small towns that have no banks.

HOW WILL THE MONEY-CREATING POWERS BE REDISTRIBUTED AMONG THE PRIVATE BANKS?

I come now to the other aspect of the proposal involved in this legislation. This is the authority being requested to rearrange reserve requirements among the member banks.

When the present minimum and maximum reserve requirements were specified in the law passed in 1936, the differences established for the different classes of banks provided a pretty good rule-of-thumb arrangement with reference to the actual factors which appropriately should determine differences in levels of required reserves. This system is admitted to be a pretty good one today.

At the same time, however, it is admitted that improvements can be made. Experts on banking matters, particularly in the universities, for many years have been pointing out how better systems could be designed to remove some of the inequities which individual banks meet under the present system. The criteria for a new system are pretty well agreed upon, and they are well-known. As for my part, I would welcome a more scientific system than we now have.

But in this legislation the Federal Reserve authorities have not proposed a more scientific system. They have proposed a who-knows-what system. And what they have proposed for readjusting reserve requirements as among the banks is jumbled in a package with a proposal for drastically reducing the whole level of reserve requirements and transferring the Federal Reserve's assets to the private banks.

As we all know, the American Bankers Association submitted its plan for reforming the reserve system to the Federal Reserve Board in 1957. This is the plan which is to reduce required reserves for all classes of banks down to 10 percent. The plan also calls for drastically narrowing, by law, the range within which the Board could set reserves. It would specify by law no less than 8 percent of demand deposits and no more than 12 percent. In other words, reserve requirements for no class of bank could ever be raised above 12 percent. This is, of course, the plan for which the bankers have been making a concerted campaign.

Last year Chairman Martin told a subcommittee of the Senate Committee on Banking and Currency that he had not proposed reform legislation because the bankers had not agreed among themselves what it is they want. When a question about this was raised with him, he said:

> We would probably be better off if we made only major adjustments in reserve requirements. But first, we need to arrive at some better system of reserve requirements than we have at the present time. That has been a most difficult thing for us to achieve because of the disagreements between bankers, which represent, I am sure, honest differences of view. (U.S. Senate, Committee on Banking and Currency, Subcommittee, hearings, Federal Reserve Monetary Policies, 85th Cong., 2d sess. (1958), p. 8.)

Frankly, I have been unaware that there was any serious disagreement among the bankers over the division of the spoils.

Furthermore, the new legal authorities which the Federal Reserve is recommending appear remarkably like the plan of the American Bankers Association. At page 10 of the Board's staff report, it is stated that the American Bankers Association plan has been "considered" and that the Board has concluded not that it is bad, but only that it is "not necessary." The statement is:

> The Board has given consideration to the careful and comprehensive study of the problem of reserve requirements and the proposals for changes made by the Economic Policy Commission of the American Bankers Association and also to other plans for fundamental revisions in the reserve requirement structure. The Board has concluded, however, that far-reaching changes in the law are not necessary. In particular the Board should not be under a mandate to reach some particular level of requirements at any time in the future. With the amendments proposed, along with other provisions of existing law, the Board would have adequate authority to make any changes in the structure and level of reserve requirements that are likely to be appropriate under present or foreseeable conditions (pp 10–11).

That statement is pointing out that under this legislation the Board will have authority to do what the bankers' plan calls for, though this Board, and no future Board, would have its hands

tied against raising reserve requirements—except in the case of the New York and Chicago banks.

The first part of this reform proposal, in the order of its presentation, is to allow the banks to count their vault cash as reserves. And it has been elaborately pointed out that the country banks have a much higher percentage of vault cash relative to reserves than do the other classes of banks, suggesting that the country banks will benefit more from this legislation than the other classes of banks. And, of course, this manner of presentation has a great deal of appeal to those of us who are particularly desirous of strengthening the smaller banks, and especially the small-town banks. The argument ultimately follows, however, that the differentials now existing must be narrowed and, therefore, since the Fed is going to be authorized to permit vault cash to be counted against reserves, a higher reduction in the legal requirements for the New York and Chicago banks must be provided.

Actually, the Federal Reserve has not indicated to what extent it expects to allow vault cash to be counted, if any.

It has shown us, in its staff report, that the country banks have a higher percentage of vault cash than the other classes of banks, but it has not shown us whether the particular banks that have the cash also have excess reserves.

And finally, this idea of counting vault cash as reserves goes back to a system that was tried, found unworkable, and taken out of the law in 1917. It is not clear to me how the Federal Reserve intends to police vault cash, unless it is to keep an inspector at every bank every day. It might just as well try to take a mortgage on the fish in the sea.

Now is not this an interesting thing? Most of our States have hard and fast laws which prohibit bankers from accepting as collateral or security, or accepting a mortgage or a note on goods that are daily exposed to sale.

For example, a retail grocer with canned goods, cheese, flour, and other groceries on his shelves, all daily exposed to sale, could not obtain a loan on security of these groceries. And one of the reasons for the certainty of these laws is that no sound banker would even consider making a loan secured by goods daily exposed to sale.

Yet in this case the bankers are asking the Government to accept as security against a most sacred obligation—namely, their reserves—cash which moves in and out of their windows hourly and even by the minute and second.

The next part of the proposal is that the Board be given discretionary authority to reclassify any or all banks in New York and Chicago either as a Reserve city bank or as a country bank; and to reclassify any and all banks in the Reserve cities as country banks. We are given no hint as to what the Board actually intends to do with such a broad and loose authority as that. There is discussion, of course, in the Board's staff report as to the criteria that should be considered; but what weight will be given to the various criteria, if any, is not specified.

Furthermore, this part of the bill would permit the Board to reclassify individual banks without promulgating general regulations. It seems to me extremely dangerous to extend any authority to the Federal Reserve to negotiate with individual banks on matters affecting such a large self-interest of the bank. We ought to try to preserve the mavericks in the banking system. We ought not to encourage the kind of situation where the big financial powers, or even a majority of the banking community, can bring pressures to have all of the banks fall in line with their policy and programs.

The only thing certain about this legislation is that required reserves of the New York and Chicago banks would be brought down and the Board would have its hands tied with a new low maximum at which it can set required reserves for these banks.

Let me call attention particularly to this statement from page 60 of the Board's staff report:

> The proposal that the requirement limits for central Reserve city banks be lowered from the existing range of 13 to 26 percent to a range of 10 to 20 percent is designed to place a lower maximum on the amount of reserves that any bank may be required to hold and also to give legislative sanction to a narrowing of differentials in requirements as between classes of banks (p. 60).

What is the purpose of this proposal? Let me read part of that sentence again. It is "designed to place a lower maximum on the amount of reserves that any bank may be required to hold and also to give legislative sanction to a narrowing of differentials in requirements as between classes of banks." Now is it not rather strange that the Board is proposing to tie its own hands by reducing the legal maximum of the New York and Chicago banks from 26 percent to 20 percent, and also tie the hands of any future Board?

It was only in 1951 that the Board thought 24 percent was the right reserve requirement for these banks, because that was what its regulation required. And it was only in 1953 that it thought 22 percent was the right requirement. What is this influence which the bankers now have which they think they may be about to lose?

On the basis of all of the accepted standards and criteria, the facts are that required reserves of the New York and Chicago banks should be raised relative to the country banks, not lowered.

What are the criteria?

The Board's staff report places the first emphasis on interbank deposits. I would not necessarily agree that this is first in importance, but let us consider the question on the Board's own terms. Since 1935, the year when the present law was passed, interbank deposits held by the country banks have gone down from 46.2 percent of reserves to 26.2 percent last year. In contrast, the interbank deposits held by the New York and Chicago banks increased from 104 percent in 1935 to 135 percent last year. In other words, on the basis of the criteria, reserve requirements of the New York and Chicago banks should be raised, not lowered.

Next there is a question of the turnover of demand deposits. This, certainly, is a prime factor in determining what a bank's required reserves ought to be. A high turnover of demand deposits requires a high percentage of reserves for the same reason that time deposits are safe on an extremely low percentage of reserves. The greater the activity against deposits, the greater the likelihood that the bank will be in trouble. And the Board's staff report also makes the point that a high turnover of deposits makes a relatively higher contribution to the money supply, and ought to require higher reserves for that reason.

So, what is the record?

In 1945, demand deposits in New York City banks turned over 24 times a year. That rate had more than doubled by last year, when the turnover was 54 times a year.

At 337 other reporting centers, which include some Reserve city banks as well as county banks, the turnover rate was 14 times in 1945, and this had increased to only 23 times by last year. In other words, there has been a terrific widening of the turnover rate, with New York City banks going up relative to the other banks.

Then comes another question. This is the ability of the banks to operate close to their reserve requirements. As the Board's staff report puts it:

> Also, the larger banks can afford to keep a closer control on the amounts of their reserve balances, in relation to their requirements, and it is feasible for them to lend out any excess reserves through central money markets, so that the amount of their funds tied up in noninterest-earning reserves or other assets need to be little if any larger than their legal requirements. Banks more remotely located or otherwise not able to operate effectively in money markets find it necessary to hold relatively larger proportions of their assets as excess reserves or balances with correspondents on which they obtain no earnings (p. 62).

In other words, the country banks and many of the Reserve city banks necessarily suffer from some nonuse of their reserves. They cannot stay invested and lent out right up to the margin of their required reserves. Yet within the last few years the so-called Federal funds market has developed in which the banks at the financial centers can borrow reserves from one another on a day-to-day basis. Their attrition, or nonuse, of excess reserves has disappeared. But other banks still have to carry, as a practical matter, a considerable percentage of excess reserves.

Finally, there is the age-old question of how much money stockholders have in the bank. As of the end of February, total capital accounts of the New York and Chicago banks amounted to 81 percent of their reserves; in Reserve city banks, total capital accounts amounted to 75 percent of reserves; and in the country banks the stockholders' money equaled 100 percent of the reserves.

In short, this proposal of reducing required reserves of the New York and Chicago banks to make them more equal with the other banks is wrong unless all banking experience and all previous legislative experience on this subject have been useless.

In summary, this is very dangerous legislation and I hope that the House Committee on Banking and Currency will continue to proceed with great caution.

TABLE 1

[Dollars in millions]

Class of bank	Computed required reserves at present regulations [1] (col. 1)	Computed required reserves at minimums allowed by present law [2] (col. 2)	Amount of reserves which could be made available under present law (col. 3)	Ratio by which new bank deposits could be created under present law (col. 4)	Potential new bank deposits under present law (3×4) (col. 5)
Central Reserve city banks:					
New York	$3,719	$2,686	$1,033		
Chicago	980	708	272		
Subtotal	4,699	3,394	1,305	7.69	$26,099
Reserve city banks	6,683	4,050	2,633	10.00	40,500
Country banks	4,147	2,639	1,508	14.29	37,711
Total	15,529	10,083	5,446		104,310
Weighted average				10.34	

Bank deposit expansion ratio at present legal minimum reserve requirements=$10.34 per $1 of reserves.
Total money expansion ratio assuming proportionate expansion of bank deposits and currency (3.9 to 1)=$8.65 per $1 reserves.

SMALL BUSINESS RESEARCH

The SPEAKER. Under previous order of the House, the gentleman from Maine [Mr. COFFIN] is recognized for 10 minutes.

Mr. COFFIN. Mr. Speaker, the 85th Congress has been called, with considerable justification, the "small business" Congress. Certainly, by making the Small Business Administration a permanent agency, and by adopting the Small Business Investment Act, we made tremendous strides in giving assistance to our small business community and in helping them to achieve a more competitive position in our economy.

One of the most important features of the Small Business Act, in my opinion, is paragraph (c) of section 8, which directs the SBA to "make studies of matters materially affecting the competitive strength of small business." This provision, coupled with section 602 of the Small Business Investment Act, which provides for research grants to State agencies, State development companies, colleges and universities for small business studies, research and counseling, offer us an opportunity to develop a much more adequate understanding of the actual needs of small business and the approaches which may be most productive in strengthening the competitive position of these businesses. Certainly no long-term program of financial assistance and investment will be of maximum value unless we engage in a constant reevaluation of the factors which influence the growth and relative position of small businesses.

In the near future, the SBA will make its first research and study grants under the Small Business Investment Act. It is authorized to make research grants up to a maximum of $40,000 to some agency, development group, or educational institution within each State. For weeks, agencies, colleges, and universities throughout the land have been hammering out research proposals, in the hope that they will qualify for the much coveted grants. SBA has published a list of suggestions which are useful as guides. But in the main a tremendous centrifugal force has been set in motion.

I have no doubt but that SBA is being deluged with research projects ranging from the use of wood products in the Northeast to the potential marketability of dehydrated cactus in the Southwest. After the winnowing process takes place, there may be up to 49 meaningful projects undertaken in 49 separate laboratories. We shall in time reap the reward of this diversity in laboratories.

But there is a need for a centripetal force, a drawing together, a filling in of gaps, a central direction. In a word, the horseman needs a head. There are areas of research which do not appeal to any one State agency or institution. Some of these areas may contain some of the richest lodes. They may not yield their ore immediately, but in the long run may well determine the extent to which health and prosperity will be restored to the small business sector of the economy.

Mr. Speaker, I shall not restrict myself to generalities. Through the assistance of Walter H. Carpenter, director of the board of research of Babson Institute, Babson Park, Mass., who has long been vitally concerned with the role of small business in the Nation's economy, I want to outline some of the basic problems to which the Small Business Administration could profitably address itself, were it given the means. These are problems which are not likely to be approached by the State grant applicants. Yet these are the areas where basic research must be done if we are not merely to turn over the topsoil in the garden plots nearest at hand.

It is, Mr. Speaker, an ironic reversal of planning that we set up a permanent agency to guide our State agencies, but do not equip it with enough seed capital to carry out fully the guidance function. My plea is that a modest amount of funds be made available to SBA for the seminal research which will increasingly be needed. Such an amount would be in the approximate sum of $200,000, or about one-tenth of the funds made available to the laboratories at the grassroots.

Here, then, are questions worthy of the attention of the Nation's sole agency dedicated exclusively to improving the lot of the small businessman:

First. What are the basic problem areas to serve in a small business program?

A. What do we mean or should we mean by "small business"?

Under what conditions should the term be modified according to industry variations?

What bearing do legal considerations, if any, have upon the definition?

What are the proper definitive guides to use and under what circumstances?

B. What are the so-called management problems of small business?

What are the causes of the small business failures due to managerial difficulties?

How does the present management training program of SBA fit these managerial problems?

What improvements or other approaches to these problems should be tried?

What continuing programs of research are needed to develop in some tangible detail the character or nature of small business managers?

C. What other internal causes for small business failures exist?

What caused these adverse developments?

How can the symptoms of eventual failure be recognized?

How can the small businessman be reached on these matters?

D. What external causes or pressures exist which tend to cause failure or serious operating difficulties?

What are the financing problems?

What competitive practices occur over which small business has no control and which become disastrous?

Are such practices normal as opposed to being illegal and what can or should be done about them?

E. To what extent are advisory services regarding management practices, finance, marketing, etc., available to small business?

To what extent are these services utilized?

What reasons exist for the pattern discovered?

How may the pattern be improved and by whom?

Second. What are the total effects of the SBA program on the economy?

A. Can we go beyond the obvious indices on importance of small business such as number of establishments, sales, and so forth?

What percentage of certain industries' production is handled by small business?

What percentage of manufactured goods may be considered as distributed by small business?

Is there a way to determine the segment of business profits emanating from small concerns?

Is there a way of comparing profit or surplus reinvestment in the enterprise in small business versus large business?

Can we determine the rate of innovation in product or process or distribution methods in small and large business for comparative purposes?

B. Can we consider the impact of small business on the economy?

How does the price structure of small business concerns differ from large or even medium concerns?

What are the economic or business bases upon which small business can and does survive in selected businesses?

Based upon the studies above, can meaningful conclusions be reached about the logical role of small business in the economy?

C. What is the impact of the SBA program on the small business economy?

What are the effects of SBA financial aid? What are the uses to which the loans are put; how have the recipients' financial condition changed as a result of the loans; how long before or do the firms ever become eligible for financial help via normal or private channels?

What lessons from successful financing of this sort can we learn to assist in administration of existing aid and framing new legislation?

Third. What can we learn about normal and abnormal patterns of small business health?

A. Can we develop statistical studies of a continuing nature to isolate symptoms of business health or disease?

B. Is small business forced to pay wage levels based upon large-scale operations and in turn sell its product at prices determined from large-scale operations?

C. What norms of behavior can be considered as guides to indicate the need for remedial action or assistance?

What is a normal turnover in business firms? What businesses in what parts of the economy need attention?

What are other business weather vanes? (a) Small business loan patterns; (b) unemployment statistics relevant to small firms and percent of total unemployment due to inactivity in this area; (c) dollars expended for expansion; (d) percentage of Gross National Product derived from small business; (e) growth or decline in total business assets found in small business concerns; (f) the quantity of manufactured products distributed to the public via small business and the changing patterns therein.

At the present time, the Small Business Administration does not have sufficient funds available for even a modest start on such a research program, essential as it is for sound planning and policy-making. It is my firm belief that the Congress must provide these funds and encourage the Small Business Administration to utilize the authorization contained in the Small Business Act for studies necessary to fulfill the intent of Congress in legislating on behalf of small business in the American economy.

BUSINESS MANAGEMENT AT THE PANAMA CANAL

The SPEAKER. Under previous order of the House, the gentleman from Texas [Mr. THOMPSON] is recognized for 30 minutes.

Mr. THOMPSON of Texas. Mr. Speaker, in an extension of my remarks in the CONGRESSIONAL RECORD of March 25, 1959, I included a news story from the Christian Science Monitor of March 21, 1959, by Ralph K. Skinner, relative to the financial operations of the Panama Canal that dealt with an address on March 13, 1959, by Governor W. E. Potter of the Canal Zone before a joint meeting of the Canal Zone Chapters of the Federal Government Accountants Association and Institute of Internal Auditors.

Since then, I have received the full text of Governor Potter's March 13, 1959, address on "Business Management at the Panama Canal," which effectively deals with its subject, and is most timely.

Also, I have received from Ambassador Ricardo M. Arias, of Panama, a translation of the press release issued by the Foreign Office of that country commenting on the statements in the indicated address of the Governor, with a request by the Ambassador that the statement be published in the CONGRESSIONAL RECORD.

As previously stated to the House on a number of occasions, I served as chairman of the Special Subcommittee on the Committee on Merchant Marine and Fisheries, 1949–50, to investigate the financial operations of the Panama Canal. The ensuing inquiry resulted in the enactment of Public Law 841, 81st Congress, which placed the Panama Canal enterprise on a self-sustaining basis and brought about its first major reorganization subsequent to opening to traffic in 1914.

During that inquiry, the subcommittee went deeply into the history of the waterway. From this, it became clear that it was constructed pursuant to treaty as an interocean artery for the transit of vessels of commerce and war of all nations on terms of equality with tolls that are just and equitable. Public Law 841 implements this basic principle by means of a formula for the calculation of tolls. Furthermore, it specifically provides that the levy of tolls is a subject of three key canal treaties: the 1901 Hay-Pauncefote Treaty, the 1903 Hay Bunau-Varilla Treaty, and the Thomson-Urrutia Treaty proclaimed in 1922.

Commenting on the committee's work, John F. Stevens, son of the early designer of the canal, wrote me on March 12, 1952:

> It is significant that my father and three Presidents with whom he was associated—Theodore Roosevelt, William Howard Taft, and Woodrow Wilson—all desired an ultimate corporate organization for the administration of that enterprise along the general line you did so much to create.

The vast benefits of the Panama Canal to world commerce and to the economy of the Republic of Panama are well known. To the latter the canal enterprise and other U.S. agencies form major sources of income. In fact, the independence of that country grew out of the canal undertaking.

In compliance with the request of Ambassador Arias that the indicated statement of the Panama Foreign Office be placed in the RECORD, I am very glad to include it as a part of these remarks along with the full text of Governor Potter's statement to which it relates.

Inevitably, among free men, differences of opinion will occasionally arise. The current differences concerning technical questions and conflicting opinions between the Panama Foreign Office and ourselves may well be resolved within the framework of the existing treaties. Doubtless the current differences influenced Governor Potter to make the address of March 13. It explains very well the situation from our point of view and I would commend him for it.

I suggest that all who are interested in the vast Panama Canal problems and particularly in the differences of opinion which may have arisen read carefully the text of both the statement and Governor Potter's address, which follow:

STATEMENT OF PANAMA FOREIGN OFFICE

(Translation furnished by the Ambassador of Panama)

A Panama Foreign Office spokesman answered a query regarding the public statements made by the Governor of the Canal Zone in a recent speech as follows:

"Governor Potter is right in affirming that the Panama Canal was not built for commercial purposes. It is precisely because of this reason that it is surprising to Panamanians that the management of the canal has been turned over by the U.S. Congress to an entirely commercial firm like the Panama Canal Company; and that said firm, which is an agency of the U.S. Government, should attempt in every way to obtain every cent of income from the canal and the other activities of the company, without taking Panama into account with regard to the equitable distribution of the benefits which the interoceanic waterway produces.

"The zeal of the company to commercially exploit the canal for the benefit of one of the parties is so marked that it ignores important clauses of treaties with Panama merely because their compliance would mean additional expenses and thus diminish the commercial output of the company. That is why, while the treaties specify that both of the nations which made the construction of the canal possible should receive the benefits which are due them, Panama still only receives a small annuity; that is why the authorities entrusted with complying with the Remon-Eisenhower Treaty in the Canal Zone continue to discriminate against Panamanian workers in the matters of salaries and treatment, mainly because it would cost a little more money to treat them in the same manner as American citizens, as they are under obligation to do according to the treaties; that is why, while the treaty specifies that purchases must be made in Panama or the United States, Canal Zone authorities buy meat in Australia, and rice, jewelry, etc., in other countries, merely because they can get them cheaper; that is why, although Panama has deprived itself of its ports to place them under the control of the Canal Zone, the same zone continues to charge a high rate to Panamanian merchandise just to allow merchandise bound for Panama to pass through its ports, this surcharge impedes the proper development of the Colon Free Zone; finally, that is why the Panama Railroad continues to operate in our territory in competition with Panamanian transport companies.

"Therefore, it is hoped that the American officials who manage the Panama Canal would practice—with deeds rather than words—the claim that the United States did not build the canal with a commercial criterion.

"And with respect to the shipping companies for which Potter suggests the canal was built as a service, it is hoped those shipping firms would realize the ingratitude with which they have repaid Panama's sacrifice. While Panama allowed its territory to be split to make the interoceanic waterway a reality, said firms arrange the so-called maritime conferences which agree to discriminatory freight rates against the Republic of Panama, treating Panama as an enemy which must be boycotted rather than a friendly nation to which they at least owe a debt of gratitude. Said discrimination has reached the shameful extreme of charging less for freight from Japan to New York, going through the canal, than from Japan to Panama. Notwithstanding all this, the United States has been so condescending toward these firms which thus treat Panama, that the tolls paid by those ships to cross the canal are lower today than when the canal first opened to international traffic even though all prices have risen—specially freight—and the dollar is now lower than it was 40 years ago."

BUSINESS MANAGEMENT AT THE PANAMA CANAL

(Address by Canal Zone Gov. W. E. Potter)

When I spoke to the Federal Government Accountants Association at its charter meeting, I spoke as the Governor of the Canal Zone. Tonight I will speak in another capacity although I am happy to report that I

haven't had a RIF nor been downgraded under the new merit system.

It is as a layman that I am here tonight. I have been disturbed by reference made to the financial management, the accounting system, of the Panama Canal Company as "singular." There have been inferences that the system is not quite "kosher" and that the operating results shown are intended to make the canal enterprise appear to be something less than good business.

Now in the process of defending many budgets and handling the expenditure of Government funds in sizable amounts, I have been impressed with the necessity for integrity of financial data. Lack of integrity in both handling and accounting for funds has been a reason for at least court action since man devised money to permit exchange of goods.

I am satisfied that the accounts of the Panama Canal Company possess integrity. Not only am I satisfied, but the GAO confirms my opinion. As for criticisms that our accounting is singular, to me the singular thing is that this criticism comes from nonaccountants, or nonbusinessmen.

It may not be easy for lawyers, doctors, and others whose professions do not involve accounting to understand the intricacies of accounting. Even as the accountant is not skilled in the complexities of court procedures, so the doctor and the lawyer normally are not familiar with the procedures and requirements of adequate accounting. Each professional is supposedly expert in his own field but cannot be expected to be proficient in the business of the other. Most of us are proficient in transferring money from one pocket to another—simple accounting—but the exigencies of modern business have given us a system that demands experts, and I'm glad we have so many top ones in our organization.

In discussing the field of accounting at the Panama Canal, it is important that we speak the same language and that terms have an identical meaning to all concerned.

For example, people talk about gross revenue, without defining it. Eric Kohler in his dictionary for accountants, defines gross revenue as "used to emphasize the absence of a deduction of cost from a stated figure of revenue."

That's a wonderful definition. What would be more wonderful would be for the average person to comprehend just what it means.

Note it says, "emphasize the absence of a deduction of cost," etc.

That's fundamentally the problem with critics of the Panama Canal accounting system. They use a layman's logic to arrive at the gross revenue and probably are reasonably close. Then comes the big boo-boo. They don't subtract the costs to get the net revenue figure. That's a fatal mistake and if followed generally would have everyone ending up in potter's field. (Incidentally, I do not control that potter's field, but they tell me that here locally, potter's field represents the top area of employment what with commissaries, etc.)

We can summarize the gross revenue of the Panama Canal Company for fiscal 1958 as $83 million; $43 million represents tolls; $40 million represents gross revenue from supporting services, from marine services such as tugs and deck gangs, from housing, utilities, commissaries and service centers, and the like. They all have a gross take.

Now this $83 million is subject to deduction. First we have the 01 expense. We are all familiar with 01—personal services. I understand that in Communist China, the steel industry has found how to get labor for free, and some similar arrangements exist in the salt mines of Siberia, but we're paying a going rate at the canal. We think morale is better, here, though. Our Company payroll in 1958 was $39 million.

I would be redundant to point out the many costs which enter into transiting ships through the waterway, from maintenance of the channel to overhauling the essential lock structures on a regular schedule.

And, in the area of supporting services, one would need to be pretty naive to overlook the cost of goods sold as a necessary offset to the sales receipts in the commissary stores. Warehousing, transportation, maintenance, and other costs must be subtracted from the gross revenue figure to arrive at net revenue.

Let me call off rapidly some Company operating costs other than the $39 million for personal services and related costs:

	Million
Operating materials and supplies	$3.5
Depreciation	5.2
Cost of goods sold	13.3

These figures refer only to the Panama Canal Company. For example, the $12 million Canal Zone Government payroll was not included. All receipts and disbursements for the Canal Zone Government are offset to produce the net cost of Canal Zone Government—$10.7 million, which I will discuss next.

In the law setting up the Canal Company there is a clear statement that the Company is responsible for the costs of operating the zone. That is because there would be no zone here if it were not for the canal.

At first blush, the criterion for separation of activities between the Company and Canal Zone Government may not be obvious, but there is a sensible principle behind the separation.

In effect, all elements which are normally a part of community life are Canal Zone Government activities. This includes roads, highways, sewers, police and fire protection, educational and health facilities, prisons, jails, garbage collection, etc.

Last year after offsetting the gross expenditures of Canal Zone Government by the receipts from such sources as tuition and hospital billings, there was a net cost of Canal Zone Government of $10.7 million. This has to be reimbursed by the Panama Canal Company by law.

An examination of these Canal Zone Government activities reveals they are as essential to this community as similar services in any modern city, such as Chicago, Los Angeles, Panama City, Fla., or Cologne, Germany.

Another bite into the revenues of the Company is to cover the cost of administering the enterprise. In addition to the more obvious administrative costs, there are the costs of leave and retirement and the not inconsiderable costs of implementing the 1955 treaty with Panama. Total general and administrative expenses amounted to $6.7 million for fiscal 1958, which are principally 01 expenditures.

Here I might mention that we had a one-shot expense for past costs for our Latin American employees when they were brought under civil-service retirement. This was $5 million. While this came out of cash, it did serve to somewhat inhibit our plans for future canal improvements. But it is just one more cost of implementing the treaty.

When we subtract the various operating expenses of the marine and supporting activities that I mentioned earlier, together with the net costs of Canal Zone Government and the administrative expenses of the Company, we end up with $11.4 million balance.

That's quite different from the $83 million gross revenue we started with in our computations. The items comprising the difference often are overlooked by our nonprofessional, accountingwise, critics.

These critics remind me of the young couple who decided they would have a perfect partnership when they were married. Everything would be 50–50, evenly divided. For example, the wife set up the 50–50 arrangement in their joint checking account at the bank. The husband would make the deposits and she would make the withdrawals.

Unfortunately, that $11.4 million I just mentioned isn't the final net income figure for PCC. We haven't deducted the interest payment to the U.S. Treasury, which in fiscal 1958 amounted to $8.8 million.

You realize that interest is a normal part of all business enterprises. No one expects to borrow money without paying something for its use. No business can get money for nothing. Neither can the Panama Canal Company. Any borrowing requires the payment of interest, as we have all learned—only the rate varies.

From inception until June 30, 1958, the U.S. Government spent $1½ billion on the Panama Canal and its appurtenances. The return to the Government during that same period was $966 million. We don't need either an abacus or electronic computers to figure that the difference is $576 million, and this is the unrecovered net investment of the U.S. taxpayers in the Canal Company.

But we have assets—$30 million in the Canal Zone Government and $451 million in the Company. If we were to sell all our assets at their book value there would still remain unrecovered costs of $95 million.

That means that after rendering exemplary service to world shipping since 1914 Uncle Sam is still out $95 million.

In that same period, Panama received $20½ million in annuities, plus the $10 million initial payment for Canal Zone rights. At the present rate of $1.9 million per year, the annuity total will grow rapidly.

Getting back to the interest angle—the present interest-bearing investment of the U.S. Government in the Panama Canal Company is $352 million. The modest interest rate established by the U.S. Treasury required a payment of $8.8 million interest last year. This was a charge against operating income.

In our final computation we subtract operating expenses, costs of Canal Zone Government, as mentioned before, and this final item of interest, and we have a net income of $2.6 million for the Company. Let me repeat—$2.6 million net income.

It is interesting to note, at this point, that the aim of the Canal Company is not to make a profit but to avoid a loss. The law requires us to be self-sustaining, and I don't intend to become a lawbreaker.

Actually, we need some margin of profit to plow back into the Company for our capital improvements. We depend on depreciation ($5.2 million in 1958) and our slim margin of profit to provide the financing for keeping the canal up to date, widening the channel, and similar betterments. Here we are old-fashioned and plan within our income.

In comparison with the total assets of more than half a billion, the net income of $2.6 million is picayune. Yet, it took close figuring to come out that close to the break-even point. With the many activities of the Company, it's a real chore to keep an eye on the expenses and income of each one, and be sure we obey our mandate of self-sustenance.

The many supervisors of the Company all have a management job and the sum of their efforts is the modest net income.

When it is known that a drop in traffic of one ship a day would reduce our gross revenue by $1.8 million a year, it is seen that the margin for error in our forecasting is tiny. Had traffic last year been 1½ ships per day less, we would not have reached the break-even point. We have to keep on top of things constantly, and our business management must have accounting data to keep it cognizant of trends and any departures from predicted norms.

Here I would like to treat on a special topic which relates to the whole subject of income—tolls.

There are many who cannot get away from the idea that the Panama Canal should be a moneymaker; that is, should make a profit and the bigger the better. The Panama Canal was built as a service to the shipping of the world. While the maintenance of the facility requires considerable expenditure, we here feel that the extent of the expenditure is exactly governed by the need. There is no need for niceties or improvements that are not required by the number of ships we foresee in the future.

I must reject any philosophy which infers that there could be more pay merely by raising tolls, that there is a throttle for the extraction of cash that should be tightened until the victim squeals merely for the fiscal satisfaction of a few. I can foresee that the needs of future shipping may require expenditures that would require modest tolls increase, but tolls should be increased for that reason alone and not for income as a sole reason. Let me then state my philosophy—the job of tolls is to pay for the operation, maintenance, and improvement of the facility it uses—all of that, nothing more.

These are some layman's thoughts on the accounting system of the Panama Canal and the business management here. Now I'm through being a layman. I'll put on my Governor's hat again, figuratively speaking, and thank you for your attention and this opportunity to be with you tonight.

THE MEANING OF BATAAN

The SPEAKER. Under previous order of the House, the gentleman from New Jersey [Mr. CANFIELD] is recognized for 10 minutes.

Mr. CANFIELD. Mr. Speaker, Bataan has a special meaning to us Americans. It stands for loyalty. In that epic battle we proved our loyalty to liberty. Our Filipino friends showed their loyalty to the same cause. We fought together, a Western nation and an Asian nation, for a precious ideal, and the commingled blood of two different races was shed on Philippine soil for democracy and freedom.

It was on April 9, 1942, when the American and Filipino soldiers in that embattled peninsula, after a heroic resistance of more than 4 months, fighting against an enemy that outnumbered them 10 to 1, finally surrendered. Bataan fell but the flame of liberty that it lighted became a beacon for all the world and because we want that beacon to continue to guide us as we face a new threat to our freedom we commemorate today the heroism and the valor that made Bataan immortal.

We want to salute our Filipino friends and allies today. We have not forgotten nor will we ever forget the untold sacrifices that they underwent during those dark and difficult days. The courage that they showed as a people has won for their country the respect of the free world and our undying gratitude and admiration. We are confident that the same indomitable spirit will continue to strengthen their determination to fight the encroachments of a new and more sinister danger that threatens our world today.

Addressing the Export Managers and International Advertising Association joint conference at the Statler Hilton Hotel on March 24, 1959, our esteemed former colleague in this body who was Gen. Douglas MacArthur's aide-de-camp in Bataan and Corregidor, Gen. Carlos P. Romulo, made some pertinent statements which I wish to include in my remarks. I believe they are most appropriate in paying tribute to the heroes who fought and fell in Bataan:

REMARKS BY GENERAL ROMULO

We stand today at the crossroads of civilization. What is our choice? One turn leads to a fuller life in expanding freedom; another, to a regimented life in varying shapes and conditions of slavery.

We have learned from experience that a fuller life—as against the regimented life offered to us by communism—is one of civilization's most precious boons; that freedom—as against Communist slavery—was bestowed upon us by our Creator as a divine gift which no human power can alienate or destroy. Communist ideology, which denies God and regards the individual as a servant of the state, threatens our civilization with spiritual poverty and the obliteration of human dignity.

It is well for us to ponder the relation between the disenchantment with freedom in some parts of the world and the paucity of spiritual appeal in the free world's approach to the problems before it in the areas of conflict between democracy and totalitarianism. Could it be possible that some peoples recoil from the goods of life which democracy has to offer because such goods are bereft of a spiritual quality?

The success of the frantic attempts of the free world to put out the fires burning with growing intensity in the Near and Far East may well hinge upon the answer to that question. For peoples who had to fortify themselves spiritually for centuries to withstand the incredible vicissitudes of colonial rule need more than consumer and capital goods to assure them of the possibility of a fuller life in the context of Western freedom.

In a larger sense, the free world must place more reliance upon spiritual values, without of course eschewing those material values that give muscle and sinew to its way of life, if it is to win against communism and the Soviet world in the conflict for mastery not alone of the international economic system but also of the minds of men.

In confronting the problems that beset the free world in common, it should be borne in mind that their solution cannot be achieved unless there is continuity in the approach to such problems. One way to provide such continuity is to preserve, cultivate, nourish the friendship of tried and tested friends while new ones are being won, attracted and developed. Let us not forget that old English rhyme:

"Make new friends but keep the old,
One is silver the other gold."

FUTURE HOMEMAKERS HAVE FAITH IN AMERICA

Mr. SIKES. Mr. Speaker, I ask unanimous consent that the gentleman from Kentucky [Mr. NATCHER] may extend his remarks at this point in the RECORD.

The SPEAKER. Is there objection to the request of the gentleman from Florida?

There was no objection.

Mr. NATCHER. Mr. Speaker, the period of April 5 through 11 has been set aside as National Future Homemakers of America Week, and I would like to take this opportunity to commend the thousands of young women and their able leaders who make up this fine youth organization.

Future Homemakers of America was organized in June 1945 and has grown to its present membership of 500,000. Any girl who is taking or has taken a homemaking course in high school may become a member. These girls work toward the FHA goal of helping individuals improve personal, family, and community living now and in the future. Cosponsors for the organization are the Home Economics Branch of the U.S. Office of Education and the American Home Economics Association.

Special emphasis this year is being placed on the national projects which are: First, families-together; second, civil defense; third, teenage consumer; fourth, UNESCO; and fifth, home, school, and community beautification. These themes are being developed by the more than 9,000 local chapters throughout the Nation.

The training provided in special homemaking skills, and the emphasis placed on the values of a happy, moral, and closely knit family life by the Future Homemakers of America cannot be overestimated. The very foundation of our Christian civilization is based on the family unit, and in these fast-moving times, characterized by the distractions of motion pictures, high-speed automobiles, the lure of so-called glamour in the big cities, and endless other diversions which tend to break up the family unit, it is to the wives and mothers that we look to provide the cohesive and stabilizing influence so necessary to the continuance of the family unit. The Future Homemakers of America, realizing this vital fact, are training our young women to assume with dignity, warmth, intelligence, and understanding the all-important role of homemaker. It is these young women who will bring to the future homes of America the truth and love, faith and security that must be present in each home if we are to preserve the ideals of Western civilization and successfully counter the materialistic forces at work in the world today.

Kentucky was the first State to charter the Future Homemakers of America and in the Second Congressional District of Kentucky, which I have the honor to represent, the local chapters of this organization are extremely active, and their influence on the community is felt in innumerable ways. Not only do the young women benefit by their membership in the FHA, but the lives of their future husbands and children will be enriched as a result of the valuable training they are now receiving.

Mr. Speaker, the members of this national organization are doing an outstanding job, and the closing words of their creed, quoted below, are to me a beautiful expression of their firm faith in America.

We are the Future Homemakers of America. We face the future with warm courage and high hope.

LT. COL. JOHN H. GLENN, JR., OF NEW CONCORD, OHIO, SELECTED AS ASTRONAUT

Mr. CUNNINGHAM. Mr. Speaker, I ask unanimous consent that the gentle-

man from Ohio [Mr. HENDERSON] may extend his remarks at this point in the RECORD.

The SPEAKER. Is there objection to the request of the gentleman from Nebraska?

There was no objection.

Mr. HENDERSON. Mr. Speaker, yesterday, the Nation took a long step into the future as the National Aeronautics and Space Administration announced the names of seven men who will orbit the earth in manned satellites. Their selection dramatizes the rapid progress we have made toward the exploration of space during the past several years. It is another milestone in this age of discovery which is eclipsing any other period of progress in human history.

The fact that we are approaching the day when man may enter outer space and return to the earth challenges the imagination of the entire world. We know that an enterprise of this kind will not be attempted unless the probability of success is overwhelmingly favorable. Nevertheless, the calculations and studies which will have been concluded when the experiment occurs certainly cannot eliminate the great risk which these seven volunteers are assuming.

The announcement has focused public attention upon these young men and their families. Their selection after rigorous tests demonstrates their qualifications and interest in Project Mercury as well as their abilities and motivation to participate in it. They are frontiersmen of a very different sort than their ancestors who conquered the ever-receding West a century ago. They are practicing scientists imbued with a spirit of adventure and service to mankind.

One of these young men is a native and permanent resident of Ohio's 15th Congressional District which I have the honor to serve here. I refer to Lt. Col. John H. Glenn, Jr., of the Marine Corps who, at 37, is the oldest of the Mercury astronauts. The people of southeastern Ohio know Colonel Glenn and have honored him for his accomplishments in the past. On the Labor Day weekend of 1957, I had the pleasure of being present when the people of New Concord, Ohio, celebrated the transcontinental speed record he established. This record for a jetplane stood at 3 hours, 23 minutes, 8.1 seconds.

Lieutenant Colonel Glenn began his military career in 1942 and it has been studded with notable achievements in World War II, Korea, and the years since. On five occasions, he has been awarded the Distinguished Flying Cross and he is the holder of the Air Medal with 18 clusters.

It comes as no surprise to find Lieutenant Colonel Glenn among these distinguished young men. This greatest adventure of his still developing career will mark him among the vanguard of intrepid men who have broken through the intellectual and physical barriers that nature has imposed. The people of the nation and of this entire world, which suddenly seems so small, salute their courage and wish for them complete success in their part of this project of epic proportions. To Lieutenant Colonel Glenn's charming wife and his family in New Concord, Ohio, as well as to the wives and families of all of the astronauts, the Nation also owes a special debt of gratitude for the encouragement and inspiration they are giving these men.

LEAVE OF ABSENCE

By unanimous consent, leave of absence was granted to Mr. MULTER (at the request of Mr. MATTHEWS), for an indefinite period, on account of illness.

SPECIAL ORDERS GRANTED

By unanimous consent, permission to address the House, following the legislative program and any special orders heretofore entered, was granted to:

Mr. THOMPSON of Texas, for 30 minutes, today.

Mr. PORTER, for 30 minutes, today.

Mr. PATMAN, for 30 minutes, today, and on Monday next.

Mr. COFFIN, for 10 minutes, today.

Mr. GEORGE P. MILLER, for 20 minutes, on Monday next.

Mr. BAILEY, for 30 minutes, on Tuesday next, April 14, 1959.

Mr. HOFFMAN of Michigan, for 10 minutes, on Monday next, April 13, 1959.

Mr. POWELL (at the request of Mr. MCCORMACK), for 1 hour, on April 17.

Mr. THOMPSON of New Jersey (at the request of Mr. MCCORMACK), for 1 hour, on April 15, relinquishing his time for April 14.

Mr. CANFIELD, for 10 minutes, on today, and to revise and extend his remarks.

EXTENSION OF REMARKS

By unanimous consent, permission to extend remarks in the CONGRESSIONAL RECORD, or to revise and extend remarks, was granted:

Mr. THOMPSON of Texas to revise and extend his remarks and include extraneous matter in his special order for today.

Mr. PORTER and to extend his remarks and include extraneous matter in his special order for today.

Mr. PATMAN to revise and extend his remarks and include extraneous matter in his special order for today.

Mr. REUSS and to include extraneous matter.

Mr. KASTENMEIER.

Mr. BRADEMAS and to include extraneous matter.

Mr. WOLF and include extraneous matter.

Mr. MARSHALL.

Mr. DEVINE.

Mr. DANIELS and to include extraneous matter.

(At the request of Mr. MCCORMACK, and to include extraneous matter, the following:)

Mr. MOORHEAD.

Mrs. KELLY.

Mr. GARMATZ.

(At the request of Mr. CUNNINGHAM, and to include extraneous matter, the following:)

Mr. MINSHALL.

ADJOURNMENT

Mr. MCCORMACK. Mr. Speaker, I move that the House do now adjourn.

The motion was agreed to; accordingly (at 12 o'clock and 25 minutes p.m.), under its previous order, the House adjourned until Monday, April 13, 1959, at 12 o'clock noon.

REPORT OF COMMITTEE ON COUNTERPART FUNDS

Mr. BURLESON. Mr. Speaker, the Mutual Security Act of 1958, chapter IV, section 401(a), requires the Committee on House Administration to publish in the CONGRESSIONAL RECORD, within 10 legislative days after receipt, the consolidated report of each committee of the House using counterpart funds during the preceding year. Accordingly, there is shown herein the report of the Select Committee on Astronautics and Space Exploration:

Expenditures of counterpart funds—Select Committee on Astronautics and Space Exploration

Country	Currency	Transportation		Lodging		Meals[1]		Total, United States
		Foreign	United States	Foreign	United States	Foreign	United States	
France	Franc	307,288	$877.94	247,996	$708.54	242,836	$693.80	$2,280.28
Germany	Deutsche mark			160	38.10			38.10

[1] Includes local transportation such as taxis and buses, gratuities, and miscellaneous expenses.

Hon. JOHN W. MCCORMACK,
Chairman.

EXECUTIVE COMMUNICATIONS, ETC.

Under clause 2 of rule XXIV, executive communications were taken from the Speaker's table and referred as follows:

830. A letter from the Secretary of the Army, transmitting a letter from the Chief of Engineers, Department of the Army, dated February 2, 1959, submitting a report, together with accompanying papers and an illustration, on a survey of Bayou LaFourche and LaFourche-Jump Waterway, La., made pursuant to several congressional authorizations listed in the report (H. Doc. No. 112); to the Committee on Public Works and ordered to be printed with one illustration.

831. A letter from the Assistant Secretary of Agriculture, transmitting a report for the month of February 1959 of the General Sales Manager on Commodity Credit Corporation sales, policies, activities, and dispositions; to the Committee on Appropriations.

832. A letter from the President of the Board of Commissioners, District of Columbia, transmitting a draft of proposed legislation entitled "A bill to provide for the regulation of credit life insurance and credit accident and health insurance in the District of Columbia"; to the Committee on the District of Columbia.

833. A letter from the Acting Chairman, U.S. Atomic Energy Commission, transmitting a draft of proposed legislation entitled "A bill to amend section 170 of the Atomic Energy Act of 1954, as amended"; to the Joint Committee on Atomic Energy.

834. A letter from the Assistant Secretary of the Interior, transmitting a draft of proposed legislation entitled "A bill to revise section 3054, title 18 of the United States Code, concerning the enforcement of certain provisions of such code, and for other purposes"; to the Committee on the Judiciary.

835. A letter from the Acting Secretary of the Treasury, transmitting a draft of proposed legislation entitled "A bill to extend the application of the Motorboat Act of 1940 to certain possessions of the United States"; to the Committee on Merchant Marine and Fisheries.

836. A letter from the Secretary of the Army, transmitting a letter from the Chief of Engineers, Department of the Army, dated February 16, 1959, submitting a report, together with accompanying papers and illustrations, on a review of reports on and survey of Yakima River and tributaries, Washington, made pursuant to several congressional authorizations listed in the report; to the Committee on Public Works.

837. A letter from the Administrator, General Services Administration, transmitting the report of the Archivist of the United States on records proposed for disposal under the law; to the Committee on House Administration.

838. A letter from the Commissioner, Immigration and Naturalization Service, U.S. Department of Justice, transmitting copies of orders entered in cases where the authority contained in the Immigration and Nationality Act was exercised in behalf of such aliens, pursuant to the Immigration and Nationality Act; to the Committee on the Judiciary.

REPORTS OF COMMITTEES ON PUBLIC BILLS AND RESOLUTIONS

Under clause 2 of rule XIII, reports of committees were delivered to the Clerk for printing and reference to the proper calendar, as follows:

Mr. McMILLAN: Committee on the District of Columbia. H.R. 1844. A bill to amend the Life Insurance Act of the District of Columbia approved June 19, 1934, as amended by the acts of July 2, 1940, and July 12, 1950; with amendment (Rept. No. 262). Referred to the Committee of the Whole House on the State of the Union.

Mr. McMILLAN: Committee on the District of Columbia. H.R. 836. A bill to amend the code of law for the District of Columbia by modifying the provisions relating to the attachment and garnishment of wages, salaries, and commissions of judgment debtors, and for other purposes; with amendment (Rept. No. 263). Referred to the House Calendar.

Mr. McMILLAN: Committee on the District of Columbia. H.R. 5534. A bill to designate the bridge to be constructed over the Potomac River near 14th Street in the District of Columbia, under the act of July 16, 1946, as the George Mason Memorial Bridge, and for other purposes; without amendment (Rept. No. 264). Referred to the House Calendar.

Mr. HAYS: Delegation of the U.S. House of Representatives to the Fourth NATO Parliamentarians Conference. Report on Fourth NATO Parliamentarians Conference; without amendment (Rept. No. 265). Referred to the Committee of the Whole House on the State of the Union.

REPORTS OF COMMITTEES ON PRIVATE BILLS AND RESOLUTIONS

Under clause 2 of rule XIII, reports of committees were delivered to the Clerk for printing and reference to the proper calendar, as follows:

Mr. MOORE: Committee on the Judiciary. House Joint Resolution 323. Joint resolution to facilitate the admission into the United States of certain aliens; with amendment (Rept. No. 260). Referred to the Committee of the Whole House.

Mr. CHELF: Committee on the Judiciary. House Joint Resolution 324. Joint resolution to waive certain provisions of section 212(a) of the Immigration and Nationality Act in behalf of certain aliens; with amendment (Rept. No. 261). Referred to the Committee of the Whole House.

PUBLIC BILLS AND RESOLUTIONS

Under clause 4 of rule XXII, public bills and resolutions were introduced and severally referred as follows:

By Mr. ADDONIZIO:

H.R. 6229. A bill to amend section 12 of the act of September 11, 1957; to the Committee on the Judiciary.

By Mr. ANFUSO:

H.R. 6230. A bill to amend the Social Security Act to increase and extend benefits, reduce retirement age, and liberalize the work clause under the Federal old-age, survivors, and disability insurance program, to establish a system of hospitalization, nursing, and surgical insurance within such program, to liberalize certain provisions relating to public assistance, and for other purposes; to the Committee on Ways and Means.

By Mr. AVERY:

H.R. 6231. A bill granting the consent of Congress to the States of Kansas and Nebraska to negotiate and enter into a compact relating to the apportionment of the waters of the Big Blue River and its tributaries as they affect such States; to the Committee on Interior and Insular Affairs.

By Mr. BAILEY:

H.R. 6232. A bill to repeal the excise tax on amounts paid for communication services or facilities; to the Committee on Ways and Means.

H.R. 6233. A bill to amend title II of the Social Security Act to include West Virginia among the States which may obtain social security coverage, under State agreement, for State and local policemen and firemen; to the Committee on Ways and Means.

By Mr. BARING (by request):

H.R. 6234. A bill to add certain public domain lands in Nevada to the Summit Lake Indian Reservation; to the Committee on Interior and Insular Affairs.

By Mr. BERRY:

H.R. 6235. A bill to direct the Secretary of the Interior to make a preliminary investigation of lands in the United States situated within the exterior boundaries of Indian reservations to determine whether mineral resources exist on such lands in amounts sufficient to justify commercial development; to the Committee on Interior and Insular Affairs.

By Mr. BROCK:

H.R. 6236. A bill granting the consent of Congress to the States of Kansas and Nebraska to negotiate and enter into a compact relating to the apportionment of the waters of the Big Blue River and is tributaries as they affect such States; to the Committee on Interior and Insular Affairs.

By Mr. CUNNINGHAM:

H.R. 6237. A bill to authorize the Federal Government to guard strategic defense facilities against individuals believed to be disposed to commit acts of sabotage, espionage, or other subversion; to the Committee on the Judiciary.

By Mr. DANIELS:

H.R. 6238. A bill to amend title II of the Social Security Act to increase the amount of outside earnings permitted from $1,200 to $1,800 yearly without deductions from benefits thereunder; to the Committee on Ways and Means.

By Mr. DINGELL:

H.R. 6239. A bill to amend section 6(a)(1) of the Fair Labor Standards Act of 1938 to increase the national minimum wage to $1.25 an hour; to the Committee on Education and Labor.

By Mr. DURHAM:

H.R. 6240. A bill to authorize the grade of temporary brigadier general for the Chief of the Medical Service Corps of the Army and for other purposes; to the Committee on Armed Services.

By Mr. FARBSTEIN:

H.R. 6241. A bill to amend the Federal Credit Union Act; to the Committee on Banking and Currency.

By Mr. HALPERN:

H.R. 6242. A bill to provide for the establishment of a Federal Advisory Council on the Arts to assist in the growth and development of the fine arts in the United States; to the Committee on Education and Labor.

H.R. 6243. A bill to amend title 38 of the United States Code to provide pensions for widows and children of veterans of World War II and of the Korean conflict on the same basis as pension is provided for widows and children of veterans of World War I; to the Committee on Veterans' Affairs.

By Mr. HARRIS:

H.R. 6244. A bill to amend the Interstate Commerce Act, and certain other provisions of law, with respect to the regulation of surface transportation in interstate and foreign commerce to, from, and between points in the State of Alaska; to the Committee on Interstate and Foreign Commerce.

H.R. 6245. A bill relating to pay television operations by wire; to the Committee on Interstate and Foreign Commerce.

H.R. 6246. A bill to amend section 203(b) of the Interstate Commerce Act in order to provide for an exemption in the case of certain movements of motor vehicles for the account and accommodation of the owners thereof; to the Committee on Interstate and Foreign Commerce.

By Mr. JOHNSON of California:

H.R. 6247. A bill to authorize the modification of the existing project of the New Melones Dam and Reservoir, Stanislaus River, Calif., and for other purposes; to the Committee on Public Works.

By Mr. KARTH:

H.R. 6248. A bill to amend the Social Security Act and the Internal Revenue Code so as to provide insurance against the costs of hospital, nursing home, and surgical service for persons eligible for old-age and survivors insurance benefits, and for other purposes; to the Committee on Ways and Means.

By Mr. METCALF:

H.R. 6249. A bill to liberalize the tariff laws for works of art and other exhibition mate-

rial, and for other purposes; to the Committee on Ways and Means.

H.R. 6250. A bill to provide for the establishment of a Federal Advisory Council on the Arts to assist in the growth and development of the fine arts in the United States; to the Committee on Education and Labor.

By Mr. MICHEL:

H.R. 6251. A bill to amend section 507 of the Classification Act of 1949 so as to extend in certain cases the provisions of such section which provide salary protection in cases involving downgrading actions; to the Committee on Post Office and Civil Service.

By Mr. MULTER:

H.R. 6252. A bill to amend section 4B of the Clayton Act; to the Committee on the Judiciary.

H.R. 6253. A bill to provide for the publication before entry of decrees, judgments, and orders entered by consent upon the merits of civil antitrust proceedings; to the Committee on the Judiciary.

H.R. 6254. A bill to amend the Clayton Act to declare private antitrust suits to be impressed with a substantial public interest; to the Committee on the Judiciary.

H.R. 6255. A bill to amend the Internal Revenue Code of 1954 so as to impose a graduated tax on the taxable income of corporations; to the Committee on Ways and Means.

H.R. 6256. A bill to repeal certain miscellaneous excise taxes; to the Committee on Ways and Means.

H.R. 6257. A bill to establish a board (outside of the Department of Defense) to review and correct discharges and dismissals of former members of the Armed Forces; to the Committee on Armed Services.

H.R. 6258. A bill to provide for disaster loans to small business concerns which suffer economic injury due to federally aided highway construction programs; to the Committee on Banking and Currency.

By Mrs. PFOST:

H.R. 6259. A bill to stabilize the domestic market prices of lead and zinc; to the Committee on Ways and Means.

By Mr. PORTER:

H.R. 6260. A bill to establish the Oregon Dunes National Seashore in the State of Oregon, and for other purposes; to the Committee on Interior and Insular Affairs.

By Mr. REES of Kansas:

H.R. 6261. A bill to amend the Federal Employees Pay Act of 1945 to eliminate the authority to charge to certain current appropriations or allotments the gross amount of the salary earnings of Federal employees for certain pay periods occurring in part in previous fiscal years; to the Committee on Post Office and Civil Service.

H.R. 6262. A bill to provide for uniformity of application of certain postal requirements with respect to disclosure of the average numbers of copies of publications sold or distributed to paid subscribers, and for other purposes; to the Committee on Post Office and Civil Service.

By Mr. REUSS:

H.R. 6263. A bill to amend the Employment Act of 1946 to provide for its more effective administration, and to bring to bear an informed public opinion upon price and wage increases which threaten economic stability; to the Committee on Government Operations.

By Mr. RIVERS of South Carolina:

H.R. 6264. A bill to exempt Naval Reserve and Marine Corps Reserve officers from the provisions of the Economy Act of 1932 for the period, July 1, 1947, to December 31, 1952, inclusive, on the same basis as members of the Officers Reserve Corps and National Guard of the Army; and Air Force; to the Committee on Armed Services.

By Mr. ROBERTS:

H.R. 6265. A bill to provide for the vesting of primary responsibility for the protection of the public health and safety from radiation hazards in the Public Health Service of the Department of Health, Education, and Welfare, and for other purposes; to the Committee on Interstate and Foreign Commerce.

By Mr. ROGERS of Florida:

H.R. 6266. A bill to amend the Internal Revenue Code of 1939 with respect to the application of section 117(q) of such code; to the Committee on Ways and Means.

By Mr. SLACK:

H.R. 6267. A bill to provide for the encouragement of economic redevelopment in communities depressed by chronic unemployment; to the Committee on Banking and Currency.

By Mr. VINSON:

H.R. 6268. A bill to amend title 10, United States Code, to provide that the Secretary of the Navy shall prescribe the compensation of the Academic Dean of the Naval Postgraduate School; to the Committee on Armed Services.

H.R. 6269. A bill to amend section 265 of the Armed Forces Reserve Act of 1952 to define the term "a member of a Reserve component" so as to include a member of the Army or Air Force without specification of component; to the Committee on Armed Services.

H.R. 6270. A bill to amend title 10, United States Code, to provide for the readiness of industrial capacity for defense production or mobilization reserve purposes; to the Committee on Armed Services.

By Mr. WEAVER:

H.R. 6271. A bill granting the consent of Congress to the States of Kansas and Nebraska to negotiate and enter into a compact relating to the apportionment of the waters of the Big Blue River and its tributaries as they affect such States; to the Committee on Interior and Insular Affairs.

By Mr. MACK of Washington:

H.J. Res. 335. Joint resolution proposing an amendment to the Constitution prohibiting a State from taxing certain income of a nonresident; to the Committee on the Judiciary.

By Mr. DOOLEY:

H. Res. 234. Resolution favoring an international agreement for a suspension of nuclear weapons tests; to the Committee on Foreign Affairs.

MEMORIALS

Under clause 3 of rule XXII,

The SPEAKER presented a memorial of the Legislature of the State of Massachusetts, memorializing the President and the Congress of the United States against restricting the further importation of residual oil, which was referred to the Committee on Ways and Means.

PRIVATE BILLS AND RESOLUTIONS

Under clause 1 of rule XXII, private bills and resolutions were introduced and severally referred as follows:

By Mr. BARRY:

H.R. 6272. A bill to provide for the issuance of a license to practice pharmacy in the District of Columbia to Diodato Villamena; to the Committee on the District of Columbia.

By Mr. FARBSTEIN:

H.R. 6273. A bill for the relief of Maksym Hrycyk; to the Committee on the Judiciary.

By Mr. FOGARTY:

H.R. 6274. A bill for the relief of Maria D. Albanese, Luigi Albanese, Mary Dvorovy, and certain other persons; to the Committee on the Judiciary.

By Mr. GREEN of Pennsylvania:

H.R. 6275. A bill for the relief of Khatchadour T. Tchoupdjian; to the Committee on the Judiciary.

By Mr. HALPERN:

H.R. 6276. A bill for the relief of Chaba M. Pallaghy; to the Committee on the Judiciary.

By Mr. JOHNSON of Colorado:

H.R. 6277. A bill for the relief of William D. Warren; to the Committee on the Judiciary.

By Mrs. KELLY:

H.R. 6278. A bill for the relief of Moses Brukner also known as Moses Broker; to the Committee on the Judiciary.

By Mr. KEOGH:

H.R. 6279. A bill for the relief of Munston Manufacturing & Service, Inc.; to the Committee on the Judiciary.

By Mr. LESINSKI:

H.R. 6280. A bill for the relief of Jadwiga Franciszka Wybraniec; to the Committee on the Judiciary.

By Mr. QUIGLEY:

H.R. 6281. A bill for the relief of McGann Manufacturing Co., Inc., of York, Pa.; to the Committee on the Judiciary.

By Mr. REUSS:

H.R. 6282. A bill for the relief of Andrija Vilanj; to the Committee on the Judiciary.

H.R. 6283. A bill for the relief of Matthias Nock, Jr.; to the Committee on the Judiciary.

By Mr. RIVERS of South Carolina:

H.R. 6284. A bill for the relief of William F. Sample; to the Committee on the Judiciary.

H.R. 6285. A bill for the relief of Mrs. Lillian E. Duggan; to the Committee on the Judiciary.

By Mr. ROGERS of Florida:

H.R. 6286. A bill for the relief of Mrs. Dorothea Brett Blok; to the Committee on the Judiciary.

By Mr. WOLF:

H.R. 6287. A bill for the relief of Bjorg Lahlum Wanberg; to the Committee on the Judiciary.

By Mr. MINSHALL:

H. Res. 235. Resolution referring H.R. 6226, a bill for the relief of Catalina Properties, Inc., to the Court of Claims; to the Committee on the Judiciary.

PETITIONS, ETC.

Under clause 1 of rule XXII, petitions and papers were laid on the Clerk's desk and referred as follows:

146. By Mr. DOOLEY: Petition of the chairman of the legislative committee, New York Petroleum Industries Council, metropolitan area, and signed by motorists residing in Westchester County, N.Y., protesting the current proposed increase in Federal gasoline tax; to the Committee on Ways and Means.

147. By Mr. GROSS: Petition of 183 residents of Iowa Falls, Iowa, and vicinity in support of H.R. 169, which provides that no air carrier shall serve alcoholic beverages to passengers while in flight, and H.R. 2221, pertaining to alcoholic beverage advertising in interstate commerce, including the broadcasting of such advertising; to the Committee on Interstate and Foreign Commerce.

148. By the SPEAKER: Petition of the exalted ruler, San Juan Lodge, No. 972, Benevolent and Protective Order of Elks, San Juan, P.R., petitioning consideration of their resolution with reference to opposing any amendment to the law of Federal relations concerning Puerto Rico which will tend to separate this island from the United States; to the Committee on Interior and Insular Affairs.

EXTENSIONS OF REMARKS

Lincoln Day Address by Hon. Barry Goldwater, of Arizona

EXTENSION OF REMARKS

OF

HON. BARRY GOLDWATER

OF ARIZONA

IN THE SENATE OF THE UNITED STATES

Friday, April 10, 1959

Mr. GOLDWATER. Mr. President, I ask unanimous consent to have printed in the CONGRESSIONAL RECORD an address delivered by me on Lincoln Day, in Phoenix, Ariz.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Mayor Williams, Governor Fannin, and Congressman RHODES, distinguished guests, and fellow Americans, fellow Republicans, fellow Arizonians, I can't tell you how good it is to be home, but, tonight it is a better feeling than I've ever had. The warmth of Arizona's sun is surpassed only by the warmth of its people and tonight after days of the freezing cold of the East both sources are more welcome than at anytime I can remember.

This evening as we gather to honor the memory of Abraham Lincoln and to ponder our responsibilities to him and to our Republic I am reminded of a story. President Lincoln, you know, wore a tall silk hat. One day as he got up to speak he put it down in a chair and a rather large lady came along and sat down on his hat. When Lincoln was finished speaking he came back and saw this crumpled topper of his, he merely looked at it and said, "Madam, if you would have just asked me first I could have told you it wouldn't have fit." The question that comes to my mind now is can we fill Lincoln's hat, shoes, and most important, his ideals? I think that is the question that is in front of our country today. I think we are at a crossroads pretty much as we were at a crossroads in the days of Lincoln when unity was needed in the country; when the people of America were faced with the task of either keeping the Republic alive or having it torn apart by people who refused to see and understand the need of unity. I think tonight that unity is equally important not only to the country but to the Republican Party as well. I think we have to strive to create unity within this party just as Lincoln strove to create a Republican Party. We now cannot see the Republican Party die because there are some small differences of opinion as to what this person should be doing or how or what that mission should be accomplished.

Now let me illustrate what I am talking about. I travel around this great country and speak to a lot of Republicans. In fact, this is the fourth night in a row and I have three more left before I finish this week. And this is one of the few places in America where I can stand up before a Republican group and say what Republicans think and not go away feeling I have stepped on somebody's toes. When I go into some other communities I feel pretty much like I'm having to walk on a crate of eggs. I'm careful to ask the chairman whether this or that will upset my listeners and then I am careful to ignore the touchy subjects.

We have reached a pretty disturbing period in our history as Republicans, when a Republican who has been a Republican all of his life has to worry about his remarks before a group of people who travel under the title "Republican." Now I realize that in this country there are people who accept me suspiciously; and some not at all. Now why is this true? And I think this is the important part, not because it's BARRY GOLDWATER, but because I am a conservative and I'm not ashamed of it and I talk about it. The opposition in this country, not the opposition in the Republican Party, not the opposition of Jeffersonian Democrats, but those radicals in this country who intend to destroy us have made a very bad word of "conservative." Bad to the point that conservatives won't stand up and be counted. They have put an onus on this word that actually should be on their philosophy and not on ours. So I think tonight as I start, I would like to outline briefly to you what I believe in as a conservative Republican. I have been attempting to do this across America recognizing that there are people in this audience, people who will hear this, who now classify themselves as liberals and say "Oh, I can't agree with anything that fellow says, he's too conservative, he's too reactionary."

I have asked audiences to bear with me and compare their philosophies of being a Republican and an American with those of mine and then see if the word "conservative" doesn't pretty much describe their own feelings also. Now what does my conservatism encompass?

First, I believe in the full concept of the Constitution, as it was written 180 years ago—not as it is being interpreted today. I believe, and accept with a full heart, the words of Thomas Jefferson in the Declaration of Independence when he said "We hold these truths to be self evident, that all men are created equal, that they are endowed by their creator with certain inalienable rights, and, that among these are life, liberty, and the pursuit of happiness."

I accept our freedoms as coming from God and I recognize that we've become a great people because we've been a spiritual people and we have been materially strong only because we have been individually spiritually strong. I believe in decentralized government. I believe firmly that the 10th amendment to the Constitution is the bulwark upon which our form of government is based. Individual freedoms rest with the freedoms of the State and I decry the fact that we are drifting more and more away from States rights into the concept of centralized government. I, as a conservative Republican desire the preservation of individual liberties rather than seeking paternalistic security for the people in this country. I believe it was intended that this great Government was to be built upon the idea that you and I are free people because God intended it that way, and that we are not free people because we belong to this or that church, or because we are black, or we're white, or we're yellow or red, or because we come from this country, that country or some other country. We are free because God intended it that way, and we are free as individuals, not as members of a collective group. That I firmly believe in. Those of us who believe in that, or in those basic principles are called reactionaries. Now it is hard for me to understand how a person who believes in those things can be referred to as a reactionary. This, ladies and gentlemen, is the new idea. There is nothing old about this. It's only 200 years old. In fact it has only been written about 180 years. This is the new idea, that man as an individual has dignity and has freedom, and he doesn't obtain those things by being a member of groups. He obtains them from the Lord himself. So I defy those who say that conservatives who believe in the freedom of the individual are reactionary. No, its the radicals of this country who want to return to the day of group identity, pigeonhole life if you will, that are the reactionaries of our country, and they wrongly call themselves liberals.

I believe in the free enterprise system. Good men, well intentioned, controlled by a limited number of rules and regulations, can make it work well at all times. It has produced more for more people than any other economic system in the world and yet today there are those people who decry it and want to see it done away with.

Having outlined these few brief points, I don't think there is anybody in this room who can fundamentally disagree that these concepts are wrong for America, and yet, I know there are people here who are as proud of their liberal interpretation of Republican philosophy as I am of a conservative interpretation of the same philosophy.

I think it's time now to look at what the liberal of today is, and I'm not talking about the honest liberal, the man who builds his liberalism on the concepts of Thomas Jefferson or even a Bob LaFollette in the later years. I am talking about those people in both parties who have more or less bastardized the name "liberal," and have tried to hide the real meaning of what they are, "radicals."

Now, what is a liberal supposed to be? He is supposed to be a man who is constantly looking for more freedom for the individuals of this country, but in looking for it he pursues the Constitution; he pursues the American thinking and the American ideals. The conservative, on the other hand, is a man who wants to go ahead on the proven factors of the past. He doesn't want to experiment as much as the liberal: that is why the man is called a liberal. Now, let's see what we have in the country today, and I might say here and now that I believe firmly, that we need in this country a strong, true liberal movement, and we need a strong, true conservative movement. But let's see what these so-called liberals preach in this country and let's make up our minds whether or not they are liberals. They are the ones who are preaching minority versus majority. They say that freedom rests in minority groups or majority groups. They don't recognize that the individuals of those groups are the ones whose freedoms we should be constantly aware of and constantly fighting for. They are the ones who want to regress. They are the reactionaries who want to go back to the group, to tribalism; they are the ones who preach the "common man." When I ask, who is the common man in this country, they will say, "well, he is the farmer." And I say, "Well, what does he farm." "Well, he farms cotton." All right, so I ask "Does he farm long staple or short staple." And when they begin to see the light I say, "Now who is the common man." Well, they say, "The common man is the miner." So I say, "What does he mine." "Well, he mines coal." I ask, "Does he mine hard coal or soft coal." That about ends the argument. The truth of the matter is, folks, that we're a 170 million of the most uncommon people that were ever placed on the face of the earth. And if we ever succumb to this idea of oneness, and commonness, this country will be through.

I am glad today, in reading the remarks of people whom I recognize as real liberals, to see that they are interpreting the actions of so-called liberals as dangerous in this one area among others because the so-called liberals are tending to preach the idea of commonness. Now what else do they preach? Whether they like to admit it or not, they preach government control. Get in a little trouble in this country. They want the Federal Government to help out. They want centralized government and they want the concentration of governmental power on the banks of the Potomac and not in Phoenix or any other capital of this Nation. Federal aid—oh, there is the most dangerous siren of them all. Federal aid to everything. We've got one suggested now—Federal aid to distressed areas. That means that this great State of Arizona, the thriving city of Phoenix, all of us going ahead on the initiative of men and women, going ahead with courage, recognizing that we have to make advances on proven policies, will have to begin to pay for the backwardness, the laziness and dependency on a Federal paternalistic attitude of people in other parts of our country. I don't like that. I don't think anybody likes to pay for the shortcomings of other people unless those shortcomings be caused by conditions over which they have no control, and yet we are proposing today Federal aid to distressed areas; Federal aid to schools. Now why should taxpayers in Arizona pay for the school buildings in the South where they refuse to build buildings of their own. Why shouldn't we say to those States, "Grab your own boot straps, Buster, and pull yourself up." Federal aid to the farmer. Federal aid to farms is ruining one of the greatest economic opportunities in Arizona by closing the foreign markets for cotton, and yet we can't make our brothers in the South and the North see that Federal aid to farming is killing the farmers of America. And let me tell you, far more than the economic damage is the moral and spiritual damage it is doing to the people of this country as they say to themselves, "I can't do it, but Uncle Sam can do it for me." That wasn't the way our Nation was built. The so-called liberal, the radical and real liberals along with all of us are concerned with the civil rights of the Negro in the South, and I say that that is rightfully our interest no matter what our philosophy may be. But at the same time, these people are ignoring a civil rights problem of the North. You say, "What's he talking about." This is what I'm talking about. The Republican member of a union in Detroit who has his money taken away from him in the form of dues to be spent on a Democrat candidate. Now if that isn't tampering with the franchise of Americans, I don't know what is. And let's apply it to the South where nomination in the primary is tantamount to election in the general. What about the Democrat member of the union who pays his dues only to see that money go to defeat a Democrat that he would vote for. Those are the things I talk about when I talk about the so-called liberals who refuse to see the whole problem, but who again are playing race against race, color against color, creed against creed, only because it might produce a few votes come election time. That, I remind you, was not the philosophy of Lincoln. Who then today, I might ask you, is the party of special privilege. I think the Republicans at one time could have rightly been called that, but it has been a long, long time. I ask the so-called liberal of today, "What difference is there between the corporate baron of the early 1900's buying elections for the Republicans and the union barons of 1958 buying elections for the Democrats?" What difference is there? There is none.

Let us look now at their attitude toward fiscal soundness. I call it on their part, "massive irresponsibility." You have on a card tonight, a new penny. If that penny were worth 1 cent it would be fine, but it is worth about 48.6 percent of 1 penny now, and it's worth that because of the irresponsibility of the opposition party. And I might say that yesterday I got quite a laugh out of my good friend LYNDON JOHNSON. I like LYNDON. He is a very able, capable man. But he comes from Texas, and you know that down in Texas they aren't satisfied with anything small. I think that LYNDON just got to thinking the other day that "Well, by golly, I'm down in Texas and this can't be true; we couldn't have cost these people all of this money. We're not fiscally irresponsible." And he got that Texas mind of his going around and around and he came up with the suggestion that the Democrats had cut $22 billion off the Eisenhower budgets in the last 6 years.

Well, I wish that I were back there to remind him of it, but if he is talking about what has been cut, $12 billion of that was cut by the Republican 83d Congress off of Truman's budget. Now I will have to admit that in the 85th Congress the Democrats did cut about $5.6 billion from the amount that was requested. But then we get into the fiscal slight of hand. We find that 1⅓ billion of that was only a paper cut and that they turned around and authorized the expenditure of it from existing capital. And then offsetting further the 5.6 billion, was action that totaled more than that. For instance, 1 billion for housing that wasn't asked for; 1.8 billion for further appliances on the housing act. Two hundred thirty five million dollars direct to the Highway Act. And then there was legislation requiring more spending than what was authorized. For instance $444 million in retroactive Federal pay increases. A hundred million dollars for a super liner, and then by failure to adopt the President's suggestions we went $700 million more in the hole in the Post Office and $725 million more in the hole in the Federal highway fund. And in addition to that they wanted to spend another $6 million. So as a result of the action of the irresponsible radicals in the Congress, you are going to have about a $12 billion deficit this year. In fact, Congressman RHODES will tell you that last year in the House of Representatives alone, there were almost $156 billion of bills introduced that, had they been passed, would have added that amount to your tax rolls in the next 5 years. And while it's not according to school-tie etiquette to mention names in the other House, a tall thin man slightly bald, who wears glasses, whose father was a President, introduced almost $33 billion worth of these bills. And I don't want to ignore the Senate. We totaled nearly $43 billion in the bills that were introduced by eager radicals, eager and ambitious to deflate the value of the dollar in this country.

That's probably their greatest hallmark. The fact that these radicals have absolutely no conception of what a dollar is worth. And you know the surprising thing to me, and I think Congressman RHODES will comment on this. I have always been amazed at the rich Socialists we have in this country. It very rarely fails that a man who inherits money, suddenly gets ashamed of it, and he has to think of ways to deprive everybody else of their money, just because his father was a success. But that's true across this country. It's a sad commentary. One other thing they do that I think you and I can disagree with. They have been very successful in selling this Republic of ours as a democracy. We hear speech after speech by people who should know better exhorting the virtues of our great democracy. Now ladies and gentlemen, find me the word democrat, democratic or democracy in the Constitution of the United States and I'll sit on the top of John Mills great flag pole up here on Saturday afternoon and eat the Constitution. But it does mention republican, in a small case. Not the Republican Party but the republican type of government, our form of government.

I remember here just a few years ago when my nephew Timmy came home one night. He said, "Uncle BARRY will you help me write a theme 'I Speak for Democracy.' " I said, "Timmy, let's have some fun with your teacher. Go back tomorrow and tell her that you can't do it because we are not a democracy." Well the next night he came back and he said, "Uncle BARRY, don't ever tell me to do that again." But they have been able to teach our young people and many of our old people that we are a democracy when we are a republic. And if we want to go part way, we are a democratic-republic. Both small case.

I don't think there's any question in the minds of anybody in this country, who will soberly think over our history, and you have to think of history in evaluating present position and future position, who will not agree that under conservative government, mostly under Republican government, this country has been better off. Therefore, a conservative approach of some type is best for America.

But we haven't been doing a good job of getting that story told. We have conservatives of all hues and we can go from the middle of the road to the extreme right. In that category we have not been telling our story and I think that it's time that we do. Why? Because we, in this country, whether we like to admit it or not have gone a long way toward socialism. It's very difficult for us to think tonight of a business that isn't touched in some way by governmental support. It is very difficult for businessmen of any type to think of a day or a week that doesn't go by without the hard, hot hand of the Federal Government on their books and in their business. And let me remind you of what Lincoln said, I don't recall the exact words, but it has been said down through the history by all great philosophers of government that "freedoms are not lost overnight." You are not going to wake up some Sunday morning and read in the Sunday morning paper or hear it over the Sunday radio or see it on the Sunday TV, that we are no longer free people. No, it doesn't happen that way. It happens like termites eating in a house, and the first sign of trouble you see is when grandma put her foot through a step. That's the first inkling you have and it's usually too late. We will lose our freedoms, ladies and gentlemen, by being attacked from within. We will never lose our freedoms, as long as we believe in them, by any force outside the United States. There are some other signs that are disturbing in these days that I want to mention as to what the radicals have wrought. The growing dependency on the Federal Government for the solution of all of our problems, from the home to the top levels of government. Solutions that once were made at home. Why, I can remember, and I am certainly not old by any standards except by possibly physical standards, when they built the first hospital here and they met in a man's house right across the street from this hotel and as a result the hospital was built. It wasn't as expensive in those days, but it was comparatively so. We did things then. We had the same obstacles. We had the same troubles to contend with; the same apathies; the same lack of interest. But things got done and today we say write our Congressman. He'll solve our troubles. Oh,

he will. He'll trade your troubles for something real.

What's another sign? What's happening to patriotism in this country, folks. You know, there is a sign up at West Point on the parade grounds, "When the flag passes, gentlemen will remove their hats." Watch the coming rodeo parade. See how many hats you see still on when the flag goes by. And you ought to walk up and knock them off. How many new buildings have flagpoles? How many flags fly on the days they should? How many people talk with feeling in their hearts about America and what it stands for. Those are signs, ladies and gentlemen, that we might be further down the road than we like to think or admit. They have derided free enterprise and the American businessman is so beaten down he won't rise up and fight back. And I watch them come to the Halls of Congress as JOHN does and testify before our committees as whipped dogs. You businessmen have made America and will keeping making it, but not when you are cowards. You are in business to make a dollar. Don't be ashamed of it. And the free enterprise system is the only vehicle that can provide profit and can provide jobs for the millions and millions of American workers who along with management, have made this enterprise work. Don't be ashamed of it. Talk about it. Preach it to your employees. Preach it to the young people in the schools and the young people in the communities.

Now, those are some of the signs. I think that right now we might have a short estimate of our situation as Republicans. I always liked that part of the military when you stopped and took a look at what you were doing; what the enemy was up to; and what you might do to get around him. Lincoln said something about it too. He said, "If we could first know where we are, and whither we are tending, we could then better judge what to do and how to do it." Now let us Republicans look at ourselves very quickly. We have won only one national election since 1928, and that was in 1946. I don't think we can call the elections of 1952 or the election of 1956 a party triumph. I think that it was a deserving recognition of a great American who had served his country well in time of need. And I think that he could be reelected again if he cared to run and if we didn't have an amendment preventing it. We must dismiss the Republican victories except for 1946. Now, answer then, this question. Why? Starting back with the creation of the Civil Service Act we started to deprive both parties of patronage. Now, I'm not arguing for the patronage system as such. I think it has a place in politics. But I don't think that it has the massive place that it once had. I think that it would be disrupting to modern government. But nevertheless a great void was created in both parties, where we couldn't say to our loyal precinct workers, "there's going to be a job for you." Well, he would get out and work like the devil to get that job, to see that his man won or that his party won so that he could have that job. As a result, in the early thirties the Republican Party and the Democrat Party had no great pool of workers. Now, there has stepped into the Democrat side though, the newly created force of organized labor and their politically minded leaders, and they filled the void in the Democrat side to the point where the Democrat Party today in many States exists only as a hollow shell and in it work the people of the Committee on Political Education, financed by the vast sums available to the organized union movement. Now, this has been more and more evident as we have been losing elections across America in the strong Republican States like New York, Pennsylvania, Indiana, Ohio, Illinois, Iowa, Kansas, Nebraska, Colorado. All of these States that for years would never tolerate a Democrat being elected to office at any level. We have seen, for almost 25 years a loss in county seats and a loss in State legislative seats and it was only a matter of time until we lost Governors, Congressmen, and Senators, and come 1956 and 1958 we saw that occur.

I suggest the answer to that, nationally, is what we did in Arizona in 1958. We are imploring our party nationally, and as you can see, they are taking steps to do it, to do precisely what we did when Dick Kliendienst and Jim Wood and the other leaders of this party recognized that we had division in our party and then called Republicans together and formulated an eight-point statement of principle on which we could all stand. They did away with the divisive effects in a political party and in 1958 we marched to the polls united, even though there might be some people who wouldn't agree entirely with everything their candidates stood for, they worked for the Republican Party because they knew what the Republican Party in Arizona stood for.

Now, what to do. I'll say first that I'll echo what John Rhodes said, what Jack Williams said, what Paul Fannin said. Let's not yield to the temptation of the opposition philosophy. Let's not look at their grass and say that it's greener than ours. It isn't. It's dead, dirty, dried-up grass that should have been swept out of both political parties years and years ago. We cannot compromise with principle. I think the Republican Party and Republican candidates should take the attitude that this is going to be a long haul; this isn't going to be done by magic; but if we recognize we're in for a hard rough job, I am convinced that by sticking to principle the Republican Party can put itself across. And if we forget our principle, ladies and gentlemen, there will be no more Republican Party. I think that we must remind the people that we are a party of peace. Now by that I don't want to imply that the opposition party is a party of war, but under the Republican Party by peculiar coincidence we have always managed to have peace. Yet this peace now is one that you and I and all Americans don't like; we have to recognize that we are in a cold war with a philosophy that does not recognize God where ours does. We are at odds with a philosophy that doesn't recognize the freedom of the individual where we do, and that this isn't a war that is going to be fought and won on the battlefields or in the skies or on the oceans or under them. It's a war that's going to be fought in the minds and hearts of men. And when the American people can demonstrate to this world that the concepts of Jefferson and Franklin and Washington and all of those great men who founded this country, are as true today as they were then, then I suggest to you that the idea of freedom will prevail over the dirty idea of communism. We have to come to it; we can't do it by force anymore than they can subdue our ideas by force. We have to tell the people, and remind them and prove to them that we are a party of all the people. We are not a party interested in dividing the American people into cataloged groups so that we can pull them out at election time for this purpose or for that purpose, but that we are constantly interested in the individual freedom of every American living in this country. We have to remind the American people that under a conservative approach to the fiscal problems of government, good business exists and that under the spend and spend philosophy of the radicals we have in the opposition party today disaster is the only end result. No, good business, long prevailing good business, comes under our philosophies.

In closing I want to mention one thing: one area where this party, or the other party, or both of us have to provide corrections. Some party has to stand up to the illegitimate use of power by some of the union bosses in this country, and that party should be the Republican Party, and I hope and pray that it is.

I might remind you that Walter Reuther made a statement yesterday decrying the amount of unemployment in this country, and everybody should be concerned with unemployment, but he proposes a vast new program and nobody knows what it is, but if you want to see the result of the political and economic philosophy of Walter Reuther, look to the once glorious, industrious State of Michigan where I spoke 2 nights ago. A State that is so bankrupt that they are asking their businessmen to pay their taxes in advance so that they can pay their governmental employees. A State that is asking $140 million more in taxes from already overburdened taxpayers, never thinking for one moment that they might stop some of their foolish spending in order to get their State in order. You need no other example, ladies and gentlemen, of the end result of the socialist political planning of Walter Reuther than to look at the once great State of Michigan, and as I told them up there that night, "You keep your solidarity house and Reuther; we'll take your water." Here is the unbridled power of one man able to destroy a sovereign State of the United States and nobody seems willing to stop him.

And then we have James Hoffa on the other side with his economic power, thumbing his economic nose at decent citizens all over this country, threatening to organize all means of transportation and if need be, tie up the business of this country to get it done. Now, ladies and gentlemen, power was never a part of the concept of government under our Founding Fathers. It's something we fled from, to get away from, as it existed in Europe and yet tonight, in 1959, it is working to the detriment of the American people and we cannot get a political party with the courage to stand up and say "This has to be done." Now I know about this power.

I sit on the Labor Committee. I am the ranking Republican member. And if you think for one moment that any bill that is before that committee is going to stop Jimmy Hoffa or Reuther or any other power-mad union boss—stop fooling yourself because it won't happen. We are flirting around with the symptoms, not the disease. The disease is unbridled, illegitimate power given to these bosses by the law of the United States and we have to make it equal to the power of the rest of the citizens.

I want to close by reminding you that we faced these times before in our history and we have come out of them. Back in the Revolutionary days we were faced with problems worse than we are faced with today, but it took courage as it's going to take today to solve them. I recall some place in history the question was asked, "Where do you stand?" We don't ask that question tonight of Republicans and Democrats. We ask it of Americans. "Where do you stand?" Do you want America to remain a free Republic so that our two-party system, our economic system and the theory of individual freedom can exist or are you going to be a member of the lazy, indifferent throng that says, "It can't happen here." It happened to Rome, to Egypt, to Greece, it almost happened to France and it might yet, it almost happened to England and it might yet, and there's nothing historically different, ladies and gentlemen, in 1959, than

there was 500, 1,000, or 2,000 years ago. The problems are wrapped up in human beings. And it is up to people to say what they want in government; not organized groups or masses by the people themselves. And I have faith in people. I think the answer to "Where do you stand, sir?" will be a resounding "With freedom, sir."

The Benson Farm Policy

EXTENSION OF REMARKS

OF

HON. HUBERT H. HUMPHREY

OF MINNESOTA

IN THE SENATE OF THE UNITED STATES

Friday, April 10, 1959

Mr. HUMPHREY. Mr. President, I ask unanimous consent to have printed in the CONGRESSIONAL RECORD the February 21, 1959, issue of the Washington Report of Representative GEORGE MCGOVERN, of South Dakota. Representative MCGOVERN competently and briefly reviews the Benson farm policy record and points up the existing situation in farm legislation. It is worthy of our attention.

There being no objection, the report was ordered to be printed in the RECORD, as follows:

WASHINGTON REPORT

(By Congressman GEORGE MCGOVERN)

WASHINGTON, D.C., February 21, 1959.—Dear friends, Secretary of Agriculture Benson came before the Agriculture Committees of both the House and Senate in mid-February to ask broader authority to flex farm prices downward.

BENSON FARM POLICY RECORD

What the Secretary said in effect was a playback of the theme he has been preaching ever since he took office in 1953. That is: Lower farm prices will discourage farmers from producing surpluses and will, therefore, produce higher farm income.

Unhappily for many farm families—as well as small businessmen and workers who rely heavily on agriculture for their own livelihood—the results of the last 6 years have disproved the Benson theory.

Since the beginning of 1953, farm prices are down 16 percent. Farm income is down 25 percent. In the 1952–57 period, farmers absorbed an aggregate loss of nearly $18 billion in income. Four million farm folks have left the land, and 600,000 farms have disappeared. Meanwhile, Government stocks of farm commodities have quadrupled since 1952. Benson does not seem to realize that lower prices lead to greater production, as farmers seek to offset their loss of income.

NEW PRICE-FLEXING AUTHORITY ASKED

Yet, the Secretary told the Agriculture Committees he needed: (1) New authority permitting him to set price supports at zero if he deems necessary; or (2) discard the parity principle and support prices between 75 percent and 90 percent of the average market price in the immediately preceding 3 years.

In my opinion, Congress will not accept the administration's farm recommendations. I, for one, cannot accept any such proposal. But a showdown is in the offing. The first round will probably come as we consider wheat legislation in the next few weeks.

WHAT ADMINISTRATION FARM PROPOSALS MEAN

To give Secretary Benson authority to drop supports down to zero would be to invite return to the chaos of 30 years ago. If Congress were to approve the plan providing for supports somewhere between 75 percent and 90 percent of the average market price for the last 3 years, manufacturing milk supports could slump to as low as $2.45 a hundredweight, compared to the present $3.06. Butterfat supports could drop to 47.6 cents a pound, compared to 59 cents a pound. Corn supports could fall to 96 cents a bushel, instead of the prospective $1.12, and wheat supports could plummet to $1.43 a bushel, compared to the announced level of $1.81. This latter figure will probably drop to $1.77 a bushel for 1959 even if the program remains as it now is. This is because of the Agriculture Department's new method of calculating parity.

PRICES DROP BUT PARITY RATIO RISES

The new parity computation went into effect at the beginning of this year. When the parity ratio was figured for the month ending in mid-January, it showed it had risen 2 points. The parity ratio was reported at 82 percent. In mid-December, it stood at 80 percent.

In reality, however, farm prices had actually fallen 1 percent by the old standards, toppling to 79 percent of parity, the lowest since August 1940.

Even with farm prices hovering at their lowest level in 19 years, consumers have not benefited by lower food prices. In the final 3 months of 1958, the Department of Agriculture announced that retail food prices rose 3 percent. At the same time, the farm share of the food dollar has dropped from 47 cents in 1952 to 39 cents today. We need to remind ourselves that on a loaf of bread, for example, the farmer receives only about 2 cents for the wheat involved.

ONE-SIDED PICTURE OF FARM COSTS

Much has been made of the cost of the farm programs, and to be sure, they have skyrocketed tremendously under Secretary Benson. But so often, only one side of the picture is shown.

The administration, for instance, has made a great deal of the $1 million a day storage cost for farm commodities. This is no small figure, but it costs more than $23 million a day to finance the Federal debt. Yet, we have had no recommendation to reduce interest rates which have been pushed higher and higher as a direct result of administration policy.

How many people know that of the total $6,872 million estimated agricultural budget for 1959, $3,022 million will be expended for programs which have multiple benefits going far beyond agriculture?

FARM BUDGET NOT ALL AGRICULTURE

Some $1,383 million will go toward programs related to foreign aid—Public Law 480 and the International Wheat Agreement, for example. Every American benefits from these expenditures, whether he lives on the prairie lands of South Dakota or in a Fifth Avenue penthouse in New York City.

Here are a few other programs listed as agriculture expenditures which benefit other segments of the public: $145 million for school lunch program; $53 million for disease and pest control; $21 million for meat inspection; $74 million for school milk program; and $26 million for dairy products for the armed services and Veterans' Administration.

All of these are fine programs. But is it fair that the farm budget should be charged with all of the cost? Shouldn't some of it be shifted to the State Department, Defense Department, etc.?

In spite of the implications that farmers enjoy a favored subsidy position, records show that of all Government subsidies paid in the last 50 years, agriculture has received only $5 out of every $1,000.

HOPEFUL SIGNS FOR NEW LEGISLATION

Obviously, we need a change in farm policy. There is no reason why a Nation that has the brain power to put satellites into orbit around the earth and send atomic-powered submarines beneath the polar ice cap cannot solve the problems of agriculture to the benefit of the farmer and the general public.

I believe there are hopeful signs in this Congress. Senate Majority Leader JOHNSON has called for an improved farm program. Under serious consideration is a bill offered by Senator TALMADGE, which by the way is similar to a measure I offered 2 years ago. Senator HUMPHREY is working closely with him on this legislation. In the House, I believe chances have also improved. Many of my colleagues share my determination to work for passage of a more adequate farm bill.

On several previous occasions, Congress has passed strong farm legislation, only to have it vetoed by the President at Mr. Benson's insistence. Let us hope that this will not be the fate of farm legislation in the next 2 years.

Your friend and Representative in Congress,

GEORGE MCGOVERN.

A Bill To Amend Title II of the Social Security Act

EXTENSION OF REMARKS

OF

HON. DOMINICK V. DANIELS

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Friday, April 10, 1959

Mr. DANIELS. Mr. Speaker, I have introduced today, a bill to amend title II of the Social Security Act to increase the amount of outside earnings permitted from $1,200 to $1,800 yearly without deductions from benefits thereunder.

The purpose of this bill is to liberalize the allowance of earnings of old age beneficiaries without the loss of benefits. Under the present law, persons who are 72 years of age and older may earn any amount without having social security benefits reduced. Those persons under 72 years of age, however, may only earn a maximum of $1,200 per annum, without penalty. For each $80, or fraction thereof over $1,200 in yearly earned income, one month's benefit is lost.

I believe that our people after working and toiling through life should live out their final years in comfort and human dignity. In the past several years, the cost of living has risen higher and higher, thus reducing the purchasing power of the dollar. One group of our people most seriously affected by this inflationary spiral, has been our older citizens. The present limitation of $1,200 on earned income per annum is unjust and unfair. I am certain that all Americans are desirous that our senior

citizens shall maintain and enjoy a decent and respectable standard of living.

By increasing the income limitation from $1,200 to $1,800, as my bill proposes, a social injustice of the present law shall be corrected.

United States-Canada Relations: After Awareness What?

EXTENSION OF REMARKS
OF
HON. EDNA F. KELLY
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Friday, April 10, 1959

Mrs. KELLY. Mr. Speaker, one of our colleagues, the Honorable FRANK COFFIN of Maine, was one of the first Members of Congress to become alert to the growing tensions between the people of Canada and the United States. Determined that this increasing unfriendliness must not be permitted to continue, he, along with our former colleague, the Honorable Brooks Hays, conducted a study of the problems and issues involved, and they submitted a most noteworthy report on the subject. I beg all the Members of Congress to read it.

The report highlights the traditional friendship between the people of the United States and of Canada as well as the geographical significance of two nations sharing an unguarded border of 4,800 miles, sharing common objectives, loving peace, and most important, believing in the dignity of man. The Hays-Coffin report thrashed out the issues and origins of the deterioration of relations between the two countries. As a result of the report and as a result of the study of the same problem conducted by the Senate Foreign Relations Committee and by Senator AIKEN, of Vermont, a study group composed of Members of the House and the Senate, respectively, was appointed by the Speaker of the House and the chairman of the Senate Foreign Relations Committee, pursuant to a Senate resolution, to meet with the Members of the Parliament of Canada. The first Hays-Coffin report, which contained a recommendation for the establishment of closer legislative liaison between the United States and Canada was the first suggestion for the establishment of bilateral relationships between the legislatures of the two countries. The suggestion was picked up by the Prime Minister of Canada and encouraged by the Parliament of Canada, and endorsed by the executive branch of the U.S. Government.

A meeting of representatives of the two legislatures was held in January of this year here in Washington and at that time it was agreed that the establishment of a continuing inter-parliamentary group to be composed of representatives of the United States and Canada would have a salutary effect on the relations between the two countries. Furthermore, the Canadian group has now issued an invitation to 12 Members of the House and to 12 Members of the Senate to attend a meeting in Canada to be held in conjunction with the formal dedication of the St. Lawrence Seaway. We are endeavoring to make plans to participate in that meeting. There is a steering group on the U.S. side composed of Mr. COFFIN, of Maine; Mr. MERROW, of New Hampshire; Mr. JUDD, of Minnesota; and myself for the House, and of Senator AIKEN, Senator MANSFIELD, Senator MORSE, and Senator CAPEHART for the Senate.

In order to facilitate this meeting and in order to provide for the continuation of these meetings I have introduced House Joint Resolution 254, authorizing U.S. participation in parliamentary conferences with Canada. The resolution provides for the appointment of not to exceed 12 Members from the House and 12 Members from the Senate to participate in each meeting. It is not contemplated that 24 Members will participate in each meeting and it is quite probable that some of the meetings will be composed of a smaller group. The resolution also authorizes the appropriation of not to exceed $30,000 each year to meet the expenses of these meetings. Fifteen thousand dollars of this amount is to be available for expenses of the House group and $15,000 is to be available for the expenses of the Senate group.

It is my belief that the group that this resolution establishes will go far toward creating new understanding on both sides of the border and that it will result in the development of new ideas and new approaches to our economic and political problems.

The Honorable FRANK M. COFFIN recently delivered a speech at the Canadian-American Relations Seminar, at Michigan State University, in which he discussed the value of a Canadian-United States parliamentary group. I would like to insert this address in the RECORD:

AFTER AWARENESS WHAT?

(Address by Representative FRANK M. COFFIN, of Maine, at Canadian-American relations seminar, Michigan State University, East Lansing, Mich., March 9, 1959)

There are many new dimensions in the relations between the United States and Canada. They range from defense, trade, transportation, power, travel, education, culture, investment, management, labor, and resource arrangements to diplomacy in most areas and in most groupings of the world.

There is certainly a new awareness on both sides of the border. That on the Canadian side has come earlier, sunk in deeper, and spread wider. It is a popular theme, originating spontaneously from many sources, lending itself to political uses by all parties, and tending to be (so far as United States-Canadian relations are concerned) more divisive than cohesive in its impact. In short, the new awareness on the Canadian side is a natural instrument of nationalism.

On the U.S. side of the border, there is also a new and unmistakable awareness. But mark the differences. It is less than 2 years old. It began, quite self consciously, with a few of us in Congress, caught on in some executive departments, attracted the attention of some observant commentators, and has reached the stage of quite formal cabinet and congressional arrangements. It is spreading both in Congress and in the public mind, slowly, deliberately, almost painstakingly. There is no political lodestone in this movement. To some extend there may be political liability. The tenor of U.S. awareness is a constructive one, placing more emphasis on hearing the other side than on stating its own case. These factors justify one in saying that the new awareness on the U.S. side is a hard wrought instrument of international accommodation.

These two sides of the new awareness are natural, in view of the disparity of size, of population, wealth, and influence of the two nations. The comparison implies no moral judgments. I predict that as the new awareness loses its novelty, there will emerge international overtones in Canada and national themes in the United States. What we can hope for is a balance on both sides, an adjustment of problems with no injustices to the national aspirations of either country.

This, however, will not automatically happen. The new dimensions which make both sensible and necessary the new awareness could lead to the new psychosis.

Awareness is in itself neither good nor bad—or, perhaps more accurately, it can be both. It is good when it leads to effective action to deal with a situation. It is bad when it is static, leading nowhere, except to frustration.

It is still too early to say which of these roads the new awareness will travel. But the time will soon come when we can tell.

There are two dangers that threaten. One is that we who are actively enrolled in the awareness forces shall try too little. The other is that we shall try too much. In either case we shall be harshly judged by impossible standards of excessive expectations. What I mean by trying too little is that we may feel that all that is needed are occasional fellowship meetings, strong on the amenities and weak on the specifics. Should meetings at Cabinet, sub-Cabinet, or congressional levels be too infrequent, too short, too poorly prepared, too press-release conscious, there will set in a disillusionment that will undo much of the good work that has been done.

The opposite trap lies in trying to do too much. This would happen if the various executive groups or our Canada-United States Interparliamentary Group failed to recognize their limitations. There are some problems that are unsolvable; there are others that only time will solve; still others can be solved but by other groups or in other contexts. For example, it would not in my opinion be productive if our interparliamentary group were to set itself the task of trying to arrive at a consensus on tariff matters or of trying to persuade the other side of the soundness of our position. Here we may well find that a consensus is impossible and that national positions are fixed and at least temporarily immutable. It would be a waste of time, talent, and opportunity if this group should take upon itself the role of a perpetually hung jury.

It is right and proper for both executive and parliamentary joint bodies to begin their work by developing an agenda for discussion. Much good can come by way of understanding and tolerance simply from the presentation of different views of the many problems existing between the two nations. But eventually there will come a time when awareness for awareness' sake will not be enough.

When this time comes, what function will our interparliamentary group serve? I have been deeply concerned over the proper and fruitful function of this group in the long run. After all, we have taken an unprecedented step in the technique of international relationships. There are other interparliamentary organizations. These, however, involve many nations, large memberships, and

obvious limitations in marking out fields of common interest. Their purposes are and must be of the broadest scope and general in nature.

What is different about the Canada-United States Inter-Parliamentary Group? What is its justification? There are some who fear that this may be a precedent for forming bilateral parliamentary liaisons with other nations. The answer to this fear lies not in political theory but in the opportunities for meaningful collaboration.

These opportunities arise from the length of the 4,000-mile common border; the infinite daily crossings of people, goods, services, and ideas; the interdependence of the two nations in defense, in economic development, in diplomacy; the multiplicity of friction points and problems. The essential point is that the very intimacy of relationships creates problems which overpower the ordinary channels of collecting, analyzing, discussing, and acting on information. Even with such a close and important ally as the United Kingdom, distance from the United States and proximity to other nations blunts the edge of the American problem. There may even be a kind of diplomatic law of thermodynamics: the farther apart countries are, the more adequate are the ordinary channels of relationships; the closer together they are, the more need exists for extraordinary arrangements.

It is my conviction that a flexible but continuous relationship between the lawmaking groups of complex and advanced neighboring nations is eminently sensible, if those concerned see and remain faithful to their proper function.

That function is, in my opinion, not so much the attempt to solve problems as it is the continuing and systematic effort to improve the procedures for recognizing, discussing, and solving problems. This distinction could be the means of avoiding stand-off stalemated sessions between people who lack the power to solve the problems they are discussing. It could be the key to a limited but highly useful service.

For example, I can easily imagine Canadian and U.S. parliamentarians making little progress in persuading their opposite numbers to change their positions relating to lead and zinc. But I can imagine them coming to agreement as to the manner in which metals policies should be changed, as to the usefulness of full discussions before changes are made, as to the need for exploring noncontroversial fields as research, marketing, and the gathering of worldwide data as to supply and demand.

This function would require an orientation toward procedure. The objective would be what former Congressman Brooks Hays and I have called "mechanisms which will guarantee—if not a solution—an orderly, regular, and routine method of discussion, exchange of views, and, if possible, agreement on action."

Here is how I would visualize the Canadian-United States Inter-Parliamentary Group working: It would begin with a full exchange of views on the major problems besetting the two nations. This process of mutual education could be expedited by the preparation of position papers on the various subjects by the members of each side. These papers would be exchanged by the two sides before the first series of meetings. Oral exchanges would then be encouraged.

A Canadian and a U.S. parliamentarian could be assigned the task of preparing a summary for each subject. This would include a description of the problem, the Canadian position(s), the U.S. position(s), a report of any consensus that could be arrived at, a statement of the remaining issues, and a description of possible approaches to solution.

At this point, possibly at a subsequent meeting, the subject matter is taken up again, but from a different point of view. The focus shifts to possible procedures. Such questions would be explored as these: Is there need for more research on the problem? Is there need for better communication of facts or positions to interested parties, government, or the people on the other side of the border? Is there enough opportunity for discussion of the problem on both sides? Is the communication between governments frequent enough, easily achieved, and responsibly achieved? Is there need for advice to governments? Are additional structures needed? How can citizens or citizen groups help? Does experience in other countries offer a lead? Should the problem be considered in the broader context of the free world?

In trying to answer these questions, the group would be well advised to invite those intimately concerned to talk, not primarily on the merits, but on the procedures and mechanisms which might lead to solutions.

A vital part of the group's function would be that of a friendly watchdog on the effectiveness of the relationships between the executive branches of the two Governments. To change the figure, the group would serve as an anticoagulant to the Canadian-United States bloodstream. There are certain natural tendencies of bureaucracies. Some of them are as follows: To resist change; to do things as they have been done before; to reduce the level of decision to that of the lowest common denominator; to avoid seeking new problem areas; to delay moving into an area that looks like added work; to put off meetings that might be difficult or inconvenient; to avoid bringing issues to a head where one's department might not appear to advantage; to limit meetings and discussions to platitudes; and, above all, to cultivate an abiding distrust of and contempt for the legislator.

The overnight function of Congress is well established. I am not sure to what extent the Canadian Parliament exercises a similar function, in view of the fact that the government leaders also serve as leaders in Parliament. Nevertheless, there is no reason why the Canadian-U.S. Inter-Parliamentary Group could not keep track of the relationships between the executive branches, and make observations as to their improvement. The U.S. members of the group, could, for example, study the extent to which joint cabinet committee meetings had been prepared, agenda set forth, background briefings given to participants; the extent to which each government consults with the other in advance of a policy shift; the adequacy of opposite number communication and discussion at career staff levels; the need for additional executive relationships; the need on each side for coordination and centralization of data in all the areas of concern. The Canadian members could, I am confident, find areas where their government's procedures could be improved.

The mere fact that an informed and interested group is serving as a procedural watchdog will do much to stimulate a higher level of performance by executive personnel both in their planning for meetings and in their day-to-day performance. What I have been suggesting is not an antagonistic role for the Inter-Parliamentary Group. Its observation should be made to the respective governments in a friendly, even private manner. No good purpose would ordinarily be served by blowing up criticism of either government by the lawmakers of either nation.

The results of the lawmakers' group operating in the procedural area might not be dramatic. We hope, of course, that over a period of time there will be enough members of Parliament and Members of Congress educated to see the point of view of the other nation to make possible the passing of salutory laws or the removal of some irritants. But in the meantime a worthy purpose will have been achieved if new channels of communication are opened, if interchange of views reaches a new level of attention, if roadblocks to consideration of problems are removed.

The function I have described is a legitimate role for the parliamentarians of both countries. Both countries have the representative form of government. The member of Parliament and the Member of Congress represents his constitutents. He is close to them, knows their problems, and is the instrument through which his people speak. The representative can bring to the overwhelming task of Canadian-United States relationships the insights and irritations of the farmer, businessmen, laborer, shopkeeper, and tourist. The parliamentary member can supply the leaven of the generalist to the loaf of the specialist.

We are entering a period of great and continued strains and stresses on both our nations. This new experiment in parliamentary relationships can well serve to minimize these pressures. It will do this if it helps direct "the new awareness" into areas of fruitful activity. We shall have succeeded in our task when it is no longer newsworthy to hold seminars about awareness. Our objective is to make awareness commonplace, routine, undramatic, and highly productive.

Address by Hon. Barry Goldwater, of Arizona, Before Edison Electric Institute, at New Orleans

EXTENSION OF REMARKS

OF

HON. BARRY GOLDWATER

OF ARIZONA

IN THE SENATE OF THE UNITED STATES

Friday, April 10, 1959

Mr. GOLDWATER. Mr. President, I ask unanimous consent to have printed in the CONGRESSIONAL RECORD an address delivered by me before the Edison Electric Institute, in New Orleans, on April 6.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Mr. President, members and guests of the Edison Electric Institute, I am happy and privileged to be with you today.

This morning I want to discuss what I consider to be this Nation's most fundamental problem and to relate that to the difficulties facing your industry.

History—the experience and lessons of the past—should help us as we analyze and search for the right answer to current political problems.

Just a couple of weeks ago there was an interview in the Washington Post quoting that wonderful classical scholar of ancient Greece, Edith Hamilton. Here is what she said about the reasons for the collapse of that once great democracy:

"I think it was mostly because Greece no longer cared to fight for anything. In the end the Greeks wanted security more than they wanted freedom. They wanted not to give to the state but to receive from the state. They just wanted to be comfortable."

Today we may feel a comfortable sense of security under the protective cloak of our Constitution and Bill of Rights. History, however, should dispel any feeling of complacency we might have. We are not the first people to have written sacred contracts to protect the rights of the individual. Governments in times gone by have thrown up even stronger safeguards than ours against dictatorship, only to see the barriers first lowered, then destroyed, as the people permitted more and more power to be concentrated in a tyrant or in an all-embracing central government. And even we, I fear, have forgotten the centuries of fighting and conflict that led to the freedom we enjoy today. The one clear lesson to be learned from the total experience of mankind is the folly of believing that any government, given excessive power, will for long remain benevolent. Government has nothing to give except that which it has first taken away.

America's way in tomorrow's world will depend greatly on the outcome of the contest currently waging between those who believe in "belly politics"—the materialists—and those who believe that man's needs go deeper than material things alone. So much depends on the strength of our belief in principle and our willingness to fight for the things we believe in. I personally have great faith that the dignity and rights of each human being will be preserved even as government itself grows and expands to cope with problems properly in its domain.

Your industry and what happens to it at the hand of government will provide an important clue to our future course. In covering this subject, there is no need for me to take you back over the history of Federal encroachment in your field. One single fact tells the whole story. A short generation ago the Federal Government produced less than 1 percent of the power consumed in the United States. Now it produces almost 15 percent, and the ratio mounts steadily.

This trend continues even though the electric companies have made a tremendous contribution to progress in the past and are destined to do even greater things in the future as we move into a new era of electronics and electrical living. You are doing and are capable of doing a good job for the people of this country, yet government is constantly moving in on you.

Why?

Electricity is a complex subject—something very difficult for the people generally to understand. Few recognize or regard it as a manufactured commodity. It does not package and sell like soap or carry a brand name. It has its own particular method of delivery which is unlike other commodities.

Its technology and economics are highly complex and, therefore, difficult to explain. Even the framework of regulation—State and Federal—within which you operate is not clearly understood.

Moreover, when a man buys or rents a dwelling, electricity is a necessity and taken for granted. Therefore, people seem to have a different economic attitude in buying electricity than they do in buying, say, a pair of shoes, or an automobile.

These characteristics, unfortunately, make the function of supplying electricity easy prey for those who believe government should do more things for people. They argue that electric service can be provided cheaply only by government. This is pure propaganda, of course, for you are providing the American consumer with excellent low-cost service.

Yours is one of America's truly great industries. I have had the pleasure of knowing some of your leaders and I have found them to be outstanding examples of what businessmen should be. I have found your industry to have a standard of ethics unexcelled by any other and equaled by few. Maybe you have been forced into that, I do not know, but the fact remains you have it.

From my observations, your companies usually take the lead in community development. Your officials are either heading up or assisting in drives for local charities and community betterment. I know of your efforts to create new industry. You have anticipated our future electric requirements for years ahead and are ready to provide it. You have provided us with adequate capacity during every national emergency. You have helped the local and national economy by courageously investing and building for the future at times when more timid souls would have pulled back.

But how much credit does the American public give you as an industry for those splendid accomplishments?

When your company is largely responsible for bringing a new industry into your service area, does it get the credit or does that go to some other group of citizens?

Does the public know that it has been industry and not Government that has made the technological advances which have kept the price of electricity at 1939 levels?

Does the public know that electric companies serve over 40 percent of our farms directly and furnish power for more than 50 percent of the remaining ones?

Do your customers understand that they pay heavy Federal taxes when they buy electricity from you, taxes that are avoided by those who get their power from Federal or public power bodies?

My point is this: If you received the credit you justly deserve, your troubles would diminish. The public is not going to permit an industry which is a valuable citizen to be kicked around. But it does not realize your value. It appears you have a job to do here.

Another obstacle you face is that your opponents speak with one voice on all issues, whereas you do not. Maybe it is impossible for you to achieve the same unity of action and thought. Perhaps this is as it should be, for the nature of private enterprise is such that it does not lend itself to regimentation and, certainly it proves there is no power trust.

But in facing up to what unquestionably is a public power trust, you must strive for singlemindedness of purpose.

Your opponents are one for all and all for one. They are for Government power in any section of the United States and help each other whether their area is affected or not.

I am sure that some electric companies have taken no interest in national affairs that affect the industry as a whole. Others have become active only when some Government operation starts breathing down their necks.

If you do not make an all-out effort every time a company is faced with Government competition or encroachment, even if it is 3,000 miles away, you are going to be picked off piece by piece, company by company. Although a company may not seem in danger now, there is no telling when it might be.

There was a time when the vehicle used for Government competition and expansion was hydroelectric development; but that time has passed. You now have the atom. That puts the threat of a Government powerplant in any area, be it Maine or Chicago.

Why are Government power advocates so active in supporting Federal development of power from the atom? It is not because of a present or foreseeable shortage of power from conventional fuels. It is not because it means cheaper power.

Look at it this way—the Federal Government has constructed steam electric plants in only one area—the TVA. Today it would be very difficult to pass legislation authorizing Federal construction of conventional steamplants in any other area; but the atom is something else.

It is argued, and many people think it is logical, that the Federal Government should take the lead in constructing atomic powerplants. So the atom may replace hydro as the vehicle to get the Government into the steampower business. Your opponents know this; that is why they are working so hard toward that end. Therefore, no single company enjoys the security it once thought it had from the threat of Government encroachment. For that reason, it is even more important today that you present a united front in opposing Government power developments.

As a businessman who has spent the last 6 years as a U.S. Senator with more than a passing interest in your affairs, I have sometimes felt there is a timidity on the part of some utility executives in making contacts in Congress and in participating in utility legislative efforts.

You cannot expect the employees you send to Washington, or those you have permanently stationed there, to work without benefit of your help. This is your job—your responsibility—and you need never hold back or apologize in defending the position of your company and your industry in Washington. In this respect public power is not the least bit modest.

Without question, you are concerned about the efforts being made in Washington to silence you. I would only say this: If Congress doesn't grant some tax relief for your advertising and legislative effort, I hope this won't deter you from participating up to the hilt in such programs. There is no place in this fight for timidity. Those who are timid will lose their shirts.

We are talking here of matters you can do something about. You have top-flight executives to head up your operating, engineering, financing, and other divisions. Since politics now is one of the most important, if not the most important activity that confronts you, is there any reason why you should not select a top official to handle this field as his primary responsibility? I do not believe you can leave this to an already overworked executive or to your lawyer. It requires full-time attention.

An advantage you have is your coverage. You operate in every State in the Union except Tennessee and Nebraska. I know of no other industry with this same advantage. You have responsible representatives in almost every congressional district who are, or should be, well acquained with local officials and opinion leaders.

One of your opposition groups has organized what it calls minutemen to work for its legislative objectives, many of which are designed to put you out of business. It would appear to me that you already have your minutemen. The question is, are you using them?

Talking with your Congressmen and Senators is a very important function. We are busy people, so never assume that we are fully informed on the subjects in which you are interested. If we are busy and tied up, talk to our administrative assistants. They will get the word to us. But do not be hesitant about coming to see us. Most of you do not come around often enough. Some come only when they want something. So long as your visits are informative and helpful, you cannot visit our offices in Washington too often.

To continue in this practical vein, you are not going to win issues or stave off disaster

without votes, and you do not have them now. Although the climate of opinion with regard to your industry in Washington has improved compared to earlier years, it has not improved enough to prevent your industry from losing ground. I must say you have been remarkably successful on the whole in Washington. And this, in spite of the fact that your industry has only a minority of stanch supporters in the Congress.

It will take votes to stop the trend. I am not suggesting that you run for political office or support candidates of one particular political party. But I do suggest you maintain a continuing interest in the philosophy of those who seek office.

Most legislators who continually support ideas and legislation that lead us nearer the welfare state would be highly indignant if accused of undermining our free-enterprise system. But their votes are the more detrimental because the result chisels away at our system of government a little at a time while pretending to support it.

So far we have not even touched on labor and I am sure you would not expect me to speak to you without mentioning the subject. Certainly it ties in with some of your problems that we have been discussing.

Some labor leaders and some of my colleagues consider me a labor-baiter. I am not. I defy the contention that any man in the labor movement or in Congress has any more concern for America's working men and women, both union and nonunion, than I have. My concern is for the worker. I fear some of my critics—those who parade as the champions of labor—are more concerned with the personal power of the labor boss and the influence he may have on their political fortunes than they are in the welfare of the worker.

I am not against the labor leader so long as he is the duly elected representative of labor and confines his activities to those things that concern the ones he represents. Where we part company is when the labor boss uses his position to defraud those he represents and to promote his own political ambitions.

As you know, I am a member of a select committee of the Senate—the McClellan committee—investigating labor-management affairs. Some of the things we have turned up are scandalous. Laboring people—members and nonmembers of organized labor—have been intimidated, beaten, and murdered. Money extracted from union members has been borrowed, never to be returned, or stolen outright. Union money has been used to elect or defeat candidates for public office. Criminals have held high office in labor organizations. Criminals, thugs, and other racketeers have used organized labor to force their will on employers and employees who wanted no part of them. Unfortunately, some employers have connived with unscrupulous labor leaders to sacrifice the welfare of the working people.

These things should be corrected by Federal law and yet as widely as these sickening atrocities have been publicized over the past 3 years, remedial legislation has yet to be enacted. You wonder why? The answer is very simple. The leaders of organized labor have become so politically powerful they are able to stop or to tone down proposed legislation to where it will not do the job.

Do not infer from what I have said that I think all leaders of organized labor are bad. Quite the contrary. The rotten apples we have dug out of the barrel comprise a very small percentage of those connected with labor. But the disturbing thing to me is that even upright leaders oppose corrective legislation because they are afraid it might infringe on their power.

Let any organization once acquire power, it will fight to keep it—that goes for either business or labor. There was a time in this country when business became too powerful politically. It abused that power to the extent that the people in righteous wrath clipped its wings. Now labor has reached the point where its powers must be controlled, otherwise we will soon be under a labor government, irrespective of what political party brand it may use for the purpose.

The State of Michigan has been taken over by labor through its control over the Democratic Party in that State. But labor is not satisfied with Michigan. It spent millions of dollars last year to influence elections in other States, including my State of Arizona, and overall it enjoyed an alarming degree of success.

Now where does all of this fit in with electric company problems? Organized labor should have no specific interest in promoting government power. Its interest really should be with the electric companies. You furnish 85 or 90 percent of union members with their personal power requirements, to say nothing of the power they use on their jobs to increase their productivity. I understand the unions representing your employees have publicly opposed any expansion of government power—Federal, State, or local. They have found their members fare much better under company ownership and operation than they do under government.

One would think with this being the case, other unions not directly connected with the electric power industry would take the same position. But they have not. They oppose the things that might benefit workers in your industry and support all types of government power. They do this in their publications and before committees of Congress.

Why do they? Obviously this stand fits into the general pattern of seeking political favor by seeming to give people something for nothing. Too often people seeking power are willing to cast principle aside in the interest of political expediency.

Government power is paraded as giving something to the people as their due. It matters not that the majority have to pay for it through taxation to give to a minority.

This giveaway theory is bait for votes. There is nothing new in it. It was used in ancient times and it is being used today. Votes win elections. If union leaders can influence election of public officials, they build up their own political power and that is their objective. If you have to be sacrificed in the scramble, that's it.

These are among the reasons why it is so important for us to redefine and restate our values. We can do this and we must if we are to survive.

Where have we fallen down? Why is it that conservatism—belief in the ultimate importance of the individual human being—or free enterprise—call it what you will—finds itself on thin ice today? It is not that our principles have failed, but rather that we have failed to translate them and make them meaningful in terms of today's problems. As certainly as we sit here today, if we don't find the answer to this, we won't be here tomorrow and there won't be any private electric companies.

The core of this problem, it seems to me, is to decide, and to help people decide, where to draw the line on what the Government should do and should not do. The answer is not to have the Government do nothing, but to have the Government do the right thing.

One thing we have failed to point out convincingly is that Government programs are always directed at the group and tend to submerge the individual. Yet when we lose sight of the individual we destroy all the important values we cherish.

We only have to look around us to see how far we have gone in this respect—growth of conformity, the decline of individual incentive, the search for security at all costs—these things are everywhere.

The philosophy of some leading labor officials is the perfect example of what happens when the individual is lost sight of in the search for security for the group. Labor has directed its attention at getting the most benefits, the most security for its group, and within its own framework has deprived the individual of liberty, freedom, and individuality. Where laws permit, the laboring man is deprived of his right to work unless he joins a union In many unions he has no control over his union dues and is often deprived of the right to elect his own officers. He is deprived of recourse to law and justice through fear of brutality from union leaders. Often he is deprived of his right to feed his family when ordered out on strike, no matter how hard pressed he might be financially and irrespective of his individual desires.

It becomes urgent for us, therefore, to swing the focus of attention back to the individual as an individual.

Obviously we cannot lose sight of the material needs of people, but until we rediscover the individual, we will not make progress. Government cannot be a friend of the people if it ignores the individual.

Where, then, do we draw the line between government doing things for all the people and the individual doing things for himself? It seems to me this administration has developed at least one standard to guide us: namely, if people can do something for themselves, then there is no need for government to do it.

Now the electric power field is one clear-cut area in which this line can be drawn. You know as well as I do that there is no need for the Government to assume a full and complete utility responsibility. Here, without question, people themselves are able to supply the Nation's electric power needs.

This is where your interests merge with national policy and this is where your most vital problem of communication lies. And this is why it is important that you continue to exist within the framework of free enterprise, not because you are free enterprise, but because you are not government.

As long as you are not government you still stand for those values which place the individual first, which offer him the greatest opportunity for material and intellectual growth and, consequently, the most freedom and progress. Government cannot do this.

If at times I have given you cause for pessimism, don't think for one minute that I am pessimistic. In what I have been outlining I see hope for the conservative cause. We know with unshakable certainty that what we believe in is good. The pseudoliberals, who argue continually for greater government responsibility, have nothing to offer except more and more government. This is the only road they can take if they remain true to their philosophy. The ultimate result of this course is so obvious it needs no elaboration.

We conservatives, on the other hand, offer the only opportunity to go forward. Our beliefs are founded on proven values—values which have never failed in the past. Conservatism is based on the belief that only to the extent the individual's whole personality is developed to its ultimate potential can society advance in the best interests of all the people. The reason I am optimistic is because I know that what we stand for is sound. Let us never weaken in this belief.

The Hope for Housing

EXTENSION OF REMARKS
OF
HON. WILLIAM S. MOORHEAD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Friday, April 10, 1959

Mr. MOORHEAD. Mr. Speaker, soon on the floor we will be debating the omnibus housing bill, a piece of legislation with great impact upon those expanding urban areas in which 70 percent of our national population now lives.

It was a most fortunate coincidence, therefore, that the April issue of the Progressive magazine published an article by Senator JOSEPH S. CLARK, of Pennsylvania, entitled "The Hope for Housing."

If we were to search both of these great legislative bodies, it would be difficult to find a Member with greater interest in and knowledge of the problems of our urban areas, particularly in the field of housing, than Senator CLARK. He began this interest as mayor of Philadelphia and continues it as the senior Senator from Pennsylvania.

In his article, Senator CLARK tells precisely why we have not carried out the adequate housing goals enunciated as a matter of national policy in 1949, and lists the steps which must be taken if housing and urban renewal are to proceed in a manner befitting the future of our great cities.

Therefore, Mr. Speaker, pursuant to permission granted, I insert in the RECORD this well-conceived and effectively executed article:

THE HOPE FOR HOUSING

(By Senator JOSEPH S. CLARK)

A decade ago, in the Housing Act of 1949, the Congress wrote a declaration of national housing policy which said, in part: "The general welfare and security of the Nation * * * require * * * the realization as soon as feasible of the goal of a decent home and a suitable living environment for every American family." Ten years later this statement could hardly be improved. The only trouble is that, as an expression of our national policy today, it is a dead letter.

What the 1949 language suggests is a simple and logical procedure. First count our families. Then project population growth. Then count the number of decent homes in good environments. Then subtract. The remainder is the number of homes needed. With that as a goal, adopt a program for reaching it. Simple and logical, yes; but perhaps too much so—because that is not the way our national housing policy is made today.

If we were to follow through on this arithmetic, this is what we would find:

The number of substandard housing units, according to the Census Bureau's 1956 inventory of housing, is 13 million—24 percent of a total inventory of 55 million. Of the remaining 76 percent, not all are "in a suitable living environment"; but for purposes of our calculation that factor can perhaps be disregarded. We know, then, our backlog of need.

Meanwhile, our population is increasing. We need close to 1 million additional homes a year just to take care of new families. Approximately 300,000 more are required annually to make up for houses which are burned or bulldozed to make way for new highways or cleared for urban renewal or otherwise lost to the housing inventory.

The net of all this is that we need 1,300,000 homes a year just to hold our own. To make any substantial dent in our backlog of 13 million substandard homes would require a building rate in the neighborhood of 2 million new homes a year.

Figures such as these have never been reached in the history of American homebuilding. Only twice has the rockbottom replacement level of 1,300,000 new units been achieved—in 1950 and 1955. Last year, with the stimulus of the antirecession Emergency Housing Act, 1,200,000 units were built. The rest of the time it has been a struggle to stay above 1 million.

No wonder that mayor after mayor who has appeared before the Senate Housing Subcommittee has testified that we are not gaining ground in our fight against slums; we are losing ground.

Are those responsible for executing our national housing policies looking hard at these figures? Are they mulling them over and devising programs which will raise the production of housing in America from 1,200,000 units up toward 2,000,000?

Not at all. They do not even think in such terms. To put it bluntly, whereas the 1949 law talked of homes for families, what is talked of these days is the budget, the preservation of the status quo (which is usually referred to as free enterprise despite the massive governmental intervention through the Federal Housing Administration and the Federal National Mortgage Association), and the limits of what is acceptable to the housing industry—especially that part of the industry which lends on housing. The people who live in housing are incidental.

If we ask, what are the needs, who are the families who are ill-housed, the answer comes: the low and lower-middle income groups, and most of all our minority group families. If we start from there, then we must devise government programs which, using the channels of private enterprise wherever possible, would bring decent housing within the reach of the families who need it.

Because need has not been our guiding consideration, our governmental housing programs have become badly skewed in favor of the upper-income groups. On the one hand, the FHA-FNMA complex, which insures mortgages on suburban homes for those who can afford them, is flourishing. At the other end of the scale, the public housing program, which serves the lowest income groups, has slowed to a trickle. And there is no effective program for the families in between.

I belong to an old-fashioned school of thought which holds that the Government should concern itself first of all with those least able to help themselves. I have no objection to helping the well off through FHA and FNMA, so long as we do not ignore the housing needs of those who are less well off. But in the past 6 years, this conception of Government has been inverted. In the case of housing, the administration's bill this year would have completed the inversion: it proposed to remove the ceiling on the volume of loans which FHA might guarantee, and to push the services of FHA even higher into the upper-bracket income groups by raising the individual mortgage limit to $25,000. At the same time, it proposed to administer the final blow to the one program which builds houses for low-income families—the public housing program.

The Senate, happily, paid little attention to the administration bill. We wrote our own bill, which gives public housing another 1-year lease on life. This is a degree of progress. But without Presidential leadership, it is at least unlikely—and probably impossible—for the Congress to go much further in bringing balance to our present housing programs so that they serve all income groups equally.

If we could achieve such balance, and thus broaden the housing market, we could approach the 2 million-a-year rate of building that is called for by the measurement of need. Otherwise, we will live with our slums as far ahead as population data can be projected.

Suppose we approach the problem from another viewpoint: the future of the central city.

The slum problem of the cities is broader than just the problem of slum housing. In many cities, the most blighted areas are those with dilapidated commercial and industrial structures which stand on valuable land and drag down the economy of the entire area. As blight—both residential and commercial—spreads, the tax base of the central city declines in relation to the need for services. Then the services themselves decline. Wealth and leadership flee to the suburbs. A vicious circle is set in motion, and the very life of the central city is threatened.

Obviously, in the national interest, our central cities cannot be abandoned to decay. Even if we want to, it is physically impossible for us all to escape to the suburbs and take our offices and businesses with us. The balance wheel of the urban economy and its social and cultural life will always be the central city. A rational pattern of metropolitan growth is simply impossible without assigning the highest priority to the development of the core city, commercially, industrially, and culturally as well as residentially.

Fortunately, the ingenuity of legislators has devised the means to make that possible. That means is urban renewal, and almost 400 cities in 44 States and Territories now have projects under way. These cities are of all sizes; one-third have a population under 25,000.

Urban renewal is tedious and complex in execution, but its principle is simple. Blighted areas are replanned to provide for better uses and a higher tax base. The city buys the land, clears it of structures which cannot be restored, and sells it to developers. The difference between the cost to the city and the usually lower sale price is financed by Federal and local subsidies, the Federal Government paying two-thirds. If no Federal subsidy is needed, as in the case of Pittsburgh's Golden Triangle, there is no need for Federal participation. But there are few Golden Triangles.

An important aspect of the program is the rehabilitation of existing structures—in so-called gray areas—that are on their way to becoming unsafe or unsanitary and which can be saved as decent housing by the expenditure of a little private money. Here, the Federal assistance is mainly to help defray the costs of public improvements that serve the renewal area.

Urban renewal works. Blight has been cleared. New buildings have risen. Private investment has taken place which could have been stimulated in no other way. Urban tax bases have been improved. For the first time cities can take hope that blight can be conquered, slums can be cleared. The light at the end of the tunnel is faintly visible at last.

But, to reverse a metaphor, the silver lining seems to have its cloud. That cloud is housing. In itself, clearing of slums does not build houses for the slum dwellers. In itself, urban renewal cannot solve the housing problem. In some respects, indeed, it

intensifies the problem. The urban renewal law contains, quite properly, a provision that a project may not proceed unless decent, safe, and sanitary housing is available for the persons displaced.

What happens in the case of a typical city is this:

The urban renewal planners, initially, carve out a relatively modest project as a community experiment. The existing vacancy rate in private housing, and the turnover in public housing, are sufficient to take care of the families displaced. The project proceeds. Presently, cleared land replaces slum, and, shortly afterward, bright new buildings rise.

The impact on the community is immense. The pilot project has served its purpose. It has fired the imagination of the civic leaders. It has united conservatives and liberals, Republicans and Democrats, management and labor, behind the inspiring goals of rebuilding their community. These leaders, in turn, spur the planners to lay out a truly ambitious program. Together, they map boundaries for new projects, they count the families to be displaced, and then run abruptly into a cold stone wall: where do they put the families?

Sometimes a city will not encounter the wall on its second project, or even its third, but the logic of the statistics is inexorable. Sooner or later, before they have bitten very deeply into the slum problem, most cities will find that urban renewal itself will be blocked unless low-income housing is provided.

The figures show that half of the families displaced by urban renewal are of the lowest income level—the lowest sixth, who are within the income limits of public housing. Of the remaining half, a large proportion are just above the public housing level. Some will disappear during the relocation process and leave no trace. Some can be absorbed by the other slums in the community. A few will get trickle-down housing from persons moving to the suburbs. But beyond that, the only feasible way to bring into balance the need and the availability of low-rent housing is to achieve a major acceleration of the public housing program.

And yet the Eisenhower administration has chosen this particular moment to recommend that what remains of the present de-vitalized public housing program be laid to rest.

Perhaps there is more consistency to the administration's program, however, than meets the eye. The President also has proposed that the urban renewal program itself be held back. He asked $250 million a year in Federal funds to cover applications beginning at the rate of $500 million and going up. He also recommended that the Federal share be reduced gradually from two-thirds to one-half.

If we have less urban renewal, of course, we will need less public housing. We will, instead, retain our slums and congratulate ourselves upon the "soundness" of our fiscal policies.

It is ironic to recall, once more, that the authors of the Housing Act of 1949 were Senators Wagner, Ellender, and Taft—and that the last of these is none other than the man who lost the Republican nomination in 1952 because he was considered too conservative.

Where do we go from here?

I suppose we must start from the assumption that we can't go anywhere much until 1961. Even the modest bill the Senate has passed is being greeted with rumblings about a veto. Clearly, any measure truly geared to eradicating slums and rehousing slum families would never get across the White House threshold. But what should be the elements of a housing program for 1961? I believe it should have four:

1. Upper-income housing. For families above the median in income, the present FHA–VA–FNMA programs are relatively adequate. FHA has done far better, however, in promoting suburban sales housing than urban rental housing. Some of the improvements needed can be accomplished, I am sure, through administrative regulations; beyond that, legislation may be useful. A constructive proposal has been presented to establish a central mortgage facility to stabilize the flow of mortgage funds. Other recommended measures would extend the insurance principle to some loans now made on conventional terms and facilitate the trading of old houses for new. All these should be considered.

The various branches of the housing industry will present, as they have each year, proposals to bring the Government further into the job of assisting building for the upper and upper-middle income groups. These should be sympathetically considered, on the principle that whatever accelerates the building of homes for any income group increases the total housing inventory. But this is the easier part of the job of legislators; the hard part is devising measures that will work for the lower-income groups for whom the housing industry as now organized does not speak.

2. Middle-income housing: For housing purposes, middle-income (or moderate-income) families are defined as those whose incomes are too high to permit them to be admitted to public housing projects, and too low to be able to afford new privately built housing—the exact income limits varying from one market to another, as both incomes and housing costs vary. This gap between the top of public housing and the bottom of the private market was not an unknown factor at the time of the passage of the Housing Act of 1949. But the problem was held in abeyance until 1950, when a solution in the form of long-term loans, with interest rates set at the cost of money to the Government, came within five votes of adoption by the Senate. The bill has been introduced in subsequent years, with modifications, by former Senator Herbert Lehman and by myself, but has not been brought to a vote on the Senate floor. The problem, however, is still with us—increasingly so as urban renewal proceeds and the Federal highway program bulldozes its way into the core cities, displacing families by the thousands.

3. Low-income housing: In 1949, Senator Taft and his colleagues estimated that one-tenth of the need for new housing should be met each year through public housing. Accordingly, they authorized 135,000 units a year. Given the current need projection this rate would be raised to 200,000. Not even the 135,000 has been approached, but there is no reason to believe the need is any less than estimated a decade ago.

The difficulty with public housing appears to be twofold: apathy or antipathy in the cities and gradual strangulation by hostile Federal administration. Both can be cured, to a large extent, by certain changes in the program: decentralization of management decisions, the use of existing housing and scattered units in lieu of large institutionalized projects, and the raising of income limits so that public housing is not confined exclusively to problem families. Important steps in this direction are written into the housing bill approved this year by the Senate.

4. Urban renewal. The urban renewal program also needs both improvement and expansion. To keep up with the current rate of applications would require an annual Federal authorization of $500 million. Personally, I would prefer $600 million, to allow room for the participation of additional cities and the acceleration of the program, and to authorize this rate for a long-term period, so that cities can plan ahead—say, 10 years. The Senate bill represents a good compromise, however, for this year. It allows an authorization of up to $500 million a year for slightly more than 4 years, if applications are filed at that rate.

Many improvements are needed to provide flexibility, to cut the long period between the conception of a project and its execution, and to adapt the program to industrial and commercial as well as residential areas—changes too technical to be enumerated here. Again, the Senate bill points the way forward, with further changes in order from year to year as experience accumulates.

The case for urban America is briefly summarized: nearly 70 percent of our people live in metropolitan areas, and the proportion continues to grow. As an urban nation, our national ability to govern ourselves and solve our problems is being tested in the cities. Many basic tools are at hand. Others can readily be fashioned. National purpose and will are also present. The need remains only for enlightened and courageous leadership.

The Townsend Plan for National Insurance

EXTENSION OF REMARKS
OF

HON. FRED MARSHALL

OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES

Friday, April 10, 1959

Mr. MARSHALL. Mr. Speaker, I take this opportunity to pay tribute to the dedicated people all over America who are joined with the Townsend plan for national insurance in working for a decent standard of living for our older citizens. Their headquarters is just a few blocks from this Capitol and most of us here are familiar with the fine services this office performs.

In the decade I have been privileged to serve my district in the Congress, I have come to respect the faithful and tireless service this organization performs solely in behalf of the elderly citizens of our country. It has undertaken this worthy effort on a national level and deserves our commendation for the leadership it has provided. It has always been in the forefront of efforts to attain a realistic program of security for retired workers and continues to assert this leadership at a time when the problem is of growing consequence.

As a farmer and as a representative of a great agricultural area, it is natural that I should think of this legislation in terms of farm families. The serious decline in farm income and the natural hazards of agriculture make it difficult for farm families to provide for retirement. Yet, farmers were among the last to be covered under the Social Security Act and many today can qualify for only the minimum benefits. As self-employed persons, a distressing number of farmers operate at marginal levels and will therefore continue to qualify for

the minimum or near-minimum benefits.

We certainly can agree that farmers contributing to any such program should be treated as equals of other workers and self-employed. They deserve the same opportunity to maintain a decent standard of living upon retirement from active farm operation.

Farmers have another stake in a realistic program of security for old age inasmuch as food is the basic requirement of every human being and retired workers remain the customers of agriculture. As the number of retired persons grows, it is important that their purchasing power be maintained at the level of decent comfort and adequate diet. Our interest in the retired worker, however, is not primarily economic, but humanitarian. In the midst of our abundance, we cannot permit a whole segment of our society to exist at subsistence levels after they have contributed their most productive years to our growth.

Because they are genuinely concerned with this problem and are dedicated to its solution, I welcome representatives of the Townsend organization to my office. In fact, in the 10 years I have been privileged to serve in this legislative body, the Townsend group have been the only organization to come to my office to express concern over the problems of the aged, those senior citizens of ours who have contributed so much to building our great country.

We respectfully suggest that all who share this concern devote some time to considering the purposes of H.R. 4000 and the goal it envisions. We are all too familiar with the inadequacies and the inequities of the present social security program and know that we must move forward with realistic programs if we are to meet the challenge now upon us.

Minshall Opinion Poll Shows 23d District Ohio Supports President's Defense Budget, Berlin Stand

EXTENSION OF REMARKS
OF
HON. WILLIAM E. MINSHALL
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Friday, April 10, 1959

Mr. MINSHALL. Mr. Speaker, tabulation is complete on the fifth annual Minshall opinion poll. This poll went to the home of every registered voter in the 23d district, 108,000 homes in all. Response was truly remarkable: more than 20,000 questionnaires were completed and returned.

Mailing of the poll was timed so that a sampling of opinion was possible before and after President Eisenhower's televised speech on the Berlin crisis and his defense budget. Prespeech returns showed 75.5 percent support of his Berlin stand; postspeech returns showed that support had risen to 77 percent. Before the President's speech, returns indicated 61.8 percent were satisfied that the defense program is adequate; after the speech, the total reached 63.5 percent.

Both foreign aid and Federal aid to school construction slipped in the voter's favor. Foreign aid support dropped from 50 percent in 1958 to 48.5 percent this year. Support of Federal school aid fell off from last year's 45 percent to a mere 36.8 percent.

Many of the returns carried marginal comments in which the voters further amplified their views both on national issues and on their own individual problems with the Federal Government. They were very nearly unanimous in calling for sensible economy in Federal spending; many, in particular, deplored the huge farm subsidies doled out under our antiquated agricultural laws.

The results of the poll follow:

Results of 1959 Minshall opinion poll

	Yes	No	No opinion
1. If the fiscal 1960 budget is not balanced, would you favor increasing taxes to eliminate the deficit?	34.4	60.6	5.0
2. Do you favor a higher Federal gasoline tax to maintain a pay-as-you-go basis in Federal-aid highway construction?	48.8	47.9	3.3
3. From information available, do you believe this country's defense program is adequate?	62.5	22.2	15.3
4. Do you favor Federal aid for local school construction?	36.8	58.0	5.2
5. Are you in favor of amending the Social Security Act to include all medical expenses, the financing to be shared by the employers and employees?	37.4	56.9	5.7
6. Do you favor repeal of that section of the Taft-Hartley Act which presently permits States to enact their own right-to-work laws?	22.3	69.2	8.5
7. Should the cost of air passenger terminals be paid by the airlines rather than from Federal-local funds as at present?	75.1	16.9	8.0
8. Do you believe we should continue our foreign aid program which calls for expenditures of $3,200,000,000 in military and economic assistance during fiscal 1960?	48.5	46.8	4.7
9. In case of a blockade, do you believe we should employ military force to maintain our position in Berlin?	76.1	13.3	10.6
10. Do you favor repeal of the 22d amendment, which limits the Presidency to 2 terms?	25.1	69.3	5.6
11. Do you favor expansion of public power against private power (for example, TVA)?	25.1	65.4	9.5
12. Are you in favor of stronger civil rights legislation?	39.0	40.5	20.5
13. Do you favor removing the Federal Government's present regulatory control over prices producers can charge for natural gas?	18.3	70.9	10.8
14. Are you in favor of a law guaranteeing union members the secret ballot in the election or removal of union officials, and in other vital union matters?	91.4	5.2	3.4

Special Citation Awarded to Two Steamship Companies

EXTENSION OF REMARKS
OF
HON. EDWARD A. GARMATZ
OF MARYLAND
IN THE HOUSE OF REPRESENTATIVES
Friday, April 10, 1959

Mr. GARMATZ. Mr. Speaker, because of their significance and satisfactory performance in the interest of the general public, it is gratifying to have recognition given to the Marven Steamship Co.—formerly the Ore Navigation Corp.—and the Calmar Steamship Co. for attaining highest rating in vessel sanitation after the closest inspection by our Government authorities. These companies have just been awarded the special citations of the Public Health Service, after approval of the recommendations of inspectors by Joseph B. O'Connor, Regional Director of the Department of Health, Education, and Welfare for New York, Pennsylvania, New Jersey, and Delaware.

Harry W. Warley, who has over a lengthy period distinguished himself in maritime affairs of our Nation, is the president of both companies, and received the awards.

The special citations were given because each of the 9 ships of the Marven Steamship Co., and each of the 12 ships of the Calmar Steamship Co. achieved a rating of 95 or better on official Public Health Service inspections in which 166 separate items of sanitary construction and maintenance were involved. Our citizens in large numbers, who have had contact with President Warley and with representatives of the two companies in question, will approve of these awards, which have been justified by lengthy satisfactory service

The Marven Co. has earned the award for the third consecutive year, while the Calmar Corp. is now being cited for the second successive year. Both concerns transport valuable products to Bethlehem Steel Co., and their ships transport lumber from west coast ports in connection with their return voyages.

Americans have reason to be proud of the performance of these companies, which have given encouragement to steamship operators in different parts of the country.

The Al Sarena Case: A Log-Rolling Mine Gathers No Gold

EXTENSION OF REMARKS
OF
HON. CHARLES O. PORTER
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Friday, April 10, 1959

Mr. PORTER. Mr. Speaker, the other day in reading through the interesting hearings on the Department of the Interior and related agencies appropriations for 1960 I came across an enlightening exchange between my able and distinguished friend, the gentleman from Ohio

[Mr. KIRWAN] who is, of course, chairman of the appropriations subcommittee, and the director of the Bureau of Land Management of the Department of the Interior, Mr. Edward Woozley. You will no doubt remember that the famous Al Serena case developed in the Fourth Congressional District of Oregon and was one of the important issues in the campaign which resulted in my election to the 85th Congress. Under leave to extend my remarks I am inserting the following brief, but delightful, exchange between the chairman and the witness:

AL SARENA CASE

Mr. KIRWAN. Maybe one of you could enlighten me on this point. Did they ever discover those minerals that we gave Al Serena with all of that timber?

Mr. WOOZLEY. I think the minerals were discovered, but whether or not they are operating is a question. Gold prices are not too conducive to mining, and they have not been since 1934, as you know.

Mr. KIRWAN. They are not mining. This reminds me of a story Bob Burns, the comedian, once told about his uncle.

It took him 3 years to chisel a huge boulder out of the mountain overlooking Van Buren. He finally chiseled it away and the boulder rolled down the mountainside and destroyed every building in its path. They followed the boulder and when they got up to it to examine it carefully, his uncle said, "Just as I thought, no moss."

The same seems to be true of that mineral lease given to Al Sarena. After he removed thousands of dollars worth of timber, he found no minerals.

Mr. WOOZLEY. The timber is on a national forest.

Mr. KIRWAN. I am glad you mentioned that. It was, but, of course, it is now private land, thanks to the approval of the mineral claim given by the Interior Department.

Opinions From Columbus and Franklin County, Ohio

EXTENSION OF REMARKS
OF
HON. SAMUEL L. DEVINE
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Friday, April 10, 1959

Mr. DEVINE. Mr. Speaker, on March 9, 1959, I sent a newsletter and questionnaire to a cross-section of 1,000 persons in the 12th District of Ohio. The response was amazing. After 30 days 405 persons have answered. I feel this clearly demonstrates the keen interest the citizens of central Ohio have in the affairs of their Government.

Further, the overwhelming majority of responses contained studied comments, suggestions, and opinions relative to the matters we face here in Congress. I plan to retain these answers for some period of time, and any Member of Congress who wishes to examine them is most welcome.

In response to the question, "Do you favor a balanced Federal budget and reduced Federal assistance programs rather than additional public debt?" Ninety-one percent said yes, four percent said no, and five percent were undecided.

The results on the fair trade bill were not nearly as conclusive since 31 percent favored it, 46 percent were opposed and a large 23 percent undecided.

On the issue of Federal aid to education concerning Federal grants to schools for construction and teachers' salaries, 33 percent favored, 61 percent opposed, and 6 percent were undecided.

The omnibus housing bill relating to Federal grants and loans for urban redevelopment, public housing, college housing loans and other programs brought a favorable response from only 26 percent. Fifty-six percent opposed the legislation and 18 percent were undecided.

Thirty-five percent of the people answering were in favor of increasing the Federal gasoline tax from 3 to 4½ cents per gallon for the highway trust fund. Fifty-two percent opposed a gasoline tax increase and fifteen percent undecided.

On legislation aimed at elimination of corruption in labor unions, specifically such bills as Kennedy, Goldwater, and McClellan to require unions to submit reports on activities, hold secret ballot elections for officers, and other provisions, 94 percent favored such legislation, 3 percent were opposed, and 3 percent undecided.

The above figures express the views of a small segment of the population in Columbus and Franklin County, Ohio, and perhaps other areas in the great Midwest.

Due to the tremendous response and interest in central Ohio, I have mailed out another newsletter and questionnaire on March 30, with seven questions directed to the mutual security program that now faces Congress. The mailing list has been more than doubled due to the number of persons who have written asking that their names be added. I hope to give the Members of Congress the benefit of that poll on May 1. The results on incomplete returns to date are surprising.

Restoring the Integrity of REA

EXTENSION OF REMARKS
OF
HON. JOHN BRADEMAS
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Friday, April 10, 1959

Mr. BRADEMAS. Mr. Speaker, many of the farm people of Indiana, including thousands of the citizens I have the honor to represent who live in LaPorte and Marshall Counties, depend for their electricity on the Rural Electric Membership Corporations, the REMCs.

The Rural Electrification Administration program has for many years contributed enormously to American life by bringing the blessings of electricity to the farm families of our country and by stimulating the business and industry which produces and sells the appliances, machinery and equipment needed by REA users.

Unfortunately, the rural electric systems of Indiana have been under severe attack by both the Handley administration in Indianapolis and the Eisenhower administration in Washington.

Yesterday the House of Representatives, by a margin of nearly 2 to 1, voted to uphold the integrity of the REA program by restoring to the Rural Electrification Administrator sole authority to pass on rural power and telephone loans. The bill, which has also been passed by a similar margin in the Senate, would thus reaffirm the original intent of Congress that the Administrator of REA, who is appointed to office for a term of 10 years, should be free from political influence. Since 1953, however, the Secretary of Agriculture has had the last word on the approval or disapproval of loans over $500,000.

During the 1958 campaign I stated my conviction that the REMCs should be permitted to operate without having to engage constantly in political and legislative battles merely to defend their right to exist. REMCs are nonpartisan and should be permitted to remain that way. This is the reason I was glad yesterday to join with the great majority of my colleagues in Congress in voting to restore to the Administrator of REA the full authority to pass on loans independant from the control of the Secretary of Agriculture.

Mr. Speaker, with the passage of this legislation rural America can again have confidence in the integrity of the loan procedures of the Rural Electrification Administration, and the farm families of Indiana and the Nation who use REA can continue to enjoy the benefits of modern electric service.

A Tribute to a Great American

EXTENSION OF REMARKS
OF
HON. ROBERT W. KASTENMEIER
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Friday, April 10, 1959

Mr. KASTENMEIER. Mr. Speaker, under the leave to extend my remarks in the RECORD, I wish to announce that it is with pride and sorrow that I rise, in the name of my Wisconsin constituency, to pay tribute to a great American, Frank Lloyd Wright, who passed away in a hospital in Phoenix, Ariz., early yesterday morning, April 9—just 2 months short of his 90th birthday.

And this great American, who lived just 10 miles west of my congressional district in Wisconsin, in a once obscure place he named Taliesin, even in the last days of the broad expanse of his life remained provocatively controversial and magnificently creative. He will best be remembered for having lifted American

architecture from the status of a craft to a fine art, but to Mr. Wright architecture was even more fundamental and meaningful; it was a way of life, a philosophy.

Frank Lloyd Wright was a man of unrivaled achievements in the field of architecture. Magnificent at once as an engineer and as an artist, he has left his monuments in stone and steel, in wood and concrete, and glass and plastic, in globe-girdling profusion.

Characteristic of the man was his daring conception of the plan for the Imperial Hotel in Tokyo, in 1915. Required to design an earthquake-proof building for a region noted for its frequent and severe earthquakes, he discarded the ancient reliance upon rock for solidity, knowing that it is in the rock itself that the earthquake takes place, and built the hotel like a huge Noah's Ark, not supported on anything solid, but floating upon soft mud, and held together internally by cantilevered floors and concrete supports.

The building was completed and opened for use in 1922, and in 1923 triumphantly survived, undamaged, the extreme test of the great earthquake of that year, one of the worst earthquakes in Japanese history. It was the only major building to withstand that upheaval, and many a correspondent wrote in awed tones of seeing its mass looming above a waste of rubble.

But that is one of his ideas, one of his buildings. He spouted ideas like a fountain, and strewed buildings behind him in his career as a child strews toys. But varied as these buildings are, each suited to its surroundings, meeting its special engineering problems, fulfilling the needs and desires of its owner, and expressing the resolute independence of the architect—yet there is a core of unity informing all this sparkling variety.

Everywhere, and all the time, Frank Lloyd Wright was the exponent of a philosophy of architecture that combined functionalism with what may be called naturalism. His effort was always to make his building seem to grow out of the earth like a tree or a bush, to loom like a rocky cliff or to curve like a lily; but at the same time to suit his building to its function as strictly as a machine. A similar suiting of building to its surroundings and function appears in the apparent inconsistency with which Wright, the most spectacular free-spender in the history of architecture, devoted himself and his Taliesin Fellowship to the problem of constructing medium-sized homes at a moderate cost and with the least expenditure of material and labor, at the same time retaining artistic excellence. A lavish expenditure of wealth he found suitable to the display of spectacular beauty that a rich man might desire for his estate—but for the man of moderate means he was intent on securing an equal beauty at a pared-to-the-bone cost.

A "rebellious old gentleman," they called him. He was indeed rebellious. He rebelled against hidebound conservatism, and equally against doctrinaire modernism. He was wise and witty, fierce and furious, warm with human sympathy, delight, ambition, energy, and a passion for truth and justice. His name will be honored for centuries in the history of architecture.

He had won international eminence long before some of us in the House of Representatives were born, but his contributions, his genius and the spirit of his personality will live forever. Indeed, he leaves this earth uniquely—already memorialized by his own monuments. We and the generations to come will long remain in his debt.

Uniform Milk Sanitation Code Needed for Nation

EXTENSION OF REMARKS
OF
HON. HENRY S. REUSS
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Friday, April 10, 1959

Mr. REUSS. Mr. Speaker, it would be difficult, if not impossible, to conduct the business of the House of Representatives under one set of rules on Monday, a second code on Tuesday, and still a different procedure on Wednesday. Confusion and chaos would be the inevitable result, and it would not be long before every Member demanded the adoption of a single body of rules to cover every session.

Fortunately, we have but one set of rules. But the example illustrates the confusion that exists today in the American dairy industry. Although it is quite feasible for a dairy to ship milk anywhere in the country, such commerce is hampered by the myriad of conflicting State and city milk sanitation codes that have developed through the years.

It is not unheard of, for instance, for the manager of a Wisconsin dairy to have to be under 10 different sanitation codes. Far from seeking to improve health standards, many local sanitation codes exist to restrict competition from outside dairies. Such codes are actually trade barriers in the disguise of sanitation standards—and nothing more.

So to the confusion and waste that result from the current pattern of multiple standards is added the curse of monopolistic trade practices and the higher consumer costs they create.

The remedy for these dairy industry ills is, quite obviously, a uniform national standard for milk sanitation. To accomplish this goal, my distinguished colleague from Wisconsin, LESTER JOHNSON, has developed and introduced H.R. 3840 which would establish the U.S. Milk Ordnance and Code as the single standard for fluid milk and fluid milk products shipped in interstate commerce. I am proud to have cosponsored this measure.

In addition, H.R. 3840 will topple the restrictive trade barriers that have grown up as the result of the multiplicity of State and local codes and thus allow all the milk-consuming public to purchase first quality milk at reasonable prices. Adoption of a uniform national standard will simplify sanitation code enforcement and compliance, and that means savings to taxpayers, farmers, and consumers.

Mr. Speaker, both farmer and consumer stand to gain much by the passage of this bill to set a uniform, national standard for milk sanitation. I hope that the House will act on H.R. 3840 quickly and favorably.

Keeping the Peace in Berlin

EXTENSION OF REMARKS
OF
HON. LEONARD G. WOLF
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
Friday, April 10, 1959

Mr. WOLF. Mr. Speaker, with nine of my colleagues in the House of Representatives, Congressmen Carter, Clark, Meyer, Clement Miller, Porter, Reuss, George Rhodes, Byron Johnson, Rivers, and six colleagues in the British Parliament, Attlee, Davies, Foster, Henderson, Pitman, and Reeves, I have joined in a proposal which I believe is quite suggestive. Its purpose is not to foreclose thought on the Berlin issue but to open possible ways that the United Nations and the United Nations police force could be used in keeping the peace.

It should not be forgotten that the United Nations was formed to keep the peace and to help in the settlement of international disputes. This is the aim of the United Nations and we must afford it an opportunity to function in accordance with the aim that it was assigned by the sovereign states of this world.

The proposal, as released jointly on Thursday, April 9, is as follows:

1. We believe that the problem of Berlin offers another opportunity for utilizing the U.N. through the establishment of a U.N. police force.

2. A first step would be the appointment of a U.N. commander for the present Allied Kommandatura. This would require the consent of the U.S.S.R., which should be invited to resume its membership of the Kommandatura.

3. We propose that the whole of Berlin should come under U.N. responsibility and this would involve removal of the seat of government of the East German Government away from Pankow—to somewhere outside the confines of Berlin.

4. A further stage would be the gradual replacement of the units of the four occupying powers, as the new U.N. force built up around the figure of the U.N. commander. The transfer of power to U.N. could thus be a gradual process, in which all parties could see how the transfer was progressing before proceeding to the next step.

5. We consider that the U.N. force could be more effective if it is commanded and paid, and directly and individually recruited, by the U.N. from a wide range of nations. If this is not practicable, then it could, as in UNEF, be composed of national con-

tingents, drawn from countries other than the occupying powers. In the view of the group, the system of national contingents of seconded personnel adopted in UNEF, NATO, and Warsaw Pact, have shown that there is no real integration by that method, and that national sovereignty—the right to be judge and jury in your own cause—is still unimpaired.

6. The financial requirements for the establishment and maintenance of the proposed police force should be guaranteed for at least 5 years in advance.

7. We believe the opportunity offered by Berlin for a practical experiment in building up a force acceptable to both NATO and Warsaw Pact countries in a location strategically placed between the two camps, could be not only immensely valuable as a solution for the Berlin problem but also as a contribution to the eventual coming together of East and West Germany.

The idea of use of the United Nations Police Force is not a new one. The United States and this Congress has always supported the use of a U.N. Police Force either in the form of an observer group or as an actual police force. In the past, we have taken the initiative in formulating various plans that would have the effect of fostering such developments. For example, in the fall of 1958, the United States proposed to the General Assembly, the creation of a United Nations Peace Force. President Eisenhower stated to the General Assembly on August 13, 1958, the following:

The countries of this area (the Middle East) should also be freed from armed pressure and infiltration coming across their borders. When such interference threatens, they should be able to get from the United Nations prompt and effective action to help safeguard their independence. This requires that adequate machinery be available to make the United Nations presence manifest in the area of trouble.

Therefore I believe that this Assembly should take action looking toward the creation of a standby United Nations Peace Force. The need for such a force is being clearly demonstrated by recent events involving imminent danger to the integrity of two of our members.

I understand that this subject is to be discussed at the 13th General Assembly and that our distinguished Secretary-General has taken an initiative in this matter. Recent events clearly demonstrate that this is a matter for urgent and positive action.

Elaborating on the President's proposal, Secretary of State Dulles outlined the possible structure of such force to the Assembly on September 18, 1958:

The United States suggests the following points for consideration:

1. We conceive of the peace force not as a combat force, but rather as a group that would observe and patrol, and by its very presence make visible the interest of the world community in the maintenance of tranquility. Also, we believe that members other than the permanent members of the Security Council can most usefully contribute personnel.

2. A small planning staff might be created within the Secretariat to develop standby plans for calling into being, deploying and supporting such a peace force.

3. The planning staff could develop concrete arrangements so that a United Nations decision to employ such a peace force could be promptly implemented.

4. The costs of the standby arrangements should be kept small and that should be possible if there is no force-in-being to be maintained.

These arrangements should make it possible to bring together on short notice a United Nations group to meet a need which has become evident over recent years. That would be an important bulwark of the pacific settlement objectives of the charter.

Just before the U.N. Assembly met, the Congress had made known its support of such an initiative by the adoption on August 22 of a concurrent resolution to the effect that:

It is the sense of Congress that consideration should immediately be given by the General Assembly of the United Nations to the development within its permanent structure of such organization and procedures as will enable the United Nations promptly to employ suitable United Nations forces for such purposes as observation and patrol in situations that threaten international peace and security.

The Senate Foreign Relations Committee Report No. 1884, 85th Congress on its resolution emphasized that:

The main objective of the committee in recommending the adoption of the resolution is to underline the urgency of continuing to work on the problem of devising a military type of force which will be helpful in achieving the objectives to which members of the United Nations have subscribed.

House Committee on Foreign Affairs Report, No. 2581, 85th Congress, stated that:

The resolution reflects the desire of the Congress that the United States delegation to the United Nations support action necessary to attain the desired objective * * *.

Spokesmen for the Department of State have repeatedly emphasized United States interests in the creation of a standby force for use in troubled areas. The Assistant Secretary of State for International Organizations Affairs, Francis O. Wilcox, outlined the longstanding policy of the United States of strengthening "the capacity of the United Nations to carry out its important responsibilities under the charter" in testimony before the House Foreign Affairs Committee on July 25, 1958.

The United States also has given, and continues to give, full support to the United Nations Emergency Force in the Middle East. At the time this force was created, Secretary Dulles told the General Assembly that both he and President Eisenhower shared the view that the Secretary-General should be authorized to make arrangements for a U.N. force large enough to keep the borders at peace while a political settlement was being worked out. As House Resolution 367 indicates, this force did make an important contribution to international peace and stability in the Middle East. The UNEF experience has shown clearly how, under certain circumstances, such a force can serve an extremely useful purpose. For many months the frontiers between Egypt and Israel have been free from the kind of hostile incursions which formerly troubled the area.

The Department of State shares the view of this committee that a similar force, established on a permanent basis, could be an important instrument for observing and reporting, and for assisting in the maintenance of international peace and security. You will have noted, in connection with the current Middle East crisis, that our Government supported the establishment of the United Nations observer group in Lebanon. We also presented a resolution to the Security Council on July 17 requesting that the Secretary-General consult member states with a view to making arrangements for additional measures, including contingents, to protect Lebanese integrity and independence and insure against illegal infiltration of personnel or arms into Lebanon. Unfortunately this resolution was vetoed by the Soviet Union.

I recall these examples, which I know are familiar to all of you, in order to emphasize the positive attitude of the U.S. Government toward the creation of United Nations forces in order to meet a variety of difficult situations. The State Department is also favorably inclined toward making more permanent arrangements for some type of U.N. force.

Not only have the Congress and the executive department gone on record repeatedly in favor of a U.N. force, but there are many indications of general public approval of such a force. I have certainly found this to be true in my district.

The American Institute of Public Opinion, directed by George Gallup, has frequently polled the public on its views regarding a U.N. force—with overwhelming support for such a force:

ONE HUNDRED THOUSAND STANDING ARMY FOR U.N. BACKED IN POLL—TWO OUT OF THREE IN SURVEY FAVOR FORCE SUFFICIENT TO PUT OUT BRUSH FIRE

(By George Gallup, director, American Institute of Public Opinion)

PRINCETON, N.J., March 11.—American public opinion is solidly in favor of a standing United Nations army large enough to deal with any brush-fire wars around the globe.

Such a proposal, which some observers see as revolutionizing present military planning, is supported by two out of three adults questioned in the latest institute survey.

As regards the actual size of such a permanent U.N. emergency force, the vote is 2 to 1 that it should be increased to at least 100,000 men. The present U.N. emergency force serving along the Israeli-Egyptian border is considerably smaller in number.

SUPPORTED SINCE AIRLIFT

Actually, Americans have supported the general idea of such a force for 10 years now. It was in the spring of 1948—at the height of the Berlin airlift—that the institute first recorded a substantial international police force.

Observers claim that the establishment of such an international army might well mean a substantial reduction in the number of troops maintained by each nation at present—including the United States—to take care of such brush-fire conflicts as the Korean war.

In the most recent survey, the question was posed as follows:

"A proposal has been made to build up the United Nations emergency force to a size great enough to deal with brush-fire or small wars throughout the world. Does this sound like a good idea or a poor one to you?"

The vote was as follows: Good idea, 66 percent; poor idea, 15 percent, and no opinion, 19 percent.

The second question dealt with the size of such an international force:

"The present number of men in the U.N. emergency force is 10,000. Would you like to see it built into an army of at least 100,000 or more?"

The result was: Yes, 51 percent; no, 26 percent; and no opinion, 23 percent.

Although both proposals have the support of the rank-and-file members of both political parties, analysis reveals that they have somewhat more appeal to Democratic voters than to Republicans.

FOR PERMANENT FORCES

After 4 months of duty along the Israeli-Egyptian border by the emergency force, a survey in April of last year found the vote more than 2-to-1 that the U.N. should have its own permanent forces, including troops from the United States, which it could use to enforce U.N. decisions.

The present U.N. emergency force was proposed to the U.N. General Assembly by Canada's Lester B. Pearson who was awarded the Nobel Peace Prize in 1957.

Mr. Speaker, the people, the Congress, and the Executive have shown their support for a U.N. peace force. Its effectiveness has already been shown. I am sure that its effectiveness could be shown again in Berlin. With an interim stabilization of the area by the U.N., peace force negotiators will be better able to arrive at a general settlement in Western Europe that would alleviate tensions without destroying our interests in Western and Eastern Europe.
